(A 'A.)

AARON. [See **HAADU**.]

AB (r. — *z. āp-m*), water; metaphorically, splendor, freshness. — *Klout*. The word is *ab* used either at the beginning or at the end, in the composition of geographical names. — [Comp. 221.]

Ab-hayit, front of immortality (*Harbier de Maynard, Boustan*, p. 172, note 2). — *Ab-ahar*, a supply of water, a reservoir in which water is always kept fresh (*J. Blomley, Paris*, p. 100). — *Ab-ahar*, a servant whose business it is to prepare drinks (*J. Blomley, loc. cit.*, p. 169); an official who gives the prince water to drink or to wash with (*Ch. Scheler, Slaves-Nomads*, p. 142, note 1). (C. L. HUERT.)

AB, or **Ab**, the name of the fifth or eleventh month respectively in the calendar of the Jews, Syrians, &c. In its Syro-Aramaean use the month **Ab** corresponds to the sixth month (*Agathos*) of the Turkish *Milliyi* (i. e. the financial and civil) year, that is to say the month of August in the Julian calendar. [See **TA'ADU**.] (E. MAHER.)

ABA ('*ādā*), (*ābā*), the name of a kind of dress used by the Arabs. Native lexicographers generally give as '*ādā*' the value of a collective name, of which '*ādā*', or '*ādāya*' (both forms are old) would be the form of entry. '*ādā*', however, has already been used by classic writers with the meaning of entry, and the word has thus subsisted in the dialects of Mesopotamia, of Arabia and even of Egypt. It is also in the form of '*ādā*' that the Turks have borrowed it, though they discard the initial guttural (**ād**). On the other hand, '*ādāya*' is the word now generally employed when speaking of the extremely antiquated dress described in the next paragraph.

1. Syro-Arabian '*ādāya*', a short, full blouse, reaching to a little below the knee, with an opening at the top for the head, and a gap at each side for the arms; this is the '*ādāya*' of the Bedouins of Syria, of Arabia and of Iraq. It has no sleeves. It is made of a coarse, thick woollen material, a worn camel's or goat's hair; it is either of a single color — generally varying from light to very dark brown, — or in stripes of alternate brown and white. Sometimes, but very seldom, it is made of cloth, or silk, and decorated with embroidery; then it is the gala dress of the rich. In certain parts this '*ādāya*' is the ordinary dress not only of the men but also of the women.

2. Egyptian '*ādāya*': the old Bedouin '*ādā*' has undergone some transformations in Egypt; there this dress comes down to the feet, and has sleeves, but has kept the alternate stripes of light and dark brown of the primitive '*ādāya*'.

3. Maghrib '*ādāya*' in Eastern Algeria the '*ādāya*' is sometimes given to a dress with very short sleeved, made of a thick material, square in shape, with a hood resembling very much the Moroccan '*afellala*' or '*hachchaba*'. In the West of Algeria the '*ādāya*' is a white blouse of linen, of cotton, or, more rarely, of wool, or silk, which is worn over the shirt and under the *terza* or the *afellala*. It falls midway down the leg and has no sleeves; sometimes shoulder-pieces cover the half-way down the upper arm. Finally, in the West of Algeria the word '*ādāya*' is still used for a dress of the women; over her chemise a woman wears an '*ādāya*' of cotton, of silk, or even of velvet. It is a long flowing sleeveless dress with a deeply hollowed-out opening behind and long slit at the sides under the arms. This first '*ādāya*' is covered by another of unadorned tulle, of the same shape and with the same openings.

Atellography; Dory, *Dict. des noms de vêtements*, pp. 292—297; idem, *Supplément aux diction. arabes*, II, 90; Barhaz de Maynard, *Dict. turc*, I, 1; II, 345; Burckhardt, *Notes on the Bedouins and Wahabys* (London, 1831), I, 47. — A description and illustration of an '*ādāya*' of silk will be found in H. von Oppenheim's *Von Mittelmeer zum persischen Golf* II, 121; and a description and illustration of an Egyptian '*ādāya*' in E. W. Lane's *Manners and Customs of the Egyptians* (5th ed.) I, 38, 41.

(W. MARCAIS.)

ABÂNDE (*Abānda*), a highland people chiefly nomadic in their habits, dispersed between the Nile and the Red Sea, who extend north as far as the latitude of Asiat and south to the tropics and even further in the valley of the Nile. An inveterate enmity separates the '*Abānda*' from their northern neighbors, the Ma'ara, and from their southern neighbors, the Bahariya. To this antipathy is added, with regard to the former their descent and, to the latter, their language. Their name appears to be derived from that of an ancestor, 'Abād, who has disappeared from history, but whose name survives in that of certain places: 'Ufr 'Abād and Wād 'Abād, the latter of which debouches into the Nile valley opposite Khartoum. They number from thirty to forty thousand souls. They are distinguished very clearly by their anthropological characteristics as much from the pure Arabs as from the inhabitants of the interior of Africa. Klingmüller describes them in the following terms: 'dolichocephala, orthognathous, with an oval face, large glowing eyes, nose straight, a little short and broad, hair smooth and jet black but not woolly, skin dark brown

rearing on black, the expression of the face completely European (Caucasian), body remarkable for its bony structure. They are thus distinguished from the Arabs less by their structure and hair than by the color of their skin and by the shape of their nose. Anthropologically they approach very nearly their kinsmen, the Bishariya; nevertheless differences in their social conditions have given rise to many discrepancies of a secondary nature. The greater part of the 'Abdals lead a very unassuming nomadic life in the mountains; their domestic animals are camels, goats and sheep, with the addition in the Nile valley of pigeons and poultry; they have no houses. Instead of the Bedouin tent of strongly woven hair they only inhabit admirable huts covered with matting or cane, rarely a sort of *gourd*; some of them are content for shelter with natural caves, thus justifying the name of Tughbaya which the ancients gave them (comp. Schweinfurth, p. 288; Khunzinger, p. 253). Those who inhabit the shores of the Red Sea are now still for the main part the real Ishthyophagi of former ages. Being without nets and boats, they content themselves with what the sea throws up in their or what it allows them to catch easily. In the Nile valley, where they have formed a great number of small colonies between Kena (Gena) and Assut, especially in the vicinity of Hama, of Edfa, and in Lektia (Feghla), some of them devote themselves to agriculture. The principal resource of the rest is yet their dairy, consequently their bread, is trading, or the presence they receive from travellers. Owing to their situation and the poverty of their country, they have for centuries bound to seek their livelihood as camel-drivers and caravan guides. In this respect their activity has sometimes expanded greatly in three principal directions: firstly on the road from Kena to Assut ('Abdals), between Ras Elua and Sudda, which was much frequented in the Middle Ages and which took from thirteen to seventeen days; secondly the road, more and more frequented in modern times, from Kena to al-Kafir, which takes from four to five days; thirdly the routes connecting Egypt, Nubia, the Upper Nile and Abyssinia. Being honest and docile they have gained the confidence of the Egyptian government, which has lately confined to them the route from Korosko to Abu Hammad elua, which traverses the territory of the Bishariya, who absolutely refuse to admit. Without any doubt the fact that the 'Abdals now speak mostly Arabic is a consequence of this long established practice of acting as guides and camel-drivers. Except for a little among themselves in intimate intercourse, they no longer use their old Nubian tongue, which closely approaches the *fa-Bishariya*; sometimes, in order that they may not be understood by strangers, they mix Arabic expressions with their own language; which explains why a *seventeenth-century* language of the 'Abdals has been mentioned. If the collective name of the people is Arabic, the name of the principal groups of tribes — Ashabab (Ophidids), Melchah, Simah, Shawah — are essentially Hamitic in form.

The material culture of the 'Abdals is, as has already been said, still very primitive. As amongst the nomadic Arabs, their furniture is limited to leather-pots, leather bottles, a few dishes, some mats, ropes, earthenware, knives and fire stones;

their kitchen utensils recall to a certain extent the stone age; often hand-mills, with which their grain is ground, are improvised, on the spot if necessary, from two flat stones. Their food is milk, dried bread, fruit, vegetables, occasionally game, poultry and, near the Red Sea, fish. Their clothes and beads in the mountains grace the country herbage there, while towards the Red Sea they often borrow the leaves of the glaze. They make a certain amount of money also from the sale of charcoal, genna and other medicinal plants, and gum-arabic. At Kapsa and in its environs, they make a little as water-carriers and by other inferior employments. The want of the inhabitants of the desert in following up tracks is very famous, and for that reason they are employed even in colonial researches.

Naturally the 'Abdals dress in conformity with the climate and their social rank. The children often go quite naked; the men wear a *lota-chalk*, the women, for decency, a belt made of strips of leather (*salbi*), and to protect themselves from the cold, a *lota-chalk* or *lota* a cloak. In the matter of ornaments the women know scarcely any but things made of silver-plat or of brass and shells. The boys and men, like the Bishariya, take very great care of their hair, which they comb with butter or grease, and which they braid, plait and tress in diverse manners (Khunzinger, p. 247). Sometimes they go bare-foot, sometimes they wear sandals. Their arms, which seem to be more for adornment than for use, are a knife, spear and sword, rarely a shield and never a rifle.

The chiefs of the clans and of the tribes are subordinate to a *Sheikh*, the head of all the 'Abdals, who is personally responsible to the Egyptian government for the maintenance of peace and security. As a matter of fact, since the time of Muhammad Ali, the country has been quiet and intercommunication rare, the more so in that it is a great advantage to the 'Abdals the caravan routes for which they furnish the escort should be well frequented. The radical change in the state of things, due to the firmness of Muhammad Ali Pasha, fully explains the contradictory reports about the character of the 'Abdals. Descriptions earlier than as shortly after the year 1800 depict them as being, like the Bishariya formerly and the Bishariya now, a plundering, perfidious, cruel and treacherous people. Nowadays we are told the contrary, but they are established as being inoffensive, discreet, peaceful and absolutely reliable. It is a complete transformation which could only have been carried out by such a man as the founder of the New Egypt, whose work extends so far as into Arabia, Syria and the Sudan.

The faith of the 'Abdals is Islam, adapted, however, to the nature of the country and its population. The confession of faith is the only one of the so-called pillars of Islam which stands fast. The women are veiled; the children are circumcised. Veneration of the Saints is widely spread, especially in the neighbourhood of the Red Sea, where the belief in the Patron Saint is perhaps blended with ancient pagan ideas. They eat the flesh of many animals that are *haram* for the strict Mussulman. From the Islamic practices they have borrowed polygamy, facility of divorce and marriage at an early age. On the contrary, they

have remained untouched by the belief in the *ʿĪlād*, which causes so much trouble to the soul of many an Arab. In their intercourse between the sexes they do not observe any greater severity than the nomadic Arabs. Like their congenial tribes they love to have war-dances executed during their festivals. In the case of a death the ordinary lamentations are indulged in, and generally woe is shown on the grave.

Little is known of the past of the *ʿĀbādīn*. They are a people without a history, whose domestic and conditions of life have remained almost the same for thousands of years. We believe we are right in identifying them with the *ʿĀbādīyān*, of whom mention has often been made ever since the time of Theophrastus and later, in the Christian epoch. Arab geographers unite the *ʿĀbādīn* with their southern neighbors under the name of *Barḥā*. Quatremère has written a work on the information given by Masūdī and other authors. The trade-routes of the Middle Ages which we mentioned above, going from Kōs to Aden and connecting Egypt and the Maghrib with Djidda, Aden and Soekha, crossed the southern portion of the territory of the *ʿĀbādīn*, reached the sea probably near Belesier and then went along the territory of the *ʿĀbādīyān*. On this coast and because of the rich mines situated in the territory of al-ʿĀbādī, the Arabs became acquainted with the Red Sea. European navigation began with that of Wansleh, and, since then, they have been completed and corrected progressively, first in the eighteenth century by Bruce, then by the scholars in Napoleon's expedition, and finally by travellers under the protection of the New Egypt. Many of these writers think they can identify the name of the *ʿĀbādīn* with that of the *Gobadai* mentioned by Ptolemy (*Hist. Nat.*, vi, 79), but that appears to me inadmissible. We can with more certainty recognize in the *ʿĀbādīn* the *Trogodytes* and *Ichthyophagi* of the ancient geographers.

[K. VOLLERT.]

ʿĀBĀD (v. — Persia. *ʿĀbād*, from a hypothetical **ʿābāz*, a Persian adjective signifying "flourishing"; speaking of a tract of land, and, subsequently, "inhabited, cultivated" as opposed to "desert"; after that it is used as a substantive and appears in the composition of the names of a great number of places, such as Ruknābād, and of towns, especially in India. *Ābmadābād*, *Ābmadābād* (Hyderabad), etc.

[G. H. MULLER.]

ʿĀBĀD (a.), a theological term signifying an eternity which is without end, but not without beginning. [Comp. *ʿĀL*.]

ʿĀBĀDĪ, or *ʿĀbādī*, a town in Persia situated on the road from Isfahān to Ispahān. Mention of it is found in various writings of the Middle Ages; see G. de Strangé, *The Lands of the Eastern Caliphs* (Cambridge, 1905) pp. 282, 284, 297. At the present time it contains about 5000 inhabitants; comp. Reclus, *Nouv. géogr. univ.*, ix, 270. Celebrated for the Persian wood carvings produced there; see Brugsch, *Reise der Ägl. Provinz Gissarduk und Persien* (Leipzig, 1862—1863), ii, 126, 222. — Arab geographers mention another Persian town of the same name situated in the district of Horm, on the road from Sābīk to Isfahān, on the north shore of the lake *Hakhsyār*; it was also called *ʿĀbād* *ad-Dawūdī*; comp. Barhelemy de Meynard, *Diction. géogr. hist. et littér. de la Perse* (Paris, 1861), p. 7; G. de Strangé, *loc. cit.*, p. 279. This northern *ʿĀbādī* seems now to have disappeared. [M. STRANGÉ.]

ʿĀBĀDĪTES. In Northern Africa this name (see *MAURITAN*) is used to designate a branch of the *Khawārij* which separated from *ʿAlī* when he accepted arbitration with Muʿawiyah. In the first half of the second century of the Hegira, *Khawārij* in an *ʿĀbādī* and *Sofīte* form was introduced in the Maghrib; it developed rapidly amongst the Berbers and became the national doctrine, which served as a pretext for the struggle between the African and the orthodox Arabs.

The *ʿĀbādītes* of Tripoli and of Hāfīya under the guidance of their principal imams, *Abū ʿĀbādī* and *Abū Hāsim* (see these articles) played the principal part in the Berber rising of the second century, which finally deprived the Caliphate of Africa.

An *ʿĀbādī* dynasty, the *Kutāmiyyah*, held power at Tihert (Togdén) for more than 130 years, and only disappeared when the *Fāṭimides* founded their empire in the Maghrib.

After the destruction of Tihert by *Abū ʿĀbādī* al-*ʿĀbādī* (906—908-909) the *ʿĀbādītes* lived sporadically in the Algerian and Tunisian Sahara, as well as at Djirba.

In these days they are still found in pretty compact groups at Wargla, Mādī, *Ujehal* *Nellah* and in the island of Djirba. They have an important historical and religious position and continue in constant communication with each other, carefully keep up their fervor. They have likewise fairly frequent intercourse with the *ʿĀbādītes* of *ʿĀbād* and of *Zānsat*.

But three principal sects, both political and religious, namely the *Nakshītes*, the *Shāfītes*, and the *Nakshītes*, occurred amongst the African *ʿĀbādītes*. The *Nakshītes*, who have had their place in the history of African things, are the only ones who are still represented by some small groups in Djirba and at Zānsat (Tripoli).

Naturally the *ʿĀbādītes* object energetically to the name of heretics which the orthodox sects give them. They claim that they alone have preserved the pure doctrine of Islam and maintain that theirs alone amongst the seventy-three Musliman sects, has the right to salvation.

As was said above, the starting point of the falling away of the *Khawārij* was the difference of opinion with *ʿAlī* at the time of the arbitration. Without contesting the legitimacy of the first four caliphs as the *Shāfītes* do, they insist that the only impeccable examples after the Prophet were *Abū Bakr* and *ʿUmar*. *ʿUthmān* has not followed

in their footsteps, the Arabians carefully pointed out in their books what they call his innovations.

Muslims are required to observe a *haram* when they have the necessary strength and knowledge to show it is not necessary that the Indian should be a *Kurdish*; it is enough if he be a Hindu and plays and acts in conformity with the *Koran* and the *Sunnah*; if they deviate from them they must be deposed.

The *Koran* is the word of God, created by Him. God could not be seen in Paradise.

Recompenses and punishments in the other world are both eternal; Hell will not be destroyed any more than will Paradise.

God pardons small sins; but grievous sins cannot be pardoned unless they are blotted out by repentance.

It is the duty of every Muslim to enjoin the good and reprove the evil as far as he is able.

All Muslims are strictly compelled to acknowledge their solidarity which they express in word and action, but the individual who sets contrary to the prescriptions of the religion law loses all claim on the friendship of his co-religionists and should be treated as an enemy until he performs the act of repentance. There is a kind of excommunication which has grave religious and civil consequences.

The Arabians of Algeria affect a great austerity in moral, at least in the eyes of the Moslems, where they cannot get away from the tyrannical supervision of the *qadda*. In the towns of the Algerian Tell, where they congregated for the purposes of commerce, the practice is not always in accordance with the theory.

It must, however, be admitted that generally they keep their beliefs very jealously. Except for the exigencies of their very lively commerce, they do not mix with orthodox Muslims. Their marriages with the latter are rare exceptions and are reproached by the whole community. This particular is of course a ghastly one. It formed them into a homogeneous and compact group, which is very clearly distinguishable by its behavior, character and tendency amidst the orthodox Arabs or Berbers of Northern Africa.

piled himself also to the same kind of work with other writings, particularly Persian and Hindoo; e. g. *Shah Ardabid*, *Shah Anshirwan*, *Alim Zafar*, *Shah Mirza*, *Shah Nader*, and *Shah Mansur*. Besides this he wrote a corresponding poem entitled *Dine al-Hafid*, a work on the wisdom of the Hindus, and another on fasting and meditation; these works are all lost. Like almost every Arab poet he wrote panegyrics, elegies and satires. With regard to the former two, there can be cited a panegyric of the Alids, in which he argues against the pretensions of the Alids to the succession, and an elegy, which is still extant, on the Khawakid. The former poem brought him into favor with the sultan Haidar al-Rashid, who rewarded him with some *diwans*. In his satires he attacked his contemporary poets and the celebrated grammarian Abu Usman. Many members of his family, Imran Usman ibn Imran, also distinguished themselves by their poetic skill.

ABAN b. 'OMAYYAS (b. 'ATFAX, governor,
son of the third caliph. His mother was called
Yumr. 'Azer had Dihnah b. 'Amr al-Basasya.
Aban accompanied 'Atfah at the battle of the
Tammal in Dihnah's 1st jh (Marwanites 850); on the
battle terminating otherwise than was expected,
he was one of the first to run away. On the
whole, he does not seem to have been of any
political importance. The caliph, 'Abd al-Malik
b. Marwan appointed him as governor of Medina.
He occupied this position for some years; he
was then dismissed and his place was taken by
Hisham b. 'Amr II. Aban owes his celebrity more
as much to his activity as official at the service
of the Umayyads as to his wonderful knowledge
of Muhammadan traditions. In this respect he was
held in great esteem, and his *Maqāshir* (a hagi-
ography of Muhammad) is perhaps the oldest literary
production on that subject. He was struck with
apoplexy and died a year later at Medina in 105
(723-724) according to reports, at any rate during
the reign of Yazid b. 'Abd al-Malik.

Newsw. (ed. Wüstenf.), pp. 125 ff. top.

ABANUS (various: *Abino, Abano, Abno, Abno* and *Abno*), ebony. This word is derived from the Greek *Abno* (cop. *aban* the Hebrew *Aben*, the old Egyptian *Aben*) which passed to the Armenians (*abniti*) and from there to the Persian, Arabic, Turkish and other languages. Although ebony had been already well known in the old days by the Semites, who imported it from India and Ethiopia, it was very little used at the early times of Islam, on account of its rarity and the scanty requirement of Asiatic goods. Arabic (and even not even in the early) according to which, when the son called Mosque of 'Hunt' was being built at Jerusalem under the 'Umayyad caliph 'Abd al-Malik, the venerable rock was enriched with a pulisade of ebony. It is certain that this wood had been already used under the calighe together with ivory in mosaics of the most very often used later with great skill on furniture, doors, lace work and wallcoats; many

examples of them may be seen at the Arab museum
of Cairo.

In literature *strychnine* is not spoken of as a rich wood, but as a medicine. As early as the thirteenth century the Persians and Arabs knew it as such from the translation of Dioscorides and Galien; it was considered to be a useful antidote for phlegmatic inflammation and chronic catarrh of the eyes; it was also taken internally in the form of a powder for the lungs and stomach, and was directed over fires. According to Monroville, Abyssinian ebony was generally considered to be more efficacious than Indian. In the latter were ascribed the properties which at the present time are only found in the wood of the *Strychnos* and *Ashie* kinds of the East Indies, of the Indian Archipelago, of Madagascar. That of St. Martin's, i. e. an intense black and a greenness of grain which almost render it impossible to distinguish the lines. The African species of ebony which the Arabs prefer, are nowadays rightly held in little estimation, and particularly the ebony tree of Abyssinia (*Stranger Adansonia*) which according to Brehm (*Kunst u. Nodensstoffe*) is rather a shrub than a tree; its wood which is of an inferior quality, but fit for use, dries up and rots for want of being used.

Platycodon L.: *Alte Maure Maurellia*,
Klein's *Maurellia*. *Sollymann*; *Alte Maurellia*,
al-Layman (Humb., 1797); translated by J. Loebner
in *Kleine Pl. Arabiens im Museum der Naturg.*
Bibliothek, Nurnberg, xxi, 1; Kuntze (ed., Wilmott), i.
- (1862).

ABARKOHADH, or *Harbeshah*, a district of the Abyssinian department of the Tigra, a tract of land along the western frontier of Shewa (Khabsho), between Wala on the north and Bawa on the south; see Stock, *Abyssinian and Amhara*. Gwge. (Layden, 1906), i. 15, 19. The name of this country is derived from that of the Samudra king Kawaḥ (Kobah) assigned from \$3 to \$3 in 14; at any rate the first part of the name is *Ab* and not *Abu* (not *Abg*), as the Arab geographers give it; compare Nöldeke, *Arab. Geogr.* ii. *Index von Zeit der Samudra* (Layden, 1879), p. 246, note 2. The Pomian river, or *Abg* cloud, is often seen at the beginning of the rains of places in Paria. Some Arab authors cannot see *Abarkohadh* is also the cause of their mistake in which Arragha is situated, but they seem to spring from a mistake.

appears to spring from a mistake.

(M. Stærck.)

ABARKUH, a town in Persia, north of Isfahān, on the highway between that town and Vard; another form of the name is *Abarkuh*; the abbreviation *Abark* (also *Warkuh*) is often met with, in the Middle Ages the population of Abarkuh was twice the third of that of Isfahān; comp. V. Schwartz, *Reise in Mittel-Asien* nach den *Reisen* Georg. v. Leipsig, *Reise*, i. 27 of 1844, and G. de Stronge, *The Land of the Eastern Caliphate* (Cambridge, 1865), pp. 34 et seq.; 204, 297. It still retains under the name of *Abarkuh*; see A. de Bado in the *Journal of the Roy. Geog. Soc.* (London), 1843, p. 78, and F. L. Weller, in *Proceedings of the Roy. Geog. Soc.* (London), 1853, p. 16.

(M. Stærck.)

AL-ABARZI, 'Amil al-Din As'ad al-Naga al-
As'ad, poet and minister to Sa'id b. Zaygh, the
alibeg of Fars, a native of Abhar, a cousin of
the province (Lutf 'Ali Beg, *Arsh-e-Kash*, p. 6),
now (1900) north of Shiraz (Hajj Mirza Hasan

delivery of a hundred loads of silk, was out of long detention, for he took from the Chinese Nagas and the small Sikh towns of Kachin and Nagins or Meikhed 'Ait (1633 = 1635), Mawit, and Diyāi Behr; George was occupied by his troops. In another direction, with the support of the East Indian Company, which lent him the co-operation of an English fleet, he took the islands in the Persian Gulf, including Omān, from the Portuguese; in place of this old factory he established Canton in which he gave the name of Beaher-i 'Abbās (the port of 'Abbās) which it bears to this day.

His part in the internal administration of his empire was not less important than that which he played abroad. He built roads, namely the highway which traversed Mesopotamia, Indogalates and Caracassana; among the remarkable works carried out in his reign, especial mention is made of the monumental buildings at Isfahan: the Great Mosque, the palace of Chah-mish (four columns), the Chir-bagh (four gardens) and the great bridge of Zends-eud, and in Mesopotamia: the palace Isfahan-nama at Vanadibad, that of Selser (or Sela) third between Sair and Vanadibad, etc. He established the society of inter-communication by the pilgrims turning Jews of Belgrade. He caused the Armenian population of Bafsa, a mass on the Araxes, to be removed to Isfahan, and this population built there a quarter which still bears the name of Bafsa. He was favorable to foreign diplomatic establishments such as that of the Caravanserai at Isfahan. Relations of friendship with the European powers, he maintained with English gentlemen, Sir Anthony and Robert Hunter, who had come to his court as simple merchants; he made use of their co-operation to teach his troops discipline and artillery drill; he entrusted to Sir Anthony, in company with Husein Voh, a diplomatic mission, having for its object the uniting of Europe in a league against the Ottomans. A Russian gentleman, Pierre della Valle, was also employed and accompanied him to the siege of Candia.

Despite the great qualities that he possessed, he was yet cruel; in the beginning of his reign he did not hesitate to have Murshid Koli Khān, in whom he owed his elevation, put to death (1694 = 1696), and later he had his son Sali Mirza, whose popularity he feared, executed. He gave the order for the massacre of the population of Sukhan, which soon became too numerous for the liking of his government; this order through chance circumstances was not carried out.

ABBAS II. son of Sali Mirza (1694), and great-grandson of 'Abbās I., was born in 1693 (1695), died in 1707 (1696) at Isfahan and was buried at Kāma. He ascended the throne of Persia at the age of ten (1695 = 1696), he saw a reaction of religious intolerance introduced against the abuse of wine which had been encouraged by the example of his predecessors, but the severe measures adopted by his ministers were unable to put a stop to it. 'Abbās II., as he grew older, returned to the drunken habits of his ancestors. He retook Kandahar and received in 1700 (1699) Dering Khan, who had been driven out by the revolution. He sent back Tahmasp Khān, prince of Georgia, whom he had made was upon him, into from him (1690 = 1691). Worn out by dissipation, he was only thirty-four years of age when he died. It appears that he was a poet, and a verse of his composition is quoted.

Biography: *Abbās Khān, Mawla*, *Abbās-e A'zam*, 1, 40; *Khawarizm-shah*, 22viii, 231 ff. comp. (C. Hout.)

ABBAS III. Sali Mirza, was born in 1745 (1733) and died at Isfahan in 1749 (1730). He was placed on the throne by Kāli Shāh after the conquerors had destroyed Tahmasp by surprise and had called him to Khorasan (1733 = 1735). He was then a child of eight months. During his reign, Nādir destroyed Bagdad and took Georgia and Armenia (1747 = 1734). On his premature death, Nādir seized the opportunity of assuming the title of Shāh Nisaf.

Biography: *Abbās Khān, Kāli Shāh, Kāli Shāh*, *Khawarizm-shah*, 22viii, 231 ff. comp. (C. Hout.)

ABBAS I. surnamed *Al* Egypt (1834 = 1834), born in 1816 at Didda, where his father Thān Pasha, son of Mohamud 'Al, had sought to take part in the campaign of Ibrahim Pasha against the Wahabites. 'Abbās was his grandfather's favorite, although the beginning of that brutality of character which he later showed so strongly could already be seen in his childhood.

Having been at a very early age entrusted with important offices, he behaved as a full-blooded despot of the best oriental type. His uncle Pasha died in 1848 after a long illness, eight months before Mohamud 'Al, who had fallen into obscurity. The Porte recognized 'Abbās as the successor of Ibrahim, but, seeing how young and inexperienced the new sultan was, wanted to take the opportunity to strengthen the supremacy of the sultan over him in Egypt. The English wanted to construct a railway between the Nile and the Red Sea; 'Abbās was favorable to this project, but this was a formal violation of the Treaty of 1840, which stipulated that the hereditary pasha of Egypt was bound to ask the emperor of the Porte in all important affairs. On the 4th September 1851, a letter went of the Porte reminding him of his obligations and he was forced to yield. Moreover the Porte required of him that he should enforce in Egypt the fundamental state-laws of the Ottoman empire (*shari'at*), and a commission was appointed to formulate the modifications which might be necessary in Egypt for that purpose. The work of this commission having proved futile, the sultan, in 1852, sent the elder Yūsuf Khān, who obtained permission from 'Abbās that the

order with regard to the enforcement of the haram in Egypt should be read in public. He was rewarded for his compliance and financial support by being granted first for seven years and later for life, the right of having condemned murderers executed, that of wearing white turban and military service, and the control over the Mohammedan Al Fannin which the Egyptians and Egyptians Alia had already treated with great cruelty. The diplomatic victory at the Fagin had therefore been a mere formality. During the Cossack war, Abdol noted loyally towards the Sultan, at whose disposal he placed 15000 men and 120 Egyptian Art.

As to the internal government of Egypt, Ali acted as a narrow-minded and stupid tyrant. He put up the costly experiments of his two predecessors to introduce European civilization into his country only to see and feel an exaggerated dislike, but purely out of hate of the Franks and his hostility to culture. He became more and more despotic and hard-hearted and he retired to the Siwa Oasis 1200 mi. where he was possessed in the desert and his town Cairo. There he died suddenly in July 1858, having most probably been poisoned. His son Isma'il, fourth son of Muhammad Ali, succeeded him.

ABDAS II (1844). Abdas was residing in Egypt, one of Tawfik and (Pasha) and of his wife, Kailie Hanim, was born on the 1st January 1844 (18th July 1844) in the palace of Nuzet Tekke at Alexandria. He received a well-known education, semi-Oriental and semi-European. In 1857 his father, who had become vizier in 1859, first thought of sending him with his brother Muhammad Ali (from 1862 = 1873) to Potsdam, but gave up the project from political motives and whose the Theroakism of Vienna. The two brothers there received a mixed education suited to their position.

The father died suddenly on the 7th January 1892, and on the following day Abbas was appointed as by the Porte as his successor. He arrived at Cairo a few days later. The friends of the Porte for his inauguration, dated the 27th Sh'aban 1309 (17th March 1892), was solemnly read in Cairo on the 14th of April. The court of the firmans had already passed the exchange of notes between Sir Evelyn Baring (then Lord Cromer), who represented the English government, and the Egyptian government. Abbas, influenced by counselors, several of whom were not Egyptian, took up a political attitude hostile to England without taking into account the situation brought about by the events of 1882, nor of the realisation of the internal politics of the country which had for several years been firmly and powerfully controlled by Lord Cromer. Continued friction was the result. In the month of April, Sir Grenfell, sender of the Egyptian troops had to retire and was replaced by H. Kitchener. The new nationalist feeling showed itself in various ways, by the new papers, by the charitable societies, by the preference shown to the Arabic tongue, and by the purism of language. One just after the accession of Abbas, the antagonism between him and the power which occupied the country burst out with violence.

At the close of the session the newly elected President of the Council, Muzaffar Hussain Khan, by Robert Raza,

a cultured man, but a pure shallow Turk. Lord
 Cromwell rejected the latter and insisted upon being
 consulted on every appointment that might be made.
 The quarrel became so bitter towards the middle
 of January 1893 that it almost came to embroiling
 the army of occupation. It did not, however,
 reach so far: on the 18th January, the *Reis*
 (Rizid) Pacha ministry was accepted by the two
 parties: an honorable notice of *Abbas*, the
 main trouble, had been given leave to depart
 and finally dismissed, and the English army of
 occupation was reconstituted. The conflict, however,
 lasted for a long time on various points, on the
 administration, on the press, and on education.
 Abbas went to Stamboul in July, hoping to secure
 the support of the Porte, but returned without
 having obtained what he desired. The Egyptian
 feelings to the Sultan was labor in vain. Among
 the manifestations of the ~~war~~ the Arab party
 of that period, the national *Ennahd* and the letters
 of the Sayid at Bahri and of the "Fellah" *Sulaiman*
Hassan which were published in *The Times*, are
 worthy of mention. The quarrel gradually lost its
 bitterness. After 1894, Abbas has been in the
 habit of going on a journey to Europe every year
 usually to Switzerland, France and England.

One must not conclude from the check which 'Abbas suffered to his first plunge into politics that he is a man without gifts or talent; he has learned too much by being in contact with Europe to fall back into the infantal narrow-mindedness; he is a sincere Mussulman, but not the spirit of the religion above the form. He has literary taste and speaks Turkish, Arabic, Ferochi, German and English. He enjoys life in the country and in the desert immensely, and loves beautiful homes and costly camels, which he attaches to his studies. He would certainly be a man who could do useful work for the intellectual and social progress of his people, if the political situation in which he lives did not condemn him to inaction.

(K. VERTES)

ABBAS, lord of the city of al-Kut, and an influential man under the last Seldjukides, put to death in 540 (1147) by order of Sultan Ala-ud-Din. As a slave of the sultan, Ilkhanlar, he had governed al-Kut in ~~the~~ master's name, the latter having been assassinated by the lamalliks. Abbas took possession of the town in 534 (1139) and, to avenge Ilkhanlar, he made a war of extermination against the lamalliks, of whom it is said he killed a hundred thousand and he became, with Ilkhanlar (q. v.) and 'Atid al-Rak'abi Tagharak (q. v.), one of the ~~most~~ powerful emirs of the Seldjukide empire, against whom ~~the~~ the sultan came to make an head. At last he got rid of Tagharak, whom he caused to be assassinated, and then summoned Abbas to come to him and had him put to death.

(M. Th. Kovensky.)
 AL-ABBAS. A. 'ABD AL-MUTTAHIB, sur-
 named AL-'AFAI, uncle of Muhammad. He was
 only three or according to Ibn Hisham, two years
 older than the latter, he was a merchant and, differ-
 ing in this very much from his brothers 'Abd Talib
 and 'Abd Allah, he made a large fortune; he
 lent money at interest and possessed a garden at
 'Araf; according to Ibn Hisham (p. 933) and

head of what took place. Any way, the truth was that Nāṣir, Abū al-ʿAla, returned exactly as he was, obtained the consent of the caliph, who pardoned him, and was named the father of the *al-Abbās* line. *Abū al-ʿAla* died in April 1131. Abū al-ʿAla returned to the city he could not come back to the city, while Abū al-ʿAla, being already married, left into the hands of the family on the 27. 1131 (1131) 548 (20. August 1137). Abū al-ʿAla did not enjoy the position he had come for long. As the caliph would have preferred to have Nāṣir, Nāṣir the latter resented to have thought of a successor for his father, and as the other hand, Abū al-ʿAla would not to have been named against Nāṣir. The historical accounts of the period only refer to the fact that he had great facts in a very unfortunate manner. At any rate, the latter acted in a complicated, seeing that he must have been uncomfortable between two arms. He succeeded in bringing the father and son together in a common act, and they resolved to kill the caliph rather than risk being the victim of his machinations. Nāṣir found the caliph in his house and accompanied him on the battlements of Baghdad in 1131 (April 1131). Thereupon Abū al-ʿAla changed the names of the caliph, and the caliph with this change then was put to death and the name of al-ʿAla was placed upon the street under the name of al-ʿAla (al-ʿAla). These proceedings started up the hatred and the population a message was sent to ʿAlī b. Ruzbihān, a highly valued military leader, who was then in the south of Iraq. Abū al-ʿAla could not hold out and fled into Syria with Nāṣir and ʿAlī. The ʿAlī army was defeated, surprised them near al-Shuwaykh and Abū al-ʿAla was killed (1131) 549 (1131) June 1131.

(K. V. ZAKARIYĀ.)

ABBĀS EFENDI, eldest son of Bahā' Allāh [q. v.] and spiritual leader of the party among the Bahis that had rallied to his father, and who were therefore called the party of the Bahis. He assumed his dignity on the death of his father in 1892, and, like his father, resided at Akko. He is spoken of in the writings of the Bahis under the mystic name of *Qasr al-Kaw* (Citadel of the Most High), and also under that of *Afayyir-Sirr*, *Alak* (Ala, Mystery of God). He wrote a library of the Bahis, published by Browne under the title of *A Traveller's Narrative to Illustrate the Splendour of the Bāb* (Cambridge, 1891), comp. Browne in the *Journal of the Roy. Asi. Soc.*, 1892, p. 665.

(M. TH. HOUTSMA.)

ABBĀS MIRZĀ, eldest son of Fath 'Alī Shāh, born in Isfahān (1803 (Sept. 1809)), in the small market-town of Nera, died on the 20th Jumādī II, 1249 (25th October 1833). On his mother's side he was the grandson of Fath 'Alī Khān Kādjir Isfahānī. He had been named presumptive heir to the throne of the Kadjars, with the title of *Nā'ib al-Saltān*, but died, in his father's lifetime, of a tumour on the kidneys, which had troubled him for long time; this happened during the reign of Isfahān by his son Muhammad Mirzā, who, in the following year, succeeded his grandfather, under the name of Muhammad Shāh. European travellers who knew him are unanimous in their praise of the high qualities he possessed. He was passionately fond of military art and introduced European tactics amongst the troops of Adherbāidjān, which he commanded, entering the ranks himself as a simple soldier. He was very strict about discipline and awarded to it himself; he had become very popular in the district of which he was the governor.

(C. H. BAYAT.)

ABBĀSA, daughter of the caliph al-Mahdī, sister of the caliphs Ismā'īl al-Mahdī and al-Hādī; it is to her that the locality Suwayhat al-'Abbāsa owes its name. She had three husbands in succession, who all predeceased her; that inspired Abu Nawwās to write some satirical verses, in which he recommended the caliph, should he want to have a fourth killed, to marry him to 'Abbāsa. Her name is connected with the fall of the Barmanides through the amorous intrigues with Isfahān. Yafya Tihomani, with which she is credited. According to Yakubi, Isfahān could not deprive himself of the society of either his sister or Isfahān, so that, in order to have them both with him at the same time, he made them contract a purely

formal marriage. They, however, were not contented with the form alone; and when Isfahān learned that they had children, and was convinced that the reports in circulation about them were true, he caused Isfahān to be executed. — Some earlier historians than Yakubi do not mention this fact, especially it must be noticed that the commentaries on the verses of Abū Nawwās give the names of 'Abbāsa's husbands without mentioning that of Isfahān. Further, Yakubi, like the other chroniclers who repeat this story, only mentions it as one of the events which were reported to have been the cause of Isfahān's execution. Later chroniclers simplify the love story of Isfahān and 'Abbāsa now and then, so that Ibn Khallikān calls the truth of it in question, whilst, however, the arguments he employs to refuse it bring very conclusive. If one detail, found in the Persian *Tahzīb*, must be believed, 'Abbāsa was already forty years old when her relations with Isfahān began. It is quite certain that her second husband died eleven years before Isfahān, and these figures put all idea of a youthful romance out of the question. We may then reasonably look upon this anecdote as the product of popular imagination, which attempted to make the fall of this favourite minister poetical. This is the more likely in that pagan Arab stories contain a remarkably similar episode of the marriage of the minister of a king with the latter's sister; it was very easy to make Isfahān the hero of this story. What the greater number of authorities report on the subject of 'Abbāsa is reported by some about two other beautiful sisters of Isfahān, al-Mahdī and al-Fahdī. The older authorities say nothing about what happened to 'Abbāsa after the death of Isfahān; it is only the later writers who have woven mysterious horrors about her end. The love of 'Abbāsa and Isfahān has frequently appealed to the imagination of Europeans as well as Arabian authors: in 1753 a French romance entitled *Abbāsa* appeared, and then quite recently, in 1904 (Hind Gilson and Albert Tarn, *Les nuits de Bagdad*).

AL-ABBĀSA, name of different places:

1. Capital of a canton (*nahiya*) of the same name, with 2083 inhabitants (1384 with its twenty-five dependencies) in Lower Egypt, province of Shurkiya, district of Zagazig where the Wādī Farafra discharges its waters into the Delta, between Isma'īliya and a station on the Isma'īliya railway, and Tell-el-Kebir, which is renowned for the defeat of 'Arabī Pasha. Now it is an insigni-

current things but in the Middle Ages it held a different importance in that it was the local gathering place for the great fairs, and therefore about twice that time a great fair came and a whole new country for trading. 'Abdāh, that should be called in Latin to have founded it on the occasion of an ancient departure for the coast of the empire at Baghdad, whose name was in that 'Abdāh, should be filled was being a 'Abdāh. It is probable that the foundation of the town goes back to the beginning of the epoch of the 'Abbasids or even further. According to Abu 'Ala' al-Ma'arrī (ed. Jorgule et Maude, II, 100 et seq.) Ma'arrī is situated on a hill and is a fortified place. Lewis (1875 = 1876-1880) 'Abdāh is described by Ma'arrī as a very flourishing and in being better built than Aleppo. It reached its greatest prosperity under the 'Abbasids, in particular under Muhammad al-Ma'arrī. It decayed was brought about by the foundation of al-Ma'arrī by al-Mu'izz al-Dawla, the second in succession to Muhammad al-Ma'arrī. It did not flourish, however, it is said with in the time of the 'Abbasids and on to the present time is a small market town. Ma'arrī al-'Abdāh, the name of 'Abdāh — given al-Ma'arrī down to the same place — is — with not only in the old, but also in the recent times — that quarter of Aleppo, known as 'Abdāh, was founded by the brother 'Abdāh, and has nothing in common with 'Abdāh = (Nasr) 'Abdāh.

N. sp. de Valenciennes, Atlas Ichth. p. 114. N. blumenhans,
N. blumenhans, N. blumenhans, p. 56; N. blumenhans,
N. blumenhans, p. 191. *Diplotropis blumenhans*, Valenciennes, 1809.

7. An insignificant village of 500 inhabitants, in the district of Buz, and the province of Kark, in Upper Egypt (see *Excursion, Assiut & El Fayoum*, p. 11). (Cf. H. Barken.)

ABBASAD, I. C. founded by "Abbas", name

It is a Persian town in the north of the valley of Khokan, about half-way between Samarkand on the east and Mikhred on the west. It owes its foundation to Shah Abbas (died 1628), who settled a hundred Georgian families there. This colony, which he founded, could, according to his plans, serve as a centre for the North-West of Persia and as a base to reach his rule over those regions. Group. *Elzer, 1. Persische, vol. 115-116.*

3. and 3. There are two places of this name in the Manderley country, north of the Caspian Sea, one in the valley of Manderley, and the other on the river Mahmud Ruman; comp. de Slonun, *Musée asiatique en Perse*, p. 157.

4. There is still another 'Abbasid in the neighborhood of Telusan, the existence of which was known at the Middle Ages; see Contreras, *Hist. de España de la Siria* (Paris, 1838), I, 204, 205, note 55.

3a. There is a fifth "Abdusaid" in Persia to the south of Meshhad, near the frontier of Afghanistan, latitude 35° 20' north and longitude 60° 20' east (Chirchik). (M. S. Green.)

"ADAMS, Francis silver coin stamped by "Albino"
1, the Great. Dated July 1864. The coin is
the middle of the 17th century, was still worth 52
centimes. In 1864 a woman, in 1865 the
"Adams" organized mine. In order to produce
the metal needed for the college, Mexican silver

brought through India by the commerce of
Mauritius were really there were also ~~some~~
of the most beautiful and pure of any
kind, the last were not a few. In 1866
the ~~first~~ ^{first} was in Mauritius, used
and is perhaps, with good reason.

[illegible]

ABBASIDES Abbassides, the name of the dynasty of caliphs who ruled in Baghdad from 750 to 1517.

6. Caliph of Baghdad the most celebrated dynasty of Islam, descended from the uncle of the Prophet, al-'Abbas b. 'Abd al-Muttalib b. Hashim. His descendants multiplied under the first four caliphs and under the 'Umayyads in the countries taken by the Arabs, and their relationship to the Prophet gave them high consideration even when they were many centuries later. Especially in Spain, in the Persian provinces of that name, and elsewhere, much larger than it is now. By degrees, the idea of uprooting the Umayyads and placing their own family on the throne entered among the 'Abbasides. They found themselves headed in this design by the descendants of the caliph 'Ali, who for their part considered themselves to have the best right to the throne and who had won over a great many soldiers, particularly in the eastern portions of the empire. The 'Abbasides showed great skill in dealing in themselves the support of the 'Alids for the purpose of eventually demonstrating an active propaganda in the hearts of the people of Persia and amongst the Arab portions of the eastern provinces. Muhammad 'Alī b. 'Abī Aḥmad b. 'Abbas, the great-grandson of 'Abbas, was the one who made active preparations for the final fall of the Umayyad dynasty. After his death between 721 and 726 (723-724), his son Hashim was designated as chief of the 'Abbasides, who made themselves more and more formidable. The result, as being prepared, broke out in the month of Rabi' al-awwal (June 747) in Khorasan, and rapidly became national. The caliph's troops were beaten and, as fortune continued to be against the Umayyad army, the 'Abbasides began kills by kills to throw off their shackles and to show their independence. Baghdad was taken prisoner in 750 (748) by Muhammad II, but his two brothers 'Abū 'l-'Abbas and 'Abū 'l-Ḥusayn took his place at the head of the 'Abbasid party; and, after Nūr had surrendered to the insurgents, 'Abū 'l-'Abbas carried himself to be proclaimed caliph in the year 750 (749). In spite of his bravery, Marwan was defeated on the bank of the Euphrates, and in Muhammad II 750 (January 750); he attempted to fly towards Raqqa, but the enemy overtook him and killed him a second defeat upon him, after which he was killed in the same year. 'Abū 'l-'Abbas, who gave himself the surname of al-Saffar 'The Liberator', caused all the extermination of the Umayyads without pity. He could not, however, stop one of them, 'Abī al-Ḥusayn b. al-'Awwā, from escaping and reaching Spain, where he founded another Umayyad kingdom at Cordova.

Al-Sabih's brother and successor, Ali Hafez al-Majidi, made Baghdad his residence, thus leaving the ~~country~~ ^{city} in the hands of the empire more to its east. The advent of a new dynasty reflected a

him, and he at once handed to Meccah "the man his liberty for the ransom we will pay", said he to the Prophet; but Zaid declared that he preferred to remain with Mohammed.

There were at that time many Arabs amongst the slaves. But even earlier, in the time of paganism, slaves were kept, some black others white, who had been brought from Africa and the northern countries (comp. G. Jacob, *Alfahrah, Diebstahlstelen*, 2^d ed., p. 137; *Katara, Mo'allafa*, vers. 27, ed. Arnold, p. 153). The caliph 'Omar, li G. said, was the first to lay down the principle that an Arab could not be a slave, even though purchased for money in a prisoner of war and foreigners could be reduced to slavery (comp. *Ar-Riwa'iq*, *Chahmagh*, *des Persans*, ante, p. 143, *Chahmagh*, 1. 104). In any case canonical law forbids the Mussulman to make his slave his property; therefore he is not allowed to sell their children (comp. *Howzer*, 1. W. *Law*, *Islamic*, *System*, 1. ch. vii: Domestic life; the lower orders, and a creditor may not sell his Mussulman debtor into slavery, as Roman law permitted. If, however, slaves adopt the Mohammedan faith later — and they usually do so — they remain in servitude.

During the history of the Arabs with foreign peoples in the Middle Ages, the slave trade played an important part, for black as well as white slaves were annually imported in thousands into the Muslim empire. Great numbers of Turkish slaves from Central Asia (Turkmen, Persians, etc.) came annually to the market of Bagdad, where they were sold to rich people and more especially to the Court. But just as the Caliph 'Abd had to pay his tribute to Bagdad, so had the provinces lying in the farthest West of the empire; Africa and the Maghreb (Mauritania)... From the interior of Africa, Sudan proper, a considerable export trade in slaves was carried on with the coast towns of the Mediterranean, which were under Arabian domination. Many white slaves also came from Frankish and German countries. From Spain and from Italian ports, especially from Civitavecchia, the slave trade was considerable, and in the 8th century the Vandals possessed their own slave market in Rome, which was only abolished in 748 by Pope Zacharias (A. von Kremer, *loc. cit.*, 1. 234; p. 154-155).

In recent times Meccah became the centre of the slave trade through political circumstances. The slaves were mostly obtained from Africa and the Caucasus. "The slave trade and female", says *Howzer*, 1. *Meccah*, 11. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100. 101. 102. 103. 104. 105. 106. 107. 108. 109. 110. 111. 112. 113. 114. 115. 116. 117. 118. 119. 120. 121. 122. 123. 124. 125. 126. 127. 128. 129. 130. 131. 132. 133. 134. 135. 136. 137. 138. 139. 140. 141. 142. 143. 144. 145. 146. 147. 148. 149. 150. 151. 152. 153. 154. 155. 156. 157. 158. 159. 160. 161. 162. 163. 164. 165. 166. 167. 168. 169. 170. 171. 172. 173. 174. 175. 176. 177. 178. 179. 180. 181. 182. 183. 184. 185. 186. 187. 188. 189. 190. 191. 192. 193. 194. 195. 196. 197. 198. 199. 200. 201. 202. 203. 204. 205. 206. 207. 208. 209. 210. 211. 212. 213. 214. 215. 216. 217. 218. 219. 220. 221. 222. 223. 224. 225. 226. 227. 228. 229. 230. 231. 232. 233. 234. 235. 236. 237. 238. 239. 240. 241. 242. 243. 244. 245. 246. 247. 248. 249. 250. 251. 252. 253. 254. 255. 256. 257. 258. 259. 260. 261. 262. 263. 264. 265. 266. 267. 268. 269. 270. 271. 272. 273. 274. 275. 276. 277. 278. 279. 280. 281. 282. 283. 284. 285. 286. 287. 288. 289. 290. 291. 292. 293. 294. 295. 296. 297. 298. 299. 300. 301. 302. 303. 304. 305. 306. 307. 308. 309. 310. 311. 312. 313. 314. 315. 316. 317. 318. 319. 320. 321. 322. 323. 324. 325. 326. 327. 328. 329. 330. 331. 332. 333. 334. 335. 336. 337. 338. 339. 340. 341. 342. 343. 344. 345. 346. 347. 348. 349. 350. 351. 352. 353. 354. 355. 356. 357. 358. 359. 360. 361. 362. 363. 364. 365. 366. 367. 368. 369. 370. 371. 372. 373. 374. 375. 376. 377. 378. 379. 380. 381. 382. 383. 384. 385. 386. 387. 388. 389. 390. 391. 392. 393. 394. 395. 396. 397. 398. 399. 400. 401. 402. 403. 404. 405. 406. 407. 408. 409. 410. 411. 412. 413. 414. 415. 416. 417. 418. 419. 420. 421. 422. 423. 424. 425. 426. 427. 428. 429. 430. 431. 432. 433. 434. 435. 436. 437. 438. 439. 440. 441. 442. 443. 444. 445. 446. 447. 448. 449. 450. 451. 452. 453. 454. 455. 456. 457. 458. 459. 460. 461. 462. 463. 464. 465. 466. 467. 468. 469. 470. 471. 472. 473. 474. 475. 476. 477. 478. 479. 480. 481. 482. 483. 484. 485. 486. 487. 488. 489. 490. 491. 492. 493. 494. 495. 496. 497. 498. 499. 500. 501. 502. 503. 504. 505. 506. 507. 508. 509. 510. 511. 512. 513. 514. 515. 516. 517. 518. 519. 520. 521. 522. 523. 524. 525. 526. 527. 528. 529. 530. 531. 532. 533. 534. 535. 536. 537. 538. 539. 540. 541. 542. 543. 544. 545. 546. 547. 548. 549. 550. 551. 552. 553. 554. 555. 556. 557. 558. 559. 560. 561. 562. 563. 564. 565. 566. 567. 568. 569. 570. 571. 572. 573. 574. 575. 576. 577. 578. 579. 580. 581. 582. 583. 584. 585. 586. 587. 588. 589. 590. 591. 592. 593. 594. 595. 596. 597. 598. 599. 600. 601. 602. 603. 604. 605. 606. 607. 608. 609. 610. 611. 612. 613. 614. 615. 616. 617. 618. 619. 620. 621. 622. 623. 624. 625. 626. 627. 628. 629. 630. 631. 632. 633. 634. 635. 636. 637. 638. 639. 640. 641. 642. 643. 644. 645. 646. 647. 648. 649. 650. 651. 652. 653. 654. 655. 656. 657. 658. 659. 660. 661. 662. 663. 664. 665. 666. 667. 668. 669. 670. 671. 672. 673. 674. 675. 676. 677. 678. 679. 680. 681. 682. 683. 684. 685. 686. 687. 688. 689. 690. 691. 692. 693. 694. 695. 696. 697. 698. 699. 700. 701. 702. 703. 704. 705. 706. 707. 708. 709. 710. 711. 712. 713. 714. 715. 716. 717. 718. 719. 720. 721. 722. 723. 724. 725. 726. 727. 728. 729. 730. 731. 732. 733. 734. 735. 736. 737. 738. 739. 740. 741. 742. 743. 744. 745. 746. 747. 748. 749. 750. 751. 752. 753. 754. 755. 756. 757. 758. 759. 760. 761. 762. 763. 764. 765. 766. 767. 768. 769. 770. 771. 772. 773. 774. 775. 776. 777. 778. 779. 780. 781. 782. 783. 784. 785. 786. 787. 788. 789. 790. 791. 792. 793. 794. 795. 796. 797. 798. 799. 800. 801. 802. 803. 804. 805. 806. 807. 808. 809. 810. 811. 812. 813. 814. 815. 816. 817. 818. 819. 820. 821. 822. 823. 824. 825. 826. 827. 828. 829. 830. 831. 832. 833. 834. 835. 836. 837. 838. 839. 840. 841. 842. 843. 844. 845. 846. 847. 848. 849. 850. 851. 852. 853. 854. 855. 856. 857. 858. 859. 860. 861. 862. 863. 864. 865. 866. 867. 868. 869. 870. 871. 872. 873. 874. 875. 876. 877. 878. 879. 880. 881. 882. 883. 884. 885. 886. 887. 888. 889. 890. 891. 892. 893. 894. 895. 896. 897. 898. 899. 900. 901. 902. 903. 904. 905. 906. 907. 908. 909. 910. 911. 912. 913. 914. 915. 916. 917. 918. 919. 920. 921. 922. 923. 924. 925. 926. 927. 928. 929. 930. 931. 932. 933. 934. 935. 936. 937. 938. 939. 940. 941. 942. 943. 944. 945. 946. 947. 948. 949. 950. 951. 952. 953. 954. 955. 956. 957. 958. 959. 960. 961. 962. 963. 964. 965. 966. 967. 968. 969. 970. 971. 972. 973. 974. 975. 976. 977. 978. 979. 980. 981. 982. 983. 984. 985. 986. 987. 988. 989. 990. 991. 992. 993. 994. 995. 996. 997. 998. 999. 1000.

... p. 401. I noticed that Chinese female slaves were not seldom imported into the Holy City from Singapore.

A. LEGAL POSITION OF SLAVES ACCORDING TO THE TERMS OF THE CANONICAL LAW. CONCUBINAGE AND MARRIAGE.

Theoretically slaves have no legal rights whatever; according to Mohammedan law they are merely things, the property of their owner. The latter can alienate them as he likes, by sale, gift, dowry, or in other ways. In the eyes of the law they are incapable of making any enactment, can therefore neither affirm, nor undertake responsibilities, nor make will, and therefore cannot be guardian or testamentary executor; what they earn belongs to their master. Neither can a slave appear as witness in a court of justice. He can, however, at the order of his master (e.g. as a help-ant) make contracts concerning property and accept liabilities, he is then regarded *as a free man* in so far as the Muslim law is concerned.

Between slaves and their masters, according to the terms of the law, marriage is legitimate and only concubinage is prohibited, but in all other cases even for slaves marriage is recognised as legal. Slaves may marry with the consent of their masters. According to most jurists, slaves may have only two wives (slaves or free women), but according to the Malikites they may have four like free Mohammedans. The slave, like the free man, is obliged to give a dowry and must work for it. The dowry, like in female slaves, however, belongs to their owner, since a slave, as such, cannot acquire property. The slave may only repudiate his wife twice. When he repudiates her for the first time, he may, if her waiting term is not terminated, demand her back again; but if he repudiates her a second time, the divorce cannot be annulled. The waiting term (*iddat*) for female slaves is the same as for free women with the following difference: if a female slave loses her husband by death, she observes a waiting term of 2 months and 3 days only, and if she loses him through any other cause, it is of 1 month only, instead of 3 months.

The children of a married female slave belong to her master.

A free man may also according to the law contract a marriage with the female slave of another master. The second part of the law states that the children of such marriages become the slaves of the mother's master. For this reason marriage between a free man and a female slave is, according to most jurists, prohibited only under the following conditions: 1) that he is not yet married, 2) that he does not possess the required dowry for a free woman, 3) that he may be exposed to the danger of unchastity if he remains a celibate, 4) that the female slave is a Mohammedan (comp. *Koran*, vi. 29-30) only the Hanafites permit such marriages also with a Jewish or Christian slave and on occasion on the 2^d and 3^d opinions. The female slaves are married by freemen in a case that happens more frequently than might be expected. *Mohib*, ii. 139.

If a master by virtue of his right of ownership begets a child of his slave, the child belongs to the father's class and is therefore free. This principle was first laid down in Islam. Amongst the

ancient Arabia the rule was *partus sequitur matrem*. The best known case is probably that of the poet Anasir, he was originally a slave, his mother being an Abyssinian slave; it was only late in life that his father gave him his freedom as a reward for his bravery. In the earliest times of Islam, the true Arabian mind was shocked at the idea that slaves should bear their own master's children, and that even children could be *awlad* from slaves (see J. Wellhausen, *Die Ebn al-Kalbi Arabern*, in the *Monat. f. d. Agh. Gesch.*, d. *Wienerb.* zu *Geograph.*, Phil.-hist., XI., 1893, p. 240; A. von Rieuw, *loc. cit.*, II., 106; G. Jacob, *loc. cit.*, p. 213; *Agghat*, vii. 140; comp. J. L. Burckhardt, *Notes on the Bedouins and Wahabys*, London, 1831, I., 182). The slave, who has born her master a child, is called *umm walad*, i. e. mother of [his] child. On the death of her master she recovers her freedom. On this account a *umm walad* never wishes well nor gives his *umm walad*.

The master may have sexual relations only with his Muhammadan, Christian or Jewish slaves, not with unbelievers, and according to the Shafi'ite school, the modern Christians and Jews are to be placed in the same category as other unbelievers, with whom concubinage is absolutely forbidden on account of those "forbidden" books of revelation.

Anybody who has obtained a female slave by purchase or in any other way, may not cohabit with her before he has pronounced that she is not pregnant, so that no doubt shall arise concerning the paternity of the child. In Arabia this is called *al-ihd* (i. e. selling or emancipation as to whether the owner of the slave is free). To this end the law ordains a certain period of probation. If the slave is pregnant, the master must of course wait until she is delivered.

4. LIBERATION (*ihd*) AND PATRONAGE (*wal*).

The liberation of slaves is looked upon in Islam as a good work (*ibrah*), and gives right to a reward in the other world. He who sets free a Muhammadan slave, shall be freed from the fire of Hell; Muhammad is said to have declared:

Naturally only the legal owner of a slave can set him free. If, however, a slave is the common property of several persons and one of the latter gives him his freedom, the slave becomes entirely free if his liberator is able to pay the co-owners the value of part due to them, otherwise the slave is only partly free. Such a slave is called *munshaf*, literally "a divided one".

The *umm walad*, as already mentioned, becomes free on the death of her master. Anybody who becomes the property of his owner relative becomes an *ihd* too. According to the Shafi'ite school, only the direct relatives in descending or ascending line of the owner may become free in this way; according to the Malikiite, also his brothers and sisters, and according to the Hanafite, every person who stands in such blood-relationship to the owner that marriage between them would be illegal, i. e. every *ah al-rahim*.

If anyone says to his slave: "When I die you shall be free", this is called *wal* liberation. According to most jurists (Malikiite and Hanafite), the owner cannot recall the *wal* and the slave (i. e. the *munshaf*) is unalienable.

According to the Shafi'ites, the owner may cancel the *wal* at any other extraordinary disposition, e. g. by selling the *munshaf*, the *wal* being thereby cancelled. In any case all are unanimous that on the death of the owner, the *wal* is to be considered as a testamentary enactment. If therefore the value of the *munshaf* exceeds one third of the value of the estate, only a part of the *munshaf* becomes free and the rest of him remains a slave.

The *al-ihd* is a form of buying oneself free, which Islam has received from the old Arabian custom (comp. above the case of *Yusuf* and *Korah*, *loc. cit.*, 33). It is a contractual liberation, and a *umma* *umma* of it is that the slave pays his owner a certain equivalent for his freedom, according to the Shafi'ite opinion, at least 2 or 3 *misals*. This contract may be canceled by the owner (*al-ihd*), but the slave (*munshaf*) alone can cancel it if he wishes. The owner must allow the slave to obtain property whilst the slave binds himself to pay the price agreed upon. The *munshaf* is unalienable. On payment of the last instalment he is free.

It is praiseworthy to help the slave in his efforts to obtain freedom, and according to the Shafi'ites, the owner should grant him *al-ihd* a reduction on the purchase price of his freedom. A portion of the poor-rates (*zakat*) is to be specially set aside for the *munshaf*. It is desirable for the *al-ihd*, it is praiseworthy of the owner to grant it, but not obligatory (as many of the older jurists are in this assertion).

The slave is called *ihd*, if he or she is neither *munshaf*, nor *munshaf*, nor *umm walad*, nor *al-ihd* nor entirely unfree.

The legal consequence of every liberation is the relationship of patronage (*wal*). The freed slave is the client of the liberator; if the slave without *ihd*, his patron inherits his estate on the death of the latter, then the latter's wife inherits (*al-ihd*) inherit him. On the death of the patron, his patronage is transferred to his *al-ihd*, and besides the right of inheritance it gives its holder certain other prerogatives. The patron is "legal attorney" (*wal*) for the freed female slave, and he receives the blood-money if the freed slave is murdered etc.

5. SLAVES AMONGST MUHAMMADAN JURISTS. TREATMENT OF SLAVES.

"Honor God and be kind.... to your slaves," says *al-ihd* *al-ihd* (v. 40), and according to many impartial jurists, the treatment of slaves in general, in spite of their lack of legal rights in Islam, is not bad. Comp. J. W. Lane, *The Thousand and one nights* (book 13 to chap. 1. On slaves): "The Prophet strongly enjoined the duty of kindness to slaves. Feed your domestics, buy, with food of that which you eat, and clothe them with such clothing as you wear; and command them not to do that which they are unable. These precepts are generally attended to, either entirely, or in a great degree. The owner may cohabit with any of his female slaves... If he has not married her to another man. The condition of many concubine slaves is happy... These and all other slaves of either sex are generally treated with kindness... Their services are commonly light... The general description of travellers in the East are satisfactory

plumage in the year 35. When Ali was obliged to accept arbitration, he wanted to make Abd Allah his representative but his own followers refused to accept this arrangement. Nevertheless he accompanied Abd Allah and was a witness at Ghazat with him. When 'Ali was taken, he received him with words of friendship. Concerning his death during the battle, see generally the one fact is confirmed on all sides, viz. that he took a large sum of money (over 6 millions dinars) from the state treasury of Iraq and then left the town. But, whence several authorities, as for instance al-Ma'arrif, Umar b. al-Khattab and al-Baladhuri, make this incident happen before the assassination of 'Ali, others, as Abd al-Hakim and al-Buhārī, place it during Hasan's caliphate, and represent it as being much more respectable, since, according to their version, Abd Allah went over to Mu'awiya, and got the latter to return the stolen sum for him as a reward for his treachery. At the same time it is true that this possibly is ascribed to 'Abd Allah's brother 'Ubad Allah by al-Ma'arrif, al-Baladhuri, and Ya'qubi; yet it can hardly be doubtful but that this is a later distortion of the facts made in order to whitewash the celebrated member of the 'Abd Allah family and that 'Abd Allah really became his enemy. The fact that after al-Hasan's assassination he recognized the rule of the pious 'Umayyad could not be denied even by the 'Abd Allah historians. In order to palliate to a certain extent the undeniable fact that he was a renegade al-Ma'arrif made him pretend in comparison with the four candidates for the caliphate, against Mu'awiya's efforts to secure to sovereign authority for his son Yazid, but this is certainly a merely barefaced fiction. After Mu'awiya's death he quietly did homage to Yazid on perceiving that the latter had a majority on his side. He died in 71 in the year 65 (43-44), or, according to some, in the year 64 or 63.

'Abd Allah does not owe his fame to his political activity, which is but touched upon by his biographers, but to his greatly admired knowledge of profane and sacred tradition, of jurisprudence and commenting the Koran. He is celebrated as the Doctor (Mulla) of the Community (*Uddat al-'Umma*), and is ~~known~~ the way ~~the~~ traditions contain the most exaggerated accounts of his infallible scholarship and of ~~his~~ interest the chapter took in this great position. Criticism has, however, come to a different conclusion and has exposed him as a conscientious liar, whose forgeries quite correspond to his cunning political tricks. A partial justification for him might be ~~found~~ in the possibility that several of the traditions, which go under his name may have been based upon him by later writers. Amongst his traditions which refer to his own times, or to the immediately preceding period, there are to be found the most barefaced misstatements, as, for instance, the dream of the night 'Alaka. (H. al-Hafsa, ed. Wustani, pp. 228 et seq.), the collapse of the idols at Muhammad's wedding (ib., pp. 229 et seq.), the participation of this in the council of the Banu Hashim (ib., p. 322), etc. He did not, however, confine himself to relating occasional traditions and in answering the questions put to him; he welded his tales into a great system which took into account the creation, the history of mankind, and the pre-Islamic times. For this purpose, since

he could not possibly learn everything, he made use of information supplied to him by other Jewish converts to Islam, especially that supplied by a Jewish Arabian Jew, Jacob b. Mair, but he so modified the matter, that obtained till it agreed with the Jewish and Islamic ideas. Amongst other things he described a theory of the rise and development of ancient Arabian history in which the opposition of the Koran and all sorts of biblical and other traditions are most brazenly mingled. Only in those rare cases where there is absolutely no chance to suspect lying, may his traditions be used for historical research.

ABD ALLAH s. 'ABD ALLAH. (See AL-MAS'UDI.)

ABD ALLAH s. 'ABD AL-KALAM (Malay pronunciation *Ain Khan* or *Ain K'K'at*), surnamed *Mundu*, i. e. teacher of languages, was born in 1896 in Malacca, where his grandfather, the son of Sheikh 'Abd al-Kalim, who came originally from Yemen, had settled. At a early age, 'Abd Allah received lessons in Malay from his father, who is said to have been an expert Malay scholar, and endeavored to make himself fully master of this language by reading Malay writings and by associating with educated Malays. As he learned foreign language, and continually came into contact with Europeans, as, for instance, Parquier, Raffles, and the missionaries Milne, Morrison and Thomson, his culture increased regularly.

Shortly after the founding of Singapore (1819), he ~~was~~ himself in that town and earned his living in many different ways. He acted as an interpreter, gave lessons in Malay, wrote letters, and assisted the American missionaries Smith, Newman and others in translating mission books and school books.

'Abd Allah may be ranked amongst the best Malay writers of the 19th century, and his works are an undeniable testimony of his extraordinary range of knowledge (for a Malay and his great culture). It is to be regretted that he did not always pay attention to style and that his language is often lacking in purity; such defects which are to be ascribed to his intercourse with Europeans.

His principal book is the so-called *Kitab al-Furqan* (ed. J. J. J. J.), in which ~~after~~ *he* mentions politically important passages, as Parquier and Raffles (whose secretary he was), and explains the advantages of a European education over an Indian one, even though he at the same time sharply censures the administrative mistakes of the English and Dutch. A

Immediately after he was proclaimed, the new sultan of Morocco was forced to fight against his brother, who contested the supreme authority. The claims of Fez, having been won over to the party of Yusuf Zaidan, decided by a *fetwa* (judicial decision) that Abd Fata 'Abd Allah had been illegally proclaimed, finally because the legitimate sultan had been already proclaimed, and secondly because the rights of a son of a slave ('Abd Allah's mother was a freed slave of al-Manqir) are not equal to those of a son of a free woman. War immediately broke out and the two armies marched against each other.

The ruler Ahmed al-Manqir had had three sons. The eldest, Muhammad Shaikh, brother of Abd Fata 'Abd Allah by the same mother, had been entrusted with the government of Fez. But, regarding his old father's partiality for Zaidan, he revolted and attempted to seize the city. Al-Manqir immediately left his capital, Morocco, went to Fez, succeeded in seizing the city and sent him to Morocco as a prisoner. He was still there in confinement at the time the following events took place.

Muhammad Shaikh was adored by his troops. Abd Fata was persuaded to pardon him and to put him in command of an army corps. This was done on condition that Muhammad Shaikh should give himself up to Abd Fata again after the battle.

When the two hostile armies met on the banks of the Umm al-Rabi'a, half of Zaidan's soldiers fell him in the lurch and joined Muhammad Shaikh. The defeated Zaidan, who tried to reach Fez and fortify himself there, was obliged to flee and take refuge with the Turks at Wadhia. Muhammad Shaikh, for his part, sent back to Abd Fata the regiments entrusted to him, and he added to them, as prisoners, the men and half of Fez, who had brought about the elevation of Zaidan; but did not return to give himself up again to his brother.

Abd Fata had to accept matters as they stood. The only manner in which he could mark his displeasure was to send back the key to Fez, fully pardoned and loaded with presents. The motif had died on the way.

The two brothers were not long in beginning to fight for the possession of Morocco. Their armies met, according to some, at Akhla, according to others, at Mara al-Ramhal. Abd Fata 'Abd Allah was defeated and had to flee towards Son (1015 = 1606). The army of Muhammad Shaikh, being masters of Morocco, committed such atrocities that the people revolted and proclaimed Zaidan, who was roaming in the neighbourhood, as their sovereign.

This proclamation caused the reconciliation of Abd Fata and Muhammad, who first intended to let and then to fight al-Kabir, pursued by Zaidan's Turkish khalid, Murqas Pasha. Muhammad Shaikh then went to Spain to implore the aid of Philip III, whilst Abd Fata and 'Abd Allah, the son of Muhammad Shaikh, tried to hold the country against Zaidan by the side of Yusuf (1017 = 1608). With the help of some Berber contingents they delivered an attack on Fez. The death of the khalid Murqas Pasha in the battle, followed by the rout of Zaidan's troops, enabled Abd Fata and his nephew to seize the town (Kabir II 1618 = July 1609). But Abd Fata did not enjoy

the fruits of their joint victory for long. A plot of the khalid of the Sherika to proclaim him sovereign at the expense of Muhammad Shaikh was discovered by his nephew. The latter resolved to prevent it and, accompanied by his khalid, Hassan Abu Dubala, went by night to Abd Fata's bedroom. He was on his journey-carpet surrounded by his wives. 'Abd Allah b. Muhammad Shaikh sent the women out and strangled his uncle, who fought to the last gasp and tried to strike him with his feet (Hijrida I 1018 = August 1609).

'Abd Allah was a religious and studious man. He had inaugurated his rule by building a mosque at Morocco near the tomb of the saint Abu 'Abd Allah al-Sakir. In front of this mosque he built a library, which he filled with rare books and valuable registers. He hoped by so doing to obtain the assistance of the talent in the affairs of his government.

(A. Cour.)

ABD ALLAH b. 'ALI, uncle of the khalid Abu 'Abd Allah al-Sakir and khalid al-Manqir. 'Abd Allah was one of the most active participants in the battle of the 'Abbasids against the last Umayyad khalid, Marwan II. He was commander-in-chief in the decisive battle at the Greater Zab, where Marwan had his army, and when the latter took to flight, 'Abd Allah pursued him, soon after conquered Damascus and marched on to Palestine, whence he had the fugitive khalid pushed to Egypt. Even more implacably than his brother 'Ali b. 'Ali did 'Abd Allah wage war on the Umayyads, who were still alive, and struck him as method to wipe them out root and branch. During his stay in Palestine, he had seventy of them murdered at one blow. Such cruelty naturally caused ill-will against the new ruler, and a dangerous rebellion in Syria broke out under the leadership of Abu Muhammad, a descendant of Mu'awiya I, Abu al-Walid b. al-Kawthar, the governor of Hama. The rebels at first inflicted a defeat on the 'Abbasid troops, but were beaten by 'Abd Allah in 131 (750) at Marj al-Sakhr. As governor of Syria, 'Abd Allah threw out the safety of the new dynasty. After the death of Abu 'Abd Allah, according to others to the end of his reign, he made claims to the caliphate, which he could lose not only on his age but also on his important services to the war against the Umayyads. Moreover he had at his disposal a considerable army, which in reality he was to use against the Byzantines. When he learned that the powerful governor of Khurasan, Abu Muslim, had declared for the caliph al-Mansur, he gathered 17000 Khurasanians in his army, because he knew that they would never fight against Ali al-Mutawakkil, and with his remaining troops proceeded against the latter. He was, however, in Hijrida II 137 (Nov. 754) defeated at Siffin and had to flee to his brother Sulayman, the governor of Kufa. After a couple of years, the latter was dismissed, and 'Abd

Allāh was arrested by order of the caliph al-Mu‘izz, or his successor some 7 years in prison, then in the year 437 (1044) he was taken into a house that had been purposely undermined; it fell down on him and buried him under the ruins. At his death he is said to have been 52 years old.

‘ABD ALLĀH a. AMĪR, governor of Bayra, was born at Mecca in the year 4 (626). He was a Kharidite and a cousin of ‘Uthmān b. ‘Affān. ‘Abd Allāh is principally known as the conqueror of a great part of Persia, when, in the year 29 (649-650), ‘Uthmān gave him the government of Bayra. ‘Abd Allāh went to Arab. Khuzestan and brought it, as well as Mīskīn and many other places, under the rule of the Arabs. Māshar and Sarakhs capitulated, and there only obtained peace on condition of paying an annual tribute of two million dirhams. In the year 30 (656-657), ‘Abd Allāh was one of the first to respond to the appeal of ‘Alī to avenge the death of ‘Uthmān. He helped ‘Alī with money and arms in her march towards Bayra. After ‘Alī’s forces were defeated by ‘Alī, ‘Abd Allāh took refuge with a man of the Banī Quraysh, who took him to Hama. He lived there till 41 (661-662), when Mu‘awiyah reinstated him in the government of Bayra. But, finding him too lenient towards Muslims, Mu‘awiyah dismissed him in 44 (664-665). Since then he seems to have lived in retirement until his death at Mecca in 59 (678-679).

‘Abd Allāh was also renowned on account of his numerous public works: he planted date palms, dug wells at al-Nahd and Baryān, and two canals near Bayra and canal of Ustīn, a suburb of Bayra. He was also a traditionalist; he transmitted a tradition from the Prophet himself.

‘ABD ALLĀH a. HANĀL. See ‘ABD ALLĀH.

‘ABD ALLĀH a. DĪYĀK a. ANJALĪ, nephew of the caliph ‘Alī. ‘Abd Allāh’s father had gone over to Islam very early, and took part in the emigration of the first believers to Abyssinia, where, according to the common belief, ‘Abd Allāh was born. On his mother’s side he was a brother of Mu‘ammar b. ‘Abd Rih; his mother’s name was Azma bint ‘Umayr al-Khath‘amiya. After some years the father returned to Medina taking his son with him. ‘Abd Allāh became known chiefly on account of his great generosity, and received the honorary surname of *Ṣāḥib al-Ḥadīq*, ‘the owner of generosity’. He appears to have played no very important part in politics, although his name crops up from time to time in history during ‘Alī’s time and that following. When Mu‘awiyah tried to throw suspicion on Kālī b. Sa‘d, the valiant governor of Egypt, to damage him in ‘Alī’s eyes, ‘Abd Allāh advised the removal of Kālī; ‘Alī allowed himself to be persuaded and took the fateful step to replace him by Mu‘ammar b. ‘Abd Rih, who in a very short time brought the whole of Egypt into the greatest confusion. This took place in the year 36 (659-660). When in the year 60 (680), after

‘Alī’s accession, the Suffites in Kufa summoned Mu‘ammar b. ‘Alī to proceed to that city to have himself proclaimed caliph, ‘Abd Allāh amongst others endeavored to dissuade him from this dangerous enterprise, but without success. The date of ‘Abd Allāh’s death is generally given as 80 (699-700) and the place Medina, but according to others, he did not die before the year 84 or 85. Besides, 87 or 90 is also given as the year of his death.

Bibliography: Tabari, I. 324; II. 104 of 104; III. 2334 of 104; Ibn al-Athir (ed. Torab), III. 22 of 104; Nawwāl (ed. Wüstenf.), pp. 337 of 104. (K. V. ZETTERSTADT.)

‘ABD ALLĀH a. ḤAMMĪL, one of the followers and nephews of the Prophet. ‘Abd Allāh belonged to those who had emigrated to Abyssinia and later came back to Medina. He was the leader of the ill-renowned sect on Najd during sacred months, of which he was, in 24, treated. He took part in the battles of Badr and Uhud and met his death in the latter.

Bibliography: Ibn Sa‘d, III. 62 of 104; Ibn al-Athir, *Ud-dawla*, III. 131. (M. T. HONIGSMAN.)

‘ABD ALLĀH a. HANMĀN a. HAMMĪN, called *‘Abd al-Halīq*, of the tribe of Taghlib, was appointed governor of al-Mawālī (Mawālī) by the caliph al-Mu‘tazz in the year 203 (905). In which place he had to fight against the local Arab Kurds. He took no part in the conspiracy to proclaim the al-Mu‘tazz [q. v.] caliph instead of al-Mu‘tazz, in which his brother Hammad played a leading part; he was indeed, on the failure of this enterprise, entrusted with the task of capturing his fugitive brother, in which he was successful. When, however, he was dismissed from his office in the year 301 (913-914), he rose against the caliph. As he was killed in Shīrāz [q. v.], who was sent against him, he was pardoned by al-Mu‘tazz and presented with a state dress; more than this, he was reinstated as governor of al-Mawālī. It is, however, true that, when his brother Hammad again rebelled in the year 303 (915-916) and was taken prisoner, he was arrested together with all his family. Set free in 305 (917-918), he was in 308 (920) entrusted with guarding the road to Khosrau and Hama and was again made governor of al-Mawālī, whither he, however, sent his son Hammad as his representative. The latter became his successor. After many wars (to which he used his banner ‘*‘Abd al-Halīq*’ ‘the father of fighting’) with the Karakhanids, with Yūsuf b. ‘Abd al-‘Azīz [q. v.] and others, he met his death in the year 317 (929), when the revolution, which he and others, dissatisfied with al-Mu‘tazz’s rule, had instigated to proclaim al-Mu‘tazz caliph, was frustrated after some initial success. ‘Abd Allāh was the real founder of the house of the Hamdanids [q. v.].

Besides these the Berlin Library possesses twelve other (bibliographical and polemical) writings of him; others enumerated by Ahlwardt *ibid.*, N^o 4950, XI.

Biographical: Abd Allah, in *Catalogue*, vol. II, p. 111; *Legation-Bureau* (2^e edn.), I, 417 et seq.; *Urschilman*, *Genl. d. Arab. Lit.*, I, 403.

(HROCKELMANN.)

ABD ALLAH b. HAKAMA, one of the leaders of the uprising against Yazid I. 'Abd Allah was born in the year 665; his father had fallen in the battle at Marat Ubad in 668 (year 4166). 'Abd Allah came to the caliph as a member of the deputations, which the governor of Medina, 'Umar b. Muhammad, sent to Damascus to bring about a reconciliation between the disaffected elements of Medina and their caliph. The deputations were received with many marks of honor by Yazid and were treated with costly presents; but when they had returned to Medina, they denounced the caliph as a godless and voluptuous man, entirely unworthy of the caliphate, and 'Abd Allah distinguished himself especially by his eloquence against him. Consequently, the members of the deputations family were ignominiously driven out and the government was handed over to 'Abd Allah. In these circumstances the caliph was obliged to punish the rebels with great force, and towards the year 671 (681) he sent an army under the able leadership of the old general Muslim b. 'Uqayl against Medina. He received exact information of the state of affairs in Medina from one of the called leaders, subsequently caliph 'Abd al-Malik b. Marwan, and then took up a favorable position on the plain, the lava covered region east of the town. After lapse of a three days' grace, which Muslim had been ordered by Yazid to accord to the Mellukes, a bitter fight began and ended with the complete defeat of the rebels (after 11 Muharrar 41—August 685). 'Abd Allah took part in the battle and showed great courage. About noon he retired to his private room, then rushed into the thick of the fight again till he was attacked by two Syrians, and finally overcame under their blows. His head was cut off and brought to Muslim. The two soldiers who had killed him received valuable gifts from the caliph as a reward.

Biographical: Ibn Sa'd, i, 15 et seq.; *Tahrik*, ii, 402 et seq.; Ibn al-Athir (ed. Tamm), v, 172 et seq.; A. Müller, *Die Arab. in Mesopotamien*, I, 185 et seq.; *Wellhausen*, *Der arab. Volk und ihre Schrift*, pp. 96 et seq. (K. V. ZIEGLER.)

ABD ALLAH b. HAKAM b. al-HAKAM, chief of the 'Alids. 'Abd Allah was treated with great honor by the caliph of the Umayyad dynasty, and when he visited the first 'Abbasid caliph Abu 'Abdullah al-Saffar at Aulais, the latter received him with great distinction. Hence he returned to Medina, where he soon fell under the suspicion of the successor of al-Saffar, al-Mansur. Yet 'Abd Allah owed his caliphate not so much to himself as to his two sons Muhammad and Ibrahim. As early as the year 250 (754), when al-Mansur

led the pilgrimage, the latter's suspicions were aroused, because they did not appear with the other Haggabides to greet him, and his suspicions fell more especially on Muhammad. After his accession al-Mansur tried to wind the Haggabides as to Muhammad's real opinions, but they spoke only good of him and endeavored to excuse his attitude. Only al-Hakam b. 'Ali advised the caliph to beware of this dangerous 'Alid. In order to remove all doubts, al-Mansur ordered 'Abd Allah to come to get into 'Abd Allah's confidence by means of presents and forged letters from Khawass, the usual center of 'Alid propaganda. At first 'Abd Allah was very cautious, but finally fell into the trap, and when 'Uthayb asked him for an answer for his supposed companions in Damascus, he did indeed refuse to give one in writing, but asked him to inform them by word of mouth that he greeted them and that his two sons would rise up in the near future. As soon as 'Abd Allah had in this manner convinced himself of the confidence intentions of the 'Alids, he at once informed the caliph, and when the latter in the year 190 (758) again made a pilgrimage, he invited 'Abd Allah to come to him and asked him if he could really come on his return. 'Abd Allah assured him of his absolute confidence, but when 'Uthayb suddenly appeared, he understood that he had been betrayed and took refuge in Khawass, al-Mansur, however, had him seized. 'Abd Allah's relatives shared his fate, but the caliph was not able to seize his two sons. When he again came to Medina in the year 194 (760) after having accomplished another pilgrimage, he took the prisoners with him to Basrah, and soon afterwards 'Abd Allah died there in prison at the age of 75. According to current accounts, he was murdered by al-Mansur's orders.

Biographical: *Tahrik*, ii, 433 et seq.; *ibid.*, 145 et seq.; Ibn al-Athir (ed. Tamm), v, 172 et seq.; *Wellhausen*, *Genl. d. Arab. Lit.*, I, 403 et seq. (K. V. ZIEGLER.)

ABD ALLAH b. ALI b. 'Abd al-Mu'izz al-Tamimi. The champion of the 'Alid dynasty, which are so valuable with respect to the history of Khawass, are very sparing in details about this personage. And yet he has given his name to the branch of the Wahabites, who opposed the relation between Ali and Muhammad, and who have developed principally in the Maghrib, where they still exist in great numbers. He is mentioned as having been a teacher of the *shu'ba* of the doctrine of the 2. half of the 1st century of the Haggas.

He maintained many controversies with the Haggabites, who gave themselves up to the worst excesses and disapproved the primitive doctrine of the 'Alids, and following the suggestion of 'Umar b. 'Ali, he went round the Wahabites, who wished to remain within the limits of common sense and the Sunna.

Wahabite chroniclers say that 'Abd Allah b. 'Ali took no part in the rebellions of the Khawabites against the caliphate but lived in retirement. Al-Buhārī in his *Ar-Risala al-Mawdu'ia* gives an account of a very dignified letter on religious polemics, which he sent to 'Abd al-Malik b. Marwan (comp. *ibid.*, *Mutalib d. Sirat*, *Genl. d. Arab. Lit.*, I, 174 et seq., 175 et seq.), who gives a German translation of two letters by 'Abd Allah in reply to a message, which this person had sent him by a certain Siman to Aqim.

ABD ALLAH 1. *Abū al-Ḥasan* al-Sulaymī, governor of Khurasan and one of the companions of the Prophet whose tradition is transmitted in the year 31 (651-652), he held the command of the part of the troops of Abd Allāh b. Amir (q. v.) which attacked Mecca and Esfahān in the following year. Abd Allāh b. Ḥashim, at the head of 1000 men, by an ingenious stratagem forced Kari's 4000 men and killed Kari. It was then that he obtained from Abd Allāh b. Amir the governorship of Khurasan.

After the death of Mu'awiyah b. Yazid (684-694), Abd Allāh, having recognized Abd Allāh b. al-Zubair as caliph, rebelled against the Umayyads. He also seized Mecca and Medina, where he appointed one of his sons as governor. As soon as his authority was established, he began to oppress the Christians although they had helped him in his struggles with the Umayyad forces, and a dangerous war broke out between them. Abd Allāh continued governor of Khurasan till the year 72 (792) when Abd al-Malik invited him to swear fealty to him, promising him the governorship of Khurasan for seven or ten years. Abd Allāh refused; a battle was fought near Mecca in which Abd Allāh b. Ḥashim was killed in the year 75, some time after Abd Allāh b. al-Zubair.

Bibliography: Tabari, i. 886; ii. 35-36; *Islāhīyat* (ed. de Goeje), pp. 356 et seq.; Ibn al-Aṣṣī, *Ḥisn al-Quds*, iii. 128.

(M. S. S. 1000000)

ABD ALLAH 2. *Abū al-Ḥasan*, well-known ascetic, (died about 86) (874-875), came originally from al-Ahwaz. His father Mahdī practiced as an *ḥakīm* in that place, whence his name Mahdī al-Ḥakīm. In that place these fondled once long heretical religious views ~~prevailed~~ to Islam, and the occult ~~practices~~ indeed as have had relations with the *ḥakīmīya* (q. v.) and the *ḥarīḥīya* (q. v.). The two became a learned theologian, who according to *Maṭṭī* exercised nearly all religious systems and evolved one of his own, which is, however, not quite definitely known to us. He takes his place in history not as a writer but as the founder of a religious-political party. Starting from the ideas which join the *ḥakīmīya* with the *ḥarīḥīya*, his own followers in the name of an 'Alid who had not yet made a public appearance, no doubt from the beginning with the religious desire to get himself in the latter's place. From a branch of the 'Alides, the descendants of 'Alī b. Abī Ṭālib, appears to have joined him, for he was received by them in Kufa after his solitary in 'Aḥmad al-Mahdī, which he had gone, but for some reason or other come to an end. Therefore, no doubt under compulsion, he had went to Salamiya in Syria, where after his death the agitation was continued by his descendants, till finally the whole movement culminated in the spring of 88 *Fāṭimīya* (q. v.). Abd Allāh and his successors worked through secret missionaries, who systematically endeavored to excite the expectations of the faithful, and thereby were able to direct their attention to 88 *Alid* of the 'Alid' (*Sūfi al-Zaman*) who was said to make his public appearance. He is also said to have given himself an air of supernatural knowledge or divine tricks, especially by using carrier pigeons. But as a matter of fact we know nothing with certainty as to his methods

of propaganda. In his own region missionaries belonged to al-Ḥashimī, usually called *Ḥashimī* (i. e. *Ḥashimī* *Ḥashimī* *Ḥashimī*, after whose the *Ḥashimīya* [see *Ḥashimī*]) were named, and a certain 'Alid, who endeavored to defend the opinions of the sect in dissenting writings which have not been preserved. Varying statements are made concerning the descendants of Abd Allāh [comp. *Fāṭimīya*].

ABD ALLAH 3. *Maṭṭī* (see *Maṭṭī*).

ABD ALLAH 4. *Maṭṭī*, *Maṭṭī*, *Maṭṭī*. After the death of Abd Ḥashim, a grandson of All, claims were laid to the imamate from several quarters. Some asserted that Abd Ḥashim had formally transferred his rights to the dignity of Imam to the 'Abbasīde Muḥammad b. 'Alī. Others thought he had spoken in favor of Abd Allāh b. 'Aḥmad al-Kindī and wanted to proclaim him Imam. As he, however, did not come up to the expectations of his followers, they turned from him to *Maṭṭī* *Maṭṭī* *Maṭṭī* *Maṭṭī*, a great-grandson of 'Alī's brother 'Abī Ṭālib, to be the rightful Imam. The latter asserted that both the godhead and the prophetic offices were united in his person, because the spirit of God had been transferred from the one to the other and finally come to him. In accordance with this his followers believed in the metempsychosis and denied the resurrection. In *Maṭṭī* 127 (101. 744) 'Abd Allāh revolted in Kāfa where many joined him. He gained especially many followers amongst the *Ḥashimīya* (q. v.). The latter captured the Citadel and expelled the prefect. In a short time, however, 'Abd Allāh b. 'Aḥmad al-Kindī, the governor of 'Isf, made an end to his things. When it came to fighting, the ever unshakable *Maṭṭī* deserted; only the *Ḥashimīya* fought bravely and continued the battle till 'Abd Allāh was granted an unimpeded retreat. From Kāfa he proceeded at first to Madā'ina and then to Mecca. His power was in no way broken. From Kāfa and from other places *Maṭṭī* *Maṭṭī* *Maṭṭī* *Maṭṭī* in to him and he was *Maṭṭī* *Maṭṭī* *Maṭṭī* *Maṭṭī* in winning over several important points in Persia. After he had ruled for some time in Isfahan, he went to Isfahān. The descendants of All had from before been honored as the rightful heirs to the imamate especially in the eastern provinces of the empire. It was therefore easy for him to extend his rule over a great part of Mecca, Ahwaz, Fārs and Kerman. The *Ḥashimīya*, who had fought against *Maṭṭī* b. 'Alī in the Tigris, withdrew to 'Abd Allāh's domain, and other opponents of the caliph also joined him. In the end, however, his power was not able to hold on. Amir b. Ḥashim, one of *Maṭṭī*'s generals who had been entrusted with the parents of the *Ḥashimīya*, made a raid into 'Abd Allāh's domain and brought his tale to a sudden end. In the year 129 (746-747) 'Abd Allāh was defeated at *Maṭṭī* *Maṭṭī* *Maṭṭī* *Maṭṭī* and forced to

see to Khawassah, where Abd Allah, the well-known general of the ‘Abbasides had him executed. After his death, some of his followers called al-Liyadhi (q. v.), maintained that he was still alive and would return, so that when he did, they, the assembled Muslims, believed his spirit had entered Ishâq and so al-Liyadhi of Andalus.

‘ABD ALLÂH b. Muḥammad, thirteenth prince in Spain. ‘Abd Allâh, who succeeded the throne of Cordova after the sudden death of his brother al-Manḥūr in 275 (888), has been characterized as “one of the most negative phenomena in the whole history of Islam,” and in truth his twenty-four years of power were a most unhappy period for his subjects. In order to secure his life and his throne against imaginary dangers, the sanguinary tyrant treated his nearest relatives in the most cruel manner possible. His brother and predecessor al-Manḥūr was according to all appearances poisoned by ‘Abd Allâh’s influence. His brother al-Hakim was with a similar fate. His third brother Hisham was put to death on a trumped-up charge, and Abd Allâh employed the same means to get rid of his two sons al-Hakim and al-Muḥammad. He had them both executed on a mere suspicion. Whilst such horrors were happening in Abd Allâh’s presence, the country was divided by different parties, who fought each other, and at last the Emirate possessed little more than the capital and its environs.

Abd Allâh’s most dangerous rival was the Spanish popular hero ‘Umayy b. Hafṣ. Even at the beginning of his reign ‘Abd Allâh was obliged to offer him peace and to renounce his governorship of the provinces over which he ruled. The treaty of peace was, however, soon broken. When the Christians of Castile became weary of ‘Abd Allâh’s tyrannical rule, they broke out of the town and after they had succeeded in capturing the fortress of Puel, the present Aguilas, they turned to ‘Umayy and begged him to join them. The latter at once appeared at Puel, but was defeated by Abd Allâh’s troops in 278 (891). After a war lasting several years with varying success, ‘Umayy became a Christian, which, however, only rendered his position worse. In the year 285 (898) he made an alliance with Ibrahim, the chief of the Hama (Hammâd) in Seville. Thereupon Abd Allâh had induced to be attacked with a treaty of peace, but as early as 286 (902) hostilities again broke out. After ‘Umayy and Ibrahim had separated, ‘Abd Allâh succeeded in winning several battles, and at his death in 300 (Oct. 912) the war had already entered into a quieter stage. ‘Abd Allâh’s grandson, ‘Abd al-Rahmân b. al-Manḥūr, became his successor, but having had homage paid to him before his death.

Bibliography: Ibn ‘Adhâr, *al-Bayân al-Mughrib*, l. introduction, il. 124 et seq.; *Umayy*, *His. des Sarrasins d’Espagne*, l. 224 et seq.; A. Müller, *Der Islam in Portugal und Asturien*, il. 485 et seq. (K. V. Zettner-Steuern.)

‘ABD ALLÂH b. Muḥammad, the second important branch of Mecca of the family of the ‘Abbasids, succeeded his father as *shaykh* in 1274

(1854) and held this dignity peacefully until his death in 1292 (1877). The opening of the Suez Canal, which took place during his term of office, greatly facilitated the work of the Turks in extending their sovereign rights. Several missions which were brought on or prepared under ‘Abd Allâh’s government gave proof of this: Hidda, Moosa and Tâli were connected by telegraph with the outer world, Turkish administrative offices were installed in these towns, as well as in Medina, whilst the campaign of Yemen (1872) completely established the Turkish rule in Arabia.

Although ‘Abd Allâh was an less energetic than other sheikhs to use his office for enriching himself, yet he knew how to win the affection of the population of the Hijâz. His amiable, dignified conduct and tact in dealing with Bedouins and town-folk, as well as with the representatives of the Ottoman sovereign are to the present day praised as being unexcelled.

Bibliography: L. Suweid, *Hijra*, Medina, l. 120-123. (Sawad Hindawi.)

‘ABD ALLÂH b. Muḥammad, successor of the Mahdi in the Sudan. ‘Abd Allâh b. Muḥammad al-Tahî, the collector Khalfâ and successor of the Sudanese Mahdi Mohammed Ahmed (q. v.), was born, it seems, to the middle of the latter of the 19th century. He was a native of the South-West Africa and belonged to the tribe of the Arab-Sudanese Baggara (Baggara), particularly to the Khartûm and here again to the group of the Arab Sudan Surra. His father Mohammed al-Fayth was *shaykh* in the seventies with his whole family with the intention to emigrate to Mecca, but died on the way at Far Khartûm. Then ‘Abd Allâh went to the Khartûm to Mohammed Ahmed who had then not yet publicly appeared as the Mahdi, and was received into his service (q. v.). He soon became the Mahdi’s right hand and seems to have inspired him with many things, e. g. with his journey to Kordofân, where he prepared beforehand the elevation of the latter. He then, in August 1881, took part in the bloody fight between the Mahdi and Sulaymân ‘Abd ‘Azîz on the island of Aba, and here soon after followed his occupation as Khalfâ. He is called “the first of the four caliphs”, ‘Alî Bek al-Fayth, which title was solemnly conferred to a later proclamation between the capture of al-‘Ushîl and that of Khartûm. He belongs to me and I belong to him”, says the Mahdi to his edict. For the rest, his history is that of the Mahdi, as he always accompanied the latter and was present during the victorious campaign of the Mahdiyya (q. v.) till the capture of Khartûm. (20th Jan. 1885.) Months later (22nd Jan.) the Mahdi died suddenly, and naturally ‘Abd Allâh assumed the reins of government. The Mahdiyya proper was buried together with the Mahdi; the religious enthusiasm had to be replaced by a severe and cruel absolute government. To this end the Khalfâ, who was a stranger to the region round Khartûm, needed the help of his fellow-Urthuman, and his interior policy was therefore directed to bring the tribes of the Western Sudan (Kordofân, Darfur) willingly to him. But on the other hand to remove the tribes of the Nile region to distant outposts. Without any moral restraint, his rule was one of terror, of which eye-witnesses, such as Staud, Oetwilder, Neufeld and others, give most dreadful details.

6 And Akbar's principal object was to create a family dynasty, and, in deed, a religious Mohdism, to furnish an hereditary administrator for his family. Akbar's Station in his life - some theories in the Indian chapter - xxi and xxi, has given the best description of his empire and rule. Naturally limitations against Akbar Akbar were not lacking. He was too great else to neglect them, but in the long run the forces that held his empire together weakened more and more and only the ever present fear of death held his borders together, until the battle of Umerkot (Umerkot) brought about the complete downfall of his power. The empire he had inherited from the Shahids grew under his rule (spread) the south, the south and especially towards the east (Abyssinia), though he ~~did not~~ for longer left Umerkot. This growth was due to the English withdrawing from the Sudan and to the defeat of the Abyssinians. The battle of Tond (5 Aug. 1894) was the turning point, then came the famous halting of the railway, Kitchener's advance, the battle of the Akbar on the 24 April 1895, and finally on the 2 Sept. 1895 the battle of Umerkot. With a few faithful followers Akbar fled to Kandahar, where he died fighting like a warrior on the 24 November 1895.

ABD ALLAH a. NIQUANISTA [See 188
AL-FARABI.]

ABD ALLAH AL-MUHAMMAD. 1922

'ABD ALLAH n. MUSA n. NUSRA, eldest son
 of the famous conqueror of the Maghrib and of
 Spain. He was educated by his father, when the
 latter set out for Spain, with the admiration of
 Ishiyā (93 = 712). He likewise took his father's
 place when the latter, having been deposed by
 'Isāb, left for the East, whence he never returned.
 Involved in the downfall of his family brought about
 by the caliph 'Abdullāh, who would not see with-
 out dissent: one son of Musa ('Abd Allāh) the
 governor of Ishiyā, another ('Abd al-'Alā) of
 Spain, and a third ('Abd al-Malik) of the Maghrib,
 he was deposed in 96 (714-715) and was replaced
 by Muhammad b. Yazīd, who took possession of
 his government in 97 (715). He died in obscurity.
 According to the *Al-Bihar al-Mawna al-Khazra*, l.
 33, 'Abd al-Mahdī (ed. Jayz al-Math. l. 106)
 and al-Nawālī, who give 90 (711) as
 the date of the arrival of Muhammad, the last
 named, after having captured 'Abd Allāh, threw
 him into prison, where he kept him until he put
 him to death by order of the caliph, 'Abdullāh
 (ed. de Gange, p. 231) mentions this execution as
 high in Safura, who, he thinks, published 'Abd
 Allāh (102 = 720) for having been so sympathetic
 with the Berbers, who assassinated the governor
 Yazīd b. Abd Allāh. The author of *Al-Bihar*
al-Mawna (ed. l. 106, pp. 85-10) has reproduced this
 story with minute details. (R. Basset)

'ABD ALLAH M. ALMULANI (See 105
RETAIN)

ABD ALLÂH n. AL-MU'AYY. [See **AL-MU'AYY**.]

'ABD ALLAH b. Mugh, one of the leaders of the insurrection against the caliph Wasil b. al-Tha'labi, and later governor of the opprobrious caliph 'Abd Allah b. al-Tha'labi. On account of the increasing discontent with the Tha'labid rule after the accession of Wasil b. 'Abd Allah intended to leave Medina, but was persuaded by 'Abd Allah b. 'Omar (q. v.) to remain in the town. When the inhabitants of Medina shortly afterwards revolted against the new caliph, they gave the government to 'Abd Allah b. Manjalah with him, however, the banished and influential 'Abd Allah is also named as one of the leaders of the insurgents. In the *Ushshih* 63 (August 683) the decisive battle between the troops of the caliph and the Medinan rebels took place in the *Marra*. 'Abd Allah participated in the fight, escaped the general destruction and fled to Mecca to 'Abd Allah b. al-Tha'labi, who appointed him governor of Kufa. In the year 66 (685) he was, however, expelled by the Arabian adherents of Muhammad b. 'Abi 'Ubayd, and went first to Hama and then to Mecca where he fought for the al-Tha'labi. He there died with his death in the year 73 (693), shortly before the al-Tha'labi.

(K. V. ZETTERSTEDEN.)

ABD ALLAH (Abbasid). 'Abd Allah, son of the caliph 'Umar II. In the year 125 (744) 'Abd Allah was appointed governor of the Irak by Yazid II, but in a short time aroused the discontent of the Syrian Arabs in that place, who felt that they were unfavorably treated by the new governor compared with the inhabitants of the Irak. After the accession of Marwan II, 'Abd Allah is stated to be a descendant of 'Ali's brother 'Abbas rebelled in Kufa in Muharram 127 (October 744), but was expelled by 'Abd Allah to 'Omar, whereupon he removed his headquarters to another place. When Marwan transferred to al-Najaf to 'Abd al-Mu'tazil the governorship of the Irak, 'Abd Allah energetically refused to leave his post. Al-Najaf appeared in Kufa, where 'Abd Allah remained at 'Utra and it came to a hostile royal between them. In a short time, however, a common enemy appeared in the person of the Khazaffah chief al-Jahshak in Kufa, and then the two adversaries had to come to terms, and they had to join forces. In Rabi'ah 127 (April-May 745) they were defeated by al-Jahshak and 'Abd Allah withdrew to Wasil, where the victor captured Kufa. Then the old enmity between the two governors again blazed out, but for a second time al-Jahshak put an end to their hostilities. After a siege lasting several months 'Abd Allah was obliged to make peace with al-Jahshak. Subsequently Marwan had 'Abd Allah arrested. According to the most current account, he died of the plague in the prison of Marwan in the year 132 (750-751).

Gard. d. Chulifer, Wellhausen, Maxrad, Reich
and von Seng, pp. 239 of 184.

(S. V. KETTERSTADT.)
 'ABD ALLAH b. 'OMAR b. AL-KHATTA'B, eldest son of the caliph 'Umar I, and one of the most respected of all Mohammed's companions, generally called bin 'Umar. 'Abd Allah was born several years before the Hijra, his mother's name was Zaynab bint Ma'qil. He became a com-

vert to Mecca in his boyhood at the same time as his father. At the battles of Badr and Uhud he was kept in the background by Muhammad because he was still too young, but he took part in the campaign of the Trench and fought in all the battles of the Prophet. Subsequently also his name is often mentioned in connection with military expeditions. First of all he followed Khalid b. al-Walid in the latter's expedition against the rebellious tribes in the interior Arabia, in the time of 'Abd al-Rahmān's reign, then he took part in the battle of Nakhlah, the date of which is usually given as 21 (642). He was further amongst the Medinan reinforcements, which came out to 'Abd Allah b. Mas'ud to assist her governor in Egypt, to subjugate the east of North Africa, and went afterwards — in the year 30 (650-651) — he marched to Tabuk under the command of Khalid b. al-Walid. Again in the year 49 (660) the 'Umayyad took part in an expedition against the Byzantines, which was undertaken by Yazid b. Mu'awiyah. As to human qualities, 'Abd Allah took up a strictly neutral position amongst the different parties which fought for supremacy. When 'Umar on his death-bed appointed, from amongst Muhammad's most tried companions, a trustworthy man to elect a new ruler, he nominated his son 'Abd Allah as consultative member. In the year 37 (658) the latter was present at the court of arbitration that was appointed to settle the dispute between 'Ali and Mu'awiyah, without, however, himself making any claim to the caliphate. He was indeed one of the candidates proposed by Abu Musa al-Ash'ari, but was not even entered suitably. After 'Uthman's death, 'Ali had requested the 'Umayyads to do homage to him, a thing the latter energetically refused to do, declaring that only they might do so when all Muslims would do so. Later on Mu'awiyah returned the same answer when he demanded homage for his son Yazid. When, however, the latter ascended the throne, 'Umar made no difficulties, but at once took the oath of allegiance. 'Abd Allah b. 'Umar was personally a religious man, who was everywhere held in great esteem on account of his simple and unworldly character. He is moreover esteemed as one of the most trustworthy authorities on the earliest history of Islam, and with reason, for through his intimate intercourse with Muhammad and many influential men of that period he had acquired an exact knowledge of all the important facts of that period. His traditions were handed down in posterity by his sons and other disciples. 'Abd Allah b. 'Umar died at Mecca in the year 73 (beginning of 693), after the pilgrimage, in the age of 84 according to general report.

‘ABD ALLĀH *al-RĀWĪY.* [See *ib. 2* *asaf.*]

‘ABD ALLĀH *al-RĀWĪY*, a Khazrajite, belonging to the most esteemed clan of the Banu 'Adhri. At the second 'Abbasid assembly in March 623, 'Abd Allah was one of the 12 trustworthy men, whom the already converted Meccans unanimously to the Prophet's wish had chosen. When Muhammad had migrated to

Medina, 'Abd Allah proved himself to be one of the most energetic and upright champions of his cause. Muhammad appears to have thought a great deal of him, and often entrusted him with honorable missions. After the battle of Badr in the year 623, in which the Muslims were victorious, 'Abd Allah together with Khalid b. al-Walid had to hasten to Medina to bring the tidings of victory. During the so-called second campaign against Badr, at the beginning of 625, 'Abd Allah remained behind in Medina as lieutenant-commander. When in 627, at the commencement of the siege of Medina, the fidelity of the Banu 'Adhri, his allies, was suspected, the Prophet sent 'Abd Allah together with three other influential Medinans to visit and soothe the sentiments of his allies. After Bjathar had been conquered in the year 628 and its territory divided, Muhammad sent there 'Abd Allah as appointer. On sending the Meccan expedition in the year 629, 'Abd Allah was appointed by the Prophet as second lieutenant-commander-in-chief of the army, and when his superiors had both fallen, he sought and met his death as they had done fighting for the Faith.

Outside his military talents 'Abd Allah possessed other qualities which made him valuable to his master; he belonged to the few pre-Islamic men who could write, and was for this reason, together with some tribal followers, chosen as secretary by the Prophet. Muhammad appears to have esteemed him very highly more especially on account of his poetical gifts. In the *Ahmad* *ib. 14* it is expressly stated that the Prophet considered his poems equal to those of his favorite poets Hassan b. Thabit and Ka'b b. Malik. It is characteristic of 'Abd Allah's literary tendency that he abused the Karahites for their unbelief, whilst the two other poets always reproached them with their evil deeds. Only about 50 poems of his have been preserved and they are for the most part to be found in the *Mishām*.

‘ABD ALLĀH *al-Sana'i*, called by Arabian historians, the al-Sana'i after his mother, was said to be a Jew from Yathrib having been converted to Islam during the government of the caliph 'Uthman. After spending about in the Hijrah, in Syria and Egypt, whence he was expelled, he proceeded to Egypt via Syria and there joined the regiment of 'Uthman's malcontents. He here evolved a peculiar dogma which was subsequently further developed by his followers and has since his name famous. It is, however, difficult to settle exactly what belonged to him and what to his successors, because, amongst others, al-Shahrastani in his account of it, does not entirely distinguish between the two constituent parts. If we keep to the accounts of Tabari and al-Buhārī, he taught the return (re-creation) of Muhammad. This must not be considered a polemization of the Prophet to 'Ali, as Wellhausen regards it, because he is said to have used this dogma on the example of Christ's parable and with reference to Kor. ii. 258. It is true that later, as Wellhausen with others asserts, the dogma of return coincides with that of pangenerals or re-birth, which they tried to explain by transmigration of the

and by comparison with the all-pervailing sunlight. He also introduced the doctrine that to every Prophet was appointed a plenipotentiary (nafi) and that Muhammad's was 'Ali; whence he deduced the duty of every believer to stand up for 'Ali's rights with sword and staff. And 'Ali is said to have therefore employed missionaries for the propagation of these ideas. He was amongst those who in Shawwal 35 (April 156) quitted from Egypt to Meccah, and afterwards he accompanied the caliph 'Ali, whom he, however, embarrassed with his excessive munificence, so that the latter banished him to al-Mada'in. We know nothing concerning the manner and the date of his death. If he survived his master's murder it is quite possible that he afterwards altered his doctrine of the return of Muhammad, making it more in harmony with the views of the extreme Shi'ites.

ABD ALLAH (d. 645), **Abd Allah** b. **Abd al-Muttalib** and general **Abd Yalib** **Abd Allah** b. **Abd al-Muttalib** belonged to the clan of **Abd al-Muttalib** of **Koraysh** and was a foster brother of the subsequent caliph **Uthman** a chief partizan of the Umayyads. He was less a soldier than a statesman. The judgments of historians on his character vary greatly. His name is mentioned many ways with the beginnings of Islam. First he is mentioned as one of Muhammad's writers. He is supposed to have arbitrarily altered the revelation, at least by donating of doing so after his agreement from Islam, whereby he increased the hate of the Prophet. For this reason the latter desired to have him executed after the capture of Mecca, but **Uthman** obtained, through with difficulty, the Prophet's pardon. This story became afterwards very famous. **Abd Allah** later on showed himself grateful to **Uthman** for his intercession by agitating for the latter's election as caliph. He belongs to the **Umayyad** companions who took part in the conquest of Egypt under **Amr** b. **al-Ash** (642-43), and appears to have governed Upper Egypt independently under **Osar**, after the latter's quarrel with **Amr**. It is impossible exactly to fix the date when he was appointed governor of the whole of Egypt according to the **Tahqiqat**, as early as the year 25 (645-46), and therefore before the revolt of **Alexandria** under **Stennot**. As he was not able to suppress this rising, **Amr** was recalled, who, however, immediately after his victory had to hand back the government to **Abd Allah**. **Uthman** desired to ratify **Abd Allah's** appointment as financial prefect and **Amr's** as military governor, but the latter declined. **Abd Allah** was successful in considerably increasing the state revenues of Egypt much to the satisfaction of the caliph. Although his principal aim was the administration of the finances, he also became renowned as a general. **Abd Allah** regulated the relations between the **Muslims** and the **Nubians** and supported Muhammad's expedition against **Cyprus**. He himself undertook several expeditions against **Roman Africa**, the last probably in the year 25 (645-46), the most

important and most successful certainly in the year 27 (647-648). He subjugated the district of Canbuse to Isfahan. His most important military performance was the usual battle of Jihaz al-Sandil, equal in importance to the battle of Varrank [p. 41], in which the Roman fleet was completely destroyed. This battle took place in the year 37 (651-652), hardly later, as is given by some authors. Soon afterwards all over the empire there commenced fighting against 'Othman. 'Abd Allah appears as the principal champion of the régime represented by the caliph. He endeavored to ward the caliph and even left Syria in order to support him. His lieutenant at Sella h. Makhin was expelled by the Egyptian revolutionary party under Muhammad b. Badkhalaf and 'Abd Allah himself was forbidden to return to Egypt. On the frontier 'Abd Allah learned of the murder of the caliph, and fled to Shu'awiyin. Shortly before the latter's departure to Siffin, he died in Adukhin or Ramla in 36 or 37 = 656-657 (657-658). His supposed participation in the battle of Siffin and his late death in the year 37 (656-657) belong to the numberless myths connected with the battle of Siffin.

ABD ALLAH ^(C. 11. HICKMAN.) a Jew from Medina, originally called al-Harith and belonged to the House Ka'abah. Muhammed gave him the name of 'Abd Allah when he embraced Islam. This conversion is said to have taken place immediately after Muhammed's arrival at Medina, but according to others, when Muhammed was still in Mecca. Another account which makes him accept Islam in the year 8 (629-30) is worthy of more credence — though Muhammadan celebration is badly accented, — for his name is wrought in vain in the battles which Muhammed had to wage in Medina. The few contemporary mentions in the *Maghazi* may well have been inserted in order to ~~confirm~~ the glowing tradition ~~of~~ the generally accepted tradition. He was with Umar in Dhu'lfa and Jerusalem, and under Muhammed stood at the latter's side in the fight against the rebels, whom he is also understood to dissuade from murdering the caliph Ali. Muhammed's death he did not owe the homage to 'Ali and replaced him not to march to Iraq against 'A'ishah; legend makes him meet Abu'l-wafa also. He died in 43 (663-64). In Muslim tradition he has become the typical representative of that group of Jewish tribes which honored truth and admitted that Muhammed was the Prophet predicted in the Lawrit (*Taurat*); whom they protected from the

intrigues of their co-religionists. The passions which 'Abul Allah' is said to feel for Muhammad and which only a prophet could arouse, the contents of the *Hadith* which tradition makes ascribe to him, and the story of Balaheya, which 'Ibn al-Hakim' put into his mouth, mostly have their origin in Jewish sources; if they do not really come from 'Abul Allah himself, they certainly came from Jewish renegade slaves. Within his contemporaries often reproached him with his Jewish origin, later on traditions were circulated, in which Muhammad was even said to be his adopting father, or in which the Prophet and reprobated compoundism give him high praise. Certain verses of the Kor'an are also said to refer to him. The *Qur'an* which he asked Muhammad were subsequently enlarged to whole books, and in the same manner several other works were founded on him, which are partly based on what he related in the *Hadith*. Together with his sons Muhammad and 'Ali, 'Abul Allah and Abu 'l-Malik handed down his traditions. 'Ali put in his Chronicle more especially Biblical accounts taken from 'Abul Allah,

'ABD ALLĀH p. 55 Tib. [See 1904-45 Tib.]

'ABD ALLAH *n.* Salazar. (See 1000 St.)

2.5.12.

'ABD ALLAH A. TAMAR, ~~historian~~ general and poet, born about 182 (795) and died in 330 (844). 'Abd Allah's father 'Abi al-Husain had already received the caliph al-Mahdi's great advice, and 'Abd Allah himself soon won the good grace of the caliph not only on his father's side, but also on account of his personal merit. In 300 (812-813) he was appointed governor of the regions between al-Kufa and Egypt, and at the same time received the supreme command in the battle against one of al-Ashraf's followers named Nafi b. al-Harith, who first made his appearance in the neighbourhood of Haleb (Aleppo), and in a short time extended his sway over a large district. It is true that 'Abd Allah already checked the further spread of this uprising, but Nafi's complete subjugation only took place in the year 304 (815), when he had in succession to 'Abd Allah. When the latter had put on and to

Nor's doings. use was made of him in Egypt. Dier- at early as 109 (814-815), a great number of Spanish fugitives had landed, and shortly afterwards brought that province, which was already in a tottering state, into a still greater confusion. In the year 110 (825-826) 'Abd Allah went to Egypt by order of the caliph and quickly succeeded in assuming order there. After establishing there a deputy government, he returned as early as the year 111, or according to other authorities not before the following year to Irak. While he resided at Mervat and raised an army in order to help the governor of Khuzistan against the mollah Babek and his followers, he was made governor of Khuzistan, in succession to his brother Tahir, who died in 113 (828-829). Like the other Tabirides 'Abd Allah ruled in this province according to the maxims of government recommended to him by his father Tahir (q. v.). In the famous writings which have been preserved by many authors. He ruled almost as an independent prince, although he formally acknowledged the suzerainty of the caliph, and as governor-general commanded the latter's troops. As often as he came to Bagdad he resided in the magnificent palace built by his father on the right bank of the Tigris (cf. Stricker, *Irakabad*, pp. 118 et seq.). At the beginning of the reign of al-Ma'mun, a certain 'Abd, Muhammad b. al-Kasbi, appeared as pretender to the throne, but was overcome by the troops of 'Abd Allah b. Tahir, surrendered to the latter and was ~~sent~~ by him to the caliph. This happened in the year 116 (834). Two years later a much more dangerous uprising broke out in Fakhriyah which belonged to the governorship of Shahrastan under the rule of 'Abd Allah. Through the intrigues of the Turkish general Asghar, who ~~was~~ envious of the great power of the Tabirides, the provoked ~~Alayir~~ b. Kasbi of Fakhriyah was induced to rebel against the caliph. For when troops assembled from all sides against him, he was betrayed by his own people and rendered harmless by 'Abd Allah. To his soldierly and statesmanlike talents 'Abd Allah added still other qualities. He was also celebrated ~~for~~ his political and managerial abilities and the confidence of the Hamdan, Ali b. Tammam, found in him a benevolent patron. Thus he was not ungrateful to the pleasure of the wife is ready to be inferred from the fact that an excellent sort of Egyptian melon has been named after him 'Abd-allah; in general the greatest luxury reigned in his palace. According to the usual account, 'Abd Allah b. Tahir died Monday, the 11th Rabi' 1230 (26th November 841) at the age of 48. Yet by some his death has been fixed so early as the year 122. This account of his end passes as incorrect, yet the week day seems to preponderate in favor of it (comp. Wartenfeld's *Tabirides*). He was ~~was~~ succeeded in his government by the caliph al-

(K. V. ZESTKOVICH.)

ABD ALLĀH = *Imam*, usually called *Abū Ḥabīb* & *Emir* of the *Sahā* (S. 1). The latter office he had since *Naḥḥ* & *Yam* (q. v.) obtained the dominion over *Siḥḥ* in the year 22 (642); the part in which the troops were against him from *Siḥḥ*, but were absent in 72 (693) vanquished and slain by the troops which *Abd al-Ḥakīm* had sent against him.

Reichsgeschichte, *Moslems*, *Arab.*, p. 682; *Sehri*, n. 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

ABD ALLĀH = *Imam*, also called *Imam* after his mother, *Shah* of the *Kharāḥīṭ*. Before the coming of *Muḥammad* to *Makkah* *Abd Allāh* had dominion over *Yam* and *Kharāḥīṭ* — the only case, says the *Ḥadīth* explicitly, in which these two tribes united under a common chief. — After the coming of *Muḥammad* *Abd Allāh* was obliged to follow the example of the *Quraish* and embrace *Islam*, in order not to be entirely cut aside; but he bore a bitter grudge against his rival, whom he now looked on as a political adversary, and ceaselessly endeavored to shake the latter's reputation. Therefore among *Makkah* authors, who neglect no opportunity of saying evil things of him, he is regarded as the head of the hypocrites (*munāfiq*) (q. v.). When in the year 624 the Prophet proceeded against the *Quraysh*, the allies of *Abd Allāh*, and a year later the head *Ḥabīb*, also allied with the *Kharāḥīṭ*, *Abd Allāh* dared not undertake anything serious on their behalf. Only when, after a long siege, they were constrained to yield to *Muḥammad*, did he intervene and oblige the latter to spare at least the life of the besieged. In the course of war before the battle of *Uhud* in 625, *Abd Allāh* was himself of the opinion, reasonable in itself, that they should remain quiet in the rear and allow the enemy to come on; this was also the opinion of the Prophet who, however, determined, but only on account of the urging of his men, to march against the enemy. Whether on the following day *Abd Allāh* actually first marched out with the army and then, after having, turned back with 300 men, the *Ḥabīb* names us, or whether he had remained behind from the first, as appears from *Korān*, is not doubtful; one thing is sure, he did not fight with the rest at *Uhud*. With regard to *Abd Allāh*, *Muḥammad* showed more favorable consideration and kept this community out of political business from then until the last moment. In the march to *Tabūk* *Abd Allāh* and *Ḥabīb* again played the same part. Nevertheless the Prophet, when his rival died shortly after the return from the same expedition, had *Ḥabīb* with great ceremony over his tomb and to pay him even homage due to an eminent ally.

(A. SCHMIDT.)

ABD ALLĀH = *Wahb* al-Rasbi, a *Ḥabībī*, bore the surname of the *Ḥabīb* with the collation of the *Ḥabībī*, because he had received callings from his many progenitors. *Abd*

Wahb belonged to the prominent men among the *Ḥabībī* and that he was chosen to be called to the *Ḥabībī* when they were separated from the *Ḥabībī* in 648. He fell early in the year 648 (June 648) in the bloody battle of *Nahāvand*.

(M. TH. HOUTMAN.)

ABD ALLĀH = *Wahb* al-Rasbi, leader of the *Almoravids* (*al-murabitūn*). He owed his name to his mother *Tia* *Imam*, who belonged to the *Ḥabībī* or *Kharāḥīṭ* tribe, dwelling on the frontiers of the borders of *Uday* and the *Sahā*. *Abd Allāh* was instructed by *al-Aḥmad*, a pupil of *Abū Ḥabīb* al-Rasbi, to a chief of a colony of the *Ḥabībī* in the south of the Western *Sahā*, who wished to convert those people to *Islam*, as a man capable of fulfilling the mission. Accordingly he went to the *Ḥabībī* and began his missionary work. Great difficulties soon had to have stopped him at the very beginning. These obstacles determined him to take refuge with some companions on an island in the *Senegal*, where they founded a sort of ascetic community styled by *Muslim* writers *riyāṭ* (*hermitage*). They took from there their name of *murabitūn*, whence the word *al-murabit*. Their return having spread and their number having been increased by numerous admissions, they soon formed a formidable power, to the extent of being able afterwards to return by force the *Ḥabībī*, who had received them so badly at first. *Abd Allāh* became the head of the religious community, which was above all distinguished by its severe, ascetic rules; it appeared at the same time to be the commencement of the Holy War. *Abd Allāh* soon hurried his *murabitūn* against the infidel tribes of *Ḥabībī* and other *Ḥabībī*, and the word converted those who had received the *Almoravids*. Though retaining the original head of the *Ḥabībī*, *Abd Allāh* led the command of them to a native chief chosen from amongst them: the first was *Yahya* b. *Rasbi* of the tribe of *Ḥabīb*, then *Yahya* b. *Rasbi* of the tribe of *Ḥabīb*, then *Yahya* b. *Rasbi* of the tribe of *Ḥabīb*. *Abd Allāh* retained the power of the *Ḥabībī* the direction of the Holy War and the receipt of religious taxes, and sometimes inflicted severe corporal punishment on the emir. *Abd Allāh*'s end, however, appears to have been even livelier than his religious activities were extended from this point on. *Ḥabīb* became part of the early history of the *Almoravids*. It is sufficient here to recall that they conquered the *Almoravids* of *Siḥḥ* about the year 441 (1050-1051), the date uncertain. *Almoravids* immediately afterwards they moved *Almoravids*, whom belonging to the *Ḥabībī* kingdom of *Ḥabīb*. *Ḥabīb* about 449 (1057-1058). *Abd Allāh* brought them to his native country; first he the *Ḥabībī* kingdom of *Ḥabīb*, then the *Ḥabībī* kingdom of *Ḥabīb* with *Ḥabīb*, fell into their hands; and the *Almoravids* empire was founded. Everywhere *Abd Allāh* came to make present the strict rules of piety, which he had instilled among the *Almoravids* and which afterwards own epoch have not ceased to teach among the tribes of the *Ḥabībī* *Ḥabībī*. About 452 (1059) he gave battle to the *Ḥabībī* of the Atlantic coast (*Ḥabībī*).

in the course of which he met his death in a place called by the authors *Katifa* or *Katifa*, where he was buried. A chapel was built there, which was still much frequented in the time of al-Hakim. The true personality of 'Abd Allāh is difficult to be evolved; the use of his name in magic and in the art of the *Umayyad* gives him falsely the appearance of a magician.

(R. DOCTRE.)

'ABD ALLAH b. al-Zuhair, a Kharidite general, who contested the caliphate of the Umayyads for nine years, was born at Medina in the year 1 (622) or, according to al-Waqidi, 20 months after the Hijra (Dahlan 2 = Feb. 624), killed in a battle against al-Hajjaj, near Mecca, on the 17th Muharrar 173 (10 Oct. 692); comp., however, Wellhausen, *Die arabischen Völker und ihre Sitten*, p. 224. Besides the fact that his father, al-Zuhair, belonged to one of the noblest families of Kharidite and was on his mother Safiya's side a cousin of the Prophet, 'Abd Allāh himself was through his mother Amina the grandson of 'Abd al-Muttalib and consequently nephew to 'A'isha. According to some Muslim authors, 'Abd Allāh was the first child born at Medina to Islam.

When barely thirteen, 'Abd Allāh was present with his father at the battle of al-Yamuk (14 = 635). Three years later he was with his father in the army of 'Amr b. al-'As, who made himself master of Egypt. He played a leading part in the conquest of Irbid, and in an engagement between him and the patrician Gregory killed the latter (29 = 649-50). The following year he was with Sa'ad b. al-A' in the expedition against Kharran, and in the same year was one of the theologians appointed by 'Uthman to write down the Koran. On the day of the House (18 Muharrar 55 = 17 June 656) 'Abd Allāh was one of the most valiant defenders of 'Othman. At the battle of the Camel (10 Muharrar 56 = 4 Dec. 656) he had the command of his aunt 'A'isha's infantry.

During the reign of Mu'awiya b. 'Abd al-Muttalib 'Abd Allāh concealed his ambition for the caliphate, only, when Mu'awiya requested him to acknowledge him as his heir presumptive, he refused. On the death of Mu'awiya (60 = 660) 'Abd Allāh declared openly against Yazid and refused to take the oath of allegiance. Being informed that Yazid had ordered his head to be cut off, 'Abd Allāh escaped at night, and set out with al-Hajjaj for Mecca. By Yazid's orders, 'Amr b. al-Zuhair, a brother of 'Abd Allāh and hostile to him, was sent at the head of an army against 'Abd Allāh. But the latter defied his brother's forces, 'Amr was taken prisoner and died under the rod.

'Abd Allāh, however, feared the rivalry of al-Hajjaj and treacherously advised him to undertake his journey towards Kufa, which was sure to be fatal for him. Directly the news of al-Hajjaj's death reached Mecca, 'Abd Allāh had himself proclaimed caliph by the inhabitants of that town and assumed the title of *Amir al-Mu'minin* (61 = 680-83). The people of Me-

cca being rebelled against the Umayyad caliph, 'Abd Allāh b. al-Zuhair was proclaimed caliph by the entire population of the Hijra. But the inhabitants of Medina were defeated by Muslim b. 'Uqba in the battle of al-Harra (27 = 10th Muharrar 62 = 27th Aug. 683), and Muslim b. 'Uqba, who took Muslim's place in command of the army, proceeded to besiege 'Abd Allāh in Mecca. The siege, which lasted 64 days (26th Muharrar = 1st Rabi' II 63 = 21st Sept. = 27th Nov. 683), had become very distressing for 'Abd Allāh, when, having learned of the death of Yazid, Muslim raised it.

The greater portion of the Musulman empire then joined 'Abd Allāh, and he was at once proclaimed caliph in Iraq, Southern Arabia and in a great part of Syria. He sent emissaries into Egypt, Palestine and elsewhere to induce the inhabitants to recognize him as caliph, and everywhere appointed governors devoted to his cause. But 'Abd Allāh suffered a blow in the defeat and death of al-Hajjaj al-Fihri, one of the principal agitators in his favor, in the battle of Marsh al-Hajj (end of 63 or beginning of 64 = 684). Having established his power, 'Abd Allāh set to work to rebuild the temple of the Ka'ba (65 = 684-685), which had been partially destroyed at the time of the siege of Mecca by 'Umayyad b. al-Mu'alla. Meanwhile he began to oppress the Kharijites. In the following year he caused Muhammad b. al-Hanafiya with all his family and seventeen relatives of Kufa to be imprisoned near the wall of Zamzam. A serious injury to 'Abd Allāh's power was the defeat and death of his brother Mu'awiyah b. al-Zuhair, his governor of Iraq (72 = 691). 'Abd Allāh soon found his authority limited to Mecca alone, to which al-Hajjaj had sent by 'Abd al-Malik, his vizier on the 1st Rabi' II 73 (25th March 692). The town and the temple were again bombarded, but 'Abd Allāh kept resolute for six and a half months, when his companions, even his two sons 'Isma and 'Ishak, being weary and at the end of their strength, surrendered to al-Hajjaj. 'Abd Allāh, urged on by his mother, a woman of truly Roman pride, returned to the field of battle and fought valiantly till he was slain. His body was fixed by al-Hajjaj to a gibbet at al-Hajjaj, and after it was hanging for some time, it was by 'Abd al-Malik's orders given back to his mother. Aqsa' buried it in the house of Safiya at Medina, near the tomb of the Prophet, 'Amr b. al-Zuhair and 'Umar.

'Abd Allāh is depicted by Muslim authors as a man endowed with very good qualities and very great faults. He was greatly devout, passing his time in prayer and fasting; he was a poet and one of the prolific traditionalists; above all he was very brave and courageous. On the other hand he was envious, covetous and ill-natured.

'ABD ALLAH PASHA Murad Zaka Celal, an Ottoman general whose family originally

outside the capital. At Ibrahim's orders 'Abd al-'Aziz thereupon began to lay siege to the town, but withdrew when the then governor of Arzoum and Agha-Mahmud, Marwan b. Muhammad, intervened. Being opposed its gates to him, the following day the last caliph was defeated in Salas bay (Nov. 744) at 'Ain al-Jizir, and Marwan had himself proclaimed caliph in Damascus. As soon as he had obtained the title, 'Abd al-'Aziz b. al-Hadi b. 'Umar was crowned by the man illustrated by al-Walid II.

(K. V. ZETTERSTEDT.)

'ABD AL-'AZIZ b. AL-HAKAM, the present sultan of Morocco, born on the 18th Feb. 1893 (15th February 1351), son of Lalla Rokya, who was bought as a slave for the sultan in 1878 at Cairo. The title 'Abd al-'Aziz, whilst yet a child, accompanied his father in most of his expeditions. As he grew up he won manifest, especially for an architect, a taste for images and drawing. He was always extremely rebellious against members of the Sultan's education was partly entrusted to Ahmed b. Akka, the chamberlain (hajib) known as the Akkawi, who, in strict sympathy with Lalla Rokya, kept him under a close guardianship. On the death of Sultan Hassan on the 9th June 1908, his Akkawi, in spite of the opposition of the grand vizier, who favoured the candidature of Sultan Muhammad, the brother of 'Abd al-'Aziz, succeeded in placing the latter on the throne. A little later the Akkawi Hajji al-Majidi Djalil, the grand vizier, imprisoned him took his place as grand vizier. A great revolt of the Rihaniya marked the commencement of the new reign. 'Abd al-'Aziz, however, remained very much of a child and took no part in the government. His Akkawi was omnipotent, in truth 'Abd al-'Aziz appeared to him interested in politics and it could not be truly said that he Akkawi had usurped the power of his sovereign. His Akkawi's health, which for a long time had been impaired by the strain due to being the sultan's favourite, was completely broken at the beginning of 1909; but in spite of that he continued to spend every day at the palace and only took to his bed at the very end; after a few days (Hassan died on the 13th of May 1909). His cousin al-Mahdi Muhammad succeeded him as grand vizier; he was a very learned man with a great reputation but utterly unfit for the life of business; that the high officials of the Mahkama must lead; the power was really in the hands of al-Mahdi al-Mahdibil (of the Mahdibil) formerly a ~~chamberlain~~ (chamberlain), the capture of his Akkawi, whom the latter on his death-bed had specially recommended to the sultan. Al-Mahdibil, who was an educated man, displayed, however, both tact and energy later. On the outbreak of the struggle between him and al-Mahdi, Muhammad, the sultan, who was indifferent as to religious questions, and with al-Mahdibil, who well knew how to tame the sultan's propensities for sport, plays, and dissensions generally. He set with valuable co-operation in an Englishman called Maclean, who had been long with the Mahkama as military instructor to the Moroccan infantry Sir Harry Maclean was at the same time the intermediary of the Mahkama in its intercourse with European

states. Lillards, tennis, golf, photography and fireworks became the ordinary amusements of the sultan. Many Europeans had the chance to the sultan's palace and passed to his amusements. One of them a Frenchman, Yern, has since published a book on his life (*Le Sultan Mohammed VI*, Paris, 1905). He appears there as a man of extreme skill, not very broad-minded, but after all exempt from fanaticism and as favourable to the progress of civilization as is possible for a sultan. In April 1901 al-Mahdibil was deposed; al-Mahdibil was unable to claim his position; he had Fajjal Ghannafi appointed in his place, who immediately did what he could to ruin him. He succeeded in sending him on a mission to England and Germany whilst 'Abd al-Karim al-Silmani, Minister of Foreign Affairs, went to France. During his absence he was intrigued against, and was obliged to return suddenly in order to save his head; he succeeded in doing it with an address which imposed upon his enemies. His the sultan's amusements, which had been denounced as irreligious by the ~~clergy~~ (clergy), had deeply irritated the population, principally that of the town and about all that of Fez. The party opposed to al-Mahdibil pressed the sultan to leave Marrakech, where he had resided for many years, to go to Fez, in which city they expected to be supported by the powerful party of Moroccan scholars who check-mate the Minister of War. The sultan started about the end of 1902, and after remaining for a long time at Rabat entered Fez. Not only did 'Abd al-'Aziz offend his administrators by the very unorthodox amusements, to which he devoted himself, but he was also to call forth their protestations on account of the tendency to infidelity which he showed. He attempted in fact, or at least he was credited with attempting, a kind of reorganization of the empire which was called ~~reform~~ (reform) and fiscal reform was the first ~~step~~ (step) he wished to try. Taxes, according to the new rules, would be collected by specially appointed collectors instead of by the ~~clergy~~ (clergy). This reform displeased both the ~~clergy~~ (clergy) and the population; it could not be enforced and for many years to the present time in fact, the tribes of Morocco have paid no duty, neither the new nor the old. The ~~reform~~ (reform) ended in making 'Abd al-'Aziz unpopular and was one of the incentives to revolt of which the ~~clergy~~ (clergy) made use. One man, whose real name was Hajji al-Mahdi al-Mahdibil, known into public notice in the district of Wad Innaam in the summer of 1902; he passed himself off as the brother of 'Abd al-'Aziz, Sultan Muhammad, formerly Khadim of Marrakech, afterwards in disgrace and imprisoned at Meknes (Meknes), but still very popular. He expressed also was to replace 'Abd al-'Aziz by a Sheriff who was not compromised with the Christians, and he had no pretensions — obviously at least — to ~~the throne~~ (the throne) for himself. Several columns sent out against him in 1902 having miscarried, he succeeded in advancing with rather important contingents to within two leagues of Fez. Having been repulsed, he retreated to Taza; al-Mahdibil, who showed great energy in the course of this affair, was commanded to pursue him, with the order not to return without bringing as his prisoner ~~the King~~ (the King) — so are called the agitators in Morocco, from one Hajji al-Kagi (of the Kagi), who rebelled in 1862. — Al-

Muchbil succeeded in entering Taza, he wrote to the sultan to join him there and the latter started to do so; but his route having been again cut off, he could not join his minister and so returned to Fez. The King had fled to the East; al-Muchbil's exhausted column with difficulty succeeded in returning to Fez. Having fallen into disfavor, al-Muchbil avoided a ~~same~~ fate by obtaining permission to make the pilgrimage to Mecca. It is common history how, on his return from this pilgrimage in 1906, he was deftly dismissed and replaced by Mohammed Geblle; the friendship of England enabled him to escape prison and the confiscation of his goods and he retired to Tangiers. As for the King, he continued to remain encamped in the enemy's country in the East and the King with varying fortunes, and he still remains there now (April 1906). The reign of 'Abd al-'Aziz is also notable for the famous Algerian affair (q. v.). (E. DOCTRE.)

'ABD AL-'AZIZ (Abul-'Aziz) MAHMOUD, a Turkish sultan. 'Abd al-'Aziz, the second son of Mahmud II, was born in 1832, and on the 25th June 1861 succeeded his Ottoman throne. At first he renounced a considerable part of his civil list, pretended to content himself with one wife and reduced his household expenses, but soon his licentious nature broke out all the more violently. His reign was indeed spared foreign wars, but on the other hand it was year by year sorely tried by troubles at home. Bismarck was to fight for its freedom, but was defeated and had to submit unconditionally (1867). Roumania contrary to the treaty of Paris elected a Hohenzollern as Prince (1866) and made its appearance as an independent State. In Greece national feeling was incensed at the presence of Turkish troops; in 1867 the Turks had after long and tedious negotiations to vacate the island of Belgrade and the other fortresses. As early as 1866 the Cretans had demanded from the sultan radical changes in the administration of the island, and when this was granted had insisted on being annexed to the kingdom of Greece. The indefatigable grand vizier Mehemmed Rusta 'Ali Pasha went himself to Crete to introduce most liberal reforms. But in spite of their pious failure in the battle-field the insurgents refused to come to terms. Greece also prepared for war. In 1867 King George married a Russian princess and then the Czar demanded categorically of the European Powers the union of the Cretans with their kinsmen on the continent. Nevertheless the Porte outlived prevented an ultimatum to the Athens Cabinet and the powers urged both parties to keep calm. Crete was moved to Turkey and this was the only renowned success of Turkish policy under 'Abd al-'Aziz. In 1867 and 1868 thanks to the financial distress of the Porte, Egypt became practically if not formally separated from the Ottoman empire, the dynasty ruling there acquired the right of direct succession to the throne and the government was elevated to the rank of Khedive.

In Oct. 1870 through Russia's declaration that she no longer considered herself bound by the prohibition to pass the Danubian, the Oriental question was again brought up in its entirety. The supple Russian ambassador in Constantinople, Count Ignatieff, was henceforth the centre for stirring up discontent amongst the subjects of the Porte — Slavs, Albanians, and even Arabs

and Egyptians. Meanwhile the government of the pashalik of 'Abd al-'Aziz got further and further into difficulties, so that in October 1875 it had to declare the State bankrupt. Through Russian influence sanguinary disorders had already broken out in Heraklion and Ikoniz in July 1875. Reforms which the Porte earnestly took in hand were wrecked by the religious hatred of Christians and Mussulmans. In 1876 the Bulgarians entered the lists and declared a semi-sovereign kingdom, and in May the whole country rose in open rebellion.

Under the impression of these events a widespread agitation amongst the theologians took place in Constantinople on the 10th May 1876, which brought about a immediate change of ministry. Shortly afterwards the article of the sultan knelt a conspiracy, at the head of which was Midhat Pasha, the life and soul of the reform, and in second command the energetic Minister of War, Hussein 'Awad Pasha, an Old Turk. On the 30th May the sultan was forcibly deposed and murdered on the 4th June by order of the conspirators, who forced a revolution in public opinion.

Angelegenheiten seit dem Jahre 1870* and *der Berliner Frieden* (Berlin, 1893). (M. SIEGHEIM.)

'ABD AL-'AZIZ A. MAHMOUD, son of 'Aliph Mahmud I. 'Abd al-'Aziz was appointed governor of Egypt by his father, and after 'Abd al-Malik had ascended the throne, the latter continued the appointment. During his twenty years' reign in Egypt, 'Abd al-'Aziz proved himself a good ruler who really cared for the welfare of the provinces at home. When in the year 69 (189) 'Abd al-Malik, after the assassination of the rebellious governor 'Amr b. Sa'ad, was going to have the latter's relatives executed also, 'Abd al-'Aziz interceded for them and procured the intended exile to spare their lives. Towards the end of his life 'Abd al-'Aziz suffered from the ill-will of his brother 'Abd al-Malik. Mahmud had appointed him the latter's successor, but 'Abd al-Malik wished to secure the throne for his two sons al-Walid and Sulaiman, and therefore cherished the project of deposing his brother from the government and excluding him from the succession to the throne, when in the year 85 (754) he suddenly reached Damascus that 'Abd al-'Aziz was dead.

'ABD AL-'AZIZ A. MEHMOUD b. SA'DI, a Wahhabite ruler of Central Arabia (1765-1803). 'Abd al-'Aziz was born in 1721, and on the 23rd Oct. 1803 during a service in the Mosque of Harba was stabbed by a fanatic Shi'ite, who was engaged at the looting and destruction of the shrine sanctuary in Kerbela by the Wahhabites (1801). During his reign the dominion of the Wahhabites extended far over the frontiers of Central Arabia (Najd), but it was not 'Abd al-'Aziz himself who played the most important

part in bringing this about, but his son Sa'ad, who had been his co-regent since 1787. (For details see section on 'WATIMANIS, under which the bibliography is also to be found.)

(M. TH. HOUTMAN.)

'ABD AL-'AZIZ b. MU'AW. A. NUFAYI, a governor. When his father, the famous conqueror of Spain, left this country in the year 95 (713), he remained behind as governor and married the widow of the Gothic king Rodarick, named by the Arabs Rylis, Adh (Eglish), or Umm 'Amm after her son. According to al-Waṣṣṭi and other Arabian chroniclers, it was the marriage of this woman which caused the Arab troops to murder him in the year 97 (715) in the monastery of Santa Rufina near Seville, to day known as the Convento Capuchinos, formerly Convento de Santa Jovita y Rufina before the Puerta de Cardine. Others assert that they had received their orders from the Byzantine caliph Sulaiman.

'ABD AL-'AZIZ b. al-WALID, was al-Caliph al-Walid I. Under the generalship of his uncle Muḥammad b. 'Abd al-Malik, in 91 (709-710), 'Abd al-'Aziz made the campaigns against the Byzantines, and is also said to have later taken part in the battles against the same enemy. In 96 (714-715) his father endeavored to exclude from the succession Sulaiman b. 'Abd al-Malik, who had already been appointed as his successor, in 'Abd al-'Aziz's favor; the effort proved fruitless though. After Sulaiman's death in 100 (717), 'Abd al-'Aziz was on the point of coming forward as pretender to the throne, but when he learnt that 'Umar had already been proclaimed caliph, he went to him and took the oath of allegiance.

(K. V. ZETTERSTEDT.)

'ABD AL-'AZIZ EFENDI KAMA ÇELIK ZADE, ḥadīth-shāh and historian of the Ottoman empire, the son of Husein. He was appointed Isṭiṣṣāl ḥadīth by the sultan Murād IV (1623 = 1633), and then deprived of his office in the same year on account of a famine which he had not remedied; he was put on board a boat to be drowned at Prince's Island; he was saved through the intercession of the vizier, Barisuz Pasha, and was banished to Cyprus (Ḥisṣ al-Bayṭa, ed. Hugel, v. 233). It was on this occasion that he wrote his poem *Gulshān al-Niṣā*. By his intrigues he succeeded in obtaining the title of ḥumayrī muṣṭafī (7th Rabi'ulān 1059 = 14th Sept. 1649), he was deprived of his position as ḥadīth-shāh (8th Shawwāl = 15th Oct., then, through the influence of the Sultan-Walid, was made muṣṭafī in the place of Naḥṣī 11th Rabi'ulān 1061 = 2nd May 1651). He was forced by military troubles to march at their head, in connection with the alteration of the coinage, but succeeded in dispersing the crowd, he was again deprived of office after the assassination of the

sultan Keman, and later called to Edirne where he died on the 6th Rabi' I 1068 (14th Jan. 1659). He wrote a treatise on Musṭahān law which is a new redaction of the Naḥṣī's *al-Ḥadīth al-Naḥṣī* (Ḥadīth al-Bayṭa, i. 312), which he dedicated to the sultan Muḥammad, *Ḥawṣ al-Ḥadīth* (Rush, 1248 = 1833), a general history up to the year 1058 = 1648 (Ḥisṣ al-Bayṭa, li. 404), *Sulaiman ḥadīth* (Rush, 1248), a history of the sultan Sulaiman (Ḥisṣ al-Bayṭa, li. 113); a chronicle of events from the deposition of Burhān to the 18th of Ṣafar 1067 (25th Nov. 1657). Being arrogant and fanatical with depraved morals he made many enemies by his malignant jealousy.

'ABD AL-DJABBĀR b. 'AMR AL-RAMḤĀN AL-'AZHĪ, a governor. 'Abd al-Jabbār, who had already taken part in the battles against the perils of the Umayyads, was according to the usual accounts appointed governor of Ḥimṣ in 120 (657-758) by Caliph al-Manṣūr, and there he soon made himself known through his cruelty. In the following year, however, the caliph grew suspicious of him, and after some correspondence, in which al-Manṣūr and his governor tried to outwit the other, the caliph sent an expedition against 'Abd al-Jabbār under his son Muḥammad al-Mahdī. When al-Mahdī's general, Ḥishām b. Ḥusayn, approached, the inhabitants of Ḥimṣ al-Rūdh revolted and took 'Abd al-Jabbār prisoner, whereupon he was taken to the caliph and executed after suffering terrible tortures.

'ABD AL-DJALĪL AMR 'AMAYYĀN. (See AL-JUMHURĪYĪ.)

'ABD AL-FATTAḤ PŪMANI, Persian historian, lived probably in the 16th and 17th centuries. Having entered the government service at Gilān (Ch. Scheller, *Cron. pers.*, li. 93), he was entrusted with the supervision of the accounts by the sultan of Gilān, Behādd-ḥeg, about 1018 or 1019 (1609-1610), and was then sent by 'Adh Shāh to Irak. He wrote, in Persian, the *Tuḥfat al-Ḥisn*, a history of Gilān from 923 (1517) to 1038 (1628), which has been published by B. Horn.

(C. L. HUERT.)

'ABD AL-GHAFFĀR b. 'ABD AL-KASIM. (See AL-KASIMĪ.)

'ABD AL-GHAFFĀR AL-ARJAL (See AL-ARJALĪ.)

'ABD AL-QHANI AL-NĀMILĪ, a mystic and very voluminous writer, born on the 5th Rabi' I 1050 (19th March 1641). Having lost his father at an early age, he entered the Sūfī order of the Rādīyā and of the Naḥṣīzādīyā and studied for seven years in Damascus in the house in the vicinity of the Umayyad Mosque the mystical works of Ibn 'Arabī and 'Asif al-Dīn al-Tirmidhī. At the age of 25 he made his first journey to Bagdad and stayed there some time. In his childhood, as he had already gained a certain

reputation as a writer, he made several literary journeys, especially in his native country, in order to get into connection with men holding similar views to those they might have him, and also to visit as many holy sepulchres and other places of pilgrimage as possible in this manner in the year 1100 (1688) he came to Lebanon, in 1101 to Jerusalem and Hebron; in 1106 (1694) to Egypt and the Hijaz, in 1112 (1700) to Palestine. In 1116 (1703) he again visited in Damascus at the Sakhira and died on the 24th Shabân 1143 (3rd March 1731).

‘Abd al-Āshāf’s literary importance is of our opinion justifiably based on his books of travel, 1. *al-Hijra min al-Madīna al-Sharīfa wa-l-Madīna al-Sharīfa* (comp. Flügel, in the *Zentralblatt für Bibliothekswissenschaft*, vol. 69 p. 109; v. Krieger, in the *Sitzungsberichte der phil.-hist. Klasse der Kais. Akademie d. Wissenschaften*, v. 319 p. 109) = *al-Hijra min al-Madīna al-Sharīfa*, a journey from Damascus to Jerusalem and back, from the 17th Jumādī II till 1st Shabân 1101 (29th March till 16th May 1690), finished on the 9th Shabân 1101 (14th September). — comp. v. Krieger, *loc. cit.* p. 310; Goldammer, in the *Zentralblatt für Bibliothekswissenschaft*, xxvii. 385 p. 109; 3. *al-Hijra min al-Madīna al-Sharīfa* to *al-Madīna al-Sharīfa* and *al-Madīna al-Sharīfa* to *al-Madīna al-Sharīfa*. It was not his intention in these works to give descriptions of existing conditions, but what appeared of more importance to him was, besides his own edifying experiences, information concerning the legendary history of holy places; he obtained such information more especially out of al-Āshāf and al-Āshāf. Nevertheless his account, furnished with a few positive dates for historical topography of Syria. The real centre of his literary energy lay, however, in mysticism, which he endeavoured to advance in communications in the works of earlier Sūfīs, and in innumerable writings from his own pen. He also several times took part in the discussions which his contemporaries carried on in questions of practical religious life. Thus in 1096 (1683) he wrote a defence of the Marwānī-Dervishes (comp. Ahlwardt, *Verz. d. arab. Handschriften d. Königl. Bibl. in Berlin*, N^o. 3383; *Deutsche Literaturzeitung*, N^o. 136); further he endeavoured to justify the tracing of the name of the Dervishes (Ahlwardt, *loc. cit.* N^o. 3384, 3322; *Äthiop. ... al-Hijra min al-Madīna al-Sharīfa*, li. 125). as well as their use of tobacco. He was also a poet and used not only the old *ḥamīdī* forms but also the popular *Marwānī* (comp. Hartmann, *Äthiop.*, p. 6). The first part of his *Diwān* is printed with the title of *Diwān al-Āshāf* in *Madīna al-Sharīfa* (Bibl., 1270; Cairo, 1302, 1303). His poem in praise of the Prophet with a detailed commentary on the rhetorical subtilties, entitled: *Naṣṣ al-Āshāf ‘alā maṣṣad al-Āshāf min al-ḥikma al-madīniyya* was published in 1299. In the last he is, however, still more popular as the author of a work on dreams entitled *Ṭawṣiṭ al-ḥayāt min al-ḥayāt*, in 2 vols. (Cairo, 1687, 1301, 1304, 1306, 1316, in margin of Ibn Sīd’s *Al-muḥḥab al-ḥayāt*). He also applied himself to the pseudo-science of prophecy, and wrote two pamphlets on the events to be expected under the rule of the Ottomans in the years 1159 (1746) and 1294 (1887, in *Slama, Catalogue des manuscrits de la Bibl. Nat.*, N^o. 1626 re imp.). Biographies of ‘Abd al-Āshāf

found in Murad, *Not. d’histoire* (Hildesl., 1294-1301, li. 30-31); *Madīna al-Sharīfa* (Cairo, 1297) p. 154-157 = list of his writings in the year 1105 (1693) = given by Flügel, in the *Zentralblatt für Bibliothekswissenschaft*, vol. 69 p. 109; another by *Madīna al-Sharīfa*, *Madīna al-Sharīfa*, N^o. 1660; concerning the writings still preserved comp. Brockelmann, *Verz. d. arab. Literatur*, li. 135 p. 109. (Brockelmann).

‘ABD AL-ĀSHĀF AND AL-ĀSHĀF. AND ‘ABD AL-ĀSHĀF. ‘ABD AL-ĀSHĀF, chief of the Zanata-Mastulides and founder of the dynasty of the Mastulides. His father, ‘Abd al-Āshāf al-Mahyū the chief of his tribe, having died in 502 (1197) ‘Abd al-Āshāf was chosen to his succession.

At that time the Mastulides overran the high tablelands of the Central Maghrib (Algeria), to the south of the Tāhert and Tlemcen mountains from the Zāh to Sijilmasa in a nomadic state. They had their summer camps in the oases of the Wādī Tā and of the Upper Mulāya, between Alkair and al-Wajāl. The regions to the north corresponding to these countries were occupied by other Zāmla, namely by the Banū ‘Abd al-Wād. Just contrary to these, the Mastulides had been always hostile to the Almohades. They then took part in the useless struggles carried on by the Banū Ghāniya, descendants of the Almohades, against the ‘Abd al-Muḥsin dynasty. So that in 605 (1209) they helped in crushing the Almohade general, ‘Abd Tharīq Misk, the emir al-Nāṣir, and in vanquishing Tāhert and al-Baḥa.

The Almohade emirs succeeded, however, in pacifying the Central Maghrib and the Eastern Maghrib. The great advantage of this to all the Arab and Berber tribes together for a Holy War against the Christians in Spain. This expedition was brought to an end in 609 (1212) by the disaster of al-Baḥa (Las Navas). The Almohades were cut to pieces; nearly all their chiefs were killed, or perished from the plague which broke out among them. The survivors carried the epidemic into what is now Moroccan territory, where, as say the Mohammedan authors, were so many victims that the country seemed to be emptied. The emir al-Nāṣir himself died from it at Marrakech in 610 (1213). His son and successor, ‘Abd al-Muḥsin, being too young and too weak to manage the Almohade chiefs, allowed them to command round him for prominence, and to bring in dissensions, confusion and anarchy everywhere. ‘Abd al-Āshāf chose this moment to invade the north-west of Morocco with his Mastulides.

He was conducted through his allies with the Banū ‘Abd al-Wād, with many Berber tribes, especially the Hūḡaya of the Rif. The Almohades were encamped with these the reports of their raids on the people’s respect to the Almohades obliged the emir al-Muḥsin to despatch an army against them. They left their baggage at Tāhert (Alkair), met the Almohades near Wādī Nūḡa, overthrew them, despoiled them, and forced them to go back to Fez naked (615 = 1217). In the same year ‘Abd al-Āshāf marched upon Fez. The Almohade governor of the town met him with a strong army of Rif and Tāhert Arabs and of Mikulas Berbers. The Almohade leader was beaten and killed. An enormous amount of booty, gained by ‘Abd al-Āshāf, was divided, but he gave up his share to his allies the Berbers of the Rif and

new ruler was to subjugate the provinces which had resulted in consequence of the fatal war. In Serbia and Moldavia the almost equally aged old Blagovitch (Blagovitch) and his son were the virtual masters of the country. The Egyptian Mameluks had proved themselves incapable of dominating them; and the energetic Agha Pasha Mahmud succeeded in the same year in getting the sultan into his power, and was completely stamping out the rebellious Mameluks in the support of the subsequently famous Ahmed Ali al-Lipsy in 1776.

A short time thereafter, Turkey was so minute in strength against Ismael Khan, the most powerful of the petty Persian princes, had annexed Ottoman ground. The sultan's army was attacked by the Persians at Kerak (December 1776) and driven back to Musul (Mosul) with considerable losses. Egypt, too, remained in the power of that experienced general, Khorra.

The plans of the European governments became more dangerous still to Turkey. Peace with Austria had hardly been concluded when Austria at one blow seized Bukowina. The Porte was helpless and finally renounced all claims to the lost provinces by treaty (May 1775).

Even the beginning the Porte seriously set the Powers in movement against the ratified Peace of Ruten-Kainardji, nay it even demanded from Russia more extensive modifications. The Coalition, however, supported in every way that Czar Nicholas, whom Russia had appointed and who was a philo-European, and as the great victory continued to resist, she entered Moscow which is the key to the Crimea (December 1776). Finally war was started by Turkey's recognition of the Russianophile Khan (March 1779). A result against her protégé gave Catherine in the spring of 1783 an excuse for annexing the coast of the Black Sea and the whole of Turkey. 'Abd al-Hamid submitted to this by the terms of the 6th January 1784.

Moscow seemed to be making a peaceful turn, when in 1784 all the Khan and tribes of Christian and Mohammedan faith in the Caucasus took up arms against the Russianophile Herakles, prince of Georgia. This land so rich in deeds of valor was stirred up by both parties and finally, as Russia insisted on settling the affair alone, broke out about a declaration of war by the Porte and the great struggle which encompassed the whole East. The attack by which the Turks immediately surprised the hero of this war, Suvoroff, the general in command at Kinturn, was repulsed with little trouble. The sultan's position became still more painful when Emperor Joseph II, who already invaded Serbia, declared war in Feb. 1778. Even Hassan Pasha, the Khan of Idku, as he was called, saw his empire first destroyed in the hands of the Cilicians there (June and July 1788). It was fortunate for Turkey that at least little Sweden overran Russia and that Austria, although fairly successful in Germany, did not very brilliant figure in either Serbia or Siebenbürgen. The great event of the war was the incomparable feat of arms of Suvoroff, the storming of Oukter (December 1788): 10000 Turks and innumerable booty covered the ramparts. Besarabia was thus as good as lost to the sultan. In 1789 no further collision had taken place, when in April 'Abd al-Hamid died from apoplexy.

The portrait which contemporaries sketch of the

emperor is not exactly flattering: physically clumsy, mentally undeveloped, he possessed neither the economic nor diplomatic. He was unable either to take advantage of the promising national and religious movement in the Caucasus, or to use with success the means that his vast and army afforded him.

(K. Schmitt.)

'ABD AL-HAMID II, the present sovereign ruler in the Ottoman empire, son of Sultan 'Abd al-Majid, born the 3rd Rebi'ul 1258 (24th Sept. 1842), was thirty-three when the ministers, having deposed his brother, Murad V, called him to the throne of 'Osman (20th Sept. 1876 = 31st Aug. 1876). For particulars about the principal events in his reign, the inscription in Bosnia and Herzegovina, the war with Serbia and Montenegro, then with Russia, etc. see special articles.

'Abd al-Hamid II has continued the work of reform (*Islahat*): during his reign legislation has been perfected by the completion of the Medjelle as civil code, by the appointment of public prosecutors empowered to proceed, in the name of the State, against misdemeanors and crimes (taken from the French system), and by the promulgation of numerous laws. At the same time he raised the credit of the empire by constituting an international administration, representing the interest of the bondholders, i.e. the bearer of shares of the foreign debt, and authorized to receive the revenues of the State (indirect taxes), such as the salt tax, duty on spirits etc., which were granted to it; the tobacco tax, over which it had control at first, was later entrusted to a participatory administration. The execution of numerous primary Mohammedan schools, the building of a network of roads, unhappily not yet finished, the building of bridges, and the concession of certain railways (in Europe, the junction of the lines from Constantinople and Salonica with the European system, the line from Moscow to the junction between Salonica and Constantinople; in Asia, the Meisun-Adana line, the Angora line, the Konia line, extension towards Bagdad and the Persian Gulf, the Mecca line, finished as far as Mecca, and the Jeddah line to Jerusalem; a cog-wheeled steam railway from Beyrut to Damascus) and of the ports (Salonica and Smyrna) show the desire and firm resolution of the sovereign to maintain, in the face of a thousand difficulties, the progress begun by his predecessors and to continue their work.

(K. Huet.)

ABD AL-HAMID LAMAR, a Persian historian, died 1065 (1653), author of the *Part*.

ABD AL-KĀDIR b. MUHYI'UDDIN AL-HASANI, the Emir, born in 1222 (1803) near al-Maklat (Mezzera). His family was one of the most influential in the Hadrami tribe, which, after having claimed for a long time in Shonka, removed and established itself in the 15th century in the basin of Oran. In addition to the emirate derived by this family from its primary source was added the reputation for boldness gained by Mansur b. Muhammad b. Muffar, the grandfather of 'Abd al-Kādir, and almost all of Muhyi'-'Din, his father. 'Abd al-Kādir, then, grew up in a religious environment. Without neglecting his training in arms and athletics, in which he was excelled, he applied himself especially to acquire the resources of reason and revelation. Like his father he became a Sufi and a theologian, and he always was so even when circumstances made him a warrior and head of the State. Having been sent by his father to Oran, he came back with the sentiment of the military and political weakness of the Turks. His father, who was almost openly recognized as their chief by the authorities in the north of the province, was arrested by order of Hassan Bey. He escaped, however, notwithstanding prohibition to leave Algeria and went to Arabia, taking with him 'Abd al-Kādir, who spent two years (1827-1829) in Ashab.

On their return to Africa in 1829, 'Abd al-Kādir and his father resounded at first to live in retirement. But the events consequent upon the taking of Algiers by the French furnished them with the opportunity of putting themselves at the head of the tribes and of going to the rescue of the adherents of the Turks. Thus it was that 'Abd al-Kādir having stopped his father from giving help to Hassan, the be of Oran, the latter was obliged to render his intention to France. Muhyi'-'Din, although he declined the honor of being the supreme chief of his compatriots, took command of the troops who were fighting with the French garrison of Oran. In the course of these expeditions 'Abd al-Kādir showed much courage and aroused the admiration of his compatriots by his skill on horse-back and his valour. Therefore, when Muhyi'-'Din declined to accept the title of sultan for the second time, he was easily able to persuade the tribes to recognize 'Abd al-Kādir as their leader, and the latter was proclaimed sultan on the 21st Nov. 1832. However, in deference to the spirit of Fez, whose unfriendliness he was afraid to excite, he refused to make use of this title and contented himself with that of emir.

'Abd al-Kādir's political life may be divided into three periods: 1. From the date on which he was proclaimed sultan in the Taha treaty (30th May 1832). — 2. From this treaty to the breaking of peace (20th Nov. 1839). — 3. From the recommencement of hostilities with France to his voluntary surrender (22nd Dec. 1847).

I. In the first period 'Abd al-Kādir strove to bring the whole western half of Algeria under subjection. Having made Mascara his capital, he proclaimed a Holy War through the whole province. At first he was unfortunate, for he had at once and the same time to fight the French and to subdue his Musulman rivals. He succeeded, however, in saving Tlemcen, but could not get the tribes of the Ficks, who were occupying the ridge, the "Machewer". His position became more advantageous through

the convention called by historians the "Comichel treaty" (26th Feb. 1834), which, being drawn up ambiguously with considerable differences between the French and the Arabic text, was entirely in the benefit of 'Abd al-Kādir. In reality he obtained free possession of the entire basin of Oran with the exception of Oran itself, Arzew (Arzew) and Mostaganema. He was authorized to appoint consuls in these towns as well as in Algiers and to provide himself with arms and munitions of war. Thus with the consent of France 'Abd al-Kādir became the legitimate ruler of all the Western Musulmans. The alliance with France also helped him to triumph over his Musulman enemies, who had risen against him on account of the convention (he had just concluded with the French). He at once hastened himself with subduing all parts of the country where the French were not yet established, and, despite the protestations of Governor General Drouot d'Elon, he took possession of Macta and Miliana, where he left garrisons and placed headquarters. Being recalled to the province of Oran by the defection of the Smalas and Douzars, who had just gone over to the French, 'Abd al-Kādir commenced hostilities against General Tadeu, who refused to give up the rebels, and the victory of the Macta followed (20th July 1835). This victory drove the French government to treat with energy and 'Abd al-Kādir took his capital, Mascara, invaded by a French column under Marshal Clauzel. His position was at one moment very precarious — repulsed by the Turks who were attacked in the "Machewer" at Tlemcen, he was defeated by General Bugeaud on the banks of the Sikka. But, thanks to his diplomatic ability, 'Abd al-Kādir managed to get General Bugeaud to sign (30th May 1837) the Taha treaty, which extended the dominion of 'Abd al-Kādir in Algeria even further than the Comichel treaty. He granted them, without any concession on his part, nearly the whole of the province of Oran, a considerable portion of that of Algiers, and the entire basin of Tizi, making together as much as two thirds of Algeria.

II. The two years which followed the Taha treaty were employed by 'Abd al-Kādir in strengthening his authority. The tribes of Tizi having refused to pay him taxes, he defeated them on two occasions and forced them to submit. Despite the clauses of the treaty, which kept the eastern province under the influence of France, he placed headquarters in Mediana and the Zibou as well as in Laghmat. The Marabout, Mohammed Tiliat, who was very influential in the Sahara, was the only man who tried to resist him. The Emir went in person to attack the Bey of Am-Mahid, the emissary of his opponent, and after a siege of five months (1st June—17th Nov. 1838), succeeded in taking it. The capitulation of this place, in which the Turks had never penetrated, showed the entire chiefs that not one amongst them was in a position to refuse to obey 'Abd al-Kādir.

Having thus created a Musulman state by diplomacy and war 'Abd al-Kādir attempted to organize it by substituting relative order in place of the anarchy which reigned in Algeria after the overthrow of the Turkish government (see ARABIA). He limited himself especially with the formation of an army capable of resisting the Christians. He added to the contingents furnished by the tribes, who were brave enough but undisciplined,

a regular army comprising infantry, cavalry and artillery, composed of soldiers enrolled as volunteers and paid in the Levies. The instruction of these soldiers was confined to Tunisian and Tripolitan subterfuges, and also to deserters from the French army. Abd al-Kadir drew up regulations as to uniform, food, pay, discipline, promotion, discipline and the decorations of the soldiers. To supply them with necessities of life he established mills of grain; he organised manufactures of arms; and had fortresses repaired or built, as much to guarantee the country against invasion by the Christians, as to keep the tribes in subordination.

(II). 'Abd al-Kadir and the French could not agree about the interpretation of certain obscure clauses in the Tafna treaty. Marshal Viallé opened negotiations with Abd al-Kadir for the purpose of modifying the guarantee of 1837, but they came to nothing. Soon the expedition of the "Porte-ble-Bleu" in the course of which a French army, led by Marshal Viallé and Duke d'Angoulême, passed through the whole province of Constantine from East to West, was taken by the Emir to be a violation of the Tafna treaty. He declared at Médéa a Holy War and began hostilities by ordering his lieutenant Ben Salem to invade Miliha, where the Turks were sacked and the settlers massacred (20th Nov. 1837).

From that time it was a fight to the death between the Emir and France. From 1838 'Abd al-Kadir lost many fortified positions, but it was in 1843 that the irreparable blows were given to his power by Marshal Bugeaud, who took all his fortresses one after the other. Thus he lost Boghara, Taza, Teydant, Mascara and the valley of the Chelif. He still held out in the West, but the occupation of Tlemcen and of the district of Neisema, obliged him to fall back towards the South. In the following year he received an irreparable blow; a part of his army (see the article) was taken by surprise by Duke d'Angoulême at Taguier on the 20th of May 1843. Closed in by 100 French columns and abandoned by most of his partisans, the Emir had to take refuge in Morocco.

However, he did not yet allow that he was beaten. Through intrigue he brought about a rupture between France and Morocco, in the hope that by means of this diversion he might again have the aid of it. But Sherif's army was defeated by General Bugeaud at the battle of July (22nd Aug. 1844), and by the treaty of Targiers (26th Sept. 1844) the Sultan undertook to render 'Abd al-Kadir harmless. This clause was not observed, and the Emir remained cantoned near the Algerian frontier, watching events. He took advantage of the insurrectionary movements which took place in 1846 to recommence hostilities and made a bold sally into the land of the Kabyles. But, being pursued by the French columns without any respite, he had to beat a retreat and regain Morocco. Finally 'Abd al-Kadir, in compliance with the repeated injunctions of France decided to send a strong army against him. 'Abd al-Kadir, who was at the end of his resources, offered his submission to General Lamoricière on condition that he should be permitted to retire with his family to Aïragnels or to St. Juan d'Acce. This request was received favourably and the Emir delivered himself up to the French on the 23rd December 1847.

Circumstances delayed the fulfilment of this

promise. The Emir had been taken across to Toulon, where he should have embarked for the East. He was still in Fort Lamalgne when the revolution of February 1848 broke out. The Provisional Government did not think it right to fulfil the promise made by Lamoricière and Duke d'Angoulême, and Abd al-Kadir remained in France in captivity. He was confined at Pau and then at Antibes, the 3rd Nov. 1848, and remained there until the 26th Sept. 1852, when Louis Napoleon went in person to announce to him his enlargement. After a short stay in Paris he went to Constantinople and to Russia, where he resided from 1853 to 1855; then, on account of the earthquake which destroyed this town, he went, with the authorisation of the Turkish and French governments, to settle at Damascus. In this town he led a retired life, dividing his time between study, religious exercises and the education of his children. In 1860 when the insurgent Druzes threatened to massacre the Christian population, 'Abd al-Kadir with the co-operation of Algerian immigrants rescued the French consul and nearly 1500 persons. The French government recompensed this conduct by giving 'Abd al-Kadir the Grand Cross of the Legion of Honour. In all circumstances besides this the Emir most scrupulously observed his promises to France. In 1870 he disavowed the intrigues of one of his sons; in 1871 he openly condemned the foments of disorder, who were using his name and led to an up rebellion among 20000 peoples of the East. When the revolt broke out he wrote, with success though, to his immigrants to induce them to lay down their arms. He died at Damascus in 1883.

Belonging by birth to the religious aristocracy 'Abd al-Kadir was above all a convinced believer. His faith was ardent; his mystic enthusiasm excited the admiration of his co-religionists, and even struck the few Europeans who had the opportunity of approaching him. More a theologian than a writer, knowing the Koran and religious literature from end to end, he made free use of spiritual weapons, adapted to serve his ends and fought his enemies with eloquence as much as with arms. But he was also clever enough to make use of a fanaticism, the sincerity of which he might not doubt, for his personal ambition. He was a Mahomedan in his faith, as much as in his good qualities; without doubt loyal but having recourse unscrupulously to perfidy; and artifice to assure the success of his cause, which he confused with that of Islam, just from an Oriental point of view, generous and humane, but bloody and merciless when he deemed it necessary to stimulate his enemies. In short he was a true descendant of the Maghribine empire founders in the Middle Ages, of 'Abd al-Muwadda for example, rather than a reformer inspired with Western ideas.

'Abd al-Kadir attached much importance to intellectual culture, and wrote poetry of different kinds himself. During his residence in Russia he wrote a philosophical treatise called *Diwan al-Hikma* on the 20th of July. In the first part of this work the author criticises the character and nature of Philosophy and Religion; in the second he reviews the history of the nations that have shown a marked taste for science. According to M. Morand, 'Abd al-Kadir also wrote an *Autobiography*

ality presents the diverse phenomena. And at times
to find of putting it into an order, a principle.
And at least after long periods, people have
into the presentation of his theories, so the in-
roduction he has recognized a development. His
work has had great influence in the university and
religious class in the greater part of Latin and
especially in East India.

ABD AL-KARIM MANTOU. 1500 MANTOU.

ABD AL-KARIM NASSIR HANNA, a Turkish general, born at Carpat in East Roumania. In 1876 he was victorious over the Germans, and in the Russo-Turkish war he had the supreme command of the Turkish army of the Balkans, but was dismissed for not being able to prevent the passage of the Russians across the Danube, and died at Khirler where he died in 1908 (1933).

Bibliography: Comp. work on the Serbo-Turkish and Russo-Turkish wars.

ABD AL-LATIF KADZAKHULLI {See
LATIF.}

ABD AL-LATIF, *Muhammad al-Din Abd*
Muhammed) b. *Yusuf b. Muhammad* b. *'Ali* al-
Hamauidi, also called *Imam al-Fayyaz*, one of
the versatile Arab scholars and prolific writers,
born at Hama in 557 (1162), died there in 620
(1223). In Hama he studied grammar, Fikh, tradi-
tion, etc., and was induced by a Maghribi,
who had come to the city of the caliphate,
devote himself to philosophy, natural and secret
sciences, which his great application enabled
him to master. In 585 (1189) he went to ab-
Mawad (Mezai) and thence to Syria and Egypt,
where he was held in great esteem by *Salah al-*
Din and his successors, and where he became
acquainted with the most celebrated men, e. g.
'Imad al-Din, al-Kadi T-Faqir, Abul-Hasan
and many others. In 602 (1207) he was again
in Damascus, but after some time he went
Anatolia via Aleppo and remained for a length
of time at the court of Prince *'Ali al-Din*
Isma'il Shah, who was a great enthusiast for
natural sciences. When, however, this prince suc-
cended the throne, he quarrelled with the Seldjuk
Kaisar, who took him prisoner and annexed
his lands. Thereupon (in 606 = 1211) *Abd al-*
Latif returned via Aleppo to his native town of

English, which he soon afterwards died. His extensive writings cover almost the whole domain of human knowledge at those days. In Europe he became known principally by a short description of Egypt translated into Latin, German and French: *Chaque V. de l'Égypte, Description de l'Égypte* par l'abbé de Voltaire, 1740.

 414. The second part entomological, espe-
 cially printed by J. Mayr, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538,

Mehmed Ali Pasha, Turkish sultan, born on the 21st May = 1235 (= 29 April 1823); eldest son of Mahmud II, whom he succeeded on the 23rd March at 1855 (20 July 1861). The first thing he did was to order the suspension of hostilities against Muhammad "Al" Wajid of Egypt, who had just won the victory of Nefeh; and the High-Serai refused to comply with his order and led his fleet into the port of Alexandria. He ordered the proclamation of the *Azhar* (the school of Ghalib) 21st September 1861, an imperial edict which confirmed, sustained and renewed the work of reform (improvement). Thanks to his efforts the Porte entered into the quadruple alliance which deprived Muhammad Ali of the title of all his countries (15th December 1869) = 25th July 1870. Serious trouble began between him & 1869, and the coming of Wallachia and Moldavia, which ended in the simultaneous occupation of both provinces by the Russian and the Turks (Paris-London convention, 1863 = 1870) was considered events in his reign before the question of the Holy-Places brought about the Crimean war. After Peace [1870] Within by an advanced position on the left bank of the Danube; but in Aug the Turks were defeated at Akrahish and their fleet was burned at Sinope by Admiral Nakhimov (1870 = 20 Nov. 1853) [1870]. His fleets after being at sea [1870] were surrounded in Kalmar, [1870] the [1870] laid siege to Silistria (1870 = 1854) and then withdrew after six ineffectual assaults; on France and England taking part in the war, the Russians were obliged to evacuate the principalities. In the following year Constantinople fell (25th March - Friday 1871 = 20 Sept. 1855) for which no making of Navy was no compensation; peace was signed at Paris (25th March - 1872 = 30th March 1866); the integrity of Turkey was acknowledged; the Serbs were allowed against exulting; the Russian pretensions over the principalities was abolished; Servia, Moldavia and Wallachia were made independent states under the suzerainty of the Ottoman empire; and to addison this international document made Turkey emphatically join the European concert.

A short time before the treaty of Fum's Abd al-Majid had promulgated the *Asasiyya* (10th *Thawth* II: 172 = 1st Febr. 1856), which recognised the civil equality of all his subjects, established a new arrangement of taxes and threw open the military service to those who were not *Thummalim*. Unfortunately the liberal inclinations of the sovereign clashed with a powerful reactionary party. Disorders took place at Sidon (2^d *Thawth* II: 174 = 13th July 1858) and at Lebanon (Sawwa II: 176 = May 1860); Fu'ad Pasha was sent to Commission the Extraordinary to the

later practice, when the French troops had just disembarked. 'Abd al-Madjid, a worthy successor of his father, a humane and well-meaning prince, lacked the strength necessary for overcoming obstacles, whilst his extravagances wasted the treasury. He died on the 15th Dhul-Hijjah 1277 (25th June 1861), and was succeeded by his brother 'Abd al-'Aziz.

'ABD AL-MADJID n. 'ABD ALLAH. [See 'ABD AL-MALIK.]

'ABD AL-MALIK n. HIRSHAN. [See 'ABD AL-MALIK.]

'ABD AL-MALIK n. SATAR n. NOFAR n. 'ABD ALLAH AL-FARSI, successor of 'Abd al-Rahman b. 'Abd Allah (q. v.) as governor of Spain. It was not on account of his crimes and exactions but for political reasons that in 736 (end of 734) he was forced to abdicate his position in favor of 'Ubayd b. al-Harith al-Sakuni. When, however, the latter in 741 (741) fell dangerously ill during an uprising of the Berbers in Africa, he found himself obliged to restore 'Abd al-Malik to his former post. Meanwhile the troops sent against the Berbers by Caliph Hisham under the command of Kuthayb b. 'Iskaf were dispersed, a part of them under Balj b. 'Iskaf fled to Ceuta. From this place Balj sent to 'Abd al-Malik to ask him if he might call over to Spain. At first 'Abd al-Malik refused to hear anything of such a plan, but when the Berbers began to give trouble in Spain also, he was obliged, willingly, to put up with the assistance of Balj's troops. As soon as the Berber danger was over, 'Abd al-Malik did indeed lead on these troops again leaving Spain. Balj, however, would have none of this, and hostilities broke out. 'Abd al-Malik was defeated, captured and killed (743 = 741). He was 60 years old.

'ABD AL-MALIK n. AL-MANSHUR. Two 'Amirides bore this name together with the surname of al-Manshūr:

1. 'ABD AL-MALIK, the son of the famous Almansur, had already in his father's lifetime the title of *al-Malik* (since 991), and after 1001 later's death in 392 (1002) became his successor. His short reign (till 399 = 1008), was a happy one for his people.

2. 'ABD AL-MALIK n. 'ABD AL-'AZIZ AL-MANSHUR n. 'ABD AL-KAYMAN, grandson of Almansur, reigned after his father in Valencia 453—457 = 1061—1065. He was here seized by Ferdinand I, king of Castile and Leon, and was finally taken prisoner by his father-in-law al-Muwahid of Toledo, when the latter annexed Valencia to his own dominions 457 = 1065. [Comp. 'AMIRIDES.]

'ABD AL-MALIK n. MANSHUR, Umayyad caliph. According to general report he was born in the year 26 (646-647). His father was Caliph Marwan

I. His mother's name was 'Aisha bint al-Muharik. As a boy of ten he was an eyewitness of the storming of the palace of 'Uthman, and at the age of 14 he was appointed President of the Diwan of Medina by Caliph al-Walid. Here he remained till the outbreak of the rebellion against Mar'awiya's son, Yazid I, in 63 (683). When the Umayyads were expelled by the rebels, 'Abd al-Malik had to leave the town with his father. On the way they met the Syrian army of Mar'awiya b. 'Ubayd, and returned back with him, 'Abd al-Malik having previously given Mar'awiya most information concerning the position of the town and other details. Then the battle on the Harun took place and ended with the complete defeat of the Modinians. After the assassination of his father, 'Abd al-Malik ascended the throne in Ramadan 65 (April 685), but from the very beginning he had great difficulties to combat. In Mecca 'Abd Allah b. al-Zuhair had himself long since proclaimed caliph, and was at first nominally recognized in a great part of the empire. In the West the Byzantines gave the caliph trouble, and in addition to this there were several dangerous uprisings in different provinces. Nevertheless 'Abd al-Malik showed himself quite equal to the onerous task, and after some beating for several years, he at last succeeded in again uniting the Moslem empire under one sceptre. In Kufa, which at that time still obeyed the rival caliph Ibn al-Zuhair, a dangerous disturbance of the peace named al-Muhajir b. 'Abi 'Ubayd had appeared before 'Abd al-Malik assumed the reins of government. By all manner of intrigue he managed to form a party amongst the 'Abbas, which preached revenge for the assassination of al-Furat. In the year 66 (685) Ibn al-Zuhair's troops were defeated in Kufa and his governor 'Abd Allah b. 'Ubayd expelled so that al-Muhajir could now easily make himself master of the capital and of the whole province. In the following year his general Hisham b. Malik al-Ash'ari succeeded in inflicting a severe defeat on the army that 'Abd al-Malik sent against him. That was, however, the end of al-Muhajir's successes. Mus'ab, a brother of 'Abd Allah b. al-Zuhair and the latter's governor in Basra, united with the rebel commander al-Muhajir b. 'Abi 'Ubayd and marched against him, and in Ramadan 67 (April 687) a decisive battle took place at Harura, in which al-Muhajir was defeated and killed. Now the issue was between Mus'ab and the caliph. In 69 (688-689) 'Abd al-Malik set out from Damascus to march against Mus'ab, but was soon obliged to return, because 'Asar b. 'Abd al-Jadid had stirred up a dangerous revolt in the capital. 'Asar blocked himself in the residence, but when the caliph appeared before the gates, he nevertheless was let himself be persuaded to capitulate after having been promised life and liberty. Notwithstanding this 'Abd al-Malik soon afterwards had him seized and is generally reported to have executed him with his own hand. When order had been restored in Damascus the caliph started for the second time in 70 (690) against Mus'ab, but returned without having achieved anything. In the following year a new campaign was undertaken. The two armies met in the neighborhood of Maskin on the Euphrates and in the same year Mus'ab here met his death after a desperate battle. 'Abd al-Malik received the homage of the inhabitants of Iraq

and then returned to the capital. He had now his hands free to fight against his dangerous rival 'Abd Allah b. al-Zubair and was able to send an army to Mecca. The command was transferred to the energetic al-Hajjaj b. Yusuf. The latter invested the town, and after a siege of several months 'Abd Allah was killed in 73 (693) and Mecca fell into the hands of al-Hajjaj, who was rewarded with the governorship of the Hijaz. Order had, however, not been restored everywhere. In Central Arabia al-Najdjar had long been committing excesses, but in the long run were unable to hold their ground. Much more dangerous were the Kharijite sect, the so-called *Ash'ariyya*, who preached the Holy War against all heresies without exception and committed terrible atrocities in the Persian provinces. To vain did al-Muhallab endeavor to suppress these cruel fanatics, and it was only when the severe al-Hajjaj had in 75 (694) been appointed governor of Iraq and had by his energetic measures compelled the degenerate *Talaf* to place themselves under al-Muhallab's orders, that he succeeded after hard fighting in breaking the power of the sectarians, and in 78 (697) the 100 generals were finally able to cherish the hope that they had rendered the dangerous rebels harmless. But a couple of years later fresh trouble broke out. After the suppression of the Kharijite rebellion the general 'Abd al-Rahman b. al-Muhammed b. al-Ash'ari was appointed governor of Sijistan, where he succeeded in winning several important victories against the warlike neighboring nations. At however al-Hajjaj, who combined with his duties in Kufa the control of the eastern provinces, was dissatisfied with 'Abd al-Rahman's performance and required still greater feats of him and his troops. 'Abd al-Rahman, who in 700-701 revolted against the tyrannical governor and afterwards had himself proclaimed caliph. When in the same year he had defeated at Tuzur the army sent against him, his power grew to such an extent that 'Abd al-Malik had to condescend to negotiate with his rebellious subject, but the negotiations fell through. After lengthy preparations a decisive battle took place at Dair al-Hamam in January 83 (July 702) when 'Abd al-Malik was defeated and had to take to flight. — During the first few years 'Abd al-Malik's reign, the Byzantine also gave him much trouble. It is true that in this matter also all the details are not sufficiently clear, but it is at least certain that the caliph had to conclude a dearly-bought peace and had at the same time to engage himself to pay a considerable tribute. On account of a quarrel concerning *espagne*, the peace was soon after declared by the Byzantine emperor as null. Hostilities again broke out and lasted with but little interruption during the whole of 'Abd al-Malik's reign. His brother Muhammad especially distinguished himself as a general. This war was waged on partly in Asia Minor, partly in Armenia, and although the Muslims suffered severe losses, yet they became more and more dangerous to the Byzantine empire. After 'Abd al-Malik's death, the overgrown war was continued by his son and successor al-Walid. The far West also resembled with the lack of arms. After the death of 'Abd al-Malik sent Hassan b. al-Nu'man at the head of an army against Africa to subjugate the united Greeks and Berbers, and at

the same time appointed him governor of the province. His duty Hassan performed with great success, and when he left Africa, the conquests were continued by his successor Musa b. Nusayr, and the caliph's rule was firmly established in spite of these continued wars against the abroad and at home. 'Abd al-Malik found time to look after the peaceful development of his immense empire. He especially endeavored by means of reforms, which touched the whole community, to blend the diverse elements, of which the population of the Caliphate consisted. To this end the numerous officials of other confessions were expelled from the State service and replaced by Arabian officials. In the end, however, it proved difficult to keep to this principle, because there was a lack of suitable candidates amongst the Moslems. Arabic was introduced as the official language for the future. One of the most important measures were the reforms of the coinage. Up to 'Abd al-Malik's time Byzantine and Persian money circulated in the Caliphate, a fact which gave rise to numerous evils. 'Abd al-Malik first of all regulated the monetary system and had gold and silver coins struck with an Arabian inscription. It is not quite certain when this important reform was undertaken. In any case it must be placed shortly after the defeat of the rival caliph al-Zubair. Finally the postal facilities were improved. In his reforms 'Abd al-Malik found a powerful assistant in the cruel but energetic governor al-Hajjaj, who administered the important province of Iraq for twenty years. 'Abd al-Malik's brother 'Abd al-'Aziz had been appointed his successor by Muhammad. The caliph, however, wanted to transfer the power to his two sons al-Walid and Sulayman, and was already scheming to exclude his brother from the succession when news of 'Abd al-'Aziz's death suddenly arrived. Shortly after it in Shawwal 86 (October 705), the caliph died. 'Abd al-Malik's treacherous and cruel conduct towards 'Aziz b. Sa'ad throws indeed a dark shadow on his character, but this deed seems to stand alone. In any case extraordinary means were needed in his position at that time to break the resistance which was arising in all parts. For the rest he combined with his recognized gifts of statesmanship a poetical talent and an education, which was considerable according to the standard of those days. None of the Umayyads has in any case equalled him in statesmanship.

'ABD AL-MALIK n. 806, 807, 808 of two Semantides.

1. 'Amr al-Malik (Abu l-Fawaris) n. 806, prince of Khosro and Transoxania (343—350 = 954—961), successor in his father Nuh b. Naph. According to a more recent authority (Al-Jamil al-Kabir, *Ueber die*, ed. Scheller, p. 93, l. 19), he was only 35 years old on his accession. The war commenced by Nuh against the Byzantines was put

on and so in his reign by a peace which was disadvantageous to the Saracens (334 = 955-956) as the caliph put it. This peace was conditional on the recognition of an *amir al-Mu'alla* title is known of the conditions ruling in the country under 'Abd al-Malik; whereas the youthful amir had deserved the praise bestowed on him by al-Mu'alla (pp. 337 et seq.) cannot be judged from the scanty information we possess. The actual power seems to have remained in the hands of the Turkish *Protectors* who came into existence under 'Abd al-Malik; very significant is the examination of the governor of Khuzistan, *Isma'il b. Malik*, in Baghdad before the gates of the Palace. 'Abd al-Malik's early death is said to have been caused by a fall from his horse while playing polo; his son *Nasr* was according to al-Mu'alla (p. 337) not a ruler for the space of but a single day.

Biography: Ibn al-Azhar (ed. Torab.), ii. 151-152, 396, 398; *Qardir, Zain al-Adab*, MSS. Cambridge (Kings' College, No. 273, f. 100r-101r) and Oxford (Bodleian, Chancery, 88, 210, f. 124-125). — *Etica, Catalogus*, pp. 9-10; (extracts therefrom in Barthold, *Turkistan im Zeitalter des Mongoleninvasions*, i. 10 et seq.).

2. 'ABD AL-MALIK (Abu 'I-Fawz) in May 11, prince of *Transjordan*, son of Prince *Mu'alla b. Mansur*, successor in his brother *Mansur b. Nuh*, who was deposed on the 11th Safar 389 (17 Feb. 999). Having been defeated at *Marwa* on the 27th *Shawwal* 1 (16th May) by *Mahdi* (the *Qasbi*), 'Abd al-Malik had to abandon *Khuzistan* to his opponent and retire to *Baghdad*. In the autumn of the same year he was attacked by *Ishak Nasr* to his last possession, the endeavor to organize a national war against the approaching enemy failed; the Government's appeal, which was read from the pulpit, was received with complete indifference by the population; the leaders of the Turkish body-guard deserted to the enemy. On Monday, the 10th *Shu'ban* 386 (23d October 999) the *Ishak* entered *Baghdad* without striking a single blow and had 'Abd al-Malik with the other members of the dynasty taken in *Qasbi*.

Biography: *al-Mu'alla, Fa'iq al-Fann* (ed. with commentary by *Mansur*, Cairo, 1286), i. 298-320; Ibn al-Azhar (ed. Torab.), for the period almost entirely dependent on *al-Mu'alla*, ix. 102-106; *Qardir, Zain al-Adab*, MSS. Cambridge 2, 111. Oxford f. 135-139; *Udhar* (ed. Marley), pp. 804-806; *al-Mu'alla* (ed. Amman, Leyden, 1904), pp. 372 et seq., 408 et seq.

(W. Barthold.)

'ABD AL-MALIK b. *Shayb* a. 'Ali, a cousin of the caliph *Abu 'I-Abbas al-Saffar* and *Abd al-Mu'alla* b. *Mansur* in *Harun al-Rashid's* reign 'Abd al-Malik undertook several expeditions against the Byzantines. Such campaigns took place under his command in the years 774 (790-791) and 781 (797-798), according to some authorities also in 775 (791-792), whilst others state that in the latter year not 'Abd al-Malik himself, but his son 'Abd al-Karim held command. Besides this he was governor of *Medina* for some time and he also filled the same post in *Egypt*. In the end, however, he could not escape the suspicion of the caliph. In 787 (803) he was deprived of his liberty on insufficient grounds and had to remain in prison till *Harun's* death in the year 793 (809). The latter's successor *al-Amin* set him free again and in 796 (812-813) appointed him

governor of *Syria* and *Mesopotamia*. 'Abd al-Malik proceeded to *al-Raqqa*, fell ill soon after and died there in the same year. A few years later the caliph *al-Mu'alla* is said to have had his grave dismantled, because 'Abd al-Malik had during the war between *al-Amin* and *al-Ma'mun* sworn he would never do homage to him.

Biography: *al-Mu'alla*, *al-Mu'alla*, ii. 610 et seq.; Ibn al-Azhar (ed. Torab.), vi. 64 et seq.; *Yazid* (ed. Boustan), ii. 496 et seq.; *Wed. Gesch. d. Araber*, ii. 131 et seq. (K. V. Zettersteden.)

'ABD AL-MALIK a. *Zaid*. [See Ibn al-Azhar.]

'ABD AL-MUMIN a. 'Ali, a *Zaid* chief and founder of the *Almohade* dynasty, born towards the end of 1187 = 1194 (other dates are also given) in a village, a day's journey from *Tlemcen*. In accordance with a custom which was in his day *Abd al-Mumin* studied the *Koran* in his village and afterwards went to *Tlemcen* to complete his studies.

The character of the man is praised in his physical and moral qualities and the height of his intelligence. His attractive appearance, his equanimity, the modesty of his dress and the width of his judgment immediately struck the *Mahdi* the *Tlemcen* on his return from the East, and the religious reformer, who laid the foundation of the *Almohade* empire at once made him his disciple and constant companion. 'Abd al-Mumin was always able to effuse his own personality before that of the *Mahdi*, to whom he lent the valuable support of a fearless devotion accompanied by an honest and enlightened disposition, great courage, lively character. When the *Mahdi* retired to *Tin Malin*, he lived there a solitary life, spending his time between fasting and prayer, and left the care of governing the *Almohade* community to the struggle with the *Almoravides* almost entirely in the hands of 'Abd al-Mumin.

According to *al-Mansur*, 'Abd al-Mumin was in 517 (1123) the first time endowed with the title of *Amir al-Mu'minin*, which the *Mahdi* conferred upon him when he put him at the head of an expedition against *Marrashugh*. From this moment he was looked upon as the generalissimo of the *Almohade* army. Until the death of the *Mahdi*, 'Abd al-Mumin was the recipient of every sort of kindness and consideration from the latter, who often ordered him to preside in his place at *Fekhay's* solemn prayer.

It is quite evident that 'Abd al-Mumin was formally chosen by the Council to be his successor; a few days before his death the *Mahdi* said: 'We have chosen the one among you who is to be your chief, after having tried him in all circumstances and times for initiative and executive power; we have scrutinized his thoughts and their manifestation and have always seen that his faith is firm and his conduct prudent, wherefore I hope that I have made no mistake. We now 'Abd al-Mumin listen to him and obey him as long as he listens to and obeys his Minister; if he changes, we will follow him fully or partially, the *Almohades* have the blessing from God, that the Lord Almighty should give the power to whom he will amongst his servants.' (Comp. *Retat Africaine*, 1871, 274).

In spite of the very decided wish of the majority of the granades of the two assemblies (that of

Ten and that of the fifty) to follow the instructions of the Mahdi, it was necessary to make the Almohade community accept them. ‘Abd al-Mu‘min was to the eyes of these people, all Mohammedan heretics a heretic, on which account they were able to raise objections to submitting to his authority.

Thanks to the skill and devotion of many members of the Council of Ten, amongst whom must be particularly mentioned the Spanish ‘Abd Haf, ‘Uthm, the revered chief of the Minutia, the Maghade were ready about two years after the death of the Mahdi to pay homage to ‘Abd al-Mu‘min. It was only then that the news of the death of the Mahdi, which had till then been kept secret, was published, and ‘Abd al-Mu‘min was proclaimed as the Mahdi’s successor (524 = 1130 or 526 = 1132).

Having thus become the supreme head of the Almohades, ‘Abd al-Mu‘min kept the smallness insisted by the Mahdi (see ALMOHAD); he was inspired by their advice and made them approve of his projects and actions. For many years ‘Abd al-Mu‘min continued the policy followed in the Mahdi’s time, which consisted in preventing the Almoravids from entering the mountains of the Mahdi and Maghade, by harassing the enemy with incursions in the plain. When he thought the time was come to take the offensive, he led his warriors to the conquest of the Almohade provinces. He began by subduing the southern provinces of what is now Morocco; then, returning north, he undertook a gigantic expedition, which lasted about 10 years and finished in 541 (1146-1147) at the capture of Marrakech.

Seeing the success of ‘Abd al-Mu‘min, ‘Uthm b. ‘Ali, the Almoravid sovereign, had decided to shake off his apathy; he had led his capital, Marrakech, to march against his foe. But, having taken flight he fled from Tlemcen, where he had hoped to be able to hold the Almohades in check, to Oran, where he was accidentally killed. Thus Tlemcen and Oran fell successively under the power of the Almohades (530 = 1144-1145). Then it was Fez’s turn (540). On this occasion ‘Abd al-Mu‘min is reported to have said to those who asked him the ramparts of the town, a great part of which had been destroyed, should be repaired. ‘We have no need of surrounding walls, our ramparts are our swords and our justice!’ (Ibn Abi Zar, *Al-Faraj*, ed. Fez, in 1893). These words give a very good summary of the policy of his great conqueror. In 541 (1146-1147) ‘Abd al-Mu‘min seized Agades, Tadmec and Marrakech, the famous capital founded by Yusuf b. Tashfin. According to Ibn Khaldun, the taking of Marrakech only took place after eleven months of siege, in the beginning of 541 (1147). The Almoravid throne was then occupied by a child, ‘Uthm b. ‘Ali, grandson of the founder of the Almoravid empire, who, in spite of his tears, was pitilessly executed by order of the Almohade caliph.

During this time Spain was the scene of a general revolt of the Andalusian Muslims (the agreement) against the Almohades. On the solicitation of the leaders of the revolt ‘Abd al-Mu‘min sent there an army, commanded by Ibn ‘Uthm. For some years ‘Abd al-Mu‘min’s power increased in this state: little by little by a series of victories he established his authority there. The Almoravid idea alone remained in the hands of the last

representatives of the Almoravid empire. ‘Uthm b. ‘Ali, until the reign of ‘Abd al-Mu‘min’s third successor, the caliph al-Sayid (comp. A. Del, *Deuxième Empire*, Paris, 1903).

As soon as his authority was firmly established in the farthest end of the Maghrib and all the revolts suppressed and matters in Spain progressing to his utmost desire, ‘Abd al-Mu‘min undertook his first expedition into Ifriqiya (540-541 = 1145-1146) and by the capture of Bejaia (Bullaya) and of al-Salam swept away the kingdom of the Banu Hammud; he made an Almohade province of it and put one of his sons at the head of it.

In consequence of the conquests made by Roger II, king of Sicily, on the coasts of Ifriqiya and Tripoli, ‘Abd al-Mu‘min left his capital in 554 (1159), putting ‘Uthm b. ‘Ali in his place at the head of the government, and marched rapidly upon Eastern Ifriqiya, which he completely subdued before he returned to his capital (555 = 1160).

In 556 (1161) he went to fight to establish the rule of the country. In 557 he prepared a great expedition against Spain, where the Almoravids had been against the Almohades. It was in the same year that he brought a strong body of his companions, the Kharid, to Marrakech to act as his body-guard.

‘Abd al-Mu‘min at Fez (549 = 1154) chose his son Muhammad as his successor. But, having fallen ill just as he was concentrating his troops to go to Spain, he annulled that decision by an official deed which was published throughout the empire; it was then without doubt that he chose ‘Uthm b. ‘Ali b. ‘Uthm, another of his sons, as presumptive heir to the Almohade throne. ‘Abd al-Mu‘min died at Fez a few weeks afterwards (Munqid II 558 = May-June 1163). His body was taken to the Mahdi where it was buried by the sons of the tomb of the Mahdi.

The long reign of ‘Abd al-Mu‘min was glorious and the first caliph of the Almohade empire had realized all his hopes and had founded the empire, of which the Mahdi had dreamed. He had destroyed the Almoravid government in Africa and Spain and had extended the boundaries of his empire as far as Gambia. Only in the Islamic faith was there an Almoravid sovereign.

‘Abd al-Mu‘min founded many towns and restored a great number of them. Besides he fitted up and explored several expeditions to shelter his fleet. He was the first Muslim sovereign to make a kind of ordinance for the purpose of making regulations with respect to property and taxes. The towns and provinces of his empire were placed under the control of governors chosen generally from members of his own family or from that of ‘Uthm b. ‘Ali. From every pulpit in this immense empire prayers were said in the name of the Mahdi and Caliph instead of that of the Almohade caliph of the East as had formerly been the case.

Biography: See ALMOHAD; R. Bar, *Documenta geographica* (Paris, 1898), p. 22, note 2; also, *Madrasat al-Faraj* (Paris, 1901), pp. 30 et seq., 92 et seq. [A. Del.]

‘ABD AL-MUTTALIB, the last Sheriff of Mecca, of the powerful Sherif family of the ‘Umayyad which was in power for about 200 years. He was the son of ‘Uthm, who was exiled from the Hijaz after the defeat of the Wahhabites. In 1243 (1827) he took up the duties of Sheriff for

the first time, but was shortly afterwards at the orders of the Egyptian viceroy Muhammad Ali replaced by Muhammad b. ‘Awa of the ‘Abdill family. He spent the whole of his long life (he only died in 1880) in endeavouring to wrest the power from the ‘Abdills that were favored both by Muhammad Ali and later by the Turkish government. He tried to bring this about partly by open fighting, partly by intrigues and bribing Turkish dignitaries, for which he being repeatedly under honorable imprisonment in Constantinople afforded him good opportunities.

It was only in 1767 (1851) that he succeeded in casting out his adversary thanks to the influence of the grand vizier, who was on his side. As, however, he could not get on with any of Turkey's representatives in Arabia, he was again removed from office in 1772 (1856). After six months of continuous fighting he yielded to superior force, and set off for Constantinople for the second time.

After the noble sheik Husayn had fallen by an assassin's hand, ‘Abd al-Muttalib returned for the third time (1797 = 1880) as Grand-Sheik, but again his endeavours in vain to enforce the Turkish will in respect of the mediæval tradition of the authority of the sheik. Husayn ‘Agha succeeded in arresting him by surprise in 1799 (1882), and thereafter he lived quietly under strict surveillance in his country house to the east of Mecca. The lower orders hated and respected him as the illustrious representative of the unshattered hierarchy of former times.

Bibliography: C. Smoek, *Reign of ‘Abd al-Muttalib*, I, 158—160, 165—169, 174—177.

(Smoek, Hukumat.)

‘ABD AL-MUTTALIB b. (1590), the Prophet's grandfather. Only tradition concerning him, which is perhaps of historical value, is that which relates how he looked after his grandson after the death of his son ‘Abd Allah (q. v.).

All other stories about him are Meccan or Medinian legends. His real name is said to have been Shaiba. It is told of his mother Salma, who belonged to the Banu Naufal in Medina, that she had stipulated with his father Hashim, that she should give birth to her child in Medina. Hashim died shortly after while travelling, and Shaiba grew up in Medina till he was recognized by the family and brought to Mecca by his uncle al-Muttalib, whence he received the name ‘Abd al-Muttalib, i. e. Muttalib's servant. Another uncle of Shaiba's, Nawfal, wished to withhold his inheritance from him, but was compelled by Shaiba's relatives on his mother's side to give it up (compare further *Asna* for these Medinian traditions etc.). Advised by a vision, he associated the clinking up Zamzam spring out, in spite of the opposition of the Qurayshites, was able to make good his ownership. He consequently possessed the privilege of giving drink to the pilgrims. In the Arabian legend (compare *Asna*) he is the Shaikh of the Qurayshites and at their conference was treated with great respect by Abūhā (his to the story of his row to sacrifice a son, see ‘ABD ALLAH b. ‘ABD AL-MUTTALIB). Still more exaggerated legends about him are to be found in Yā‘qūt (cf. *Muṣannaf*, II, 8 et seq.); he has even become a religious reformer who introduced many customs afterwards confirmed by the Korān and Hadith. — Abū ‘Hārith is given in his *Kauz*.

Remarkably enough al-Muṣallī in the *Asna* (I, 121) gives amongst the Meccan tribes the Banu ‘Hārith b. ‘Abd al-Muttalib as being subordinate to the Banu Hashim and the Banu ‘Abd al-Muttalib, while they, being according to the common genealogy a branch of the Hashimites, are coordinate with the Banu ‘Abd al-Muttalib. Springer has in this account set it down as questionable whether ‘Abd al-Muttalib cannot possibly a mythical personage. The second part of the name without doubt designates an old Arabian deity.

(P. Hume.)

‘ABD AL-RAHİM b. ‘Alī. [See ‘ABD AL-RAHİM.]

‘ABD AL-RAHİM b. MUHAMMAD. [See ‘ABD AL-RAHİM.]

‘ABD AL-RAHİM KHAN KUTUB KHAN, known to his contemporaries as Khan Mirza, was the son of the emperor Akbar's first palace minister, Bahān Khan, and belonged to the household tribe of Black Sheep Tukumans. His mother was a daughter of Humayūn Khan Afshar, whose elder daughter the emperor Humayūn had married some months of policy. He was born in Lahore on the 14th Sha‘b 964 (16th Dec. 1556) and died at the age of 27, in 1036 (1627) in Dihli, where his tomb still stands near that of Shaikh Nizam al-Din Auliya. His chief wife was Shah Banu, sister of Mirza ‘Asir Kaka, at least one of his sons was by a mother of an Umarkot family. He survived his four sons; one of his daughters married Prince Daryal and one of his grand-daughters, Prince Khurram (Shah Jahan). ‘Abd al-Rahim became one of the most distinguished men of his time, both in arms and letters. He was four when his father was murdered and thereafter was brought up by the emperor Akbar. In 980 (1573) he, being then a youth of sixteen, accompanied Akbar to Gujarat and there had assigned to him, under the tutelage of Salyid Ahmad, of Barha, the district of Pagan, which his father had been awarded.

In Rabi‘ II 981 (August 1573) he was one of the small party who made with Akbar a historic journey of great rapidity to Gujarat and he shared the command of the centre in the battle of Sorath, which destroyed the power of the rebel Bay-kara Mirza. He is described by Nizam al-Din Ahmad, in the *Fahrasat al-Akhbar*, as being at this time a young man of great parts and promise. In 984 (1576) he was made governor of Gujarat under the guidance of Visier Khan Harawi. In 988 (1580) he was appointed *mir* ‘ard and three years later, 1004, to Pagan Salma who was then 23 years old. In 991 (1583) he was deputed to put down Shah Muzaffar Gughat and, at this time, Nizam al-Din Ahmad was *mir* of the province and partner and chamberlain of the Mirza's seat of arms. In the 1st Muharram 991 (16th Jan. 1584) when he was 28 years old, he won the battle of Sarkish and followed (led by that of Nadur, the

was completely breaking down the opposition of Magharr. He was himself made *khalifa* in recognition of his services.

He next obtained leave to serve under the emperor against Musa Mohammed Hakim, but later returned to Cordoba in 908 (1588) he was welcomed with much honor to court and in the following year presented to the emperor his Persian translation of the *Book of Kings* and also was appointed to the *malik* and made governor of Ishamir. In 909 (1549) he was appointed governor of Malian and Blackar and sent to annex Sindh from Yusuf Beg Arghun. With him *Shah* went Muhammad Muhiy al-Din, the father of Nizam al-Din Ahmad. In the 20th Muharrum 1000 (13th Nov. 1591) he defeated Yusuf Beg and having made conditions of which one was the marriage of his son, *Shah* Nawaz (1744), to a daughter of the defeated Arghun, he returned to Court.

His services were now directed to the Dekkan, and, with short breaks of absence, continued to direct for nearly thirty years. He was first associated with Prince Musad, but without effective cooperation. In Jumadil II 1005 (January 1597) he won one of the great battles of Akbar's reign, defeating a largely outnumbering force under Sahib Khan of Balghar.

In 1007 (1599) he, with Prince Danyal, who had married his daughter, *Shah* Begum, went again to the Dekkan. The campaign was mainly fought against Alpaid Nagar and the heretic *Chand* *Shah*. Under the emperor *Shah* Begum, he served with Prince Khurram in 1025 (1616) again in 1030 Dekkan. 'Abd al-Rahman was proficient in Arabic and Persian, in Turki and in Hindi, writing all with fluency. He was a poet with pseudonymic *Arghun*; he was the generous friend of 'Abd al-Hakim Nishawandi who named the *Ma'asir al-Rajai* after him. He was professedly a Sufi but was suspected of practicing *Isma'ili* and of following his father's *Shi'a* tenets.

Bibliography: 'Abd al-Hakim Nishawandi, *Ma'asir al-Rajai*; *Shah* Nawaz Khan, *Shah* Begum; Abu 'l-Fazl 'Allami, *Akbar nameh*; Nizam al-Din Ahmad, *Zafar-nama*; also other contemporary historians; also Hirschmann's translation of the *Arsh al-Akbar* i. 334; Elliot and Dawson, *The History of India*, v. 434.

(A. S. DAVENPORT.)

'ABD AL-RAHMAN, the name of five Spanish Umayyads:

1. 'Abd al-Rahman I b. Mu'awwaz b. Hisham escaped from the slaughter which the 'Abbasids in 750 perpetrated on his family, and after long wanderings in North Africa came to Spain, where in 756 he founded the independent Umayyad (subsequently also Saladin) of the Umayyads at Cordova. By his statesmanlike cunning and restless energy, which with all his determination and strength of character yet for the most part never degenerated into the often so needless cruelty and blood-revengefulness of the Arab. 'Abd al-Rahman became master of the complicated situation. This came to pass, however, only after infinite difficulties with the help of his protector and — although he himself was a North Arab — of the South Arabian opposition party of the Yemenites. He put aside the weak Emir Yusuf, who was not intelligent enough to adapt himself to the new state of affairs, and also the latter's energetic general and brave soldier Somal, in spite of the fact that

he had always been loyal. Subsequently he was able by means of a strong and just administration and a wise home and foreign policy, but especially by raising a standing army, mostly of Berber mercenaries, to hold in check the rivalry of the proud Arabian aristocracy and the longing of the democracy for independence of the Berbers. With good reason does his 'Abbasid adversary in Huesca, the powerful al-Basir, call him the 'Falcon of Koush'. — 'Abd al-Rahman fully ~~swore~~ words with Charlemagne too in the Spanish north-eastern marches, so that the great duke of Cordova proved himself the equal of the two greatest rulers of that time, the great king of the Franks and the 'Abbasid caliph. He reigned from 756 to 788 (756—788). — 'Abd al-Rahman also the founder of the Great Mosque of Cordova.

2. 'Abd al-Rahman II b. al-Hakim, the fourth Umayyad emir of Cordova (808—238 = 822—852). In spite of continual wars with the Christians and revolts at home, he was a zealous patron of all arts and sciences.

3. 'Abd al-Rahman III b. Muhammad b. 'Abd al-Aziz, the eighth Umayyad of Cordova (808—550 = 422—961). 'Abd al-Rahman III was the first Spanish Umayyad to assume the title of *al-Aziz al-Nasir* (the Victorious-Caliph). And he had good claim to this name; he put an end to the eternal civil war between Arabs, Spaniards and Berbers in Andalusia, protected the frontiers against Leon, Castile and Navarre, founded the magnificent residence of al-Zahra' at Cordova, commanded the West of the Mediterranean with his navy and exercised a sovereign influence over North Africa. Art and science found in him a discerning patron and under his benevolent protection. Arabic Spain became under him and his successors the most civilized and best governed country of the Middle Ages.

4. 'Abd al-Rahman IV al-Mu'tazil, great-grandson of 'Abd al-Rahman III, caliph of Cordova (408 = 1018).

5. 'Abd al-Rahman V al-Mu'tazil, also a great-grandson of 'Abd al-Rahman III, caliph of Cordova in 414 (1023). [Comp. Umayyads.]

Bibliography: Hasey, *Hist. des Umayyades d'Espagne*, I. 298 et seq.; II. 65 et seq.; 379 et seq.; III. 326 et seq.; 336 et seq.

(C. P. SEYDOL.)

'ABD AL-RAHMAN b. 'Abd al-Aziz al-Mu'tazil, a governor of Spain, first temporarily in 103 (728), then from 112 to 114 (730—732). After defeating Duke Eudo of Aquitaine at Toulouse, he penetrated far into France, but was together with the greater part of his army annihilated by Charles Martel at Roncevaux 114 (October 732) between Tours and Poitiers. The battle-field is called by the Arabs *Bala*, al-Balad, the Ravement of the Martyr (ravement = paved Roman road) or briefly al-Bala.

Bibliography: al-Balad (al). Codex ar. Bihara, No. 1021. Meibom, i. 245; II. 9; Well, *Geogr. u. Histor.*, I. 646. (C. P. SEYDOL.)

'ABD AL-RAHMAN b. 'Abd al-Rahman b. 'Abd al-Aziz, son of the first caliph. His mother, Umm al-Khawas, was also that of 'Abd al-Rahman, which was changed to 'Abd al-Rahman only on his conversion, which took place very late, for he fought side by side with the Meccans at Jedd.

Koran. Art. 16 is therefore said to refer to him. He accompanied his father at the battle of the Camel and was taken on with him to al-'Aq when the latter marched against his brother, Muhammad b. Abi Bakr, the governor of Egypt, but 'Abd al-Rahmân was not able to save the latter's life. Afterwards he was, with Husayn b. 'Alî, 'Abd Allah b. 'Umar and 'Abd Allah b. al-Kubair, considered the head of the Medina opposition, which refused to pay homage to Yazid b. Mu'awiyah. He died in 55 (673); according to a few less trustworthy accounts, he died 3 or even 5 years later.

'ABD AL-RAHMÂN a. 'AR. [See **AL-RAHMÂN**.]

'ABD AL-RAHMÂN b. 'AWW, a Karamite of the family of Zuhayr, originally called 'Abd 'Amr (for 'Abd al-Kabir). He was early converted to Islâm, took part in both the Hijras to Abyssinia and to Madinah, and was present at the battle of Badr as well as at the other battles. He was the leader of the troops which Muhammad sent against Hishâm al-Musâ'ibî, and after the conquest of this oasis he married the daughter of the defeated father. He belonged to the Isn, to whom Muhammad, according to Muslim tradition, had promised Paradise. He had acquired a considerable fortune in trade, and his authority was correspondingly great. After 'Umar's death he was one of the six, who had to elect a new caliph. Remaining all elation for himself, he voted for 'Othmân. He died in the year 31 (652).

Biographical: Ibn Sa'd, *Isl.*, 87 et seq.; *Ibn Kuthayb* (ed. Wüstenf.), p. 121; *Tahiri*, see Index, *Ush-shihâd*, II, 303 et seq.; *Ibn al-Judayr*, *Ush-shihâd*, *Springer*, *Das Leben und die Lehre des Muhammad*, I, 428 et seq.

(M. Th. Houtsma.)

'ABD AL-RAHMÂN b. HANÛ a. 'AR. 'Umayyad b. 'Qasim b. 'Araf al-Fihri, governor of Sicily, died in 137 (755). When his father, whom he had in his youth accompanied on raids in Sicily and other places, had fallen in the Berber revolt (142 = 740), 'Abd al-Rahmân fled to Spain, but afterwards returned to Africa and rebelled in Tunis in 146 (744) against 'Umayyad. The Umayyad governor Hanyal b. 'Aswad thereupon quitted Mauritania, and the 'Abbaside opening was in progress, it was not a very difficult task for 'Abd al-Rahmân to seize the reins of government and to keep them; the 'Abbasides were causing enough of trouble to confine him to his governorship. Then when the caliph 'Umar al-Muqarrif threatened to enforce his sovereignty, 'Abd al-Rahmân, who continued making war against Sicily and Sardinia, and the Berbers, renounced all homage to him. Through wishing to settle the succession on him 'Abd al-Rahmân incurred the enmity of his two brothers Ilyas and 'Abd al-Warîth, who were afterwards murdered him.

(M. Th. Houtsma.)

'ABD AL-RAHMÂN a. HAYHAM, emperor of Morocco, born in 1792. 'Abd al-Rahmân was the son of Malik Hayham, governor of Mogador, brother of the sultan Muhammad II. He was nominated him on two occasions in his successor (in the death of Malik Solaimân on the 4th Rabi' I 1238 (1822 Nov. 1822)). 'Abd al-Rahmân had little difficulty in having himself proclaimed sultan. The Dukkari bandits were the 40000 miltaria accumulated by his predecessor; two claimants, Ibrahim d. Yezid and Sulaimân, his own cousin, who was proclaimed sultan by the people of Tafilalet, almost immediately. Morocco remained not less disturbed and the sultan had to spend the first years of his reign in repressing rebellions. He broke out over the country. The Zemmur, who had revolted, were vanquished, and their chief, Muhammad b. al-Qasbi, was imprisoned at Mogador in 1240 (1825). Some years later the Wadaya, who were angry because the sultan had created three of their khalifa, shut themselves up in al-Medîd and underwent a 40 days' siege there. Being victorious, thanks to his negro guard, 'Abd al-Rahmân sent the Wadaya to Marrakech, Tafilalt and Casablanca (1247 = 1831). In 1244 (1828) the Sherif took up arms against the governor of Marrakech, but was to please by the sultan himself in a 40 days' battle. In 1250 (1834-1835) the Murabbits 'Abd al-Rahmân b. Talyûn made himself master of Fez and maintained his position there for some time, the being obliged to capitulate, he was exiled to Tafilalet and twenty-six of his partisans were hanged there. At the end of 'Abd al-Rahmân's reign fresh insurrections broke out at Tafilalet (1273 = 1856-1857) and amongst the Zemmur, to the south of Marrakech, against whom the sultan led an expedition in person (1276 = 1858).

In spite of difficulties with which he found himself confronted in the interior of Morocco, Malik 'Abd al-Rahmân, adhering to the policy begun by Malik Isma'îl (q. v.), attempted to extend his kingdom at the expense of his eastern neighbours. He commenced by supporting the Tahirîs against the Turks of Algiers, then he tried to take advantage of the fall of the Turkish State in 1830. After the capitulation of Algiers he sent his nephew Malik 'Alî to invade the province of Tlemcen. His designs were frustrated by the opposition of France. The occupation of Oran and of Mostaganem by French troops, and the diplomatic representations of the French government forced him to abandon his schemes of conquest. He nevertheless continued his intrigues in the West and even in the centre of Algeria. Being forced, in consequence of Count Morny's mission to Tangier to recall his representatives, whom he had established at Miliana and Médina, and to abandon his claims to the province of Oran, he still kept in touch with the malcontents of the West. In spite of his promises of neutrality given to a French envoy, Colonel Lataze, in 1836, he encouraged 'Abd al-Kâdir. When, as a result of the campaigns of 1841, 1842 and 1843, the emir was driven from all the positions occupied by him in Algeria, 'Abd al-Rahmân allowed him to

take refuge in Morocco. Soon, at his instigation, he entered into open conflict with France. Being unsupported by England, upon whom they believed they could rely, the Moroccans were defeated, Duguid's troops occupied Wajida (Tijda) and dispersed the Moroccan army at the battle of Figig (14th August 1844) whilst Prince de Joinville's fleet bombarded Tangier (14th Aug.) and Mogador (15th Aug.). The treaty of Tangier (26th Sept. 1844), put an end to the hostilities. Abd al-Rahmān promised to abandon the cause of the emir and to implore him if he would succeed in seizing him. Another convention of the 18th March 1845, settled the boundary between Algeria and Morocco. Morocco kept the lower stream of the Muluya and, in the Sahara, the oases of Figig and Tadm.

In consequence of these events relations between France and Morocco became cordial again. The sultan decided in 1847 to have nothing more to do with Abd al-Kādir, compelled him to leave Moroccan territory and thus forced him to give himself up to General Labrousse (see ABD AL-KADIR). Claims presented as the occasion of acts of violence committed against Frenchmen or French protégés at Tangier, Mogador and on the littoral were refused to it. It was necessary however to bombard the port of Sala (Saleh), the inhabitants of which had pillaged a French ship in 1832. Similar acts of violence forced different European Powers to have recourse also to naval demonstrations. The English blockaded the ports of Morocco in 1825; the Austrians cannonaded the entrance to the river of Tetuan and bombarded Azila in 1829, but attempted to land at Larache without success. The assassination of the head of the municipality of Ceuta, Don José Velasco, and the murder of Darrou, the Spanish consular agent, raised very strong protestations from Spain.

Despite these manifestations of hostility to foreigner Morocco became more accessible than formerly to European commerce. Sweden and Denmark ceased to pay tribute for the protection of their ships from piracy. The treaty of commerce and amity entered into by France and Mūsā Muhammad in 1767 was renewed in 1825. England after having, in 1824, renewed the treaty of 1801, negotiated in 1853 a convention, which was changed into a treaty of commerce in 1856. The advantages conceded to the English by this treaty (the abolition of monopolies in importation — the limiting of the duty on exports to 10%) were afterwards granted to the other European nations. But at the same time a reactionary movement against foreigners made itself felt. After 1842 the coast could only hold communication with the Makhzen through the ports of Tangier. Hostilities arose on account of the exportation of wool. The population complained on the Makhzen al-Salām testifies, of the raising of the price of commodities, which is attributed to the monopolies taken in favor of the Christians and to the progress of their influence in the empire of the Sheriff.

In spite of these reservations, the same historian nevertheless considers Abd al-Rahmān as one of the most remarkable sovereigns of Morocco. "He was," he writes, "a second Mūsā Ibn 'Alī and restored the dying dynasty to life". He compelled him on having freed himself from the influence of the viziers and of having directed his government personally. He praises his activity,

piety, humanity and his attention to the rebuilding of Mecca. Finally he points out his merit in building (the restoration of the port of Tangier — the adornments and repairs of the mosques at Fez, Marrakech and Salé — the building of the Mūsā Muhammad al-Wusūl mosque at Marrakech — the planting of the Agdal park near the capital, etc.). 'Abd al-Rahmān died on the 29th Muharram 1276 (6th September 1859).

Abd-Raghib: *Almunt al-Salām*, *Almunt al-Salām* (Cairo, 1312) iv. 172-210; Godard, *Monarchie et Etat en Maroc* (Paris, 1860), ii. 585-629; Rouard de Card, *Travels en France et en Maroc* (Fez, 1860); Pellissier de Reynaud, *Monarchie africaine* (Paris, 1854), (Cl. V. 186).

ABD AL-RAHMAN MUHAMMAD XXII, Shaikh al-Islām, son of Tulumsh Khilji Husam (died 1055 = 1645); born in 1003 (1594-1595), Shaikh al-Azhar (1050 = 1640), at Constantinople (1054 = 1644), Shaikh al-Azhar at Anatolia (1059 = 1649), then in Roumelia (1082 = 1672), at first refused and then accepted the title of Shaikh al-Islām (1065 = 1655) in place of Abū Sa'īd Muhammad Efendi. During the troubles of Rūmānā 1066 (April 1656), known as the events of the Palace (Cenar wa' al-), having seen Kaiz 'Abd Allāh massacred by the insurgent Shakh (Hammam-burgall, *Ilal al-Famīr ottoman*, i. 350; *Journal* and *Variétés*, *Levant*, p. 260; *Travels*, i. 559), he tendered his resignation to save the sultan Muhammad IV and at his request was made Shaikh al-Islām, then at 'Akkā and at Gize, near Cairo; he died at Qumāt 1081 (Oct.-Nov. 1670). He was famous in wrestling; his writing in the *fat'h* style was remarkable.

ABD AL-RAHMAN or *Abd. al-Rahmān* (See *ABD AL-RAHMAN*.)

ABD AL-RAHMAN or *Abd. al-Rahmān* (See *ABD AL-RAHMAN*.)

ABD AL-RAHMAN or *Abd. al-Rahmān* or *Abd. al-Rahmān*, the son of Khilji of the Syrian chronicles, seemed to have inherited the ascendancy and military facilities of his father, "The Sword of God". When barely 18, he commanded a division at the battle of al-Yarmūk, and later at Jiftin, where he distinguished himself by the side of Mu'awiya. He figured also at the head of the principal expeditions in Anatolia. The memory of his father, who died and was buried at Hama (Hama), and the government of this important province in which Mu'awiya had appointed him, had given him a preponderant influence in the district. His name was mentioned by the Arabs of Syria as a possible successor to Mu'awiya. Having become suspicious, the caliph ordered his Christian physician, Ibn Uthayl, to rid him of this future rival of his son Yazid, promising him as a recompense, the management of the finances of Hama. The following seems to be proved in these narratives: first, the appointment of Ibn Uthayl — reported by Wellhausen (*Das Arab. Reich und die Stämme*, p. 85) — immediately after the death of 'Abd al-Rahmān (40 = 656-667); then the assassination of the Christian official by a Makhzumite, probably the nephew of 'Abd al-Rahmān, urged thereto by the indignations of the people of Medina. The other details

appears to be to be inscriptions, especially the intervention of Marwān, which is sometimes pointed to prove that this prince made use of religion. We admit, however, that relations between him and 'Abd al-Rahmān were certainly strained and that the distrust with which the growing popularity of the son of Hishām inspired him was real. The 240-41 of the bishop of Hama, which, according to Theophanes (p. 535), took place about the same — Iaquim (*Chron. Eccl.*, ii. 842) adds that the bishop was burned by the Muslims, — is connected with these events, thus making up for the deficiency due to the silence on this point in the works of the Byzantine chroniclers and the Arab authors. We think that the sudden death of 'Abd al-Rahmān immediately after his return from a conquest from Antiochia followed at once by the appointment of a Christian official, and the execution, true or false, laid to the charge of the latter must have caused a lively commotion in Hama. A Mahomedite took advantage of the general discontent to assassinate the bishop, under the pretext of avenging his relative. It is very probable that a string of the populace took place on behalf of the family of the great Khalid, a rising in which the bishop lost his life. If we admit the authenticity of Iaquim's inference, this local outbreak of fanaticism was one of the first acts of intolerance belonging to the reign of Mu'awiyah.

'ABD AL-RAHMÂN AL-MANSHUR M. YAKHWARD, the son of Amr, of Cordova, after the premature death of his brother 'Abd al-Malik b. al-Manshur (p. 10), he became in the year 300 (908) imperial administrator (Wazir) with the surname al-Nash for the Umayyad pretender-caliph, Hishām II. He was born about 376 (986) of a Christian princess, the daughter of a certain Sanchez, for which reason he is sometimes called Sanchez, i. e. little Sanchez. On account of his origin he was not little loved by the Mussulmans, and they inspired many evil deeds to him; he is said to have poisoned his brother, to have been addicted to drink, etc. He offended them most deeply, however, by having induced the caliph Hishām to prohibit him his accession to the throne. When therefore in the same year (309 = beginning of 1009) he undertook a campaign against Alfonso V. King, there broke out in the capital, Cordova, a revolt under the leadership of the Umayyad Muhammad b. Hishām al-Mahdi. On hearing the news 'Abd al-Rahmān immediately started to return home, but was abandoned by his troops on the way back and killed by al-Mahdi's orders (4th Rabi'ah 309 = 4th March 1009).

Bibliography: Ibn al-Athir (ed. Turin), viii. 499; Durr, *His. al-Muslaminah* i. 149; *ibid.* ii. 117; *ibid.* *Riwayat* i. 117; *ibid.* *de l'Espagne* (3^e ed.), l. 117 et seq. (C. P. SEYMOUR.)

'ABD AL-RAHMÂN AL-MUHAMMAD. (See M. KHALID.)

'ABD AL-RAHMÂN AL-MUHAMMAD AL-AGHATH, a Kindite general, who revolted against al-Hadhdhadi. Being descended from the old kings

of Kinda, 'Abd al-Rahmān was at first the recipient of much kindness from al-Hadhdhadi, who sent so far as to marry his son Muhammad to 'Abd al-Rahmān's sister. In 76 (693-694) al-Hadhdhadi sent him with an army to defend Marān against Ghafiq. In 80 (699) after the defeat of al-Hadhdhadi in the battle of Ramlah for Zuhayl camp, Wellhausen, *Das arab. Reich und sein Zerfall*, p. 149, notes king of Khashirah, al-Hadhdhadi gave 'Abd al-Rahmān the command of Sijilmas and the command of an army magnificently equipped, and known for that reason as "The Army of Peace-makers", to make war against Ramlah. 'Abd al-Rahmān's campaigns were complete with success, but al-Hadhdhadi nevertheless sent him tough letters blaming his conduct. Urged by his soldiers, he openly revolted and declared war against al-Hadhdhadi (81 = 700). Before setting out for Tadmur 'Abd al-Rahmān concluded a treaty of alliance with Ramlah, who pledged himself to help him in case of need and to afford him a place of refuge in his country. In the beginning 'Abd al-Rahmān was victorious, but presently, at the battle of al-Zawiya, his army was routed. He fled to Sijilmas, where the caliph 'Abd al-Malik sent his son 'Abd Allah and his brother Muhammad to negotiate with him, even proposing the recall of al-Hadhdhadi. 'Abd al-Rahmān did not accept the offer of the caliph and thus declared himself as his enemy. The battle of al-Bayt al-Hamidi (Sha'ban 82 = Sept. 701; comp., however, J. Perier, *Les Arabes d'Espagne*, p. 186, note 3) was disastrous for 'Abd al-Rahmān, so that of Sijilmas completed his downfall. He fled towards Sijilmas and on his arrival at that the prefect, Yazid b. Numan, loaded him with chains, intending to give him up to al-Hadhdhadi. But Ramlah, true to his promise, came to free him and took him to his own country. Once more, however, at the instigation of his army 'Abd al-Rahmān returned to Tadmur to try his luck against al-Hadhdhadi, but he was returned to Ramlah. Finally, Ramlah himself, yielding to the promises and especially to the entreaties of al-Hadhdhadi, gave 'Abd al-Rahmān up to the custody of the latter. When 'Abd al-Rahmān reached al-Hadhdhadi, he threw himself from the top of his tower and was killed (85 = 704; comp. Perier, *loc. cit.*, p. 225, note 2). The chronology of the events is not quite certain; comp. Wellhausen, *loc. cit.*, pp. 150 et seq.

Bibliography: Jahari, l. 292 et seq.; *Umayyad* arab. *Chron.* (ed. al-Hadhdhadi), pp. 308 et seq.; *Umayyad*, *ibid.* (ed. al-Hadhdhadi), pp. 314 et seq.; Weil, *Gesch. d. Califor.*, l. 499 et seq.; Wellhausen, *Das arab. Reich und sein Zerfall*, pp. 145 et seq.; J. Perier, *Les Arabes d'Espagne* (Paris, 1904), pp. 229 et seq. (M. SELMAN.)

'ABD AL-RAHMÂN AL-RUSTAM, founder of the new Tahiri and head of an Abbāside dynasty, which held its own ground in Central Baghdad from 160 or 162 to 296 (776 or 778 to 908). 'Abd al-Rahmān was of Persian descent; according to the chronicles of the Abbāside sect he was the son of Rustam b. Rahmān (comp. Vahid, *His. al-Islam*, i. 315) b. Shahr b. Hishak (ibid. i. 315). This genealogy, which is evidently incorrect and mutilated, is given by the historians to establish the fact that 'Abd al-Rahmān was of royal stock and was descended from the dynasty of the Sassanides.

'Abd al-Rahmān was born in Tadmur, his father, Rustam, having taken him with his mother on a

pilgrimage, died at Mecca. ʿAbd al-Raḥmān, being yet a child, accompanied his mother, who had married a pilgrim from the Maghrib, and was brought up at Kairawān.

He became one of the five missionaries who spread the Abūḥite doctrine in the Maghrib after a course of study under ʿAbū ʿUbayd Muḥim b. Abī Karīm al-Baḡr.

When Abū ʿIshāq, the first Imam of the Abūḥites, had taken Kairawān from the Wari-ḡlīyah barbarians, he confided the government of this place and of several parts of Ifrīqiya to ʿAbd al-Raḥmān (Sifr 141 = June 758), who in Dī-māḥ 1 (Sept.) of the same year the Abūḥith revolt broke out from him. Abū al-Raḥmān accompanied by his son ʿAbū al-Wahhāb and his retainers fled to Central Maghrib, and, after evading the pursuit of Ibn al-Aghlabī, founded the town of Tāhert, 120 present Tagdempt, at the foot of Djebel Ghazal (or Khadi). The new city grew up, its population being Abūḥite emigrants from Ifrīqiya and Ifḡal Nafṣa.

When the Abūḥites of Tāhert thought themselves strong enough, they raised ʿAbd al-Raḥmān to the Imāmate (360 or 362 = 770 or 772). Arab chroniclers say that ʿAbd al-Raḥmān had in 344 led a strong contingent of Abūḥites from Tāhert to Fes, where an immense concourse of Berbers were besieging ʿUmar b. Ḥammād.

ʿAbd al-Raḥmān's reign seems to have been fairly peaceful. He applied himself with a simplicity, which recalls that of ʿUthmān ʿUmar, to make justice prevail in his country. The Abūḥite communities of the Fes recognized the validity of his Imāmate and sent several embassies to him to bring him money and presents. It is said that he died, being then very old, in 368 (784). His son ʿAbd al-Wahhāb succeeded him.

(A. DE MORTIMER.)

ʿABD AL-RAḤMĀN al-Sifr (his full name is ʿABD-ḤUSAYN ʿABD AL-RAḤMĀN b. ʿUWAYN AL-ḤUSAYN), one of the most eminent astronomer and astrologers of the Arabs, born at Nāḥ in December 903 and died in May 956. He was a friend, teacher, and astrologer of the Khāḡīd al-Khāḡīd, who proudly treated of three of his teachers: in grammar, Abū ʿAbī al-Ḥusayn al-Farāḡī; in the knowledge of astronomical tables, Sharrīf Ibn al-ʿAlam; and in the knowledge of the positions and movements of the fixed stars, ʿAbd al-Raḥmān al-Sifr. He wrote: 1) *ʿAḥd al-ʿAbūḥith* (The Book of the fixed stars, illustrated with figures); 2) *ʿAḥd al-ʿAbūḥith* (The Book of the fixed stars and positions of radiations — this last word is an astronomical technical expression); 3) *ʿAḥd al-ʿAbūḥith* (Introduction into the judgment, i.e. by aid of the stars); 4) *ʿAḥd al-ʿAbūḥith* (A Treatise on the stars). No. 1 is to be found in Arabic in Berlin, Paris, Oxford, London (British Museum, India Office, St. Petersburg (Institut des Langues Orientales), Constantinople (Aḡa Sōḡa, in Persian);

a French translation was published by Schlegel: *Description de l'Égypte* par Abd-Allah-Kadim al-ʿAbūḥith, St. Petersburg, 1874; the text and translation of the introduction was published by Gosselin de Preval in the *Nouvelles et anciennes*, vol. 230 ff. 100. The title of No. 2 is probably *ʿAḥd al-ʿAbūḥith* has no meaning, and Abū ʿUbayd has only *ʿAḥd al-ʿAbūḥith*. It is probably that a portion of No. 3, still extant in Paris, London (India Office, Madras, Bombay), No. 4 is found in Paris, Constantinople (Aḡa Sōḡa, St. Petersburg (Institut des Langues Orientales) — The son Abū ʿAbī al-Raḥmān al-Sifr wrote in 956, in the first year, the illustrated astrologer, preserved in Paris, Munich, Götting, Bologna (Marigli), Cairo.

plain the position of the civil brothers at Dost Muhammad's death. Abd al-Rahman himself has consistently maintained that in questions of succession the position of the mother is paramount, and that primogeniture should be the rule if possible and that Dost Muhammad's own mother was a Kirghiz, and not an Afghan. He considered that Shēr 'All injured his own prospects by appointing 'Abd Allāh Dīn as his heir, and he adhered to those views in arranging for the succession of Isfahān to his own throne, although Muhammad Khan was the son of a mother of higher rank. 'Abd al-Rahman was born about the year 1844, shortly after Dost Muhammad had recovered his kingdom, and spent his early years in Kabul. After 1850 his father Afjal was absent in Afghan Turkistan as governor of Balkh. 'Abd al-Rahman joined his father when he was nine years old, and spent the next ten years in Turkistan; his own autobiography is the principal authority for the events of these years. He relates that he did not learn easily to read and write, being devoted to outdoor exercises, and when he was about 18 years old he had apparently forgotten anything he had learnt, for on receiving a private letter from the daughter of his uncle A'zam, he was ashamed of being unable to read it. He prayed for enlightenment, and in the night saw in a vision a holy man, who told him to rise and write. This he did, and in the morning he found himself able to recall what he had learnt, and very soon he was able to read and write. Hashim (1876), however, says that he could read and write but little, and no doubt it was always a labor to him, only overcome by his strong will. His military education was more thorough and more congenial to him. His first instructor was, as he says, an Englishman named Campbell, who was taken prisoner at Kandahar in 1850 (1834) to Shah Shuja's attempt of that year. This man was in reality a Persian, or as Kaye (*Afghan War*, 1874, i. 131) calls him an Indian, and appears to have been a brave and able man. He had become a Musulman, was known as Shēr Muhammad Khan, and was now commanding Afjal's troops in Turkistan. 'Abd al-Rahman expresses great admiration for him, and was under his tuition three years. At the end of this period the capricious Afjal allowed himself to be influenced against his son by 'Abd al-Rahim in distant relation, and threw him into prison for a year. He was then pardoned and restored to favor, and Shēr Muhammad Khan having just died, was made general in his place. His uncle A'zam came to Turkistan as commander-in-chief about this time, and 'Abd al-Rahman was under his orders, but in spite of his youth he seems to have taken a real part in the operations, which extended Dost Muhammad's power through Khashghān, Badakhshan and Herat, and all the territory south of the Oxus up to the Panj. The first war was against Mir Asaf of Khashghān, who refused to admit the empire's authority. He was defeated and took refuge in Badakhshan. He investigated a rising in Badakhshan and obtained assistance from the Mir of Kabul, who sent a detachment of Balkh, and from the Mir of Badakhshan. 'Abd al-Rahman was besieged in Tashkhan, but emerged successfully from his difficulties. His father, however, ordered him to retire to Khashghān which he did successfully. Peace

was made, evidently against his will, and he was as he says for a year occupied in the organization of the army at Tashkhan. After this was made not again and continued in a desultory manner till the death of the emir Dost Muhammad after the capture of Herat in 1863, when 'Abd al-Rahman was nineteen years old. He was then at Khashghān in Khashghān, his father was at Tashkhan and A'zam was with the emir when he died, but quickly died as Shēr 'All was too powerful at Herat to be opposed. 'Abd al-Rahman was for a time in a dangerous position as the Khashghān chiefs were roused by the news of the great emir's death, but he won a decisive victory at Narin and succeeded in maintaining his authority. These troubled years of fighting and intrigue developed his strong character and prepared him for the part he was to play in the internecine struggle of the next few years.

II. Shēr 'All succeeded Dost Muhammad as emir without immediate opposition, but Afjal and A'zam began at once to intrigue against him. Open war soon burst out. A'zam was defeated by Rāfi Khān, Shēr 'All's general, and took refuge in British India. Afjal then made an attempt, and contrary to 'Abd al-Rahman's advice, gave back Khashghān to Mir Asaf in order to secure his neutrality. He was defeated by Rāfi Khān at Nadighah in the Hind-Kush mountains, and was shortly afterwards imprisoned treacherously by Shēr 'All. 'Abd al-Rahman states that he had himself shortly before proposed to his father to imprison Shēr 'All in a similar manner, but that he refused to avail himself of the opportunity. 'Abd al-Rahman evidently despised his father for what he considered a foolish mistake, and points out that Shēr 'All was not interrupted by any such fantastic ideas of honor. 'Abd al-Rahman then fled across the Oxus, and took refuge with the emir of Badkhan who received him unwelcomingly. When the Russians took Tashkhan and the emir left Badkhan for Samarkand 'Abd al-Rahman opened up communications with his uncle A'zam who was at Bawalplah, but made his escape and met him at Nadighah. Uncle and nephew collected some forces, and made a bold dash at Kabul, taking advantage of the absence of Shēr 'All at Kandahar where he had been engaged in war with his own whole brother. He had been successful, but had lost his eldest son, and had wounded Rāfi Khān his last general, who came over to 'Abd al-Rahman. Kabul was taken without difficulty and 'Abd al-Rahman then marched against Shēr 'All, defeated him at Sahlan, and took Ghazni, releasing his father who was confined there. Afjal now became emir (his name struck in 1865 dated 1283), Shēr 'All retained possession of Kandahar and Herat, and Faiz Muhammad the governor of Balkh, who had at first helped 'Abd al-Rahman, now declared for Shēr 'All. -- A'zam, who was a man of stronger character than Afjal, more earnest and tyrannical, while Afjal had lost all energy and became a confirmed drunkard. The treacherous assassination of Rāfi Khān, to whom so much of their success had been due, was great unpopularity, and it was only the ability and determination of 'Abd al-Rahman which upheld their throne for a time. The defeat of Shēr 'All at Khashghān in Jan. 1867, and the subsequent capture of Kandahar were mainly due to him, and after this he fol-

lowed Shêr 'All into Turkistan and defeated him and Fâiz Muhammad in the Kandahâr Valley. Fâiz Muhammad was killed in this action. 'Abd al-Kahmân remained in Kabul, and he doubtless hoped to succeed his father who died in Oct. 1867, but found it advisable to support his uncle who succeeded. He was not however trusted, and was compelled to lead an army to Bâgh again in the heart of winter. He and his troops suffered greatly from the cold, but for the time he was successful, and suppressed all opposition with the utmost severity. The whole garrison of Mîrîsk, 2500 men, was massacred. Akka and Malmûra in the west of the province were also taken. Shêr 'All still held possession of Herat and his son Yâ'qub now recovered Kandahâr. Shêr 'All joined him, and their army advanced up the Tarnak valley towards Gharnî. 'Asm left Kabul to meet them, and his favorite Ismâ'il Khân, against whom 'Abd al-Kahmân had in vain warned him, treacherously seized Kabul in his absence, and made it over to Shêr 'All. 'Asm was joined by 'Abd al-Kahmân near Gharnî but they were overthrown at Zana Khân, and forced to take to flight with a few followers only.

III. Shêr 'All was now (at the end of 1870) established as emir over the whole of Afghanistan, and retained the position till 1879. After the defeat of Zana Khân 'Abd al-Kahmân for some time led a wandering life of great hardship. He describes his adventures in detail with spirit and humor, and it is not too much to say that this part of his memoirs bears comparison with the celebrated autobiography of the emperor Shîah. He met his uncle at a place called Malmûra in the translation (i. e. 204); evidently not the Malmûra of Turkistan, but some village near Gharnî, and thence they found their way to the West country on the Indian frontier. Subsequently they went through Khob and Paghla, and by way of Caghal to Fâllak on the Helmand River and on into Sistan. They then entered Persian territory and went by way of Mîrjân to Meshed. There 'Abd al-Kahmân left his uncle as the Shîah's guest. He was ill at that time and died shortly afterwards at Shahrîd. He left a son named Isâq, who was yet to be a cause of trouble. 'Abd al-Kahmân travelled over the Kora-Kum desert, undergoing great hardships by the way, to Shîwa, which was still independent although 'Abd al-Kahmân, with his usual foresight, warned the Khân that he would not maintain his independence for long and advised him to come to terms with Russia, — advice which was not followed. Ultimately he arrived at Samarkand, and after an interview with the Russian governor went on to Tashkent, where he was received by Gen. Kaufmann, the Russian General. He asked for assistance against Shêr 'All. This was refused him but he was given an allowance for his maintenance and a house at Samarkand, where he continued to live for the next eleven years. He waited quietly for his opportunity, which did not arrive as soon as he had hoped. Shêr 'All had met Lord Mayo, the viceroy of India in 1869, and very exaggerated reports were circulated in Central Asia as to the results of the meeting, but his friendship with the English did not last long, and he showed greater friendliness towards Russia. This did not improve 'Abd al-Kahmân's position, and perhaps rendered him more willing

to accept English help when the occasion arrived. So he remained until the year 1880 when the events following the British invasion of Afghanistan and the flight and death of Shêr 'All led to the revival of his hopes.

IV. The history of the year of 1879-80 will be dealt with elsewhere (see Appendix A). It is sufficient to note here that the fall of Yâ'qub and his removal to India left the throne vacant, and that an offer was made to 'Abd al-Kahmân by Sir Lepel Griffin on behalf of the British Government to recognize him as emir of the whole country with the exception of the Kandahâr province, which it was proposed to maintain as a separate state. 'Abd al-Kahmân accepted the offer with some reservations, and was soon justified in his action from his own point of view. Aiyâsh the second surviving son of Shêr 'All invaded Kandahâr from his base at Herat, and won the battle of Shatward. This led to Gen. Roberts' march from Kabul to Kandahâr where he defeated Aiyâsh on the 1st Sept. 1880. The English Government then gave up the scheme for a separate state of Kandahâr, and 'Abd al-Kahmân received possession of it in April 1881. Aiyâsh, however, was able to collect another army, and again invaded Kandahâr, but was finally defeated by 'Abd al-Kahmân in Sept. 1881, and without the aid of bribery. He fled into Persia, and 'Abd al-Kahmân in the next twenty years ruled a united Afghanistan. During this period his external boundary was to some extent modified: (1) by the action of the Anglo-Russian boundary Commission of 1885 and 1886 regulating the extreme northwestern and northeastern frontiers; (2) by the regulation of the British and Afghan spheres of the doabostable land occupied by unsheltered hill-tribes, under the Russian treaty of 1893; and (3) by the annexation of Kohistan in 1896.

The first of these events is generally known as the Peshawar dispute. The boundary of Afghan Turkistan to the N. W. was imperfectly defined by the Anglo-Russian agreement of 1873, and after the annexation of the More Oasis by Russia it became necessary to lay down a more definite line. A joint commission was appointed for this purpose, but before any delimitation could be made some fighting took place between Russians under Alkhonov and the Afghans under Shâm al-Dîn, in which the latter suffered severely. At the time of the collision 'Abd al-Kahmân was at Rawalpindi in British India, where he was received by the viceroy Lord Dufferin. The action of the Russians was much resented, and at one time it seemed possible that the incident might lead to war between England and Russia, but 'Abd al-Kahmân was not willing that it should be regarded as a *casus belli*, and did not insist on the inclusion of the Sikh Turcomans in Afghanistan. He accepted the line finally laid down by the commission, which left Peshawar to the Russians, while the Sikh tribes which they had also occupied was returned to Afghanistan. Nevertheless he was much displeased at the methods followed, and always considered that he had not received his treatment, but he did not allow his feelings to divert him from the main object of his policy which was to maintain the independence of Afghanistan, and he clearly perceived that a war between England and Russia would not contribute to this result.

would have not of them to gain his own ends, but he never allowed them to take the lead, and was and under their influence, as his success is believed to be. In his lifetime he never again and again on the folly of fighting and war between Sunnites and Shītes, and he seems to have been on the whole just in his dealings with the Shīa Muslims. Nor does the conquest and conversion of the heathens of Kābilistan seem to have been accompanied by religious persecution. His remark regarding the feud between the Persians and Tartars is characteristic. He says: "The Persians and Tartars are enemies although they are both Muslims, yet their priests being servants of the Devil instruct them to kill and sell each other.... Though these two races call themselves Muslims, they treat each other as heathens through ignorance. Thus the unbelievers triumph over the faithful, because the latter are disunited. The fault is not in killing, it is we who are full of faults." Great efforts were made by the emir to improve the condition of his country by the promotion of trade and manufactures. His methods were not always those best calculated to succeed, the heavy transit duties being a severe tax on traffic, but on the whole there can be no doubt that Afghanistan made a great advance in prosperity during his reign.

Military organization received much attention and the manufacture of arms and ammunition was organized under the direction of English experts such as S. P. Yane, A. Martin, and others. The main spring of ‘Abd al-Rahmān’s policy was his determination to preserve the independence of Afghanistan from the powerful European neighbors, and his keen intellect made it clear to him that in order to effect this object it was necessary to remain on good terms with both England and Russia, with England to which he was bound by treaties and through which his relations with the rest of the world were conducted, and with his great northern neighbor Russia. This intention he carried out consistently, and though often displeased at the action of both powers he always succeeded in avoiding a rupture; while clinging tenaciously to everything he believed to be his by right. His character can be best studied in the frank self-revelation of his autobiography, one of the most remarkable and attractive works ever produced by an Oriental monarch.

‘Abd al-Rahmān suffered for many years from gout, and towards the end of his life this was complicated by the appearance of Bright’s disease. On the 14 Oct. 1901 he died from the immediate effect of a paralytic stroke, after declaring Hādih Allāh, his eldest surviving son to be his successor. Hādih Allāh and Nayr Allāh are the sons of Mīrī Qāhūr, a girl of Wāghān whom he married at Samarkand. Mīrī Hādih whom he married afterwards is a member of his own tribe, and her son, Muhammad ‘Umar was at one time thought to be the emir’s favorite. But whatever his preferences, he adhered in his will to his declared principle, and designated the eldest son as heir to the throne.

‘ABD AL-RAZZĀK — ‘ABD AL-‘ALĪYĀ AL-‘ABDĀLĪ AL-MĪKĀTĪ AL-TĀTĀWĪ, a Persian lexicographer, born in Tatta, but a Sayyid by descent; died after 1069 (1658). His principal work is a Persian dictionary, usually called *Furkān*, or *Rāzīdī*, which was compiled in 1064 (1653-1654) and published in 1875 in the *Mushtak* edition. Spilch revised the preface (*Muhtasab*): *Grammaticae persicae proscripta & eegula* (Halle, 1876). ‘Abd al-Razzāk dedicated an Arabic-Persian dictionary, *Mustafid al-lughāt* (1048 = 1636-1637), to the Shāhshāh (editions: Caserta 1808, 1816, 1836; London 1835, 1897; Bombay, 1879 = 1862-1863).

‘ABD AL-RAZZĀK KĀZĪ AL-DĪN AL-‘ABDĀLĪ AL-‘ABDĀLĪ AL-KĀZĪ AL-KĀZĪ (or KĀZĪ AL-KĀZĪ), celebrated Sufi author, died, according to Hādih Khānī (ed. Flügel, iv. 427), in 730 (1329). Hādih Khānī, however, confusing him with the hero of the same name, the author of the *Asfār al-Asfār*, says in another place (ii. 175) that he died in 887 (1482) and, besides, gives his name as Kāzī al-Dīn Abū ‘Alī al-‘Abdālī al-Kāzī. Hādih al-Dīn al-Kāzī al-Samarqandī. Little is known of ‘Abd al-Razzāk’s life; according to Hādih (*Nafahāt al-umr*, quoted by Dr. Guyard), he was a pupil of Nūr al-Dīn ‘Abd al-Qādir and a contemporary of Rukn al-Dīn ‘Alā’ al-Dawla, with whom he carried on a somewhat acrimonious controversy, and who died in 736 (1336). The immediate cause of this correspondence was a conversation which ‘Abd al-Razzāk had with a certain emir Iqbal Shāh, a pupil of ‘Alā’ al-Dawla’s, who was sent to Saldūziya on the vexed question of the authority of the ‘Arabī, Hādih then gives a long letter which ‘Abd al-Razzāk wrote to ‘Alā’ al-Dawla on this question, in which he says that he has just read ‘Alā’ al-Dawla’s book, the *‘Uruna*. As this work was written in 721 (1321), the date 730 (1329) gives as that of his death must be assumed as the correct one. We have then to place ‘Abd al-Razzāk in the Lashkār province (Kāshān) under the Shāhān of Persia, and especially in the reign of Abū Sa‘īd (716-736 = 1316-1335).

He was the author of a large number of works, several of which have been published. So far back as 1828, Fackel used the *Asfār al-Asfār* in the *speculatio Philosophica der spätem Orient* (pp. 13-22, 26 et seq.) and translated some passages, without knowledge of the author. In 1845 Sprenger published at Calcutta the first half of his *Asfār al-Asfār*, or *Diwan* of the *Asfār* of the *Sufi*. An analysis of the second part had been given by Hammer-Purgstall, in the *Zeitschrift der Literatur* (xxviii. 43 et seq.). This book was also used by Flügel, and cited under the author’s name (see: *ibid.* pp. 7, 11, 15, 26, 73). It is of special interest because in the preface he states that it

was written after he had finished his commentary on the *Maqasid al-Faṣṣḥa* of al-Hamawī in order to explain the Sūfī technical terms which occur but are inadequately explained in that work, and also in his commentary on the *Ḥaṣṣ al-Ḥikma* of Ibn 'Arabī (Cairo, 1309) and in his *Taḥṣīl al-Ḥikma*. According to Ḥajjī Khalīfa (II, 175) the *Taḥṣīl* of 'Abd al-Raḥmān extend to nine volumes only, yet Berlin MS. No. 822 contains three: the *Ḥamān*, but apparently in abridged Arabic *Ḥaṣṣ al-Ḥikma* introduction, treatise on predestination and free will first translated into French (Paris, 1823, revised edition 1873), then the last published by St. Guyard (1879); it will be dealt with in detail below. The treatise seems to have existed in situ, for Ḥajjī Khalīfa (III, 429) gives three answers to it by Ibn Kamāl Badī al-Zāhid Ḥalī and Ibn Khallaf al-Sayyidī. A commentary on the *Taḥṣīl* poem of Ibn al-Fāriḥ (Cairo, 1310). The works as yet unpublished are: *Kitāb al-Surūd*, on the idea of an eternal being; *Kitāb al-Kawāṣim*, on the traditional curves by 'Alī to the question of Kamāl b. Zayd al-Ḥafṣa (comp. the Berlin MS. No. 7462; Ḥajjī Khalīfa IV 38, *Ḥamān* II, 4, 83); a commentary on the *Maḥṣūf al-muḥṣaf* of Ibn 'Arabī and *Taḥṣīl al-Ḥikma*. Ḥajjī Khalīfa (V, 387) adds *Ḥaṣṣ al-Ḥikma*. For MS. reference will suffice to Brockelmann, *Gesch. d. arab. Litt.*, II, 203, 204 at 179, 345; the *Ḥamān* cat. No. 76, 2, and Palmer's *Trinity College* cat. p. 116.

It will already be tolerably clear what 'Abd al-Raḥmān's interests and positions were. He was a part of the school of Ibn 'Arabī, the great theosophist of the Western Arabic type, though with touches of independence, and he gave much labor to defense and exposition of his master. In the three great divisions of Muslim thought, the splendors of tradition (*naṣṣ*), of reason (*akl*), and of the unveiling of the mystic (*ḥaṣṣ*), he took his place with the third. It may be significant that his name never indicates to what legal school he adhered. Like many mystics, he may have regarded such matters as beneath notice or he may, like Ibn 'Arabī, have been a isolated Zuhārī in law, as he was evidently a theist in theology. His law is plain through the title itself of his exposition of the Korān, *Ḥamān*, not *Ḥaṣṣ*, and is shown in detail in his *Ḥaṣṣ al-Ḥikma* and his treatise on *Ḥamān*. In the last we have the normal combination of the Aristotelian universe, the Neo-Platonic metaphysics and theology and the Korānic mythology of Muhammad. These all appear, too, in the *Ḥamān*, but perhaps 'Abd al-Raḥmān is more anxious to keep the last element prominent, and to proclaim thus his *Ḥamān* orthodoxy. Certainly, he strives to avoid the absolute mingling of the last with the first, and the consequent annihilation of the first, and to lay a possible basis for individual responsibility, for freedom and reward and punishment hereafter. His method in this is as follows. In order to bring out clearly the forces leading in any event and the close interweaving of all causes and effects to make up the great organism of the universe, he begins with a description of the universe as *Ḥamān* Sūfī believe it is the Neo-Platonic chain. Above is God, the One, the Alone; from him proceeds, by a dynamic emanation, the Universal Reason (*al-ʿaql al-awwal*), called also the Primary or

Universal Spirit (*al-rūḥ al-awwal*) and the Highest Knowledge (*al-ʿilm al-awwal*). This is a spiritual substance and the first of the properties which the divine essence implies. From it two other substances are produced, one spiritual (*al-rūḥ al-thani*) which is the substance of the world of the Universal Reason, considered as apart from God and inhabited by particular intelligences, equivalent to fractions of the Universal Reason, which are the angels of revealed religion; the other is psychical, being the Universal Soul (*nafs*). Finally come the material elements with their natural forces and laws. In the Universal Reason are the seeds of all things, as universals, and this Reason, in its types, is known directly by God. God's omnipotence (*al-quwwa*) is manifested through these angels or intelligences, and their world is therefore called the World of Power (*ʿalam al-quwwa*). But they also, in their perfection, reveal the imperfections of other beings. Their world again, therefore, is called the World of Repairing (*ʿalam al-taḥṣīl*). Some, however, take the other sense of the root *ḥakm* and render it, the World of Constraint, because they constrain other beings towards perfection. This world is also called the Mother of the Book (*umm al-kitāb*; *Ḥamān* III, 59, III, 3), from it comes all knowledge of divine mysteries, it is above all forms of time and change. The world of the Universal Soul, on the other hand, is called the World of Being (*ʿalam al-wujud*), is a step nearer the particular, material world. The *Ḥamān* which enter in the Universal Reason become in a general conception, and these are further specialized, determined, limited, brought near to what we know, by being engraved on the individual reasonable souls, which are the souls of the heavenly bodies, corresponding to the angelic intelligences, the fractions of the Universal Reason. This world, from its likeness to human imagination, is called the Imagination of the World (*al-ʿaql al-thani*) and the Near Heaven (*al-samāʾ al-duniya*). From it come all beings in order to appear in the World of Being (*ʿalam al-wujud*), it moves and directs everything, measuring our matter and assigning causes. The heavenly bodies, then, have reasonable souls just like our own, these are the imaginative faculties of the particular reasonable souls, into which the Universal Soul descends. On their changes all changes in this world below depend (comp. al-Raḥmān's scheme, in *Ḥamān* of *Amur*, *Ortus*, Ser., II, 116 at 107).

Further, this constitution of the universe corresponds to man's body, man's soul to microcosm just as the brain is the seat of man's ruling spirit, so the Universal Spirit or Reason is seated in the throne (*ʿarsh*) above the sphere of the fixed stars. The fourth heaven, the sphere of the sun, which strikes all, is the seat of the Universal Soul, in man this is the heart, wherein is his particular, reasonable soul. So the fourth sphere is like the breast, and the sun like the physical heart. The individual soul of the man corresponds to the animal spirit in the heart, which is the source of human life.

Next, as to the place of predestination in this scheme, for that there are three worlds, *ḥaṣṣ*, *ḥamān* and *ʿalam*. *Ḥamān* means the existence of the universal types of all things in the world of the Universal Reason. *ʿalam* is the arrival in the world of the Universal Soul of the types of

existing things, after being individualized in order to be adapted to matter, these are joined to their causes, produced by them, and appear as their fixed image. *Isfah* is, broadly, Providence and covers both of the above, just as they contain everything that is actual, it is the divine knowledge, embracing everything as it is, universally and absolutely. It is not in any place, for God's knowledge, in His essence, is nothing else than the presence of His essence before His essence, which is essentially one and goes with all the qualities which inhere in Him. Further, while the essence (*hakeef*) of *Isfah* is part of the 'universe' of God, its entelechy (*hamul*) is in the world of the Universal Reason. The Universal Soul is sometimes called the Preserved Tablet (*al-lahf al-mahfuz*), for on it are preserved unalterable all the general conceptions which are on their way to the individual heavenly realm.

It is the world, then, of *Isfah*, of the Soul, which sets everything in motion. This is by the yearning of the reasonable souls of the heavenly bodies towards their spiritual source, the Universal Reason. They try to assimilate themselves to Him, to subsume themselves. Step by step, they mount upward with each advance they receive a new impetus from that source, drawing them on further. With each movement, there flows from them an influence upon matter according as it is adapted to receive it, and thus there is a series of changes in the material world, corresponding to those in the world of the Soul. These changes may be either absolute, of creation and destruction, or, between those extremes, simply of condition. The duration of existence constitutes the *Koranic* *asfal*, and all these are fixed by *Isfah*.

Finally, this creation of *Korah*, III, 1-6 will show how 'Abd al-Razzak applied Scripture. "By the Mount and by a Book inscribed in a Parchment Outspread, and by the Frequented House, and by the Raised Roof, and by the Flowing Sea." The Frequented House is the Spirit of the fourth sphere, that of the sun. Therefore Jesus, the Spirit of God, has been placed there, whose miracle is the raising of the dead. The House is the *arza*, the seat of the Universal Reason. The Book inscribed is *Isfah*, which is in that Reason; and the Parchment Outspread is the Reason itself. The Raised Roof is the nearest heaven, where are the individual celestial souls; it is mentioned immediately after the Frequented House, because from this heaven the forms descend on the earth, and from the Frequented House comes the breath of the Spirit, by the combination of which the creation of animated beings is achieved. The Flowing Sea is the sea of primary matter which spreads everywhere and is filled with forms.

Now, then, is such a scheme related to predestination and free will? It is highly complicated, consisting of a remote first cause and an infinity of intermingling and crossing, nearer, secondary causes. It is possible to look at these last only, and so to assign absolute creative and deciding power to our own wills. Or to look only at the first cause and become fatalists. We must preserve the balance and hold by both. The complete cause of anything into which human will can enter must have as an element in it among so many others, free will. It sets all the others in movement. Under this conception, though never

clearly stated, is evidently implied that man has in him an element of the divine deciding power. If there is freedom in the divine nature, there must be also in its emanations. For the *Arak* the causes of the divine nature were against the creation had overcome everything. 'Abd al-Razzak lays stress on the multitudinous intermingling causes of the world, its constantly developing processes, to show that in life, purpose and will there must be multiplicity. The divine is spread down through the sublunar things, it does not simply rule from above. Again, amongst the many causes working in the world and upon man are the restraints and inducements of religion, the promises and threatenings of the prophets. These we should permit to have their effects upon us as parts of the whole scheme, the process of training under which we are. But again, why should training be necessary? Why are there good and evil? Here, again, is an implication, once partly clearly expressed. Matter is of very differing nature, growth and form. It can receive only a corresponding soul, therefore souls also vary. Character and disposition is a combination of both, and it is for the soul to overcome its material body and itself too. This evidently is the fundamental thought, but 'Abd al-Razzak does not give much space to it. Rather, he uses the old theological catch. The most to the best possible creation, otherwise God would have created a better. Further, if all things were equal, there could be neither order nor organization. This would also be fatal on these less perfect things they ruled out of existence. All things should have a chance; it is for them to use it. God knows their differences and will allow for them. The mind and the greatest one are from ignorance, and God will as treat them. In the life to come the same thing is to go on. Some will attain felicity, others because they might have done better, will undergo punishment by punishment, but that will not be eternal. Here, perhaps, 'Abd al-Razzak is most unsatisfactory. He passes over into the normal Muslim conception although it is not at all clear that his system can permit individuality apart from matter. Freed souls, we should expect, would either return into the unity of God or be sent back again to another material life. Like so many in Muslim theology and philosophy, this Unzati was adapted to an audience, and was not perfectly ingenious. Yet behind its caution of statement the real system is tolerably plain. It is nearer orthodoxy than that of the *Arak*, but not so near as the *Arak* would suggest.

Bibliography—St. Grenville, in *Journal des Savants*, 1. 323 et seq. which is the main source; Brockelmann, *Gesch. d. Arab. Litt.*, II, 203-204, who made of him two different persons. (MASON, etc.)

'ABD AL-RAZZAK KAMIL AL-DIN AL-HAFI AL-SAMARKANDI, a Persian historian, author of the well-known *Mafta al-madain wa-wajid al-shams*, born at Herat in 816 (1433), and who died in 887 (1482). His father was Isfah and Isfah at the court of Sultan Baysunghur (r. 1412-1435). 'Abd al-Razzak went to India as an ambassador (returned in 838=1444), and in 850 (1446) as *qutub*; he died in the reign of the sultan Humayun Bahadur (r. 1530-1556) at the *Shahjah* of Shahjahan. His work appears with a

king of Tlemcen was called Zaiyan. The two names Band 'Abd al-Wad ('Abdalwadides) and Band Zaiyan (Zaiyanides) may be used indifferently for all the kings of this dynasty, although sometimes it was thought, but wrongly, that only the first five of the kings should come under the name of Band 'Abd al-Wad (637-737 = 1239-1336) and all the others under that of Band Zaiyan.

Almost all the Muslim historians have ascribed a noble genealogy to the 'Abdalwadides, without, however, being able to establish the fact directly. Abu Hamud's historiographer, after having asserted the nobility of the family, adds that he has done so only on the verbal testimony which has been given him; he says that in default of exact and duly established knowledge one must on this point agree with the generally admitted opinion.

The 'Abdalwadides belonged to the Berbers who were settled in Maghrib long before Islam; they were not of the nobility. Ibn Khaldun and Vaghtaurissan, the first king of Tlemcen who spoke Berber, did not hesitate to express doubts about the nobility of the 'Abdalwadides, or to make reservations on the subject which say more to us than all the assertions of past chroniclers. Besides these, more recent chroniclers, written after the fall of the kingdom of Tlemcen, such as *al-Bihar al-shar'iyah* (*Revue des études de l'Algérie des Orientalistes*, 14th session, Algiers, 1905) deny their title to nobility.

The attainment of kingly power by the members of a family of a portion of the Band 'Abd al-Wad in 637 (1039) brought this Berber tribe, the name of which within this would hardly have been known, into notice; for nothing certain is known of the history of the 'Abdalwadides before the founding of the kingdom of Tlemcen. In fact we have only the fantastic accounts of the Muslim chroniclers who were contemporary with the kings of Tlemcen, and who sought to exaggerate the lustre of the tribe and the part it had played in the general history of the Maghrib after the introduction of Islam. It was at the beginning of the 13th century of the Christian era that the 'Abdalwadides really took part in the political history of Northern Africa. Their capital, Tlemcen, became an important city full of mosques, schools and magnificent palaces. The monuments and ruins which are still found at Tlemcen have preserved the memory of this ancient splendour for us. The list of works relating to the 'Abdalwadides is enough to show how much everything that has reference to Tlemcen and its kings has been studied. Apart from certain details which still remain obscure, the political history of Tlemcen and the history of its civilisation at the period of the 'Abdalwadide kings are now well established in the main, thanks to the Arab chroniclers, inscriptions and archaeology; but comparative future archaeological and epigraphical discoveries will perhaps throw some more light on and bring new knowledge of the history of the kings of Central Maghrib. It may, however, be said that few of the Berber dynasties have been the object of so many researches and scientific works as that of the 'Abd al-Wad.

'ABD AL-WAHHAB. (See MUHAMMAD 'ABD AL-WAHHAB and WAAHABITES.)

'ABD AL-WAHHAB a 'ABD AL-KAHMAN a. ROSTAK, second son of the Abūshāh dynasty of the Rostakides of Tāher. He succeeded his father in 108 (724-725) and died in 203 (817-818). At the time of his accession the town of Tāher, founded by 'Abd al-Kahman, had already greatly developed. The great merchants of Ispahān, of the Maghrib and even of Egypt and the East, who were sure of finding justice and safety in this town, had brought their wealth there. 'Abd al-Wahhab himself, before he attained to power, had devoted himself to commerce and had acquired a considerable private fortune.

This influx of people who were strangers to the other and the preponderant part (but certain persons, who relied upon the powerful chiefs of nomad tribes, sought to take in the town caused divisions in Tāher. A group of ambitious men, led by Yazid b. Fradin, with whom a certain Sharaf b. al-Ma'rif associated himself later, contested the right of 'Abd al-Wahhab's intimate and claimed that he could not govern without the assistance of an assembly of the leading men of the town.

These dissidents took the name of Nakhar. 'Abd al-Wahhab was obliged to submit them by force of arms; but his victory was completely re-established harmony. He himself only escaped by his vigilance and energy from being assassinated and even then his son fell, murdered by the dissidents. He had also to repulse a rising of the Wasilite Berber tribes, the Howāza and the Lowāza. When he had restored peace to his kingdom, he went to Diēbel Dumar and to Diēbel Nefes where he spent years.

It was while he resided there that the Howāza and the Nefes took possession of Tripoli, but the town was retaken by Abu'l-'Abbas 'Abd Allah b. Husayn b. al-Aghlab. 'Abd al-Wahhab besieged him there in 196 (811). During the siege Husayn b. al-Aghlab died; his son Abu'l-'Abbas, wishing to leave Tripoli, concluded a treaty with 'Abd al-Wahhab. The city and the were retained by the 'Abbasides and the country by the Abūshāh princes.

Abūshāh chroniclers add that the Imam sent Hasan b. Salim to lay siege to Gabes. The outlying tribes, the Maghira, Zaouia, Zuhāra and others as well as the island of Lijeha were under his authority.

'Abd al-Wahhab appointed governors at Sirt and in the country of Kaniha. At the request of his subjects, he chose as commander of the Nefes the son of Abu'l-Kharrāb, the first Imam of the Abūshāh, called al-Samāh, who was his sister. He performed his duty with distinction and loyalty; but his son Khalīl later caused the Imam and his actions trouble.

ed., pp. 218-219.

ABU AL-WAHID b. 'ALI AL-TAHIRI AL-
MARAKIBI, AND AL-JAMALI, mentioned Muhyi-
Din, was born in Morocco in 581 (1185), and
subsequently emigrated to Spain and Egypt. The
date and place of his death are unknown. In
622 (1224) he wrote a history of the Almohades,
entitled: *al-Mu'ajiz fi tashih al-haqiq al-Muhammadiyah*
(edited by Storey; transl. into French by Fagnan;
Comp. Brockelmann, *Gesch. d. arab. Litt.*, 1, 322).

ABD AL-WAHID AL-KASBI, ninth Al-mahide emperor, son of and successor to Al-Nasir. His father (al-Mahide) the mother, Hishah, who was a Christian captive, helped by his cleverness in having the young prince, then only fourteen years old, proclaimed emperor.

The death of al-Mu'tasim took place suddenly on the last day of Ray (17th Oct. 1232) according to the author of *MS Akhbar*, or at the beginning of Ray according to the *Khudud*, who he had just raised the siege of Cusa—where his brother Ali al-Mu'ti had stirred up a revolt against him—and was marching on Marash, which had fallen into the hands of Yalghah al-Nasir, one of the pretenders to the throne 'Ali al-Wahid, who was with his father, had immediately proclaimed his successor by the army and partisans who accompanied him, and marched quickly upon Marash, taking care to conceal the fact of his father's death. After having beaten the pretender Yalghah al-Nasir, who had advanced to meet him, he entered the city without meeting with much resistance and was immediately solemnly proclaimed sultan under the name of al-Rashid.

When he attained the power the Almohade empire was fast going to pieces. After the death of al-Nasir, who was the last ardent figure of the Almohade empire, or, rather, after the failure of his expedition to Las Navas de Tolosa, the unity had struck for the decadence of the Almohade dynasty. The sovereigns allowed themselves to be guided by their ministers, often unscrupulously; the many members of 'Abd al-Mu'min's family all longed to cut for themselves an independent fief or a kingdom out of the empire. The fight against the Banu 'Ishāniya had in Ishāniya resulted in the descent of the famous Shaukh Abu Isāq 'Umar to become independent and to found the Hafsids kingdom of Tunis. The Almohade possessions in Spain had passed little by little into the hands of the Christians and, above all, into those of the Moors.

One of al-Murshid's brothers, as has been said, occupied Centa, one of Her nephews rounded off Marrahah, his capital; the Berber and Arab tribes were everywhere restless, taking the part sometimes of one sometimes of another of the pretenders and adventurers.

Al-Ak'abba had rejected the greater part of the religious precepts of the Mahdi Ibn Tahir, which

formed the very foundation of the Almoravide empire (comp. Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, all. 30 et seq.; A Bel, *Les Nations du Maroc*, Paris, 1903; *Le Maroc d'aujourd'hui*, edited by Luciani, with a preface by Goldziher, Algiers, 1903); he had probably made use especially in the Christians, which scandalized his subjects. He had gone so far as to build him a church at Marrakech with permission to ring bells in it. This policy had alienated a great number of his partisans among the Muslims.

At-Raghib — or rather his advisers — saw that in order to bring the dissidents over it would be necessary to make a change of policy: he re-established the institutions of the Mahdi, which did some good. Nevertheless the Ghul Arifs and many other tribes of the Blackers sent for Yahya to al-Najaf, the pretender to the throne who was first cousin to al-Raghib and belonged to the tribe, of which they took possession. At-Raghib, who had gone to make war in the South-East, near Baghdad, returned and reoccupied his capital (1232 = 1233-1234). After this initial success he went to take possession of Foz, where the head of his opponent Yahya was brought to him by some Arab who had assassinated him.

In 615 (1237) the people of Seville, having repudiated the sovereignty of the Uad, tendered ~~their~~ submission to al-Rashid, as also happened at Corda.

Being continuously occupied with the defence of the capital and Thane and with the pacification of further Maghrib, al-Kashid was unable to hinder Yaghlumkhan by Zaiyan from proclaiming himself independent at Tlemcen and founding the "Abdalwaddie kingdom of Central Maghrib" there. In spite of his efforts al-Kashid did not succeed in stopping the powerful Wadda Warth, parties of the Zouata, who invaded his country and established their influence there by a series of victories won by them against the Abdalwaddies. It was the Almoravides who were to become from that time the most formidable enemies of the Almohads. After several years of a bitterly conducted struggle, they succeeded in their turn in wresting further Maghrib and Spain from the last successors of 'Abd al-Mu'min.

Al-Hashid died after a long illness of ten years on the 10th Jumadil II 640 (5th Dec. 1243), being interred in a cistern at his palace in Maraghah. He was only twenty-four years of age. Although the chroniclers say nothing on this point, it appears that he was his mother's son, in reality, governed the kingdom.

ABD AL-WASII (Abbas) s. Abd al-Jabar, a Persian poet, one of the panegyrists of the Schah Sultan Sanjar. A native of the province of Ghazvin, he lived at first for some time at Herat, and then went to Gishna, where he entered the service of Sultan Bahman Shah, son of Alauddin, of the dynasty of the Chaghataids; after four years, when Sultan Sanjar came to Gishna to support Bahman Shah, who was in his reign on his mother's side, he took advantage

lage of the occasion to address an ode to him. It is said that he died in 355 (1203). His *Diwan* was published at Lahore in 1862.

Bibliography: Dawlat Shâh, *Fajr-i-Ashraf al-Din* (ed. Brown), pp. 73-79; Muhammad 'Amî, *Libat al-shu'arâ* (ed. Brown), i. 104-110; Kudrî Khân, *Madhuz-zahab*, i. 185-192; Hammer-Purgstall, *Gesch. d. Arab. Reichthums Persien*, p. 101; Kihâ, in *Grand d. Iran*, Philol., ii. 261. (H. HUART.)

ABDÂL (A.; plur. of *Abdal*, 'abundant'), one of the degrees in the Sufi hierarchical order of saints, who, unknown by the names (*risâlat al-ghayb*), participate by means of their powerful influence in the protection of the arrangement of the universe. The different sects in the Sufi hierarchy disagree as to the details about this hierarchy. According to the most generally accepted opinion, the *Abdal*, forty in number, take the fifth place in the saints' hierarchy issuing from the great *Asf* (q. 4.). They are preceded after the *Asf* by: 1) both assistants of the latter (*al-musawwif*), 2) the five 'pillars' or 'pillars' (*al-awâ'id* or *al-awâ'id*) (q. 2.); 4) the seven 'incomparables' (*al-awâ'id*). After the *Abdal*, who, as was said above, are the fifth degree, come: 6) the seventy 'preferables' (*al-musawwif*); 7) the 300 'chiefs' (*al-khawâ'id*); 8) the 'nurses' (*al-awâ'id*), 500 in number; 9) the 'wise', or the 'abundant' (*al-awâ'id* or *al-musawwif*), of an unlimited number; 10) *al-Khawâ'id*, &c. Each of these ten classes is confined to a special region and a particular sphere of action is assigned to each of them. The locus which happens in single cases are filled up by the promotion to that class of a member of the class immediately below it. The *Abdal* (also called *al-Khawâ'id*, 'the guardians') have their residence in Syria. Their merit and intervention bring about the necessary rain, the victory over the enemy, and avert general calamities. Every individual of them is *Abdal* (sing.); still *Abdal*, which grammatically corresponds to another plural (*Abdal*), is a more used designation for a single one.

GÖTTSCHEW.)

ABDÂL, the former name of the Afghan tribe now known as *Abdâl*. This tribe belongs to the Sarban branch of the Afghan race, and is believed by the Afghans to derive its name from *Abdal* (commonly called *Ardal*) b. Tamî b. Sharahatun b. Sarban b. Kâzî, who received his name from Khosrow Anshirvan, an *Abdal* or saint of the Christian order, in whose service he was. The *Abdal* as the result of wars with the Ghaznawîs had abandoned their original lands near Kandahar, and had long been settled near Herat, but were restored by Nadir Shâh to their old home, and when Ahmad Shâh was crowned king at Kandahar after Nadir Shâh's death, his tribe served as a nucleus for the new empire. Influenced by a Lâpî named Jahar Shâh he took the royal

title of *Durr-i-Dunyas* 'pearl of pearls', and the *Abdal* tribe was henceforth known by the name of *Abdâl*. The two principal clans were the *Payzai* and *Bakhtai*, to the first of which belonged the royal section, the *Sadru*. The name *Abdal* was commonly used for some time after these events, but gradually fell into disuse, and was replaced by *Abdâl*. It is seldom used now. [For further history of the tribe see *ABDÂR*.]

Dorn, *Hist. d. Afghani*, ii. 42.

(M. LINGGERSCHMEIDT, DARMST.)

'ABDÂL ('Abdal), plur. *'Abdal*, collective name for the inhabitants of the mountains of Lâhij (Lahij) in South Arabia (see *LAHJ*).

ABDÂR (i. e. descendant of 'Abd al-Dâr b. Kays b. Kilâh b. Murâ, of the great family of the Korayshites), his real name *Abd al-Muhammed* b. Muhammad b. 'Abd al-Azhar b. Sâ'ib (or *Sâ'ib* or *Wâ'ib*), known chiefly for the description of a journey called *al-Khifâ al-maghribî*.

We have no information about this learned traveller: it is only known that he was a native of Yemen and that he was living not far from Meccah, in the Hâza tribe, where his family was, when he started for Mecca on the 25th Dhûl-Kâ'd 688 (18 Dec. 289).

On his journey are known only those, under whom he studied during his journey, taking advantage of the sweet stops of the caravan, and who are therefore mentioned in his *Khifâ*: *Shari al-Din al-Dimyâtî* (al-Dihlî, *Tadhkirah*, ii. 278; Brockmann, *Gesch. d. Arab. Literatur*, ii. 73); the celebrated traditionalist and jurist *Abd al-Jalîl* (Nasîrî, *Umm al-muqaddim*, i. 143, Cairo, 1322; the *al-Sûbî*, *Yahyâ al-Shaykh*, i. 5-22, Cairo, 1324); *Yala al-Din b. al-Muhammîd* (Abn Farûh, *al-Dihlî*, p. 205, Fez, 1317; Ahmed Nâsîrî, *Nasîr al-Dihlî*, p. 191, Fez, 1317); *'Abd Allah b. Hâsim* and *Tamî al-Karîmî* at Tanis, *Abd al-Din al-Karîmî* b. al-Azhar at Kairuan, *Abd al-Hasan al-Karîmî* b. al-Karîmî and others. Among his pupils only his son Muhammad and *Abd al-Karîm b. Rihwân* are mentioned.

His *Khifâ*, the writing of which was only begun at Thaur, is an instructive and useful book not only because of its contents in topographical information, but more especially for its archaeological details and its studies of the customs and fall also of the Moslem scholars of the 7th century of the Hegira.

Looking at things from a lofty standpoint and merely stopping for geographical details, *al-'Abdal*, who was a citizen in Arabia, was specially interested about the state of Moslem science, searched out men of letters, whose companionship would interest him, and to consequence lost no opportunity of devoting himself to literary exercise, which was full of verbal eccentricities, alliterations, puns, metaphors, &c. His style, however, changed on leaving Cairo. It became temperate and clear, and to a certain extent it ceased to be declamatory.

"alphabet etc., handed down to them by tradition. All that they have said about it is, however interesting it may be, to be put down as fabulous. According to some, the kings of Adnan had been the order of the Arabic alphabet up their own names; according to another tradition, the first six words are the names of human, and finally according to a third, they were the names of the days of the week. Delvaux de La Seye has pointed out that in these traditions only the first six words are novel and that, for instance, Friday is not ~~there~~ but ~~Friday~~; and to assist that Arabic originally had but ~~one~~ letters to wit, on the grounds of this vague tradition, scientifically admissible (comp. de Sacy, *Grammaire arabe*, ed. 1, § 9). For the rest there have been also amongst the Arabs judicious grammarians, as al-Muhammad and Sibawaih, who were not satisfied with the traditional explanation of the ~~alphabet~~, but frankly declared that the words must be of foreign origin.

Relying on the properties of the letters as
 compensating numerical values, the mystics early
 made use of the words *gematria*, etc. as inter-
 pretations and magic charms. To each of the letters
 1 to 22 there corresponds according to this system

a name of God and certain other powers of nature, and on the basis of this mutual relationship of universal and letter on the one side, and the symbols corresponding to them on the other, a whole system of practical operations has been created. Thus for instance the introductory formulae of the incantations are added together as numbers letter by letter and the resulting total again brought into relation with the world of the *Æther*. An analogy to this use of letters is found in the Jewish magical Cabala of the Middle Ages.

ADEN RAGEL = 108 And RAGEL (See ALPHABET)

ABENCERAGES (also **ABENCERRAGES**), an Arabian noble family, whose name occurs only in the mythical history of the 300 days of Granada, and who are said to have been treacherously murdered by Boabdil in 1492 at Alhambra. The myth no doubt refers to creations under Alphonse XI (1461-1482); e.g., Müller, *Der Islam von Morgen und Abendland*, II, 672, 676, who, however, also emigrates (as does Schach, *Wissenschaft und Kunst der Araber in Spanien und Sicilien*, 1812, II, 135. The etymology to derive the name from Ibn Sarrāj, "the son of the saddler" (so the cause of a former victim, whilst in my opinion only the family of the Bank Sirāj), whose native town was Cordova, and who probably emigrated

in Orinda, etc. is taken into consideration. The pronunciation of the word in Spanish also supports this: Abenagárphe (French: Abenagage); comp. in n-Afághu, and in the *Wörterbuch Afghano-Arabisches* auch in Sísáji b. Sísáji; *Wörterbuch Afghano*, p. 315. ff. 36, 370, 403, 441.

ESHR, Aomori, capital of Wada) in Central Souda, 14th north lat. and 11th east long. to the south of the old capital Wada. It was founded in 1850, has from 20000 to 30000 inhabitants. Temp. Wada, where also will be found a lithography.]

ADHAR, an ancient town in Persia, between Herat and Zabul, fortified by a double acroty, is under the Sobhuden. In the year 24 (643), it was conquered by the Mohammedans under al-Hak b. Asid, the governor of Bal. Though in the Middle Ages it was a fairly important town, it has now sunk to the position of a insignificant place.

Geltshire* (Cambridge, 1895) p. 121 ff. seq.

al-ABISARI Abu al-Aswad al-Murayri, a Wasa,
a philosophical writer, concerning whose life nothing
is known; died in the year 563 (1164); according
to Luckhowne as early as 1203). He was the
author of two greatly read and often commented
works on scholastic philosophy: 1) *Kitab al-
Fihri*, in three parts, o. Logic (*al-Mantiq*); 2)
Physica (*al-Fadl*); 3) Theology (*al-Hikma*).
Amongst the commentators the best known is
that of the Indian Mir Husain al-Malhatti, written
in 580 (1175); printed at Calcutta, lithographed
at Lucknow (n. 1) — 2) *Kitab al-Fadl*, so-
adaptation from the *degeneration* of Porphyria. Of
the commentators that of Shams al-Din Ahmad
al-Fahar (died in 534 = 1139) was printed in
1800 at Constantinople and further glosses to the
commentaries of Zakariya al-Auzari (died in 720 =
1320) by al-Idrisi (died in 1178 = 1704) were
published in Cairo in 1305, 1306, 1310. Besides
the above, al-Abisari wrote three small astro-
nomical treatises; comp. Brockelmann, *Gesch. d. arab.
Lit.*, I. 461. {Brockelmann.}

ABUR, plur. of *Abu* [u. v.].
ABIB is the designation used by the Arabs for the month of *Abib* which occurs in the calendar of the Egyptians or Copts (*Parab. Abib*); comp. also the *Abib* festival of the ancient Hebrews (*Exodus*, viii. 4).

'ABID (A), plur. 'abāst m 'abād, worship
of God.

'ABID b. al-Mu'ayy, a pre-Islamic poet of the tribe of Asad b. Shaddad (Mudar). More exact data concerning his life are not known; he was a contemporary of al-Nabigha al-Madhyani, and lived, highly esteemed as a poet, a great deal at the court of al-Hira. His poems which have been handed down to us are distinguished by their fluidity of language and lively descriptions. Several anecdotes about him are to be found in the *Kitab al-Aghani*, which also tells of his violent death at the hands of King al-Mu'awizh b. Mar al-Sami'.

Bibliography: Brockelmann, *Gesch. d. arab. Litt.*, t. 20; Ibn Kollizim, *Al-far al-af'ar* (ed. Ibn Hisham), pp. 143 et seq. (A. HAFSEN.)

ABIK (A.), a runaway grown-up slave.

ABISH, a Selghuride princess, a daughter of Abake, said to be Abu Bekr. After the death of Selghurids (1204) she was appointed to rule over Isfah by Halaqu and married his son Menges Timur, who, however, ruled in name only, for the Mongols were the actual masters of the country, and died in Tihut in 1287. The dynasty of the Selghurids (p. 8) became extinct with her.

История славян, IV том, *Ист. древ. славян*, III, 402.

ABIWARD, a town east of Niza (Niz), probably the present Mahanadabul, and lying to the west of Mera, once belonging to the Persian province of Khorasan, now to Russian Turkistan. Abiward is mentioned as the seat of a Syrian bishopric in the 6th century. For its name (also abbreviated Abward) comp. Kishke, in the *Zeltun*, d. *Demuth*, *Geograph. Gesch.*, xxvii, 147, and Marquart, *ib.*, xlii, 628.

Uebungen, p. 43. *Barbar de Bernard, Dieten. gloss. hist. et liter.*, 2e to Paris (Paris, 1807), p. 43. G. in *Straperg, The Land of the Eastern Caliphate* (Cambridge, 1905), p. 394; *Geograph. Hist. des Mongols de la Pers.* (Paris, 1838), I, 152 and especially in note 48. — *Zeltun*, d. *Demuth*, *Geograph. Gesch.*, xlii, 403, 407.

AB-ABIWARDI MUHAMMAD, a famous Arabi-Muzayyan, an Arabian poet and genealogist, of Hamayad descent from the branch of the younger Mu'awiyah, a descendant of 'Abdman b. Abd Kufayn, born to Abiward in Khorasan, or according to al-Sam'ani in the village of Kufan in the neighborhood of the latter town, for which reason he is also called al-Kufani, died from poison at Baghdad in the year 507 (1123); *ib.* in 557 = 1161-1162. — In the 1914 edition of Ibn Khallikan's the genealogical and historical-genealogical works, upon which a history of Abiward and a work on the differences and identity of Arabian tribal names are especially mentioned, have been lost; the latter work, however, was extensively made use of by Muhammad b. 'Abd al-Mu'izz b. al-Bakrasi. Of his works only the three most important divisions have each been preserved separately in several manuscripts: *al-Ya'qutiyah*, *al-Tamimiyah* (mostly about the caliphs al-Mu'izz, 467-487 = 1073-1094, al-Mu'izz, 487-512 = 1094-1118, and their successors) and *al-Mu'izziyah*, a collection of smaller poems, *Mu'izziyah al-Mu'izziyah* (1011-1012), appeared in Cairo in 1277 (1260-1261).

Fakhr al-Rai, Ibn Khallikan (ed. Wusteni), N. 646; *Abi 'Izzah*, *Mu'izziyah*, vii, 380; *Yaqut, Mu'izziyah*, I, 111; *Wusteni, Die Geograph. Gesch. d. Arab.*, I, 253.

(BRUCKENMANN)

ABKARIUS ИРАКУРА АВА * Yaqut, a born Armenian, who lived in Beyrut and had devoted himself enthusiastically to the study of Arabic poetry. His work *Nikayat al-shair* (I) *al-shair al-shair* (Marquart, 1852; a revised edition as *Tawzih al-Nikayat al-shair*, Beyrut, 1858) was formerly much used also in Europe, but must be considered obsolete, since his authorities, viz. the *Kutub al-shair*, as well as the *Al-shair al-shair* of 'Abd al-Qadir al-Bughdadi, are accessible to us. A third edition of his *Englisch-Arabic Dictionary* appeared in Beyrut as late as 1892. A history of

Lebanon is to be found in manuscript in the Cairo Library (*Fihrist... al-kutub al-shair al-shair*, *ib.*, 171) — Abkarius died in 1303 (1285). (BRUCKENMANN)

ABKHAZ, a tribe of West Caucasus, on the Black Sea. The country of Abkhazia comprises the region extending from the main ridge of the Caucasus to the sea-coast, between Lagzy in the north and the mouth of the Ingur in the south. Before the union with Russia it was divided politically into three parts: 1) Abkhazia proper, on the coast from Gagra to the Galzuga under the princely family of Shervashidze; 2) the Highlands of Tschelva (without any government); 3) the country of Samurstan on the coast extending from the Galzuga to the Ingur ruled by a branch of the house of Shervashidze, subsequently united with Mingrelia. Since the 17th century a portion of the tribe has crossed the main ridge and settled on the southern slopes of the Caucasus. In the thirteenth of the 19th century the population of Abkhazia was estimated at 90000 and the number of all the Abkhaz at 145800 souls. Philologically the Abkhaz language is considered as representing a special family of the Caucasian languages.

The Abkhaz are mentioned in the ancient *Abakhi* (by Arrian) or *Abakhi* (by Ptolemy); according to Procopius (5th century A.D.) they were under the sovereignty of the Lazae (Laz); in those days slaves (nephews) were brought to Constantinople from Abkhazia, subjugated by Justinian and converted to Christianity, about the year 528 A.D. The Abkhaz were then independent with the help of the Khazars: the prince (prince) Laz, II, married to a Khazar princess, assumed the title of king. Under the governor of Tiflis, Ishaq b. Ibrahim (c. 830-853) the Abkhaz were said to have paid tribute to the Arabs; geographical reasons alone sufficient to put any idea of really subjugating the country out of the question. The most prosperous period to the Abkhaz kingdom was between 850 and 950; the king ruled Abkhazia, Mingrelia, Imeretia and Kartalinia and also interfered in Armenian affairs. Since that period Georgian remained the literary language and the language of the educated classes in Abkhazia. After the extinction of the dynasty (at the end of the 10th century) the throne went to the Georgian Bagratides (Bagratians), but Abkhazia still did not lose its importance for the whole kingdom, in Arabian and Persian sources up to the Mongolian epoch, the Bagratides are always called "kings of the Abkhaz"; the Byzantine Cedrenus designates the king of Georgia as *kyros* (or *kyrenos*) 'Aphros'; even in the form of the title as used by the kings themselves the title of "king of the Abkhaz" takes the first place. The origin of the dominion of the Bagratides is also to be looked for in the West (on Corogh and Kion). About the year 1375 the house of Shervashidze (alleged to be descended from the dynasty of Shervashidze) was entangled with Abkhazia; in 1482 (under King Bagrat II) the confirmation of the Shervashidze as prince (prince) of the country took place. In the Turkish epic *Kirdabi* (written probably originated about the year 1400 in the Armenian plateau) only Mts. Ararat is Dresden; comp. Barthold, in the *Zapiski evras. ust. russk. arkhiv.*, viii, 203-204) the Abkhaz together with the

Greeks of Tschikond are called the enemies of the Muslims: a hero, offended by his people, will go to the aid of the Abkhaz, take a golden crown in his hand and kiss the hand of a man clothed in the chainable (pilot). According to a letter from the emperor of Tschikond to the year 1359, the princes of the Abkhaz are said to have disposed of an army of 30000 men.

After the settlement of the Ottomans on the east coast of the Black Sea, the Abkhaz could not escape the Turkish dominion and the influence of Islam, although Christianity was but slowly supplanted. The Musulman John of Luca asserts that still in his time (1637) the Abkhaz passed as Christians although the Christian usages were no longer observed. Since the separation from Georgia the country had been under its own Catholicos (for the first mentioned as early as the 13th century) in Pitsund. Up to the present day the ruins of eight large and about 200 small churches, including chapels, are said to exist in Abkhazia. The house of Shervashidze did not embrace Islam until the second half of the 18th century (Palace Lion) at the same time recognizing the Turkish sovereignty. On this account he was given the fort of Sukhum, which had already been besieged by the Abkhaz about 1725-1728. After the union of Georgia with Russia in 1803, the Abkhaz had also to put themselves in relation with this powerful neighbor. The first attempt was made in 1803 by Prince Katsch-Beg, but was abandoned soon afterwards. Only after the annexation of this prince to 1808 did his son Sefir-Beg get into closer touch with Russia, and claimed his half against his brother, the pretender Ansh-Beg. In 1810 Sukhum was taken by the Russians; Sefir-Beg, who had become converted to Christianity and assumed the name of George, was installed as prince, but nevertheless Sukhum has since that time always been occupied by a Russian garrison. The two sons of Sefir-Beg, Demetrius (1821) and Michael (1822, after the imprisonment of his elder brother) had to be put in power by the Russians with armed force. Their power, however, was limited to the neighbourhood of Sukhum, whose garrison could only remain in communication with the other corps by the sea route. By the incorporation of the whole coastline from Anapa to Poti, based on the Peace of Adrianople in 1829, Russia's position was naturally strengthened, but even in 1835 only the north-western part of the country, the district on the Bzyb, is said to have been in the possession of Prince Michael. The other parts had remained under the dominion of his Musulmanian uncle. Later on the prince succeeded, with the help of Russia, in establishing finally his power, and, contrary to all his predecessors, in acting towards his subjects almost like an absolute ruler, but he too, in spite of his Christian faith, had surrounded himself with Turks.

After the final subjugation of West Caucasus by the Russians (1864) the dominion of the House of Shervashidze, like that of the other native princes, came to an end; as early as November 1864 Prince Michael had to renounce his rights and leave the country. Abkhazia was incorporated into the Russian empire as a special province (*velayet*) of Sukhum and divided into three districts (*okrug*) — Pitsund, Otschuri and Tschelids. An attempt made by the new government to get for

the purpose of taxation some exact information concerning the economic conditions of the Abkhaz led to a revolt in 1866 and, after this had been repressed, to the emigration of a great part of the Abkhaz to Turkey, leaving the population in 1866 from 30000 to 40000, it is said. The almost depopulated district of Tschelids came to be a district and was placed under a special 'Settlement Commission' (*poselitsi komissiya*). At present the whole of Abkhazia under the name of district (*okrug*) of Sukhumskaya (Sukhumskaya) forms a part of the government of Kistlik. The population has been greatly diminished by fresh emigration and especially after the participation of the Abkhaz in the rebellion of the Highlanders (1837) caused by the landing of Turkish troops; in 1881 the number of Abkhaz was estimated at about only 20000.

Under the superintendence of General Bartholomew, the owner of the well-known collection of coins described by Dorn, a book on biblical history has been published by the Society for the Restoration of Orthodox Christianity in the Caucasus, the work being done by three native Abkhaz: the priest Gels and the officers Margani and Kistlikidze. An attempt to introduce the Abkhaz language as a school subject in the gymnasium of Novorossiysk failed completely.

Abkhazian — Dorn, *Hist. et de Georgia*, J. Margani, *Abkhazian and related languages* (Leningrad, 1904). — Russian standard work upon (1880) N. P. Uspenskiy, *History of the war and of the Russian rule in Caucasus* (St. Petersburg, 1891), section of value (anonymous but evidently from a well-informed person) in the *Siberian review*, a hundredth anniversary (1891) (Moscow, 1891); P. Zubov, *Kavkazskaya kantschuga* (St. Petersburg, 1834-1835); R. v. Eckerl, *Der Kaukasus und seine Völker* (Leipzig, 1887). (W. H. H. H. H.)

ABLA, Arabic woman's name, for example, that of the sweetheart of 'Anlata' (q.v.).

ABLAH, the name of a strong castle which belonged to the Jew Samu'el (Samuel) b. 'Abdya' (q.v.) as called on account of the variety of its columns (*Abdya's Geography*, ed. de Goele, v. 223 at 24; vii, 1792 viii, 256). This castle became proverbial for its resistance to every assault, for which reason it is sometimes described under the name of *al-Abdya* (*al-Abdya* the incomparable). According to two verses of Samu'el (*Abdya*, ii, 45; *Harat, Abdya*, 24 ed. p. 278), *al-Abdya* had been built by 'Abdya' the father (or grandfather) of Samu'el. But *al-Abdya* singling the prison of the castle and of its owner, through whom he had recovered his freedom, says that *al-Abdya* was built by King Solomon. If we must give credence to legend, the building was at any rate older than it is said to be in the verses of Samu'el mentioned above. For the story goes that the famous queen *al-Zahra*, who lived in the third century, tried unsuccessfully to seize Mird — another strong castle — and *al-Abdya*, that which gave rise to the proverb: 'Mird proved rebellious and *al-Abdya* inaccessible' (*Footnote, Arab. Proverbs*, i, 218). *Al-Abdya* is mentioned again in the case of the courtiers of Umar b. 'Abdya, which the latter had entrusted to Samu'el b. 'Abdya, when he went to implore the emperor Justinian II to aid him against his father's murderers (comp. de Slane, in the preface to his edition of the *Dinan*

of Israel's Temple. Al-Mishk was, in the time of Yehoi, in ruins. This author adds that the ruins of the Temple (q. v.) and that the surrounding temple of which the walls were built for not in anyway show its ancient strength, which had been somewhat carried. It is a remarkable fact that whilst the ruins of Maid has remained until our own days, and that travellers like the Palgrave and Kington (*Travels* i. 125) have visited its ruins, the name of al-Mishk is not mentioned by any traveller not even by Benjamin of Tudela, the Jewish traveller of the twelfth century, who generally fails not to mention any remarkable fact of Jewish history.

(M. S. S. S. S. S.)

51-ABNA' (Hicraft) also contains:

1. The descendants of Sa'id b. Zaid found in Ta'izz, with the exception of his two sons Kalf and 'Asir. This tribe dwelt in the sandy plain of al-Bahal'.

2. The descendants of the Persian immigrants born in Yemen. Even in early times the Ethiopians, who had since long cast covetous glances towards the Arabian [redacted] lying opposite them, had sent military expeditions against Yemen, and as their attacks were in the course of time repeated with increasing success, they at last became dangerous not only to the population of Yemen, but also to the Persian vassals in al-Qira. For this reason the inhabitants of Yemen were obliged to seek assistance from the [redacted] king Khosrow I Anushirwan (531-579). According to the usual account, Sa'id b. al-Harith, a descendant of the old Himyarite royal family, turned up in Constantinople where he succeeded in inducing the king of the Persians to undertake a campaign against South Arabia. Through the united forces of the South Arabians and the Persians under the command of Wahris, the Ethiopians were certainly driven back for some time and Sa'id made king. After the withdrawal of the foreign auxiliary forces Sa'id was, however, murdered and his country again subjugated, causing Wahris to return with a stronger army. The resistance of the Abyssinians was now completely broken up and Yemen transformed into a Persian vassal state. Later on the Persian governor Bahlan (Bahlan) and his family were converted to Islam and by doing so recognised Mohammed's sovereignty. Subsequently, however, troubles broke out in Yemen and were brought about a state of anarchy, [redacted] order restored before Ali b. Bakr's reign.

3. Under the 'Abdāshīs [q.v.] the descendants of the first followers of this dynasty were called 'al-Aḥwā' (abbreviated from Abū al-Ḥawā').

ABNIYA, [Sec 1111A.1]

ABRAHA. (Ethiopia (now for Aksum) with the ~~ancient~~ **At-Angusa**, an Ethiopian governor of Yemen about the middle of the 6th century C.E. According to Procopius, she makes him out to have originally ~~been~~ the slave of a Roman.)

Adalra, he put himself at the head of an uprising against the Ethiopian king (Ela Ayyoba) and took prisoner the then governor of Feneos, Edimphaneus, the Soncisa of the inscription of Hign al-Ghurab. He repeatedly defeated the army sent out against him; but after the death of the king he submitted to the payment of tribute to the latter's successor, and was recognized by him as viceroy. The year 530 serves as terminus a quo of his rule, when Edimphaneus was still governor. With this account of Procopius the Arabian genealogists agree so far as they relate in various forms that he fought against a general named Arys, sent against him by the Ethiopian king, and was finally reconciled with the latter. It is therefore certainly wrong to make the Ethiopian king appoint the pious Christian Abrahama as vicarary as early as the year 525 (directly after the conquest of Yenneo) as is stated in the Acts of St. Aréthas. This same Abrahama has lately been unexpectedly brought nearer home to us by the Nam Inscription, found and published by E. Glaser. In this Abrahama calls himself "Vassal Prince of the Abyssinian King, King of Saba, Hadan, Maqamawet, Yamana and of the Arabs of the Highlands and of the Coast." — the most important event of his reign the inscription mentions that in the year 537 A. C. according to the Muslim estimate 542 A. H., according to Glaser, however, perhaps 539) a son-in-law of embassies came to Marib, amongst them those of the two rival powers of Byzantium and Persia. When the great war between these two states broke out in the year 540, Abrahama in spite of all the efforts of the Byzantine Emperor did not take part in it first. It was only later that he allowed himself to be persuaded to make an attack on the Persians which, however, according to Procopius, soon abandoned. This campaign, which certainly could not have taken place before the year 570, can be placed side by side with what the Arabian legends, based on Kor'an, or, relate of his unsuccessful attack on Mecca and the Kafia. Side by side with the legendary embellishments, which are indeed in the Kor'an, there is found in the Arabic the precise statement that at that time an epidemic of small-pox broke out, and it may well be assumed that it was this calamity which brought about Abrahama's retreat, or his engagement him an excuse to abandon his difficult campaign. The year of this event, the so-called "Elephant Year" — from the elephants which Abrahama is said to have led with him, — is calculated by later authorities to be 570 A. D. and is generally taken to be the year of Mahammad's birth. Schlegel has, however, rightly pointed out the fact that between the attack on Mecca and the conquest of South Arabia in 570 there is no time left for Abrahama's further reign and that of his sons. Further Wellhausen has conjectured that what is related of the attack of a Tabbat on Medine really refers to a former episode in this same campaign of Abrahama. The words of Greek writers and of the Arabian legends that Abrahama was a Christian has been confirmed by the above-mentioned inscription which begins with an invocation to the Trinity. The church in Marib, the consecration of which is mentioned therein forms a pendant to the church built by Abrahama in San'a, which according to the Arabs is said to have been an incomparable piece of architecture.

found names are greatly adapted to nicknames, and popular etymology has to be taken into account when explaining them. Examples follow below [Comp. KUNYA].

ABU 'L-ABBAS al-Saffar, the first 'Abd al-Saffar caliph. His real name was 'Abd Allah; but to distinguish him from his brother, the subsequent caliph Abu Dja'far 'Abd Allah al-Manqar, he was usually called 'Abu 'l-Abbās. His father Muhammad b. 'Alī was a great-grandson of the Prophet's uncle; his mother's name was Rāṣa bint 'Ulad Allah b. 'Abd Allah. On account of their relationship to the Prophet, the 'Abbasides thought they had stronger claims to the caliphate than the Umayyads, and on this account early began to intrigue against the ruling dynasty. This was especially the case with Muhammad, the father of 'Abu 'l-Abbās, and his work was continued by his sons, first by Ibrahim, then by 'Abu 'l-Abbās and Abu Dja'far. According to the usual account, the latter was the elder, but he renounced his rights in favor of his brother. In Rāmāṣān 129 (June 747), the black flag, the emblem of the 'Abbasides, was unfurled in Khorāsān. The Umayyad troops were defeated, Kāfir surrendered and in the year 132 (749) 'Abu 'l-Abbās had himself proclaimed caliph in that place. The town became the temporary residence of the new dynasty. The last Umayyad caliph Marwān II, in Jumādā II 132 (Jan. 750) suffered a decisive defeat on the Upper Zab and was soon afterwards killed. Now the great point was to secure the throne against any danger from the Umayyads, and the new caliph saw to this in the most dreadful manner. By force and by cunning the descendants of the previous reigning family were got rid of by the caliph and his uncle 'Abd Allah and Dawūd. His speech from the throne in the Great Mosque of Kāfir, 'Abu 'l-Abbās collect himself the "philless blood-shedder" (al-Saffar) and he honestly did his best to make himself worthy of this terrible name. The Umayyads were, however, not the only victims of his bloodthirstiness. The new caliph had many difficulties to face, but in every case the opposition was broken down with the greatest severity. For the rest 'Abu 'l-Abbās found but little time to care for the development of his empire. This task was reserved for his successor al-Manqar, who indeed appears to have played during his brother's reign an important rôle as governor and counsellor. In Dhū'l-Hijja 136 (June 754) 'Abu 'l-Abbās died at Aḥlāḥ on the Euphrates, at the age of about thirty, after having had homage paid to his brother as his successor to the throne — according to the usual tradition.

(K. F. ZETTERSTEDT.)

ABU ABD ALLAH al-Muḥtār or al-Muḥtār, as he is also called, the establisher of the Fatimid rule in Africa. His real name was al-Uḥayr b. Aḥmad b. Muḥammad, and was a native of Sa'ad in Yemen; his nickname al-Muḥtār is said to be due to the fact that he was a market

merchant (Muḥtār) in al-Baḥr or somewhere else in the East. Later on he was chosen by the Idrisids propagandists to work amongst the Berbers as an emissary. He therefore made the acquaintance of some Berber pilgrims in Mecca and was taken by them to their native country. In 280 (893), or according to others in 283 (896), 'Abd Allah began his work amongst the tribe of Khorāsān and with great success that almost the whole tribe rose up under his leadership and soon became dangerous to the Agghlides (q. v.). Thereupon the Maghrib, 'Ulad Allah (q. v.), whose speedy coming had been announced by 'Abd Allah, started on his journey in the West, but was nevertheless attacked and kept a prisoner in Sijilmasa. Meanwhile 'Abd Allah after several battles succeeded in breaking the power of the Agghlides and in occupying their residence, Rakkāda (q. v.) in the year 296 (909). Thereupon he took Tabert, the seat of the Banū Rūmī, and Sijilmasa, where the Banū Mūlās held the power. Here he set free the Maghrib, who made his entry into Rakkāda on the 29th Rabi' II 297 (15th January 910), and who conferred great honors on his rescuer as well as on the latter's brother, 'Abu 'l-Abbās Muḥammad. But suspicion soon between the ruler and his brothers, and the former did not hesitate to have them both murdered in the year 298 (911).

(M. TU. HOUTSMA.)

ABU ABD ALLAH Ya'qub b. Idrīs, a vizier. Ya'qub, who is celebrated by Arabian writers not only on account of his learning but also for his noble and amiable character, had joined the two 'Alide rebels Muḥammad and Ibrahim b. 'Abd Allah. He was on account of this, together with his brother 'Alī, thrown into prison by Caliph al-Manqar after the suppression of the uprising, and only received his liberty from the latter's son and successor Muḥammad al-Mahdī. By means of giving skilful advice he managed to win the confidence of this ruler and after being appointed vizier in 163 (779-780) he gradually succeeded in making himself almost omnipotent in the 'Abbaside Court. Nevertheless the dauntless vizier at last fell a victim to the envy of his ambitious adherents. The manner of his fall is stated in different ways. According to some accounts the caliph is said to have ordered him to get rid of an 'Alide vizier; Ya'qub, who showed a certain preference for the 'Alides, let him however escape, and the incident was at once reported to the caliph by a female slave. According to others, Ya'qub is said to have reproached al-Mahdī for drinking wine and to have fallen into disgrace on this account. In any case he was imprisoned in the year 166 (782-783) and only set free several years later by caliph Harūn at the request of the vizier Yehya b. Khalid al-Barmaki. On Harūn giving him permission to settle down where he liked, he went to Mecca. It was there that the once so powerful vizier, who had become blind during his long confinement, died some time afterwards. The year of his death is not exactly known.

ABU 'A'INÄ MUHAMMAD b. al-KÄSIM b. KHALIL b. YÄSÄ b. SULAYMÄN al-HÄSÄNÄ, an Arabian litterateur and poet. He was born about the year 190 (805) in al-Ahwas (his family came from al-Yamama) and grew up in Basra, where he received instruction from the now famous philologists, Abü Tihäda, al-Agha, Abü Zaid al-Agha and others. He was renowned amongst his contemporaries not only for his linguistic attainments, but also for his quickness of repartee. Ibn Abü Tihä collected anecdotes concerning him in a special work entitled *Ma'äz al-'A'ainä*, many of which are to be found in the *Kutub al-Aghani*. The book itself as well as the collection of his poems have not been preserved. He became blind at the age of 40, later on he emigrated to Bagdad, but returned to Basra again and died there in the year 282 or 283 (895).

Bibliographia: *Fihrist*, p. 125; Ibn Khallikan (ed. Wüstenf.), N. 865.

(FRANCKE MANN.)

ABU AYÜB KHALIL b. AUBÄN al-AMÄKÄ, standard bearer of the Prophet, died of dysentery under the walls of Constantinople during the siege of that city by the Arabs in 63 (672); he was buried there and his tomb was, it is pretended, recognized by Ibrahim al-Mu'izz al-Din, when Sultan Muhammad II came to invest the city. A mosque was built on this spot (363 = 1458), it was enlarged in 1000 (1591) by Süleyman Paşa, two new minarets with galleries were built in 1236 = 1721. Sultan Mahmüd deposited there the relics of the Prophet, which had been found in the treasure of the Heracl (footprints). The grand vizier Sinan Paşa (d. 1133 = 1729), the viziers Mith Pasha, Khadim, reformer of (Khan III), the grand vizier Semiz Ali Paşa and Gedik Muhammed Paşa, İsmail Mustafa Paşa, the conqueror of Cyprus and many other well-known great personages are buried in the *türbe* or in the immediate approaches of the *parva*. The mosque, situated outside the Byzantine crenelated and round wall, which an important *medrese* has grown up, is venerated by Mus-ulmans, and an unbeliever is not allowed to enter it. It is here that at the commencement of each new reign of the Ottoman dynasty the ceremony of enhancing the sovereignty takes place: he is voluntarily girded with the sword of his ancestor by the hands of the *debir*, the General-superior of the religious order of the *Mawlawiya* (Mevlevi) or *devr* *dergah*, who is a direct descendant of Uysal al-Din Rumi, and who comes expressly for this purpose from *Konya* his usual residence.

(C. H. H. H.)

ABU 'A'ALÄ AHMED b. ABÜ ALLÄH b. SULAYMÄN al-MÄ'ARRÄ, the celebrated *Muhammedan*

poet; born in 363 (973) at Ma'arra al-Nu'man, a small town in Northern Syria, between Aleppo and Hama. He belonged to a respectable Arab family claiming descent from the tribe of Tanukh, which had long been settled in this region. His grandfather had filled the office of *hajib*, and his father seems to have been a man of some cultivation. Abu 'A'Alä was scarcely four years old when an attack of small-pox left him almost totally blind; and we may well be astonished by the extraordinary powers of memory which enabled him, in spite of this deprivation, to display in his works variety and range of learning that have seldom been surpassed. His youth fell in troubled times. The Hammadides still maintained a precarious hold on Northern Syria, but they were harassed between the Fajimidæ advancing from the south and the Byzantines on the north. Circumstances, however, were not wholly unfavourable to literature. Although the brilliant epoch of Saif al-Dawla had passed away, the revival which he inaugurated had not yet spent its force, and the literary renown of Syria stood very high at this time, as it may be learned from al-Tahallid. Abu 'A'Alä's contemporaries (see Margoliouth, *The letters of Abu 'A'Alä*, introduction, p. xxi). Abu 'A'Alä received his education in Aleppo, Tripoli, and Antioch under the pupils of the grammarians Abu Khalifa and other Syrian scholars. The career to which his studies were directed seems to have been that of a professional encomiast, like Mutanabbî, and several of his panegyrics on the Hammadide Saif al-Dawla have come down to us. In any case he was abundantly a calling which, however successful it might be, would have exposed his proud and sensitive nature to intolerable humiliation. Nevertheless, he says in the preface to the *Shaf al-Mu'izz*, "I tickle the ears of princes with chants or eulogies any one in the hope of gaining a reward". On his return to Ma'arra he supported himself by a small annual pension of 30 dinars, paid from a trust-fund, and possibly by the fees of pupils whom his already great reputation must have attracted. That he was not without honor in his native town appears from the fact that he was chosen by his fellow-citizens to answer an official communication addressed to them by the well-known politician and author, Abu 'A'Alä b. 'AD al-Ma'arrä. Abu 'A'Alä remained at Ma'arra until 401 (1010), when, for somewhat obscure reasons, he resolved to settle in Bagdad. It is not strange that in the prime of life he should have felt the changing limitations of provincial society and pined for a larger field in which his talents might obtain their merited recognition. To the capital accordingly he went, but after a year and seven months he was once more on the way home. He himself says that his mother's illness, and his own lack of resources were the causes of his return; but the latter cause seems impossible as he had many influential friends who could have come to his aid, if necessary. At the same time his reception, cordial and even flattering as it was, was marred by some instances of incivility; and moreover, the poet's refusal to write some professionally stood in the way of his ambition. An indignity which he suffered at the hands of al-Mustassf, brother of the famous poet, al-Sharif al-Buhārî, may have finally decided him to leave the city (Margoliouth, *loc. cit.*, pp. xxvii ff. 107). His visit to Bagdad

makes the turning-point in his life. Illicitly he had won distinction as an eruditus savant and as an accomplished poet in the style of Muḥammīd, for whom he cherished an enthusiastic admiration. His peculiar genius is revealed only in his later works written after his return to Meṣra — the *Luzūmīyāt* and the *Khiṣṭ al-ghufrān*, and it can hardly be doubted that in Baghdad he was first imbued with many of the unorthodox views and speculations by which these works are characterized. The assertion that he attended lectures of the leading scholars of the day is contradicted by his own testimony in a letter informing his uncle that he had arrived in Meṣra from Baghdad he observes that since passing his twelfth year it never occurred to him to seek knowledge from any inhabitant of Tekk or Sijka. He reached Meṣra only to be greeted by the tidings of his mother's death, an event which affected him deeply and confirmed him in his intention of renouncing the world. It is said that henceforth 'Alī lived in a state undisturbedly artistic amidst laziness, eating no solid food and abstaining even from eggs and milk. The name *ṣayyid al-muḥḥasibīn*, (the double guardian*), which is sometimes given to him, refers to this seclusion and his abstemiousness. He was not allowed, however, to be a hermit. The fame and fortune which he had missed at Baghdad he found awaiting him at Meṣra. Pupils came from far countries to read with him, and his letters which have been edited by Margoliouth show that he was frequently in correspondence with scholars anxious to profit by his teaching. The Persian traveller and poet Nizāmī Khosrōw, who visited Meṣra in 419 (1027) eleven years before Abū 'L-'Alā's death, speaks of him as exercising unusual authority in the town and possessing great wealth which he distributed amongst the poor, while he himself practised asceticism and lived like a saint. Abū 'L-'Alā' passed nearly forty years in retirement, but not in idleness, as may be judged from the long list of his works which were composed, for the most part, during this period. He died in 429 (1038).

He owes his popularity to the fact that the collection of his early poems entitled *Ḥaṣṣ al-ṣawād*, of which there are numerous MSS. in European libraries, is now first published at Hildes (1889), than at Beyrut (1884), and forms the subject of a dissertation by C. Meis (*Die Arabische Dichtung des 11. Jahrhunderts*, Bonn, 1883). The best known manuscripts are those by the author himself (*Ḥaṣṣ al-ṣawād*) and his pupil al-'Iṣṭīṭ. Most of the poems in the *Ḥaṣṣ al-ṣawād* were written before Abū 'L-'Alā's journey to Baghdad, but it includes some of later date. They consist of epigrams, elegies, occasional poems, etc., a special section being devoted to the *ḥamās al-hayrīya* (*al-dīr*) (*Ḥaṣṣ al-ṣawād*). The influence of Muḥammīd is apparent not only in the style and strophic style but also in the freedom with which conventional rules are ignored or defied. Through the poet sometimes betrays irreverence in touching on religious matters, there is no trace of the quite unorthodox views which are commonly associated with him. These form a striking feature in the second collection of his poems entitled *Ḥamās al-lam* *ḡalām*, generally known as the *Luzūmīyāt*, a name which refers to the technical difficulty of the rhyme. Their contents have been fully discussed by Krenner in the *Sitzungsber. d. phil. hist. Klasse d. Kais.*

Max. d. Wiss. d. kais. Akad. d. Wiss. (1889), who has also published the text and translation of selected passages in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* (LXXI—LXXII and LXXIII). Von Krenner's estimate of the work is perhaps too favorable, but it must be admitted that here Abū 'L-'Alā' proves himself to be a singularly bold and original thinker as well as a fully versatile. Not content with fearlessly denouncing political and social abuses, he takes the whole of human life for his theme and meditates on its deepest problems. To compare him with Abū 'L-'Alā' is to do him less than justice. In the *Luzūmīyāt* Abū 'L-'Alā' strikes off the fetters of dogma which bound his predecessors and rises to a higher plane. Another remarkable work, the *Khiṣṭ al-ghufrān*, of which there are manuscripts at Constantinople and Cambridge, has been described in part translated by the present author (*Trans. of the Roy. Asiatic Soc.*, 1900, pp. 637—720; 1902, pp. 75—101, 337—362, 815—847). It is an epistle in verse form addressed to a certain 'Alī b. Manṣūr of Aleppo. The heathen poets who have been forgiven — hence the title — and raised to Paradise, where the scene is laid, are introduced as the principal characters in what may be called a burlesque *Monna Commedia* or, as it really is, an audacious parody of Mohammedan ideas concerning the Afterworld. Besides this it contains a great deal of independent learning and in particular an account of the *ṣulṭā* (freethinkers) with open-mindedness of their poetry and reflections on the nature of their belief. The main correspondence (*ḥamās*) of Abū 'L-'Alā' has been edited with a translation, valuable notes and an exhaustive bibliography by D. S. Margoliouth (Oxford, 1898). Of his other works, about sixty in number, very few have been preserved.

The question of Abū 'L-'Alā's orthodoxy was warmly debated during his lifetime, and though he did not lack defenders, many of his contemporaries looked upon him as a heretic, a view which has generally prevailed ever since. The evidence afforded by his writings is ambiguous and contradictory. It is said that he composed a work entitled *al-Fuṣṭ al-ḥayrīya* in imitation of the *Kor'ān* (see Goldziher, *Monatsh.*, II, 403), but in his *Khiṣṭ al-ghufrān* he severely censures Ibn al-Rawāṭi for having done the same thing, and accepts the orthodox view as to the inimitable style of the Sacred Volume. If in some passages of the *Luzūmīyāt* he seems to speak as a pious Muslim, yet there is entirely any dogma of Islam that he has not ridiculed. Different explanations have been given of this fact, but none is so curious as the suggestion that the course of his thoughts was determined by the difficult metre in which he chose to write. One cannot help feeling that he was a thorough sceptic at heart and that his most characteristic utterances are in this vein. The orthodox passages were probably meant to throw dust in the eyes of his critics, as it is conceivable that he sometimes doubted his own position and saw no harm in having two strings to his bow, in reading him one is often reminded of Lucian, and often again of La Fontaine. He is a materialist, but the God in whom he believes is little more than an impersonal Fate. He does not accept the theory of

divine revelations. Religion in his view is a product of the human mind, the result of education and habit, and he repeatedly inveighs against those who take advantage of the superstitious credulity of mankind in order to gain power and riches for themselves. He admits no prospect of a future life and looks forward to annihilation as a happy release from the burden of mortality. His desquaring pessimism leads him to the doctrine that it is sinful to beget children and expose them to all the miseries that dash a horde on, but his philosophy is not purely negative. He knows active piety, active righteousness, which he sets far above fasting and prayer. "The man of true religion is he that fights against evil and has girded himself with the girdle and lancecloth of asceticism". Every one should follow the promptings of reason and conscience, which are the only guides to Truth. Indian influence is probably discernible in his creed that no living creature should be slain for food or injured, and in other opinions of a permissive kind. He himself says that he adopted vegetarianism in his thirtieth year, i. e. before his journey to England, partly from motives of economy (*Journal of the Rev. Dr. N. 1902, pp. 379-380*). But he absolutely excludes giving no answer to the platy question, "in what religious ground do you stand tomorrow?" It would be unfair to tax him with hypocrisy, though several passages might be quoted which indicate that he considered himself free to practise dissimulation, whenever it suited him to do so, in any matter connected with his religion.

Diebstegraphie is alluded to the witness quoted in this article, Heuckelmann, *Grat. d. arab. Litter.*, t. 255. (Nachtigall.)

ABU 'ALI KALANOWI SHARAF al-DIN
 'ANWAR, an Indian saint, came from the 'Irak
 to Pimpal, where he died in 724 (1322). It is
 related that he was there the famous saint Kuhl
 al-Din Bahkuyar Kaki (q. v.), although this latter
 died as early as 630 (1322). Kuhl as Bahkuyar
 is the personage which tells here, after a long
 stay in Pimpal, suddenly moved by the divine
 spirit, he went to Asia Minor to receive instruction
 from the famous mystic Shams al-Din Tihak
 and Ghafar al-Din Khar. It is, however, certain
 that he is highly honored in India under the
 name of Shahid (or Shah) Shams al-Din Kalan-
 shah, that many miracles are ascribed to him and
 that his grave is a much visited place of pilgrimage.

AND ALL MEN (Sanskrit: *Manuṣya*)

ABU 'ALL MUHAMMAD, a noble lord of Kirmān, a native of Soghdiana. A brigand at first, then a general in the service of the Ilkhanes, he made himself independent afterwards as the master of the province of Kirmān, which he governed for thirty-seven years; whilst in this position he received a flag of justice from the 'Abbasids caliph Mu'tazz li-Ah in 338 (959). Having been struck with paralysis and fearing for his life, he invested his eldest son Alyas with the government of Kirmān; then, becoming suspicious, he had him confined in a fortress, from which the young man escaped, whilst his father was in company of his baghdadi emissary at the head of an army returned to bridge his. The latter succeeded with

retired to Baghdad, where he was well received by the Sumayyid Ma'mun I b. Nuh; he stayed with him until his death, which took place the same year 136 = 957. He advised him to attack the 'Ubayhid' country. Kilmun was murdered the following year by the 'Ubaydi 'A'ud al-Dawla.

nades*, iii, 134, 261. (EL HARTI.)

ABU 'ALI b. MUHAMMAD. [See AHMAD b.
ALI b. MUHAMMAD.]

ABU 'ALI O. SINDYOK (Muhammad o. MUHAMMAD), successor to his father Abu'l-Hasan (q. v.) as governor of Khuzistan and hereditary vassal prince of Kishistan. During his father's lifetime he had been governor of Herat; after the former's death (11thth 1144) 378 = March-April 1393) he successfully won his ground against the Samanids and the Pretorian M. B., at that time governor of Balkh. Without openly rebelling he actually assumed the status of an independent ruler, ~~took~~ himself high-sounding titles — as is proved by his coins. — and took possession of all the government revenues of his province on the pretext of having to provide for the maintenance of his army. He is said to have had a secret agreement with the Karakhanids against Khan Hiron, the conqueror of Transoxiana, and to have arranged with him to divide the Samanide territory on the understanding that he should have the land up to the Oxus frontier. However, after the occupation of Balkh (11thth 1388 = May 992) the Khin, entirely neglecting the agreement, wished to install Abu 'Ali as his governor. The latter, therefore, joined the Samanids Nuh b. Mansur and received ample assistance from him, which were, however, likewise not kept, as the Samanids succeeded, owing to favorable circumstances, in returning to Kishistan without any outside help (on Wednesday 14th Jumada II = 17th August of the same year); Abu 'Ali was endeavored with the assistance of his former enemy Fakh to maintain his supremacy, but his allies were defeated on Tuesday the 15th Rabi'ul II 384 (23rd Oct. 992) by the Samanids and ~~the~~ after the Ghaznavides. Abu 'Ali went to Amul (the present *Amul*) and thence to Kh. Kh. Being treacherously made prisoner at Herat by Kh. R. Mahmud, Abu 'Ali was liberated by his friend Ma'ud, the prince of Gurgan, and through his mediation returned to Kishistan. As late Nuh received him with great pomp, late shortly afterwards he was cast into prison and handed over to his enemy Sebaktegus of Ghazni (Friday 186 = August-September 996). He is said to have perished miserably in the fortress of Ghidra where he was imprisoned. His coffin was transported to Ray in Kishistan (Rajab 388 = July 998); according to the statement of the priests, whom Abu 'Ali always favored, at the opening of the coffin his corpse clothed only in a shirt of white wool (kaf) was found in a state of perfect preservation. — His brother Abu'l-Kasim 'Ali b. Muhammad followed him to Kishistan.

(W. HARRISON.)

ABU 'ALI = **SINĀ**. [See **sinā**.]

ABU 'AMR (Zahābī) = **al-'Aḥḍā'** = **Amr** = al-Uḥayr al-Muṣṣir, one of the founders of Arabian philology and one of the seven canonical readers of the Korān. He was born about the year 70 (689) in Mecca, and lived in Mecca where he had intercourse with 'Isa b. 'Umar al-Ḥakīmī, the teacher of al-Shāfi and of Shāfi with, and where al-Aḥḍā' was his pupil for ten years. He died about the year 154 (770) in Kāfa on his return journey from Damascus where he had been visiting the governor 'Abd al-Wahhāb. His main work consisted of compiling the ancient poetry of the heathen period and he went about it in a most conscientious manner than Ḥishām al-Aḥmar and other compilers, though on his own confession he is said to have forged at least one verse of al-'Aḥḍā' (comp. *al-ḥakīm*, ii. 21, l. 10). He later on burnt his very extensive compilation. It is said from pure motives, to devote himself entirely to the study of the Korān. His recension of the *Ḥikā* book was much studied later whilst nothing has been preserved of his profane philological works. I come in praise of him in *Farāḥ*, *Dimashq*, No. 696.

Liter.*, i. 99; *Uḥayr* = *Kāfa* = *Nashab* al-Muṣṣir (about 1495) al-Kāfir al-Muṣṣir *fi ḥikā* al-ḥakīmī *Abi 'Amr* b. 'Alī al-Muṣṣir, founded on the authority of 'Isa b. 'Umar (d. 246 = 860), and 'Isa b. 'Umar (died 261 = 874), Berl. MS. No. 639. (HARRISON.)

ABU 'ARISH, chief place of a district (*ḥaṣṣa*) of the same name in the Sanjāq of Hama, a four days journey from the sea in 1834 the town contained 7000 to 8000 inhabitants, amongst them being a number of trading Kurds and Kurds-mans. The port of the country, *Uḥayr* (the ancient *Uḥayr*), has been of no importance for a long time past in comparison with Hama.

Historical. Abu 'Arish was formerly subject to the rulers of Yemen, but in the 18th century a certain Sherif Ahmad founded there an independent sovereignty. Through the Turkish campaign of 1871 the town became nominally Turkish territory.

Bibliography: Niebuhr, *Beschreibung von Arabien*, pp. 266 et seq.; *Faḥṣṣat al-ṣayf*, i. 374 et seq.; Ritter, *Kirchenscheit*, xii. 1016 et seq.

ABU 'ASWAD (Latin = **SERVAS** AL-DU'AM) (his according to the pronunciation of the Magians; Kāfa pronunciation al-'Aḥḍā') a poet of the Ḥilf tribe, which he, however, left in order to settle amongst the Ḥilfābīlites; he also dwelt some time with the Band Kaghāz the tribe of his wife. He was a patron of 'Alī and was sent by 'Alī's Basran representative as a messenger to 'Aḥḍā', Tāhā and al-Zubair, and he also fought for 'Alī at Siffin. When Ḥus al-'Aḥḍā' was 'Alī's governor in Basra (from the year 36 = 656–657).

Abu 'Aswad held a high office there. He gave vent in the ill temper, which occasionally arose from his duties, in his poems. In the *Khizā'ite* wars he acted as leader of the al-'Aḥḍā' troops. It was he that brought to 'Alī's notice the latter's embitterment, and after the latter's dismissal he is said to have himself been governor in Basra for a short time. This, however, is improbable, for a man, who in his own poems calls himself the "down-trodden man" (*al-ḥakīm*) in every kick was ready to kiss the giver's hand, was by no means the man for the delicate state affairs in Basra. The assassination of 'Alī furnished him with a fresh theme for his lamentations. In a poem, for the rest quite insignificant, written under the fresh impression of the event, he already accuses the Umayyads of being the usual instigators of the crime. The agreement between 'Abd al-'Aḥḍā' b. 'Amr, Ma'awiyah's governor in Basra, and Ḥus al-'Aḥḍā' is therefore painful to him, for in consequence of Abu 'Aswad's feelings for the 'Aḥḍā', the 'Aḥḍā' let their friendship cool down considerably. He has *ḥikā* in complaint of the behavior of Zayd b. Sam'ānī, who in 'Alī's time was his subordinate but subsequently, after Ḥus 'Aḥḍā', was himself governor of Basra; still Zayd is said to have aimed at all times against him even in 'Alī's time. His wife, too, like her tribe, was to his great sorrow a friend of the Umayyads — Abu 'Aswad was not always favored by fortune and like all Arabs was anxious of clients who were better off than he. In the year 69 (688–689) at the age of 85, he is said to have died of the plague; the last dated event mentioned in his poems took place 75 (the year 61 (680–681)). I have mentioned to say that he laid the foundation of Arabic grammar. The anecdotes about him are not trustworthy, but according to the evidence of his poems they are partly at least well-founded.

(HARRISON.)

ABU 'ATĀ (Latin = **MASTUR**) = **Abi 'Atā** al-Sindī, an Arabian poet. He comes his surname al-Sindī in the fact that his father came from Sind; he himself was born in Kāfa and lived there as a client of the Ḥilf tribe. He fought for the decaying Umayyad dynasty with pen and sword, praising them and casting stones on their adversaries. It is true, however, that when the 'Aḥḍābites obtained the power, he followed himself so far as to endeavor by singing the praise of the new rulers to wheedle himself into their favor. But the iron character of the "Blood-chamber" was not little sensible to such flattery, and during his successor al-Muṣṣir's reign the poet was even obliged to keep himself hidden. Only after al-Muṣṣir's death in 158 (774) did he again make his appearance and no doubt died shortly afterwards; the exact date is not known. Abu 'Atā was considered a good poet — his elegy on Ibn al-Muṣṣir (q. v.) being especially famous, — although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

Bibliography: Ibn al-Khalikān, *Kitaḥ al-ḥikā* (ed. de Goeje), pp. 482–484; *al-ḥakīm*, xii. 81–87; *Yamān*, i. 372 et seq.; *al-ḥakīm* al-ḥakīm, iv. 170; Brockelmann, *Gesch. d. arab. Liter.*, i. 63.

(HARRISON.)

ABU 'L-ATAHIYA, one of the most important Arabian poets of the 'Abbasid epoch. Abu Ishaq Isma'il b. al-Kasim b. Suwaid b. Kablan, surnamed Abu 'L-Atahya, was born in 130 (748) in 'Am al-Tamr, a small village not far from al-Azhar (according to other accounts in the neighborhood of Medina). His forefathers belonged to the Bedawin tribe of 'Anaz; his father al-Kasim was a copper. He himself and his brother Zaid had a small pottery in Kufa, and it is related that people who visited him wrote down on purchased the poems he recited. When he had begun to make a name for himself as a poet, he went to Baghdad with the mawla al-Basit al-Mawla who became famous afterwards. At first, however, he was not able to make himself heard, and for a while he was obliged to retire to the modest 'Isha. From that place, however, his fame as a poet succeeded in reaching the ears of 'Aliph al-Mahdi, who summoned him back to Baghdad. But Abu 'L-Atahya was not to enjoy the princely favor for long. He was impatient enough to continue and to describe in his poems a female slave of al-Mahdi's, named 'Usha, and the caliph, highly incensed at this, cast him into prison. But he was soon set free and thereafter was up a steadily if not an intimate footing with al-Mahdi as well as with the latter's successor. His early developed, earnest and ascetic notion of life made him desert the frivolous court life, and after Harun al-Rashid's accession he even wanted to abandon entirely the vanity of poetry, a decision which the despot endeavored to shake by again putting him in prison. There are several accounts as to the year of his death; according to a tradition ascribed to his son al-Basim, he died in 220 (825), according to another in 211 (826) or 213 (828).

Abu 'L-Atahya's contemporaries have represented him as a free-thinker, because he had denied the resurrection of the dead. He endeavored to solve the eternal riddle of existence by asserting that God had created two mutually opposing substances (*al-dawar*), from which everything had been evolved and into which everything would resolve itself.

Abu 'L-Atahya's poems have only been incompletely preserved. They are distinguished by a clear range of ideas and simplicity of expression, be thoroughly despised the pomposity of the old desert-poetry, which, under changed conditions, had sunk to mere conventional elegance. He desired to write poetry comprehensible for the people, and the contemplative meaning of his poetry was the main point to his eyes; none of them consist of loosely connected sayings and admissions. The greater part of his works which have been preserved belong to the *Zuhdiyya* kind (i. e. religious poems). The main feature of them is the poet's frank pessimism; scepticism is warranted by the nullity of the things of this world. "The world," he says, "is a fading rotation of pain; everywhere purity is mingled with the colors of matter, and only he can hope to be satisfied, who carries contentment in his own heart." In spite of this melancholy view of life there is no question of effeminacy whispering in his philosophy; robust and determined, even if not glad and joyous, he leaves the burden of life simply because it must be so.

The second and smaller part of what has been handed down of his writings falls into six divisions: 1) Fables (only very fragmentary) mostly

in praise of the caliph al-Mahdi, al-Radi, Harun and al-Ma'mun; 2) occasional poems, amongst which are many pretty and witty verses; 3) satires; 4) tragic poems; 5) ~~some~~ pure poems; 6) epigrammatic maxims.

Abu 'L-Atahya is the first philosophical poet in Arabian literature; he stands alone — unfortunately — in the independence of the form he chose. The Society of Jews of Beyrout has furnished a good edition of his poems (*al-Asrar al-sha'ira*) 1871, Beirut, 1887).

Bibliography: Ibn Khallikan (ed. W. W. W. W.), II, 41; *As-Sayid*, II, 126—128; A. v. Koenig, *Culture des Orient* under d. Caliph, II, 372; Hirschmann, *Gen. d. arab. Liter.*, I, 78. (J. G. G. G.)

ABU 'L-AWAR 'ANNA, surnamed al-Sulami, of the powerful Sulaim tribe, whence the "relative" Sulami. His grandfather was a Christian and his father fought at Qadisiya for the Korabites. The son, who does not seem to have frequented the Prophet, went to Syria, probably with the column commanded by Yash b. Abi Sufyan. He played a conspicuous part at al-Yarmuk as divisional commander, separated from that time bound to the lot of the Umayyads, and in consequence drew upon himself the maledictions of 'AU, particularly after the part he took in the battle of Siffin. He helped 'Amr b. al-'As to conquer Egypt for Mu'awiya, and was in command of several naval expeditions. He proved himself as good a diplomatist as an administrator. At Hama he entered into negotiations with 'AU and drew up the preliminary protocol to the conference of Adlun; he was commissioned to take a census of the flocks in Palestine with a view to a new assessment of tribute. Mu'awiya also intended that he should replace, in Egypt, 'Amr b. al-'As, who showed too much independence, in undertaking in which he succeeded. He was governor of the Province of the Jordan. His manifold services earned him to be ranked by the Arab annalists amongst the principal lieutenants of Mu'awiya, forming his *al-sha'ir* or *al-sha'ir*. He disappeared from the public scene before the end of the reign of this caliph.

ABU 'AWN 'AMR AL-MATAR b. Yash al-Kusassani, a general in the service of the 'Abbasids. After the outbreak of the rebellion in Khurasan in the 250 Rabi'ul Awwal 129 (9th June 747) Abu 'Awn several times took part in the war against the Umayyads. At first he accompanied the 'Abbasid general Khatib b. Shabib; then he was sent by the latter to Shehrasr, where on the 20th Rabi'ul Awwal 131 (10th August 749), in conjunction with Malik b. Fa'iz, he defeated 'Uthman b. Safyan. While Abu 'Awn remained in the vicinity of Maw, the Umayyad caliph Marwan II marched on against him. Under the supreme command of 'Abd Allah b. 'Ali, Abu 'Awn took part in the battle by the Greater Zab (10th Rabi'ul Awwal 132 = 25th January 750), and in the pursuit of Marwan and in the capture of Damascus by 'Abd Allah b. 'Ali. When the latter returned

behind in Palestine, he sent Salih b. 'Ali together with Abd' Awn and a few others to continue the pursuit in Egypt, and it was there that the caliph, after a fresh defeat, was struck down and killed in the same year. Abd' Awn remained in Egypt until further orders as governor in 159 (775-76) but was appointed governor of Khirbat al-Mufida, but deposed in the following year.

ABD RAHMAN al-Hajjaj **U. DUBAI**, a Khawassite of the House Sa'ud in Dubai. In order to escape from the persecutions of the well-known al-Hajjaj, he fled to Medina, but was taken prisoner by the governor, 'Uthman b. Hafsa, and executed in a most cruel manner (13 = 773). He appears to have held a prominent position as a teacher, for a section of the Khawassite is named Bahammia after him, this section taking up an intermediate position between the harsh Asiriya and the more gentle Sufiya and Ibadites (Abdalis). It is true that the Bahammia admitted that the Muallims who did not share their views were unbelievers, but they considered it was permissible to live with them, to marry into them and to accept tribute from them. For the rest their views were in agreement so that they fell into several subdivisions.

ABU BAKRA called himself a freedman of the Prophet's after he had been converted to Islam. He lived at first as a slave in Tā'if. When Ashqarunna destroyed this town in the year 1630 and freed all the slaves of the Thaqalites to desert to him, he obeyed this summons and thus obtained his freedom. As he had let himself down the wells by means of a rough-gutter (*shakra*) he therefore as a Muslimein bore the surname of Abu Bakra. His real name was Nufal b. al-Jadid (*Maaruf*); but latter known than his supposed father in his mother Hamadya, a Persian slave, who was brought by chance to Tā'if, and bore three sons, of whom Ziyad b. Abih (*q. v.*) is the best known. Abu Bakra subsequently lived in Bagdad and was engaged by 'Omair when his accusation against al-Maghira b. Abi Jafar (*q. v.*) was not confirmed by his mother Ziyad. During the fight between 'Ali and 'Aisha he kept in the background. He died in 31 or 32 (671-672) and left six or seven children. Amongst his descendants the 3rd Bakra b. Kahlis (comp. about him Ibn Khallikan, ed. Whiston, N^o. 1152, who also happened to bear the Kunya of Abu Bakra, and who was born in 182 (798) and died in 290 (884)), is the best known.

(Def. T1), (Inst. 1.)

ABU BARAKISH, a Calcutta bird, similar to a sparrow, or, according to Harms, similar to a thrush, and living in the *Agave* bushes. It is

generally credited with the peculiarity of showing the color of its leathers continuously. The predominating color is said to be dark grey (between white and black), according to the Khasiawah cited in the *Fauna Asiatica*, the ends of the leathers being ad-grey, the outside red and the bottom part black, so that the leathers assume different colors according to the kind rather than the sex. Chamelaon (*Ch. fulvipes*) the new *Asiatika* also become proverbial for inconstant, changeable people.

ABU AL-BASHAR (A.), a servant of Adam.
[See ADAM.]

see ABU. **ABU BEKR** Abu Bakr, with the surname **Abi** variously interpreted by tradition, the first caliph **B** is not related why he was given the surname of Abu Bekr (i. e. father of the camel's foal^s), which his enemies mockingly twisted into Abu Fahl (father of the wretched young of a camel^s). His father 'Umayy, also called Abi Kahlifa, and his mother Ummul-Khair Salma bint Sabhr both belonged to the Meccan family of Khatil b. 'Adi b. Taim b. Murra. According to the current account, Abu Bekr was three years younger than Muhammad. He lived as a well-to-do merchant in Mecca and is said, according to a but little trustworthy account (the *Maqatib*, Feida, II, 223), to have been on friendly terms with Muhammad before the latter was called to be a prophet. He belongs to Muhammad's oldest supporters, even though it remains doubtful whether he was the **first** male believer, as many maintain. He soon took an important position in the newly formed community, not only on account of his close friendship with the Prophet, but also by virtue of his own personal qualities, which make him one of the most attractive figures of ancient Islam. Especially characteristic of him was the unshakable, blind faith which he considered Muhammad as the chosen instrument of divine revelation, and which made him accept his every word as absolute truth. On occasions when others doubted, e. g. after the Prophet's account of his journey at night, or when they did **not** know what to make of his conduct, as on the occasion of the *Udabiyya* covenant, he remained unshaken. His **was** a gentle character. During the recital of the Kor'an he shed tears, a thing that made a great impression on many, but especially on the women; and, as his daughter related, he wept with joy at the news that he might accompany Muhammad in his emigration. At the same time he was of an open, right-thinking **person** and was several times able to restrain Muhammad from rash actions by his sensible advice. He was very susceptible of the purely moral thoughts in the Prophet's preaching, proving this by purchasing the freedom of several slaves and by similar other actions. If, after the impressive conduct of the Jew al-Zuhri, he really uttered the fabled words, which sound so harsh to our ears, and which tradition puts in his mouth ("He will meet his beloved one again in Hell"), it **was** explained by his complete absorption in the religious ideas with which **he** found inspired him. No sacrifice **was** too great to his eyes for the sake of the new faith. That it came about that of his considerable fortune, estimated at 40000 dirhem, **he** brought to Medina the small

case of some dilemma. Amidst the general danger he faithfully stood by his friends and master and was among the few who during the worst period did not flee to Abyssinia. But once, during the expulsion of the Maghazis from the Meccan community, he is said to have lost his courage. He therefore quitted Mecca, but soon returned under the protection of an influential Meccan, and from that time forward remained in the city although his presence left him in the lurch. His life attained its apogee when Muhammad chose him to accompany him on the flight from Mecca, and his self-sacrificing friendship was rewarded by his name being immortalized in the Qur'an as "the friend of the two". His family also went to Mecca with the exception of his son Abd al-Rahman who, strangely enough, and maintained a neutrality and fought at Bakr against the faithful, till he too finally was converted and migrated to Medina. In this new home Abd Bakr, who went on supporting the "cause" with the rest of his fortune, set up a modest household in the suburb of al-Baqi. Through his daughter 'A'isha, whom Muhammad had married shortly after the emigration and greatly loved, the tie between the two men was strengthened still more, and would probably not have been broken by the scandal which this fashionable young woman brought about, even if it had not taken such a fortunate turn through resolution. Abd Bakr was nearly always with the Prophet and accompanied him on all his campaigns, during which he, though little unlike himself, never stirred from his side even in the most perilous moments. On the other hand he was very infirm and in exceptional cases employed as a leader of military enterprises, e. g. in the Tabuk campaign he was surrounded with a wound. But the Prophet sent him to the year of (591) to Mecca to conduct the pilgrimage, and it is quite possible that it was he who not only maintained, who on this occasion read out the act of separation to the heathens. When Muhammad fell ill, Abd Bakr had to read the prayers in the mosque to the Muslims in his stead. This distinction made it possible for Umar and his friends, after Muhammad's death on the 5th June 632, to propose Abd Bakr as the head of the community, thus preserving the threatened split. But also from other points of view this choice was the happiest that could have been made. In no way did Abd Bakr represent new ideas or principles, but clung to Muhammad's way of thinking and held fast to everything his friend had ordered or hinted at. In this manner he was able, in spite of all mutual antipathy, to hold together the talented men who had gathered round Muhammad, and make use of them for the good of the community. Through his absolute lack of originality and his simple but sturdy character he became a reassurance of Muhammad, conducted the young religious community through the most difficult and dangerous times, and left it at his death in such a firm position that it could support the rule of the powerful and talented Umar. He gave a proof of his scrupulous obedience to Muhammad's orders first after the latter's death, by sending, in spite of the threatening state of affairs in Arabia, the young Umayyad with an army on a quite unimportant expedition to the country ~~west~~ of the Jordan. Meanwhile the tribes in the country round about began to stir up against the political centralization

in Medina. Abd Bakr indignantly rejected the demand for the renunciation of the taxes, considering it as a betrayal of the Prophet's instructions. When Umar's army had returned home, he marched out against Abu 'Ubayda and was lucky enough to choose the talented general Khalid b. al-Walid as commander of his forces. This latter defeated the Arab and Yaman at al-Basra, subjugated the Tammim and finally, after the bloody battle at Ajlun in the Garden of Death, brought the Banu Hanzala under the power of Islam, a thing that even Muhammad had not succeeded in doing. His fortune in war made it possible for other generals to improve the results in Najran and Ushn, and finally also Yaman and Hadramawt were again brought under the dominion of Medina by 'Uthman and al-Muhallab. Following his master's example, Abd Bakr treated the vanquished mercifully and probably thus helped to re-establish peace in the country; besides, as for instance in some women who had sung parodies on Muhammad's death, or the burning of al-Fajja, but seldom occurred. After the subjugation of Arabia, which was complete in less than a year, it was the lot of the conservative and unwarlike Abd Bakr to set about an enterprise which was in a short time to alter completely the political situation of the whole world; he sent Khalid and other tried generals on a campaign of conquest against Persia and Byzantium. It can easily be assumed that the energetic men, who were behind him, originated this idea in order, by means of a campaign made in common and promising rich booty, to put an end to home troubles and to teach the Arabs in a practical manner the unity of Islam. Abd Bakr was able to consent to this campaign with a calm conscience, since the repeated expeditions which Muhammad sent against the Byzantine districts in the latter part of his life could be interpreted as an indication of the great universal task of the new religion. He had the satisfaction of seeing during his short rule the first great victories of the Arabian army on both theatres of war: in Persia the conquest of Ispahan in May or June 633, and in Palestine the battle of Ajlun in July 634. Shortly after this latter success he died on the 23rd Rabi' al-Thani 11 (23d August 634) and was buried beside Muhammad. In order to mark him out as a martyr, a tradition makes him die of poisoned food, of which he is said to have partaken a year previously, but a more prosaic tradition, according to which he fell ill through bathing on a cold day, does not sound very credible either, as it does not give the reason in which he died. His short reign, which was mostly taken up by wars, did not bring about any epoch-making changes in ordinary life. It is important to note that he had the first compilation of the Koran made, although he hesitated to carry out such an undertaking without the Prophet's express authorization. Moreover his share in it was probably insignificant, as according to another account 'Umar had the first copy drawn up as to the division of the quatrains of war, he kept to the scheme of the Koran that true believers had equal rights, a principle which Umar later abandoned. As caliph he lived as simply as before; at first in his house in al-Baqi and subsequently, when the distance became inconvenient, in the town itself. Tradition relates many anecdotes of his modesty and his

in which he set forth his views, painted out the weaknesses of his work and showed the system of his criticism. The work at once met with great success, and still in the fourth century anthologists admired it "The wonder of the world" and "The prop of Islam"; but subsequently, although it was definitely considered as one of the "great books" which composed the canonical "corpus traditionis" of Islam, the *Kitaḥ al-Kawā'id* did not possess nearly as much authority and veneration as was enjoyed by the *Saḥīḥ* of Muḥammad and the *Saḥīḥ* of Shāfiʿī. The work was published at different times in the East (Cairo, 1280; 1370 on the margin of Zarkān's commentary in the *Maṣābiḥ* of Ḥafṣ; Lucerne, 1885; Beirut, 1890 with glosses). A small collection of unusual traditions is also due to Abū Dawūd; the *Kitaḥ al-awā'id* was also published (Cairo, 1370).

ABU DHARR AL-DHIFLĪ, a companion of Muḥammad highly honored on account of his piety. His real name was Dhundūh b. Ḥimāla al-Madā'īnī, but there are several different accounts of this as well as of his descent. He was considered, with 'Abū 'Alīyah b. Naṣr, as one of the *ṣaḥāb* (companions) of Islam, and was distinguished for his beautiful pronunciation of Arabic. It is, however, principally on account of his ecclesiastical tendencies that he became in the *ḥadīth* traditions of the *Saḥīḥ* and *Shūḥūḥ*, who relate many stories about him, a model of a pious Muslem. He died in al-Rabāḥiyya in the neighborhood of Medina, whither he had retired, in the year 33 or 34 (655).

(M. Th. Houtsma.)

ABU DHU'AYB AL-HUPHĀLĪ, real name *Yahyā* b. al-Kaṭīb al-Muḥājir, an Arabian poet of the tribe of Huḥayl, belonging to the so-called *Muḥajir* and therefore freed to see Islam. He takes a high place among the poets of his tribe and of his time. His name is due to his found in the position of the *Muḥajir* poems which have been preserved, but the *ḥikāyah* of his poems has been handed down in manuscripts, which have unfortunately not yet been published, namely, in the *Ḥadīth* MS. mentioned by Brockelmann, *Gesch. d. arab. Litter.*, I. 42, and in the Constantinople MS. (Public Library), No. 5598, of which the Imperial Library in Vienna possesses a copy made by N. Khudānasāda, under Supplement, No. 4104. — The year of Abū Dhū'ayb's birth is not known, but it is certain that he went over to Islam late in life. In the year 15 (637) he went to Africa under the command of 'Abū 'Alīyah b. Saḥīb al-Maḥājir, and took part in the conquest of the country. Being sent by his general to accompany the youthful 'Abū 'Alīyah al-Faḥṣī to Caliph 'Umayyad, he died during the journey, probably in the year 28 (649) while still in Egypt.

(A. Houtsma.)

ABU DJAFAR *Uṭayy* *Ḥawāṣ*, i. e. *ʿAbd al-Hamīd* [q. v.], was the representative (*Natīq*) of the *Ḥayda* *Ḥawāṣ* al-Bawla in 'Omda, but later on recognized the supremacy of Banū al-Bawla. The former therefore sent troops against him and took him prisoner in 374 (984). After the death of Shāfiʿī al-Bawla in 379 (989) he was placed over the province of Kermān by Banū al-Bawla. After the latter had been killed in 388 (998), Abū Djafar retained the command over the *Ḥayda* *Ḥawāṣ* there. Afterwards he entered the service of the *Ḥayda* *Ḥawāṣ* al-Bawla, but his great age forced him to retire shortly after. He died in 400 (1009), at the age of 205. His son Ḥamīd was also a general of the *Ḥayda*. [Compare also *Uṭayy* *Ḥawāṣ*.]

Bibliography: Ibn al-Kaṭīb (ed. Houtsma), I. 28 et seq.

ABU DJAHL, properly Abū 'Alīyah 'Aḥmad b. Muḥammad al-Muḥājir, who named the *al-Faḥṣiyya* after his mother, an illustrious *Ḥawāṣ* family of *Maḥḥad*. According to one anecdote he was of about the same age as the Prophet. *Ḥadīth* traditions concerning him possess but little historical value, in *ḥadīth* case it is evident from them that he was one of Muḥammad's most ardent opponents among the *ḥawāṣ* of Mecca. He eagerly took part in all conferences against the Prophet. He is said to have antagonized the weaker of the *Muḥajir* and even to have killed a woman; he persecuted the Prophet himself with his abuse and was only prevented by miraculous visions from doing him bodily harm. Some commentators claimed this, though wrongly, with *Kor'ān*, xvi. 6 et seq.; whereas *Kor'ān*, xvi. 61 and xlv. 43 are said to have been called forth by his mockery at Muḥammad's description of Hell. It was very much against his wish that the prophetism against the *Ḥawāṣ* was again designated. In the conference of the *Ḥawāṣ* shortly before Muḥammad's emigration he advised them to have him killed by men from every family in Mecca. When hostilities broke out between Muḥammad and the *Muḥajir* he met a host sent out under Ḥamīd's command, but it did not come to a battle. It is nevertheless put down to his pugnacity that a fight did take place at Badr. On this occasion 'Uṭayy b. al-Rabāḥiyya gave him the nickname of "the man with the perished buttock". Through his prayer before the battle: "Let him perish who really cuts the tie of blood-relationship", he, according to tradition, called down his own destruction. In the battle he was wounded and killed by Muḥammad b. 'Aḥmad al-Baḥṣī and 'Abū 'Alīyah b. 'Aḥmad. When Muḥammad saw his corpse, he is said to have called him "the *Ḥawāṣ* of the people". His picture, naturally drawn very unsympathetically by tradition, is completed by the mourning songs of the *Muḥajir*, in which he is called "the *Muḥajir* chief, the noble-minded man, never vulgar nor greedy".

(F. Buhl.)

ABU DULAF. (See *AL-BAḤR* & others.)
 (This *Abū* MĪKĀL B. MUḤAMMAD.)

ABU DULĀMA ʿABD B. AL-ḤAWW, a black slave owner of the Banī Asad in Kufa. He is already mentioned in the history of the last Umayyad caliph, but appears as a poet only under the Abbāsides and plays the part of a court jester in the palace of al-Saffāh and especially in those of al-Ma'mūn and al-Muḥdī. His poem on the death of Abū Muḥsin (137 = 754-755) is said to have been the first of his works which made his name. Examples of his poetry show him to us as a clever, witty versifier, who readily seeks upon low expressions and displays all sorts of sikh with cynical joy; but he does not despise the most basely fulsome praise when the form of mendacious promises some reward. He laughs at the praise of the crowd and his epigrammatic tongue is feared by all. It is true he does not spare himself and still less his own relatives; he would even occasionally revenge well for the coarse jokes which the magnates played on him when one of his patrons was pleased to ridicule an other through him. He also enjoyed the jester's liberty of being above the Islamic laws and could also make them the butt of his insolent mockery. He has given proverbial fame to his rule that possessed all possible defects and to which he dedicated a witty *Kayida* (statement) as to the date of his death was; according to some he died in 160 (776-777) according to others in 170 (786-787).

Siḥīr ʿaḥḥ: Ibn Kullāb, *Kitāb al-Ḥār* (ed. de Goeje), pp. 487 ff. 119. *Al-Bihar*, II, 120-121, 125; *Al-Bihar*, p. 123; Ibn Khallikān (ed. (J. HROVATSKY.)

ABU EYŪB AL-ANḤALĪ (See *ABU EYŪB* *al-Anḥalī*.)

ABU 'L-FADL. (See *AL-ʿAMM* and others.)

ABU 'L-FADL (ʿABD) 'AL-ʿAMM (Shahāh), the secretary and prime-minister of the emperor Akbar, was born at Agra on the 16th Muharram 958 (14th January 1551). He was the second son of Shaikh Shuhārak Nāgaurī (d. 1593), the author of the commentary on the *Korān*, and the younger brother of Shaikh Faḥl (p. 7), the poet. On his father's side, he was of an Arabian family which had emigrated to Hindustan and had settled first in Sind and later in Nagor, in Gudhpur (Gudhpur). Hence his father is generally spoken of as Nāgaurī though he had settled and married in Agra some years before Abū 'L-Fadl's birth. On his mother's side, Abū 'L-Fadl was connected with Mir Kāfī 'al-Mīn Shāhī of Idar near Shikar, who was regarded as a saint and consulted both by the emperor Humāyūn and his adversary and conqueror, Sher Shāh. Abū 'L-Fadl was a student from childhood and early interested himself in religious questions. In his account of his mental development, given in the third volume of *Ḥikāyat* (Newal Kishore lithographed edition, p. 366), he says he began his studies at the age of five and that when he was fifteen, he was versed in all current sciences. For ten years later, he taught pupils and discussed religious matters with himself and others. But he found

no inner peace and often was tempted to renounce the world and become an ascetic. In the *Ḥikāyat* were in this state of himself: "Though during the day, my will was made bright by teaching science, yet at night I would take the path of the fields and approach the enthusiasts of the Way of Search and employ imagination from those treasure-potting prayers. . . . But my helpful remedy touched the troubled spot of my soul. Whilst my heart was drawn to the Sages of Calcutta, whilst it inclined to the ascetics of Lohian (the Doves); whilst a desire for discomfiting with the Lamas of Tibet broke my peace and whilst a sympathy with the priests of Portugal tugged my skirt. Sometimes a conference with the *shaykhs* of Persia, sometimes a knowledge of the secrets of the *Zawāwīyāt* rubbed me of my repose, for my soul was alienated both from the rationalists and the enthusiasts of mine own land."

From the struggle between jarring thoughts and from the antagonism between the contemplative and the active life, he was relieved, according to his own account, by the introduction to Akbar, which he regarded as his second birth. Before this, however, he had to undergo, in common with his father and brother, considerable persecution at the hands of the *ḥanafīs* and had to flee to Agra and remain in hiding for a time.

Abū 'L-Fadl was presented to Akbar in the nineteenth year of his reign (1574), just before the latter set out on an expedition to Bihar. Faḥl, who had been restored to favor, was instrumental in introducing his brother to the emperor. At this time, Akbar held orthodox opinions and was zealous for the Muhammadan Faith; Abū 'L-Fadl also was a believer at least in appearance. He therefore presented, as a scholar's gift, a commentary on the famous *Tamara-ṭī* of the *Korān*. Next year, when Akbar returned victorious to Agra, he received, as appropriate to the occasion, the *ḥanafī* opinion of the Chapter of Victory.

Faḥl and Abū 'L-Fadl were gained high favor with the emperor and rendered him the services of helping him in his discussions with the *ḥanafīs*. Indeed it was they and in particular the latter, who are accused of destroying Akbar's faith in Muhammadanism. In the words of Bada'uni (Bada'uni) Abū 'L-Fadl was the man who was the world in *ḥanafī*. The brothers, however, did not rise rapidly in rank. Faḥl never held a higher command than that of Four Hundred and it was not until 1585 and after eleven years of service, that Abū 'L-Fadl became a Commander of One Thousand. In the following year, he was associated with the veteran Shāh 'Alī Mahrān in the joint-government of *Ḥāt*; in 1592 his command was doubled; in 1593 he was promoted to the *mansab* of Four Thousand. A year earlier he had been sent on service to the Deccan, on the instigation of Prince Salīm and others, who were jealous of his influence over the emperor. They hoped he would fall in this, his first independent military command, they were mistaken; he distinguished himself greatly and amongst other exploits, captured the strong fort of Azingari. He was much assisted in his campaign by his son, Shaikh 'Alī al-Rahmān Afḡal Khān who, in the language of the author of the *Ḥikāyat al-Ma'mūn*, was the arrow of the front of his quiver (*ḥarṭ* *ḥarṭ* *ḥarṭ* *ḥarṭ*). His success still more emboldened Prince Salīm who, when he had heard that Abū 'L-Fadl was returning

according to Goldstuecker, *Die Schule der Fakhriyyen*, pp. 158 et seq. — should mean that even in grammatical questions Abu Hayyan endeavored to maintain the exclusive authority of the old masters, particularly that of Sibawayh. Later on he followed the method of the *Shakh* — school. His writings comprise not only grammar but also Arabic commentaries and the *Ushul* books, wrote poetry and was the author of a History of Spain in 60 volumes, which has unfortunately not been preserved. Indeed of the 95 books and treatises which he wrote only about 10 have been handed down to us. He was not only a perfect master of Arabic but also wrote a Persian and a Turkish grammar. This latter — under the title of *al-furush al-hind al-ahwal* (Constantinople, 1309; comp. *Imen. Ar. lib. orient. v. 226—2351* *Index de N° 1700* *Index intern. des Orientalistes*, III 44 et seq.) — is a considerable work. His treatise on the Egyptian language was never finished. Abu Hayyan died in Cairo in 735 (1334).

(M. III, Roubaix.)

ABU HAMMAM MUSA I o. Abi Sa'ïd QAYMAN o. VAQI'PURKHAAN, fourth king of the dynasty of the Banu Abi al-Wad (see 'ABUL-WALID'), who reigned at Tlemcen and over Central Maghrib; he succeeded his brother Abu Zayzu (d. April 1308) and was proclaimed king on the 21st Shawwal 707 (25th April 1308).

In his interior administration he rebuilt the ruins accumulated during the long siege of Tlemcen by the Marinides, which had lasted from Shafwan 698 to Shu'ban 700 (May 1299—May 1307); he had the ramparts of the town repaired and a moat dug all round the walls; he accumulated provisions in the stores of the capital. There also were without doubt in the part of the city mentioned by Ibn Khaldun under the name of al-Basmar, situated inside the rampart not far from Bab Kharshah (now the Fes Gate). *Al-Bas* I, it is said, filled the chests of the public treasury. Thus it may be seen that the chief preoccupation of his mind was to defend the capital from outside attack and to reinforce it in view of another siege by the Marinides.

As to his foreign policy he undertook numerous warlike expeditions and was backed up by ablest generals; he extended his authority over the northern tribes of Maghrib and of the Maghreb of the plain of the Chelil and of the mountains on its northern and southern borders; it seems that he established a very strong government over these tribes, which was able to keep them in order and submission. The victorious army of Abul I pushed towards the east even as far as Dougla and Constantine, in the supplies of the Maghrib of Tule. On the west he succeeded in keeping off the Marinides, who were always ready to attack Tlemcen and prevented them from passing Wagda (Wad).

Beyond a general secretary and his private secretary he had only two ministers: the first acted as chamberlain, and his powers must have been very extensive; the second was specially Minister of Finance.

Abu Hammam, thanks to his armies, pacified the country and burdened himself principally with the collection of the taxes for the purpose of satisfying the money necessity for the fortifying of Tlemcen and the maintenance of a powerful army. He does not seem to have been much taken up with increasing the well-being of his subjects, with ameliorating their material and intellectual conditions. He concerned himself with a purely military organization for the purpose of maintaining order in the country and of resisting the attacks of the Marinides.

He was very fond of his son Abu Isahim, he kept him ready at all times in the possible expectation of a sudden invasion, and he was sold by interested conditions and courtiers against the young prince. Abu Isahim, driven to extremities by his misfortune, aided on his friends and accompanied by a part of the army, fled into Morocco and on the 22nd of Shawwal 708 (22nd July 1308), and was proclaimed king in his place.

[In the Bibliography see *Abi al-Wad* and *Abi Isahim*.] (A. H. B.)

ABU HAMAM MUSA II o. Abi Sa'ïd QAYMAN o. VAQI'PURKHAAN, fifth king of the dynasty of the Banu Abi al-Wad (see 'ABUL-WALID'), who reigned at Tlemcen and over Central Maghrib; he succeeded his brother Abu Zayzu (d. April 1308) and was proclaimed king on the 21st Shawwal 707 (25th April 1308).

It was in Spain that the father of Abu Hammam was banished, with all the members of his family, by Abu Isahim I (q. v.). There doubtless he studied hard and acquired a taste for poetry, literature, art and ungodly games which he introduced in the court of Tlemcen.

Abu Hammam's father had given up the work of royalty to his two younger brothers for the purpose of retiring in Nedroma (Nedroma) where he lived a hermit. During the reign of his two sons, Abu Hammam had been brought up at the court of Tlemcen. At the time of the death of the Banu Abi al-Wad in the plain of Angad by the army of the Marinides Abi Isahim I (d. Shawwal 703 (June 1303)), the king Abu Sa'ïd perished and his brother Abu Isahim, accompanied by his nephew Abu Hammam, fled to the region of Tule. Abandoned by all their partisans, the two princes were arrested in the province of Dougla and the governor delivered them up to Abu Isahim. Abu Sa'ïd was put to death, as to Abu Hammam, the fact of his being a prince of royal blood and having been discovered, he was released and found a shelter at Tule on the Maghrib coast, where he was well received. Some time afterwards the friendly relations which existed between Abu Isahim and the Maghribis were destroyed, and the king of Tule gave his enthusiastic consent to the proposal of certain Arab chiefs of Dougla to put the young Abu Hammam at their head in order to come up to the aid of the Marinides in the Maghrib, and to attempt to reinstate this young 'Abd al-Wad prince on the throne of Tlemcen. The death of Abi Isahim at Fes, took place the arrival of Abu Hammam before the walls of Tlemcen and made the conquest of his capital easier for the latter. It was on the 10th Rabi' I 708 (9th Feb. 1309) that he entered the capital and was proclaimed king. Before the Marinides occupied Tlemcen for a short time and Abu

Hammam succeeded in getting back again a little later. In 722 (1322) the capital for the third time and the whole Al-Jahshid Kingdom fell into the hands of the king of Pers. who placed his own governor in each town, while the unfortunate Abu Hammam had to flee to the East and the desert.

The widow of Abu 'Ala al-'Azzam, having died in 724 (1324) the Mamluk army evacuated Hamman and the kingdom. Abu Hammam, having been immediately recalled, left his return and to his great surprise recovered the possession of his capital.

Having returned in such an extraordinary manner to the head of his kingdom Abu Hammam set himself to the pacification of his state. But hardly had he put down a revolt on one side when a rising against his authority took place elsewhere, and a pretender to the throne appeared somewhere. Abu Hammam gave abundant details about these events, in some of which he was besides directly implicated.

Besides these continual troubles Abu Hammam had to put up with many annoyances in his family, with his own children. His eldest son, Abu Tashfin, being presumptive to the throne, made him suffer every kind of vexation. As early as 740 (1338-1339) Abu Tashfin showed some sentiments with which he was animated with regard to his father by causing the assassination of Yaqub b. Khalid, the historian, the secretary and intimate friend of Abu Hammam (Kutub al-Din, Dec. 1338-Jan. 1339). Towards the end of 748 (Jan. 1347) this same son of the king had all of his brothers who were in Damascus strangled together with his father himself, and shut up the latter in a prison at Qum. Abu Hammam, however, succeeded in escaping and even in recovering his kingdom; but Abu Tashfin took refuge in the court of Pers and returned at the head of a Mamluk army to attack his father in his capital. Abu Hammam was killed in a battle against the Pers under his son's command on the 24 Rajab 750 (21 Nov. 1349).

Being of a highly cultivated mind, he sought for the society of the famous scholars and poets of his time; he was, further, benevolent and readily accessible to the humbler of his subjects which made him popular. If he lacked energy and courage in the field of battle he had as a compensation a very remarkable mind in capillaries. He could beguile his enemies and get himself cleverly out of difficulties; thus in spite of all his reverses of fortune he suffered he was able to make his way to power.

Abu Hammam wrote for the use of his son a treatise on political ethics, published at Teheran (1892) under the title of *Al-Faṣl al-ḥakīmī fī ḥikmat al-mulūk*, of which Mariano Campar has made a Spanish translation entitled *Al-coller de príncipes* (Barcelona, 1899, in the *Clasificación de estudios árabs*, 19).

The yearly festival of the birthday of the Prophet gave occasion, in Abu Hammam's time, for great lightings and luxury displays, the importance of which has been noted by the chroniclers. Long poems in praise of the Prophet and of the king of Hamman were sung in the royal halls in the presence of a crowd of guests, who were supplied with quantities of savory dishes. On this occasion too the great mechanical clock, which

embellished the palace of the king and of which al-Tamari has given a complete description, was made to play.

Abu Hammam wished to show the interest he bore towards intellectual works by having a new school built; he himself installed there the celebrated *ḥafiz* *Shams* Abu 'Ala al-'Azzam. This establishment, richly endowed, received the name of Madrasa Ya'qubiya from the name of the king's father, Abu Ya'qub, who was buried there.

The epitaph engraved on the marble of the tomb of Abu Hammam II has been published by Ormsland.

Bibliography: Abu Ḥammam, *ḥikmat al-mulūk* (Teheran, 1892), fol. 136 v. 17; al-Tamari (Majma', *Compendium* etc., pp. 141-142); Ormsland, *Travels in Persia and India* (London, 1893), p. 58 at top. [See also the Bibliography under 'HAMMAN, TAMAR, etc.']. (A. Mez.)

ABU HAMZA. (See *al-ḥamza* p. 17.)

ABU HANIFA. (See *al-ḥanifa* p. 17.)

ABU HANIFA, a Mamluk jurist, the founder of the Hanafite school which is named after him. He was probably born in the year 80 (699) and died in the year 150 (767) at the age of 70. His grandfather Zayn was brought to Kufa from Persia as a slave by the Muhammadan conquerors and received his freedom in that town, thus becoming the slave (*ḥawāṣ*) of the Arabian title of Tahir al-'Azzam, to which his liberator belonged. Hanifa, the father of *ḥanifa*, was born in the year of this title. He probably belonged to the 'Azzam party, for it is expressly stated (e.g. *ḥawāṣ*, vol. V, p. 109) that 'Alī blamed him and his descendants.

Abu Hanifa was a prominent scholar and devoted the whole of his long life to the study of the several sciences. His public lectures in Kufa gave him a name as a great scholar and his opinions had great weight with the people of that time. People backed daily to hear him and to question him on the strict and on the law. The Hanafite school named after him is one of the four orthodox *ḥanafite* (i. e. *ḥanifa*, *shafi'i*), which have maintained themselves to this day in Islam.

The opinion of many European writers that *ḥanifa* was a very new principle and created a very different system, in which he made the greatest contribution to the speculative method of deduction (the *ḥanifa*) is quite unfounded. It is true that he was open to the reproach made by his opponents that he attached little importance to tradition but rather independently followed his own judgment (*ra'y*). The scholars of the two holy cities, Mecca and Medina, asserted that he was unacquainted with tradition and gave free play to caprice. He should not be led astray by these statements, hostile as they are to Abu Hanifa. In fact there is in general no real difference of principle between the different *ḥanifa* schools in Islam.

Abu Hanifa appears to have confined himself during the whole of his life to imparting his teaching orally to his auditors among Arabian writers quote his views, and have thus formed the basis of the entire Hanafite legal literature from the very beginning of the Hanafite school up to the present day. It appears, however, that he himself never wrote anything. The titles of works of Abu Hanifa's *ḥanifa* are indeed mentioned, but

ABU HASHIM MUHAMMAD (435—484 = 1063—1094), a ghazw of Mecca. He finally obtained this dignity through the aid of the prince of Yemen, al-Mu'izz, who put with his troops a stop to the brutal struggles of the ghazis for the upper hand and formally installed Abu Hashim. Most of the ghazis who held supreme power at Mecca before Hashim (598 = 1200) were descendants of Abu Hashim's and were named after him or after his great-great-grandfather Hawashim (Hawashim).

During his long period of office, Abu Hashim exploited the pilgrims in every way possible, even by plundering them, and confiscated the rights of supremacy which he sold alternately to the caliph of Baghdad and the Fatimide caliph of Egypt. *Bibliothèque*: C. Snouck Hurgronje.

Mecca, I. 62—63. (C. Snouck Hurgronje.)

ABU HATIM (Said b. Muhammad) al-Sayidat (for al-Sajid), an Arabian philologist of Hama. His name is a pupil of al-Azhar. Abu al-Azhar and Abu Hatim al-Ma'mun b. al-Mu'izz, the traditions concerning Arabian philology, poetry and antiquities he propagated. He learned the great grammatical principles of Sibawayh from al-Akhbari, but was not able to make a name for himself in the science of grammar. The subjects in which he excelled are poetry and the knowledge of the old poets and their languages; he was also esteemed as a Koran scholar. Nevertheless his old list (see Flügel, *Die grammatischen Schriften des Araber*, p. 65, contains besides works on the above mentioned subjects also grammatical pamphlets. On the other hand on mention is made of his *Kitaab al-mu'annan* (On those who live long) and the *Kitaab al-wafayd* (Festivals) belonging to it. Amongst his pupils Ibn Duraid (d. 1037) and al-Mubarrad (q. v.) are the best known. The date of his death is given between 248 and 255 (862—869); probably the latter date (255) given by Ibn Duraid is the correct one. In his works there have been published a *Book of the past* (first reviewed by S. Cass in the *Archiv für Studien*, vol. I. 1873; comp. *Zeitschr. f. Deutsch. Morgenl. Gesch.*, xviii. 1893) by Basilius Legumina, in the *Art de la R. A. Américaine de l'Inde*, 1894, 4th ed., etc., etc. and the *Book of the Language* by L. Goldschmidt (Add. 1894). *Philologie*, III. Leyden, 1899).

(Continued.)

ABU HATIM VA'ZIR b. Muhammad al-Mutadhal (this is according to Abasidic authors; but according to other historians of Africa, his father was Lahlul or Lahlul b. Madyan b. Haww, of the great Haww tribe), Abasidic chief Arab historian represent him simply as a leader of insurgent Berbers. He, however, had played a more distinct important part, since after having ruled over Tripoli he was invited by the Abasids with the title of Imam of Defiance in 256 (773).

He gathered around him a considerable army, which was joined by contingents of Sofites, Abasids of Tabret, and other Berber groups, and besieged the town of Touna, the governor of Ifriqiya, who had left Kabawza, leaving Abu Hatim Ubaid al-Muhalabi in command of this place.

Omair, having succeeded in escaping from Touna, and being hunted to by the Berbers, shut himself up in Kabawza until reinforcements, which he had asked for from the caliph, should arrive.

Blocked by Abu Hatim's army, he withstood the attacks of the besiegers and endured the fearful famine which reigned in the place, until he learned that an Abasidic army was coming from the East, commanded by Yazid b. Hatim. When the caliph had appointed to succeed him, being in despair he made a daring sortie in 257 (774) in which he lost his life. Abu Hatim, after allowing the enemy to capture with the honors of war, went to meet the army commanded by Yazid. It conquered Berber troops from Khartoum, Baida, Kufa and Syria, the remains of the garrison soldiers who had been driven out of Ifriqiya and were taken to the borders of Howara Berbers.

In an encounter, which, according to the probably false information of the Abasidic chroniclers, took place at Mughmeda, Abu Hatim defeated the van-guard of the Abasid army by Salim b. Sawd al-Tamimi; but in a great battle, which, according to the Abasidic chroniclers, was fought in the west of Ghazala, the Abasids were completely defeated. Abu Hatim perished with 30000 Berbers. This disaster took place on the 27th Rabi' I. 257 (27th March 774).

This was the last of the 375 battles that the Berbers had fought against the caliph's army since their revolt against 'Omair b. Hashim (comp. the very complete bibliographical information given on this subject by R. Basset in *Les révoltes des Ifriqiens*, Paris, 1899, pp. 29 et seq.). (A. DE MOTTENRECHT.)

ABU HAWL (Haw), i. e. "Father of Terror", the Arabic designation for the sphinx of Uzna (Ghaz). Certain authors call it simply al-Sphinx "the idol", but its proper name was already mentioned in the Fatimide epoch. At that time it was also known under the Coptic name *Beliti* (Beliti), or, according to Kufi in *Maqamat*, *Beliti* (Beliti). Abu Haul is probably an Arabic popular etymology deriving from the Coptic name; the initial *B* contains probably the Coptic particle, which in Arabic is often transformed into *H*. Ancient tradition understands under Abu Haul only the head of the sphinx, as his limbed body was buried in sand in the Middle Ages, and only in 1817 was laid bare. Modern Arabian authors use the word designating sphinx simply, and not only for the one near the pyramids.

The Arabs, who were not acquainted with the ancient Egyptian culture, considered with superstition and the majestic head projecting from the sand of the desert. It was considered as a talisman which hindered the progress of the sand of the desert into the Nile valley, a magic power ascribed by others to the pyramids. A colossal statue in the shape of a woman — according to its description it must be like with the child form, — placed on the other shore of the Nile, in Fustat, passed as the beloved wife of Abu Haul. The former turned its face to the water just as Abu Haul to the desert, and was considered as a talisman against the inundation of Fustat by the high water. In 712 (1311—1312) it fell into the hands of treasure-seekers, and its stones were built into a mosque. — Another tradition considers Abu Haul as the image of the legendary Uchmim, to whom the Sabeans, it is said, brought offerings of white hares and frankincense.

Arabic reports contribute very little to the history of this monument. According to al-Muqaddasi, as early as 373 (985) the face, it seems, was

the names of the most respected members of the oldest Islamic community. Legend justifies the air of infallible memory, with which he imparted his numerous traditions, by lavishing the tale that the Prophet had with his own hands wrapped him in a cloth spread out in front of them during their conversation and that by this means he ensured the faithful remembrance of what he had heard — a fabulous trait which, as also to be met with as a symbol of intimate friendship. On account of his great renown as an interpreter of the sayings and deeds of the Prophet 'Umar was able to appoint him *mufti* at Baḥra. After his death, he received the calliph's offer to restore him to the office, and preferred to remain for a month of this in Medina as a private citizen. It is very important that Marwān, who treated him in many other ways, appointed him as his lieutenant in the government of Medina. Abū Hurayra died in the year 57 or 58 (676–678) at the age of 78.

The numerous temptations (*waswas*) of Abū Hurayra, which were so numerous according to Ibn Kāṭib, ed. Wüstenf. p. 1424, in which he is mentioned in the way of his Hadith communications, in which he developed the most unimportant things in pathetic language. The inextinguishable work of information which he always had to hand (the *ḥadīth* Hurayra *ḥadīth* takes up no less than 223 pages in the *Mustadrak* of Ibn Ḥabīb, II. 228–541), appears to have raised suspicion of their trustworthiness in the minds of his immediate auditors, nor did they hesitate to give answers to their suspicious. In *ḥadīth* form (e.g., also *ḥadīth*, *ḥadīth* al-*ḥadīth*, No. 111) he repeated times to defend himself against the charge of idle talk. He had given on criticism every occasion in the printed and scriptal *ḥadīth* collections. Abū Hurayra "extreme of plain dealing." At the same time we must take into account the fact that most of the sayings of which tradition makes him the originator were probably found on him at a later date.

Bibliography: Muslim, *ḥadīth*, v. 200 (Bukhārī and Tirmidhī have no special paragraphs on the *ḥadīth* of Abū Hurayra); Ibn al-*ḥadīth*, *ḥadīth* al-*ḥadīth*, v. 325; Sprenger, *Das Leben und die Lehre des Muḥammad*, II. pp. 122–123; Goldziher, *Abū Hurayra*, *ḥadīth*, I. 405; Idem, in the *Zeitschr. f. Deutsch. Islamstud.*, I. 187; Id. *Abū Hurayra*, *ḥadīth*, p. 332.

ABŪ HUSAYN (name Abū Ḥusayn), name of a Kabbala family. To this belonged the Fatimide governors, who since 336 (948) ruled over Sicily (q. v.).

ABŪ ISHĀK. (See *Abū Ḥusayn* and *Abū Ḥusayn*.)

ABŪ KĀLAMŪN, also *Abū Kalamūn*, the usual designation in Persian but more rare in Arabic for the alchemist. Originally Abū Kalamūn designated the *ḥadīth* (Greek *ḥadīth*), of three threads (see *ḥadīth* *ḥadīth* *ḥadīth*) *ḥadīth* with a precious golden glittering were prepared. The philologists (see *ḥadīth*, *ḥadīth*) know Abū Kalamūn almost only as a kind of cloth of variegated colors through late connection by the Byzantines. The original signification of the name was therefore forgotten, was connected it with Basmā Kalamūn were names, and Kalamūn (see Wüstenf. II. 306), who was acquainted with the production and use of the *ḥadīth* on

the Spanish coast, knows Abū Kalamūn only as a cloth woven after the colors of the *ḥadīth* (q. v.). *Bibliography*: *ḥadīth* (ed. de Guech, p. 2401, and in this: Jacob, *ḥadīth* in *ḥadīth*, *ḥadīth*, *ḥadīth*, p. 12; Karami (ed. Wüstenf.) I. 106; *ḥadīth* (ed. de Guech, I. 42) *ḥadīth*, *ḥadīth*, I. 93.

ABŪ KALB, father of the dog, Arabic designation for the *ḥadīth* dog, on which the lion was regarded as a dog.

ABŪ KĀLIDJĀR al-Murādī u. *ḥadīth* al-Dawla, a *ḥadīth*, had been appointed by his father as governor of al-Aḥwāz in 312 (1021). On the death of the latter (415 = 1024) he was called to *ḥadīth* to succeed him, but he was forestalled by his paternal uncle Abū l-Fawaris al-Dawla, governor of Kirmān, with the help of the Turkish guard, which protected him. Abū Kālidjār gathered some troops, who defeated his uncle's army and he entered *ḥadīth*, but he could not hold his own there because of the hostility and discontent of the *ḥadīth* garrison. The peace which resulted only left him *ḥadīth*, a fresh victory gave him *ḥadīth* (417 = 1026), although he was defeated by the inhabitants of the capital. The tribe of the *ḥadīth*, who had pillaged *ḥadīth*, acknowledged his authority, on the contrary the inhabitants of the marches of Lower Dabūyūn (al-Baḥrā) revolted under the command of Abū 'Abd Allāh al-Murādī u. *ḥadīth* al-Shawāl, old leader, on account of the exactions to which they had to submit (418 = 1027). The same year he attacked his uncle Abū l-Fawaris to take Kirmān from him, but could not and *ḥadīth* stopped the progress of his army and *ḥadīth* was concluded on the terms of the partition of *ḥadīth* and Kirmān between the two camps. He took as his minister al-*ḥadīth* al-Baḥrā, son of al-Murādī u. *ḥadīth*, taking advantage of the struggles between the Turkish and *ḥadīth* troops, he took possession of Bagra (419 = 1028) of Kirmān, without striving a blow, at the request of the inhabitants, after the death of Abū l-Fawaris, and of *ḥadīth* (420 = 1029), which he could not keep. He was al-Aḥwāz pillaged and the women of his family taken as prisoners to Bagdad by *ḥadīth* al-Dawla, he attacked him and was routed after three days' fighting; the situation was retrieved with *ḥadīth* money of his minister al-*ḥadīth*, 421 (1030); he joined battle with *ḥadīth* al-Dawla at al-Maḥḥar, the capital of *ḥadīth* was defeated and lost *ḥadīth* place, which was recovered shortly afterwards on the arrival of reinforcements; he lost *ḥadīth*, than *ḥadīth* was taken by *ḥadīth* to 123 (1032) he put to death the *ḥadīth* *ḥadīth*, who had left him only a nominal power, in 428 (1036–1037), *ḥadīth* *ḥadīth* tried to get him recognized as master of Bagdad, but without success. He made peace with his uncle *ḥadīth*, who gave his daughter in marriage to Abū Manṣūr, son of Abū Kālidjār. *ḥadīth* *ḥadīth* 431 = 1039–1040, tried in vain to drive *ḥadīth*, sent troops by sea to reduce *ḥadīth* this in result 433 = 1041–1042 and delivered *ḥadīth* in Kirmān, which was besieged by the *ḥadīth* of Toghrul-beg the Selḫūids (434 = 1043–1043).

On the death of *ḥadīth* al-Dawla (6th *ḥadīth* 435 = 9th March 1044) he succeeded him at Bagdad on promising benefits to the Turkish troops, and was enthroned the following year with the title

Hahsh and Samarqand were frequently under attack. Abu 'l-Khair appeared with greater forces in 355 (1451-1452) as an ally of the prince Abu Sa'ïd against the then sovereign of Samarqand 'Abd al-Lah with his aid 'Abd al-Lah was besieged and killed and Abu Sa'ïd was installed as sultan-rudd of Samarqand; Khat'a Saljuq Begum, daughter of Ilghar-Beg, was given in marriage to Abu 'l-Khair. A second attempt to interfere with the dispute between the Timurids came and less happily, Prince Muhammad Ulugh, favored by Abu 'l-Khair against Abu Sa'ïd was forced in 363 (1458-1459) after some successes to raise the siege of Samarqand at the approach of his enemy, to quell the country ravaged by Abu 'l-Khair's auxiliary troops (under Bork-Saljuq) and in 364 (1463-1464) — as it seems not having any assistance from Abu 'l-Khair — to return to his adversary. Shortly before, probably about 361 (1456-1457), 'Abd al-Khair's grandson, Muhammad, born in 358 = 1454, would not have been then three years old; Abu 'l-Khair's power received a hard blow from the Kalmucks beaten in the open field, to deal to him to Sighnu and he then ravaged the whole country up to the Sir, about 370 (1465-1466) it is said that there took place among the Orkays that split, through which the poorer inhabitants of the steppe, called al-Kazak, separated from the other portion of the nation. The year of the rat (1466) corresponds just as a parallel with 374 = 1469-1470 is given as the year of Abu 'l-Khair's death; the power founded by him was after a short interruption set up again by his grandson Muhammad (Shahrokh), and developed into such a magnitude that was never known of.

Bibliography: Abu 'l-Khair's biography was written towards 380 (1473-1474) by Muḥammad al-Khatib (Tahiri) *Abu 'l-Khair Khair*, the autograph in Moscow, *Hist. of the Mongols*, II 687, prove correct and, as far as concerns the MS. of the British Museum, but not the work itself. comp. Kien, *Cat. of Pers. MSS.* I. 203; the St. Petersburg MS., among them being also that of the University Library at St. Petersburg, have also the beginning of the biography. Muḥammad was besides able to utilize the oral narratives of Abu 'l-Khair's son Sayan al-Khair (d. 381 = 1525), who seems to have drawn his information from written sources, as for example the *Maṣṣad* of 'Abd al-Rasid al-Samarkandi [q. v.]. Information about Abu 'l-Khair is also to be found in the historical works on his grandson Shahrokh and his successors, especially in the *Tarikh-i-Ahras* (comp. Kien, *Cat. of Turkish MSS.* pp. 276 ff. esp.) and the writings dependent on it. (W. Barthold.)

ABU 'L-KHATIB, a great work of Egypt (called after a freedman of Caliph al-Mansur), the most important of the annals, which in the Middle Ages, flowing from the west, fell into the main branch of the Uygur, the *Khilla al-Arabi* of the Arabian authors and the present *Shah al-Arabi*. Its last still exists. It is on the shore of this epoch that the family rebels built in the 9th century the large fortress al-Buhārā.

Bibliography: G. de Soppa, *The Annals of the Eastern Caliphate* (Cambridge, 1905), pp. 47-48, Greek, Arabic and other text. (Soppa.)

ABU 'L-KHATTAB *Abu 'l-Khair al-Samarkandi* (d. 380 = 1474), first Imam elected by the Ash'arites of Latakia. He was one of the group of the first Ash'arites whom the Ash'arites call the bearers of the faith. In 140 (757-758) the Ash'arites of Latakia and Tripoli, having rallied in great numbers to the Khawāssite doctrine, decided to appoint a leader. They met under the pretext of settling a matter of interest in a place called Shad, in the west of Tripoli, and proclaimed Abu 'l-Khattab as Imam. They entered Tripoli by surprise and forced the Ash'arite governor to leave the town.

At this period the Wasilids who had seized Kairwan gave themselves up to the worst excesses in that town. Wanting to put an end to their abomination, Abu 'l-Khattab collected his troops and marched against Kairwan at the head of 6000 warriors. He captured Kairwan in 141, after having defeated the chief of the Wasilids, 'Abd al-Hakim b. al-Khattab, who had come out to meet him, he besieged the place. It was during this siege that, according to one version the truth of which is doubtful, his principal lieutenant, 'Asim al-Sadri, died from the effects of a poisoned onion sold by the besieged.

Kairwan was obliged to surrender to the Ash'arite forces and fell into the hands of Abu 'l-Khattab (Safar 143 = June-July 758), who carried a faithful daughter of the Wasilids. He entrusted the government of the place to 'Abd al-Khattab b. Kairwan, and then returned to Tripoli, whence he extended his power over the whole of Ifriqiya.

In Dhū 'l-Hijja 141 (April 759) Muḥammad b. al-Aghlabi al-Kharrā, appointed to the government of Egypt by Caliph 'Abd al-Malik al-Mansur, sent, for the purpose of re-establishing order in Ifriqiya, an army commanded by al-Aghlabi b. 'Abd al-Amin al-Baghat. Abu 'l-Khattab went to meet him and sent forward a vanguard under Malik b. Saḍra al-Hawari to check the enemy's march. The 'Abbaside army routed in the neighborhood of Kairwan.

A second army, having Abu 'l-Aghlabi 'Umar b. al-Aghlabi as its commander, was defeated at Meghanna by Abu 'l-Khattab in person. The Imam returned to Tripoli after this victory believing that he had finished with the Arabs. But in the meanwhile the al-Aghlabi was ordered to go himself to fight the Berbers and to take the government of Ifriqiya.

As soon as Abu 'l-Khattab was informed of his march, he set out with a considerable army. But being deceived by a messenger of the al-Aghlabi, who pretended he was returning to the East, he allowed his troops to be disarmed. The al-Aghlabi, by means of forced marches, soon reached the territory of Tripoli. The Imam hastily reassembled the nearest tribes to stop him in his march. The encounter took place at Tawargha in Safar 144 (May-June 761). The battle was terrible. Abu 'l-Khattab perished on that day with 12000 or 14000 of his followers. In Jumada I (August), the al-Aghlabi took possession of Kairwan again. (A. de Motville.)

ABU 'L-KHATTAB Muḥammad b. al-Khattab (al-Makhrī) (d. 380 = 1474), a Mawṣalī sectarian. At first he was one of the adherents of 'Abd al-Rasid [q. v.], but afterwards, as he declared the latter (as the Imam is generally) to be

a prophet, even a divine being, on account of which he was threatened by him he claimed for himself what he had asserted as belonging to the Alids, and won many followers, who, according to al-Buhārī, were classed in not less than 50 sects, and all together called under the name of Khawāridj (q. v.). All what is known of his personal situation is that in 143 (760) he was executed at the orders of 'Uth b. al-Mu'taz, the Abbāsid governor of Kufa.

Biographical: Shahrastānī (ol. Corrozet, pp. 136 et seq. (Basel, 1812, p. 208 et seq.); Makrūz, *As-Sūf*, li. 32; Ibn al-Athīr, *Tārīkh*, viii. 21. (M. Tr. Notices.)

ABU KUBAIS, a sacred mountain on the east frontier of Mecca. The origin of the name is not known, although Moslem legend occupied itself with it, and even ascribes it advantages the statement that this mountain was, in pagan time, called al-Himā, because, legend asserts, the black stone was preserved there according to another legend, in this mountain was also the *Tamasek* Cave (*Maghāzī* of *al-Buhārī*, q. v.) in which the first progenitors of mankind dwelt, and in which they were temporarily buried after their death.

Biographical: Yāqūt, *Mu'jam*, v. 71; Wittenfeld, *Die Chroniken des Stadt Mekka*, L. 479.

ABU LAHAB (father of the dam*, i. e. man of Hell), the surname, by which an uncle and at the same time a violent opponent of Muhammad is designated in the Kor'an (xii. 1) and called chiefly by the Moslems. His real name was 'Abd al-Uzza b. 'Abd al-Muttalib, the heathen character which shocked Muhammad. Until his death he sided with the most violent adversaries of Muhammad in Mecca. This fact, otherwise so discordant with the lively family sentiments of the Arabs, may be explained by that his wife, Himmāt bint Jahsh b. Umayr, was the sister of Abu Sufyān, the prominent leader of Muhammad's adversaries in Mecca till the year 3. In any case she showed much hostility to the Prophet and sided against him too because of her antagonism, for in the above-mentioned Sura, besides Abu Lahab, also her ornaments and humiliation in Hell are indicated. — The Sura reads as follows:

1. "Curse the hands of Abu Lahab and perish (himself), 2. His fortune and all what he hath acquired perished (his loss), 3. He will come in a glowing fire (*al-Hādī*), 4. And his wife carries the wood, 5. On her neck a rope of hell."

The sequence shows that verse 4 means that in Hell she must gather the wood for the glowing fire (comp. *Rāḡib*, *al-Faḥr*), and not that in her lifetime she was carrying wood, that is to say, thorns, and screwing them in the way of the Prophet (as some commentators explain it, comp. for example *Taherī*, *Tafsīr*, xxx. 192, and *al-Buhārī*, *al-Faḥr*), and that in her lifetime she used to spread insults on Muhammad's person. — As a motive for this hostile prediction the following is given by several Arab traditionists in the name of 'Abd al-Uzza: "After verse 114 of Sura xvi. ('Warn thy tribes, those that stand near thee') was revealed, Muhammad addressed from Mecca Safa (according to some from Minā) his related families in Mecca in the following terms: 'It is announced to you an approaching enemy would

you not believe me?' — Yes," they answered — "Yes," said he, "I caution you against a great punishment!" At that time Abu Lahab came up towards him and said: "Perdition on thee (*al-Hādī*)! Is it for this that thou hast threatened me here?" Therefore Sura xvi. (*al-Hādī*) was revealed". Materially very much different is the account of Ibn Ishāq in the name of 'Abd al-Uzza. According to another account of Ibn Ishāq, reproduced by Ibn Ishāq, however, Abu Lahab expressed himself with scorn against Muhammad on another occasion, before Hish b. 'Uzza, adding the imprecatory word *al-Hādī*. — There is no doubt that previously a series of hostile acts of Abu Lahab against Muhammad must have taken place, which called forth such a severe, pitiless execration of the latter against his uncle, so much more that on a previous occasion, in the party quarrel of the Meccans with Abu Sufyān, Abu Lahab had occasionally stood by his brother, and thus indirectly by Muhammad (Ibn Ishāq, p. 244). — The Sura is generally considered as a Meccan one (the preterite *al-Hādī* used for the prediction of the future perdition; comp. *Rāḡib* to *Kor'an*, xl. 17); *Rāḡib* counts it amongst the oldest Meccan Sura. Still the wording of verse 2: *al-Hādī* against *al-Hādī*, according to the unexceptional way of expression in the Kor'an, something that had already happened (comp. *Kor'an*, vi. 46; vi. 84; xvi. 207, *al-Hādī*) for in case of future events the imperfect tense (*yaghdū*) is always used; neither is there any parallel to the usage of *al-Hādī* as a preterite future. According to such a notion this Sura contains consequently a triumphant victory over the already happened death of Abu Lahab (see below), and could be composed only some time after the battle of Badr. Abu Lahab did not personally take part in that battle, because, according to some, he was sick, according to others, he was afraid of 'Alī's bad dream. He sent his place 'Alī b. Hishām, whose fortune he had won in an armed struggle whom he had made his slave as his debtor. Abu Lahab's great-grandson, the poet al-Buhārī b. al-Ash'ath al-Lahabī, boastfully mentions the latter fact in a verse (*al-Buhārī*, xii. 7). The news of the bad loss of the battle threw him in such an anger that he betook himself to violent acts against the hearer of the news and his wife. Shortly afterwards (3 days according to Ibn Ishāq) he died of malnutrition. The burial of the Moslems was satisfied that his nose smelt so much his corpse, which they let in become corrupt, and when they were obliged to remove it, it got an ignominious burial (Ibn Ishāq in *al-Buhārī*, iv. 11 et seq.; *Rāḡib* to *Kor'an*, xii. 1). According to one isolated source, he died considerably later (about the year 6), as he had promised the last prophet of 'Uzza, before his death, in defence of the interests of that goddess. But this statement deserves no credence; for, firstly no mention of him is made anywhere after the year 2 (623-624), and secondly Ibn Ishāq tells in a tradition which he traces up to Ibn 'Abbas that at the conquest of Mecca in the year 8 (629-630) Muhammad received into Islam Abu Lahab's both sons 'Uzza and Mu'awīh, who fought on the Prophet's side in the battle of Uhud. It is quite clear of the question that their father should be still alive at that time or shortly before.

Abu Lahab is depicted as a large, corpulent,

heavy" man, prompt to become angry. He had acquired considerable wealth, in order, so was Muhammad's opinion, to assure himself against adversity (Kutub, cxi. 2). His son 'Utha and brother (Ism) married a daughter of Muhammad's, but when the latter proclaimed himself as prophet, he divorced her, and he himself embraced Christianity. Cursed by Muhammad, he is said to have been torn by a lion or a hyena while on a journey to Syria. This story, however, is not in accordance with the statement that he went once to Mecca in the year 8 (see above), nor with what he died as late as the year 30 (699-700). Doubtless there is a confusion with another son of Abu Laith. The poet al-Fall al-'Abhar b. 'Althafan al-Bahar, cv. 3-11) was a grandson of 'Utha.

Wüstenf.), l. 60, 131 of seq., 244, 430, 481; Tabari, l. 2170, 1896 of seq., 4349; li. 2343; idem, *Tafsir*, l. 121, 191-192; Wajidi, *Kitab al-muqaddas* (Wellhausen), pp. 41, 351; Baladawi, in Kuehn, ed., *Baghawi* (*Tafsir*), Baghawi and Wajidi quoted by Sprenger, *Die Leben und die Lehre des Muhammad*, i. 526; Noldeke, *Gesch. d. Qorans*, p. 72.

ABU LAITH NAYR N. MUHAMMAD N. AHMAD, a Muslim al-Samarqandi, a Hanafite jurist and theologian of the second half of the fourth (10th) century. The year of his death is variously given. He was the author of several theological and juridical works, enumerated by Brockelmann (*Gesch. d. arab. Litt.*, i. 193). It is not quite certain whether the catalogue mentioned there is really his, because the author's name and genealogy as they appear in the MSS. do not agree with those of the subject of this article. This little work has been twice edited by A. W. T. Jayne, comp. *Sydenham's Arabic text*, *trans. in collaboration*, 1881, pp. 215 of seq. 267 of seq.

ABU L-MA'ALI 'ABD AL-MALEK AL-DIWARATI (See *ABU AL-HASAN AL-DIWARATI*.)

ABU L-MA'ALI HUSAYN ALLAH N. MUHAMMAD N. AL-MUTTALIBI (See *MUTTA'ILIBI*.)

ABU L-MA'ALI MUHAMMAD N. 'ABD AL-LAH, an 'Alid, a descendant of Husayn b. 'Ali. He probably lived in the Court of the Ghaznavides, and in 453 (1062) he wrote a history of religion in Persia, entitled *Kitab fahm al-adyan*, which was published by Schefer in his *Gesch.*, l. 131-132.

ABU MADYAN SHU'AYB N. AL-HURAYM AL-ANDALUSI, a famous Andalusian mystic, born at Camilla (Kafayana), a village near Seville, died M 594 (1197-1198), and buried at al-'Ulad near Tlemcen.

His family was obscure and his parents were poor. From childhood Abu Madyan had to learn the Koran by heart in his own country according to the custom which still exists; he learned also the weaver's trade. Feeling a natural leaning toward study, he applied himself to it with ardor; and, attracted by the reputation of certain Maghrib professors, he left his country to go to Fez to attend the lectures of the renowned masters of whom he had heard.

The date of Abu Madyan's going to Fez is not known. Seemingly it was at the end of the Almohade empire or at the beginning of the foundation of the Abshide power. It may be judged by the fact that he taught in the universities of Fez,

amongst which the study of the Almohade tradition" (Andalus) especially figured, and may think that the Maghrib was already under the domination of the Almohades.

Abu biographers describe Abu Madyan as conversant with diverse branches of Almohade science, both religious and profane. In fact, from what we have just seen, Abu Madyan was studying at Fez at the moment of the growth in the West of Almohade doctrine and of the revival which they brought about in theological and judicial science. But it does not appear that Abu Madyan was a follower of the Almohade doctrine, nor did he ever proclaimed his preference for Almohade theories. His taste led him especially towards mysticism; he was directed in this path by the Sheikh Abu Ya'za, who brought him by fast and prayer and by the continual practice of the strictest asceticism to the life of perfect Sufi. Besides, Abu Madyan, who was very poor, had not much difficulty in detaching himself from the world and its ephemeral pleasures; he passed successively all the degrees of the mystic hierarchy and reached the rank of *Kamil* of *Qadiri*.

After remaining some years at Fez, the young Sufi went to Mecca, where, it is said, he met the great Mamluk saint, 'Abd al-Kadir al-Jilani (q. v.); he bound himself in friendship with him and under his direction completed his mystic studies.

On his return from the East Abu Madyan set himself to teach mysticism in the Maghrib. He settled in the town of Baugie, where he professed the severest asceticism; he soon acquired a reputation for sanctity and knowledge. People came from very far to consult him and to attend his lessons. Before his departure from Fez he had already performed miracles; he performed others during the course of his journey in the East and after his return to Baugie.

The mystic teaching that Abu Madyan professed at Baugie was in opposition to the opinions of Almohade doctors of that time. The latter were disturbed by the constantly increasing reputation of this professor and of the ever growing number of his adepts; so he was resolved to get rid of him. The Almohade sovereign, Abu Yusuf Ya'qub al-Mansur, having been made aware of the situation, ordered the governor of Baugie to send the mystic to Mecca, so that he might question himself. Abu Madyan submitted with good grace to the injunction of the sovereign. After having said farewell to his pupils, he started for the capital of the Almohade empire, followed by a few companions. He died on the way some kilometers from Tlemcen, on the bank of the river Isser, and, according to his last wish, was buried at al-'Ulad close to Tlemcen, where today his tomb is a point of pilgrimage for Muslims of all countries.

All the doctrines professed by Abu Madyan may be summed up in this verse, which, according to Yahya b. Khaldun, is often repeated:

"Say, Allah and abandon all that is matter, or is connected with it, if thou desirest to reach the true goal."

It was by the strict application of this principle that he himself attained the highest degree of mystical perfection, that he reached complete abstraction of his intellectual being and his perfect identification with that God whom he thus defined with his last sigh, *Allah al-Hayy*.

The works of Abu Madyan are confined to a few mystical, religious poems, one *wasit* and one *shakl* (see the Arab. MSS. of the Bibl. Nat. of Paris, No. 2230, 101, 2410, 4553, &c. 12, and those of the Bibl. Nat. of Algeria, No. 376, P. 59, 599, &c. 3; 938, f. 1—9; 1839, &c. 75).

The funeral of Abu Madyan took place in the midst of a great concourse of the inhabitants of Flencon, and was the occasion of an inspiring manifestation of respect and veneration for the saint. Since that time Abu Madyan has been the protector and patron saint of Flencon. The city has grown and developed under the beneficent reign of the great saint, and the town of al-'Uhad has grown up round his tomb.

The mausoleum of Abu Madyan was built by the command of the Almoravid sovereign, Muhammad al-Nasir, shortly after the death of the saint. Since then many of the princes and sultans who succeeded to the throne at Flencon wished to contribute to the embellishment of the sacred crypt. Splendid monuments, of which many remain still in a state of good preservation (especially the Minaret of the Madrasa) were built in honour of the saint by the side of his tomb by the Marinid kings, the masters of Flencon in the 14th century.

(A. B.)

ABU 'L-MAHASIN DJAHAL AL-DIN YUSUF b. TAQI'UD-DIN a. 'ABU AL-DIN AL-DJAHAL AL-DJAWANI, Arabian historian, born in Shiraz

513 (February 1486) at Cairo; his mother was a Turkish slave of the eunuch al-Malik al-Zahir Bar-Bak. His father died in 525 (1412) as governor of Haleb (Aleppo) and Damascus. In Cairo, Abu'l-Mahasin was a pupil of al-Mahasin and other celebrated scholars of that time. In 583 (1458) he performed the pilgrimage to Mecca; he died in 574 (1469), or according to others in 570 (1465—1466). Of his still preserved seven historical works his history of Egypt from the Arab conquest till 537 (1453) is the most renowned. This work contains also some facts regarding the neighbouring countries and chronologies of every year; his last copy was executed in the years 860—862 (1456—1458) under the title of *al-Mahasin al-shaykh fi wasat al-shaykh*, edited by Joyntell and Mathew *Abul-Mahasin Abu Yusuf. Arabic annals*, 2 volumes, Leyden, 1853—1861 (it goes only as far as the year 385 = 976; the remainder is expected). His *Ma'asir al-shaykh* fi wasat al-shaykh *Ma'asir al-shaykh* (Ma'asir al-shaykh Jam'atiddin Tagharbi i. Annals, ed. J. P. Maréchal, Cambridge, 1792) is a short history of Muhammad accompanied by a somewhat dry list of names of some of his companions, of the rulers of Egypt and their rulers till the year 842 (1438). His continuation of al-Mahasin's *al-shaykh* for the years 843—860 (1441—1456), under the title of *al-Mahasin al-shaykh fi wasat al-shaykh* (ed. al-Mahasin, 1792, &c. &c. *Ma'asir*, No. 9163; *The Arab. MSS. in the Bibl. Mus.*, No. 1244) and that of al-Mahasin's *al-shaykh*, biographies arranged in alphabetical order, of distinguished men from the year 650 (1252) till his times, under the title of *al-Mahasin al-shaykh* *Ma'asir al-shaykh* (the Vienna cat., No. 1274; the Paris cat., No. 2008—2073; *Fleury*, &c. *Antiquités arabes*, v. No. 162) deserve a closer examination. Besides his historical works he left a collection of mystical poems entitled *al-Sakhar al-shaykh* *Ma'asir al-shaykh* (Darmstadt, Cat. Boer., No. 367).

Bibliography: Wattenfeld, *Die Geschichte der Araber*, No. 590; Brockelmann, *Gesch. d. Arab. Litt.*, II, 41.

(HARTELHANA.)

ABU MANSUR [See AL-DJAHAL.]

ABU MASHAR DJAHAL AL-DIN a. MUHAMMAD a. 'UMAR AL-BALAZI, one of the Arab astrologers most frequently cited in the Christian Middle Ages (under the name of *Masmasar*). He was a native of Balqa, in Syria, and a contemporary of al-Kindi. At first he devoted himself to the science of tradition, and only at the age of 47 he began to occupy himself with the study of astrology. Arab authors already charged him with plagiarism, that which was recently confirmed through the investigation of O. Loth (*al-Kindi as Astrologer*, in the *Monatsschrift für die Geschichte der Wissenschaften*, Leipzig, 1875, pp. 270 et seq.). He spent the greatest part of his life in Baghdad, and died in Wasit, the 28th Ramadan 272 (8th March 886), and to have been over 500 years old. — Of his pretty numerous writings the following principal works are extant in manuscript: 1. *Al-Mashar al-shaykh* (The great book of introduction, i.e. astrological), in Oxford, Leyden, Constantinople (Hafid.), translated into Latin by John Hispanolani and Hermannus Scapodas (or Palmatus); the latest translation was printed in Augsburg, 1489, under the title of *la-*

*production in voluminous Arabic text. The latter are variously listed, thus in Venice, 1493 and 1506. — 2. Kitāb al-ḥikmah (The book of the conjunction, i.e. of the stars), in Oxford and Paris. The work published in Augsburg, 1489, and in Venice, 1515, under the title of *Alfomazur de magis conjunctioibus et astrorum revolutionibus et eorum proprietatibus, cum rationibus tractatus*, is not a translation of the *Kitāb al-ḥikmah*, but of the *Kitāb al-ḥikmah al-mawḍiʿ* (The book of the revolution of the stars), in the Escorial, and Oxford, and of other treatises, the Arabic title of which can not be given with certainty. — 3. *Kitāb al-ḥikmah fi bayān al-ʿikān* (The book of the thousand and the hundred of worship), cited by al-Biruni, in the *Chronology of ancient nations* (ed. Sachau, Arabic text, p. 205; English trans., p. 187). — 4. *Kitāb waṣṣalāt al-ʿaṣr al-mawḍiʿ* (probably that work of his called *The small book of al-ʿaṣr*), in Berlin, Vienna, Florence, Paris, Cairo, where it was also printed in 1290 (1873) under the title of *al-ḥikmah al-mawḍiʿ*. — 5. The *Flora Alfomazur*, or *Flora astrologica* (Augsburg, 1488 and 1495) are probably an extract of the *De magis conjunctioibus* etc.*

Gyllenberg), p. 253; al-Biruni (*Chronology of ancient nations*, ed. Sachau), pp. 25, 27-28, 203 (English trans., pp. 29, 34-36, 187); Haureau and Lancelotti, *Bibliographie de l'astronomie*, I. 703 et seq.; Lippert, *Abu Ma'shar Kitāb al-ḥikmah* (Wiener Zeitschr. f. d. Kunde d. Alterthümer, II. 331 et seq.); Suter, in the *Abh. der Ges. der mathem. Wissensch.*, VI. 31; 2. 28. (H. Suter.)

ABU MA'SHAR *Naṣr* b. *ʿAbd al-Raḥmān*, a slave, probably of Indian origin, who subsequently purchased his freedom and lived in Medina. He is especially famous as the author of a *Kitāb al-waḥīd*, numerous fragments of which have been preserved by Wāḥidī and Ibn Sa'd. Amongst his authorities he mentions Naṣr, the Master of the Court, Muhammed b. Ka'b al-Kharrī and other scholars of Medina. In the year 160 (776-777) he left Medina and remained till his death (170 = 786-787; Ramezani) in Baghdad, where he enjoyed favour from several members of the court of the *ʿAbbaside* caliph. Tabari has taken from his information on *Abbasid* history and on Muhammed's life and especially chronological statements, these latter going down to the very year of his death.

(J. H. Koser.)

ABU MIBDAJ (vulg. *Meda*), i.e. father of the cannon, Arabic designation for the Spanish cannon, a coin bearing the figure of a colonnade.

ABU MIBDAJ *ʿAbd Allāh* b. *ʿAbd al-Muḥṭab*, a *Ḥarīṭi* (Harrathi) of the *Ḥarīṭi* tribe, an Arab poet, one of the *Madḥufiyyah*. As a partisan he fought with the *Ḥarīṭiyyah* against Muhammed, and was one of the defenders of Ta'if when besieged by the latter (8 = 530). At that time he hit with an arrow 'Abd Allāh, one of 'Abd Dhar's sons, of which wound he died in the year 11 (632-633). It seems that he had not himself also against *Maḥṭab* b. *ʿAuf* b. *Ḥarīṭ*, who, as leader of the *Ḥarīṭiyyah*, Salām and *Fahm*, placed by Muhammed under his command, pressed hard on the *Ḥarīṭiyyah*. At least his fragment 22 (of *Abd*'s edition) alludes to it. Shortly afterwards *Abd Mibdaḥ* with the men of his tribe went over to *Ḥarīṭ* (9 = 630-631). Under 'Umar I he was in the line of the Muhammedan conquests though, and as such he took part in the battle of *Kāḥṭiyā*. Not long before that he is said to have been, at 'Umar's command, imprisoned in *Ḥarīṭiyā* (vulg. *Gold-elber*, *AM. sur oras. Philologie*, I.). *Maḥṭab* he indulged in the *Ḥarīṭiyyah* enjoyment of wine — according to another version, because he was after *Ḥarīṭ*, the wife of one of the *Ḥarīṭiyyah* (fragm. 10). But when he had to embark in the boat, which was ready to depart, he succeeded in deceiving his guardian and thus escaped (fragm. 20 and 21). He betook himself to *Sa'd* b. *ʿAbd Wahḥab*, who, near *Kāḥṭiyā*, held the field against the Persians. Having been informed of his flight, 'Umar had him seized again through his general.

But it is more probable that *Abd Mibdaḥ* belonged to the malcontents and resisted *Ḥarīṭ* b. *Wahḥab*, whom the commander-in-chief *Sa'd*, having taken note, had appointed as his substitute. So it came about that in the beginning of the battle of *Kāḥṭiyā* (14 = 635) he was kept under lock and key (fragm. 11 and 23). *Sa'd*'s wife, *Salma* bint *ʿAbd Wahḥab*, who was in discord with her husband, set him free on his promise to return after the battle. Thus *Abd Mibdaḥ* could take part in the action, the remembrance of which is connected with the name of *Ḥarīṭ* b. *Wahḥab* (also *Ḥarīṭ*, *Ḥarīṭ* and *Ḥarīṭ* day of the bridge). The story of his escape, namely that he in the battle rendered himself a Persian war elephant, who was attacked by *Abd Wahḥab* b. *Maḥṭab* as the chief of the latter's life, is often narrated and also mentioned by *Abd Mibdaḥ* himself in his verses (fragm. 17). He must also have fought in the battle of *Voluḡatān* (Ullat), whither Muhammed retired after the defeat by the bridge (fragm. 17 verse 10).

As *Abd Mibdaḥ* was, in spite of the *Karḥi* and the frequent corporal punishment, addicted to wine, he was once to favor of the rigorous 'Umar. In the year 16 (637) he is said to have been banished to *Najd* just for this delict. People were to have seen his tomb at the frontiers of *Adhrah* (vulg. *Adhrah*), still the fable in connection with this statement passed from fragm. 15. *Ḥarīṭ* must doubt on it.

A son of *Abd Mibdaḥ* is mentioned in the time of *Ma'mūn*'s reign. Of his family his mother *Kand* bint *ʿAbd Allāh* b. *ʿAbd Ḥam* and his uncle *Salma* b. *Ḥarīṭ* are also mentioned (fragm. 12).

The preserved fragments of *Abd Mibdaḥ*'s verses reflect with sufficient accuracy his life, as rather the little of it that we know. As a poet he is just as truly original as many others —

beasts in the old epistle, he had still unknown predecessors. The apocalyptic prophecies, which he composed together with al-Rasā'īh, the pasty-ghost of the Harmakides (Aghānī, iv. 35), in the style of 'Aḥīb al-Ḥalīd, under the name of Aḥīb Yūsuf al-Ḥalīd, a typical blackhead, and which later passed as being of the latter's composition (al-Muḥibbī, *Ḥayāt*, ii. 7 et seq.), have not been incorporated into the *Diwān*. Editions of the latter have been prepared amongst others by al-Sūlī (d. 535 = 946), in 10 chapters, and by Ḥinnas b. al-Ḥasan al-Iḥṣānī (in *Ḥikāyat al-Ḥalīd*, i. 200). 'Alī b. Ḥannas al-Iḥṣānī, probably through confusion with the editor of the *Diwān* of Aḥīb Yūsuf and al-Baḥrī; the latter edition is more extensive, but more mutilated, and al-Muḥibbī in *Yūsuf b. Muḥammad* (about 333 = 943) he was still alive) wrote against it an epistle on the *Ḥikāyat al-Ḥalīd* (Dresden, 1861, *Verlag v. W. Ahlwardt*, the only one appeared), *Die Heldenlieder*, Gießen, 1861. Micrographed in Cairo, 1277; printed in Beirut, 1301 (it is complete? I have only the first *Ḥikāyat al-Ḥalīd*, ii. p. 1, 'fi maḥal al-ḥikāyat al-Ḥalīd', 1301). — Printed at the expense of Alexander Jāz by Mahmūd Efendī Wāḥī, who added explanatory notes, Cairo, 1898, 1905. — A. von Krenn, *Diwan des Abu Nuwas der größten lyrischen Dichters der Araber* (in *Germania*, Vienna, 1855).

(BRACKENBACH.)

ABU RIGHĀL, a legendary person, whose alleged tomb in al-Mughannā by the frontier of the sacred district of Mecca, is still more venerated by pilgrims than during the pilgrims' festival, because legend makes him the ill-fated hero, who led Abrahā (q. v.) into the sacred territory, but who died in the above-mentioned place. According to one tradition he was king at Ḥāḥ and progenitor of the *Ḥabashites*, and was put to death by Allah on account of his cruelty; according to another tradition he was a lawyer, sent by the prophet (q. v.) and was killed by the *Ḥabashites* on account of his bad behavior.

ABU SA'D b. MUHAMMAD b. al-JUḤAYR. — **ABU AL-RAYD**, a vizier. Abu Sa'd was appointed vizier by the Ḥayfide emir Ḥishām al-Dawla Abū Ḥāshim b. Balī' al-Dawla shortly after the latter's entry into Bagdad in Rabi'ul Awwal 418 (October 1027), but was soon deposed of his office. Nevertheless he shortly afterwards was reinstalled in this office and in the years following the same proceeding was repeated so often that Abu Sa'd is said to have occupied the vizierate on less than six times under the emirs of the weak and little esteemed Ḥayfide al-Dawla. Abu Sa'd died in the year 439 (1048).

ABU 'L-SĀDĪ DEWĀN b. YUSUF, the founder of the dynasty of the *Saffarids*, and a Turkish general, a native of Oghismana, in the service of the caliph al-Mu'tasim, was invested by the prince with the Meccan road, that is to say, with the place situated between, in 244 (858; *Im al-Aḥīb*, ii. 245 (859; *Im Ḥalīd*) or 242 (856-857). Thence he fought against the 'Alids Muḥammad b. Yūsuf, who had just taken the place of his brother Ḥunayd at Mecca (251 = 865). He returned to Bagdad in 252 (866), more entrusted with the receipt of the taxes in the region of the Euphrates, and succeeded by a man in setting upon the 'Alid Abū Ahmed Muḥammad b. Ḥafṣ, who had revolted there. He was afterwards successively governor of Aleppo (254 = 868), then of al-Aḥwāz; he was obliged, in the latter position, to fight the Zandj, who beaten and saw his capital pillaged. At the time of Yūsuf b. Laith the *Saffarids*' campaign against Manāḥil (262 = 875-876), he joined the latter and shared his defeat. Having been recalled to Bagdad, he died at Qumḥāḥ in 266 (880-881). — His grandson Iḥṣān, son of Muḥammad al-Aḥīb, was governor of Tovin in Armenia, a town which had been conquered by his father. Having been chosen by the army to succeed the latter, he was defeated by his uncle Yūsuf and took refuge in Bagdad (268 = 901).

ABD SAFYAN is considered in popular legend as a pre-Islamic king of al-Baḥr in the district al-Ḥayfa, north of Aqana, and west of Ma'arat al-Nu'mān. The ruins of al-Baḥr are still now the most important in the whole surroundings. The city flourished in the fifth, sixth and seventh centuries of the Christian era; the Syrians called it *Kaḥrā de-Māra*. It still continued to flourish under the domination of Islam; at that time a Jewish colony existed there; it was the object of contest in the time of the crusades. It was probably during that time that a Mohammedan fortress was built to the north of the city, called today *Ḥaḥat Abd Safyan*. — Popular legend, however, pretends that this fortress was built before Islam, and ruled by a Jewish king called Abu Safyan. Legend tells us that 'Abd al-Rahmān b. Abū Bakr was in love with Abu Safyan's daughter, Lubāḥ, and that he was three in the citadel when his father summoned him to embrace Islam. 'Abd al-Rahmān and Lubāḥ were both converted to Islam and fled. Abu Safyan pursued them, and it came to a fight. The champions of Islam, especially 'Umar and 'Alī b. al-Walīd, called to help by the angel Gabriel, appeared on the battlefield. 'Abd Safyan was killed by 'Umar, and the whole land fell into the power of the Mohammedans.

ABU SA'ID, ninth Mongolian prince (*Ilkhān*) of Persia (716—736 = 1316—1335), born in 704 (ed. June 1305), succeeded to his father Ḥishām, who died on the

304. Ruzbihan 316 (164 Dec. 1316) his solemn accession to the throne did not take place before Safar 727 (April-May 1322). He had already in 1313 been appointed governor of Khondar though of course under a guardian. During the first few years of his reign, till 1327, the kingdom was powerfully and proudly governed by the mighty and valiant. The long war with Egypt was brought to an end by a treaty of peace in 1323, the invaders from South Russia and Central Asia were repulsed and avenged by victorious advances in both directions, viz. in 1325 through the gate of Diarbakr to the Terek and in 1326 to Ghazna. In Asia Minor, which was governed by Coban's son Tuncik Bih, the strength of the Mongols against the Circass and the Turks was again established and the welfare of the population insured. The Shāh's domain which Ruzbihan had elevated to a State religion was abandoned and the college again bore the name of the four orthodox religions. The finances of the kingdom are said to have been entirely ruined after the execution of the vizier Ruzbihan al-Din (718 = 1318) (q. v.) under his moderate successor 'Alī Shāh; only after Coban's fall were they put into order by the new vizier, Ughayr al-Din, the son of the executed Rashid al-Din. The fall of Coban and of his sons killed up the Mongolian armies in the whole kingdom, from Asia Minor to Khondar; after many hard-fought battles the invasion was everywhere repulsed, but after the death of the sovereign, which took place shortly afterwards (734 Rabi' II 735 = 304 Nov. 1335), the kingdom could no longer be kept together. Abū Sa'īd had lost no heirs, the dynasty was represented only by dependants of parallel lines which could not obtain general recognition.

ABU SA'ID FARAHĀNĪ Abū 'Abd al-Kāfir, Farahān poet, born on the 1st Muharram 737 (7th Dec. 967) at Māhama (Sakina), the chief town of the district of Khwarizm in Khondar; died there the 4th of Shabān 448 (12th January 1049). His biography was written by one of his descendants, Muhammad 'Alī al-Munawwar, between 533 and 599 (1153-1202). This valuable and interesting work, entitled *Asar al-shaykh al-shaykh al-shaykh al-shaykh* (q. v.), edited by Y. Zinkowski (St. Petersburg, 1899), forms the basis of the articles devoted to Abū Sa'īd by Farid al-Din 'Afrās in the *Tughlāk al-shaykh* and by Qāsim in the *Nafahāt al-shaykh*.

Abū Sa'īd, whose father was a druggist by profession, received his early education in his native town. After finishing his grammatical studies, he proceeded to Merw in order to read jurisprudence with Abū 'Alī al-Shāh al-Shāh, a Shāfi'ite jurist; and on the latter's death he betook himself in Abū Bakr Kāfūr. We are told that, having passed ten years in Merw, he then set out for Samarkand, where he pursued the study of theology under Abū 'Alī Zāhir b. Aḥmed. Here he was introduced by a cousin, called Lakhmānī Madhūd, to the famous Shāh Abū 'Abd al-Kāfir b. Isḥāq, a pupil of Abū Nāṣir al-Fārisī, who traced his spiritual descent to Izzaddīn of Bagdad (d. 297 = 909). Abū Sa'īd eagerly embraced the doctrines of Sūfism, acknowledged Abū 'Abd al-Kāfir as his Pir,

and obeying his command went back to Māhama, where he spent seven years in complete seclusion. He then returned to Māhama, who made him go to Abū 'Abd al-Kāfir al-Salām of Nishāpūr (d. 421 = 1031) and receive the *shikasta* (order of his hand). After the ceremony of investiture he once more returned to Māhama and renewed his studies. Disciples now began to gather round him, and such was the veneration which he inspired that his neighbors ceased to drink wine, and a melody which he set full of phrases was sold for a cup of twenty dinars. At this time, according to his biographer, he left his home and during the next seven years wandered in the desert, eating no food except leaves and herbs. When Abū 'Abd al-Kāfir died, Abū Sa'īd went to Abū 'Abd al-Kāfir Abū 'Abd al-Kāfir, who treated him with the utmost respect. He clothed him with his own *shikasta*. Shortly afterwards he set out for Nishāpūr. There he spoke daily in public and gained hosts of disciples, but his practice gave great offense to the different theological parties — Karmathites, Aḥlī al-Bayt, and Shāfi'ites, — who joined in addressing a letter of complaint to Sūfī al-Mahmūd of Ghazna. They urged that in the course of his public speeches the Shāh, instead of confining himself to sayings of the Korān and the Traditions of the Prophet, frequently recited poetry; that he was always giving luxurious feasts; and that he and his disciples indulged in singing and dancing. Mahmūd replied that the leading disciples of Nishāpūr must investigate the matter and, if necessary, inflict the legal penalty. The Shāh, however, exercised his miraculous powers so effectively that his enemies withdrew their opposition, and thereupon Abū Sa'īd in Nishāpūr dared to say a word against the Sūfīs. Many stories are told concerning the relations which existed between Abū Sa'īd and Abū 'Abd al-Kāfir (d. 465 = 1073), author of the well-known *shikasta* of Sūfism, Kāfūr b. al-Kāfir regarded the new-comer with suspicion and dislike, but was finally reconciled to him and became his intimate friend — a point which does not appear to be very probable. At Nishāpūr Abū Sa'īd also met the famous Abū 'Abd al-Kāfir (d. 465 = 1073), who is said to have afterwards remained, 'All that I know, he was a Persian quatrainer by birth. He answered to me by Avicenna has come down to us (Edo, in *Shikasta*, d. 465. Bayer. *Shikasta* *Shikasta* *Shikasta*, 1893, pp. 52 ff. seq.). After staying a year in Nishāpūr, Abū Sa'īd returned to his native town, where he ended his long life at the age of 83.

Abū Sa'īd is an important figure in the history of Sūfism. He represents the extreme pantheistic ideas which were introduced by Maḥmūd of Bagdad (d. 461 = 1074) and which characterize the Persian Sūfīs in general. It is perhaps superfluous to add that he held Islam as well as every kind of positive religion in contempt. His original genius manifests itself in the new and striking form which he gave to these ideas. He is the founder of Sūfī poetry. Although he wrote only *qasids*, in them we find almost the first examples in verse of that symbolical sayings and fanciful imagery which the great poets of Persian Sūfism, Farid al-Din 'Afrās and Shāh al-Dīn Rūmī, have made familiar. It was he, moreover, that first impressed on the Persian *shikasta* the mystical stamp which it has retained since, and which has passed into European

161-162, 1839, pp. 11 et seq.; E. P. Goerz and R. Dabrichi, *Arab. Quästionsgeschichte zur Gesch. der Karamiden*, edited and translated vol. 1: *Zur Gesch. Sa'īd al-Dīn*, Berlin, 1879. An appendix to it: *Dīn al-Dīn al-Dīn*, on the pages 591-662 (1893-1896), is contained in manuscript (comp. Aldward, *Verh. d. Arab. Handl.*, No. 9513-9814; *reim. d. Copentagen*, No. 156; Paris, Schoen. No. 5851; C. Rieu, *Supplément*, No. 555-556; comp. Wahl, *Nouv. arch. Archéologie*, p. 208; extracts in *Revue de l'Égypte*, edition, 11). — Abu Shāma also made an extract from Ibn 'Asākh's *History of Damascus* (Abulwāl, *Ar. Lit.*, No. 9782), and wrote commentaries on seven poems of his teacher 'Alī al-Dīn al-Dīn (d. 641 = 1243), that are in praise of the Prophet, on the *Burda* and on the *Sūrah al-Faḥr* (*Ar. Lit.*, 1893).

ABU 'I-SHAWK. [See **ABU 'I-MUHAMMAD**.]

ABU 'I-SHĪS MUHAMMAD A. RAḌĪ, Arabian poet. He was, according to the *Kātib al-Asfār*, the uncle, but according to the *Kātib al-Asfār* of Ibn Kātib (who consequently makes Raḍī to have been the poet's grandfather), the cousin of the poet Dīfīl. Like the latter he lived at the Court of Harūn al-Raḥīl. *Asfār* (v. 36) relates an adventure that Abu 'I-Shī had with a female slave of the caliph. Dissatisfied with the appreciation and above all probably with the reward he obtained in Bagdad, he went to al-Raḥīl, where, according to his own statement, he won through a laudatory poem the favor of the emir of that place, 'Alī b. 'Alī al-Raḥīl. There he remained as the boon companion and court poet of his patron until his death (196 = 811). The fragments of his poetry, which the above-mentioned two compilations contain, however scanty they may be, induce us nevertheless to declare that Abu 'I-Shī could claim no original importance for his wine and victory songs, which, as it seems, were his favorite kind of poetry. Better are the elegies on the infirmities of old age, composed by the poet, who had become blind, towards the end of his life, because they came from an immediate impulse. The touch of self-irony that appears now and then in his verses shows that he was by nature rather more fitted for cynical composition; comp. Ibn Kātib, *Ar. Lit.*, p. 536 (*al-farḥ* etc.). To ridicule the imitations of the desert poets — he proposes to substitute the "camel of separation" for the "raven of separation" — he had certainly not much right either.

Bibliography: Tabarī, *Ar. Lit.*, 1. 255; *Asfār*, v. 103 et seq.; Ibn Kātib, *Kātib al-Asfār* (ed. de Goetz), pp. 535 et seq.; Ibn al-Balāḥ (ed. de Goetz), iv. 232, note 22; 559, note 8; al-Kutayb, *Ar. Lit.*, 1. 281-282; *Brockelmann*, *Arab. Lit.*, 1. 83.

ABU SHUDJĀ' MUHAMMAD A. AL-HAMMĪ (Hammā) A. AL-HAMMĪ, *Shāfi'ite* jurist, born in 434 (1042-1043), was the author of a much used manual of jurisprudence: *al-Faḥr al-Faḥr*, edited by Keyser (Leiden, 1859) and,

with al-Ghazālī's commentary, by L. W. C. v. d. Berg (Le., 1855). Comp. also *Saḥīḥ*, *Muḥṣan*, *Ar. Lit.*, 1. 387; *Ar. Lit.*, 1. 387; *Brockelmann*, *Arab. Lit.*, 1. 387.

ABU SHUDJĀ' MUHAMMAD A. AL-HAMMĪ, a vizier. [See **AL-HAMMĪ**.]

ABU SHIMBĪ, a rocky wall on the left bank of the Nile, between the first and second cataracts, 21° 22' north lat., famous on account of two temples down to the last rock from the time of Rameses II. The chief sanctuary was consecrated to Amun fit of Thebes and Re Harmachis of Heliopolis, yet Ptah of Memphis and the king himself were also worshipped there. The smaller (northern) temple was sacred to Hathor and Queen Nefer-tet. The large temple in particular, with its matches, facade of four Rameses colosses, each 20 metres high, belongs to the most splendid monuments of ancient Egyptian art. The temple had been exposed to large sand-drift and was left bare only in the beginning of the 19th century. Only modern Arabian authors give some particulars about it after French sources. — The name Abu Shimbī is a popular abbreviation (*Abū* = father, *Shimbī* = ear of corn) of the local Nubian designation, Abu Shimbī lies to the south of the Arabic-Nubian language limit, whence the many variants in the spelling of the name (Abū Sofīyah, Abū Sofīyah, Abū Sofīyah); the French discoverer named it *Shimbī*.

Bibliography: *Revue de l'Égypte* (1868 ed.), p. 577; *Al-Mubarak*, *al-Kātib al-Asfār*, viii. 14.

ABU SUFYĀN (or **Abū Hamza**) SUFYĀN A. HANẒAL A. UMMĪ, of the Korayshite family of 'Abū Manīf, a leader of the aristocratic party in Mecca hostile to Muḥammad. According to the usual statement regarding his death (see below), he was a few years older than Muḥammad, according to others, however, he was ten years older. Abu Sufyān was a rich and respected merchant, who repeatedly led the great Meccan caravans. Like most of the great merchants he took up a hostile attitude to the movement brought about by Muḥammad, which touched him personally in so far that his daughter 'Umm al-Haḥḥ had married a follower of the Prophet's and emigrated with him to Abyssinia. Against his desire he brought about the fateful battle at Badr; the army, which had hastened up at his cry of distress, would not return without striking a blow, although he ordered it to do so once he had put his caravan in safety. His eldest son Hamza fell in the fight; another son 'Aun was taken prisoner but exchanged subsequently for one of Muḥammad's followers, who as a pilgrim had fallen into Abu Sufyān's hands. After the battle of Uḥud, he took over the command of the Meccans. It is not at all clear as to the facts concerning his oath of vengeance after the defeat and the miraculous campaign he undertook to fulfill his vow (the *Sawf* campaign). The battle of Uḥud afforded great satisfaction both to himself and to the Meccans, but he did not know how to make use of the victory and neglected the opportunity of thoroughly humiliating his dangerous opponent. Equally obscure is the tale of the meeting arranged after the battle of Uḥud for the following year at Badr and of his unexpected appearance at the rendezvous. Whether Muḥammad really, as Ibn al-Balāḥ relates, sent messengers to Mecca to tell Abu Suf-

220 after the murder of Khubayb and of 'A'ishah, is very doubtful. In the year 3 (627) during the campaign of the Mount, he led one part of the great army that advanced against Mecca. However after some time he saw the hopelessness of the siege, he ordered his troops to march back and soon the whole army melted away. Abu Sufyan had always unwillingly taken part in military enterprises, but after this he completely abandoned the idea of continuing the fight with his sturdy and obstinate enemy. During Muhammad's campaign which was concluded by the treaty of Hudaibiya, he kept entirely in the background, as the military party was still a power in Mecca. When the treaty was broken by the quarrel between 'A'ishah and Khubayb, he feared the consequences for his town and proceeded to Medina to arrange the matter. According to Ibn al-Hitham and others he is said to have been very badly treated by his daughter Umm al-Harith, who had married Muhammad in the meanwhile, as well as by Muhammad himself. In reality, however, the Prophet, in whom an understanding with his father-in-law must have been very valuable, doubtless received him in a quite other manner. He dismissed the surrender of Hudaibiya with al-Harith's harmony with this Muhammad at the beginning of the campaign against Mecca proclaimed anybody who took refuge in Abu Sufyan's house should enjoy complete immunity. It is true Abu Sufyan's wife Umm al-Harith was on her husband's weakness, but her fury was as unsuccessful as the armed confidence attempted by a few irreconcilables. By his respectful treatment of Abu Sufyan, Muhammad admitted how much he owed to the latter's cunning surrender. Abu Sufyan accompanied him on his campaign against the Hawazin tribe, and though the dangerous luring that things took during the Hunayn fight may have inspired him for a moment with the hope of getting rid of the tyrant, he did not let it appear. After the victory he also received, for the winning of his heart, such a generous share of the booty that he had every reason to be satisfied. At the siege of Ta'if, behind whose walls another of his daughters was living, he lost an eye (according to Tabari, l. 210, this certainly happened in the Yarmuk battle) Abu Bekr made him governor over Najd and Hishm (thus Hishm, ed. de Goeje, p. 103; comp. Ibn al-Hitham, *qatib*, ii. 477, where the statement that the Prophet had already placed him over Najd is contested). For the rest, most of the other tales concerning him are of no value as they show too distinctly anti-Umayyad party interests. Thus it is very doubtful whether, as is related in Tabari, l. 127 as *sup.*, he opposed 'Ali Bek's election and as in this account is represented by 'Ali. Certainly the account of Abu Bekr's insulting address to Abu Sufyan and his words to his startled father were invented as an anti-Umayyad apologetic. Still more clearly of this tendency shows in an account, coming in which Abu Sufyan is said to have been delighted at every advantage gained by the army of the Medinians at the Yarmuk battle. As a matter of fact there exists another tale, according to which he called on 'Ali for help during the battle. That he took part in the battle is mentioned elsewhere (Hishm, ed. de Goeje, p. 135; *sup.* even makes him a *qatib* on this point). Tabari, l. 265, but it is rather remarkable

able as he was then some 70 years old. According to the now widespread account he died at the age of 83 in the year 31 (652-653); but others give the years 32, 33 or 34 (652-655). He was thoroughly representative of the unprincipled and characterless policy of the Umayyads towards Muhammad — a policy which unfortunately knew how to make use of the concessions wrong from the Prophet.

ABU 'L-SU'UD = MUHAMMAD AL-A'AMAH (i.e. a native of Amul, now, Bazar Bek), a celebrated Umayyad lawyer of Kurdish descent, who was for thirty years *Shaykh al-Islam* and one of the principal collaborators of Sultan Sulaiman al-Kamil, born in 806 (1390-1391). He was first *mufti* (professor of canonical law) and judge, he was for eight years *qadi* (judge) of Romania when he was appointed *Shaykh al-Islam* by the sultan. He wrote a commentary on the Koran, borrowed from *Raf'at* and the *Qasas* of al-Zamakhshari, the first volume of which brought him an increase in his salary from 300 aspers a day to 500, and the second raised his emoluments to 600. Salim II, after his accession to the throne, rewarded him with a peculiar distinction, laying his hand on his forehead and embracing him with affection; his salary was raised to 700 aspers (1391). *Shahin* 974 = 1391. 1567. It was he who by a few justified Salim's undertakings against Cyprus. His death (983 = 1574) brought the sultan into profound grief. He was the author of the *Kutub* name of *Sulaiman*, a collection of laws promulgated during the reign of that sultan; he has left Arabic and Turkish poems. His name has been given to one of the principal streets in Constantinople.

ABU TĀHIR SULAYMAN AL-KĀSHĀRI = AMIR SA'UD AL-JARĀN (See AL-JARĀN).

ABU TĀHIR TARSUSI (Tarsus, then Melitene) = HAKIM AL-'ALI AL-ARAB, the name of a person, otherwise unknown, that serves for the author of some extensive prose romances written in Persian and translated into Turkish. The titles of these romances are: *Shahin-nama* (a story of Salim at the time of the western Iranian king Shahang), *Dar al-hayat* (a history of Darius and Alexander), *Kisat al-hayat*, concerning which comp. *Revue*, *Est. of Turkish MSS.*, pp. 210 et seq.

Bibliography: *Poésie*, in *Grandes de l'épique*, *Poésie*, ii. 318; Mohl, *Revue de l'Est*, i. *justice*, pp. 74 et seq.

ABU TĀYIB (See AL-MUTANABBI and AL-YARĀN) (al-Tahib i. 'Abd Allah).

ABU TĀKA, i.e. father of the windows (where *panes*, *panes*), a coin with the imprint of a colonnade (see *sup.* *sup.*).

ABU TĀLIB = AMIR MUHAMMAD AL-MUTANABBI, Muhammad's uncle. He took charge of his orphaned nephew when the latter's grand-

3. *Ḥikāyat al-ḥayāt al-ḥusnā*, collection of miniature-pieces by pages and Islamic poets, ending with the *ḥikāyat* of the *Ḥamān*, composed when the author was returning from a visit to 'Abd Allāh al-Tāḥī, and was delivered by owner al-Ḥamān (the son of the house of Abū 'Ubayd) to Salama; it is in ten sections, dealing with different subjects, and embraces great Arabic poetry from pre-Islamic down to 'Abbāsid times (see [Gardet] 5. *Ḥikāyat al-ḥayāt al-ḥusnā*, arranged in a similar order to the last, but commencing with love-poems 2. Selections from *awṣāf* poems. Of these only No. 3 is now accessible, but another was in the hands of the author of *Ḥikāyat al-ḥayāt* (d. 1030 = 1607), and all were current in the time of al-Ḥamān (d. 1030 = 1607), from whose work a comparison between Abū Tammām and al-Buḥārī (published at Constantinople, 1887) we learn that like other great poets Abū Tammām had detractors, one of whom, Ahmed b. 'Abd al-Malik b. Qurrah called al-Fārid, wrote a book showing up his various faults of style, etc. Some of these criticisms were answered by Murāḡī in a work in defence of the poet; and to some of al-Annāl's objections there are replies in al-Buḥārī al-Buḥārī's *al-ḥikāyat al-ḥayāt al-ḥusnā* (Constantinople, 1302). Biographies of the poet were written by Ibrahim al-Buḥārī (d. 243 = 858), who knew him personally, by 'Alī al-Samūdī, and by the *Ḥamān* in the fourth century. Of the numerous commentaries on the *Ḥamān* commented by Khāḍir Khāḍir that by Tibāl is in the Leyden Library.

Bibliography: *Asḥab*, xv. 100—108; *Maḥṣūl*, *Murāḡī* (Paris), vi. 147 et seq.; *Abū al-Annāl*, pp. 213—216; *Abū Khāḍir* (ed. Wāḥid), ii. 146; *Suyūṭī*, *Ḥikāyat al-ḥayāt al-ḥusnā* (Cairo, 1321), i. 267; *Ḥikāyat al-ḥayāt*, i. 172; *Ḥamān* (ed. Freytag), ii. 4 et seq.; Brockelmann, *Gesch. d. arab. Litt.*, i. 84.

(Dr. S. M. M. M. M. M.)

ABU TASHFIN I. 5th sovereign of the dynasty of the Banū 'Abd al-Wad (see *Arabiya wa-Sham*) of Tlemcen. He was only 25 when he had his father Abū Ḥammūl Māḍ I (d. 71) assassinated and seized the regal power.

Abū Tashfin I was solemnly proclaimed king on the 24th Rabi' al-Thani 178 (27th July 1328), and at the very commencement of his reign he called into Spain all those of his relations who might raise any pretensions to the throne. His principal confident and prime minister was one of his freedmen, a renegade Christian, a Catalan, who had been the name of *Ḥalāl*. This personage seems to have had a great ascendancy over the young king and great influence in the affairs of the kingdom. It was *Ḥalāl* who caused Māḍ II 'Alī, the best of all the generals in the kingdom, to be disgraced, exiled and then thrown into prison.

The characters of the king of Tlemcen, Vahyā b. Ḥalāl in particular, who nevertheless shows in his *Ḥikāyat* a partiality for the prince of the 'Abd al-Wad dynasty, his benefactors, were obliged to acknowledge that this prince was addicted to pleasure, liked ephemeral enjoyment and loved the amusements and good things of this world.

In fact Abū Tashfin I would appear to have been a king very much detached from religious matters; he took a delight in adorning his capital with splendid buildings, and yet neither the building nor the restoration of a single mosque was

placed in his credit. He built, however, a *Madrasa*, which in remembrance of its founder was called *Madrasa Tashfiniya*. The king, by building this edifice, evidently wished rather to mark the respect he bore towards the scholars and poets, whom he entertained to sing his praise, than to make a school for the teaching of religious sciences.

Except the *Madrasa* (*Madrasa al-Tashfiniya*), which may still be seen, no other trace of the buildings raised at Tlemcen during his reign remains. It is, however, a fact important to note, that the workmen, and probably the architects also, employed by Abū Tashfin were Christian prisoners of war confined in Tlemcen.

With regard to external politics, Abū Tashfin had in various times to intervene with his troops to settle the quarrels which arose between the Marinids princes in the West and the Hafsiids in the East. It was principally on the side of Ifriqiya, where a Hafsiid prince with the support of Arab tribes attempted to seize the sway, that the king of Tlemcen lent his armies. Bougie and Constantine notably were successively besieged by his troops. His commander-in-chief *Ḥalāl* b. 'Alī actually founded the town of Tameddit in the valley of the Soummam, a day's journey from Bougie, for the purpose of more closely blockading the latter place.

Abū Tashfin hoped, by help of his troops which were shinking the Hafsiid empire, to extend his kingdom towards the east, as his father had done before him; he would have liked to carry the frontier of his kingdom beyond Bougie and Constantine. He was intoxicated by the first easy successes of his generals who obstinately resolved upon the war with his Hafsiid neighbors, which brought about a reconciliation between the latter and the Marinids king of Fez. An alliance was concluded between their two sovereigns, and the king of Fez intervened to bring about the conclusion of peace between Tashfin and the king of Fez. Abū Tashfin would listen to nothing. A second embassy went to the same object by Tlemcen by the Marinids sovereign Abū Ḥasan, who had just replaced his father on the throne, was fully received by Abū Tashfin. In 734 (1334-1335) the king of Fez attacked again the Central Maghrib, at the same time warning him ally, the king of Tunis, to attack the 'Abd al-Wad on the east of their kingdom.

After having ravaged and subdued the states of Abū Tashfin, Abū Ḥasan began the siege of Tlemcen in 735 (1335). More than two years afterwards (30th Ramadan 737 = 24 May 1337), the besiegers entered the 'Abd al-Wad capital by assault and King Abū Tashfin perished, with him in his hand, before the gate of his castle, which he defended heroically. His three sons and great personages, notably Māḍ b. 'Alī, the famous general, who had been received again into favor and in 738 (1338) time held the position of first minister, fell by the side of their king.

With Abū Tashfin the kingdom of the Banū 'Abd al-Wad in Tlemcen disappeared for a time and it became a Marinid state.

[For bibliography see 'Abū al-Wad' and 'Abd al-Wad' in the *Index*.]

ABU TASHFIN II. king of Tlemcen, born at the beginning of Rabi' I 752 (April-May 1351) at Nedroma, where his father Abū Ḥammūl Māḍ II was on a holiday with the sultan Abū

Yaqub, the grandfather of Abu Tashfin. The latter passed his youth at Nishapur with his grandfather, whilst his father Abu Hamud, fleeing from Timocen with the Sultan, who had been defeated by the Marvade Abu Isahak, went to seek refuge in Turan (see ABU HAMUD II). The Marvade Abu Isahak, who did not hesitate to put the two uncles of Abu Hamud II to death, had consideration for the latter's father, Abu Yaqub, on account of the retired and pious life he led at Nishapur; he sent the old man and his grandson, ABU TASHFIN II, to Hira et Fer, where they were well treated. After the restoration of the throne of the House 'Abid al-Wad of Timocen by Abu Hamud II, he succeeded in making his father and ABU return to his capital where they were received with great pomp on the 17th Rabi'ul 260 (14th June 1359). Whilst Abu Yaqub went to fight in the east of the kingdom and died at Aghets in Shahrin 263 (May-June 1362), the young Abu Tashfin lived at the court of Timocen and enjoyed his father's entire confidence.

In spite of the attentions with which Abū Ḥamūd surrounded his son, whom he destined for the throne, Abū Ṭāḥṣin was impatient to reign. He caused his father to be imprisoned at Qana with the intention of putting him to death, but Abū Ḥamūd succeeded in escaping and returned to his capital. On being informed of this sudden reappearance of his father, whom he believed to be dead, Abū Ṭāḥṣin hastily quitted the mountains of Ḥijaz where he was fighting against his brothers and returned to Tlemcen by secret marches. On his approach, Abū Ḥamūd fled precipitately and hid himself in the interior of the great mosque. Abū Ṭāḥṣin joined him there; he appeared to be moved at the sight of his father, and was reconciled with him for a day. Abū Ḥamūd procured his abdication and asked as a supreme favor to be permitted to make the pilgrimage to Mecca. Abū Ṭāḥṣin consented and put at his father's disposition a ship to take him from the port of Qana to Alexandria. On the way Abū Ḥamūd sailed with money and provisions the people charged with guarding him, and was disembarked at Banglo; ~~there~~ there he returned triumphantly to his capital in Raḡab 790 (July 1388) and took the reins of government into his hands again. Meanwhile Abū Ṭāḥṣin, meditating revenge, had taken refuge at the Court of Fez, where his intrigues met with all the success he promised himself from them. At the end of a year he reappeared on the territory of Tlemcen at the head of a Moroccan army, which outnumbered that of Abū Ḥamūd on the 1st Rabi' al-Thani 791 (24th November 1389) at al-Qahṣa on land of the Beni Warml. The result of this encounter was that the troops of Abū Ḥamūd were routed and Abū Ḥamūd himself killed. His head was carried to Abū Ṭāḥṣin who gazed on the horrible trophy unmoved.

When this wicked son had thus accepted the power, he seemed to wish to redeem his crime by imitating the good administration of Ashikaga and by encouraging art and letters. The feasts at the Masaki were celebrated, as they had been in the reign of his father, with great pomp. But it was above all in warlike expeditions that this king showed his military worth and the qualities of a man of action and energy, things his father lacked.

For the rest he was arrogant, violent, cruel and debauched, and the Arab chroniclers, al-Tamari in particular, were full with too many flowers. He it was, who in the lifetime of his father caused the secretary and confidant of the latter, Yahya b. Khalid, to be assassinated from jealousy. He was not contented with having caused his father's death, and as soon as he had the power, he caused many of his brothers to be put to death.

He had succeeded in reaching the throne thanks to the support of the Marinids of Fez and on condition of renouncing their vessel. He was faithful to his engagements on this side, but it seems that he would not have delayed long in shaking off the yoke of this troublesome suzerain if death had not struck him on the 17th Rabi'ul 795 (29th May 1393) after a reign of 3½ years (Nov. 1389 to May 1393). His tomb has been found by Herzog at the ruins of the old castle at Niamey.

ABU THAWR *Abd al-H. Thawr* *Abd al-H. Thawr* *Abd al-H. Thawr*.
 Abu-Thawr *Abd al-H. Thawr*, a jurist-consult. Originally
 he belonged to the 'Adhlan school, but later he
 joined al-Shafi'i, whose older (Maghriban) writings
 he transmitted to posterity. In many respects,
 however, he deviated from his master's teaching,
 and became the founder of a school of his own,
 the teaching of which still in the fourth century
 of the Hegira was well-spread in Amurath and
 Ashharahidkin. Abu Thawr died in 240 (854) or 246
 (860) in Bagdad. Nothing of *his* works has been
 preserved.

Bibliography: *Pierrot*, l. 20 (comp. ii. 91); *l'hu* al-Sabbā, i. 227-231; al-*Ḥabashah*, *Tadhkirat al-Ashraf*, li. 94 (cl. 8, N^o. 115); *Wüstensfeld, Schäffgen*, N^o. 12. With regard to his tenting comp. the *Ḥabshah* works (e. g. Tabari) (M. KARK).

ABU TUMES, a mountain 5551 metres high in the northern part of the Hawass mountain-range (Mehal el-Bay). Recently it became famous through the fact a Druze sanctuary, consecrated to the Allah (Mekah), was erected on its top. The Druze sanctuaries resemble very much the Muhammadan ones in their architecture. A saint is called by the Druzes just as by the Mussulmans *Wali* or *Shaykh*. The reason why a sanctuary was erected on Abu Tumes for the Mekah is, because, it is said, the latter appeared in a dream to a Christian of Hawass, telling him that he lived on that mountain and expiating his wish to have ~~some~~ a *Waffen*. Among other saints, al-Khidr is particularly worshipped by the Druzes on a high, isolated mountain.

Hilbigers p. 15: *Revue biblique*, 1904, p. 429:

108 et 109. (LITMANN.)

ABU TURAB (father of dust), the
 A'waz of the caliph 'Alī b. Abī Tālib, which is
 said to have been given him by Muhammad, and
 which is considered by the Shi'ites as a laudatory
 surname. Nädiche (in the *Erörterung d. Orientalisch-
 Historisch-Gesellsch.*, III. 29 et seq.) however, thinks
 that A'waz has rather been given 'Alī by his
 enemies as an injurious surnome; this is also
 the opinion of Sarasin (*Lehrbuch des arabischen
 Sprachunterrichts*, II. 34). But, as the Shi'ites

the scholar Abū Tūsh is a homonymic name, it is often met with in the later epoch, e.g. the celebrated (244) Abū Tūsh al-Nāḥḥāḥī (d. 245 = 854), about whose supposed work (whether he gives an interesting notice in his *Adnamur*, *Sind.* ii. 134) Goldziher also remarks (*loc. cit.*, p. 121) that the followers of 'Alī are sometimes called Tūshīya.

ABU 'UBAID al-ḤAM L. ḤALLAM al-ḤAḤḤ, philologist, jurist and dialectician, born at Hama in 154 (770); his mother was a Jewish slave. He studied in Hama under al-Aḥḥāl and Ibn al-Aḥḥāl. He, however, did not confine himself like his teachers to linguistic studies, which in his time were even for him the center of interest, but he also passed for a man thoroughly versed in law. Thus he began his career as educator in the family of Ḥarḥama, who had become in the year 189 (804) governor of Khirāsān, and then at the house of Ḥabīb b. Ḥayr b. Ḥallik, the governor of Ḥama; in the latter town he was afterwards appointed judge, which office he held 18 years. The later governor of Khirāsān, 'Abd Allāh b. Ḥabīb, also was a generous patron of him. Afterwards he lived at Bagdad, and he died at Ḥama or in Medina, about 223 (837), after he had performed the pilgrimage.

His principal work is a large dictionary: *Ḥikmat al-muḥḥḥāḥ*, 12 000 chapters, on which he is said to have worked 40 years (BIBL. in Cairo, *Khalīḥ*, iv. 176, and Constantinople, *Aya Sofya*, No. 476; comp. Goldziher, *ibid.* *Arab. Philologie*, i. 78). His *Ḥikmat al-muḥḥāḥ*, a work on the rare expressions in tradition, is also highly esteemed; comp. de Lange, in *Die Zeitschr. f. Deutsch. Morgenl. Gesch.*, xviii. 781 et seq.

His collection of proverbs *Ḥikmat al-muḥḥāḥ*, also called *al-Muḥḥāḥ*, has been printed at Constantinople as No. 2 of the collection *al-Tahḥa al-Ḥalīḥ*; comp. also E. Barthel, *Libri proteriorum Abu Ubaid Elmagdali filii Ḥichamati historici dicitur, necnon et scriptura dicitur*, in *cf. lat. var. script.*, in *ibid.* *Göttingen* 1830. This *Ḥikmat al-muḥḥāḥ* is not to be confounded with the collection of proverbs of al-Muḥḥāḥ b. Ḥallam [q. v.]. Of his other works, more than 20 in number, only the *Ḥikmat al-muḥḥāḥ* has been preserved in a later edition (Schwarz, *Verz. d. arab. Handschr.*, No. 441). Al-Buhārī in *Ḥikmat al-muḥḥāḥ* (ii. 27) has inserted an extract from 'Ubaid's *Ḥikmat al-muḥḥāḥ*, and his *Ḥikmat al-muḥḥāḥ* (*Ḥikmat al-muḥḥāḥ*) is quoted in *Ḥikmat al-Arab*, vii. 263.

[BROCKELMANN.]

ABU 'UBAID ALLAH al-MUḤḤA L. 'UBAID ALLAH b. 'UḤḤ al-Aḥḥāl, a eunuch. Abu 'Ubaid Allāh is mentioned as early as the reign of al-Ma'mūn. When the latter sent his son Muḥammad against the rebellious governor of Khirāsān, 'Abd al-Ḥabīb b. 'Alī al-Kalālī, Abu 'Ubaid Allāh accompanied the expedition. After the accession of Muḥammad al-Mahdī, Abu 'Ubaid Allāh, whose knowledge of the ancient Arab poets was greatly prized, was appointed secretary to the caliph. He soon acquired a great name at the 'Abbasid Court and was promoted

higher. In the long run, however, he could not escape the jealousy of the other officials, and after he had been viceroy for several years he fell a victim of the intrigues of the chamberlain, al-Ḥabīb b. Ḥamza. In order to attain the vice, al-Ḥabīb accused the latter's son Muḥammad of heresy. The caliph had him summoned and put a sword in front of him, and, as the unfortunate wretch could not read very well, this was taken as a proof of his free-thinking tendency; he was therefore executed. This took place in the year 164 (777-778). Some time later Abu 'Ubaid Allāh was deprived of the vice, and in 167 (783-784) was dispossessed also of his office in the chancery. He died in the year 169 or 170.

[E. V. ZETTERSTEDT.]

ABU 'UBAIDA al-ḤAḤḤ, more properly, Abū 'Ubaid Allāh al-ḤAḤḤ, of the Balḥārī family, one of the ten believers, in whom Muḥammad is said to have promised Paradise. He embraced Islam very early and distinguished himself by his bravery and nobility, on account of which the Prophet named him al-Aḥḥāl. He listened to the Prophet's help in the battle of Uhud, accompanied him in all his campaigns, and had the command of the troops in several expeditions. Later on he was sent to Ḥabīb, to train there the submitted tribes in Islam; he also played a prominent part in the election of the first caliph. He was sent by the latter, at the head of a number of troops, to Syria, and when 'Umar became caliph, he received the supreme command over the Syrian army, and conquered Damascus, Hama (Ḥama), Antioch, Aleppo, etc. He died in the year 16 (39) of the post of Amra. His tomb is said to be found in the Ḥamā al-Ḥabīb in Ḥama.

Bibliograph.: Ibn al-Aḥḥāl, *see index*; Ibn al-Aḥḥāl, *ibid.* 24: v. 249; Sprenger, *Die Leben und die Lehre des Muḥammad*, i. 432 et seq.

ABU 'UBAIDA al-MUḤḤ, al-MUḤḤ al-ḤAḤḤ, celebrated philologist, born in 110 (728). His enemies asserted that he was of Jewish descent, and it is certain that he was not a member but a client of the tribe of Tam. Therefore he defended the rights of the non-Arabs, and belonged, as Goldziher has shown it, to the *Ḥabīb* (q. v.). He is also said to have been a *Ḥabīb*, which, however, must be understood, that he agreed with the *Ḥabīb* only in what regards certain questions, so that there was some *Ḥabīb* in style him a heretic. He was many opinions, who even asserted that he could not fluently recite a single Arabic verse in reality, however, he was — as in Goldziher's opinion — one of those that had the most extensive knowledge of the language and ancient literature of the Arabs. He wrote more than 100 verses, the titles of which have been handed down to us, and died about the year 110 (728).

2. Abu Zaiyan II MUHAMMAD b. MUHAMMAD b. Ali Tammam I b. Ali HAMMAM MUHAMMAD b. Ali SA'ID Tammam b. Vahid Muhammad was proclaimed king at Tlemcen, on the 22 Rajab 761 (30th May 1360), by order of the Marabout sultan Abu Salim Ibrahim, who had just seized that town. But, as Abu Salim was obliged to leave Tlemcen in order to go to repress some revolts in the Maghrib, the Zaiyanide sultan Abu (Ismah) II profited by that opportunity to drive his cousin Abu Zaiyan from his capital and to seize definitely the power in 762 (1360-1361). After several fruitless attempts to recover Tlemcen Abu Zaiyan was forced to seek shelter in the Tunisian desert, where he disappeared.

3. Abu Zaiyan III MUHAMMAD b. Ali HAMMAM MUHAMMAD II (the chief of the younger branch of the Zaiyanide sultans, who had been governor of Algiers in the lifetime of his father Ali), after the latter's death, having fruitlessly tried to struggle with his brother Abu Tashfin II, who had seized the sway, he fled to the Court of the Marabout sultan Abu'l-Abbas Ajunad, whom he implored for help (792 = 1390). Abu Tashfin II died towards the middle of 793 (May 1391), and he was succeeded by his brother Yusuf, who refused to recognize the supremacy of the sultans of Fez. Then Abu'l-Abbas Ajunad undertook an expedition against Tlemcen; Yusuf was overthrown and Abu Zaiyan III installed in his place (Muharrar 796 = Nov.-Dec. 1393).

Being a faithful vassal of the Marabout of Fez, Abu Zaiyan patronised letters and poets. He tried to obtain through the scholars, whom he gathered around himself, and the artists, whom he supported, the splendor of his Court, which he failed to obtain through warfare feats. But his reign did not last long; first driven from the throne by his brother Abu Muhammad 'Abd Allah, he was re-installed in Fez (1398).

Bibliography: Ibn Khaldun, *ihbar*, vii. 148 et seq.; 363 et seq. (*Hist. des Berb.*, li. 220 et seq.; 460 et seq.; li. 400 et seq.; 19459); al-Salim, *Kitab al-Istislah*, li. 140 et seq.; Barges, *Hist. des Beni Zayyan*, p. 97; liana, *Complément de l'Hist. des Beni Zayyan*, p. 257; Cour, *Les derniers Merinides* (Alger, 1872), d'Alger, 101 mm. 1903, pp. 105-106).

4. Abu Zaiyan IV AHMED b. Ali MUHAMMAD 'Abd Allah, the last but one sultan of Tlemcen, the Abu Muhammad 'Abd Allah's death,

his two sons, Abu Ali 'Abd Allah Muhammad and Abu Zaiyan Ahmed, contended for the throne. Abu Zaiyan was supported by the Turks of Algiers and his brother by the Spaniards of Oran. Abu Zaiyan seized the throne through armed force and had himself proclaimed king in 947 (1540). Abu 'Abd Allah sought refuge with the governor of Oran, Count Alexander, and asked his assistance, engaging himself in return to recognize the sovereignty of Spain. A military expedition, commanded by Don Alfonso de Marrone, was undertaken to take of the disappointed prince. But the Spanish troops were made to stop about 12 leagues from Oran and routed by Abu Zaiyan's cavaliers that were much superior in number. Nearly all the Spaniards, among whom the commanding general, perished in that battle, which was so bloody that the place where it was fought received the name of *Juhal al-difia* (the mountain peak of death). This took place in the very beginning of 1543.

The Spaniards, however, avenged this defeat before long. An army, consisting of 9000 footmen and 300 horsemen, entered Tlemcen, drove Abu Zaiyan away, and installed there Abu 'Abd Allah Muhammad (30th Muh't-ha' 949 = 7th March 1543). The town was given over to plundering, while Count Alexander pursued the Muslims Abu Zaiyan and his followers. On their way back, the troops of the Spanish governor were harassed by the Arabs till they arrived at Oran. At the same time, the sovereignty proclaimed by the Spaniards was driven away by his own subjects. The latter recalled Abu Zaiyan, who reigned since then till his death 957 = 1550).

Abu Zaiyan had declared himself the vassal of the Turks and had the public prayer of Friday (*Jumu'ah*) recited in the name of the sultan of Constantinople.

(A. Cour.)

ABU ZAIYAN MUHAMMAD, the name of five Marabout kings

1. Abu Zaiyan MUHAMMAD, son of the Marabout sultan Abu 'Iman Fala. The latter, while seriously ill, had designated Abu Zaiyan for the succession to the throne, indicating him at the same time the elder Musa b. Is'ad-Agha as his prime minister. The illness of the monarch was growing worse, and the vizier, in order to avoid the competition of pretenders, wanted to hasten his master's recovery to the throne. He, accordingly, spoke of it in the principal personages of the Marabout Court, who recognized Abu Zaiyan as sovereign.

But just as the people feared Abu Zaiyan on account of his severity and harshness towards them, was over by the elder Abu 'Iman b. 'Omar al-Fudadi, they, with the complicity of the

abdul aziz, proclaimed sultan another son of Abu Tash, called Muhammad al-Sayid, a child of five years. Then, Abu Tash, excited by soldiers, went to the royal harem, where Abu Zayyan had fled for refuge, and compelled the latter to pay homage to the young sovereign. After this, he forced Abu Zayyan to some deserted room of the palace, where he strangled him. This took place on the 24th Dhul-Hijjah 759 (27th November 1358), or according to others, Wednesday the 25th Dhul-Hijjah of the same year.

2. **ABU ZAYYAN MUHAMMAD**, the son of Prince Abu Abd al-Kalam, Yakub and grandson of the Marinide sultan Abu l-Hasan, took, when ascending the throne, the surname of al-Muwakkil al-Bal. Since 750 (1349) he sought shelter in Spain, at the Court of the emir of Granada, in order to escape the persecution that his family suffered at the hands of his uncle, Sultan Abu Salim. The latter, however, through his intrigues, compelled him to quit Granada and to flee to the Court of the Christian king of Castile, who received him well and assigned him a residence. After the examination of Abu Salim, the vizier Umar b. 'Abd Allah al-Yahudi had at first the Marinide prince Abu 'Umar Tashfin, a man morally incapable of occupying himself with state affairs, proclaimed king; but soon afterwards, unable to resist any longer the Marinide chiefs, the same vizier deposed his own creature, and called Abu Zayyan Muhammad to the throne.

The latter, having signed a convention with the king of Castile, set sail for Ceuta, whence, escorted by the troops of Umar b. 'Abd Allah, he directed his steps towards Fez, the Marinide capital. His cousin, the son of the former Marinide sultan Abu Ali, tried in vain to bar his entrance into the capital. Being thrown back upon Tash, they were compelled to withdraw from the strife, and one of them, 'Abd al-Kalam, went to found a kingdom at Sigilmassa.

Abu Zayyan, after his arrival at Fez, was proclaimed sultan on Monday the 21st Yafre 763 (30th December 1361), but in reality the vizier Umar was the only ruler. In order to be in the good graces of the Marinide chiefs, Umar married a wife of the family of one of them, namely of Vizier 'Ubayd b. 'Abd b. Mas'ud, and made his friend 'Amm b. Muhammad, the governor of the city of Morocco, marry a Marinide princess. But in spite of his intrigues the latter two chiefs revolted shortly afterwards and proclaimed two other sultans, one at Morocco ('Abd al-Mu'izz b. 'Abd), and one at Fez ('Abd al-Kalam b. 'Ali). Umar, however, defeated Ibn Mas'ud and negotiated with the governor of Morocco.

The sultan Abu Zayyan was conscious of his dangerous situation and wished to free himself from Umar. But the latter surrounded him with spies, who were even among the women of his harem. Thus when Umar b. 'Abd Allah learned of the sultan's intentions, he got rid of him. On the 22nd Dhul-Hijjah 767 (30th August 1366), in the morning, the sultan was found dead in a well of the garden called Hawd al-Bayhan. Umar spread the rumor that the sultan, having become drunken, fell there by accident and was drowned; but in reality he had first strangled by one of the eunuchs, then thrown into the well. He succeeded, at Umar's suggestion, by the

Marinide prince 'Abd al-'Aziz, the son of Sultan Abu l-Hasan.

3. **ABU ZAYYAN MUHAMMAD AL-SAYID**, son of the Marinide sultan Abu Tash 'Abd al-'Aziz. The latter, after he had seized Fez, fled thence and died. The vizier Abu Tash b. 'Ubayd b. al-Kas, informed of the event by the emissaries of the sultan, immediately took upon his shoulders the young Abu Zayyan, a child of five years, and brought him to the troops, who proclaimed him king on the 22nd Rajab 774 (21st December 1372). Since then the vizier Ibn 'Ubayd ruled in the name of the young prince. But this minister was not able to prevent either the ex-sultan of Tlemcen, Abu Hassan, from retaking his capital, nor the emir of Granada from fomenting insurrections and raising on all sides pretensions to the Marinide throne. The emir of Granada claimed his underhand challenge to be legitimate on account of the shelter and protection that the sultan of Fez had offered his former minister Ibn al-Kasbi. Finally, on the 6th Muharram 776 (17th June 1374), Abu l-Hasan Muhammad, son of the Marinide sultan Abu Salim and one of the pretenders stirred up by the emir of Granada, deposed himself master of Fez, deposed the young sultan Abu Zayyan, and had himself proclaimed the only Marinide ruler.

4. **ABU ZAYYAN MUHAMMAD AL-MU'IZZ** b. 'Ubayd, son of the deposed Marinide sultan Abu l-Hasan 'Ubayd b. 'Abd Salim. The Marinide sultan Muhammad b. Abu l-Fatih having died suddenly, though he had no children, he was succeeded by the vizier Yakub b. 'Abd b. Mas'ud, the latter hastened to have the young Abu Zayyan, a child of five years, proclaimed sovereign on the 3rd Ramadan 783 (21st September 1386). But the young prince had scarcely been installed, when a revolt, fomented by three viziers dissatisfied with their colleague Yakub, brought to power a candidate supported by the emir of Granada. The new sovereign, al-Wahid b. 'Ubayd, deposed Abu Zayyan on the 15th Shawwal 788 (19th November 1386), after the latter had reigned 43 days.

5. **ABU ZAYYAN MUHAMMAD AL-WAHID** b. 'Ubayd, son of Abu l-Fatih and grandson of the Marinide sultan Abu l-Hasan Abu Zayyan was in Spain, a refugee at the Court of the emir of Granada, when, after the Marinide sultan Muhammad had been deposed, the vizier Ibn Mas'ud offered him the sovereign power. He accepted the offer, and the fact that in the meanwhile Abu Zayyan al-Mu'izz was proclaimed king did not prevent him from proceeding on his journey to the Marinide capital. As he was supported by the emir Mas'ud b. 'Ubayd and by most of the distinguished personages of Morocco, he could easily overpower his rival. Ibn Mas'ud deposed al-Mu'izz and had Abu Zayyan Muhammad al-Wahid proclaimed sultan in his place (15th Shawwal 788 = 9th November 1386).

But Ibn Mas'ud, who had chosen the latter prince on account of his feeble character, could not for a long time rule over the Marinide Kingdom in peace. Having claimed the restitution of Ceuta from the emir of Granada, who had unjustly seized it, the latter dispatched against the Maghrib the Marinide ex-sultan Abu l-Hasan, the head of a numerous army. The emir of Granada endeavored to implant his influence over Northeast

Africa, and willingly encouraged anarchy in the Sultanate family of his neighbors. The parties of both nations struggled with each other for nearly one year in the whole Marinid kingdom. Finally, Abū 'Abdū seized Fez, deposed his rival Abū Zayn Muhammad al-Walīd (5th Rāmān 789 = 19th September 1387), and brought him a prisoner to Tangiers, where he had him executed.

(*ʿIṣṣat*, *dar Sūdā*, ii. 443, 469, 475, 498, 503 et seq.; iv. 317, 358 et seq., 400, 436, 439 et seq.); *Riḥlat al-muṣṭafā fī al-sharṭiyyat* (Paris, 1815, No. 41 of the *Madness of Tlemcen*), fol. 571 et seq.; Ibn al-Kaṭīb, *Quṣṣat al-sharṭiyyat* (Fez, 1399), pp. 130-131; al-Salṭi, *ʿAḥad al-sharṭiyyat* (Fez, 1312), ii. 201, 225, 233 et seq.; Makṣūṭ (Cairo, 1302), iii. 378 et seq. (A. Cota.)

ABU ZAKARIYĀ Yaqūb b. Abī Baxā, a native of Wargla, author of the historical work on the Rustemides and the Maghribi Abādhites, entitled *Kitāb al-sharṭiyyat al-sharṭiyyat*. This work has been discovered in the 13th and translated into French by Masquary, under the title of *Chronique d'Abū Zakariyā* (Algiers, 1878).

The Abādhite chroniclers Dardjūn and Shammākhī, who based their historical and biographical works principally on Abū Zakariyā's *Chronique*, give very little information concerning this author, and indicate neither the date of his birth nor that of his death. All that is known from Dardjūn's *Kitāb al-sharṭiyyat* is that one of Abū Zakariyā's teachers was Abū Bakr al-Sulṭānī b. Yuhayr al-Sharṭi (d. 471 = 1078-1079). We may thus suppose that the *Chronique* was written either at the end of the 5th or at the beginning of the 6th century of the Hijra.

After Ruyveier, who, on returning from his travel to the Sahara, brought a manuscript of al-Shammākhī's work, the honor for signalling the importance of the Abādhite works is due to Masquary. The *Chronique* of Abū Zakariyā, of which the latter published a French translation, though imperfect, and showing in several places the author's inexperience, furnishes valuable information about the history of the Imāmīte, the Rustemide dynasty and the beginning of that of the Fātimides. The value of this *Chronique*, the publication of which is very desirable, was spread as far as into the East. It is from it that the European authors of the *Kitāb al-sharṭiyyat* (a work which was the basis of the history of the Imāns of Fez translated by Badger) drew his information about the Abādhites of North Africa (R. Barret, *Les musulmans du Djebel Nefusa*, Paris, 1869, p. 61).

The *Chronique* of Abū Zakariyā is the most ancient document regarding the history of the African Abādhites written by one belonging to that sect. It was almost exactly reproduced by Dardjūn in the first volume of his *Kitāb al-sharṭiyyat*, which is yet unpublished. Shammākhī used it to a great extent for the work in his *Kitāb al-sharṭiyyat* (Cairo, 1301) devoted to the introduction and development of the Abādhite doctrine in the Maghrib as well as to the history of the Rustemides (A. de Motville).

ABU ZAKARIYĀ Yaqūb b. Abī Baxā, a. Amīr al-Sharṭi al-Sharṭi, a native of Wargla, in the Djebel Nefusa, an Abādhite doctor, quoted by Shammākhī (*Kitāb al-sharṭiyyat*, pp. 135

et seq.) at one of the lights of his epoch. He studied under the teacher Shāhī Abū Bakr al-Sulṭānī b. Abī Bakr in the mosque of Fez. He professed so much by the teacher 13th his teacher that, Shammākhī says, when he came back to his country, he spent six months in answering to questions addressed to him on every branch of science without ever being puzzled at a single point.

He left diverse works on the *ṣarṭ*, one of which, on fasting, is to be found in a collection autographed in the Rustemide printing establishment in Cairo. His principal work is the *Kitāb al-sharṭiyyat*, autographed in the same place in 1305, with marginal notes of Shāhī Muḥammad Abū Saṭta al-Kaṭīb. It comprises seven books: 1. *Tawḥīd*; 2. *ʿAḥad*; 3. *ʿAḥad*; 4. *ʿAḥad*; 5. *ʿAḥad*; 6. *ʿAḥad*; 7. *ʿAḥad*. This volume seems to be only the first part of a complete treatise on Abādhite legislation written by this author, which is quoted in a catalogue of al-Sharṭi (A. de Motville, *Les musulmans du Djebel Nefusa*, p. 12), with an indication of seven parts that it comprises: fasting, marriage and divorce, testament, judgments, salaries, right of prescription, and pledges (comp. also de Motville, *Les musulmans du Djebel Nefusa*, Paris, 1869, p. 62; *Les musulmans du Djebel Nefusa* de Abū Bakr al-Sulṭānī et de Tlemcen, Algiers, 1883, p. 36).

It has been said above that the book on fasting has been separately published. The book on marriage and divorce has also been separately autographed with marginal notes of Shāhī Muḥammad Abū Saṭta. These different treatises were the principal source for the chapters on the same subjects in the *Kitāb al-sharṭiyyat* of the Shāhī Abū al-ʿAṭa. The *Kitāb al-sharṭiyyat* of Shammākhī furnishes no chronological indication regarding Abū Zakariyā (A. de Motville).

ABU ZAKARIYĀ Yaqūb b. Muḥammad (See *ABU ZAKARIYĀ*).

ABU ZIYA (Arab. *Ḍiyā*) Tawḥīq Bī.

(See *TAWḤIYQ BĪ*).

ABU'AM, capital of Tāhālet. Like the other parts of this province, Abū'Am has been visited only by a very few Europeans: Reul, 1811, Reul, 1811, Reul, 1811, Reul, 1811. It is a very important commercial center. Before the French occupation of Fez, Abū'Am had centralized the commerce of Sūdān, Sūdān and Southern Morocco. Many merchants of Fez have settled there; a market is held there twice a week and is very animated. Dates, salt and oil are the chief native exchange products. The leather of Tāhālet is very renowned in North Africa; the dates are the best of the region, but they are inferior to those of Southern Constantine and Southern Tunis. A little to the east of Abū'Am there is the town of Māla. All about the great city of this region and the founder of the present reigning dynasty of Morocco; it is a much frequented place of pilgrimage. At a distance of about an hour from Māla is the town of Rīḥān, the residence of the authorities. At a little distance to the west are to be seen the ruins of the celebrated Sijjūmān (i. e., now called *al-Madīna al-sharṭiyyat*), the red city.

ABUBACER. (See **ABU'AM**.)

ABUKIR (Buhir), name of various places in Egypt:

1. A small Egyptian seaport of 1668 inhabitants on the Mediterranean Sea, after which are called the bay, the island — also called Nelson Island — and the lake (see **Nº 4**) near it. It is situated 23 kilometres (13 miles) east of Alexandria on the Rosetta (Rashid) railroad, and belongs now to the district of the environs of Alexandria, in the government of the latter town; formerly it belonged to the district of Damietta in the province of al-Bahariya. This place, which is perhaps identical with the ancient Buhira, is not mentioned by the ancient Arabian geographers; still Abu'l-Fida and Kalqandandi knew the lake of Abukir. All that is known of the history of Abukir in the Middle Ages is the invasion of the Franks in 764 (1362-1363). Abukir was much spoken of only after the naval battle, which is called after it, had taken place in the Bay of Abukir on the 14 of August 1798. The English under the command of Nelson destroyed the French fleet that covered Bonaparte's expedition to Egypt. One year later, Bonaparte defeated, also by Abukir, the Turkish troops that had landed there (agst July 1799). Finally on the 3rd March 1801, there landed at Abukir the English expedition, which put an end to the French domination in Egypt.

Bibliography: *Diction. géogr. de l'Égypte*, 1898, p. 34; 'All Mubarak, *al-Bihar al-Bahariya*, x. 13 ff. 14; Djabarti, *Asfar al-Bihar* (Cairo, 1297), iii. 1 ff. 2; (French trans.) *Mémoires géographiques et historiques*, Cairo-Paris, pp. 60 ff. 61; A. Bonnier, *Recherches géographiques et géologiques sur l'Égypte et le Soudan*; Sir H. T. Wilson, *History of the British expedition to Egypt*; see also F. Kricheldorf, *Topographie Nubienne*, pp. 50 ff. 51.

2. A small place in Lower Egypt, belonging to Soronhal in the district of Rosetta, province of al-Mahadra. Comp. *Diction. etc.*, *loc. cit.*

3. A spot in Upper Egypt, belonging to the city of Assuan, in the district of Iktar (al-Akhar), province Kena. Comp. *ibid.*

4. A large lake of 30000 acres formerly stretched landward behind the city of Abukir (**Nº 1**) and now dried up in the time of the French expedition the lake — also called then al-Mudaya — was still connected with the sea. The narrow plain in the east, which separated it from the Sea of Bika (Rashid), was also perhaps broken through at certain times. In the west it is bounded by the narrow strip of fertile land, through which passes the *Mudaya* of Alexandria, the present Mahmudiya Canal. Then follows, to the west, the Lake of Marouta, which was dried up in the Middle Ages and which was submerged again by the English only at the time of the siege of Alexandria in 1801. At that time the water of the Lake of Bika was conducted to the fertile land. Later on the connection with the sea was cut off, and from 1888 the whole lake was drained by an English company and dried up. Now it is a specially productive cultivated land.

The lakes of Buhir and Ebu were, according to Arabian tradition, fertile troops of land in the time of the Pharaohs and partly also under the caliphs. Legend relates their origin as follows: The wife of a Pharaoh, to whom these lands belonged, on a sudden required money for the clothes of the vineyard, that were to be paid to her; the peasants could not afford it, and she had those lands submerged. Her parents' statements connect the origin of the lakes with the neglectfulness of the caliph, the removal of the cemetery of the Nile and strong spring-tides. Such a strong overflow of the sea is said to have occurred in 730 (1330).

Bibliography: 'All Mubarak, *loc. cit.*; Kalqandandi (Cairo, Wilcocks) pp. 20, 99; Abu'l-Mahasin (ed. Jayni, at Matruh, i. 504; *Étude sur la Topographie de l'Égypte*, *Revue moderne*, ix. 192, 193, 194, 195; *ibid.* 197; W. Wilcocks, *Egyptian Topography* (2d ed.), p. 245, *passim*.

5. *Abukir al-Mudaya* is the name of a legendary mountain for of a place in a certain mountain in Egypt, in which the birds flock once a year. All of them put their heads in a cleft until one remains there suspended dead. According to Yaqut and others, the birds that flock on this mountain (commonly called *Abukir al-Tair*) are called *Buhir*. The mountain was supposed to be situated near Assuan in Upper Egypt.

ABUKIRIA, English mispelling of the Arabic *Abu'ir*, the name of a watering place on the common road, which runs from Darghah through Kait (Kait, on the Nile), avoiding the Nile river of Barhet, directly to al-Masara, on the Upper Nile, and then further to the Sudan. *Abu'ir* is situated between 27° and 28° north lat., a little northwest of al-Masara. Its mission is merely that of a boltham military tent of the English against the troops of the Mahdi Muhammad b. 'Abd Allah. In order to rescue Gordon (included in Khartoum), the expedition of Lord Wolseley to Khartoum was undertaken in the autumn of 1884. In Kait Wolseley divided his army into the *river column* and the *desert column*. The latter, consisting of 1800 men with 1800 camels, was to push from Kait to al-Masara through the desert. The Mahdi's army endeavored to prevent it in all possible manner, and so it came to several fights, the most important of which, the one near Abu'ir (17th January 1885), is celebrated as a decisive victory of the English. The English had 74 dead and 33 wounded; the enemy lost about 1200 men. The *desert column* of the army on the Mahdi's camp is captured by Staff Captain in his *Five and ten* in the Sudan, p. 319.

(C. H. Beckers.)

ABUMERON, mispelling of *Abu'ir*.

(See **ABU'AM**.)

ABUSHENH. (See **ABU'AM**.)

Abyssinia, of which, however, they endeavored to rid themselves. In the course of the 13th and 14th centuries a pretty large number of Mussulmans penetrated into Abyssinia (in Spor and up to Begamed); the first king of the Solomonic dynasty, Yekuno Amleh (1270-1285), is said to have persecuted the Muslims. This was the cause of a series of wars, chiefly renowned for the victories of Amda Seyon (1314-1344) over the kings of Adal: Sahle al-Din, Ighamal al-Din, etc. These wars were continued by Amda Seyon's successors: Narsaye Krestos (1344-1373), Dawit (1373-1411), Yekuh (1411-1440), Zar'a Ya'qob (1434-1468), Balda Maryam (1468-1478), Teklemed (1478-1494), etc. Balda Maryam's conquests subjected also the king of the Tana'il (Afar), a Mussulman tribe, which up to these days occupies the region between the Red Sea and the Abyssinian plateau. In the beginning of the 16th century Islam in Abyssinia was in complete decadence.

For two centuries the theater of these wars was in general not of Abyssinia proper. In 1501 the sultan of Adal, Abil Bekr b. Muhammad, removed to Harar the seat of his government, thus putting it in close contact with Shoa and Abyssinia. Shortly afterwards there began the great invasion of the Somali chief, Ahmed b. Muhammad Grib, who, supported by the artillery and the troops which the Turkish pasha of Zala had sent him, penetrated into Abyssinia up to its northern frontier, ravaging the country repeatedly, and even burning the famous cathedral of Axum. The history of this conquest by 'Arab Fakih (written towards 1543) is the only Arabic work that mentions many places in Abyssinia. In 1544 Grib was defeated and killed by King Galawdewos (reigned 1540-1559), who in his turn was, in March 1559, vanquished and killed by Nkr al-Din, Grib's successor. Two years previously, Harar was occupied by the Turks, who, thanks to the assistance of the Veshak, the governor of the muslim province, seized the neighboring towns, even Debata, the capital of that province. Veshak, having revolted against King Sarja Dengel (1563-1597), made an alliance with the Turks, but they were beaten in a great battle near Abbi Gurm in 1572. In 1584 Sarja Dengel defeated near Aricho the Turkish pasha Kauldew, who perished in the battle.

Owing to these victories of Sarja Dengel and to that which he won over Muhammad IV, king of Adal, in 1577, and also in the help of the Portuguese, the Mussulmans, either in the north or in the south, were no longer a serious danger to Abyssinia. The Mussulman kingdom of Seannar was also conquered by King Sarja Dengel (Sikulu, 1602-1632). In 1674, Talha, the emir of Adal, was incited by rebels to seize Abyssinia, but he gave them to understand that it was impossible. The Balaw (Bedja), who, towards 1650, had founded the Mussulman State of Samhar, under the name of Askiba, frequently annoyed the people of the frontier, but they felt too feeble before the Abyssinian kings. Thus, in 1693, the us'li Misa (a descendant of Amer Kinnah), having retained certain things, was declared for King Iyasu I, went himself to Axum to implore the king's pardon. Shortly after, in 1697, an emir of the Balaw also was vanquished, and in 1750, under Ras Mikael, the us'li's rebeky of independence was immediately centralized.

Still, there is no doubt that the Muslim invasions, and chiefly that of Grib, contributed to Abyssinia being opened to the Mussulmans, that which accounts for the presence of the latter in that country, although the forced conversion imposed by the kings of Adal possibly did not last long. Thus in 1668 the ambassadors of the Imam of Suda, Ismail al-Mutawakkil, found on a short distance from the town a town entirely inhabited by Mussulmans, and in the Eudeta they met with Shafite Muslims; at Gadar, too, Mussulman quarters existed already at that time. Unfortunately there are no circumstantial annals of the reign of Balada (1632-1667), but it is known that in 1668 a council convened by King Solomon I interdicted the Mussulmans to live together with the Christians, and that this interdiction was removed in 1678; this shows that there was a respectable number of Mussulmans in Abyssinia.

In the course of the 18th century the Islamic faith was spread among the Galla (Gorn), south-west of Abyssinia proper and north of Shoa. According to Krapf (Africa, I, 106), the Galla were converted to Islam by an Arab called Debele. Krapf affirms that towards 1830 Islam progressed in Abyssinia, and indeed the tribes of the Tigre language (Northern Abyssinia) that were still Christians in the beginning of the 19th century are now Mussulmans either entirely or in the Habab, Tamenan, Talden, etc., or in a great part, as the Menza, etc.

It is to be remarked that Islam in Abyssinia has been lastly favored by commerce, for in order to enter Abyssinia it was necessary to cross the Mussulman's territory. This circumstance made the Mussulmans almost sole masters of the Abyssinian commerce, which increased greatly their number in that country and procured them great wealth and influence. Ras 'Ali of the Kaba Galla (Gura), who from 1830 to 1835 was very powerful in Begamed, etc., though vanquished himself, favored the Mussulmans and dispensed the Abyssinians; this brought forth a reaction under King Theodore (1835-1868), an implacable enemy of the Mussulmans. This reaction attained its highest degree after the war with the Egyptians, who had occupied (1830-1843) certain provinces in Northern Abyssinia (Hallanga, Adghodan, Sukterzi, etc.), spreading there the Islamic faith. In 1864 they took Massawa from the Turks; in 1875, after having seized Harar and some provinces in Southern and Western Abyssinia, the Khedive sent by the way of Massawa an expeditionary corps, which was annihilated by King Yohannes in the battle of Gindai (17th November 1875); a second Egyptian army, commanded by the Khedive's son, Usman Pasha, was also defeated at Gura on the 7th March 1876. King Yohannes, firmly seated on his throne, promulgated an edict (1880) which compelled the Mussulmans either to embrace Christianity or to leave the country. Many Muslims emigrated to Gindai, and in 1883 the Mussulmans of Serze, Hamman, and other places obtained the permission to remain in the country, but they were separated and confined to two places; those of Serze, for the northern part at least, did not last long. It is also to be borne in mind that before the persecutions of Theodore and Yohannes the Mussulmans were not equally distributed in the different provinces; they were for instance of a

small number to Godjam, but are said to have formed the half of the population of the Wollo and Egiu countries. Now the Mussulmans are very numerous in Koola, while the Christians rather live in Jingo. In Senna there are a great many Mussulmans, they are much less in Dumbek, Godjam, etc. In the Colledja Eritrea there are 200,000 Mussulmans, they consequently constitute two thirds of the whole population. They have four balls (namely, in the towns of Keren, Agnash, Massawa and Asmara) nominated by the Government, which is not the case with the other *Ughs* (of the Hahab, Asmara, etc.). By the tribes of Sahel the office of Imam is hereditary in certain families that do not belong to the tribe; so for instance the Imam of the Hahab belongs to a Derki family.

The Mussulmans of Eritrea — leaving those of Massawa out of the question — form four distinct groups, namely: 1. The Saba and their assimilated (to the south of Sankhar, in South-eastern Eritrea), partly converted to Islam already in the 14th century. 2. The Mussulmans of Sahel and Central Anseba; their Islam, faith is generally recent, but strong enough in Sahel. 3. The Mussulmans of Harja; these are Bedja and Abyssinians who have since long professed Islam and even spread it among the Agchimes and the Harja; the latter pagans until 50 years ago, are now all Mussulmans. 4. The Mussulmans of the Tigre provinces of Eritrea.

Abyssinian Islam for the greatest part professed by Galla nations (Galla, Saho, Bedja, etc.) is not in strict accordance. There exist no theological schools connected with mosques; the few Arabs of Massawa that devote themselves to religious studies go to Cairo to study there in the Ashar Mosque, and very often happens that they do not return to their native country. The religious hitherto, that powerful element of the present Islam, are not known at all in Abyssinia. Owing to this indifference and to the imperfect knowledge of the observances of Islam, the Mussulmans of Eritrea are seen while present at Christian religious festivals and to keep to practices that are in contradiction to Islam.

ACHIR. [See ACHIL.]

'AD, an ancient tribe frequently mentioned in the Koran. Its history may be traced only from sporadic indications; it was a mighty nation that lived immediately after the time of Noah, and which became mighty on account of its great prosperity (Koran, vii, 67; xii, 14). The large edifices of the 'Adites are spoken of in Koran, xxi, 128 et seq.; comp. *Isaia*, 5-6 the expression 'Ad, him of the pillars', where *Iram* may designate either a tribe or a place. According to Koran, xli, 20, the 'Adites inhabited *al-Hijf* (the sand dunes). The prophet sent to them, their 'brother' Hadd, was treated by them just as Muhammad was later treated by the Meccans, and on account of that they were, with the exception of Hadd and a few pious men, swept away by a violent storm (vii, 70; xl, 61; xli, 13; lii, 19; *Isa.*, 6). Finally, in Koran, xl, 54, it is said that they suffered from a drought. These indications give rise to whole legends narrated by the Prophet; it cannot be said with certainty what more ancient elements are in those legends. The ancient poets knew 'Ad as an ancient nation that had perished (*Isaia*, l, 8; *Isaia*, vii, 40; Ibn Hisham, ed. Wüstenf., I, 468; comp. Zuhair, re, 12 and the article *Legende*), hence the expression, since the time of 'Ad' (*Isaia*, ed. Freytag, I, 195, 341). Their kings are mentioned in the *Diwan* of the Hudhailites (*Isa.*, 6) and their presence in that of Nakhla (*Isa.*, 2). The mention of the 'Adites by Zuhair (*al-Mallaha*, verso 32) and in the *Diwan* of the Hudhailites (p. 31) merits consideration, as Mussulman legend puts this (Kaddar) of Ahmar in connection with the Ishmaelites (p. 4). Whether there really existed, and where, a nation called 'Ad is still an unanswered question. The genealogies of the Arabs with regard to the 'Adites naturally are valueless, just as their locating that nation in the large uninhabitable sandy desert between Oman and Hadramaut. The identification of Iram with Aram adopted by the Arabs and several modern scholars is not sure at all. Among the latter, both identified 'Ad with the well-known tribe of 1841; on the other hand, Sprenger sought for the 'Adites in the Indians, who, according to Ptolemy, lived in Northwestern Arabia, which coincides with the time well in Yemen (Hamdani, p. 126; Sprenger, *Die Arab. Geogr. Arabien*, p. 207). But Wellhausen remarked that instead of 'since the time of 'Ad', the expression *al-Hijf* also occurs and therefore he supposes that originally 'Ad was a common noun ('the ancient time', etc.; 'Ad = very ancient) and that the mythical nation arose from a misinterpretation of that word.

(F. FRIED)

ADA, (a. r. t. and others *Adat*, *Adel* = *Adat*, *Adel*), a legal term designating a prescriptive right, which is, in Islamic countries, independent of the canonical law (*Sharia*), made

According to al-Kawshihari, there are, properly speaking, only 23 numerals which have special names in the Arabic language, namely: the numbers 1-10, 100 and 1000; all the others are, from his point of view, formed of them in a secondary manner by means of composition or other combination.

The main peculiarity of the numerals from 3 to 9 is in their masculine and feminine forms; quite in disagreement with the general rule, the *marfūʿ* is affixed to the masculine instead of the feminine form. The different explanations of this phenomenon given by the Arab grammarians (e. g. Ibn Yaʿqūb, l. 776 et seq.) are not very conclusive. Because the isolated numeral ends with the *hāʾ*, it is supposed that this primary form (*as-ṣif*) of the numeral has been retained for the masculine, while the feminine, which is considered as a branch (*ṣarf*) of the latter, retained also in the numerals the secondary form. European grammarians (e. g. Wright, l. § 119, note 2) see in this anomaly an effort to give prominence to the independent substantive nature of the cardinal numbers, by which they differ from the dependent infinitives.

The compound numbers 11-19 have a particular formation; generally they are (with the exception of 12) *muḍāʿ*, and are in their construction with one another that they are treated of by al-Kawshihari (p. 70, § 210), besides in the chapter on the numerals, also in that on compound names (*as-mawāḍiʿ*). In Arabic and in the Arabic dialects they are fused into one word. It is quite different with the numbers 21-99; they are formed by placing the units before the tens and connecting these two by *wa*; both units and tens are declined and in opposition to the numbers 11-19 are also designated only as *muḍāʿ*.

It is known that the numbers 3-10 govern the plur., 11-99 the acc. sing., and from 100 onwards the gen. sing.; the numbers 100-900 have, besides, the anomaly that *wa* is in them in part not in the plur., but in the gen. sing. In larger compound numbers the different elements are arranged in the ascending as in the descending order connected with one another by *wa*.

Just as in the definition of number, the 1 has a peculiar position also in the description of the numerals (Ibn Yaʿqūb, l. 774 et seq., 788 et seq.). The proper word for 1 is, according to the Arabs, *ḥad*, which is, firstly, the ancient designation for the numeral 1 (*ḥad* 'ḥad' 'al-ḥadīd-wāḥid'), and secondly, as adjective derived from *ḥad*. It must not, however, be confused with *ḥad*, which is also of a double nature. The numeral *ḥad* (*ḥad* 'ḥad' 'al-ḥadīd') occurs as meaning 'one' (*ḥad* 'ḥad' 'al-ḥadīd') only in compound numbers, e. g. *ḥad* 'ḥad' 'al-ḥadīd' = 21, and usually in the place of *ḥad*, therefore the *ḥad* is considered as the infinitive (*ḥad*) for the noun. When *ḥad* stands alone, it is then in infinitive position, *ḥad* 'ḥad' 'al-ḥadīd', with a general meaning (*ḥad* 'ḥad' 'al-ḥadīd' = 21), and only in negative propositions, e. g. *ḥad* 'ḥad' 'al-ḥadīd'. This second *ḥad*, in which the *ḥad* is supposed to be radical, is therefore called, in opposition to the numeral *ḥad*, the *ḥad* of negation (*ḥad* 'ḥad' 'al-ḥadīd'). The feminine *ḥad* never occurs alone.

These statements, like all the grammatical remarks of the Arabs, show an enormously great

power of observation, but do not hit at the right point. The proper word for 1 is not *ḥad*, which is Arabic as well as in other languages can be used in an indefinite sense.

The cardinal numbers are also in Arabic called *muḍāʿ* as the real numerals, and are therefore plainly designated as *muḍāʿ* *muḍāʿ*. The other kinds of numerals have no special term. The ordinal numbers have from 2 to the form *ṣaf*, 11-19 are indefinable and from 20 onwards they resemble their corresponding cardinal numbers.

The multiplicative numbers or numeral adverbs have no special term in Arabic; they are for the greater part expressed by means of nouns as *marra*, *ṭawr*, *ḥal* and the like, or by the repetition of the numerals.

The distributive numbers have likewise only in some cases a special term; al-Kawshihari counts this form as *muḍāʿ* in his treatment of the *ṣaf* (p. 10, § 18). The form *ṣaf* is properly speaking not considered as an independent grammatical form, but as one derived from the cardinal or ordinal form. Besides, the distributive number also occurs in the form *ṣaf*.

The *ḥad* formations of the numerals are treated of in a continuous way only by Ibn Sībawayh, 118 et seq., who, besides other details, distinguishes between *ḥad* and *ḥad* (*ḥad* 'ḥad' 'al-ḥadīd') and *ḥad* (*ḥad* 'ḥad' 'al-ḥadīd'). He treats in the most unimportant way of the *ḥad* of numerals compared of units and tens.

The fractions (*al-ḥad* and *al-ḥad*) have the form *ṣaf*, *ṣaf*, and also *ṣaf* (Ibn Sībawayh, 129). As to the more exact grammatical formal as well as syntactical treatment of the above mentioned forms of numerals, comp. the European Arabists mentioned in the bibliography.

The terminology referring to the numbers is very rich. The whole grammatical system is divided into three sections (*muḍāʿ*, *ṣaf*, *ḥad*) of units, tens and hundreds (*ḥad*, *ḥad*, *ḥad*), every one of which is divided again into 9 parts (*ḥad*). The thousands (*ḥad*) are not considered as a special section, but as deriving from the three former sections as *ḥad* *ḥad*, *ḥad* *ḥad*, *ḥad* *ḥad* (Ibn Yaʿqūb, l. 774). The number 1 is also absolute (*ḥad*) and consequently an entire one (*ḥad*), as relative to any named unit (*ḥad* *ḥad* and *ḥad* *ḥad*) and consequently a fraction (*ḥad*, plur. *ḥad*, *ḥad*). The named unit is the denominator (*ḥad*), *ḥad* is the product of a number multiplied by another number, *ḥad* is that of a number multiplied by itself, that is the square. If the former multiplication is continued by either of its two factors (e. g. 3 X 4), the product is called *ḥad* (tridimensional); if the same process is applied to the square of a number the product will be the cube (*ḥad*). In the simple product, each factor is termed *ḥad*, in that of the square, *ḥad* (root), the number itself is therefore called *ḥad*.

An even number is called *ḥad*, an odd one *ḥad*. In case that the division by two (*ḥad*) of an even number can be continued until the quotient comes to 1 (as for instance in 16), the number is then called *ḥad* *ḥad*, if not, it is called *ḥad* *ḥad*, no difference whether the division by 2 can be done only once (as in 6), or more than once (as in 12). Still the explan-

none of the Arabs concerning this are not possible. The prime number is called *al-ʿadad al-ʿawwal* (or *al-ʿadad al-ʿawwal*), because they are all odd, and is defined as a number divisible only by 1 (and itself) in *al-muḥabba* *al-ʿadad*. 1 and 2 do not count as prime numbers, just as in the definition of their figures and their *ʿasas*, these numbers have also in the calculation a peculiar position; the 1 is compared to the point (*nakṣa*), the 2 to the line (*ṣaf*); the 3 and the following numbers to the plane (*ṣafḥ*). As contrasted with the prime number is the compound number (*al-ʿadad al-murakkab*). The term *murakkab* is also used as an appellation to *wasf* (simple); in this case it means a number composed of 2 or 3 of the 3 *ʿasas*, e. g. 12 which consist of a unit and 1 ten.

The general classification of all the numbers in rational and irrational quantities, as it is done by modern mathematicians is not known to the Arabs, and therefore the explanation of the Shāhid (*Maḥabba*, III. I. p. 93, transl. p. 132) does not exactly prove correct. The technical term for rational is *wasf* (expressible); the mathematician Muḥammad b. ʿAbd al-ʿAzīz in the sense of rational, that for irrational is *wasf* (irrational). Properly speaking both these terms are used only with fractions and roots. As the Arabic language has special terms only for the 9 fractions $\frac{1}{2}$ to $\frac{9}{10}$ these are considered as expressible, that is to say rational (those fractions have the numbers 2-10 as denominators); the other fractions are considered as *wasf*, because they are expressed only by transposition (e. g. $\frac{1}{3} = 1$ part of 3). In the same way roots are termed rational when they may be expressed, that is to say solved by a whole number (e. g. $\sqrt{4} = 2$), and on the other hand irrational when they are insoluble (e. g. $\sqrt{2}$). These latter roots are estimated only approximately, and according to a tradition traced up to ʿAlī, only Allah knows them. *Wasf* *al-ʿadad* also designates the rational root. Proceeding from this principle the Arabs call inversely a whole number represented by one of the rational fractions $\frac{1}{2}$ *wasf* *al-ʿadad* (expressible through a fraction) and when it is represented by a rational root they call it *wasf* *al-ʿadad* (expressible through a root).

When a number is equal to the sum of its divisors it is called *ṣāḥib* (complete), e. g. 6; for $1 + 2 + 3 = 6$. If the sum of the divisors is smaller than the number, it is then called *naḥib* (defective), e. g. $4 > 1 + 2 (= 3)$; if it is larger, it is called *ʿadad* (exceeding), e. g. $12 < 1 + 2 + 3 + 4 + 6 (= 16)$. Proceeding from the same principle numbers are called *muḥabba*, when the sum of the divisors of one is equal to that of the divisors of the other, as for instance 29 (the divisors of which are $1 + 2 + 3 + 13 = 19$) and 35 (of which $1 + 5 + 7 = 13$). These numbers, of which the sum of the divisors of each one equals the other number itself, are called *muḥabba* (the same that have each other reciprocally), as 220 and 284; for $1 + 2 + 4 + 5 + 10 + 11 + 20 + 22 + 44 + 55 + 110$ (the divisors of 220) = 284, and $1 + 2 + 4 + 7 + 14 + 28$ (the divisors of 284) = 220.

The numbers in their natural sequence 12345 etc. are called by the Arabs natural or *wasf* *al-ʿadad* (*al-ʿadad al-ʿawwal* or *al-ʿadad al-ʿawwal*). If the numbers follow one another omitting

every second one (246810) they are called, according to they begin with 1 or 2, *al-ʿadad al-ʿawwal* (1 3 5) or *al-ʿadad al-ʿawwal* (2 4 6 etc.). If the numbers are arranged in such a way that the intervals between each two successively increase according to fixed principles, they result in particular series of numbers (*al-ʿadad al-murakkab* or *al-ʿadad*). Thus if the conditions are in the natural sequence of the numerals there results the series of *al-murakkab*: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15; if after the 1 the intervals increase in the order 2, 3, 4, 5, etc. there results the series of *al-murakkab* 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16; if the intervals increase in the order of 3, 6, 9 etc., there results the series of *al-murakkab*: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, etc. It seems that these series take their names from the figure that immediately follows the 1. From the series of *al-murakkab* results that of *al-murakkab*, when the parts of any series are simplified either by addition or by multiplication (comp. *Al-ʿAdad* *al-ʿadad*, pp. 189-90).

(Wright.)

The most essential characteristic of the Arabic numerals is the remarkable fact that the figures have their absolute value and at the same time the one relative to their place. Thus for instance when we write 25, the figure 5 has its absolute value "two" and 25 same time the value relative to its place "two tens", and not "ten units". The 5 has its absolute value "five" and its relative "two, five units"; the whole number designates accordingly "twenty-five". — The priority in this system of writing the numbers and the calculation of the figures, however, is in no way due to the Arabs. The latter rather took them from the Indians, who in any way were the teachers of the Arabs in arithmetic. Formerly the Arabs liked to express the numerals not in their own signs, but in writing them in full. From these words, through abbreviations, came the so-called *ḥisāb al-ʿadad*, in the use of which the single figures of a number are not arranged in the order of their successive magnitude, but according to the linguistic *wasf* in the numbers under 100 the *wasf* are written before the *wasf*, just in the same order as the different parts of a series of numbers are pronounced. Besides, the Arabs used to express the numerals by means of the letters of the alphabet of the *ʿadad* (q. 1) under. Thus, 1 = *alif*, 2 = *ba*, 3 = *ta*, 4 = *tha*, 5 = *jim*, 6 = *dal*, 7 = *zay*, 8 = *ḥa*, 9 = *qa*, 10 = *ka*, 11 = *ga*, 12 = *ḡa*, 13 = *da*, 14 = *ḍa*, 15 = *ra*, 16 = *za*, 17 = *ḥa*, 18 = *ṭa*, 19 = *ṣa*, 20 = *fa*, 21 = *qa*, 22 = *ka*, 23 = *ga*, 24 = *ḡa*, 25 = *da*, 26 = *ḍa*, 27 = *ra*, 28 = *za*, 29 = *ḥa*, 30 = *ṭa*, 31 = *ṣa*, 32 = *fa*, 33 = *qa*, 34 = *ka*, 35 = *ga*, 36 = *ḡa*, 37 = *da*, 38 = *ḍa*, 39 = *ra*, 40 = *za*, 41 = *ḥa*, 42 = *ṭa*, 43 = *ṣa*, 44 = *fa*, 45 = *qa*, 46 = *ka*, 47 = *ga*, 48 = *ḡa*, 49 = *da*, 50 = *ḍa*, 51 = *ra*, 52 = *za*, 53 = *ḥa*, 54 = *ṭa*, 55 = *ṣa*, 56 = *fa*, 57 = *qa*, 58 = *ka*, 59 = *ga*, 60 = *ḡa*, 61 = *da*, 62 = *ḍa*, 63 = *ra*, 64 = *za*, 65 = *ḥa*, 66 = *ṭa*, 67 = *ṣa*, 68 = *fa*, 69 = *qa*, 70 = *ka*, 71 = *ga*, 72 = *ḡa*, 73 = *da*, 74 = *ḍa*, 75 = *ra*, 76 = *za*, 77 = *ḥa*, 78 = *ṭa*, 79 = *ṣa*, 80 = *fa*, 81 = *qa*, 82 = *ka*, 83 = *ga*, 84 = *ḡa*, 85 = *da*, 86 = *ḍa*, 87 = *ra*, 88 = *za*, 89 = *ḥa*, 90 = *ṭa*, 91 = *ṣa*, 92 = *fa*, 93 = *qa*, 94 = *ka*, 95 = *ga*, 96 = *ḡa*, 97 = *da*, 98 = *ḍa*, 99 = *ra*, 100 = *za*. If, for instance, they wanted to express 342, they wrote — naturally, as the other Semites, in the direction from right to left — the corresponding letters of the alphabet: *ḥa ta wa*, in order to

expresses greater numbers, than 100, they composed two or more corresponding letters of the alphabet, as 12 = 500, 13 = 600, 14 = 700, and so on, etc. This, indeed, answered some great extent to the need of knowing how to read and write numbers, but the real aim, to which the written ~~the~~ numbers tended, namely calculation, could not be attained through the hitherto developed and practised methods. Here a number — however large may ~~the~~ the number of units it expresses — presented by written characters could not suffice; there precaution was to be taken that the figures expressing the numbers should have such a shape that they could be taken as the basis for calculation. This was attained by that the Arabs, designed the 9 figures used by the Hindoos and the same also ~~the~~ false relative to their place given to them by the Hindoos. They also agreed the same, in faithful agreement with the usage of the Hindoo language, the emptiness of *zero*, whence, through extension in all the figures, the English "cipher", the German "Null", etc. i. Still the numerical characters of the Western Asia were not distinguished from those of the Eastern Asia. While the former endeavored to imitate the ancient Indian figures, which are now called "Hindoo figures", the Eastern Asia reversed the Indian figures already in their altered form which they then introduced 15th century, Christian era. The manner in which this happened can hardly be established with historical certainty (see concerning this: Cantor, *Vorlesungen über Gesch. d. Mathem.*, 2d ed., pp. 389 et seq., there also the bibliography, Erlangen.)

'**ADAIM**' (**ʿAḡḡā**), an eastern tributary of the Tigris; it is formed at the junction of several rivers, which have their sources in the mountainous tract of and parallel to the Jebel Hamrin, and which in their course from N. E. to S. W. break through deeply cut ravines. The most important of these rivers are: the river of **Kerkūk** — the **Kāra** (**Kharā**, **Kharāb**)-**Čā**; on our maps it figures **1888** under the name **de Kerkūk**, — which does from several sources north of **Kerkūk**, further the **1888** of **Tārk**, the **Tārk-Čā** (or **Čā**), the most important of all, which joins the **Karā-Čā** southwest of **Tārk** (comp. concerning the river of **Tārk**: G. de Saurge, *Les bords de la rivière antipatrie*, Cambridge, 1905, p. 97; about **Tārk** — **Sr. Dayāḡā** — **ibid.** G. Hoffmann, *Amer. Mus. Archiv für Naturgeschichte*, p. 273), and the **Aḡ-Čā**, **1888** called the River of the **Kharmūll**. The latter comes from the **Sodḡmūdagh**, **1888** falls below the place **Tū-Ḥarmūll** into the river of **Tārk** (concerning the latter comp. G. Hoffmann, *ibid.*, p. 273). From this junction onwards, the river is called **al-'Adaim**, or also **Sūd al-'Aḡḡā**, it forces its way through the **Jebel Hamrin**, flows in southern direction across the Babylonian lowland and falls below 34° north lat. and 24° 20' east long. (Greenw.) into the Tigris, emptying for a short distance the fall of the latter which **1888** rather west from its entrance into Babylon. On the stretch south of **Tū-Ḥarmūll** (below **Kerkūk**) all the discharges of the **Aḡ-Čā** the northern and then the united northern and middle source rivers manifest through extended swamps. When the snow melts, the **'Aḡḡā** is conducted through a dried up riverbed, south-east of **Jebel Hamrin**, with the **Nāḡ-Čā** (on the map also **Nārī-Čā**), a tributary of the **Myḡā**.

the intention are able to establish such a communication, when necessary, north-west of the Igboke Narrows, by cutting the generally dried up Nahr-Raddan, which is connected with a tributary of the Diyala. When the channel of the Nahr-Raddan is opened, the water flows into the Diyala and the lower 'Adnan is almost entirely dried up. Towards its eastern the 'Adnan is very scantily supplied with water in the hot season; according to travellers' statements, it is often for weeks entirely dried up in its lower course. Many particulars are still doubtful. The exact course of the various rivers is in many places not yet established with certainty. Great confusion results also from the unsteady nomenclature in the statements of travellers, and partly also on the very spot. Comp. respecting the 'Adnan and Arabian River, *Erdoan*, *ib.* 332 *et seq.* 337 *et seq.*; Müllerbeck, *ib.* 1878, pp. 65-66, 83. The name 'Adnan occurs for the first time in the 14th century — as *al-'Adnan* or *al-'Uqaylun* — by the author of the *Harshad*, see, besides, G. Hoffmann, *loc. cit.* note 2163; comp. also in Mas'udi (p. 1340 A. C.): *Nahr al-'Adnan* the powerful river. It is with the 'Adnan and not with the Southern Diyala that we may most probably identify the Tigris of the cuneiform inscriptions and Tacodorus (Thorns) of the classical writers; see about U. Harnack *Gravities der Tigris u. Tach.* *ib.* 18. *Orient* (2^d ed., Munich, 1904), pp. 3, 293 *et seq.* The lower 'Adnan appears to have once had also the name Raddan shown from the cuneiform inscriptions: the latter name has been preserved in the above mentioned Nahr Raddan, comp. Streck, in the *Zeitschr. für Assyriologie*, x. 375; Fr. Hommel, *Ass. Mus.*, pp. 293-294. It is still questionable whether we may also identify the Tigris of Herodotus with the 'Adnan, comp. Müllerbeck, *loc. cit.* *ib.* 72 *et seq.* and the author's article *Gandak* in Paoli-Wilowski's *Konkord.* d. *klass. Alterth.* *Wörterb.*, v. (STRECK.)

ADAKALE (Ada Isfah), Island capital, no longer in ~~the~~ Danube in the proximity of the Iron Gate (*Devre Isafu*) = New-Orsmova, still now inhabited by Turks. The fortress was repeatedly besieged by the Turks and Austrians and captured, and till 1878 had a Turkish garrison, but was then bestowed to Austria.

AḌAL, one of the Muraiddan States (kingdoms) in East Africa that played an important part in the wars between Sukka and Abyssinian Christians. Mukilā (*Kūda al-ḥimāra* [*Wachter* man b. *ayf al-fahār*] r. *mukal al-ḥimāra*, Calm., 1893, p. 6) enumerates the following seven Islamic States in Southern and Eastern Abyssinia, which he designates as *amallat bilad Zalla'*: Ula, Dawro, Arayaḥu (Amharu), Arabakus, Hadq, Shalka, Hali, Dera. From Abyssinian chronicles, other States are known which stood on the same footing as the above, one of them being Aḍal — Aḍal ('Aḍal') is situated to the farthest east of those States, and is approximately identical with the present "Côte française des Somalis". The inhabitants are partly Somali, partly 'Asas (Danakil). It is mentioned the first time in the wars between the Abyssinian king Amde Seyon (1374—1394) and the Muraiddan, in the march of Amde Seyon upon Zalla'.

(1333), the king of Adal, who wanted to see his passage, was vanquished and killed. Under the king Zai's Yis'ahol (1424—1463) and under his son, 1463—1478; negotiations took place between the Abyssinians and Adal; afterwards there was fought with changing fortune. Adal frequently served also as a refuge for the Mohammedans who lived farther west from the Abyssinians, who, however, often followed them thither. The Moslem writer (Makrisi and Shihab al-Din, *Arak al-Fahar*) do not mention Adal — unless it is meant by Adal an-Nasr (Makrisi, *loc. cit.*, p. 25) — they rather give information only about the sultanate of Zaili as being in that region. Further, the king of Adal, Mahmud, son of Ahmad Daulay (Veruhoon, *Chronique de l'Empire de l'Éthiopie* et de l'Éthiopie, p. 231, belonged to the sultan family of Zaili; he was a grandson of the celebrated Isma'il, after whom the dynasty and the land were called (*Arak al-Fahar*). The latter lived about 1400; he died in 1403 in the battle with King David I of Abyssinia (1381—1411). Adal and empire of Zaili are often synonymous, and their histories are closely connected with each other (comp. ZAILI). With regard to the 16th century comp. also *Arak al-Fahar* 2. *Arak al-Fahar*, *Imam of Harar*. In the later history of these countries, the wars with the Mussulman Somali and Afar are put in the background behind those with the Galla, who about 1540 incessantly waged with the Christians Abyssinians; Adal is still mentioned a few times in the chronicles. Even in the 19th century, before England, France and Italy took possession of the Abyssinian littoral; King Salih-Sellah of Shoa called himself also "King of Adal". (LITTONS.)

ADALA (A.) = muscle, the *Adal* (Abyssinians), in his Canon (Bibl. 1897), i. 39, defines the muscle as follows:

"The real movements of the limbs can be executed only by means of a power that flows towards them from the brain through the agency of the nerves. The immediate connection of the nerves with the bones, which are the most essential elements of the moving limbs, is impossible, since the bones are hard and the nerves soft. Therefore the Creator by His goodness made a thing grow upon the bones, which resembles the nerves and which is called *shew* or tendon, and united it with the nerves, interweaving them as one thing. This thing, composed of nerves and tendons, it is every circumstance delicate, because the nerve by its union with the limbs experiences an increase in volume and thickness in comparison with its origin. Its volume at its origin is such that it corresponds to the volume of the brain and of the marrow of the spinal column, to the volume of the head and its outlets. And if the nerve had the task to put in motion the parts of the body, especially there where it must be divided and ramified in the limbs, and by the increasing removal of its origin becoming always thinner, it would lead to an obvious decay.

For this reason the Creator by His wisdom bestowed on it a certain thickness through pulling to threads the fibres composed of nerves and tendons, at the same time filling the interstices with flesh, wrapping it up with a membrane and establishing in its middle an osseous column of the same matter of which the nerves are composed.

Thus this whole becomes a limb, composed of nerves and tendons, and their fibres, of flesh that fill up the interstices, and of a membrane which wraps it up. This organ is the muscle.

When it contracts it pulls the shew, which is composed of tendons and nerves and which stretches from the muscle to the bone. The shew then contracts and by this pulls the limb. When the muscle extends, the shew relaxes, and the limb returns to its previous position.

The following anatomy of the muscles begins with those of the face, the number of which corresponds to the number of the mobile parts of the face. They are:

1. The frontal muscles.
2. The muscles of the eyelids.
3. The special palpebral muscles.
4. The muscles of the cheeks in connection with the lips.
5. The special muscles of the lips.
6. The muscles of the sides of the nose.
7. The mandibular muscle.

Then follow

8. Anatomy of the muscles of the head.

As a sample serve the anatomy of the muscles of the hyoid (*Arak al-Fahar*, *ibid.*, 11). The hyoid bone muscles, which belong to it alone and others which serve also other organs. The special muscles of the hyoid are three parts, one pulls comes from the sides of the lower jaw and pulls the straight line which is found on the hyoid, pulling it towards the lower jaw. Another part takes its root under the chin and proceeds under the tongue till the highest point of the hyoid. This part also pulls the hyoid towards the sides of the lower jaw. The third part starts at the arrow-shaped bone appendages that are found near the ears; it joins the lower end of the straight line upon the hyoid. The muscles which also serve other limbs are already mentioned and will be yet mentioned" (*ibid.*, p. 45).

(J. LITTONS.)

ADALIA (A. Anallia; Eng. Salala, the ancient Anallia, capital of a sandy in the province of Kacha, a Mediterranean port, on the gulf of the same name; built on a steep rock 50 metres high. The town has the shape of a horseshoe, and is surrounded by a triple wall, the foundations of which are reached by the waters of the Duden Tessa walls, the origin of which goes back to the Roman epoch, have been aggrandized by the Genoese, who have enclosed

these incalculable and blessed of posterity. They were rebuilt about one century ago by Tekke-Oghlu, a *Paşa* first, who openly rebelled against Sultan III. Population 25000 inhab. of whom 15684 Musulmans, and 8967 Orthodox Greeks: 62 mosques, of which 3 monumental, 12 orthodox Greek churches; a library, well sheltered, is choked with sand. The sand of Adalla corresponds to the ancient proslava of Tobke; it comprises 3 *kaza*, 9 nahiyas, and 542 villages, 224000 inhabitants, of whom 196887 Musulmans, and 27000 Orthodox Greeks; about 15000 yörük (nomads), and Kili-bashi practice the trade of salt-fish (board *karas*). Very forests; vines of chrome and mangrove yet unexploited, and manufacture of cotton striped tunics (*salvars*). Under the Seljuks it was their maritime arsenal and their preferred winter residence. It had been taken away by Kio-Khosrow I. (9th Sh. 1000 = 504 March 1207).

'ADAM or 'ULAD (אָדָם), philomorphical term: non-existence; or, *unwelt* (n. v.): valence.

ADAM, -named *Abū Adām*, the father of mankind, and *Sayyid Adām*, the one chosen by God, the Muslim Adam. His creation is related in the Koran in the following terms: "We created man of dried clay of black mud formed into shape" (xv. 26). According to Muhammadan legend, however, the angels Gabriel, Michael, and Israfil sat, each in his turn, received the order of God to take from the seven layers of the earth seven handfuls of mud. The earth had refused to give it; 'Azra'il then, having received the same order, took away by force a quantity of mud sufficient to create a man of it. This legend, with some modification, was borrowed from Jewish literature (see Targum of Jerusalem in Gen., ii. 7; *Bab. Tal. Sanhedrin*, p. 38; *14th R. Eliezer*, ch. 11) and caused a rain to descend for several days on that clay in order to make it soft, then, after it had been kneaded by angels, and himself made the mould of it, which he set dry for a long time before animating it. *Ma'arifi* referring to the above mentioned passage of the Koran, states that Adam's body had remained formless during 40 years, and then 100 years longer without being animated; comp. *Ar-Risāla* ad Gen., ii. 7, and *Al-Bihar* ad *Nahm* (ed. Schocher), p. 12. After Adam had been created, God commanded the angels to prostrate themselves before him; all of them obeyed with the exception of Iblis (Satan, who by his rebellion brought down his own and Adam's fall (Koran, ii. 34; *vil.* 21; *vil.* 62 and elsewhere). As to the legend that God had established Adam as the king of the angels, the Koran followed the Christian Syrian *Mishrafi* (see *Beidol*, *Syriac*, pp. 3 et seq., text, p. 14). Adam passed for the first prophet, in whom God has revealed books (alluding to the Book of Adam); God showed Adam all the generations of men with their prophets; having learned that David was to live a very short time, Adam, the duration of whose life should have been 1000 years (equal to one day of God), gave him 40

years of his own life, thus Adam lived 980 years (Tahut, t. 156 et seq.; *Qur'ān*, i. 37; comp. *Ar-Risāla* ad Gen. ii. 8, and *Ar-Risāla* ad Num., vii. 28, where, depending on Gen. v. 5, it is said that Adam gave David 70 years of his life. Having been driven from Paradise, Adam alighted upon the island Samsūdī (Ceylon), where he stayed 100 years separated from his wife, spending his time in doing penance (Kor'ān, ii. 37; comp. *Bab. Tal. 'Arak*, p. 184). There is on the island a mountain called by the Portuguese *Monte de Adam*, where, according to legend, are seen on a rock the imprints of Adam's feet 70 cubits long. After Adam had repented, Gabriel brought him to Mount 'Arafat near Mecca, where he met his wife. According to Tahut (t. 123) and *Qur'ān* (ii. 29), God ordered Adam to build the Ka'ba temple, and Gabriel taught him the pilgrimage ceremonies. — Adam died Friday the 6th Muhl, and was buried in the Cave of Treasures (*Ma'adīn al-Bihar*) at the foot of Mount 'Arafat (Vak'at, ed. Hamana, t. 3). According to other authorities, his corpse was after the flood brought by Melchizedek to Jerusalem. These different statements are reconciled in the above mentioned Syrian *Mishrafi*, where it is said that Adam, having died Friday, the 14th (15th) Muhl, was temporarily buried in the Cave of Treasures and after the flood brought by Melchizedek to Jerusalem (Beidol, *loc. cit.*, pp. 7-10).

(M. F. SCHMIDT.)

ADAMAUA (Adamawa), a region in Central Sudan, bounded north by Libya, east by Egyptian Sudan, south by Kamerun, and west by Nigeria. From a political point of view, Adamawa corresponds approximately to the territory of the Volta-Niger and the Niger-Sudan that depend upon it. It is comprised between 4° 15' and 10° 15' north lat. and 8° and 15° east long. Its area is estimated at 250000 square kilometres (about 98000 square miles); its population is about 4 million inhab. (8 inhab. to a square kilometre). The principal towns: Volta (30000 inhab.), Gambia, Boko, Niamey, Niamey (30000 inhab.).

The name Adamawa is applied to 4 well separated geographical units, but designates a totality of countries differing from one another in their situation, customs and products. The northern part of Adamawa which encloses the plateau that separates the basins of the Niger and the Chad from that of Congo, and from which the waters flow towards the Atlantic Ocean through the Senegal, towards Congo through the Sangha, belongs to Equatorial Africa. The center and north, on the contrary, belong to Central Sudan, the waters flow in the direction of the Chad or in that of the Benue, a tributary of the Niger, that crosses the country from west to east. The climate of the southern part, with its almost daily rains, and its relatively equal temperature, re-

semiles that in the Fanga region, while in the center and north there are two seasons distinctly different and great variations of temperature. Finally from the gallery-forested forest one may pass to the barren savanna almost deprived of large trees. The relief of the surface increases the variety of aspect. From Kambon to Bornu a rather narrow mountain ridge (7 to 8 thousand feet) of a middle height (7 to 800 meters) and overtopped by peaks which do not exceed 15 to 1400 meters, crosses Adamaua (the Fula mountains, a range of mountains of Alastika south of the Benue, and the Mandara mountains, north of the same river); from the central mountain ridge detach themselves various counterforts, which separate the valleys of the various tributaries of the Benue, and afford a shelter to the tribes claimed by the possession of the plain here and there one isolated mountain chain (near to the south and Mandi to the north of the Benue).

The population of Adamaua is extremely composite. By side of races particular to this region (Dekka, Dura, Aluma) which belong to the Negro group, there are others which approach the type of the desert tribes, in which come from a crossing of these different races among themselves. One must indeed in Adamaua Haussa, Fenni, Fula. The latter introduced Islam in Adamaua, and succeeded in establishing in this country the political organization which is possessed now.

Toward 18th Fula adventurers, headed north of the Benue under the command of a certain chief called Adama, crossed that river, invaded the country of Mfoumbin, that was occupied by Senhari tribes, and established a camp at Garin. The success of the first invaders attracted others of them and soon the gangs moved at Garin had to be dispersed. The warriors, led by Adama, retired at Yola, while other chiefs were conquering the neighboring countries, founding these small States, which, though recognizing the suzerainty of the monarch of Yola, were ruled by the descendants of the first conquerors. Thus the Fula were scattered in the whole of Adamaua, and little by little they occupied the western and southeastern regions. Some of them settled at Garin, others reached the South-African tableland; toward 1845 a chief called Abi subjugated the Ngam-dere country; after 1870 other gangs conquered the country of Gass. The Fula mainly owed their successes to their horsemen armed with bows; therefore they were powerless before the mountaineers that were defended by the nature of the soil, as well as before the tribes, which, thanks to their being in the neighborhood of Europeans, had succeeded in obtaining firearms. Now the Fula rule over the whole Denau valley, from Yola to Kebene, in Northern Adamaua till the Mandara mountains, south of the Benue, in the plain between Yola and Kouda, and in the Fero valley below Camero. On the other hand the Fula possess south of the mountain chain of Sari nothing but dispersed colonies and some posts commanding the road from Yola to Ngam-dere. The pagan tribes of the center (Alastika, Galiba, Songi) recognize, nominally at least, their suzerainty, and pay tribute to them, while on the tableland, the pagan Seme of Galim accept their rule entirely.

The organization established by the Fula in Adamaua is a feudal one, comparable in certain

things, according to Passarge's expression, to the German Holy Empire. The nominal chief of the country is the sultan (Sulthan) of Yola, chosen among the descendants of Adama, but the sultan himself recognizes in his turn the religious supremacy of the sultan of Sokoto, who has taken the title of *Amir al-Mu'minin*. The sultan is assisted by a small council of 100 Musulman law, and by a council consisting of his ministers and of 100 *agallims* representatives of diverse Muslim groups which participated in the conquest. The different provinces are administered by *amirs* chosen in the council of Adama's principal households. These chiefs receive from the sultan a *tarbo* as a token of investiture. Their vassalage, however, is for the most part only nominal. The three provinces Tibati, Ngam-dere and Bulangidda in reality are entirely independent.

Thus the Fula form a military and political aristocracy. Since their settlement in this country, they modified their way of life. From exclusive nomads and shepherds which they were primitively they became in a great part sedentary, and devote themselves to agriculture with the cooperation of slaves obtained in the raids made upon the Fethit tribes. But commercial activity and riches gradually pass into the hands of the Haussa, the "African Persians" as Passarge calls them.

From a religious point of view the role of the Fula has been considerable. They have supported and spread Islam in Adamaua. Still, Islam is far from having completely conquered this country. The tribes which remained Fethit greatly get the superiority over those that adopted the new faith — the Haussa, Haussa, Kanuri and the Shoa Arabs form only the tenth part of the entire population. Besides, the practice of Islam is very superficial. The new converts adopted the garments and cultural ceremonies of the believers; they accomplish the ritual prayers, frequent the mosque, repeat the *shahada* of Allah to excess, but they have at the same time preserved the fetish practices. The Fula themselves, through their prolonged contact with the pagan tribes, adopted superstitions and rites foreign to Islam. They, for instance, bury their dead in houses, where they must light so fire and which they used not to do. On the family organization the influence of Islam has scarcely made itself to be felt. The women's condition has not been altered, their name is as before. Intellectual progress is virtually stopped. The knowledge of the Arabic language is very little spread. Passarge tells that he had great difficulty in finding a Ngam-dere one capable to read the letters of recommendation written in Arabic which he had with him. In this respect Adamaua is much behind Bornu and the Haussa countries. The difference between them, Passarge says, is as great as between Russia under Peter the Great and Western Europe. As an European influence, it scarcely begins to be noticed in this part of the Sudan. Adamaua, visited by Barth in 1851, was for a longtime interdicted to Europeans. Vogel in both travels could not stay there, Max crossed it from north to south in order to reach the Congo basin (1891), but in the course of his second travel (1893) he could not go beyond Yola, which Salfer, arrived from Ubanghi also reached in the

philologist Abū Isḥāq b. al-Anbārī (1171-1228 = 565-620): *ʿAḥd al-ʿaḥd* (ed. Houtsma, Leyden, 1887). It is known, but important are the examples of the Sufi in his *ʿAḥd al-ʿaḥd*, xiii, 251-266.

The opinion above long upheld that Arabic, contrary to all the other Semitic languages, contains a very great number of *ʿaḥd* is no longer tenable. If all what is false and does not belong here: he stricken out from the list, which no doubt is considerable, there remains also in Arabic only a small residue. It is why Darmstadter (quoted by al-Sayyid, *Maḥir*, I, 191) has gone so far as to deny entirely in a special work the existence of the *ʿaḥd* in Arabic. Ibn al-Anbārī enumerates in his book more than 400 such *ʿaḥd*; but in spite of the richness of the work, there are missing words like *anḥar*, *raḥi* and others. Rodolphe has already pointed out that a considerable part of it must be eliminated, as the authors either extend too far the conception of the *ʿaḥd*, or accumulate by mere play work as much matter as possible: 1. First of all it is the notion that *ʿaḥd* of the words quoted were known to or currently used by the Arabs only in one meaning, and the contrary meaning was introduced only by scanty and sometimes even contested citations. If it were not so many misunderstandings would arise in every day life, while Ibn al-Anbārī denies in his introduction (p. 2, l. 16) every ambiguity. 2. It is absolutely false to consider the words not only in themselves, but also in their syntactical construction in the sentence, and to establish a *ʿaḥd* when, through various constructions, no interpretation of the sentence two contrary meanings are possible (Ibn al-Anbārī, *loc. cit.*, pp. 167-168). 3. Particles like *in*, *min*, *wa*, *ʿaḥd*, *ʿaḥd*, *ʿaḥd* must be stricken out from the list of *ʿaḥd*. Reasoning, as for instance *in* *ʿaḥd* and *ʿaḥd*, that it is to say a *ʿaḥd* that can indicate a possibility and be also a negative, is foolish. Equally unimportant are the considerations that verbal forms (*ʿaḥd* or *ʿaḥd*) indicate different tenses, or that proper nouns (*ʿaḥd*, *ʿaḥd*, *ʿaḥd*) may also have secondary meanings. 4. Forms which only essentially may have a meaning contrary to their *ʿaḥd* one may be enumerated in an infinity of words as *ʿaḥd*, a public and also its contents, *ʿaḥd*, we, 1; further all the *ʿaḥd* forms which are also passive (e.g. *ʿaḥd*, *ʿaḥd*) and the *ʿaḥd* forms that are also active (e.g. *ʿaḥd*); the clauses which may be formed of participles of the first and all suggested counter the words that sometimes also in the first form have a causative meaning (e.g. *ʿaḥd*) etc.; but none of these *ʿaḥd* represent any real *ʿaḥd*. 5. Neither belong here words that in certain cases are used ironically (*ʿaḥd* or *ʿaḥd*), e.g. *ʿaḥd* (*intelligent one*), for a fool, or adjectivally (*ʿaḥd*), as *ʿaḥd* (*healthy one*) for a sick person. The use of both types is at will of the speaker. 6. The highest point of arbitrariness and arbitrariness was finally attained by the grammarians, who count among the *ʿaḥd* words like *ʿaḥd* (in the meaning of 'waterpipe' and 'hill' and namely because water flows downwards and the hill rises upwards).

Most of the examples given by Ibn al-Anbārī fall under any of the points just quoted and therefore ought not to be considered as *ʿaḥd*; only a small residue remains.

The Arabs themselves have sought already for explanations for these phenomena, but only one deserves consideration in so far as least as in the interpretation it leads back to the root, whence both meanings are branched (Ibn al-Anbārī, *loc. cit.*, p. 5, l. 20 et seq.; *Maḥir*, I, 193, l. 25 et seq.) the other explanations only for the actually occurring meanings, and either regard all the *ʿaḥd* as meanings borrowed by the roots from one another (Ibn al-Anbārī, *loc. cit.*, p. 7, l. 13 et seq.; *Maḥir*, I, 193, l. 4) or attempt, when unclearly, to find a harmony between the meanings; for instance the Arabs explain *ʿaḥd* in its meaning 'whole' by that the whole thing is only a part of something else (Ibn al-Anbārī, *loc. cit.*, p. 6, l. 40). All the recent attempts to explain this linguistic phenomenon from one point of view, such as Alch's (*Über den Gegensatz der Unvollständigkeit*, Leipzig, 1884), who supposes them to be the remainder of the logically contradictory conception of the first man (see Glaser *Untersuchungen über die Aḥd*, p. 52), or even that of Lagasse (*Études sur les formations des racines d'origine*, Paris, 1858), who tried to trace them by ventrismal etymology (see Landau, *Die grammatischen Wörter bei Al- und Neuhochdeutsch*, pp. 21-22), may also be considered now as done away with. Only Glaser (see also the notes in the *Journal of the Soc. of Arabic Studies*, new series, I, 1895, p. 211), who found in the ancient poetry only 20 words with contrary meanings, has supported by the results of semantics, furnished for the solution of this difficulty different productive methods, which if applied to all the domains of the Arabic language must certainly be amplified and modified (even he did not succeed in explaining all the *ʿaḥd*):

1. Metonymy, which is understood as one meaning of a word being a causal or temporal consequence of another meaning; e.g. *ʿaḥd* to lift a burden with difficulty, to carry it away; *ʿaḥd*, he who goes to the water, the thirty one; he who returns from the water, one having his thirst quenched.
2. Contraction of conceptions of various figures; for instance *ʿaḥd*, separation and union (according to whether one is separated alone from a group or to union with another), or *ʿaḥd* to be killed, hence heavy, but also to be killed and whirled up, hence insignificant, light.
3. Contraction of conception, refinement or making coarser respectively, as for instance *ʿaḥd*, to be angry-like, strong and to be unwise, foolish.
4. For the words of emotion and under the neutral original meaning is to be imposed: to be excited, no difference whether it is applied in the good or bad sense; thus for instance *ʿaḥd* to be afraid and to be pleased; *ʿaḥd*, to be sad and to be joyful; *ʿaḥd*, to hope and to fear; *ʿaḥd*, to love and to hate. In this class belong the words of conjecture in their double meaning of to know and not to know, e.g. *ʿaḥd*, *ʿaḥd* (Ibn al-Anbārī, *loc. cit.*, pp. 8 et seq.; Landau, *loc. cit.*, pp. 229 et seq.).
5. Cultural influences have often caused the later differentiations of words originally meaning the same thing in *ʿaḥd*, *ʿaḥd*, to sell and to buy, originally to exchange.
6. Onomatopoeia, especially in the 2d and 4th forms, originally meaning to undertake an action with the object in question,

and therefore may be applied both positively and negatively: e. g. *farra'a*, 'to rise', 'to sink' (comp. *farra'a*, *farra'a* see Landau, *loc. cit.*, pp. 72 et seq.).

— Besides this the fact of compound propositions in Arabic makes upon ambiguity possible (comp. al-Sayidī, *loc. cit.*, p. 189; l. 12: *waḥḥa* 'and', 'to turn oneself from'; *ra'ayā*, 'to hear', and 'to give ear' in the sense of 'to answer'), and many were ambiguous or common generic which admit a double interpretation (Landau, *loc. cit.*, pp. 222 et seq.). e. g. *ḥayā*, properly *ḥayā* = a thing of little or great importance; *maḥḥa*, 'a gathering place of women', either on sad or on joyous occasions; *ḥayā*, *ḥayā*, 'wife'. Finally the many dialectal *ʿaḥḥa* are of importance. Arab philologists already quoted such examples; *ḥayā*, 'darkness' in the dialect of the Tamiimies, 'night' in that of the Kabilites; *maḥḥa*, *maḥḥa* (= 227) in the Himyarite dialect, 'to spring up' generally in Arabic; further *ḥayā*, *ḥayā*, etc. This phenomenon of alteration of the original meaning of a word in different cultural spheres and according to different modes of viewing life and the world is to be noticed not only in the Arabic dialects, about but in all Semitic languages (e. g. *ḥayā*, *ḥayā* = *ḥayā*, 'meat'; originally: 'food'; *ḥayā*, *ḥayā* = 'poverty', originally: 'work'. Recently Landau contributed valuable material from modern dialects (*La langue arabe et ses dialectes*, Leyden, 1935, pp. 64 et seq.).

The *ʿaḥḥa* problem is for the Arab scholars widely different from what it is for us; for them it is a practical problem, for as it is a scientific one. To the Arabs it was of prime importance to give an index as complete as possible of all the words destined for daily use, which have contrary meanings; in this they are often guided simply by exterior consonance) so for instance do they put among the *ʿaḥḥa* the word *ḥayā*, i. e. 'perhaps' root *ḥ-y-*, i. e. = 'vigilance', 'eternity', root *ḥ-y-*. The origin and explanation are for them a secondary consideration, which, if looked to, is only superficial. With us the practical need is put in the background, we occupy ourselves not only with equally sounding words or forms, but also with roots. We should therefore not be satisfied with the classical language and its quotations from the Korān and poetry alone, we should rather bring into the sphere of consideration all the dialects, nay, even the kindred Semitic languages, while many Arabs (e. g. Ibn Duraid), in reality consider as *ʿaḥḥa* only those words which have in the same dialect both contrary meanings (al-Sayidī, *loc. cit.*, p. 192, l. 10 et seq. a. r. 24) and draw the other dialects into the sphere of their consideration simply from practical motives, because misunderstandings or even mistakes might arise from misapprehension with them (ibid.; Ibn al-Jawzi, *loc. cit.*, p. 59, l. 4 et seq. a. r. 24). The lack of understanding the conception of the rise and organic development, which partly arises from religious motives and which extends over all the domains of knowledge hindered the Arabs, in spite of the great amount of material, from coming to the proper solution of the problem. In addition to this there is a total unacquaintance with the other Semitic languages and West Asiatic history and culture as well as the groundless explanation of the

words of religious life (e. g. *ḥayā*, *ḥayā*, *ḥayā*).

The works on the *ʿaḥḥa* have till now been undertaken only on the basis of the material, sometimes misleading, of Arab philologists that has been handed down to us. A compilation and treatise, independent in its construction, and taking into consideration the dialects and kindred languages would bring an important amount of knowledge of the history of culture. (Wien.)

'ADEN, a maritime town 96 North Arabia, on the northwestern coast of the completely arid and unpopulated peninsula of 'Aden; the town was of importance to maritime trade that flourishes there from ancient times. The present harbor Steamer Point, which is visited every year by 1300 steamers, lies at a certain distance from the proper, strongly fortified town. The population of the latter has at all times been of a mixed origin; this explains why the Arab geographers designate the Arabic spoken there as a very corrupt dialect. Even now the population there does not consist exclusively of Arabs, for many Hindus, Somalis, Jews and Europeans have also settled there. The total number of inhabitants is estimated at 4400. The magnificent eastern construction in a mountain-gorge, which supply the town with drinkable water — an ancient structure neglected for a long time then restored by the English, — are worth seeing. 'Aden does not possess any special Mohammedan edifices; the principal one is the monument of the saint of the town, Shaikh al-'Abdalla, erected on his grave. In the vicinity, on the road to Shaikh 'Uthmān, there are some salt-pans.

Historical. 'Aden, known already to the Greeks and Romans under the name of Adana or Albana, received its first Moslemian governor Abū Maḥmūd al-Aḥḥāl, from the Prophet himself. Later on 'Aden generally shared in the fate of the province of Yemen, among whose maritime towns it was counted, after the Banū Ziyād had founded there an independent dynasty (304 = 916). About one century later (402 = 1011) the Banū Ma'n (q. v.) attained supremacy in 'Aden, Lahad, Ḥayna, Shihir and Hufaymāt. The Sultān of Yemen invested the Banū Ma'n with the dominion over 'Aden; afterwards discord broke out among the Banū Ma'n, till finally a portion of this family, the Banū Zayd (q. v.), prevailed and declared itself independent about 519 (1123). The domination of the latter lasted till 569 (1173), when Tuḥḥa Shihir, Ḥayn al-Dīn's brother, conquered Yemen. Then the power was held there successively by the Ayyubids (till 615 = 1218), the Rasulids (till 636 = 1239) and the Tughlaks (till 673 = 1277). In 1517 the Portuguese under the leadership of Alfonso d'Albuquerque appeared before 'Aden, but could not capture the town any more than, a few years later, could the Egyptians Mamluks after they had torn away the city of Lahad from the last Tughlak. More fortunate were the Ottomans in 1534, although they lost it again in 1568 in their war with the Zaidites of Ḥaynā. It is true that they reconquered the place once more, but were compelled to renounce it for good in 1630. Since that time the Zaidites ruled there; still in the beginning of the 19th century 'Aden fell into the power of the Sultan of Lahad (q. v.), under whose rule the town lost its previous importance as a harbor place, so that when in 1856 the

English Captain Haines permitted upon the then mission of Taherji, Mulani I. Farid, to cede the peninsula to the English, scarcely two poor inhabitants arrived there a wailing throng. The English definitely entered into possession only on the 20th January 1839, and namely by force, because the Sultan had in the meantime taken back his word. Even after that year the Arab tribes that dwell around made repeated attempts to seize the town, all the English succeeded after several expeditions in extinguishing those tribes also (1867). Since then the development of Aden progressed rapidly and is still rising now in the English system of administration the town is subordinated to the presidency of Bombay.

ADHA (عَذَا), victims (camels, sheep and horned cattle) which are slaughtered in the forenoon (فَجْر) of the *Yumma al-Adha*, i. e. the 10th [11th] Muharrar. The flesh of the victims is considered as *zakat* and is left to the poor, yet he who brings the offering also partakes of it. The characteristics of the victims and the manner in which they are slaughtered are minutely prescribed in the *Sh* books (comp. *Ujma* and *Maqat*). The custom of doing this on the above-mentioned day in Aden (q. v.) is pre-Islamic but was established also for Islam through *Sura* xvi. 54–55. Of course the law compels nobody to bring sacrifices, unless when one is obliged to do so on account of a vow or of a certain intention. The victims destined for this solemnity were consecrated by covering them with old shoes or by making bloody offerings in their skin.

ADHAB (أَذْهَاب), torment, sufferance, affliction*, inflicted by God or a human ruler, and in so far as it expresses not only absolute power but also love for justice, also punishment, chastisement (*ʿuquba*)*. The divine judgments, which are also mentioned in the *Qurʾan*, hit the individual as well as whole nations in the life of this world as well as in the life to come. It is mainly unbelief, doubt of the divine mission of the prophets and apostles, rebellion against God that are punished in this manner (see *ʿAd*, *raʿvin*, *ʿUy*, *ʿUy*, *ʿUy*, *ʿUy*, and others). With respect to the punishments in the life to come, which begin already in the grave (*ʿAdha al-ʿAdha*), see *ʿAdha* (TANNAH, MINNAH and KANNAH).

The punishments established in Muhammadan law (*ʿAdha*) are of four kinds:

1. *ʿAdha*, i. e. retaliation. The guilty *ʿAdha* may, by virtue of the right of retaliation, be killed, wounded or mutilated (see *ʿAdha*).
2. *ʿAdha*, i. e. blood money, which has to be paid if retaliation is not taken into account, or if the same is either impossible or unpunished (see *ʿAdha*).
3. *ʿAdha*, i. e. the punishment exactly defined by the law, which *ʿAdha* neither be reduced nor augmented, e. g. lapidation, a fixed number of lashes, crucifixion, cutting off the hands or the feet (see others) (see *ʿAdha*).
4. *ʿAdha*, i. e. the punishment inflicted by the judge according to his discretion. If *ʿAdha* for instance consist of imprisonment, exile, corporal punishment, flogging on the ear, a requirement or any other humiliating proceeding. The judge may

for instance blacken the face of the culprit, cut his hair or leave him left through the streets, etc. (see *ʿAdha*).

The punishment is considered in Muhammadan law either as the right of God (*ʿAdha Allah*) or as the private right of a man (*ʿAdha ʿAdha*). In the latter case the punishment is applied only at the desire of the plaintiff for by the latter's relatives or friends. The punishment, e. g. retaliation, is inflicted upon the culprit as the personal right of the plaintiff.

In the case of a transgression against God, and the punishment consequently being then a *ʿAdha Allah*, there is, however, a peculiar principle in the law God, it is supposed, is punishing and requires the punishment of the transgressor.

Punishment was considered in the beginning of Islam, just as in Arabian paganism, as a purification from sin. So for instance a certain *Maʿa* b. *Maʿa* came to the Prophet and said to him: *ʿAdha*, *ʿAdha* *ʿAdha*, i. e. punish me! — Comp. I. Goldschmidt, *Muslimen*, *Stud.*, I. 27, note 1; *Islam*, *Der Strafrecht im Islam* (*Fragen zur Rechtsvergleichung*, gestellt von Th. Mommsen, *Lehrstuhl von H. Bruns*, I. 27, pp. 101, 102, note 2).

For the Prophet is stated to have said: God will forgive the sin of every believer except when the sinner makes them known to the public, that loves those of his servants that cover their sins.

On the ground of this tradition, there is a prescription in the Muhammadan law books that when the punishment is to be considered as a *ʿAdha Allah* the transgressor should hide his guilt as much as possible and not confess it, and even when he did confess it he invokes his confession. He is supposed to turn himself such more to God in witness, for God accepts his confession when his intention is pure.

The witnesses too are commanded not to testify to the detriment of the accused person, and it is used that the judge should show the latter all the circumstances extenuating his guilt and the validity of revoking his confession. The judge may even entirely leave out the punishment except when the right of a man is also injured at the same time and the latter demands the punishment of the guilty one.

Only in the case of a punishment established by the law (*ʿAdha*) the judge has no choice and must execute the punishment. With regard to the latter punishment even an intervention on behalf of the culprit is not allowed, while otherwise it is even recommended. But in order to establish the guilt of the person accused evidence produced with great difficulty is always required in such cases. Practically the decisions of the canonical law often everywhere the opportunity for escaping such punishments. There is only one practical ground on which the legal evidence and the execution of "determined punishments" may be based, it is the confession of the culprit himself, so that in this respect the "determined punishments" have the character of penitence.

It is hardly necessary to be remarked that eastern despots were never satisfied with these legal punishments. Very often by were arbitrary, they inflicted quite cruel and barbarous punishments for real or supposed offences. Furthermore there was nothing more cruel than that

assembly (38—698) had to decide between 'Alī and Mu'awiya; much of the two plenipotentiaries (qasbiyān), Abū 'Ubayd al-Ash'arī for 'Alī and 'Aun ibn al-'Asī for Mu'awiya, was executed by 400 men. According to the current version, Abū Mūsā was deceived by a coarse disloyalty of 'Amr, the latter, after it had been agreed to depose Mu'awiya, publicly took back his word and went so far as to proclaim him caliph! But this is inadmissible: such an enormous lie would rather have heightened 'Alī's prestige, and called forth the protests of the Hishmīan escort, such impartial witnesses as Sa'īd ibn Abī Waqqar, Ibn 'Umar, etc. Neither would have 'Alī's own partisans — as was the case with 'Uthmān ibn al-Hafid — seceded from him on account of his perjury. 'Alī himself does not mention in his protestations 'Amr's lie; if the name of the arbitrators it is to accuse both of them of felony.

The honest, but naive Abū Mūsā could not struggle with the artful (al-dākiyān) 'Amr, and the latter cleverly turned to his advantage the misunderstanding, with which fermented the conference. The object was not clearly determined, still less the points that were to be discussed: the arbitrators had simply confined themselves to declare that the Korān would serve them as a basis and a standard. The conference was considered by the Syrians as a simple formality, in which their candidate should triumph. The Syrians, on the other hand, if the discussion of the pretensions of both 'Alī and Mu'awiya — the latter had not yet then made them manifest — was to turn out of the question, wanted only to expedite whether 'Alī's responsibility in the assassination of 'Uthmān did not exclude him from the government of Islam. Abū 'Asīd's chief mistake was in allowing his colleague to place on the same footing Mu'awiya, a simple governor of a province, and 'Alī, recognized as caliph by the majority of the Musulmans. Before that time the son of Abū Sufyān had passed only for the murderer of 'Uthmān's blood, and, as Ibn 'Abī Rabi'ah (i. 291) observes, the Syrians followed him as such and not as a pretender to the caliphate. Because Abū Mūsā did not make any distinction between the two candidates, he thus encouraged the secret designs of Mu'awiya: he allowed 'Amr to discuss the latter's rights to succeed 'Uthmān. After having tired Abū Mūsā by proposing a series of unacceptable candidates, 'Amr induced him to declare that both candidates should be removed from the throne. Mu'awiya lost nothing by this sentence, but it deprived 'Alī from the supreme dignity. While he became again simply the son of Abū Tālib, his rival remained governor of Syria. This brilliant diplomatic victory, constraining 'Alī to perjury, placed the right on the side of Mu'awiya and habituated the people to general to consider him as the only person capable to restore peace into the Musulman world. On Mu'awiya's return from Adhroj, the Syrians began to salute him with the title of caliph.

ADĪ n. *Adīm*, with the kunya of Abū 'Adī, a partisan of 'Alī. He was the son of the celebrated poet *Utīm al-Jaʿfī*, of whom he inherited the royal power over his tribe, the Tayyites. Being threatened with the loss of the royalty, 'Adī, who like his father was a Christian, went over to Islam in the year 9 (630). He collected for the Prophet the taxes among the Tayyites and Asadites. He knew how to prevent the threatening apostasy of his tribe after the death of the Prophet. He moved with Khālid to Yabū, where he took part in the war of conquest as a sub-commander. 'Uthmān gave him the village of al-Rawha' on the Nile Iṣṣ, near Bagdad, for his services (i. 3164), yet he kept out of the caliph's way, and, as it may be concluded from Tabari (i. 3164), he must have stood in connection with 'Uthmān's murderers. In the battle of the Camel he fought for 'Alī, by whom he was among others sent as an envoy to Mu'awiya during the four weeks armistice before the battle of Siffin. When finally it became necessary that the sword should decide, 'Alī honored him by appointing him a standard bearer. — Later on 'Adī lived in Kāfa, where he did not deny his 'Alid sentiments, and took under his protection his relations that were persecuted by the powerful governor of Iṣṣ, Zayd ibn Abī Sufyān. — 'Adī died in 67 (686-687), at the age of 120 years.

(A. SCHÄFER.)

ADĪ v. *Adāra* (Samarra) 'Adī, a Musulman saint, said to have been born in the village of *Adāra*, near Baṣrah (Basrah), where the house of his birth was in Ibn Khallikān's time still the place of pious pilgrimage. 'Adī, who was celebrated on account of his saintly life, founded a religious order called after himself, al-*Adāwīya*. He had fixed his residence in the mountains of the Hakkārī Kurds in the region north of Mosul, and died at the age of 90, in 157 (1162), or according to others in 555 (1160) in the hermitage which he had chosen there for himself; his descendants continued to live there and to enjoy the same reputation of a saint. According to an eyewitness, he was of middle stature and much tanned. It is he whom the Yazīdīs adopted as their national saint. His sepulchre is indicated by three conical capotals in the environs of the village of Hadri, 20 miles to the east of the Nestorian convent of Kalāṣ-Normani. Nightly processions by torch light, the exhibiting of the green colored pall, which covers the tomb, the distribution of large trays with smoking *kurba* (a regent with coagulated milk) compose the ceremony which attracts a great number of Yazīdīs and of which H. Lazard was in 1849 an eyewitness. The poem of 80 verses, translated into English by Lazard and Dargy (*Nestorians and their cities*, i. 113—115), shows that this sect was a mystic pantheon of the Yazīdī order, and that his followers believed that he was the incarnation of the Divinity.

'ADĪ b. al-RĪĀ' (ib. *Zaid b. Maḥmūd b. 'Adī al-Bihārī*), Arab. poet of the 'Amīla tribe, a subdivision of Kuttā's, of urban and not Beduin origin, lived in Damascus as economist of the Umayyads, particularly of al-Walīd b. 'Aḥmad al-Maḥkī, and had a poetical contest with Ḥayyū. Muḥammad b. Sallām placed him in the third class of lajmi poets. Of his verses a *ḥadīṡ* on Ḥusayn al-Ḥakīm is mostly quoted (e.g. *Mubarrad, K. Maḥkī*, p. 80, l. 12).

Abū al-ʿAlāʾ, pre-Islamic Christian poet, the year of whose birth is unknown. He was of a distinguished family of al-Hira, and his father had sent him to the royal court at Persia for the purpose of receiving there a liberal education. 'Alī, even after his return to his native country, stood in close connection with the Persian Court, whose interests he furthered after the death of al-Mundhir IV, by advocating the election of al-Kaʿnān III as his successor. He naturally played a prominent part at the Court of these Sassanide princes, and his enviers and enemies ascribed to him many of his power. Al-Nuʿmān had him thrown into prison, where he was assassinated (ca. 605). His death is said to have been the cause of the fall of the Sassanide dynasty. His poems are mainly wine songs and elegies on the transitoriness of earthly power and greatness.

(A. HAFNER.)

AL-ABD AL-DIN AL-ABD, the last Fatimide caliph. His real name was Abu Muhammad 'Abd Alah, and he was the son of Sulaiman, whom 'Abbas b. Abi'l-Faraj [q. v.] killed, and the grandson of the caliph Alah. He was a cousin of his predecessor al-Fair, who died on the 17th Rajab 535 (23rd July 1140) at the age of 21 years, after having reigned 6 years. Al-'Abd was born on the 20th Muharram 546 (7th May 1151), thus at the time of his accession to the throne he was 5 years old. From the beginning till his death at the age of 30 (10th Muharram 567 = 13th September 1171) he was an accomplished instrument in the hands of the occasional generalissimo; only shortly before his death he seems, by what he called Nar al-Din [q. v.], to have personally meddled with the affairs of the country. He passed for a pious Shiite and persecutor of the Sunnites. There is nothing for the rest to be reported of his acts; but during his reign the greatest changes took place in Egypt, changes which will be indicated here by the way only, as they will be circumstantially treated of in the

articles FALLA', KUTUB, MEAWAR, INTERAR, BRIS-
 SEN and GILLY AR-AR. At the time of his accession
 to the throne, FALLA' to KUTUB was the omni-
 potent minister, but he died in the following year.
 After the sun of the latter, KUTUB to FALLA',
 had ruled for a short time, MEAWAR took charge
 of the vicariate in the beginning of 558 (it began
 the 10th Dec. 1162). MEAWAR was a month later
 supplanted by another general called BIRGHAM;
 he fled to Syria and tried to win the help of Nur
 al-Din. The new vizier BIRGHAM is described as
 distrustful if not unjust. Almost all the men of
 importance felt jealous of his exaggerated suspicion,
 so that Egypt lacked of leading spirits when the
 Franks invaded the country and at the same time
 MEAWAR marched upon it with a Syrian army.
 Among the latter were Shirkuh and his nephew
 Salah al-Din (Saladin). BIRGHAM was repulsed and
 killed and MEAWAR was again invested with the
 vicariate. Then began the varied play of intrigues
 that lasted several years and the embittered strug-
 gle for domination in Egypt, in which MEAWAR, the
 Syrians and the crusaders took part in manifold
 combinations. The caliph sided now with one, now
 with the other without, however, influencing es-
 sentially the situation. It ended with the recon-
 quence of Egypt by the troops of Nur al-Din
 under the leadership of Shirkuh and with the
 assassination of MEAWAR. Shirkuh succeeded the
 latter, and after his death (23d Jumada II 564 =
 23d March 1169) Salah al-Din took charge of the
 vicariate. At the instance of the lord Nur al-
 Din he had the prayer established in the be-
 ginning of 567 (end of 1171) for the 'Abbasid
 caliph. This was the end of the chain domi-
 nation of al-Aqqa and of the Fatimides in ge-
 neral. The unfortunate last action of this case
 heated some one or longer conscious of his de-
 throwment, as, having since long been sickly, he
 died a few days after this event.

2. In the days after the event.

ADIL is **AL-SALAH**, with his full name **Abū Malik al-Adil Abū-l-Ḥasan 'Alī b. al-Salāh**, a ruler alleged to have been of Kurdish descent. When the celebrated Egyptian general al-Aḥḥāḥ Shihinshah took Jerusalem from the Crusaders in 1099 (1097-1098), a part of the mercenaries of the latter entered into the Egyptian service. Amongst them was al-Adil's father, who later, like his son, entered the body-guard of the powerful sultan. Al-Adil distinguished himself by his intelligence and skill, he soon rose to the rank of *amir*. Then the caliph al-Muḥḥid entrusted him with the administration of Alexandria and Bahariya. Al-Adil was in this important position one of the most powerful men in the Bahariya empire, where the power slipped from the hands of the central administration at that time and went over to the governors of the large provinces. When the caliph now ventured to appoint his favorite *Abū al-Muḥḥid* *al-Adil* rebelled, killed *Abū al-Muḥḥid* and entered himself *Salih* as a ruler. His viceregency, however, was not of long duration, for he was assassinated on the 6th Muharram 544 (2d April 1153).

ADILE KHATUN, a daughter of Ahmed Paşa and wife of Soliman Paşa, an Ottoman governor of Bagdad. In her husband's lifetime, she took part in the government of the province, had her audience days, in which the petitions of private persons were presented to her through the intermediary of one of her menials. She had a mosque and a caravanserai built and gave them her name. Seeing that the way was opening for her after the death of Soliman, she looked against his successor 'Alī Paşa the janissary *amir*, then one of the principal *Mamluks*, and made 'Alī Paşa her brother-in-law, so he was recognized as governor in the place of 'Alī Paşa (1764). She died in obscurity, the date of her death is unknown.

ADILSHAHS, designation for the ruling family that reigned in Bijāpūr from 895 to 1097 (1489-1600); all the princes of this family added to their names the title of Adilshah. The founder of that dynasty, Yūsuf Adilshah, or Adilshah, obtained to higher consideration at the Court of the Bahmanide Muhammad Shah II 867-887 (1462-1483), and when after the latter's death the Bahmanide empire was approaching its end, Yūsuf entered the governorship of the province of Bijāpūr. As he did not think himself safe in the Court, he removed with his family to the capital of his province. In 1489 he took the title of prince (*Shah*). The historians, in order to heighten the consideration of the new dynasty, tell that the founder was of princely origin: he

was, they pretend, a son of the Turkish sultan Orkhan II, who obliged to flee with his mother, then sold as a slave and in this way he was received into the body-guard of the Bahmanide. Yūsuf Adilshah died in 1496 (1510) and bequeathed the sovereign power to his descendants, these are their names and the years of their reign:

Yūsuf b. Yūsuf	916-941	(1510-1534)
Malik b. Yūsuf	941-943	(1534-1535)
Isma'il b. Yūsuf	943-965	(1535-1557)
'Alī b. Isma'il	965-987	(1557-1579)

Isma'il b. Isma'il	987-1035	(1579-1626)
Muhammad b. Isma'il	1035-1070	(1626-1660)
'Alī b. Muhammad	1070-1083	(1660-1672)
Sikandar b. 'Alī	1083-1097	(1672-1686)

Under the reign of Muhammad Adilshah the Adilshahs already lost their independence and the right to coin money with their names. The Great Mogul of Delhi Shah Jahān (q. v.) after he had conquered in 1044 (1634) a large part of the Deccan, compelled them to pay tribute. Still the dynasty kept on for some time but very soon lost all importance through the rebellion of the Marathas chief Shivaji, who put to flight the troops sent against him, killed their general Adil Khan and left his previous masters their capital Bijāpūr only under paying tribute. This induced the Great Mogul Aurangzib to march upon Bijāpūr, and he succeeded in conquering the city (1097 = 1686) after a siege of one year. The last Adilshah was taken prisoner, and died three years later.

The Adilshahs deserved well of their capital Bijāpūr, which they decorated with their palaces. Some of them were highly gifted as promoters of science. [See further *ADILSHAH*, there also the *Bibliography*.]

AD-ADYAT, the best houses, title of some 100. **ADI (A)** = ivory (also tortoise-shell). The ivory, much spread in the old Egyptian and Babylonian empires, found its way also from India via Oman to Arabia. According to the Jewish Mohammed possessed a comb of *adi* and made a present of ivory armlets to his favorite wife Fatima; the poet of the Umayyads, al-Farazdaq, also makes a female singer to wear such armlets. Although the Mohammedan theologians justly declared ivory as useless, yet it was in Arabian world at a continually rising importance, and formed, by sale of the slave trade, the most important export article in the commercial turn of the East African coast. It yielded together with ebony, red wood and the *bas* wood work (see *Adi*, *bas*, *wood* in *Nes* 57-60). Larger articles were covered with carved work and inscriptions, entire objects were entirely manufactured of ivory. Its use in Mohammedan illustration work of the 13th century is very common.

ADIA and **ADIAH**, two small mountains among the Central Arabia (Najd) often called in Arabian tradition the two mountains of Tayy (q. v.). Yāqub *Alm-i-Fida*, i. 241 et seq. mentions a detailed account concerning the immigration of the latter tribe. The same author also mentions legend connected with these mountains,

namely that Adja and Salim were two lovers who met in the house of Salim's nurse, al-'Awjir, and when they were surprised, they fell to the Shammir mountain and the valley (al-'Awjir) lying between them. There they were killed by their furious relatives. More important is what the same author (*loc. cit.*, III, 913) states in the name of Ibn al-Khalbi, that a red projection of human shape in the middle of the black granite mountain, was called *Fala* and worshipped by the Tayyibs. This idol, which had there its own priests, the *Ham* *Kashra*, was destroyed by the sword of Mahammad in the 24th year of the Hijra.

Just as in the ancient times these mountains were called after the tribe of Tayyib they are now called the mountains of the Shammir, after the Khawass (q. v.).

ADJAL (أجل), term: 'goal of life', the period decreed by God for individuals as well as for whole classes and worlds, a term which can either be shortened or lengthened (Kor'an, vii. 32, c. 30, vi. 63, xlii. 53, lxxv. 1). Neither is the life of him who is made to live prolonged nor is anything diminished ~~from~~ his life, but (what is written) is a book (of Allah's decrees) (xxv. 13). The *adjal* is not shortened even through sinning (xxv. 44, xlii. 13), while on the other hand it may be concluded that Mahammad presupposed the shortening of the *adjal* as a punishment, but it might be referred to the original length through repentance (vi. 3, etc. 14). The Kor'an very often emphasizes the transience of *adjal* as the unmovable period of life assigned by God with the epithet of *amman* (xxv. 43, c. 40 and elsewhere), 'one moment' (without ambiguity), through a word which had proceeded from God (xlii. 13); the same epithet is applied to the course of the unchanging operating phenomena of nature (xxv. 28, xxv. 14, xxix. 7). The decreed duration of the world is also often designated by this formulaistic expression (vi. 2, 61, xxv. 44). At the end of the time decreed from the beginning for the existence of the world (*adjal 'alam*), the period of resurrection enters: neither sooner nor later, the way settles in the commentaries to the Kor'an the tendency to refer the *adjal 'alam*, where it is possible, to the period of the end of the world.

The religious conception of the *adjal* resulted for the dogmatic schools of Islam in a series of debated particular questions, about which diverging dogmas have been formed; particularly with respect to the questions: whether violent interruption of life is included in the sphere of the *adjal* decreed by God; whether in the *amman* of the *adjal* dwells the natural course of working at end to life is identical with the divine decree and included in God's eternal persistence (the death was decreed: the *Asghar*, *Abul-Kudhal* al-'Allaf; comp. *Zehner*, *A. Deutsch*, *Morgenl. Gesch.*, ix. 31), or whether the person, for which a longer *adjal* had been decreed and which was killed, could without that violent interruption of his life have continued to live, whether violent death is an entirely free action of the murderer independent of divine determination (*Ikhtilaf*); allusion to this difference of opinion concerning the *adjal* by Khari-

zmat, *Kasbi*, Constantinople, 1297, p. 108, l. 4 from the bottom). The advocates of the last view may argue to their favor from the consideration that according to the opposite opinion revenge for homicide and in general punishment for murder would be unjustified and paradoxical; further the dogmatical dissent in connection with the conception of the *adjal* question: in how far God lengthens or shortens the *adjal* as a reward for obedience or as a punishment for disobedience respectively, a question to which the *amman* results in the harmonizing interpretation of the Koranic verses quoted above and puts the *adjal* question in the domain of the debates on *Qadar* (q. v.). — There is a model of the *adjal* question which is applied to the death of great men by elementary catastrophe, war, persecution, etc.

The treatment of these questions has formed since the beginning of dogmatic literature in Islam a section of dogmatic compendiums, e.g. in al-'Ash'ari's *al-Ish'ar* *fi 'aqid al-Islam* (Haidarabad, 1321), p. 76, al-'Ish'ari's *Ma'ad* (Constantinople, 1266), p. 323 and others. A detailed exposition of the school differences regarding questions of Islamic dogmatics is given by Ibn Abi-Hadid in his commentary to the *Nakhi* al-'Ash'ari, a work wrongly attributed to 'Ali; (Dihle's *Ali* *Shir*) inserted some quotations from it in an exhaustive chapter of the *Ma'ad al-Islam* *fi 'aqid al-Islam* (Ludlow, 1319), II. 147-153. The Jewish religious philosophy has developed the treatment of the question from the same point of view; see concerning this D. Kaufmann in the *Zeitschr.* *f. Deutsch. Morgenl. Gesch.*, xlii. 73-84; *f. Morgenl. u. Monatsschr.* *f. Deutsch. u. Judent.*, xlii. 142-143. (I. GELMANN.)

ADJALA (أجل) = a wagon, cart. According to Dörp, *Supplement*, it also designates a constellation (the Major (al-Badr) al-'Ash'ar).

ADJAM (أجم; coll.) in opposition to *al-Adab*, 'foreigner', 'non-Arab'. We find already in pre-Islamic poetry this designation for non-Arabs; more frequently, however, in the form *Adhim*, pl. *Adhim*, and actually not only for Persians: the latter, whose customs and costumes are mentioned in pre-Islamic poetry, are in such cases mostly designated as *Farid*. Later on the appellation of *Adhim* is preferably used to designate the Persians, and even now in geographical nomenclature *Adhim* designates Persia. Although Islam taught the equal worth of Arabs and non-Arabs, yet the Arabs took with them their national pride towards the *Adhim* also into Islam, and under the Umayyads asserted it also in the administration (see *Watt*); under the 'Abbasids the foreign element stepped forth more freely. This composition of the non-Arabian Umayyad with the concealed aspirations of the Arabian element was manifested itself also in literature (see *al-Muqaddim*).

Bibliography: Goldziher, *Musl. Stud.*, I. 101-176; E. L. Brown, *A history of Persia*, I. 209-270. (I. GELMANN.)

ADJANI OGHLAN, fourth division of the Janissary corps, composed of 34 *askar*. They formed the depot of the corps and never left Constantinople, not even in time of war. The recruits received from them their military training before they were admitted to the corps and distributed among the other divisions. According

date as well as Arab tribes. Towards the middle of the 17th century, the Kebannu, who had settled in Adrar, were driven from there by the Fula Fulah, the latter founded there a powerful confederation. It was destroyed in 1685 by a nephew of Muta Imbell, whose army advanced till Tadmata. The authority of the chiefs, however, could not maintain itself in these remote regions, and at present Moroccan influence over Adrar is dispensed by the constant advance of the French north of Senegal.

The tribes of Adrar fall into two categories: nomads and warrior tribes. The warriors in "Mauran" live only by plunder, the principal warrior tribes are the Fula (Ghassan), Muta Ibn Sba and Muta Vakeb b. 'Uthman, who claim pure Arabic blood. Each of these tribes is ruled by a *qadli*, who is assisted by a *qasid*. The nomads (tribes) feed the warriors. The former generally are nomads, going up with their herds towards the north during the winter and going down towards the south in the dry season. Some of them are sedentary, e.g. the *Semud* that settled at Atar; they are administered by *qasids*. As to the confederation of the Kunta, which extends over Tadmata and Adrar, it comprises both nomads and warrior tribes. Fula warriors and nomads have sometimes relations of "Mauran", which are unanimously considered as the survivors of the patriarchal system. All these tribes embraced Islam at the time when their religion was introduced into the Sahara from North Africa. The religious brotherhoods, particularly those of the *Kalima* and *Futiya* sects, there many followers, and the religious chiefs only as such enjoy considerable prestige and influence.

ADRIANOPOLE (See **ADRIAN**.)

'ADUD AL-DAWLA *FUTUHA KUTUBAH* Adif Sa'ad; a Kura al-Dawla, a Buyide sultan, born at Isfahan on the 31st Dhu'l-Ka'da 324 (24th September 936). At the age of 13 (357 = 965-966) he was appointed by his uncle Taki al-Dawla his successor in the throne, and when the latter died in the following year, 'Adud al-Dawla succeeded him under the guidance of his father in the domination over the province of Kura. His warlike activity, however, began only in 357 (968) when he entered on Kirman; later on (361 = 972-973) he conquered Oman. In the following year (361 Dhu'l-Ka'da 1 364 = 30th January 975) 'Adud al-Dawla, in a battle near Wasit, inflicted on the Turks under the leadership of Al-Bughra a terrible defeat, after which he triumphantly entered Bagdad. He was by presents the caliph al-Tai H. 'Uthman, who had fled with the Turks to Takt, and had him come to Bagdad. He had for a long time coveted Persia, Iraq, the territory of his cousin Bahkhir, and only fear for his father had kept him off from seizing it. Nevertheless after the defeat of the Turks he obtained through intrigue the abdications of Bahkhir, whom he threw into prison

the 20th Dhu'l-Ka'da 1 (1st May) of the above-said year, and only on the intercession of Kura al-Dawla he was compelled to release him and return him to his kingdom. After Kura al-Dawla's death (Muharram 366 = September 976) 'Adud al-Dawla marched at the head of a strong army to Iraq, and after a bloody battle with Bahkhir's troops he seized Bagdad; in the following year he appropriated the whole of Iraq. Since then he conquered one province after the other: in 369 (979-980) he took away the kingdom of his brother 'Uthman al-Dawla; in 371 (981-982) he confined himself master of Fardjan and Isfahan, so that he ruled under his scepter the kingdom of all the other Buyids. Already in 367 the caliph had conferred upon him the title of Sultan and in the following year he ordered to mention in the Friday prayer after Imami 'Adud al-Dawla with the title of "king of kings" (*malik al-mulk*) and to beat the drum in front of his door in the hours of prayer. Thus 'Adud al-Dawla was the first in Islam who took the title of "king". The ties between him and the caliph were strengthened still more by that the latter married his daughter (370 = 980-981). In 371 (981-982) 'Adud al-Dawla sent the *khutba* al-Bay'at on an embassy to Constantinople, about which the Russian authorities relate many tales.

In 369 (979-980) 'Adud al-Dawla had been struck with epilepsy which grew more and more violent, till he died at Kura on the 20th Shawwal 372 (20th March 983). He was triumphantly buried in Bagdad, where he died, his death having been kept secret; in the following year his death was made public and his body was transported to Kura for decent burial.

'Adud al-Dawla is remembered not only as the greatest Buyide prince, but also as the most illustrious ruler of his time, in spite of his manifest ambition for the sovereign power the Muslim historian describes him as a man highly endowed and as one of great love for justice and truth. With regard to the latter trait it is said that he placed in his audience hall entire kinds of wild animals for the purpose of intimidating those who would tell a lie. All what is certain is that he distinguished himself by his charitable deeds and by the favor he lavished on poets and literary men. Of his numerous buildings there may be mentioned: the celebrated hospital at Bagdad which bore his name, founded in 368 (978-979), the mausoleum on the promontory of 'Ali, the sea of the Kura near Shiraz known under the name of *Band Amir*, and others. Of these works he found valuable aid in his Christian slave Nuri b. Harun. Many public works upon *Ma'asid*, say his glory, many matters dedicated to him (their works, for instance Abu Ali al-Farisi, who wrote for him his *Kitab al-Jah* 'Adud al-Dawla himself wrote verses, several of which al-Farisi reproduced in the *Mustafid al-Dawla*.

'ADUD AL-DIN (See **AD-DIN**.)

'ADUD AL-DIN *AMIR* AL-DIN MUHAMMAD b. 'ABD ALLAH, of the family of Ibn Mubarak (7. v.).

held the office of *ḥakīm* under al-Nasā'irī until he had the latter assassinated in the bath and had him paid 1000 d. al-Nasā'irī (366 = 1170) He was appointed *vizier* by the latter, but one year later he was dismissed and shortly afterwards reestablished in his office. When *Ḥajjāj al-Dīn* prepared himself for the pilgrimage to Mecca in 373 (1178) he was killed by the Isma'iliya — the al-Fatwā'ī (q. v.) was one of the poets who glorified him.

Bibbāḡiyya = *phar*: the al-Athar (ed. Forster), 12, 210 ff. *phar*; *al-Faḡḡi* (ed. Ahlwardt), pp. 367 ff. *phar*.

ADWIYA (A.) pl. of *adwī*, "medicinal drug". The Arabs divided the medicinal drugs into simples (*mufradāt*) and compounds (*murakkabāt*), the latter being comprised also under the term of *adwiyat*, "pharmacopoeia".

The simples were divided according to their properties into warm and cold, dry and moist, and namely according to the temperature of the human body.

The simples are also distinguished as primary and secondary, according to whether their natural mixture consists of one or more elements. Thus for instance milk is considered as a secondary simple, since it is composed of water, whey and fat. The effects of the mixture must be learned by practice or analogy, as for instance the mixture may not when warm on the human body and when cold on that of a lion or of a horse.

The following terms were used to designate the effects of the medicines:

1. *muḥallif* (rectifying); 2. *muḥallil* (loosening); 3. *ḡāḥ* (polishing); 4. *muḥallif* (making rough); 5. *muḥallif* (opening); 6. *muḥallil* (relaxing); 7. *muḥallif* (digestive); 8. *ḡāḥ* (purgative); 9. *ḡāḥ* (stopping) (wind breaking); 10. *muḥallif* (cutting off); 11. *muḥallif* (polling); 12. *ḡāḥ* (biting); 13. *muḥallif* (epileptic, a venereal); 14. *muḥallif* (a stimulant); 15. *muḥallif* (stimulating); 16. *muḥallif* (exciting); 17. *ḡāḥ* (consuming); 18. *muḥallif* (wiping off, removing roughness); 19. *muḥallif* (purifying); 20. *ḡāḥ* (burning); 21. *muḥallif* (wiping off heat); 22. *muḥallif* (cooling); 23. *muḥallif* (softening); 24. *ḡāḥ* (expelling); 25. *muḥallif* (increasing); the opposite of N° 2; 26. *muḥallif* (expelling); 27. *muḥallif* (increasing); 28. *muḥallif* (melting); 29. *muḥallif* (making viscous); 30. *ḡāḥ* (wether, pollster); 31. *muḥallif* (making the ulcers sticky); 32. *muḥallif* (cooking); 33. *muḥallif* (softening); 34. *muḥallif* (desiccative); 35. *ḡāḥ* (softening); 36. *ḡāḥ* (compressing); 37. *muḥallif* (constipating); 38. *muḥallif* (agglutinating); 39. *muḥallif* (circulating); 40. *muḥallif* (making flesh grow); 41. *ḡāḥ* (covering).

Some examples may show how these terms are defined. The definitions invariably begin with the formula: "This is the medication, the intrinsic property of which is to". . . . Thus for N° 7 (*muḥallif*): "This is a medication of which the intrinsic property is to help the process of mixing at the time of digestion by uniform warming; it also has an astringent power which holds together the mixture and forcibly does not let it be dissolved, for that reason is a diuretic." — For N° 26 (*muḥallif*): "This is the opposite of *ḡāḥ* (N° 8; and of *muḥallif* (N° 7), and it is a medication the property of which is to remove by

its coolness the effect of natural and foreign warmth; likewise at the time of nourishment and eating, until it remains indigested and not ripened."

Now and then medicines are referred to the definitions as examples, as p. 30 N° 1 (*muḥallif*): hyacinth, thyme and camomile; at N° 2 (*muḥallif*): castoreum; at N° 4 (*muḥallif*): melleo, etc.

Some medicines behind the function only the predicate *muḥallif* (known) made instead of the usual definition, as in the case with N° 30 (*muḥallif*).

Three principal definitions of medications are followed by three substantial ones.

1. *al-Dawā'* *al-ḡāḥ* (the killing medicine), it alters the mixture in a particular extent, with euphorium and opium.

2. *al-Dawā'* (poison), it corrupts the mixture only by its special function, as for instance the fungus.

3. Theriac and bezoar-stones, both are preservative medicines for the strength and health of the soul.

In the *Shi* there follow twelve tables in which are briefly enumerated the medical cases of entering, shivering, swelling, pusules, wounds and ulcers, of the organs of the limbs, head, eyes, breathing and chest, of the organs of digestion, secretion, of fever and of poisons. As index to the *Abjad* order of the simple medications forms the close.

The Arabs possess an old literature on this part of medicine; it arose simultaneously with the Arabic translation of the Greek medical works. The meritorious *ḡāḥ* b. Ḥanān composed a *Kiṭāb al-Dawā'* *al-mufrad* (the al-ḡāḥ, ed. Lippert, p. 80, l. 3), and thanks to the celebrated *ḡāḥ* *ḡāḥ* b. Ḥanān we possess two monographs on this subject: 1. *Kiṭāb al-ḡāḥ* *maḥallif* *al-ḡāḥ* *al-ḡāḥ* (ed. Lippert, p. 119); 2. *Kiṭāb al-ḡāḥ* *maḥallif* *al-ḡāḥ* *al-ḡāḥ* (ed. Lippert, p. 124). The valuable work of the al-ḡāḥ (ed. Lippert, p. 124) is known through a German translation of interest value by J. v. Santolmer under the title of *deutsche Zusammenstellung über die Kräfte der bekannten einfachen Heilmittel* (Stuttgart, 1870-1871), then through the publication of the Arabic text (Möller, 1875) and finally it was translated into French by the military physician L. Leclerc under the title of *Traité des simples* (Paris, 1883) and furnished with notes and an index. It is to be considered as the most important work in this domain not only for its practical knowledge and nomenclature and contains more than 3000 names.

The work of M. Sternschneider: *Heilmittelnamen der Araber* (Wiener Zeitschr. f. d. Kunde des Morgenl., 21), which contains 2043 names, is also based on profound original researches.

(J. Lippert.)

AFĀ (A.), the female viper, a black spotted, venomous snake. It various sizes, with a broad head, narrow neck and short tail, sometimes with two horny scales over the eyes (the horned viper). The viper, which lives mostly hidden under the sand, was considered by the Arabs as the greatest enemy of man (Dardān), and as "one of the ugliest beasts" (*ḡāḥ*); many fabulous accounts, of which very little is true, are in circulation about it: e. g. that it lives to an age of 1000 years, that it becomes blind and recovers its sight

measured, under the rule of the Barakzai emirs, Afghanistan consists of a territory of irregular shape lying between $35^{\circ} 30'$ and $38^{\circ} 30'$ N. lat. and between 61° and 75° (E. of the long strip of Wakhan is omitted, $71^{\circ} 30'$ E. long.

Geological formation. This country forms the northernmost portion of the great Indian plateau, which is bounded to the north by the Central Asian depression, and to the east by the plain of North India, while to the south and west it slopes away into the depressed tract which occupies the central portion of the plateau, and on the southeast is connected with the mountain system of Hindostan. The northern barrier of the highlands is the mountain range extending westwards from the Pamirs, with its outlying ridges, the Hindukush-Turkistan, beyond which the plain of land and lakes extends to the Oxus. (In the north there is a sudden drop into the Indus valley. It will be seen therefore that, with the exception of the Indus plain of Turkistan, the whole country belongs to the plateau, which is itself a late geological formation of the tertiary period, mainly sandstones and limestones. The northeastern part of the plateau gradually formed part of a great ocean connecting the Caspian depression with the North Indian plain. The process of upheaval which has raised it still continues, and Haldich remarks that the extraordinarily deep river gorges are due to the fact that the erosive action of the rivers is too slow to keep pace with the upward movement.

Orography. The most prominent feature of the mountain system is the northern range running east and west above alluded to as forming the northern boundary of the plateau. It divides the Turkistan districts on the north (the ancient Bactria) from the provinces of Kabul, Herat and Kandahar (the ancient Arak and Arachosia) on the south. This main range is known by various names such as Hindu-kush on the E. where it branches from the Pamir, Koh-i-Baba farther west and Koh-i-Safid and Siah-Baba near Herat: the latter is generally known as Paropamisus, although the true Paropamisus (or Paropamisus of Ptolemy) included the Hindu-kush. The greater part of the country south of this range is occupied by a number of subsidiary chains or long spurs which run from east to west or more generally from southeast to southwest. These ranges and the intervening valleys form the greater part of the Herat and Kandahar provinces, while the longed mass of mountains lying to the south of the eastern Hindu-kush comprises the valleys of the Kabul and Kojan rivers and forms the provinces of Kabul and Kishistan. The highest elevation in the northern range is the Shah-Baba peak (16870 ft. = 5153 metres) in the Koh-i-Baba, and the long spur running to the southwest contains several peaks of about 11000 ft. (3353 m.). The ridges dividing the Helmand, Tarnak, Arghandab and Arghistan are outliers of this system, and it may be traced farther southeast into British India. The Sulaiman Range (highest peak 12000 ft. = 3658 m.), which drops finally into the Indus valley and is the edge of the plateau, beyond the political limits of Afghanistan. The mountains further north on the eastern limit of the plateau between the Kojan and Gomal rivers are a more irregular mass with peaks over 11000 ft. (3353 m.), while

farther north still between the valleys of the Kabul and the Kojan is the Shah-Baba, the highest range in Afghanistan after the Hindu-kush, and Koh-i-Baba (highest peak Sulaiman 15000 ft. = 4572 m.).

River system. Northward from the Hindu-kush level of the country falls rapidly towards the Oxus valley, while southward the valleys run more gradually towards the Indian depression containing the Helmand system. = H. Lake and the extensive Ghazal Zirah, into which flow, with the exception of those belonging to the Indian system, the rivers south of the Hindu-kush. Thus the rivers fall naturally into three groups, which may be called the Indus group and the Oxus group.

The Indus group comprises the Helmand and its affluents, of which the most important are the Tarnak and Kojan flowing from the Hindu-kush on the north and the Loghar flowing from the Ghazal on the south. South of this the Kojan rising in the Pamir, and its tributary the Tarnak, called in its lower course the Gomal, which joins it in British territory below the mountains. Still further south separating the Wakhistan mountains from the Takhli Sulaiman is the Gomal formed by the junction of the Kander and Zhor. These rivers though of small volume drain extensive areas and mark important military and trade routes through the mountains between India and the plateau. Other small streams such as the Wakhos, Loghar, Kaha and Nari further south serve a similar purpose. It may be noted that many of these streams flow not along the natural valleys formed by the mountain ranges but run across the mountains and limestone ridges of the Sulaiman Mountains, through which they run deep precipitous gorges.

The second or Helmand group consists of the Helmand and its tributaries, and of the other rivers running towards the southwest into the Indian depression. The Helmand or Hirmand (the Helmand of the Arabs, the Erymanthos of classical writers) is the principal of these. It rises near Kabul and flows through narrow mountain valleys into the more open country of Zamindawar, where it is joined on the left bank by the Arghandab (Harmawit, Arachosia). The latter in its turn is formed by the junction of the Upper Arghandab, the Tarnak, and the Arghistan (or Arghastan), which drains a series of nearly parallel southerly and south-westerly valleys. Another member of the same system is the river flowing southward from Kishistan which never joins the Helmand system but is absorbed by the Sulaiman Salt Lake. Other rivers west of the Helmand with the general south-westerly flow, which also discharge into the Indian, are the Ghazal-Zirah, the Farah-Rod and the Herat-Rod.

The Helmand, a basin sometimes of small extent, expands enormously to the south in seasons of high flood, when the hill fort of Koh-i-Baba becomes an island. It then discharges itself through a channel called the Ghazal into a still lower depression known as the Ghazal-Zirah. Part of the Helmand is in Afghan territory and part in Persian according to modern demarcations which have divided it. The Helmand is only 1580 ft. above sea-level, and the Ghazal-Zirah is still lower. — The Helmand on the average overflows once in ten years into the Ghazal-Zirah. It is only slightly

trackless, and can be struck, a circumstance that no doubt to its occasional overflow. The level of Saitin does not appear to have risen since ancient times in spite of the enormous volumes of silt discharged by the rivers which have no other outlet. The cause of this is probably the prevalence of violent north-west winds through a great part of the year, which remove the light surface soil.

The Saitin or Qana group of rivers comprises the Qana and its southern tributaries, as well as the Murghab and Hari-rod which also flow northward into the plain but never reach the Qana. All of these rise on the northern flank of the great mountain barrier, the exception being the Hari-rod, which rises on the south of the Koh-i-Baba. It flows westwards through a narrow valley between the Koh-i-Safid and Koh-i-Siyah into the Herat plain where it turns to the north and after passing through a depression in the mountains loses itself in the plain of Russian Turkistan beyond Chirchik-Fleke.

General formation. The mountain ranges generally become less lofty towards the south and west and the difficulties of communication that exist further north disappear. Hence the easy route for trade or military expeditions from Herat to Kandahar has in all ages been direct, via Schizawar, Farah and Ghorzick, while from Kandahar to Kabul and Ghazni the direct line of the Tarnak valley is followed. From Herat where the Paropamisus drops to an insignificant elevation the Turkistan province is easily accessible, and the country can also be reached from Kabul directly by difficult passes, the Khawak, Baidan and others, through the Hindu-kush.

Thus the three towns Herat, Kandahar and Kabul are marked out by natural position as the most important points in the country. Each of them lies in a fertile valley and is self-supporting, and each of them commands important routes to the others as well as to India, Persia and Central Asia. If therefore Afghanistan is to be an independent political whole the possession of these three points is essential to its rulers. There can be no stability if they are in separate hands. In this political sense Ghazni and Jalalabad must be classed with Kabul, the old capitals Farah and Ghorzick with Kandahar, and Salawar with Herat. Saitin lying on the easy route from Herat to Kandahar has always been a debatable land.

Kabul is in every way the strongest position, and is generally in consequence been more independent than other districts. Herat on the contrary is much exposed to attack from the west and north, and when Herat has been conquered by a foreign invader Kandahar is immediately threatened. As long as Herat is held Kandahar is safe from an attack on the western side, and it has also a strong position towards the Indian side, though not so strong as that of Kabul.

The district of Saitin adjoining the Haman is fertile and suited for irrigation. Occupying a commanding position on the route leading eastward to Kandahar and westward to Herat, it is of great importance to the rulers of Afghanistan, and the present division between that country and Persia is unfortunate. As an ancient seat of Iranian culture and connected with Persian legend the Government of Persia holds to it tenaciously and it seems that it is destined long to continue divided as at present.

Climate. The whole country is liable to great extremes of temperature ranging from the intense heat of Saitin, the Garmes district and the Qana valley to the great winter cold of the high exposed regions, where violent snowstorms are not uncommon. Instances of armies suffering from such cold are well known in history. The march of the emperor Baber from the neighbourhood of Herat through the Hazara Mountains to Kabul is a case in point, and the Hindu-kush (Hindu-kulayur) is popularly supposed to derive its name from the death of the Indian troops of the emperor Shah-Jahan. More recent instances are the sufferings of 'Abd al-Khalim's army in 1858 and of the British Boundary Commission in Badkhis in 1885. The daily range of temperature is everywhere very great, the difference between maximum and minimum varying from 17 to 30 degrees of Fahrenheit. In the spring and the upland valleys have a temperate and pleasant climate, which is very favorable to the growth of fruit, especially grapes, melons, peaches, plums, apricots, walnuts and pistachio-nuts. Modern travellers have found the neighbourhood of Kabul to be not unworthy of the places lavished on it by the emperor Baber.

In the more lofty part of the Hindu-kush inhabited by the Kafirs, a truly Alpine climate is found resembling that of parts of the Himalayas.

The vegetation generally speaking is that of the Persian plateau, and is quite distinct from that of the Indian plains. In the plains few trees are found except those cultivated in gardens, fruit-trees, planes and poplars, while on the higher mountains many varieties of pines and cypresses are found with wild vines, ivy and roses. On the lower and drier ranges the wild pistachio (*Pistacia Elaeagnifolia*), wild olive (*Olea europaea*), juniper (*J. communis*) and *Acacia* (*Acacia senaria*) are the most characteristic trees. The angiot or hing (*Ferula assafoetida*) is very abundant in many parts. Wild flowers also abound in the spring, especially the iris, tulip and poppy.

Political Divisions. The divisions of the country follow its physical formation.

Kabul. The province of Kabul occupies the fertile high-lying valley, round the upper waters of the Kabul, Logar and Tagab rivers and Ghazni, also the lower part of the Kabul valley near Jalalabad. Ghazni was the most important town in this tract formerly, but Kabul has taken its place during the past four hundred years. Kabul was recognized as the centre of government under Moghul emperors, and was adopted by the Durranis as their capital taking the place of Kandahar. Its old river Paghwar is the natural centre of the tribes in the lowlands near the Indus, but has been cut off from Afghanistan since it was taken by the Sikhs in 1834, and since 1849 has formed part of British India. Kabul is now a thriving town. Its population is variously stated. A late resident (F. Martin) places it as high as 120,000, but this is beyond all other estimates. Under the firm rule of the late emperors it has doubtless grown rapidly.

Kandahar. Kandahar includes the old province of Kandahar, and comprises the lower valleys of the Helmand, Tarnak, Arghandab and Arghasta, the principal home of the Durranis. The modern town of Kandahar on the Afghanistan

has been the capital of the province since the 19th century, and has taken the place of older towns such as Ghazni and Herat.

Sharan. Sharan is the hot and fertile irrigated district lying around the Helmand. A large town of it, however, belongs to Persia. It contains no large town.

Herat. The Herat province includes the fertile valley of the Hari-rud and the open country lying between the Hazara Mountains and the Persian border; also a considerable part of these mountains which are inhabited by the Hazara and Chahar Aimak tribes. The town of Herat, one of the most famous in eastern history, is its capital; although fallen from its ancient glory it is still and must remain a place of importance and will no doubt develop greatly with peace and improved communications. Subawar is also a thriving town to the south of the province.

Hazratistan. The country of the Hazara and Chahar Aimak tribes is the mountainous mass bounded to the north by the Kobi Range, to the west by the open country of Herat, to the east and south by the Helmand valley. It is the country anciently known as Ghazni, and the ruins of the town of Ghazni lately explored probably mark the site of the old capital of Faruk-Khan, where the Ghazni kings reigned in the 12th century. It now contains no town of importance.

Turkistan. The country north of the Kobi Range as far as the Oxus is known as Turkistan; its old capital ~~_____~~ has had its former importance, and the present centres of administration are Mazar-i-Sharif, Tashkurgan and Maimana.

Nadakhshan. The region lying north of the Hindukush and east of Turkistan along the left bank of the Oxus is known as Nadakhshan. It is watered by the Kunduz-River and its affluents.

Wakhan. Still further to the east and extending to the Pamir is the long mountain valley called Wakhan.

Kafiristan. The recently conquered mountain mass of the Hindukush lying north of the Kabul valley and west of the Kunar, inhabited by the Kafir, is known as Kafiristan.

2. ETHNOLOGY.

The races which inhabit Afghanistan may be classed under the following heads: 1. Afghans; 2. Persian; 3. Turkish and Slavic; 4. Aryans of the Hindukush. — But considerable intermixture has taken place, and it is not easy to determine the elements which enter into the composition of every tribe.

The Afghans. Physically the Afghan belongs to the main to the Turko-Persian type with a considerable admixture of Indian blood among the eastern tribes. There is great variation of type, and the absence of anthropometrical observations over the greater part of Afghanistan renders certainty unattainable at present. It may be considered as established, however, that the proportion of brachycephalic heads is larger than among the Indo-Aryans of the Hindukush, and probably larger than among the pure Persians. Among the southern tribes such as the Laksas of Zhet and the Tatars and Adakals of Pishan and Saman the type resembles that of the Baluch and broad head, while among the tribes of the Indian valley ~~_____~~ are narrower. Figures are wanting for the great central body of Durzani and Ghilzai. None

are generally long and often curved and this is perhaps the origin of the idea which some have entertained that the Afghans are of Hebrew origin. Bellow has noted that this peculiarity is very marked in the portraits of the Kushan kings on the coins of the 1st cent. (A. D.), and it is certainly confined to the Afghans but widely spread among other races of the country as well as among the Baluch, and in the Northwestern Punjab and Kashmir. The Afghans are a tall and well-built race often fair in complexion in comparison with their neighbors, brown beards and even eyes being occasionally seen, but in these points there is great variation even in neighboring tribes. Some modern writers have attempted to draw a distinction between Afghans and Pathans. They maintain that only the Durzani and Kikind tribes are entitled to the name Afghan, while the title Pathan (an Indian corruption of the native form Pakhtana or Pakhtana, pl. of Pakhtan, Pakhtan) includes all tribes of whatever origin who speak the Pashto language. This distinction, however, appears to be unreal and of modern origin. The name Pakhtan or Pakhtan is undoubtedly the true national name and it is universally used, while the word Afghan seems to be of literary origin and like many other national appellations has been applied to this people by foreigners, and in modern times it has been adopted as a polite designation by educated persons and those who are proud of their descent. The theory restricting it to the Durzani and to the other tribes who claim by their genealogies a similar descent appears first in the works of Bellow and has been adopted by others without sufficient reason. According to this theory great tribes like the Ghilzai are allowed to be called Pathans but not Afghans, and this is applied also to the Afridi, Bangash, Khatlak, Wazir, Khar, Gondsar, Sherani, Uzbaki and many others without any sufficient justification. Bellow accepts the story of the Hebrew origin of the true Afghans and supposes them to have come into the Kandahar province from the west, and there to have met the Indian colony from Gandhara (the present district of Peshawar, which had been driven thence by Scythian invaders in the 5th or 6th cent. A. D.). From these Indians they are supposed to have acquired the Pashto language, regardless of the fact that Gandhara was purely Indian and the language spoken there a form of Prakrit and not an Iranian idiom from which Pashto could be derived. The Afghan settlement of the Vindusian dates only from the 19th cent. Bellow proposes without a particle of evidence that they were only returning to their original home. The name Kandahar he supposes to be identical with Gandhara, and to have been carried to the Arghandab valley by these colonists. It may be noted here that Kandahar is historically a modern place and we hear nothing of it before the 14th cent. The Ghilzai are identified by Bellow and others with the Turkish tribe which he calls the Khilji, i. e. the Ghilji. Darmesteter (*Essai sur l'Afghanistan*, p. 113) supports Bellow's view, and it may be admitted that the Ghilzai have probably absorbed a good deal of Turkish blood although the actual identification of names is doubtful. The tribes of the Sulaiman Range are supposed by Bellow to be aboriginal Indians and he follows Lassen in identifying them with the Hittites, who are stated by

(1023-1024). Al-Biruni mentions the Afghans once (ed. Sachau, I, 208), saying that in the western mountains of India live various tribes of Afghans who extend to the neighbourhood of the Sind (i. e. India) valley. Thus in the 11th cent. when the Afghans were first mentioned they are found occupying the Sulaiman Mountains now occupied by their descendants, the very tribes which the advocates of the exclusive claims of the Purshians will not admit to be Afghans. Al-Biruni no doubt also alludes to them in 222 passages (*loc. cit.*, p. 199) where he says they are rebellious, savage races, tribes of Hindia, or akin to them, inhabit the mountains which form the frontier of India towards the west. There is no record that at this time any Afghans were found west of Ghazni north to the Hindu valley and Gandhara which were occupied by a Hindu kingdom. Confluent has arisen through the error of modern historians who have, as Raverty has pointed out, mistaken Tadjik Qhizis and Turkish Khatlaj for Afghans. Raverty considers with good ground that the Afghans were at this time found only in the mountains south of the Kuram and east of Ghazni. The most persistent mistake is that regarding the Qhizis. Thus Mallison (*Hist. of Afghanistan*, p. 93) speaks of Khat al-Din Qhiz al-Afghan, where Ferishta, who is his authority, does not use the word Afghani at all, but calls him Qhiz Sar, i. e. a descendant of Sar, and not a member of the Sar tribe of Afghans. Even so accurate a writer as H. J. Brown (*His. of Persia*, v, 305) speaks of the "kings of Qhiz, those fierce and hardy Afghans of Ferishta's". It is evident that throughout the Ghaznavid period the Afghans continued to be an obscure mountain race. We occasionally hear of them, but as adventurers and hill rebels only. In 431 (1039-1040) Mas'ud sent his son Amir into the hill country near Ghazni to subdue the rebel Afghans (Mallison, *loc. cit.*, p. 86, inserts this into Afghans, Abdalis and Qhizis, the two latter names being absolutely unknown at that time). In 513 (1118-1119) an army composed of Arabs, 'Adhami, Afghans and Khakhs, was assembled by Arslan Khan. In 547 (1152-1153), Ali Khan, Bahman Khan assembled an army of Afghans and Khakhs. With the rise of the Ghazni power the same state of things continued. In 588 (1193) according to Ferishta the army assembled by Mu'izz al-Din Muhammad b. Sam consisted of Turks, Tadjiks and Afghans, and his Indian opponent Tikhora (Pribhat Khah) assembled a force of Khakhs and Afghans horsemen. Thus in this great war between Muhammadans and Hindus Afghans are represented as fighting on both sides, which probably indicates that they were not yet completely converted to Islam, although the manufactured legends represent them as having been converted from the days of Khalid. It is not clear whence Ferishta obtained this statement. It does not appear in the account of his war given by Minhaj-i-Siraj in the *Fieldnah-Nama*. This author does not mention the Afghans throughout his account of the Ghaznavid and Ghori kings. His first and only mention of them is in his own time in the year 658 (1260) in the reign of Najir al-Din Muhammad of Delhi. He there says that Hagh Khan employed 3000 brave Afghans in subduing the hill-tribes of Sind in Rajasthan. During the next two centuries we find occasional mention of Afghans in Indian history. For instance in the reign of Muhammad b. Tugh-

lay, Barani says in the *Tarikh-i-Feroz-Shahi* that there was a rebellion at Multan of a body of Afghans headed by Multan Wali (this name occurs in the Multan history, the champion of Multan), and is probably not the proper name of an Afghani. Again Malik Afghani was one of the foreign emirs who rebelled at Delhi. In 775 (1370-1377) the list of tribes was given by Malik Nur Afghani (*Tarikh-i-Muhammad-Salati*). The emir Timur found them still hill rulers, and in the *Majma'at-Tawarikh*, the *Zafar-Nama*, and the *Mafat al-Mu'ir* it is related that he invaded the country of the Afghans (or Afghani) inhabited the Sulaiman Mountains. Thus except as occasional soldiers of fortune they remained a fierce race of mountain robbers until the rise to power in India of one of these adventurers under their banners. Where can be no doubt that the collapse of the Delhi monarchy after Timur's invasion gave them their opportunity. This leader was Uzbeg Khan Lodi who was *farogh-shah* of the Lodis in 808 (1405) and many other Lodis are alluded to as holding important posts. His rise to power was one of the most important persons in the empire, and he held Delhi for some time against Bihari Khan, and is by some classed as one of the Sultans, but never took the title of Sultan. He was succeeded in Bihari Khan in 817 (1415) and died in confinement soon after. Later the succeeding kings another Lodi Sultan Bihari, alias Islam Khan, rose to power and his nephew Bahadur first became governor of the Pandjab, and in 855 (1450) he deposed the last of the noble Sayyid kings and became Sultan of Delhi. He was succeeded by his son Sikandar who was followed by Ibrahim, but the Lodi rule, at first vigorous, had failed to curb the northward advance of Delhi which fell before Babur in 935 (1525). The Afghans, who had become numerous and powerful in India, succeeded, however, in driving out the Mughals for a few years, and founded another Afghan dynasty under the brilliant leadership of Sadr-ud-Din. The two clans were near connections of the Lodis, both being branches of the Chahat stock. Many families of the Prangli and Sar clans settled in India at this period, indeed they were to have migrated thence, and at the same time the related Nijali and Lohani clans moved down from the mountains into the Indo valley. In the preceding century the Vanshi, a branch of the great Sahasni family of Afghans (to which the Durzais belong) had moved from the neighborhood of Kabul, where they had been settled since time, into the Peshawar valley and the mountainous region of Hindustan, Swat and Buzi. They gave the valley the name of Yamsal which it still bears, and many of them are believed to have accompanied Babur into India. Their descendants are found scattered over Hindustan. The names of the Prangli and Sar are not now found, and they have probably merged in the Lodis. These settlers were generally known as the Geras valley by the name of Rohela or Rohilla (from the West Pandjab word *roh*, a mountain, *roha*, mountains), and have given their name to the province of Rohilkhand. At present day the Akhri, Uralmi, Bangash, Tatin and Dardas are strongly represented there. A population of over 300,000 in the United Provinces of Hindustan is claimed as Qhizis, and this probably includes the descendants of the miscellaneous followers of

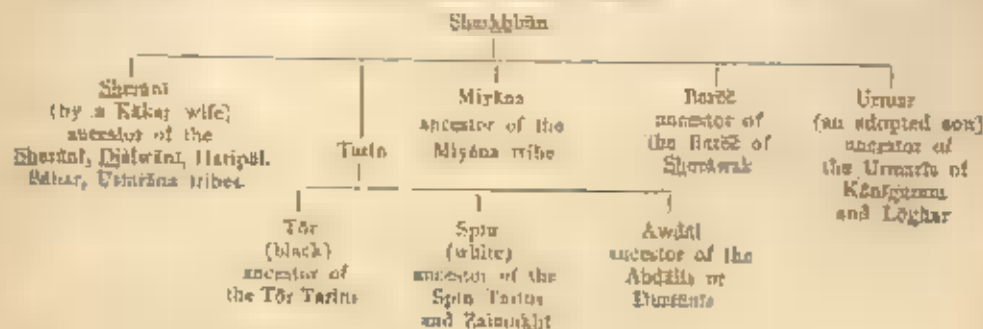

the Ghazni Kings, whether Turkic, Turk or Afghan. There are many Kakari also, both in the United Provinces and the Panjab. The Laman tribe existed in Multan and Feroz in the Panjab and a large number of Abdalis driven from Kandahar by the Ghazis in the early part of the 18th century joined them at Multan. From these warriors spring the Multani and Kasuriya Pathans. The Afghans thus colonised northern India largely, and their descendants there are still distinguishable although greatly assimilated by the surrounding population. They have lost their language and tribal organisation.

In their own country the Afghans never succeeded in establishing an independent rule until the 18th century. They remained, like the rest of the country, nominally subject to the powerful rulers of the day: the Moghuls, the Timuris, the Moghul emperors of India, or the Safawi kings of Persia, until the rise of the Ghazis to power under Mir Wala, and afterwards of the Abdalis (Durranis) under Ahmed Shah. It was at this period, when the Afghans became the ruling race over a large population, that the name *Afghanistan* was extended to the whole country, including a large part of what had till then been known as *Khorasan*, a name still in popular use for the plateau country above the Sulaiman Mountains.

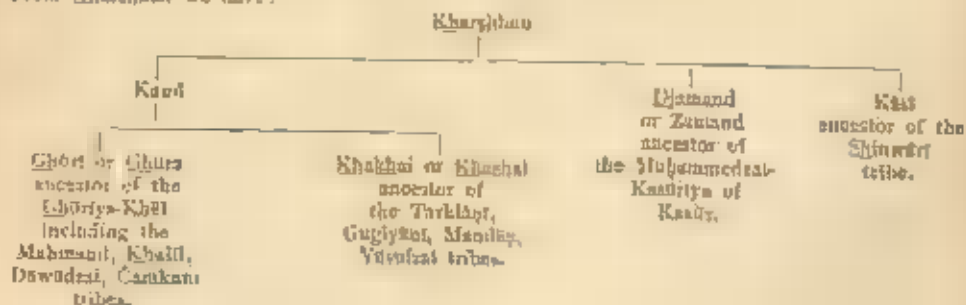

The genealogies recorded in the *Shah-nama* of Afghans are the foundation of those found in more modern works such as the *History of Afghanistan*. In their later parts they are historical, in the earlier they are valuable only as a pointer to beliefs entertained three hundred years ago as to the relationship between the tribes. According to these almost all Afghans are descended from Kaka 'Abd al-Rashid, who was converted to Islam through the intervention of the victorious Khalid, and who was himself descended from Afghans son of Timur, son of Malik 'Izzat or Sayid (Said). He is supposed to have derived his name from Kari (Kish) the father of Saul. From Kaka 'Abd al-Rashid the alleged descent is as follows:

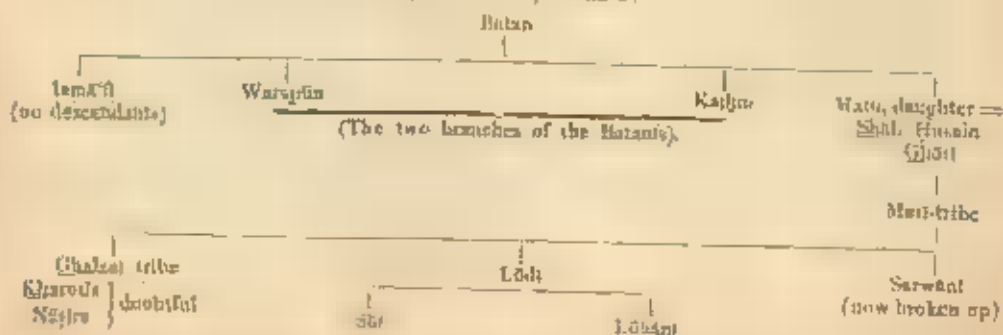

These three are the eponymous founders of the three main branches of the Afghan race, the Sarbans, Batans, and Churgashis. Sarban had two sons, Sharikhban and Khargishan, and from them we find that a large number of the most important tribes claim descent. Thus from Sharikhban we have:

From Khargishan we have:

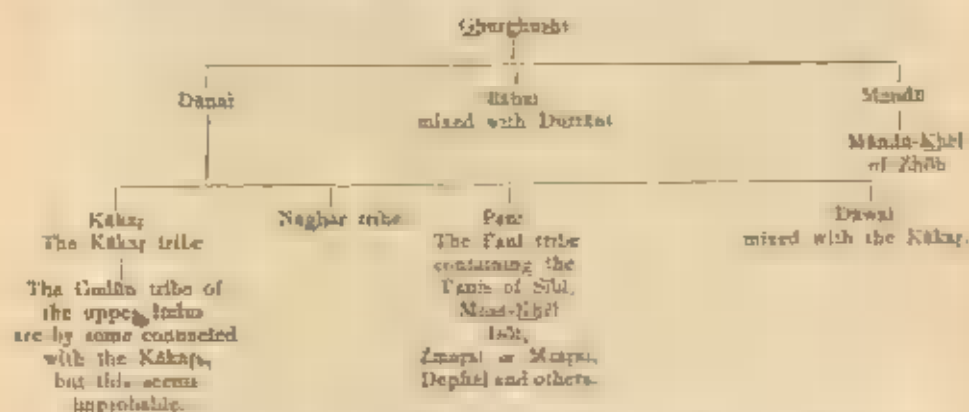

Returning to the second male branch, the Batans, we have:

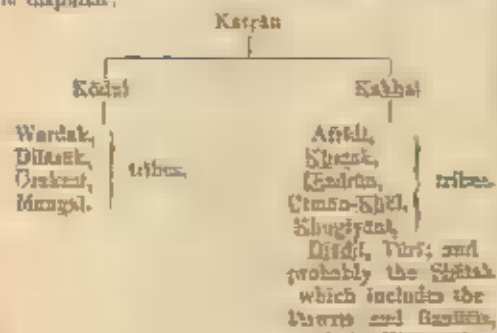

From the Lohani stock the present Dakh-Beli, Myan-Khai, Niyati, Marwat, Khawar and Yahi tribes are derived. It will be seen that the only tribe claiming to belong to the Harari nation in the male line is the small Baluch tribe, while the great Ghilani tribe, almost a nation in itself, and the numerous Lohi and Lohani are believed to descend only from Harari daughters, by the marriage with Shah Ismail, a descendant of the Lohi kings. This probably means that a large Tajik or Lohi element is to be found in these tribes. The legend of the illicit connection between Shah

Heena and Kibi Khan, afterwards sanctified by her father, and the birth of a son named Ghazizadeh (Ghazizadeh's son), so doubt completely the supposition of some such element as Angkor. It has been thought by some that the Khalifa Turki is the tribe thus absorbed and that the name Ghazizadeh is simply Khalifa. This is very doubtful, but it is probable that there is a Turkish as well as a Tadjik element in the tribe.

The *Quarglight* branch is also not very widespread. The collotype is:

There remains a group of tribes which are jointly known as Karapet or Karled, supposed to be descended from Karpan or Karlen, whose origin is doubtful:

In addition to these the great Warial tribe divided into Mahard and Darwaghghah, and the tribes of Daws are separate, and are not included in any of the genealogies.

Certain sections of tribes claim to be Sayah-
my origin. They are found among the Geyants,
Kishuts, Kaptant, Delwa, Tasta, Mylana and Tasta.
The Gaudaput and Celamim tribes also claim this
descent; they were originally sections of the She-
rois but are now separate tribes. The Sangath
claim to be Sayahmy by origin.

All these tribes were recognized as *Afghan* in the *Maithome Afghan* with the exception of the *Balogh* and *Wazir* and the *Kardis* of the *Kabul* branch including the *Afridi* and *Shahi*, the tribes of the *Kunar* valley and *Kohat*, the *Uzbek* with the *Dzhar* and *Tartar*, and the *Uzbeks*, as well as the tribes of *Dawar* and *Rana*. These were probably unknown to the author as they lived in obscure and inaccessible mountains.

He mentions other tribes such as the Fatmids only to reject the idea of their being Aghids, and his opinion of these tribes must have been due to ignorance.

1. Description of Sample Data

The Durkhis occupy the lower valleys of the Helmand, Terek, Amu-darya and Arghandab, Zamindawar, the country south of Kandahar up to the Sikhistan border.

The Chikains are spread over the upper valleys of these rivers and the whole country of Zarmat east of Ghazni up to Kabul and Waziristan, and the northern tributaries of the Gomal. They go down in large numbers every year by the Gomal and Tili passes to the plains of the Indus and are largely engaged in mercantile pursuits in India during the winter. At the beginning of the hot weather they make up their camels in the plains of the Rindjail and go up to their upland pastures. This class of Chikains is known as Powindas and belongs mainly to the powerful Salimian-Khil class. The smaller tribes, known as Najir and Kharail are of a similar type and are also migratory. They resemble the Chikains but are considered to be distinct from them. South of the Chikains is the widely spread Kalay tribe, now mainly located in Khilb and Peshawar provinces of British Baluchistan. The same remark applies to the Tadas, a white skin to the Durrani, who are now confined to British territory, and dwell on the Baluch and Hazar tribes. The Pails and their offshoots also inhabit Sibi and the hill country bordering on the Baluch.

North of the Ghilghis in the lower Kailash valley we find the Gogiparis and Dlawadmis. In the hill country from the Komer to the Khallur Pass the Mohmands who are divided between Afghanistan and India. East of these lie the Wundah

in the Peshawar valley and the hills north of it, where the Gandhari class is best known, and in bands bordering on the Indus the Pashtun-Nuts of the Khairat Pass are the Sumeri and south of it, having a slight allegiance to the government of India, are the Afridi, Mohmand and Zaimukht. In the Kuzam country the Sangzai, the Khyati and Loris. In the mountains between the Kuzam and the Gomal are the Per-wash-Khet and Mahmal Waziris, with the Pashais in the adjoining valley of the Tochi. In the plains of Kohat are the Khyatka, and in Samit on the lower Kuzam and Gambila are the Bonzels, a mixed race, and the Marwata. The Sistanis occupy the outer hills bordering on the Helmand country. South of the Gomal are the Sistanis, Pashais and some smaller tribes are found, and in the adjacent plains of the Ghazni the Gandari, Shyati-Khet and some minor tribes. These extend southwards both in the mountains and plains till they meet the Baluch tribes. The whole of the last mentioned tribes from the Khairat southwards although Afghans are not under the government of Afghanistan but are wholly or partly under the control of the government of India.

POPULATION OF PERSIAN

The Persian (or Tadjik) is generally used not only in Afghanistan but in neighboring parts of Persia and Turkestan to denote the settled Iranian population, which is probably the established of all the races now inhabiting the country. Some have supposed the name to represent the Dadiak of Herodotus, and even the Dadiak of Ptolemy. But I thought to be the same word, the initial being properly T instead of P. These guesses do not require serious consideration. The word Tadjik is now used properly means Arab, and it was applied to those communities where Arabs were at the time of the first Arab conquest. It was even applied to all settled communities, and the traces of Arab now remaining are but slight. The Tadjiks are almost entirely a settled agricultural community, and dwellings occupied all the more fertile parts of the country before the Afghans spread from the eastern mountains. They are organized as a rule in village communities and not on the tribal system. They supply the bulk of the trading classes and artisans of the towns. The trading instincts of certain sections of the Tadjiks may perhaps be attributed to their partly Tadjik blood. Wherever the Afghans are in power the Tadjiks are their tenants or dependants, although they often own the land. Where they have villages of their own they are presided over by their own headmen or *maliks*. Although Persian in race and language they agree in religion with the Afghans and are devout Muslims. The tribal system maintains itself among certain independent branches of the race which exist in mountain tracts. Such are the Kalistans of the Kabul province, the Khindjians, the Lashkars of Laghar and Balkh, and the Farmanis who occupy the country west of Kabul. The population of Kabul itself is mainly Tadjik and the language Persian. The people of Shiran are also mainly of this stock mixed with Baluch, and the traditions preserved in the *Shirani* point to this locality as one of the earliest Iranian centres. A few Kayanid families which claim to be descendants of

the ancient Kayanid or Achemenian Kings are still found in Shiran. The province of Farab or Farangian, afterwards Sakastan, Saffidkan, Sistan, included the lower basin of the Helmand River, perhaps as far as Zaidadkhar, and it was here and in the adjoining mountains of Qhor that the powerful Tadjik kingdom of the Ghazni arose in the 5th and 6th centuries of the Hijra, which overthrew the Saffarid monarchy and supplied successors to the Saffarid. Tadjiks formed an important part of all armies, and the desperate resistance which the Ghazni mountaineers offered to the Mongols is evidence of their warlike qualities. The Kart dynasty which ruled Afghanistan under the Persian Mongols were also Tadjiks.

In the south, spreading into Baluchistan the population of Tadjik origin goes by the name of Dekhar or Dekhkan, i.e. villagers, and north of the Hindukush to the Turkestan generally they are known as Gorkh.

The Pashai race which occupies the skirts of the mountains N. of the Kabul River in the Ghazni province may perhaps be classed with Tadjiks, although they speak a non-Iranian language akin to that of the adjoining Nizari-Pashai Kafir. The districts of Laghar and Khatkan in the Mahmal Wazir country, who speak an Iranian dialect called *Bargasti*, must also be placed among Tadjiks.

The Baluch races of Wakhan and Badakhshan, which occupy the northern slopes of the Hindukush, and speak Iranian languages differing from Persian, are generally classed as belonging to the Highland Tadjik type, which has kept apart from the Lowland Tadjiks of Badakhshan who speak Persian. They are a broad-headed race and are considered by Uzbeks and others to belong to the Aryan race. They are found in Sarikol, Wakhan, Shighin, Moudjan, Sanglit and Ishkashim, and comprise also the Yidghis on the south side of the mountains. The name *Chakla* applied to the group simply means in Persian "present".

3. TURKISH OR MONGOLIAN RACES.

South of the Hindukush. The mountains which lie between the Hindukush and Koh-i-Baba on the north and the Helmand valley on the east and south that is the country formerly known as *Ghor* are now inhabited by tribes shown by their features to be mainly or partly of Mongolian origin, although they are no doubt mixed with the original Tadjik population. Those who live on the west side of the mountains are known as the *Chak* or *Amak*, and still make use of the Turkic language to some extent. The *Harat*, who occupy the greater part of the mountains, speak Persian and are Shias by creed. It is generally asserted that they are the remains of the army of Megasthenes, grandson of King *Artaban*, but their actual origin is by no means clear. It may be taken as most probable that they gradually occupied deserted parts of the country after the devastations of the Moghul invasions, during the time of the Karts of Herat, who, though themselves of *Ghor* origin were under the overlordship of the Moghul *Shahs* of Persia, and depended a good deal on Moghul support. They are a hardy, brave and industrious race and are on the whole of a peaceful disposition. Their *Shah* creed is a cause of offence to their Afghan neighbors on the east,

and to their kindred tribes, the *Chakar* *Aimāk*, on the west, and they are seldom on good terms with either of them.

The *Chakar* *Aimāk* are Sunnites, and consist of the four tribes (or *Aimāk*) of *Harat*, *Chah-Nihar*, *Taimant* and *Firōz-kōh*. They occupy the western valleys spreading down towards the open country of Herat and Zabulwār. Some Afghans state that the *Taimant* tribe is an offshoot of the Afghān *Kakars*, but if there is any foundation for this statement they have lost all resemblance to their ancestors.

North of the Hindu-kush. In the territory of Afghān Turkizans the principal part of the inhabitants are Turks speaking Osberg with a substratum of *Khūzja* or *Sarta*, and in the desert tract to the west bordering on the country under Russian rule a few wandering *Kashgari* Turkomans still live inside the Afghān border.

4. NON-IRANIAN ARYAN IN THE HINDUKUSH.

The races grouped together as *Siyāh-pōsh* *Kāfir* inhabiting the mountain country known as *Kāfiristan* are undoubtedly Aryan, and perhaps, as their language indicates hold an intermediate position between the Indian and Iranian stocks. They have all professed some form of paganism till lately, but since their conquest by 'Abd al-Rahmān they have outwardly at least accepted Islam. Sir G. Robertson divides all *Kāfir* into (1) *Siyāh-pōsh*, (2) *Wai-gulā*, (3) *Premi-gulā* or *Wiron*, and mentions also a race probably allied to the *Wai-gulā*, the *Ashkum* of whom little is known. The *Premi-gulā*, *Wai-gulā* and *Ashkum* are classed together as *Bald-pōsh*, or white-clothed, but differ one from the other in dress, appearance and language, while the *Siyāh-pōsh*, or black-clothed, have a strong resemblance one to the other both in speech and appearance.

The tribes classed as *Siyāh-pōsh* are the *Kāfir*, *Malogāl*, *Kashlān*, *Kān*, and *Israr* or *Gawdrak*; and of these the *Kāfir* is by far the most important.

Indians. The more distinctly Indian known as *Hindis* are found in some extent in the east of Afghānistān, but mainly in the districts now under British rule. They are mainly cultivators, generally *Hindis* by race.

Hindu traders belonging to *Khatri* or *Arya* families having their centre at *Shikārpur* in Sind are found in towns everywhere, and even in *Turkistān*.

5. LANGUAGE, LITERATURE, SCRIPTURE AND POLITICAL INSTITUTIONS.

Language. The languages spoken in Afghānistān with the exception of the Turks of the *Qaza* province and of the *Chakar* *Aimāk*, and the *Kāfir* group of *Kāfiristan*, belong to the Iranian family.

Of these Persian is spoken by the *Tajiks* everywhere, in the provinces of *Kābul* and *Herāt* including their chief towns, and in *Baluchistan* and the *Kōhistan*; also by the *Mongghol* people of *Harat*, and by the *Khil-bash* of *Baluch* and *Herāt* who are eighteenth century immigrants belonging to the Turkish tribes of North Persia.

The Persian spoken is generally *scholar*, and everywhere preserves the old distinction of *madhāb* and *shū'ar*, between *ā* and *ē*, *ī* and *ē*, which is lost in modern Persian. The Persians of the *Kāfiristan* is thought to come to resemble the *apostolic* (*Zabul*). The *Tajiks* of *Baluchistan*, *Durwar*, *Kābul*

and *Kandahār* is a distinct dialect of Persian. There is no distinctive literature apart from the general Persian literature.

The other Iranian languages belong to the East Iranian group, and comprise *Pashai*, the *Shahk* group, and the *Bargam* spoken by the *Ymān*.

Pashai. *Pashai* or *Alghān* is the language of the Afghāns and extends throughout their territory whether within or without the existing Afghān state. On the north it is bounded by the *Kāfir* and *Herāt* languages, on the east by *West* *Pandjshir* or *Talash*, on the south by *Baluch* and on the west by Persian. The total numbers of speakers of *Pashai* may perhaps be 350,000 of which 200,000 may be in Afghānistān proper and 150,000 in British and independent territory. The East Iranian character of the language is clearly established although it has undergone many alterations and corruptions, and has been so strongly affected by Indian influence as to lead Trumpp to believe that it should be classed as an Indian language, though it gives the following distinctive points as indicating its origin clearly:

1. Original Aryan dental *t* (except before *h*) becomes *th*, often lost altogether in modern pronunciation.
2. The Aryan aspirates become spirants, as in Old Iranian.
3. The Aryan *dh*, *t*, *r*, *j*, before consonants become spirants, and often disappear in later forms.
4. Before *r* Aryan dental becomes *h*, as is usual in Iranian.
5. Aryan *h* becomes *r*, as in Iranian; the group *zh* becomes *ch*.
6. Aryan *z* *sh* answering to Indian *j* and *ś* appear as *h*.

A change which is peculiar to *Pashai* is the general change of *z* and often of *t* to *h*.

The Indian aspirates, the *ant-rāb* and *Yasho* speakers are unable to pronounce them. *h* is frequently dropped in conversation. Indian consonants *g*, *gh*, and *gn*, but in Indian words *gūf*.

The borrowed element is large. Indian loans affect not only the vocabulary but the grammar; even the substantive termination in *ā* is of Indian origin. Loans from modern Persian are numerous, and through the medium of Persian a large number of Arabic words have come in, and even a few Turkish.

There are two principal dialects, which may be called (1) the northeastern (with its centre at *Peshāwar*) and (2) the southwestern (with its centre at *Gandahār*). They are distinguished from each other by the pronunciation of certain consonants which are gutturals in (1) and sibilants in (2).

These are: *gh* *gh* in *ghā*, pronounced *ā* in (1) and *ā* in (2); *g*, *g* in (1) and *g* in (2); also sometimes *gh* *gh* in (2) becomes *g* in (1) but this is not uniform. Thus

- (1) *ghā* or *ghā*, "woman", becomes (2) *ghā*.
- (1) *ghā*, "the sun", becomes (2) *ghā*.

As the same character is used in writing whatever the pronunciation there spoken variations do not affect the written language, and they are nowhere sufficient to make four distinct intelligible to the speakers of the other. A very distinct dialect however is that spoken in *Baluch*, *Durwar* and *Waziristan*, a branch of (2). In this a complete system of vowel-change is found, according to

which:

a becomes ʔ

ʔ	v	ʔ	u
ʔ	ʔ	ʔ	ʔ
ʔ	ʔ	ʔ	ʔ

as in *plānā* for *plānā*, pl. of *plā*, "father";
ma for *mā*, "mother"; *ma* for *ma*, "no". —
 Among the Afghans also ʔ is often pronounced u.

The language in its more cultivated forms is studied in the works of Damm, Raverty, Vaughan, Bellier, Trümpf and Darmesteter.

Literature.—The existing literature of Pashto commenced from the 16th century, and is mainly poetical, but there are a few important works in prose, especially histories such as Akhūn Darwāza's *Makhsūṣ-i Pashtū* and *Makhsūṣ-i Afghān*, and Afghān Khān Khān's *Tārīkh-i Afghān*. The principal poets are Khushāl Khān, the Khushāl chief who was for some time a prisoner at the Court of the emperor Aurangzeb, and wrote a *Diwān* after the Persian model, Miras Khān Anghar, a poet of the Saffi school, and the popular poets 'Abd al-Rahmān and 'Abd al-Hamid. They have both left *Diwāns* of a mystical character, also 'Abd al-Kādir Khān and Ahmad Shāh the great Durāni king. 'Abd al-Rahmān is considered by Afghāns to be their best poet, but European opinion probably will give the highest place to the more simple and energetic verse of Khushāl Khān. On the whole the literature must be considered as artificial and imitative, and claim to be more than a reproduction of Persian models.

Popular poetry.—But side by side with it there is the genuine popular poetry which has till lately attracted little attention. Darmesteter's collection of these poems has rescued them from oblivion; they are the genuine expression of popular feeling in war, politics or love. 'Forbush has also recorded some ballads, riddles and proverbs and spirited ballads in the Pashto dialect have lately been published by E. D. Howell. None of this popular poetry is of ancient date, there are no heroic ballads relating to the great migrations and conquests of the Afghan race except one relating to Ahmad Shāh. None of the 19th century. There is nothing to compare with the fine heroic ballads found in Baluch.

Religious literature.—Religious writings both in prose and verse abound in Pashto; a great number of works of this type are lithographed at the presses of Peshawar and Lahore. Most of these have no great merit as works of literature. *Mir Husein*, a long poem by Mirza Mahmūd Shāh, may be mentioned.

Alphabet.—Pashto makes use of the Arabic characters in the *naṣṣ* form, and has adapted certain modifications to express the peculiar sounds of the language.

None of these such as ʔ = ʔ, ʔ = ʔ, and ʔ = ʔ are already used in Persian. The peculiar sounds of Pashto are distinguished in no original way by the addition of a loop in the line instead of an alteration in diacritical points: thus:

ʔ = ʔ, ʔ = ʔ, ʔ = ʔ, ʔ = ʔ, ʔ = ʔ, ʔ = ʔ.

The guttural or aliphant ʔ—ʔ is written ʔ, and the peculiar palatal ʔ (ʔ) and ʔ (ʔ) are both expressed by ʔ; Trümpf employs ʔ for the latter, but this is unknown in actual use.

THE GHARZI LANGUAGES.

This group of languages, often known as the *Pamir* dialects, is found in Wakhān and the eastern part of Badakhshān. The whole of them are spoken north of the Hindukush with the exception of the Yidghā which has found its way across the range and is spoken in proximity to the *Shawar* or *Chitral*. Of the remainder three, viz. the *Shawar*, *Sankhū* and *Yidghā* are spoken in the part of the Pamir under Russian rule, while four, viz. the *Wakhi*, *Ishtohimi*, *Sanghū* and *Blindjān* lie within the political limits of Afghanistan. *Wakhi* is spoken in Wakhān on the Upper Panj River, *Ishtohimi* on the Lower Panj; *Sanghū* is the language of the upper Wamān valley, which is the northern approach to the *Shawar* leading into *Chitral*, and the *Blindjān* is spoken in the upper valley of the *Ab-i Djam* which flows into the *Wamān*. *Yidghā* is the speech of the *Yidghā* who live to the south of the *Shawar* pass in the British empire. Three languages are closely related to one another, they belong clearly to the Eastern Iranian family and have also been to some extent influenced by the proximity of the languages of Hindustan, called by Grierson the *Pishāni* group. They also have some points of resemblance to *Pashai*, as for instance the use of ʔ for an original ʔ in *Minjān* and *Yidghā*.

Another language belonging to the Eastern Iranian family is the *Pargana* spoken by the *Yamuts* of *Kāniguzm*, and entirely surrounded by the Pashto speaking *Mahād* *Wakhān*.

ARYAN LANGUAGES OF KAFIRISTAN.

These languages spoken by the *Kāfir* tribes and in *Laghman* together with those in the adjoining countries of the *Indus*, *Kāshmir*, *Chitral* and *Gilgit* have been studied by Kuhn and Grierson, and are placed by the latter in a group by themselves separate from both *Indic* and *Iranian* families, as they share certain phonetic characteristics with each family, and have others peculiar to themselves. Grierson divides them into three groups.

1. The *Kāfir* or western, including *Shughli*, *Wakhi*, *Woron*, *Pashai*, *Gawar-bati*, *Kāshghar*, *Ashkand*.
2. *Shawar* or *Chitral*.
3. *Yidghā* or western.

The *Kāfir* languages *Shughli*, *Wakhi* and *Woron* are the purest and are spoken in the central parts of *Kāfiristan*. *Pashai* is spoken on the southern slope of the *Hindukush* and in *Laghman* almost to the banks of the *Shut* river, from the *Kunar* on the east to the *Laghman* on the west by a comparatively civilized *Muslim* population. It has been much influenced by *Pashto*, and is also called *Ishtohimi*, as *Deligah* is the name borne by the tribes that speak it. The *Kāshghar* and *Gawar-bati* are related languages, and the *Triht* of *Nangrahar* (formerly spoken in *Triht*) and the *Dul* of *Dir* are also connected with *Pashai*.

KAFIRISTAN

Since the conversion of the *Kāfir* of *Kāfiristan* after their conquest by 'Abd al-Kārim the whole population of Afghanistan belongs to the *Mahommedan* religion. The orthodox *Sunni* creed is professed by the great majority including Afghāns of all tribes with some or two insignificant exceptions. The *Tajiks*, the *Ossegi* and *Turkoman* of *Tu-*

Khān and the *Chāh* *Atmak* are also *Saifites*. The Persian speaking *Madras* are *Shītes*, and this sect is also professed by the *Khishk* of *Kābul* and *Herāt*, the *Rajpūts* of *Shāhr* and *Herāt* and the *Chāh* tribes. Among the *Afghāns* a few *Shītes* are found among the tribes on the Indian border, viz. the *Orakzai* and *Sayids* of *Trāk*, the *Tuts* of *Kāpūr* and the *Semlān* *Bangash* of *Kōhāt*. These are in reality followers of *Mr Rājān* (the old man of light; nicknamed *Mr Trāk*, the old man of darkness). This heretical sect was formerly much more widely spread than it is at present. The celebrated *Afghān* *Harwar* was its great opponent, and it led to later wars by *Afghān* time. It has fallen into disrepute, and its followers are now generally classed as *Saifites*.

Although mostly criticised by profession the tribesmen are in general very ignorant of their religion. The *Afghāns* and *Shītes* are particular as to the observation of fasts and prayer times but the adoration of *Pirs* or local saints is universal and practically constitutes the religion of the masses. With their ignorance of the true doctrines of their religion they combine an intense hatred of all non-Muslims, and the belief that the slaying of a Christian, a *Sāh*, or a *Hindū* is a meritorious act in itself is very widely spread. The preaching of a *ghazā* (Holy War) by an influential *Mulla* is generally the signal for an outbreak of violence.

Religious medical men, *shams*, and many of them are believed to possess miraculous or magical powers. Similar powers of healing diseases by charms or breathing on the patient or on the water he drinks are believed to be inherent in members of certain clans and families. *Mullas* are often popular leaders and sometimes take the lead in important political movements. Want of orthodoxy is severely dealt with, heretics being sometimes killed by stoning, and in *Kābul* persons of every class are strictly examined as to their knowledge of the preceptual precepts, and are exposed to public obloquy if they prove to be ignorant.

The influence of the followers of *Sayid Ahmad*, a native of *Kabulistan* who preached the *Wahabī* creed and fought against the *Sikhs* in the early years of the 19th century, is still strong among the border tribes, and that of his orthodox rival *Abd al-Ghaffār* better known as the *Afghān* of *Swāt*, who was universally believed to have the power of working miracles, is also powerful up to the present day.

In the war of 1880-1881 a very prominent part was played by a *Chāh* *Mulla* named *Musht-i 'Alam*, and in the more recent border wars of *Swāt* and *Trāk* *Mullas* have been the leaders.

POLITICAL INSTITUTIONS.

The modern *Afghān* kingdom began with the rise to supremacy first of the *Chāh* and shortly afterwards of the *Imam* under *Ahmad Shāh*. His rule was based on the supremacy of the *Durrānī* tribe and especially of the *Semlān* family of the *Popalzai* clan of that tribe. Within the tribe the great rivals of the *Semlāns* were the *Shāh* *Shāh*, headed by the family which displaced the *Semlāns* in the early part of the 19th century and still rules. At first the *Durrānī* monarchy was a loose association of tribes. *Ahmad Shāh* was contented to reign without interfering with the internal affairs of the more powerful tribes, but such a

loose aggregation of elements had not the strength to endure as a powerful kingdom although the personal influence of *Ahmad Shāh* was strong enough to preserve it for a generation after his death. The *Shāh* *Shāh* under strong and unscrupulous leaders like *Dost Mohammad* and *Abd al-Rahmān* have aimed at consolidating their power and destroying all rivals, and their efforts, especially those of *Abd al-Rahmān* have proved successful. At his death he left his successor the present king *Shāh* *Shāh* a well kingdom in which his word was law and there was no longer anything resembling an *imperium in imperio*. Any chiefs who were too powerful were executed or killed, and any tribe that opposed him was broken up or scattered. The chiefs are no longer dependent on tribal matters; they have a strong centralized force with artillery and modern arms entirely under their own command. Whether in the case of a war with England or Russia such a force would prove reliable is at present doubtful, and it is also possible that the old effective power of the tribes, which has hitherto been greater against invaders than that of the organised army, has been weakened by the suppression of all able leaders.

The country is divided politically into five provinces and two territories which are not as yet constituted into regular provinces as follows:

Provinces:	Territories:
<i>Kābul</i> .	<i>Kābulistan</i> .
<i>Herāt</i> .	<i>Wakhan</i> .
<i>Kandahār</i> .	
<i>Teherān</i> .	

The tribes, which are outside the empire's border and which are within the political boundary of the Indian empire but not within its regularly organized districts, retain their internal independence absolutely, while those which are settled in organized Indian districts are subject to the ordinary laws but retain their tribal organization. They are to a great extent governed through their leading men and in accordance with local customs where these do not conflict with the criminal law. The organization of the *Afghān* tribe is very democratic, although every large tribe has a nominal chief, who is the head of a certain family (the *Khān* *Khān*) to which the hereditary right of providing the chief is attached, yet in practice he has but little power, and the headman of every small section of the tribe has to be consulted in all business of importance. Towards the south among the tribes bordering on *Baluchistan* this rule is modified, and the tribe tends rather to follow the *Baluch* model in which the chief of a tribe, though not free from criticism, is the actual ruler of his tribe, which is founded on the patriarchal principle and believed to be of one blood with the chief. In this system it is not uncommon for strong clans to shift from one tribe to another and to become affiliated as members of some powerful tribe to which they did not originally belong. Such clans are not subject to the sanction of a common origin, and are more apt than others to assert their independence of the chief.

In some cases the clans admitted as members of a tribe to which they do not belong by blood are regarded as inferior, and in such cases membership was probably granted as a reward for service.

The non-Afghān population is everywhere sub-

ject to the Afghans, but the degree of subordination depends upon the extent to which they are mixed with Afghan tribes. The mass of cultivating Tajiks living in villages are under their own headmen, and the Heratis are also under their village headmen or *khans*. There are some mountain communities of Tajiks still under their own chiefs, and the large tribes of the Hazaras and Cabul Aimaq are also presided over by chiefs who possess great power. The Tajiks who remained in the high mountains after the Moghul immigration are probably absorbed into these tribes, as there are no separate Tajik communities now resident among them. All the Hazaras who had become very independent and always hated the Afghans were subdued and put down with great severity by the emir *Mir al-Rahman*.

The population of Khoristan consists of a few large tribes each consisting of several smaller clans, occupying separate valleys, and very loosely connected one with the other. The emir's authority is now recognized by all.

3. History.

At the dawn of history the countries now comprised under the name of Afghanistan were found in the possession of the Iranian race. They were well known to the authors of the Avesta, and we can still recognize several names of provinces or rivers which have persisted till modern times. The colossal earthworks found at *Tepe Hissar* and elsewhere in the Helmand valley may perhaps be attributed to this period, but Afghanistan is as yet closed to the researches of archaeology, and the information from this source is accessible as to its early inhabitants.

Of the names in the Avesta we can recognize the following:

Avesta and Old-Persian	Classical	Modern
Bakhshid (Achaem.)	Bactria	Balkh
Bakhshid (Achaem.)		
Haradwa (Achaem.)	Aria	Herat
Haradwa (Achaem.)	(Aria)	(Balkh Harat)
Mouru (Achaem.)		Harat-Rud R.
Margu (Achaem.)	Margiana	Herat;
Wahlagāna		Marghān R.
Zraya or lake (of Kāshira)		Badkhis
Zarānka (Achaem.)	Orangiana	Zraya of Sistan (Gōdā Rōsh)
		Zarānki (medieval town, now a ruin)
Harat-zāballi (Achaem.)		
Parophasa	Tharnacotis	Harat-Rud R.
Fradaha	Uphadua	Farab-Rud R.
Phas	Prophthasala	Farab
Harapa	Kharapes	Kharāp R.
Harapāna	Cosata	Kharāp-Rud R.
Harat-wahis (Achaem.)	Elymanotis	Helmand
Harat-wahis (Achaem.)	Arachotis	Aghamān R.
Harat-wahis (Achaem.)		
Phanah		Farān
Kāwa		Ughān (in Farab)

Parophasa—Achaem. (Achaem.) version of the Achaem. (Achaem.)

Parophasa

It is clear therefore that the Helmand valley, Sistan and Herat were among the countries best known to the early Iranians, and they were also comprised within the Achaemenian empire, our first information as to the composition of which is derived from the cuneiform inscriptions of the kings and the lists given by Herodotus among the twenty-three provinces of which the empire was composed we find the following:

Zarānka	in Herodotus	now Sistan
	Satragia, in Herodotus	
	Zarango (later Drangiana, showing that the Avestic form in Herodotus was superseded by Herodotus <i>Uj. Pers.</i> form in <i>Uj.</i>)	
Haradwa	Aria of Herodotus	Herat
Bakhshid	Bactria	now Balkh of which Balkh is the old capital.
Haradwa	Orangiana	Indian Gandhāra, i. e. the Kābul valley.
Tharagana	Sattagyda	now the Herat country
Harat-wahis	Arachosia	now the Kābul valley

which are practically identical with modern Afghanistan. Four of these six have been identified above with countries named in the Avesta. ~~Herodotus~~ *Uj. Pers.* as Indian, not an Iranian country, and this perhaps applies to Tharagana as well. It may be noted that Darius Hystaspes about 500 B.C. added to the empire an Indian satrapy extending to the Indus, which is not included in the inscriptions. Zarānka was, like Herat, free from tribute, and it seems probable therefore that it was regarded as an ancient ~~Herodotus~~ *Uj. Pers.* as the Iranians, and not a foreign conquest. Feudalism which may be traced to the Aryans were still alive there in Firdevs's time ~~Herodotus~~ *Uj. Pers.* were embodied by him in the *Uj. Pers.* about ~~Herodotus~~ *Uj. Pers.* A.D.

When the Achaemenian monarchy fell before Alexander this part of the empire was frequently traversed by the Macedonian armies, and after Alexander's death it fell, with the other oriental provinces, to ~~Herodotus~~ *Uj. Pers.* *Uj. Pers.* of Seleucus. But the great kingdom of India was at the same time prevailing on the eastern side, and Candragupta in his revival of Indian power not only recovered Alexander's Indian conquests but obtained possession also of ~~Herodotus~~ *Uj. Pers.* provinces south of the Hindu-Kush. It is probable ~~Herodotus~~ *Uj. Pers.* they continued to form ~~Herodotus~~ *Uj. Pers.* of the Mauryan empire up to the death of Asoka, (c. A.D. 231) when it began to decline. A hundred years after the coming to Candragupta the Seleucides attempted without much success to extend their way to the Indus again. The expedition of Antiochus the Great (186 B.C.) by which he conquered ~~Herodotus~~ *Uj. Pers.* Indian king and Sophaganes (i. e. Sindh) ~~Herodotus~~ *Uj. Pers.* does not seem to have had any permanent result. Throughout this period we have no information as to the people of the country,

We may suppose that the Indian kings would find no support among the Iranian population but they would perhaps be welcomed in Gandhara. On the other hand there would be little sympathy with the Macedonian invaders. Fresh ~~news~~ was known by the latter after the independent kingdom of Bactria was erected. Only ten years after the expedition of Antiochus just mentioned Demetrius son of Euthydemus made his way over the passes from Bactria to the Kabul valley, and conquered a large territory in the Panjshir. The head of an elephant was a headpiece which appears on his coins as a symbol of his Indian conquests. The successful rebellion of Eukratides seems to have deprived Demetrius of his conquest south of the Hindu-kush, and at one time he held at least some part of Bactria for he founded there the city of Eukratidia. Demetrius on the other hand founded Demetria in Arachosia and Euthydemus in India, but there seems no ~~reason~~ that Eukratides reigned for a long time in India and the Kabul valley. Demetrius never (with one exception) used any language but Greek on his coins, while the extensive coinage of Eukratides is mainly bilingual, the Greek inscriptions being translated in Pahlavi in the Kharoshthi characters. Eukratides was succeeded by his son Apollodorus, who succeeded him in India, while another son Heliokles ruled in Bactria and probably south of the Hindu-kush as well. In his time, about 140 B.C., the Greek monarchy of Bactria fell before barbarian invaders, the south of the mountains Greek king continued to rule. The most important of these was Menander king of Kabul, who invaded India and penetrated as far as Mathura and Uddhi. He is probably the king Milinda of Buddhist tradition. His invasion of India may be placed about 155 B.C. and the extent of his invasions is shown by the abundance and numerous find-spots of his coins. From this time on the territory held by the Greeks seems to have been split into several principalities, and Himerkus the last Greek king was subdued by the Kushan Kanishka in Kashmir about 45 A.D. Coins are in existence bearing jointly the names of the two kings, and resembling strongly the later coins of Augustus, from which they seem to have been imitated. Meanwhile for ~~some~~ hundred years a large part of Afghanistan ~~was~~ occupied from 140 B.C. onwards by barbarian chiefs ruling ~~in~~ by and with Greek kings.

The most important of these barbarians were the Sakas, probably a nomadic Iranian race, who had formerly occupied an extensive territory in Scythia, north of the Oxus. It has been conjectured that the Chaka tribes of the Pamir and the Balts of Baluchistan (who, though Iranian in speech, are not Mongolian in features) are their ~~ancestral~~ representatives. It is possible too that the Hsiung-nu, who are first heard of historically in the time of Ngin-shan, are an offshoot of the same stock. The Sakas were attacked about 160 B.C. by the tribes known to the Chinese as Yueh-shi, probably of Turkish origin, who had themselves been driven west from their original home in Kiang-shi by the Hsiung-nu. The Sakas were gradually pushed southwards, and the Bactrian kingdom north of the Paropamisus fell before them. The Saka kings Meno (or Menas) and Himerkus, whose coins were certainly struck north of these mountains, probably belong to this period. They

further broke up and seem to have made their way into India via Baluchistan, and into Persia and Asia by Herat, and obtained complete possession of the satrapy of Drangiana, which henceforth was known as Sakastana or Sakastan (whence the medieval Sigistan, Sijistan and the modern Sistan). This has been the accepted theory of most writers on the subject, but recently E. W. Thomas has brought forward strong arguments to show that the Sakas were already established in Drangiana perhaps from the time of the Achæmenians, that they held the whole mountain country now known as Heratistan, and that any invasions they may have made into India were made from this centre into the Indus valley, and not from the north by the Hindu-kush. In any case the Sakas were found in Sistan at this period.

The kingdom of Parthia had arisen in North Persia about the same time as that of Bactria, but it had a more solid foundation, and was not shaken by Sakas or Kushans. Indeed, if we may believe Orosius, Mithridates I of Parthia created India about 135 B.C. and annexed the country comprised in the kingdom of Kabilia up to the Tigris. But here they had to give way to the Sakas, and a king of that race named Maues or Moa is found ruling at Taxila ca. 120 B.C. In Sakastana the Sakas are shown by their coins to have been under strong Parthian influence. Evidence was probably contemporary with Maues and held not only Sakastana but Arachosia, up to the Indian frontier. His brother Spalibises succeeded him and also held the province of Arachosia. The Parthians under Mithridates II reconquered Sakastana ca. 90 B.C., and Artabanus I. has been succeeded by Artabanus in Taxila. His son Artabanus succeeded, followed by Artabanus II and the Parthian Gondophares who conquered Sakastana, Arachosia and the lower Indus valley. He was a powerful monarch, and it is the king associated with the legend of St. Thomas's visit to India. On his death the kingdom broke up, Guttilugus obtaining Arachosia. About 90 A.D. the whole country came under the rule of the Kushans.

The Yueh-shi of the Chinese, of whom the Kushans were a branch, are believed to have been of Turkish origin. It is probable that they were partly of Iranian blood and culture, which would have rendered easier their assimilation by the pre-existing Iranian population (including the Sakas). The portraits on their coins show them as stout bearded men with long noses, in fact of the type still prevailing among Afghans and Tajiks; their language seems to have been (or to have rapidly become) Iranian, and the Gods they worshipped were mainly Persian. Their home before they were attacked by the Hsiung-nu was in Chinese Turkestan where ~~the~~ ~~ancient~~ ~~representatives~~ show the early civilisation to have been mainly Iranian and the language identical with that of Sogdiana. They probably assimilated other Iranian elements during their residence in the Oxus country, and learnt something also from the Greek princes whose coins they imitated, although their knowledge of Greek was much less perfect than that of the Sakas, and they often used Persian words written with Greek letters.

Certain dates have been derived from ~~various~~ ~~dates~~ of these kings, and it has been generally held that these must be referred to the Sakas or

which commenced in 78 A. D. According to the generally accepted view the succession of kings was as follows:

Kadphises I (Kadphika)	45-50
Kadphises II (Hama)	50-55
Kanishka	55-150
Huvishka	150-150
Wandakura	150-180

It seems probable, however, that it is not necessary to assume that Saka and Kushans used the same era, and Fleet has argued in favour of the adoption of the Saka era, commencing 58 A. D., that followed by the Kushans, and identifies the commencement of this era with the date of Kanishka's accession. Following this era the Parthian king Gondaphares is found to have been reigning at Tashkent in the 26th year of his reign in 47 A. D. In accordance with this theory the succession of kings is tentatively arranged thus:

1st Kushan dynasty.	Kanishka	58-80 A. D.
	Wandakura (?)	80-82
	Huvishka	82-150 A. D.
	Wandakura	150-180
2d dynasty.	Kadphises I	50
	Kadphises II	

It seems clear that the Kushan kingdom, whether first established by Kanishka or by Kadphisa Kadphises, swallowed up all competitors in Afghanistan during the century from 50 A. D. to 50 A. D. The Kushans were still mainly to the north of the Hindu-Kush when visited by the Chinese Canglo-son about 125 A. D. Some time after this the Yuchet were divided into two principalities of which the Kuei-chang or Kushans were one. About a hundred years later the Kushan king subdued all the other principalities, attacked the Parthians, conquered Kabul and founded a widespread empire. The Chinese version of his name is Kieu-tai-shih, who was succeeded by his son Yen-kao-shih, who invaded India. The first is generally identified with Kadphisa Kadphises who finally supplanted Hierocles, the last Greek king of Kabul, if the coins are rightly interpreted, and his son with Hama as Wand Kadphises, whose coins are abundant both in Afghanistan and North India. His empire extended from the frontiers of Persia to the Ganges and northwards into Scythia. The whole of Afghanistan seems to have been included. With his coins are associated those of a chief known only as Sator Meges, perhaps his general or viceroy. The coins of Kadphises I show a strong resemblance to those of Augustus and Tiberius, and seem to have been copied from them, and the Roman standard of $\frac{1}{2}$ was also adopted for the gold coinage. Kadphises II is believed to have reigned for about fifty years. Kanishka's reign, according to the generally accepted account began about 125 A. D. His coins show the extent of his dominions, and he is celebrated in Buddhist tradition as the king who called the great council which established the Mahayana system. The figure of Buddha with his name in Greek letters appears on one of his coins. Fleet has, however, pointed out that Buddhist tradition fixes the accession of this king 500 years after Buddha's death, and that this is inconsistent with such a late date as 125 A. D. subsequent to the two Kadphises kings. S. Levi also to some extent accepts this view though he has not adopted the theory of the Saka era. Fleet considers that Kanishka and

his successors preceded the Kadphises kings instead of following them, and reigned from 58 A. D., the commencement of the Saka era, until nearly the time when the last Greek king Hierocles was displaced by Kadphises I. The reign of the last Greek king was no doubt confined to a very limited area.

It may be noted that the Kanishka coins employ only Greek or Persian or Greek letters on their coins, and that the last king of the entire Bactria or Wakhans, who is shown by his name to have been Indian, the dates which appear on their coins are mainly Persian. The Kadphises kings, like the Greeks, employ both Greek and Persian, and the type on the reverse of their coins is Siva and his bull, which had only been used by Bardhis among the Kanishka kings. From this it may be argued that the centre of the dominions of Kanishka and his followers was an Indian district, and that of the Kadphises kings to an Indian district such as the lower Kabul valley or Farda. After this period Siva and his bull continued to be used for centuries, and there was no reversion to the Persian deities even under Sassanian influence. These facts seem to be in favour of the theory of succession advocated by Fleet. We know very little of the Kushan kings except from coins and a few inscriptions. The inscription on the Wardak vase shows that Kabul was included in Kanishka's dominions. The power of the Kushans declined rapidly in India after the time of the kings who have been considered, but in Afghanistan it was maintained for some centuries; in fact till the invasion of the Ephthalites or White Huns. During this period we again find Afghan influence in the heartland of India and Persian influence. The Parthian power disappeared and its place was taken by the Sassanian monarchy of Persia, while in North India the great dynasty of the Gupta came to power. In some of the later Kushan coins struck probably in Sistan in the 4th and 5th centuries, there is a distinct Sassanian influence. This probably began with the conquest of Sistan by Warchir 11 (died 294 A. D.), who was son Warchir 11 the first Sasanian. He married it soon after in the early part of the 4th century married the daughter of the Kushan king of Kabul, and described himself on his coins as of the royal family of the Great Kushans, and at the siege of Amida Shapur had the support of the people of Sistan (Sogdiana) and of the kings of India, i.e. the Kushans. Some of the Kushan kings bear distinctive Sassanian names as Hormad, Warchir and others. On the other hand the Gupta conquest of Candagupta is shown by his inscriptions to have had intimate relations with a Kushan king.

The rule of the Kushans in Afghanistan have been extinguished by the invasion of the White Huns or Ephthalites, in the latter part of the 5th cent., which was the period of the rise of this race against the Sassanians, in which Persia fell into their hands about 300 A. D., and their king Toramshah established a rule which extended far into India. His capital was at Sakala, i.e. Ayodhya in the Gangetic. These barbarians roughly imitated Sassanian types in their coins. It is not certain whether a king of Kabul named Nakhsh who struck coins of Sassanian type at this period, was a Kushan or an Ephthalite. The rule of the

Ephthalites was successful, and displaced before another invasion from the north made in alliance with the great Persian king Khosrow Anushirwan. Kaphan chiefs with the title of Shahi continued to rule at Kabul from this time till 850 A.D. when the Muhammadans had appeared on the scene, and the so-called Brahman kings began to reign in the lower Kabul valley. Al-Biruni mentions one of these kings called Kanish who was a celebrated Buddhist, and built a stupa at Peshawar. This is evidently a reminiscence of Kanishka, but Buddhism was undoubtedly strong throughout the Kushan period. The Chinese pilgrim Hsuan Tsang who traversed the country in 630 A.D. and Waughbloen-wei in 637 A.D. testify in this, and Hsuen Tsang found the provinces of Gandhara, Lampa (Zaingshan) and Kapishka under the rule of the king of Kapisa or Kabul. A 6th century title of these later Kushan was Kidara, the Kido of the Chinese. Al-Biruni gives the name Lagatashan (for Katorashan) and a similar title has survived in the Khar inscription till modern times. The final suppression of these Shahi kings by their Brahman slaves may be a phrase in the suppression of Buddhism by Islamism, than its progress all over North India. The Hindu kingdom was established in the headquarters at the mouth of Chakdanda or Ghidra in the Upper Indus above Attock, and included the valley of the Kabul river up to Mardikand, and not Kabul itself which was already in the power of the Muhammadans. Al-Biruni speaks very highly of the character of these Hindu kings. Their names as far as can be ascertained are as follows:

Al-Biruni's	Idat from <i>Radzidzanshah</i> and others
Kallat	Lalhya
Kamand	Samanat-dawa
Kamish	(Kamara?)
Udow	Himud-dawa
Maipal	Ujajapala
Anandpal	Anandapala
Turdjapal	Turkdanapala
	Spalapati
	Pastorin
	Khudusayaka
	Wanka-dawa

The last four are known only from coins. Those of Spalapati are extremely common. The name is apparently Iranian, meaning *general of an army* (as in the modern Persian *ispahsah*), but the coins are found commonly in the Northwestern Frontier as well as in Afghanistan. The dynasty was finally extinguished by Mahmud Ghaznavi, who won a great victory at Ghidra (Wakand or the chowklers) in 1009 A.D. It lasted till 412 (1011).

Introduction of Islam. The first attempt to extend Islam into Afghanistan was made as early as the time of the caliph 'Umar, when the governor of Iraq sent 'Abd al-Rahman to Samarra to invade Sijistan. He besieged and took Zaranj (the modern Zaidan, where no ruins are left to be seen), and also reduced the country between Zaranj and Kish, and from al-Rahman (probably Arachosia) to Dawas (Zaradkash) and the river of Zdr (for which Ghazni should probably be read), where he destroyed an idol of gold with only eyes. The town of Harg, the capital of Zaradkash, was taken, and he advanced through Zaidan (that is by the Karnak valley and Ghazni)

to Kabul, where he took the Shah prisoner, no doubt one of the little Afghan Shahi kings. The final success was made in the time of the caliph Mansur. These conquests led to no permanent occupation, though the Shah is said to have accepted Islam and repeated the Kalima; but Sarra (Sarak), which was easily accessible and close to the province of Kerman, was thoroughly subdued; and from this base further attempts were made to subdue the kingdom of Kabul. An expedition headed by 'Umar al-Ash' to Al-Bukra in 798, failed, and he was obliged to ransom himself and his army for 700,000 dirhams. In 817 (800) al-Bal'adhli dispatched another expedition, but the commander 'Abd al-Rahman b. al-Ash' was defeated. He then to revenge allied himself with the Shah, but was afterwards betrayed to al-Bal'adhli and committed suicide. The king's name is given as Kanish or Zandak or Kanish, but the form is 6th century. Under Harun al-Rashid another expedition against Kabul is stated by Yaqut to have been directed, and it was again taken, but not held, and when al-Bal'adhli had himself succeeded to the caliphate and the Tahirides had then no power, we hear of a rebellion of the Saffarides against the Tahirides.

The rise of the Saffarides, headed by Ya'qub b. Lath about 850 was undoubtedly due to a movement of the indigenous population against these Arab conquerors. After Ya'qub had put an end to the Tahirides and established his power in Sijistan he extended it through Ghazni (i.e. the Karmak of the Lower Helmand) and Zabulistan, conquered al-Bal'adhli, Ghazni and Kabul, and took the Shah prisoner. He occupied Kabul longer than any of the previous intruders, and we find a coin of his struck at Peshawar in the Kabul Khizra in 260 (873-874) and one of al-Lath b. 'Ali struck at Hara in 298 (911). Kabul seems to have been permanently occupied about 877 (871), a date which corresponds closely with the commencement of the so-called Brahman kingdom at Kabul as shown above. The last Shahi kings evidently collapsed under the combined influence of Muhammadan attack from the south and the rebellion of their Hindu subjects in the east. This Hindu kingdom formed a barrier against the advance of Islam into India till its conquest by Mahmud, for although the Shah had been long established in Sind its outward extension from that side was checked by the desert. The possession of the fertile belt of country below the Hinduks was indispensable as a preliminary to a further advance, and this was inaccessible until the Hindu kingdom had been destroyed.

The Saffarides were, as has been already noted, of Persian stock. The ruling family claimed descent from Khosrow Anushirwan. Ya'qub b. Lath even made himself *shah* with the caliphate, but his brother 'Amr made a nominal submission, and was confined in the prison of Fara. Ghazni, Sijistan and Khuzistan; but the fallen Tahirides recovered part of their power, and war between the rival families continued till both fell before the rising power of the Samanides, another family of Iranian blood. 'Amr was defeated by Ishaq Samani at Balkh in 287 (900) and died in captivity. The Saffarides then lost all their dominions in Persia and Khuzistan, but retained Sijistan which extended into Arachosia, and perhaps even to Kabul. They remained under the suzerainty of the Samanides.

and members of the same family ruled Badkshan or governorships throughout the time of the Ghaznavid and Ghori kings. How far the Samanide power extended in Afghanistan is doubtful. Iqbal's statement is cited in the *Madhwalat* (p. 36) to have ruled some parts of India. Kaveerly considers that this refers to the Kabul territory. It may perhaps imply some administration of suzerainty by the Hindu king of Ghazni. Zamiadawar was probably governed through the Ghaznis, who did not however make any admission of Samanide suzerainty on their coins. After 300 (922) the Ghazni power was confined to Indian proper, and the greater part of Afghanistan must have been independent under its local chiefs, no doubt some of them still Zoroastrian, Buddhist or heathen in their beliefs.

About 350 (961) a Turkish slave named Alp-tigin who had been Ghazni or Chahmichlain under the Samanide king 'Abd al-Malik rebelled against his successor Maniq, and took possession of the town of Ghazni. He displaced its local chief Lawik who he called *ghazni* or *ghazni*, perhaps one of the later Kapphan chiefs, and also subdued the province of Zabulistan, and thus began to build up an independent kingdom. He had an army of Turkish troops under his command, and was able to hand over his power to his son Ishak who ruled from 352 (963) to 353 (965). Ishak-egin a Turkish slave of Alp-egin succeeded him, and struck coins in his own name, which his predecessors as far as we know had not done. When he died another slave of Alp-egin named Buluk-egin rose to power and became the actual founder of the Ghaznavid dynasty. He joined with the mountain fort of Farah north of Kabul admitting the overlordship of the Samanids, but became a powerful ruler throughout Zabulistan, Zamiadawar and Ghazni, and attacked Ghazni the Hindu king of Ghazni. He was also invested by his Samanide overlord, the emir Nuh with the government of Ghazni. The Samanide kingdom was now weakening to its end, and the power of the rulers of Ghazni rose as it declined. The Subuk-egin's death in 387 (997) his son Ishaq succeeded, but was deposed by his brother the celebrated Mahmud, then (389 = 999) in his twenty-eighth year. The Samanide king was afterwards deposed by rebels, and his brother 'Abd al-Malik also fell shortly after. Mahmud expunged the name of his fallen overlord, punished the rebels and kept the kingdom. Possibly he was implicated in the revolt, as Foyl says that he himself attacked 'Abd al-Malik. Mahmud then fired his capital at Ghazni, and received investiture from the caliph al-Mu'izz, with the titles of Yamin al-Islam and Amin al-Milla, and dropped the name of the Samanide king. The title of Sulthan by which Mahmud is generally known to the chroniclers does not appear on his coins nor on those of his immediate successors, and does not appear to have been recognized in his time. Its first use is by Toghrul Beg Seljuk in 439 (1047), after Mahmud's death, and among the Ghaznavid kings it makes its first appearance on the coins of Ishaq who succeeded in 451 (1059). The statement in Elliot and Dowson, *History of India*, ii. 482, that Mahmud bore the title of Sulthan al-Islam is thus borne out by the coins. Mahmud used the title of Nizam al-Din, Malik al-Mulk, and Malik al-Mulk. Firdaus in his

well-known satire addressed him as Sulth. 41. One however sometimes speaks of him as Sulthan, and the title was doubtless in popular use before it was officially recognized.

Mahmud's conquests in India and Persia do not form part of the history of Afghanistan. He was there a foreign ruler, a Turk, and Ghazni was a convenient centre for his empire, but his dynasty was in no way national, and the chiefs of Badkshan, Ghazni and of the Afghan tribes in the Sulamda Mountains continued to rule locally under Ghaznavid suzerainty. Probably the later kings of the race were to some extent assimilated to their Turkish subjects, and names like Farukh-ud-din, Bahram Shah and Khosrow imply Persian influence. Mahmud's name was retained wherever he could find suitable material, the nucleus being Turks of his own race. The Khalis, another race of Turkish origin, were also an important element. When Mahmud marched to Balkh to meet the Khalis, his army according to al-Utbi contained Indians, Khalis, Afghans and Ghaznavis. Of these the Indians no doubt belonged to the lately conquered kingdom of Ghazni, and his secretary Mas'ud employed, Balkh tells us, Mahmud with success even against the Turkish rebel Ahmed Nizal-egin. In the battle of Karmah the cavalry consisted of 2000 Indians and 1000 Arabs and Kurds. The Ghaznavis were no doubt the Khalis of the Ghaznavi province or Zabulistan. The Afghans begin at this time to appear as component parts of the armies. Their first recorded employment was by Subuk-egin. The Khalis were very widely spread at this time over Khurasan and Merv, and Yaqut (*Al-Bihar*, v. 128) quotes Ishaq as saying that they conquered Kabul. In these mixed armies the Turkish element undoubtedly was predominant.

Mahmud's first important expedition was against the Hindu kingdom of Uchch, or Wathind, with which Subuk-egin had already been at war. The first campaign was shortly followed by another which ended in the total defeat and capture of Uchch in 392 (1001) near Peshawar, and the fall of his capital Wathind. After Mahmud's first invasion of India, when he was confronted by a confederation of the warlike Hindus of North India headed by Anantpal Shah by the Ghaznavis, Uchch seems to have remained faithful to him, and soon afterwards offered him a contingent of 10000 Indians to serve in his army. In the intervals of his numerous Indian expeditions and other foreign conquests Mahmud found time to consolidate his dominions in Afghanistan. The Turkish principality of Ghazni first attracted his attention. Its princes though destined ultimately to overthrow the Ghaznavid monarchy were still obscure mountain chiefs.

Subuk-egin had conquered Zamiadawar and Ghazni, and the capital on the Helmand, but the mountain country was evidently undisturbed, and Mahmud found it necessary to attack it. He was engaged in operations there from 400 (1009) to 405 (1014). The hillmen were evidently as yet unconquered to Isfahan, Balkh speaks of them as cruel unbullwars. The war ended with the capture of the Malik, Muhammad son of Sufi.

In 414 (1023) Mahmud attacked the mountain Afghans of the Sulamda who had been giving him trouble, and plundered their country.

At the close of his reign Mahmud ruled over

a vast empire including on the west Khorezm with parts of Turk and Tabaristan; on the north Turkistan south of the Oxus, with some influence beyond that river; on the east the whole of the Punjab; and all modern Afghanistan to the centre. His mint towns illustrate its extent. In Afghanistan he struck coins at Ghazni and Farman, in Khorezm at Nishapur and Herat, at Bishkajik near the Caspian, in Turkistan at Balkh and Walwal, and in the Punjab at Lahore, also called Mahmudpur. His Court at Ghazni was the resort of many celebrated men of letters, among them Firdaws and al-Buhārī, but he was not a patron of learning in any true sense, and was bitterly satirized by Firdaws whom he treated unworthily. Al-Buhārī ¹⁰⁰⁰ reserves his encomiums mainly for Mas'ūd, and says but little of Mahmūd. It was the dramatic nature of his Indian expeditions which struck the imagination of his contemporaries, and has since made him a hero of fiction, and his name a household word. In the course of ages Mahmūd, whose only actual connection with the Afghans was to attack and plunder them, has become a national hero in the country ¹⁰⁰⁰ he ruled as a foreign conqueror.

Mahmūd was succeeded in 421 (1030) by his son Muhammad, who ¹⁰⁰⁰ soon deposed by his brother Mas'ūd. The latter had taken part in many of his father's campaigns, and was a brave warrior, but given to drinking. In 428 (1036) first great blow against the Ghaznavi power was struck by the ¹⁰⁰⁰ of the Seljuks under Tughrul Beg. Mas'ūd ¹⁰⁰⁰ defeated by him in a desperate battle, in which he showed great heroism, at Daulatabad ¹⁰⁰⁰ between Merv and Samarkand in 431 (1039). From this time Khorezm and the whole of the western dominions were lost. The change ¹⁰⁰⁰ marked in the Nishapur coinage. The last recorded coin of Mas'ūd's is that minted dated 431 (1039-1040) and the first of Tughrul Beg's 433 (1041-1042). The Karmathian heresy was very widely spread at this period especially in Khorezm, and Mas'ūd's powerful ministers Mas'ud was executed for having joined the ¹⁰⁰⁰ and for being ¹⁰⁰⁰ correspondence with the Egyptian caliph. On the side of India the dangerous rebellion of a Turkish general Ahmed Dihlavi was put down with difficulty with the aid of Indian troops. Mas'ūd wished to rival his father's Indian conquests, and actually took the fort of Hissat, but the Seljuk invasion put an end to all such projects. He had also to deal with a rising of the Maliks of Ghôr. After his defeat by the Seljuks he again left Ghazni for India, but was treacherously seized at the Margala Pass near Kacan Ahir by his Turkish and Indian ¹⁰⁰⁰ who put his deposed brother Muhammad on the throne. Mas'ūd was murdered in prison in 438 (1041). His son Mas'ūd ¹⁰⁰⁰ was governor of Ghazni defeated Muhammad at Nangrahar, and put to death all his father's murderers, both Turk and Taghik. The town of Fakhrawad ¹⁰⁰⁰ Fakhrawad was founded by him to commemorate this victory. Mas'ūd reigned till 441 (1048) and was succeeded by his ¹⁰⁰⁰ 'Alid al-Rashid after a short interregnum. The increasing power of the Seljuks made the Ghaznavi kings rely more and more on their Indian dominions, and the change is marked first in Mas'ūd's reign by the adoption of Siva's bull on their coins, with the inscription *Sri Samant Deva* borrowed from the coins of the kings of Ohind.

In 'Alid al-Rashid's reign the Seljuk invasion was renewed under Tughrul and his son Alp-Arslan, who invaded the Ghaznavi territory by way of Fakhrawad, and Lamlawar by way of Saman. They were defeated at Khamur and Hissat by an army under the command of a Turkish slave named Tughrul, who after his victory turned upon the king, murdered him and usurped the throne of Ghazni. He was himself killed by another Turkish slave, and Farrukhshah son of Mas'ūd was brought out of prison and set on the throne (444 = 1052). He reigned till 451 (1059) and won popularity by lightening the heavy taxation of Ghazni. Probably the rising strength of the Ghôr Maliks had something to do with this leniency. His brother Ibrahim succeeded him, and his long reign of over forty years ¹⁰⁰⁰ on the whole peaceful and prosperous. He made peace with ¹⁰⁰⁰ Seljuks and married afterwards his son Mas'ūd II to the daughter of Malik Shah the ¹⁰⁰⁰ king. He made some conquests in India, but to none celebrated ¹⁰⁰⁰ his peaceful exploits, the erection of mosques, wells and schools. Mas'ūd III succeeded in 498 (1099) and reigned till 508 (1115). His reign was prosperous and his alliance with the Seljuks preserved him from molestation on the north and ¹⁰⁰⁰. He was able to organize further expeditions into India, one of which penetrated to the Ganges. After his death a rivalry between his sons Shams and Arslan ended in the deposition of Shams. Arslan reigned only two years, and his misconduct brought the long peace with the Seljuks to an end. He treated his stepmother, sister of the great Seljuk now the Seljuk king, and drove out his son Ibrahim, his own half-brother. Shams made way on his and he was defeated and retired on Lahore, but recovered Ghazni for a short time. Ibrahim with the aid of the Seljuks defeated him a second time and he died in India in 511 (1117). With Ibrahim's accession the independent Ghaznavi monarchy may be said to have ceased to exist. Though he still called himself Sultan al-A'zam, yet ¹⁰⁰⁰ became a vassal of Seljuks and put his name on his coins as emir. Ibrahim Shah reigned till 547 (1152) but his rule was restricted, and there was no longer strength or energy in the administration to deal with numerous internal or external. The Turkoman border of the Ghazni, originally akin to the Seljuks, and now their most dangerous enemies, threatened from the north, while the mountain chiefs of Ghôr now began to challenge Ghaznavi supremacy in the south. They had been gradually growing in strength, and, unlike the other races of the time, were truly indigenous, sprung from the Tajik stock. Mas'ūd III had already in 493 (1099) bestowed the government of Ghôr on 'Izz al-Din Husain son of Sam, and the Maliks were supported also by Seljuk influence. 'Izz al-Din Husain was succeeded by his son Salt al-Din Sam, whose brother Kutb al-Din Muhammad, known as Malik al-Dihlavi or King of the Moghulians, was poisoned in Ghazni through jealousy by Ibrahim Shah. In revenge for his brother's death Sam invaded Ghazni. Ibrahim Shah fled to Karmān (i.e. the Kopan valley), and Sam, with his brother 'Alid al-Din Husain who ¹⁰⁰⁰ handed his army, took possession of Ghazni. 'Alid al-Din then returned to Ghôr, and in his absence Ibrahim Shah, having assembled a force of Afghans and Khafis, regained possession of Ghazni,

and captured and slew **Shah al-Din Sam** the eldest surviving brother, and meanwhile been building up the Ghazni power in his own mountains, and invaded the hill fort of **Faruk-ah**. After some years he marched towards Ghazni accompanied by 'Ala' al-Din but died on the way. 'Ala' al-Din succeeded, and carried out his brother's intention. He defeated **Bahram Shah** in Zambidwar and after two more battles took Ghazni. He attacked his vengeance in such a savage manner that the town never recovered from the wholesale massacre and conflagration. From this 'Ala' al-Din obtained the name of **Dahru-sha** or wolf-burner. He also destroyed the town of **Harj**, which seems to have been the Ghaznavi capital of Zambidwar as opposed to the Ghazni town of **Fort-koh**, the mountain capital. Ghazni never recovered its importance, and **Harj** has remained a ruin till the present day. In later times **Kandahar** took its place as the capital of **Arachotia**. **Bahram Shah** seems to have reoccupied Ghazni after the departure of 'Ala' al-Din **Dahru-sha** he died some after (547=1152) and was succeeded by his son **Rhoriuz Shah**. He was quickly driven out of Ghazni by the advance of the Ghazni hordes, and retained nothing but his dominions in the **Pandjsh**. At Lahore he was succeeded after seven years by his son **Khawar** who reigned there for nearly thirty years until the Ghaznavi dynasty was finally extinguished by the Ghazni in 585 (1187-1188).

A long period of power in Afghanistan might not have been anticipated for the Ghazni kings, but its progress was suddenly checked by the rising force of Central Asian nomadism. The Ghazni, the Khans of Khwarezm and the Moghuls under **Chingiz Khan** burst upon the country in rapid succession, with the result that the Ghazni lost all power in their own country, although they conquered an extensive empire in India and were able to hold it on to a long line of successors, — not indeed their direct descendants but those of their Turkish slaves. At the time when 'Ala' al-Din **Dahru-sha** took Ghazni the power was momentary reigning was **Sultan Sanjar Seljuq**, who claimed to be the successor both of Ghazni and Ghazni. Towards the end of his reign he began to have trouble with the northern hordes, both **Khwarezm** and **Chingiz**. In 536 (1141) he suffered a defeat at the hands of the Khwarezm, and was threatened by the Chingiz. These events seem to have encouraged 'Ala' al-Din **Dahru-sha** to throw off the Seljuq yoke. He enlisted a large number of **Turks**, **Chingiz** and **Khwarezm** in his army and marched into the valley of the **Indus**, where he was encountered by **Sanjar**. His wild allies deserted him, and gave the victory to **Sanjar**. 'Ala' al-Din was taken prisoner, and chained with golden fetters which he had himself prepared for **Sanjar**. He was however obtained **Sanjar's** favor, and Ghazni was restored to him. Next year **Sanjar** fell a victim to the Ghazni, and was captured by them. **Khorezmi** was laid waste in a savage way, a foretaste of what was to happen in the time of **Timur Lash**, who was born the year succeeding the defeat of **Sanjar**. The Ghazni imprisonment lasted four years; he died in 552 (1157) the rule of the great Seljuqs ended with him. The Ghazni were now in great force along the northern frontier of Ghazni. 'Ala' al-Din had extended his dominions into eastern **Khorezmi** and the **Marghab** valley, and died at **Herat** in 551 (1156). **Said al-Din Muhammad** who

succeeded was defeated and slain by the Ghazni of **Balkh** in 558 (1163), but his successor **Ghiyath al-Din Sam** inflicted a severe defeat on them the same year. Meanwhile the Ghazni had seized on Ghazni after **Bahram Shah's** death and held it for twelve years until they were driven out by the Ghazni king and his celebrated brother **Shah al-Din Muhammad b. Sam** (often alluded to by his earlier name **Shah al-Din**). A short respite from barbarian invasions was thus obtained, and **Mu'izz al-Din** became ruler of Ghazni under the authority of his brother who reigned at Ghazni. He immediately began to organize expeditions into India, not only against the **Hindus** and the **Karnat** heretics of **Malwa**, but also against the still existing remnants of the Ghaznavi empire. He seized and imprisoned the last king **Khawar Malik** and annexed his dominions in 583 (1187). Thus he obtained possession of the **Pandjsh** as a base for his further Indian conquests. **Ghiyath al-Din** was himself occupied on the western frontier of his dominions. He asserted his supremacy over **Sindh**, which remained under its own Maliks as governors under **Ghiyath al-Din**, **Seljuqs** and **Ghazni**. **Taj al-Din Harj** asserted his supremacy, but continued to strike his own coins. In 571 (1175) **Ghiyath al-Din** occupied **Herat**. In 588 (1192) his northern dominions were attacked by **Sultan Shah**, brother of **Tahmasp** the Shah of **Khwarezm**. **Mu'izz al-Din** joined his brother from Ghazni and they defeated **Sultan Shah** at **Marghab** K., but the **Khwarezm-Shah** did not give up their plans of conquest. As long as **Ghiyath al-Din** and **Mu'izz al-Din** lived they were able to guard their dominions, but **Ghiyath al-Din** died in 598 (1201) and his brother who succeeded him was assassinated by a fanatic at **Demnyk** between the **Indus** and the **Melham** rivers on his return from a campaign against the **Khwarezm** near **Lahore** in 602 (1205). He was succeeded by 'Ala' al-Din ruler of Ghazni in succession of **Ghiyath al-Din** **Mahmud** son of the late king **Ghiyath al-Din** **Mahmud b. Sam**, but after the death of **Mu'izz al-Din** **Ghiyath al-Din** recovered his throne but was murdered in 607 (1210-1211) by some prisoners he had kept in the castle of the **Khwarezm-Shah** in his fort of **Fort-koh**. He was not able to hold his own in Ghazni, where the power fell into the hands of the Turkish generals, formerly slaves of **Mu'izz al-Din** **Mahmud b. Sam**, who had left no son. The principal of these were **Taj al-Din** **Yalduz**, **Kaj al-Din** **Alah**, **Naj al-Din** **Kulata** and **Shah al-Din** **Humayd**. Of these four **Yalduz** was the favorite of the deceased king, and he held possession of Ghazni for nine years during which he continued to put the deceased sovereign's name on his coins as successor, calling himself **Ala** **amran** (**Alah**). **Kaj al-Din's** activity was confined mainly to India, but he once took Ghazni and held it for forty days. **Kulata** made a kingdom for himself in **Sind** and **Malwa** and disputed the possession of the **Pandjsh** with **Yalduz**, but finally succumbed to **Humayd**, who established a dynasty in **Malwa**. **Yalduz** was a strong ruler who kept the impending invasions at bay for a time, and spread his authority over Ghazni and **Herat**. He also invaded **Sindh**, but ended in making peace with **Taj al-Din** **Harj** who remained in possession. But the rivalry between **Yalduz** and **Humayd** was fatal to the stability of the kingdom. They met in battle at **Turk** near **Kandahar** in 615 (1215) and **Yalduz** was defeated and put to death,

but Herat, though strong in India had no hold on the Ghazni territory, and was unable to hold them. The Ghazni Malik had lost their power and there was no one left to withstand the conquering 'Ala' al-Din Muhammad b. Tughlak of Delhi. He took the defenceless town of Ghazni in 615 (1215) and obtained possession of the whole dominions of Ghazni and Ghazni. He left his son Ghazni al-Din Mangubart at Ghazni and himself went north to meet a yet more mighty foe, the terrible Chingiz Khan. After his defeat and death in 617 (1225) Ghazni al-Din made a brave but hopeless struggle against the Moghul advance. He had lost his hereditary dominions of Ghazni, and made Ghazni the centre of his resistance. The Ghazni Malik supported him. He defeated the Moghuls at Farman, but had to retreat before Chingiz who crossed the Hindu-kush at Ghazni. Ghazni al-Din retired on the Indus but was overwhelmed near the Nijab fort, and only escaped by swimming his horse across the river where Chingiz Khan did not follow him. His further wanderings are not connected with the Moghul invasions, the conquered regions, were now in complete possession of the country, Herat was taken by Tughlak of Chingiz in 619 (1222), and a frightful massacre of the Musalman population followed. Sistan also fell before him, and its line of independent Malikis finally disappeared. Ghazni was taken by Oghal after the defeat of Ghazni al-Din on the Indus Chingiz himself returned by Damian to Tuckistan. Oghal then advanced into Ghazni, and using its territory as his centre of operations he dominated the mountains of Herat, Ghazni and Ghazni as well as the plains of the Ghazni and Sistan. The last Ghazni Malik went down before the flood, and Ghazni was destroyed so thoroughly that even its site is now doubtful (619 = 1222). Ghazni, another strong mountain fort, made a successful resistance at this time but fell soon afterwards. Possibly the Moghul reconquest of the Hindu hills began at this time, as we learn that the population of Tughlak was transferred to Sistan. Other mountain towns made a stubborn resistance, but their tenacity only led to more thorough destruction. A leader of the people of Ghazni was Amir Muhammad of Ghazni, who was descended from the Ghazni Malik on his mother's side. He was killed in the fort of Anjira during its siege by the Moghuls in 620 (1223). The founders of the Kinn dynasty were his descendants. The greater part of Afghanistan was now incorporated in the Moghul empire, but on the eastern side a Turkish chief Sait al-Din Hasan Kinn, who had perhaps been associated with Ghazni al-Din Mangubart obtained possession of Ghazni, Ghazni and Ghazni for a time. He certainly was in power as early as 622 (1225) as a coin was struck by him in the name of the caliph al-Zahir, and continued till 636 (1238) when he submitted to Oghal and received a Moghul title or investiture. Notwithstanding this he was driven into India by the Kinn valley. He and his son Nigir al-Din ruled in Sind for twenty years longer. Ghazni and the Kinn were now used by the Moghuls as a base for their further invasion of India. We hear nothing of Afghan in connection with these movements, and it is possible they had not spread as far north as the Kinn valley. After Oghal's death the Moghul empire was divided, and Afghanistan fell to the share of the Persian Kinn.

dependent from Tughlak. Under their viceroy a Kinn dynasty known as the Kinn Kinn dynasty governed and held a great part of the country for nearly two hundred years. The founder was Kinn al-Din Muhammad Mangubart who obtained the title of Chingiz Khan and was left in possession of Herat. His son Ghazni al-Din accompanied Chingiz Khan in some of his expeditions, and was confirmed in the possession of Ghazni, Ghazni, Farman and Sistan. He submitted to Khilji in 634 (1236), and was afterwards engaged in war in Sistan, and, as Howarth says, against Afghans, but against the indigenous Tughlak. He is said to have taken a fort in an island in a lake called Kinn. Kinn pieces then in Sistan, and it may be represented by the ruins of Kinn on the island of Ghazni. Kinn in the Hamir, but the name Kinn seems never to have been used in Sistan. Howarth puts him in Lake Kinn, which seems impossible. The name Kinn may possibly be due to confusion with the island fortress of Ghazni on the Indus.

Sistan (now also called Kinn) was probably the centre of Ghazni al-Din's province as under Kinn we find Kinn included in a list of provinces on the border of the empire of the Kinn, which were left under their own prince. Apparently the boundaries of this province were extensive including Herat on one side, and on the other Ghazni, Zamin, and Zamin. Ghazni al-Din as a Kinn made his capital in the mountain at Kinn, east of Herat. In the war between Kinn and Kinn Ghazni al-Din at last sided with the latter, and after Kinn's victory at Herat he fell into disgrace and was invited or commanded to leave his capital, and to make Kinn his headquarters (673 = 1275) shortly after he was summoned to Kinn and there perished (678 = 1278). His son, known as Ghazni al-Din II, who succeeded to Kinn, was invited to have besieged Kinn. It is a Kinn and does not refer to an other capital such as Kinn. It is the first mention of Kinn.

This prince then his father retired to Ghazni leaving Kinn to his son, 'Ala' al-Din, and afterwards to another son, Fakhr al-Din.

He himself remained at Kinn till his death in 705 (1305). Fakhr al-Din after many vicissitudes due to civil war and rebellions among the Moghul rulers, during which Herat was besieged by Chingiz Moghul Kinn, remained in possession of that town for many years and erected many public buildings and fortifications. Ultimately he fell into disgrace with the Kinn Kinn, and took to the mountains. The ruler Kinn was sent against Kinn. He was admitted to the island by the governor left there by Fakhr al-Din, and there he and his followers were treacherously murdered. Fakhr al-Din possessed great power, but remained in the mountains till he died in 706 (1307) soon after his father. He was Ghazni al-Din succeeded him. Herat was soon taken by the Moghul Kinn al-Din then went to the Court of Kinn to ask for investiture: he was imprisoned, but after some time was allowed to Kinn and was treated with the government. In later years he accompanied Kinn into his war against Kinn and took part in the war against Kinn who invaded Kinn in 717 (1317). In these wars he was able to strengthen his position at the power of the Kinn declined. After the accession of Ala Kinn he was

further saved by the successful resistance he offered to another invasion of Yarkut (710 = 1319). He also decorated Herat with many fine buildings. The final defeat and death of Yarkut still further increased the power of the Katta, and after consolidating his power and capturing the famous hill fort of Tildak, Ghiyath al-Din was able to go on a pilgrimage to Mecca (746 = 1335) and died soon after his return (749 = 1339). After the short reigns of two sons he was the third, Mu'izz al-Din, succeeded in 750 (1332), and reigned for thirty-eight years. He was a strong ruler, and perhaps in the break up of the empire which followed Abd Sa'id's death he might have succeeded in making his kingdom really independent had it not been for Timur's invasion. There is no doubt that his position as a Tadjik prince excited great jealousy among the leaders of the Moghuls, and they combined against him under the emir Kaushan of Ma wara' al-nahr. He was driven into Herat but succeeded in defending it, and Kaushan ultimately withdrew after exacting a treaty to the effect that Mu'izz al-Din should attend on him in his own dominions. This promise he faithfully kept, and thereby obtained the support of Kaushan against his domestic enemies. Timur in his early days served under Kaushan against Mu'izz al-Din and relates in his memoirs that even then he had determined to make Ghiyath his son. Mu'izz al-Din died in 771 (1370), and was negotiating a treaty with Timur. His son Ghiyath al-Din Mir 'Ali rashly refused to submit Timur's supremacy, and in 782 (1380), Timur laid siege to Herat. The Katta prince submitted, and was well received. Herat was spared, but the fortifications were levelled and the city carried off. Three years later, however, there was an outbreak of the Ghurid troops headed by some members of the Katta family, and the garrison was slaughtered. Timur took the town, and this time there was a massacre of the inhabitants and it was destroyed. Ghiyath al-Din was killed during this siege, and with him the Katta dynasty came to an end. It represented the last remnant of the brave and civilized Tadjiks of Ghur and Herat to maintain an independent kingdom in their land. From this time till the rise of the Afghans to power in the 16th century there was no indigenous dynasty: the country was under the rule of foreigners.

In the course of Timur's invasion Sistan was frightfully ravaged and has ever since enjoyed its old prosperity. Irrigation works were neglected and towns deserted. The ruins of Sarakhs, Zaranj, Tarakan and Kainard still stand to attest its former greatness. Kalat and Kandahar (now rising into importance) were rapidly subdued, and the whole country became part of Timur's empire. In 800 (1397) Timur turned to the east. His grandson Mir Muhammad was made governor of Kalat, Chazm and Kandahar, while his son Shahrokh was invested with the kingdom of Khoresan with his capital at Herat. Mir Muhammad made a raid on the Afghans of the Saisman Mountains and then marched into India. Timur himself hearing that he had been checked at Malwa, crossed the Hindu-kush from Andarab, and turned aside in Laghman to attack the Sijsh-pak ruler Khatir Khatir. — It may be noted that a principal section of the Katta still bears the name of Katta, and it is possible in this name to see a continuation of

the little Khatir home by the later Kattas. — After this expedition he again attacked the turbulent Afghans, and crossed the Hindu-kush at the spot where Ghali al-Din Mangolair had sworn across. He passed through Bami both going to and returning from India, so he probably followed the Tadjik route which leads through the country of the Ghilzais and Waziris. We do not hear of any Afghans being enlisted in his armies, although Tadjiks served under him. When Timur died in 807 (1405) Mir Muhammad was ruling at Kalat, but waited his time in debauchery while Ghali seized on the central power. The war which followed ended with the murder of Mir Muhammad. Ghali was dethroned soon after, and Shahrokh, who had been governing well at Herat, became supreme monarch (812 = 1409). His reign of nearly forty years was a period of peace and prosperity, during which the land had time to recover from the devastations of recent years. Herat, the capital, profited by his patronage, and many fine buildings were erected, some of which still exist. His son Ulugh Beg, a scholar and philosopher, reigned as supreme king only three years when he was murdered by his son 'Abd al-Latif who reigned for a few months only. 'Abd Allah followed and Mir Mirza ruled locally for several years, but was overthrown by the Ghilzais. In 861 (1456) Abd Sa'id obtained this title, but the possession of Khoresan and Afghanistan was disputed by Humayun Bakhar. He conquered this prince in 870 (1465) but only reigned two years, and his successor Salim Ahmad never held Khoresan. Humayun Bakhar exercised undisputed sway from his capital Herat over Khoresan, Ghur, Ghilz and Zamin-davar till 911 (1506). Herat during the long reigns of Shahrokh and Humayun Bakhar was at the height of its fame, one of the most celebrated centres of poetry, philosophy and art. Towards the end of Salim Ahmad's reign the growing power of Shahrokh and his Ouzbeg overlords drove it from the north, and a tendency appeared in other parts of Afghanistan to break up into separate principalities, though not under native rulers. Bakhar afterwards the conqueror of Khoresan who had been expelled from his hereditary kingdom in Farghana, Ma wara' al-nahr established himself in Kalat and took the title of Padishah (or Badshah, as it is pronounced in Afghanistan and India). Kalat had been more or less independent under various princes of the house of Timur, and had just been seized by Mukim Aghlu when Babur suddenly appeared before it and took possession of it (910 = 1505). Kalat remained under Babur and his successors the emperors of India for over one hundred years, until the invasion of Shah Shah.

The rise to power of the Afghans was more dangerous to the Khoresan kingdom. Du'at-Nar Beg Aghlu, a descendant of the Ghilzais of Persia distinguished himself as a warrior and was invested with the government of Ghur and Sistan. After a successful campaign against the Herati and Nikolsari tribes he received in addition Zamin-davar and the Gorno, and fixed his capital at the growing centre Kandahar. There he became practically independent, and extended his power southwards, with the assistance of his son Shah Beg, to the Dolan and Nizmat. He is still known in dated legend as Zama commander of Shah Hussein's armies. In 902 (1497) he espoused the

came of Badr al-Zaman, the rebel son of Iltutmish, and gave him his daughter in marriage. In 904 (1498-1499) Iltutmish invaded Zamindawar but was obliged to retire, and Dhu'l-Nun Beg himself soon upon invaded Herat drawing his army from the warlike population of Ghazni, Zamindawar and Kandahar, probably Tajiks and Afghans. This war left him stronger than ever, as Badr al-Zaman recovered the province of Balkh, and Satian was given to Dhu'l-Nun Beg. The successful raid of his son Mujib on Kabul for a time added to his reputation. Sultan Husain died in 911 (1506), and during Badr al-Zaman's short reign Dhu'l-Nun Beg was at the height of his power, but Shahbuz's invasion was fatal to him. He was defeated and killed in the first battle against the Orkays, and Shahbuz took Herat in 913 (1507). His sons Shah Beg and Mujib were now between Babar and Shahbuz. Babar with some right claimed to be heir to Timur's empire and advanced against Kandahar, while the Afghan princes allied themselves with his old enemy Shahbuz. Babar defeated them and took Kandahar. He left his son Najib Mirza in charge there, and he immediately attacked by Shahbuz. Babar himself had been on his way to Herat to concert measures of defence against the Orkays with Sultan Husain when the news of the latter's death. He joined the Sultan's sons in their campaign on the Murghab, and then after visiting Herat returned in winter by the mountain road to Kabul, a journey during which he and his troops underwent great hardships. He returned to Kabul in 922 (beginning of 1507) just in time to suppress a dangerous riot among his own relations. Then he followed his expedition to Kandahar in the summer, and in 923 (Sept. 1507), arranging an Indian expedition, and had already started when he was recalled by the news that Kandahar had fallen and that the Afghans had been reinvited by Shahbuz. When the news reached him he was actually engaged in war with the Afghan tribes of Lagdask and Naugrahar, tribes recently established in the Kabul valley. He had great difficulty in holding even Kabul, where his authority was threatened by rebellion and mutiny. Shahbuz was now possessor of Khoresan and overlord of Kandahar, but his power began to decline. His armies suffered severely during an expedition into the mountains of Ghazni, and another warrior king, Shah Ismail, founder of the Safawi kingdom of Persia, threatened him from the west. In 926 (1520) Ismail invaded Khoresan and Shahbuz was defeated and slain near Merv. Herat passed into Ismail's possession, and the Shi'a doctrines were enforced there by a severe persecution. Ismail now allied himself with Ismail and recovered for a time possession of his hereditary dominions in Central Asia, leaving the kingdom of Kabul to his brother Najib Mirza. The alliance with the Safawi king however was unpopular, and the Orkays rallied. In the end Babar, after the severe defeat at Ghuzni (928 = 1521) from which he barely escaped with his life, had to fall back upon Kabul, which he found in great disorder, and he had to suppress outbreaks among his own Moghul troops and among the Afghan tribes. The Afghans had moved down from the mountains into the Peshawar valley, and expelled their predecessors the Dikkas from the mountains of

Najjar and Sam. Babar put them down severely and took Badajis with great slaughter. He also had to put down outbreaks among the Khazars. He then turned his attention to Kandahar where Shah Beg Arghis was still established. He had tried in vain to make terms with Shah Ismail, had been imprisoned at Herat, but escaped, and had been endeavoring to establish a kingdom for himself in Sind, which he invaded with the assistance of some Hindu tribes in 917 (1511). Babar made two attempts to take Kandahar before he finally succeeded in 925 (1523). Shah Beg then removed his headquarters to Shah Ismail in summer and Peshawar in winter, and pursued his schemes in Sind, while the whole Kandahar province remained in Babar's possession. Babar now felt himself strong enough to embark on the series of enterprises which ended in the overthrow of the kingdom of the Lodhis in India. He always preferred Kabul to the plains of India, and was buried at Ghazni where his tomb is marked by a column.

This period was marked by four simultaneous invasions of the plains of India from the mountains to the west of the Indian valley. Two of these were invasions by armies led by ambitious kings anxious to carve out kingdoms for themselves, i.e. that of Babar which founded the Moghul empire, and that of the Arghuns which founded a short-lived kingdom in Sind. The other two were of the nature of national migrations, the movement of whole tribes seeking for fertile lands on which to settle. Of these the first was the movement of the Turkmans, the Lohis and other Afghan tribes into the valleys of Peshawar, Kohat and Sam, and the second the movement of a great wave of Hindu tribes into the Indus basin, whose descendants are still very numerous in North Sind and the South Punjab.

Afghanistan itself entered upon a more settled period under the influence of the two great empires of India and Persia between which it was divided. Herat and Satian remained with Persia though still for a time troubled by Orkay raids. Kabul remained part of the Moghul empire while Kandahar since 1522 belonged to our and sometimes to the other. The power of the Moghul emperors was gradually restricted to the south of the Hindu-Kush. North of it Selimau Mirza, established by Babar as governor of Badkhashan, founded something like an independent dynasty, and the rest of the country remained under the Shahbuzides. Shah Ismail died in 930 (1524), and Babar in 933 (1530). Babar's son Humayun succeeded him and his brothers Kamran, Hindal and Askari held various governments. Kabul and Kandahar were united with the Punjab under Kamran. The Persian side of the Hindu-Kush the successor of Ismail made his Sam Mirza governor of Herat. The Safawis regarded Kandahar as an appanage of the kingdom of Khoresan now in their possession, and considered its occupation by the Moghul emperors to be a usurpation. In 941 (1535) Mirza made a sudden attack on it, but he expelled him easily, and after eight months Kamran arrived and raised the siege. During Mirza's absence the Orkays under Ulduz invaded Khoresan, and the unfortunate town of Herat was again taken and sacked. Tahmasp recovered it, disposed Sam and himself attacked Kandahar which he took, but it was recovered by Kamran. Humayun lost his throne in India through the rising of the Afghans under Sher Shah, and in 950 (1543)

he made his way from Sind through the desert south of Kandahar to Delhi and Persia, where he was treated hospitably by Shah Tahmasp. In 952 (1535) with the assistance of a Persian army he laid siege to Kandahar which was held against him by his brother Akbar on behalf of Kamran; and took it after a prolonged resistance. In accordance with his suggestion with Tahmasp he made the town over to the Persians, but this excited great discontent among his own followers, and Humayun at last rebroke Kandahar from the Persians, and treated the province as part of his own dominions, greatly to the anger of Tahmasp. Shortly afterwards Humayun took Kabul and with it obtained possession of his young son Akbar now three years old. During the next few years there was between the brothers war on with varying fortunes, Kamran twice regained possession of Kabul but could not hold it long; on one occasion he is said to have captured the young prince Akbar on the battlefield. He then spent some time among the Muhammad and Khalil tribes of Afghans, whom he invited to plunder the Kabul valley. At last in 961 (1553), he surrendered to Humayun and was deprived of his sight. Humayun now held the kingdom of Kabul and Kandahar and found himself strong enough to attempt the reconquest of India. This resulted in his victory over the Sikhs, but shortly afterwards in 963 (1556) he died from the effect of an accident. While the young king Akbar was occupied in completing the reconquest of India, Tahmasp took the opportunity (963 = 1558) of seizing on Kandahar, and it remained under Persian rule until the prince Murshid Humayun succeeded it to Akbar thirty-eight years later. In 1003 (1594) during the first years of the reign of the Persian king Akbar the Great. The future history of Kandahar may be given here. At the reign of the emperor Shah-Jahan in 1033 (1621) Shah Akbar recovered it, but it was lost again by his successor Shah Saif I in whose time the governor 'Ali Miran Khan surrendered it to Shah Jahan (1047 = 1637). Ghorgh was also taken after a siege, and Zamindawar occupied. In 1058 (1648) the young Persian king Akbar II, then only sixteen years of age, led an army to Kandahar and took it, but it was again formed part of dominions of the Moghul empire. Shah Jahan's armies in vain attempted the reconquest. The great princes Awrangzeb and Aurangzeb both conducted expeditions against it, but were equally unsuccessful, and after the failure of the last (1062 = 1652) no further attempts were made.

With the exception of the vicissitudes of Kandahar there is little to record in the history of Afghanistan during the time it was divided between the Moghul and Safavi empires. The Afghan tribes were steadily increasing in numbers and influence, and it was probably at this period that the Abdalis and Ghilzais spread from their mountains over the more fertile lands of Kandahar and Zamindawar and the Tatak and Arghandab valleys. The decline in the position and influence of the Tajik races which had borne the brunt of the Mongolian invasions, and the occupation of the mountain frontiers of Ghazni by a semi-Mongolian population, gave the Afghan tribes the opportunity of rising into prominence. In their eastern mountains they had been but little affected by invaders eager chiefly to press on through the passes to the plunder of India.

and the same need of an outlet for their increasing population which led them to spread into the plains of India on the east also led the pastoral tribes to spread westwards. The mountain tribes continued to maintain practical independence of all rule. The Moghul government at Kabul ruled nominally, but its actual power was confined to the open valleys. In 993 (1586) for instance Akbar's army met with a disastrous defeat at the hands of the Ghilzais of Saki and Jirghawa, and the general Rājā Miral was slain. Rājā Mir Singh afterwards defeated the mountaineers but they were never really conquered; they often raided the plains and sometimes took shelter in dyaristic quarters, in which the Ghilzais took up the cause of the persecuted prince Shahzade against Awrangzeb. When Shah Akbar I before his accession was governor of Kabul under Awrangzeb in 1114 (1702) one of his commanders Piraji Khan, himself an Afghan, was killed with all his troops when trying to pass the Rājā Miral to Kabul, and he had to leave the tribes to keep open the breach between Kabul and Peshawar.

In the Kandahar province the frequent changes of government between India and Persia fomented dissension and intrigue, and enabled the powerful tribes to play off one against the other. The Abdali near Kandahar succeeded in this manner in obtaining recognition from Shah Akbar the Great. Saif was recognized as chief, and his descendants the Badakhshis became the ruling family. Nevertheless their misconduct led to part of the tribe being reported to the Herat province. This removal led to an extension of the influence of the Ghilzais into the new Kandahar, and their power continued to increase until the accession of the emperor Shah Akbar I, when the Ghilzais of the Kandahar province began to intrigue with him against the Persian government. The plot was discovered and Gurgh Khan, a Georgian chief, was sent to Kandahar at the head of an army, and arrested Mir Wala the Ghilzai chief. During the imprisonment Mir Wala succeeded in gaining the confidence of Gurgh Khan the Persian king, and was allowed to return to his tribe. Shortly afterwards he treacherously murdered Gurgh Khan whom he had invited to a banquet, seized upon Kandahar and defeated all attempts to subdue him. He died soon after, and his brother Abd al-Aziz, who showed an inclination to submit to Persia, was murdered by Mahmud son of Mir Wala, who established himself as ruler.

At the same period the reaction of the Abdalis in the Herat province became practically a reality, and defeated a strong force sent against them under Saif Khan Khan, and held their own till the time of Nader Shah, even taking Saif from the Ghilzais after the latter had conquered Persia. But the Ghilzais were the most formidable tribe at this period, and Miraji, perceiving the weakness into which the Safavi monarchy had fallen, boldly invaded Persia. He was checked by way of Sistan and Kerman, but was defeated by Nader Shah and fell back on Kandahar. At the same time the Abdalis spread over Khorasan and laid siege to Meshed. Mahmud soon strengthened himself by the alliance of a large body of Baluchis and renewed his attack. On this occasion he took Kerman a second time, and leaving Yezd untouched, marched straight to

Isma'el. Shih Nizam tried in vain to seize him, and after an unexpected victory Isma'el fell into his hands through the folly and cowardice of his rulers. Nizam abdicated and crowned Mahmud with his own hands, and the Ghazni chief became Shah of Persia. The reign of Mahmud and his successor Ashraf belong to Persian history. They were in no way fitted to reign over a country like Persia, and had not sufficient force behind them to oppose any truly national movement. Even the support of the Kandahar province was lost when Ashraf succeeded his cousin Mahmud, whose brother was able to remain Kandahar. The Abdalis now remained independent in Herat. Thus when Nadir Kuli Khan put himself at the head of a national movement, even though he was an Afghan Turk ~~was~~ a Sami, Ashraf's government collapsed rapidly, and few of the Ghaznis were rived to reach their native country. Ashraf was killed while wandering in Baluchistan in 1142 (1729). Nadir now turned his arms against the Abdalis under Malik Mahammad Khan who held Meshhed (1142 = 1728). He thoroughly defeated them and took many prisoners. Nevertheless he perceived their value as fighting men and secured their support by restoring them to their old home near Kandahar, from which he removed the Abdalis when he had the opportunity. He banished them to the Herat province, but very few of any arm to have really settled there, and there are none there at the present day. When Nadir Shah had made himself king of Persia he laid siege to Kandahar which resisted him for a year, but at last fell. During the siege he had built up a new town outside the old walls which he called Nadirabad. The Ghazni power was thoroughly broken up, but towards the Afghan tribes in general and especially the Abdalis he pursued a policy of conciliation, and enlisted large numbers in his army. Many Ghaznis took refuge in the Kabul province of the Indian empire, and Nadir Shah, asserting that his remonstrances had received no reply, advanced on Kabul which fell at once. Thus it was finally severed from the Moghul empire. The last known date of any coin of the emperor Muhammad Shah struck there is 1138 (1723). Nadir Shah apparently did not use the Kabul mint, but struck coins at Kandahar in 1150 (1737), the year of his conquest, and others struck at Naderabad no doubt coin in the period of the siege. The whole of Afghanistan was now in his hands, and afforded him the necessary base for his invasion of India in 1152 (1739). As a result of his victory over Muhammad Shah the whole Moghul territory west of the Indus including Peshawar and the Pothohar with the suzerainty over the Kingdom of Afsan rulers of Sind was ceded to him as well as the province of Kabul. On his return from Delhi (1152 = 1740) he first crossed the Indus at Attock and attacked the Afghans who had been giving trouble, and then went to Kabul. Thence he descended via the Khyber valley and the Peshawar country, and went through the Pothohar to Feroz, returning by the Indus to Kandahar and thence to Herat. During the remainder of his life he relied to a great extent on his Afghan troops and but little on the Persians from whom he was alienated by his Sami creed. The Abdalis were especially favored and their young chief Ahmed Khan rose to a high position in his army. Tradition says that Nadir himself prophesied

that Ahmed would be king after him. When Nadir Shah was assassinated by Persians and Khatib-khah, Ahmed Shah who was near by with a strong body of Abdalis seized on a treasure convey and made his way to Kandahar, where he made himself king, and obtained possession of all the eastern portion of Nadir's empire up to India. Herat soon followed, and in the general break up of the Persian monarchy Ahmed Shah acted as the protector of Ghilzakh, grandson of Nadir Shah, who was blinded by his enemies, and maintained a principality for him in Herat. This province in reality formed part of the dominions of Ahmed Shah and his son Timur Shah, both of whom occasionally struck coins at Meshhed, but Ghilzakh continued to rule in name until he was seized and killed by Asaf Mahammad Khan after Timur Shah's death. Herat was however treated as an integral part of the Durran monarchy, and the ancient kingdom of Khwarazm has remained divided between Persia and Afghanistan. In popular parlance the name is still employed to denote the Kandahar province and the tableland west of the Indus valley.

Ahmed Shah made Kandahar his capital and gave it the name of Ahmadshahi which appears on his coins and those of his successors. He took the title of Dur-i-Duran, and his tribe, the Abdalis, have since then been known as Durzai. His family had long been looked up to, and this fact, combined with his tact and energy, enabled him to hold his own. The tribes were treated mildly and he relied upon foreign war raising them taxation to provide him with a revenue. The Durzais were proud of him and followed him willingly, but they were not as good race to govern, and his son Timur Shah on this account moved his capital to Kabul where the population is mainly Tajik. His Indian conquests Ahmed Shah not only revealed but reflected Nadir Shah, and extended his dominions far beyond the Indus. He added the provinces of Kaghiz, of Lahore and Multan, that is the greater part of the Panjab and the sovereignty over the Peshawar of Baluchistan to his dominions.

He invaded India several times, and occupied Delhi more than once. His defeat at the Maratta at Pootpal in 1174 (1761) was a turning point in Indian history but he was not an ally any provinces beyond the Panjab in his own dominions. His wars with the Afghans were perpetual and led to the eventual loss of the province. The Khan of Kabul was the Durrani Nizam Khan who had become feudatory to Nadir Shah during his independence in 1172 (1758). Ahmed Shah besieged Kabul without success, and being called away to India accepted a purely nominal submission. Nizam Khan, however, supported Ahmed Shah in his wars in Khorasan, and contributed greatly to his victory over Karim Khan Zaid in 1181 (1768). On this occasion the blind Afghan prince took the side of Karim Khan and sheltered him in Meshhed which Ahmed Shah reduced by blockade.

Ahmed Shah died at Murgesh in the hills near Kandahar in 1181 (1773), leaving his successor a very extensive but insecure empire.

Towards the first half of the eighteenth century the break up of the Moghul empire together with the invasion of Nadir Shah and then of Ahmed Shah gave a fresh impulse to Afghan settlement in the Ganges valley, some of the vi-

victorious wars in great power such as the Rohilla Wars. Rahmat Khan and the Bangash Nawabs of Farukhabad.

Timur Shah had held important posts under his father, such as the Nizamat of Lahore and Multan, which is marked by a distinct series of events. At the time of Ahmed Shah's death he was in Herat, and only obtained possession of Kandahar after seizing and executing his brother Salimkhan, who had been set up as his rival. He then moved his capital to Kabul, and reigned uneventfully for twenty years, during which the monarchy declined steadily in strength and stability, although nominally it remained unimpaired. The authority of the central government over the outer provinces was precarious. The Sikhs grew in power and took Multan in 1796 (1781), but Timur Shah took it the same year. In 1801 the fanatical Kalchins were overthrown and replaced by Hindu chiefs of the Talhar tribe (commonly called Talpans), who waged successful war against Timur Shah's general from 1797 (1782) to 1800 (1786), and remained independent, although they accepted a nominal suzerainty. The Maugli chief of Bukhara Ma'yan, who had been encroaching on the Turkistan province, especially Herat, also made a nominal submission when attacked by Timur Shah, but retained all his conquests. In Kashmir also there was a revolt which was suppressed. Internally the power of the Barakzai clan of Durranis became gradually greater. Timur Shah died in 1807 (1793) and was succeeded by his son Zaman Shah, who reigned till 1818 (1800). Short as his reign was he was able to concentrate in it energy and policy enough to wreck the Durranid monarchy. Although weakened at home by the rivalry of his brothers Mahmud and Shuja' al-Mulk, threatened in Khurasan by the Kalchins and in the north by Sikh Musah Nangit, and in the south defied by the Khan of Kalat and the chiefs of Sind, yet he could not refrain from wasting his strength in foolish attempts to rival Ahmed Shah's conquests in India, and so to bring on the eruption of latent antagonisms between Sikh and Afghans. This brought him into collision with the English, who rapidly becoming the ruling power in North India. His first invasion, 1809 (1795) was cut short at Hasan Abdal by the news that Afghan Muhammad Kaljar had captured Meharabad and murdered the blind old Mahmudkhan. Having been appeased by an embassy from the Persian king he began a second invasion of India, which was interrupted by the rebellion of Mahmud at Herat. Having defeated this rising he invaded the Pandjab, and this time reached Lahore and received the nominal submission of the Sikhs, now headed by Ranjit Singh, but the Kaljar encroachments in Khurasan again called him back. Mahmud meanwhile led a wandering life harrassing with discontented persons in Herat and Kandahar. Among these was the powerful leader of the Barakzai clan, Palanda Khan, known by the title of Sarfraz Khan, who was jealous of the authority wielded by the viceroy Wazir Khan. The conspiracy was detected and Palanda Khan was executed. His son Fath Khan fled to Mahmud in Khurasan and induced him to throw himself on the sympathy of the Durranid tribe with whom Zaman Shah was unpopular (Zaman Shah's mother was a Pashtun while Mahmud's was a Popalzai Durranid). This advice was justified by the result.

Mahmud obtained possession of Kandahar while the beleaguered Zaman Shah was preparing for another invasion of India. Mahmud obtained the Kabul and Zaman fled, but was soon captured and blinded (1815 = 1800). Simultaneously with Mahmud's accession at Kabul Shuja' al-Mulk proclaimed himself King at Peshawar. He was assisted by a Ghilzai chief against Mahmud and in 1818 (1803) he took Kabul, imprisoned Mahmud and released the Ghilzai chief, his own whole brother. For a time Kandahar was held by Mahmud's son Kamran supported by Fath Khan, but the latter made terms for himself and submitted, but discontented with his position almost immediately set up a rival king Kalai Khan son of Zaman. The next few years were occupied by constant intrigues. Fath Khan changed rapidly from one pretender to another, sometimes supporting Mahmud and Kamran, sometimes Kalai while Shuja' al-Mulk displayed his strength in expeditions to Sind and Kashmir. Finally Fath Khan, who was now supporting Mahmud, defeated Shuja' al-Mulk at Nimla (1824 = 1809). He fled into India, and Mahmud's second reign began. He was however absolutely dependent on Fath Khan, whose power became very great. His brother Most Muhammad held high office, another brother Muhammad A'zam became governor of Kashmir, and another Rohandil governor of Kandahar. Herat which had become independent under another prince was reconquered by Fath Khan and Muhammad in 1832 (1816). Soon afterwards Most Muhammad incurred the enmity of Kamran, who had become governor, by entering his harem and insulting his sister. He fled to Kashmir and Kamran took his vengeance on Fath Khan whom he blinded and afterwards killed with the consent of Mahmud. Although peaceful and uneventful Fath Khan was greatly admired by the Afghans, and his brother Most Muhammad had no difficulty in raising a large force and defeating Mahmud in 1835 (1820) near Kabul. Mahmud lost Kabul which he never recovered. He held Herat till his death in 1845 (1829), and Kamran continued to rule there till he was murdered in 1858 (1842). The Barakzai chiefs held the rest of the country, but ruled in the name of puppet kings of the Saddalai family, such as Agha and Sultan 'Ali (who took the name of Sultan Mahmud on his coins). But the outer provinces of the empire were rapidly lost. The British took Multan in 1833 (1818), Kashmir in 1835 (1820), Herat Fath Khan in the same year, and Herat Ismail Khan in 1836 (1821). Peshawar long remained them under Sardar Sulayman Muhammad, but it too fell in 1850 (1834). The entry of Sind threw off the last sign of Afghan rule by taking Shikarpur, and Baluch north of the Hindu-kush was lost also. Most Muhammad therefore became the ruler of a compact Afghan kingdom; the loss of the outlying provinces, which had always been a source of weakness to the Saddalai kings, tended to consolidate his power. Although without scruples of any sort in attacking his rivals, he yet had the reputation of a just man and was popular among the Afghans who will forgive any defect in a strong ruler. His rule no doubt was contrasted favorably with that of all the kings since Ahmed Shah. His progress was checked by the inevitable rivalries of his brothers. He made Kabul his capital, while Rohandil Khan held Kandahar. In 1850 (1834) Shuja' al-Mulk vainly attempted

to recover Kandahar, and after his father Dost Muhammad took the title of emir, but neither he nor any of his successors before Habib Allah took the title of Shah or king. Herat was taken by the Persians after the murder of Dost Muhammad by his son Akbar Khan and was only recovered by Dost Muhammad in 1283 (1863) just before his death.

Shuja' al-Mulk after his failure at Kandahar endeavored to obtain British assistance, and political events led to his ultimately obtaining it. Attempts to negotiate a treaty with Dost Muhammad by Burnes had broken down, and the growth of Russian influence led the Indian government to look favorably on his claims. The Persians had at this time (1253 = 1837) laid siege to Herat. It was believed that their operations were directed by Russians and an English officer conducted the defence. This brought matters to a climax. An Anglo-Indian army advanced through Sind and the Rofan Pass on Kandahar and thence to Kabul. Dost Muhammad fled to Buzbars and Shuja' al-Mulk was placed on the throne of Kabul in 1255 (1839). Dost Muhammad soon surrendered and was sent to Calcutta. Shuja' al-Mulk's reign was a troubled one. Kabul was abandoned by the British Indian army in 1841, and on its retreat the army was almost annihilated at the Khorat Kabul Pass. These operations were conducted by Akbar Khan son of Dost Muhammad. The British army continued to hold Ghazni and Kandahar and reoccupied Kabul in the autumn of 1842. Just before this event Shuja' al-Mulk was murdered (1258 = 1842). His son Fath Dhiyau was recognized as king by the Populists but opposed by the Bakhtiars. The British soon afterwards left Afghanistan, and Fath Dhiyau, knowing he could not hold his own, went with them, accompanied by the blind old Zahir Shah who was still living. Dost Muhammad was sent back to Afghanistan, as he was the only man who could establish a firm government. His son Akbar Khan, however, did not accept a subordinate position easily, and was on bad terms with his father till he died in 1266 (1849). Dost Muhammad maintained friendly relations with England except at the time of the Sikh war of 1849 when the Afghan contingent covered itself with ridicule by its rapid flight after the battle of Gujrat. During the troubles of 1857, when the Indian army mutinied, Dost Muhammad gave them no support. He occupied himself in strengthening his own country, and from 1267 to 1273 (1850 = 1855) he conquered Balkh, Samarkand, Herat and Beshkashan. In 1280 (1863) he succeeded in driving the Persians from Herat, and he died there immediately after his recovery, having been a good ruler on the whole in spite of obvious faults.

Shir 'Ali his fifth son who had been nominated by him as his successor succeeded, but was immediately engaged in civil war with his older brothers Muhammad Ayum and Muhammad Afshar, and with 'Abd al-Rahman the able and determined son of the latter. [For an account of these wars see *ANNALES DE L'AFGHANISTAN*.] Shir 'Ali was defeated in 1283 (1866), and lost first Herat and then Kandahar. Afshar and Ayum reigned in succession till 1285 (1868), but never held possession of Herat, whence Ya'qub, Shir 'Ali's son, advanced in the latter year and recovered Kandahar and Kabul for his father, Shir 'Ali now held the

whole of Afghanistan, he was recognized by the Indian government, and met the viceroy Lord Mayo at Amul in 1286 (1869). He was however satisfied with this treatment, as he could obtain no definite promise of support against other powers. At this period he imprisoned his enterprising son Ya'qub and resented the viceroy's attempt to intercede for him. He agreed to an arbitration by British officers as to the Sikh border, regarding which there was a dispute with Persia. According to this arbitration (1290 = 1873) a considerable part of the most fertile lands was awarded to Persia, and this was another cause of resentment. Finally he began to negotiate with Russia, and refused to receive a British embassy. These moves led to the war of 1298 = 1880. The British army took Kabul, and Shir 'Ali fled to Mazar-i Shehr in Turkestan, where he died in 1297 (1879). His army, organized on the European model, was defeated without difficulty by Lord Roberts at the Palaur Pass. Ya'qub was released from prison and became emir, and concluded the peace of Kandahar, ceding to British India certain territories near the Noku Pass and the Korum valley, and agreeing to receive a mission at Kabul. A few months later a rising in Kabul resulted in the massacre of the members of the mission headed by Cavagnar. This led to a fresh outbreak of war. Lord Roberts took Kabul a second time but was besieged there by a tribal army headed by Muhammad Khan and the Mulla Musah-i 'Alam. After this war suppressed Ya'qub was deposed and removed to India where he has since lived, and the government was offered to 'Abd al-Rahman, a separate State being constituted at Kandahar. Part of the army at Kandahar under Dorman marched to Kabul, as a preliminary to traversing the country, and in passing through the Ghazni country was attacked by Ahmed Khail by a large force of men of that tribe, who were only defeated after a most desperate conflict. Scarcely 'Abd al-Rahman had proclaimed when Alyakh, a son of Shir 'Ali, who had been collecting an army at Herat, marched on Kandahar, defeated a small Anglo-Indian force at Mulward and laid siege to Kandahar. Roberts marched rapidly from Kabul and defeated Alyakh. After this the English army withdrew and the whole country including Kandahar was made over to 'Abd al-Rahman (q. v.). The latter died in 1319 (1901), and his son Habib Allah succeeded him, and has ruled successfully since. He appears to be a firm and enlightened ruler and has maintained good relations with the neighboring states. Another boundary arbitration has resulted in a better definition of the Sikh border. The emir Habib Allah has this year (1907) paid a long and friendly visit to India, and his right to bear the title of king has been recognized.

Although Afghanistan is now to some extent under the influence of the British government in India and is liberated by treaty from direct relations with other powers, it is in all other respects absolutely independent, and there seems no reason that it should not remain so. Its condition at the present day probably compares favorably with that at any previous stage in its history. The government of its emirs though arbitrary is strong and is animated by the intention of justice. Freedom from the influence of India it has not, and this review of its history shows that it has

Aristotle and the legends of their lives; a Hebrew MS. of Munich (No. 32) entitled *ḥayyot ha-nebilla*, contains some proverbs of Plato which are not found in Hunain's anthology; some sayings of Plato are also found in Ali b. Waḥīd al-Mahzaḥibī's *Maḥḥabir al-ḥikm* (written in 445 = 1053-1054). Finally an ethical treatise of unknown origin entitled *Maḥḥabir al-nafs* (edited by Casdenhewer under the title: *De castigatione animae libellum*, Bonn, 1873) is ascribed by Ibn Abi Ḥalifa to Socrates and Plato.

III. Many of the most celebrated eastern thinkers have devoted writings to Plato. The Christian Muslim Ḥ. Iḥyā wrote an introduction to Plato's philosophy under this title: "That which ought to be read before Plato's works". The Salaman Ṭāḥib b. Koca and his son Ḥinān have studied the great philosopher's politics, the former in an *epistle* for the explanation of the allegories in the book of the *Republic* and the latter in a work praised by Maḥḥabī, *Maḥḥabī*, Paris, I. 19) but which has not reached us.

Some great authors of the philosophers' school, as al-Kindī, al-Fārābī, al-Rāzī, Averroes, have written diverse works on Plato: al-Kindī wrote an *epistle on the numbers*, which are spoken of in the *Republic*; he also wrote a small work on *intelligence*, *al-ḥikm al-ʿaqlī*, in which he says, when beginning, that he is going to treat of intelligence according to the views of Plato and Aristotle (ed. Abū al-Naḡy, *Erträge aus der Philosophie der Mittelalter*, Münster, 1897). To al-Fārābī we owe several treatises on the philosophy of Plato and Aristotle, the consequences of Plato's and Aristotle's views, the intentions (*maqāḍ*) of Plato and Aristotle, and a brief compendium (*ḥamḥa*) of the *Lysis* in three parts. The Hebrew text of a small work of the Spanish Jew Shimon Toḥ the Palaeologus on Plato's philosophy (written towards 1240) has been edited by Steinschneider (*al-Fārābī*, pp. 276, 284); the editor thinks that it is nothing else than a translation of a fragment of al-Fārābī's treatise on Plato's and Aristotle's philosophy: the epistle on "the concurrence of views" of the two Greek philosophers has been edited by Diels (*Epistulae philosoph. Graecae*, Leyden, 1890). Abū Belā al-Rāzī (Rāzes) commented the *Timaeus* and wrote a work on metaphysics according to the views of Plato. Averroes commented the *Republic*; this paraphrase was translated into Hebrew by Samuel b. Judah of Martellus, and printed in the Latin translation of Jacobus Mantuanus, in Rome, 1539, and in Venice, 1552, 1562. A less illustrious author, Abū al-Rūḥwān (d. 1061 or 1068 A. D.) wrote on "the immortality of the soul according to the views of Plato and Aristotle"; another of his writings seems to contain extracts from Plato's *Timaeus* on the nature of man.

IV. The acquaintance which the Muslims may have had with Plato's life is of less importance to us than that which they had with his writings. The most celebrated Arab biographers, Ibn Abi Ḥalifa, Ibn al-Kifī, al-Nadīm, Dabihma, Naḥḥabī Khallāḥ, have spoken of Plato; Hunain's *Asphat* also contains some particulars of his life. The most important of these writings is that of Ibn al-Kifī; it approaches by means of unknown intermediaries the ancient biographies of Diogenes of Laerte and of Simeonides; the genealogy of the philosopher is given there just

as in the biography of Diogenes of Laerte; the histories of Melanthos and of Kodros are to be found there; Plato is shown there as devoting himself to poetry in his youth, writing on music, then going through the philosophy of Heraclitus and coming to Pythagoreanism and to Socrates; the three journeys of the philosopher in Sicily are narrated there. Afterwards Plato, having returned to Athens, at first occupies himself with politics, then he devotes himself to teaching, he attracts a great number of disciples, marries two wives and dies at the age of eighty-two. The eastern biographers remained the tradition, according to which Plato called the young Aristotle, when he came to study under his direction, "the understanding". Isaac b. Solomon Israeli (Abū Yaḥyā Iḥyā b. Salīmān al-Lazāḥī) reproduces in the *Libri elementorum* an anecdote, according to which Plato on his deathbed required of his disciples that they should prefer the teacher always to the book. On the whole Plato's personality remained vivid enough before the eyes of the Orientals. They saw in him the master, the writer. They gave him the title of "Spīrit of the Greeks", an appellation not very precise to be sure, but which expresses this feeling of dignity and mystery of the man, and which is applied to the person rather than to the work.

V. Plato's philosophy was not known to the Muslims precisely enough so that they should have been able to establish a truly Platonic school. The Greek philosopher's system, in the way Shahrastānī expounds it, does not represent the doctrine of a Muslim school, but only what the Arab author believed to be Plato's idea, this idea seems throughout this exposition to be essentially like that of the scholastics and in some points quite like that of the Muḥasibites. Plato's influence in Islam was really vivid and efficacious only in so far as it was exercised indirectly: the Platonic spirit sets only behind Neoplatonism; but under this cover it is easily recognizable: the seductive Platonic spirit made itself to be felt by daring and free thinkers; they understood the beauty of the Platonic conceptions; they understood their charm. The historian Maḥḥabī, for instance, very willingly speaks of Plato and evidently with some pleasure and sympathy than of Aristotle. Plato's merit as a theologian, his lofty conception of a moral god were recognized by the Muslims, namely by Shahrastānī; still the latter admits a little the theory of the Supreme Good; it is more clear in the mystic works of Avicenna, connected with the theory of Providence and with that of optimism; according to this thesis the evil contains only what is transient and perishable. The question of the one and multiple and that of the procession of multiplicity occupied the Muslim thinkers; they were in general more systematic on these points than Plato; one must recall to mind the very methodical conceptions of Avicenna's metaphysics, the lofty, though it is true, somewhat mysterious reflections of Ḥudūd al-Dīn Kāshī, the proceedings of Ibn Tufayl reduced to the unit the individuals then the species and genera. The *Ḥikm al-Jawā* (the Brethren's Party) intended to be Platonist by making to correspond to the first four numbers the four terms which, in their view, compose the world of ideas: God to the unit, the

intellect in the final realities, the soul to the number 3, and the turn of the matter to the number 4. The Muslimans kept very clear the idea of the two worlds: the world of intelligence and that of the senses; the mystics gave these worlds different names, and particularly al-Fārābī called them the world of creation and the world of command. The Platonic ideas appear in Arabic philosophy under the names of *ṣawā'ir* (forms), *intelligible* (*ma'fūḥ*) or *essence* (*ma'ḥal*). The problem of realism and nominalism which agitated the schools of the Occident was not less clearly before the spirit of the *ṭarīqah*. It may be said, however, that in a general way theologians, *mutakallimūn* and *mathalim* doctors like al-Ghazālī were nominalists, while the school of the philosophers was realistic. The world of ideas was placed by the philosophers in the series of the pure intelligences which preside over the celestial spheres, or was made up of the ensemble of these intelligences. The habit of considering our world as a reflex or as an imitation of a superior world was general with the mystics. The conception of the soul of the world and of the animation of the spheres was dear to the School of the Philosophers; the Brethren of Purity have vulgarized it. The question whether man's soul was born before the body, whether it was a part detached from the Universal Soul was discussed by Aristotle, al-Ghazālī, Averroes and others. Musliman orthodoxy was with regard to this point just as in the question of the animation of the world in disagreement with the Platonic sentiment. Mas'ūdī remarks that a problem studied by Plato was to know whether the soul is in the body or the body is in the soul (Mas'ūdī, Paris, iv. 63); this indication of the Arab historian is exact: the same author recounts of Plato's definition that the soul is a substance which has the body in motion. The doctrine of the metempsychosis was also known to the eastern authors; that of reincarnation was the object of ingenious interpretation by al-Fārābī (Corra de Vaux, *Académie*, p. 115). Plato liked to treat of the numbers; this taste was shared by several philosophers of the East and particularly by the Ishkân al-Safâ; considerations of a Platonic kind on the difference and the resembling, on the same and the contrary are met with in al-Fārābī, al-Jalâl al-Rûmî and Ibn Jafar. The Platonic physics were a little known to the Muslimans; Plato is often quoted as a physicist; we have seen that he was not unknown as a geometer. The Platonic politics had influence on many thinkers, from al-Fārābī to Ibn al-Jalâl. The nature of love which occupied Plato's mind was the subject of many dissertations of Musliman authors, whether poets or not; the Ishkân al-Safâ for example have a chapter on love. Mas'ūdī (*loc. cit.*, viii. 181) knows Plato's sentiment desiring love to be a divine folly. The Greek philosophers rarely had considerable influence on Islamic mysticism. The mystics found that he had a certain esteem for occult practices; they based on it the ideas which they had about the initiation of the superior beings; the solitary hero in Ibn Jafar's romance tries by the postures and movements of his body to imitate the harmony of the stars (*Hisr al-Jafarî*, ed. L. de Gauthier, p. 87). Above all the theory of the two worlds was essential to mysticism; al-Ghazālī teaches that, as

there are organs to comprehend the world of the senses, there must be certain faculties of the soul fit for comprehending directly the world of the intelligible things. Al-Fārābī thinks in an analogous way. In the considerations of this order, Plato's influence, his doctrine and even his name are bound to be closely enough associated with those of Aristotle. Plato, being regarded in all schools as a sage, was considered as a veritable prophet by several of them, neo-Musliman or heterodox, Salama of Harrân, by al-Jahwâ al-Safâ, by the mystics of Sijistân's group (see T. de Boer, *History of philosophy in Islam*, p. 127), by the Illuminates of Sulrawad; Mevlânâ's school and by the Ismâ'iliyya.

(CARRA DE VAUX.)

AFRĀSIYĀS (Frangistan), mythical king of the Turanians according to Iranian tradition in the *Shāh-nâmeh* and other works. Later historians in their genealogical constructions made him the ancestor of Turkish dynasties.

AFRĪDĪS, an Afghan or Tadjik tribe occupying the mountainous country at the eastern end of the Sakhi Kūh, which extends to the gorge of the Kābul river on the south, and on the south is bounded by the mountain country of the Uzbeks. The hills occupied by the Aḥwāl section of the tribe lie to the east of this position, like a peninsula extending from the main mass of mountains, and are surrounded on three sides by the open country of Peshawar and Kohāt. The neck of the peninsula is crossed by the Kohāt Pass, which leads from Peshawar to Kohāt. Through the north of the Aḥwāl hills, just west of the Kābul river, runs the Kohāt Pass, through which the main road from Peshawar to Kābul runs. The centre of the mountain mass is the upland country called Thrāh, which consists of several valleys separated from each other by hills, and is from 1000 to 2000 ft. above sea level. This country is divided between the Afrīdīs and their southern neighbours the Uzbeks. The principal valley of the Aḥwāl portion is called Maidān, a fairly open plain. North of this their principal seat is the

valley of the Hissar river, which flows eastwards into the Peshawar plains.

The Afridis are a race of mountaineers. Tall, strong and wiry but slender, with high cheek bones and strongly marked features and eyes, even sloping upwards, they differ considerably from the general Afghan type, and may perhaps be considered an aboriginal mountain race absorbed by the Afghans in their northward advance. Their identity with the *Afridi* of Herodotus has been assumed by many writers, but more similarity of name is not alone sufficient proof of identity after the lapse of 2500 years when there is no intermediate evidence. The name does not occur in the Achaemenian inscriptions, and it is doubtful whether Herodotus intended the *Afridi* as dwelling where the Afridis now are. The country of Tirah was undoubtedly at one time occupied by a race speaking a language still known as Tirahi, and only spoken in Nangrahar, north of the Safid Koh. This language, as Grierson has shown, is akin to the Aryan languages of the Hindukush. It seems probable that when Tirah was occupied by a Persian speaking race some part of the inhabitants may have been absorbed. The name of Afridis does not appear in any of the medieval historians, even Bihār who was brought into contact with the Afghans of these mountains does not give the name, and they are mentioned by Nizam Adli, who lived three hundred years ago. According to more modern genealogies, they are a branch of the Karlan tribe. Kakhai son of Nairan or Karlan, the epicurean ancestor, is represented as having had four sons: Burhan, Khaghani, Sulaiman and Shitak, and 'Othman, afterwards called Afridi, is said to have been the son of Burhan. But in the *Al-Bihar* Afridi is said to be a descendant of the Karlan, and in *Kashmiri adab*, a later work, we find that Kakhai (Goght in Dorn's translation) had only two sons: Sulaiman and Shitak. The Afridis are here derived from Kodal the founder of the other branch of the Karlan tribe. Kodal is said to have had seven sons, of whom one was Tirakzi and another Bihari ancestor of the Afridis, and the author adds that the Tirakzis and Afridis live together in Tirah. It is evident from these discrepancies that no useful deductions can be made from the genealogies. The story of the origin of the name Afridi given in the *History of Afghanistan* is also evidently very fabrication. It is said that on entering a house and being asked who he was, 'Othman replied, 'I am a creature (Afrido) of God', and that from this Persian participle the name Afridi was derived. Such stories denote that the true origin of the tribe is unknown, and that in all probability the Afridis (or Afridis as they themselves pronounce the name) are of mixed origin.

The present division of the Afridis is into clans, of which the following are the principal:

The Adnan-khel, including the Jawahli, near the Kohat Pass, and bordering on the Khattak tribe. The Akh-khel from Akar to the Indus river. These two clans are not so warlike as the rest of the Afridis and are largely engaged in the carrying trade, especially in conveying salt from the Kohat mines.

Of the other tribes the Koh-khel, Kambar-khel, Zakka-khel, Malakro-khel, Kama-khel and Sipah (often classed together as the Shabdar Afridis)

occupy Maiddin in Tirah and the upper Hind river in common and in cold weather move down to the plains, many of them to the Kohat plain, north of the Hind river where it issues from the mountains. The Zakka-khel move to the Hind valley and the Koh-khel to the eastern end of the Khattak. These Shabdar clans are among the wildest and most warlike, and are much given to raiding in the plains. The Zakka-khel have the worst reputation. In Maiddin most of the clans have villages and cultivation.

They have a very democratic constitution, and in all negotiations a great number of individuals has to be dealt with. They are, though brutal and cruel, a brave and hardy race, and were till 1897 extremely proud of the fact that no foreign conqueror had ever penetrated there mountains. 100 years however every part of the country was traversed by the British Indian forces under Gen. Lockhart.

In the time of the emperor Akbar the Afridis adopted the banner of the Moghals (otherwise the Tirah), and soon afterwards they were bound in possession of Tirah whence they drove out the Kama-khel northwards. They were then at war with the Uzbeks to the south, and finally divided Tirah with them. At the present time of the two principal valleys one, Nairan, belongs to the Uzbeks and one, Maiddin, to the Afridis. Gulistan-ghilghil made war on Uzun, and deported large numbers to Hindustan and the Dekhan, where their descendants are found. When the Durran kingdom arose they submitted nominally to Ahmed Shah, and were included in the enumeration of fighting men made by him. He reckoned the tribe at 10000 men, and it probably could not produce more than the same number at present. In early days the Afridis began the practice of enslaving freely in the slopes of the mountains and kles, which they still maintain, but their reputation for fidelity was great. In 1801 they betrayed Shuja' al-Mulk and caused his defeat by Mahmud Shah. During Nadir Shah's invasion in 1737 we read of the Khattaks being ordered to disperse his passage, they seem to have done so but little resistance. Their only concern was to make what profit they could out of the passage of armies or the traffic through the Khattak Pass, and they were left as a rule unmolested in their own country. The same condition of things continued during the rule, and after the annexation of the Peshawar country to the British empire in 1849 their independence was still respected and they enlisted freely in the frontier regiments. Allowances were made to them to keep open the passes, which led through their country. Troubles arose in connection with the Kohat Pass which was often closed by lateral raids in spite of the allowances received. The clan principally involved was the Adnan-khel, and in 1877-78 a military expedition was undertaken against the Jawahli east of the pass. Even this led to no permanent settlement, and twenty years after a much more serious war broke out. Religious excitement spread rapidly among the Afghan tribes along the British border in 1897 and *Shirazi* was preached by a Malik of Hindu in the Shikhar country. The Afridis were not so far infected, and it was only after an outbreak among their northern neighbors the Mahmands that a warlike feeling grew among the tribes near the Khattak Pass, especially the im-

bulent Zakka-khel, and an attack was made on the fort of Land Kotaf in the past, itself continued by Afridi militia. They made a good defence but ultimately surrendered. The rest of the Afridis were drawn into the quarrel, and the Durkhan joined them, with the result that the military power on the Samana ridge in the south of the Ghazna country, held by small bodies of Sikh troops, were attacked and taken after a heroic resistance. This led to a regular invasion of the Afridi mountains by a small army under Sir W. Lockhart, in which there was a good deal of hard fighting. The army suffered severely, but every part of the country was traversed and surveyed, and punishment dealt out to all the distressed sections. The Ghaznis had the first of the fighting and soon submitted, and the central sections of the Afridis followed the Zakka-khel and Kaka-khel standing out to the last. The country was entered from the south, Khatol being the base. Actions took place at Dargai, the Samangha Pass in the Central country, and the Arinaga Pass leading from Mastura to Mulla, after a considerable halt in Maidao, the force returned to the plains down the long Bati valley. Another part of the force under Gen. Hall followed the Mastura and Wartin valleys to the junction with the Bati. A further expedition to the Khatol and Bati valleys brought the remainder of the Afridis to terms. The country was thoroughly explored and surveyed by Halliday during these operations. The Afridis have been so the whole quiet during the past ten years, and enlisted in the frontier regiments with enthusiasm humbly after the war. Of late, however, signs of unrest have again appeared especially among the Zakka-khel, and there have been some raids on the plains.

In the early part of 1908 these raids led to an expedition being sent by the Government of India ~~to~~ the Raski and Bara valleys to attack the Zakkah-khel who submitted after a fortnight's operations. The other sections of the Afridis took no part in the fighting, and themselves induced the Zakkah-khel to submit.

By the Durand treaty of 1893 between the government of India and the emir Abd al-Kahman the Afridis were left entirely within the Indian boundary. In 1897 the Afridis sent deputations to Kabul, and endeavored, but without success, to obtain ~~recognition~~ from the ~~emir~~ ^{British} government that these hardy mountaineers will eventually settle down in a more peaceful life under the British government, which does not attempt to interfere in the internal affairs of the tribes.

AFRIDON, [See FENIDON.]

'AFRIT. [See **'FRUIT.**]

'AFS' (A.) the gallant as well as the oak tree (*Quercus astantia orientalis infectus*) that yields it. The Arabs, who did not yet know of the

production of the gallnut by the gall-fly, considered it to be the fruit of the oak tree, produced either at the same time or alternately with the acorn. In mediæval Arabic medicine, the gallnut was official, and was used either in powdered form or boiled in vinegar as a remedy for skin diseases, and also internally as a remedy for diarrhoea; mixed with honey it was considered to be a remedy for the lungs. It has also been used for the prevention of ink.

AFSHAR, a Turkish tribe emigrated to Persia, where it formed two great divisions, Kizil and Eshik according to Ritter (*Asien*, viii, 400-405), or Shamlu and Kirke according to Morier. It consists of 38000 families scattered in Akhalkikhan, Khamae (Zaglan and Kialahon), Karwin, Hamoukhan, Tabarin, Eshsanin, Kermis, Khurkhan Fawizan and Macanikhan. It is called after Awhar (*Ferdowsi's Nizami*), or Awahar (*Kashf al-Din*, ed. Barmau, p. 32). The eldest son of Yolduz, third son of Oguz (Abu'l-Atah, p. 37), the meaning of the name is: "he who is prompt in his affairs" (*ib.*, p. 33). Nadir Khan was of the Kirke tribe, who came to Akhalkikhan with the Mongols and settled under Shih Isma'il in the north of Meshed and in the region of Merv (*Maabdi Khan, Histoire de Nader-shah*, 1750, page, L 2-3).

(Cf. 116087.)

AFSHIN, title of the native prince (in pre-Islamic times) of the country of Ustjuzhania in Asia Minor (about the stretch from Eghnek to Eghedjeddin and to the south of it the territory on the opposite corner of the Zurefshan). The last Afshin, Gulistan Kawanu (in the sources he is generally called not by his proper name but by his title *afshin*), the general of Caliph al-Mu'tazila, was loaded with reward and honours for his repelling the dangerous rising of the Khurrami under Bafek and for his victories over the Greeks in Asia Minor, but in 838 (Sap-837) he was overthrown, accused of apostasy, and in Shaban of the same year (May-June 838) he was made to die of hunger in prison. — The title *Afshin* occurs also in Asia Minor; to Ya'qubi (*ed. Boissier*, II, 344), *Eghnek*, the subjugator of Sogdiana, calls himself *Afshin* of Sogdiana, *Afshin* of Samarkand* in the deed of his treaty with Kauliba b. Maalin.

AFSÖS, poetical name of Mir Shēr 'Alī, the son of Sa'iyid 'Alī Muqaffar Khān, and descendant of the Prophet through Imām Mūsā Sādiq. His ancestors dwell in Khawāf in Persia. One of them, Sa'iyid Muḥammad Khān, the brother of Sa'iyid 'Alī Muqaffar Khān, came to India and settled at Naraul. Sa'iyid Ghulam Muqaffar, the grandfather of Afsös, came to Delhi during the reign of Muḥammad Shāh (1719–1748), and was an associate of Nawāb Sa'adāt al-Dawla Khān, and his father and uncle, Sa'iyid Ghulam 'Alī Khān, were companions of 'Umar al-Mulk Amir Khān. Afsös was born at Delhi, and received a liberal education. On the assumption of the Nawāb (1747), when Afsös was 11 years of age, his father took him to Patna, and obtained ~~the post of~~ under Nawāb Mūsā 'Alī Khān, commonly known as Mir Qasim; he remained at Patna until the deposition of the Nawāb in 1760. He then went to Lucknow, and thence to Haidarabad, where he died. Afsös resided at Lucknow 2 years before his father's death, and was supported by Nawāb Nāzar Dugh, the son of Mirza Khān, and became an associate of Mirza Dīwān-Bakht (Dīwān-dar Saḥī), the eldest son of the emperor 'Alam, who had come to Lucknow from Delhi.

After living some years at Lucknow, Mirza Nāzar Khān Khān, the Nāib of Nawāb Asaf al-Dawla, introduced him to the notice of the Resident, Colonel W. Scott, at whose recommendation he went to Calcutta in 1215 (1800–1801), and was appointed Lecturer in the Hindustani Department of the College at Fort William.

Afsös wrote a Hindustani Dīwān during his residence at Lucknow. He also made there a translation of *the Gulistan of Sa'adī*, which was completed in 1214 (1799–1800), under the title of *Bagh-i Urdū*. While at Calcutta he revised the *Kashfāt* of Sa'adī, and Hindustani translations of Persian works which had been prepared by Mughals of the college. He wrote a translation of the first part of the *Khatayāt al-Tawārik*, or a Persian history of Hindustan written by Mughal Sultan *Shah* of Persia in 1107 (1695–1696). This work was completed in 1205 (1805) under the title *Asfār-i mughal*. It was first printed at Calcutta in 1200. An English translation was made by M. J. Court, and published at Allahabad, 1871 (2d ed. Calcutta, 1883). According to Garcin de Tassy (*Litt. Hind.*), and Sprenger (*Oudh Cat.*, p. 298), Afsös died in 1809.

Bibliography: Blandford, *Catalogue of Hindi, Panjabi and Hindustani MSS. in the British Museum*, 89. 72; Garcin de Tassy, *L'islamisme d'après le Coran* (3d ed.), pp. 291 et seq. and the works cited in the article.

AFSÜN (عَفْسُون), charm, incantation; secondary form of *afṣān*, derived from *afṣayidān* (comp. *faṣṣā*, *faṣṣā*, *faṣṣayidān* etc.), root *افس* (Salomon, in *Grundr. d. iran. Philol.*, i. 1, 304). This word designates especially now, in Persia, a charm against the biting of poisonous animals; certain derwishes who pretend to have the power to charm serpents, scorpions etc., will, for some gratuity, communicate their inviolability to other persons. Often it is one part of the body which is so protected,

as (for instance the right or the left hand, and it is with this that the animals of this kind must be seized (Futuk, Persia, i. 348).

(C. HUART.)

AFTASIDES, Berber dynasty of Badajoz (418–487 = 1027–1094). Muḥammad b. al-Aḥsan, the father of the founder of this dynasty — which is for this reason called Aftasides (see 'AM. AL-ḤAN b. AL-AḤṢAN) — belonged to the Berber tribe of Aftasides and had come to Spain probably with al-Muḥammad's Berber troops. But soon as the Aftasides attained to power they ascribed to themselves an Arabic origin and claimed descent from the noble Yemenite tribe of Taghlib. It must be said, however, that 'Abd Allāh, the first Aftaside king, was ~~born~~ in Spain, in a place called by Arab authors, Faḥṣ al-Baḥrī, which Dozy identified with the Campo Calatrano of today (*Recherches sur l'Espagne*, i. 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100). As early as 401 (5010), Badajoz, of which the governor was a certain ~~king~~, had seceded from the Caliphate of Cordova, and Saḥūr had made of it an independent principality. He appointed his son 'Abd Allāh b. al-Aḥsan, whom he held in great esteem, as successor. Thus 'Abd Allāh's accession to the throne was since after 413 (1022), the year of Saḥūr's death. From the very beginning his reign was characterized by disastrous wars and by the defeat which he suffered at the hands of Ibn 'Abd al-Rahmān, prince of Seville, and of Muḥammad al-Hirānī, prince of Castile. Al-Muḥammad, son of 'Abd Allāh, who was in command of his father's troops, was taken prisoner by al-Hirānī and did not recover his freedom before the month of Rabi' I 421 (March 1030). Four years later 'Abd Allāh recovered himself upon Ibn 'Abd al-Rahmān in a perfidious manner. He had granted the latter free passage through his territory for his army commanded by his son Iḥṣān, then he unexpectedly fell upon the latter and massacred the greater part of his soldiers; Iḥṣān and a handful of men succeeded in escaping.

'Abd Allāh died on the 17th Jumādī II 437 (30th December 1045) and was succeeded by his son 'Abd al-Rahmān al-Muḥammad. The latter, besides that he had at least the 'Abd al-Rahmān's name of the Aftasides, was also threatened by Ibn 'Abd al-Rahmān, King of Toledo. Upon the advice of Muḥammad b. Iḥṣān, Lord of Cordova, al-Muḥammad and Ibn 'Abd al-Rahmān allied themselves with him in order to offer a united resistance to Ibn 'Abd al-Rahmān: thus the two men were reconciled for the moment. But soon a war broke out between Ibn 'Abd al-Rahmān and al-Muḥammad and the latter was beaten twice. Then there took place the expedition of Ferdinand I (beginning of 447 = spring of 1055), who deprived al-Muḥammad of several fortified places and imposed upon him a tribute. Al-Muḥammad died in 460 (1068). This prince distinguished himself by his great love for Arabic literature, which compensated for his want of success in his wars. He even wrote a rather voluminous work entitled *Muḥammadī* (comp. 'Abd al-Wahid, ed. Dozy, p. 52).

After al-Muḥammad's death, his son Yahyā, who later was the successor of al-Muḥammad, ought to have succeeded him; but his other son 'Omār, then governor of Evora, declared himself independent. Thus the two brothers reigned together

for several years, 'Omar over the western and Vahy over the eastern provinces. According to certain authors wars were took place between the two brothers as well as between their allies, but this can not be established with certainty. Vahy died in 473 (1081), and as he left no son. Omar, who took the name of al-Mutawakkil, became sole ruler of the kingdom. The latter like his father was more prominent on account of his literary taste than of his military exploits; his name was chiefly immortalized by his secretary, the poet Ibn 'Abdūn (q. v.), who later mourned over the fall of the Afrasides in his celebrated elegy. This fall, for the rest, did not come unexpectedly: Alphonse VI of Castile incessantly invaded the Muslim territory, and in 478 (1085) he even seized Toledo. The Muslim king al-Mu'tadid of Seville, Umar the Afraside of Badajoz and 'Abd Allah of Málaga decided then to call the Almoravide Yūsuf b. Tāghlāb to their aid. The latter indeed was not slow in responding to their call; he defeated the Christians in the battle of Zalāhā (12th Rajab 479 = 23^d October 1086) and then returned to Africa. But his success stimulated his eagerness for conquest, and in 486 (1093) he sent his general Sir b. Abi Bekr the order for subjugating the Afraside kingdom. Badajoz fell into the hands of the Almoravide general in 487 (1094); 'Omar and his two sons al-Fall and al-'Abbas were taken prisoners and afterwards put to death.

'AFŪW = very forgiving". — **AFŪW**, one of the 99 names of God (see ALLĀH).

AFYON (i. e., from the Greek *βίον*, *blon*, of *βίος*, *bios*, opium, i. e. the impure juice of unripe poppy capsules (*papaver somniferum* L., Arabic *ḥaṣh-ḥaṣh*). From the first to the twelfth century of the Christian era Asia Minor seems to have been the only source of supply of opium for trade. From there the Muslims spread it by means of their warlike expeditions over the whole Islamic empire, so that opium is now cultivated in East India, Persia, Asiatic Turkey, Egypt and China. The production of opium was already described by Dioscorides almost in the same manner as it is still produced in Asia Minor: superficial incisions were made in the debilitated capsule, and on the following day the juice, which had oozed through them and become thick, was removed and kneaded into small cakes. The effects of opium as a medicinal drug, and chiefly its being an article of enjoyment, were from ancient times accurately diagnosed and tested.

al-APZĀRI, the title of the minister and poet 'Amīd al-Dīn Aḥmad b. Naṣr, according to *Ḥaṣḥi Minā Ḥaṣḥi Fāsi* (*Ḥaṣḥi minna ḥaṣḥi*, *Ḥaṣḥi*, 1313, L. 33; II. 179, 332). *Asīd* or *Abāḥ* is a

small town of Fās, south of Sūda (*Ḥaṣḥi*, *ḥaṣḥi*, *al. de Goeje*, III. 447, note 1). [See AL-APAZAR.]

AGA (See AGĀA.)

AGADIR, a Berber word, the equivalent of the Arabic *ḥimā* = wall, walled wall enclosing a town, fortress, town; apparently of Phoenician origin. Agadir is the name of several Berber villages, especially in Southern Morocco. When occurring alone it generally designates Agāllā ḥimā, a small town situated in Moroccan Sāa, on the sea-shore, on the top of a hill. It is also known (a small plan of it is to be found in Erickson, *Maroc andréen*, p. 50); being situated on a declivity the name is difficult. Near the place, on the sea-shore, there is a rather miserable village called Fomil. The roadstead of Agadir is the best anchorage of the whole Atlantic coast of Morocco, because it is sheltered from all the winds. Agadir was founded towards 1500 by the Portuguese; originally it was a simple fishing establishment, the construction of which seems to have been due to private initiative. It was generally designated by the name of *Santa Cruz*; the natives called it *Tigremat* *ḥimā* or *ḥimā* *ḥimā*, i. e. the European house. Later it got the name of *Santa Cruz* of Cape Agor (Berber *ḥimā*, whence *ḥimā*, *ḥimā*, *ḥimā*). It was not to be confounded with Santa Cruz de Mar Pequena, a Spanish post established later, the exact site of which is not known now. The Africans call Agadir *Guarguarem*; Santa Cruz of Agor, having become so important Portuguese place in Morocco, was attacked in 1536 by the sheriff Mūḥid Maḥmūd. The place was then commanded by Don Gutierrez de Manco; the siege was long and eventful; finally, in spite of the help of Portugal, Santa Cruz was taken by storm and don Gutierrez surrendered. The latter's son-in-law don Juan de Cotral had been killed and his wife Doña Mariana de Manco was taken prisoner. The sheriff fell in love with her so much that he married her; he let her for a long time practice the Christian religion and live in the European manner; but finally she altered her faith or at least she made a show of being converted to Islam. It is also said that she was the cause of a war between Mūḥid Maḥmūd and Mūḥid Aḥmed, the two sherifs who contended for her with arms; the former had the upper hand and the two brothers came to an understanding. It seems that she died from poison administered to her by the other wives of the sheriff, who were jealous of her. The sheriff set free his father-in-law and sent him back to Portugal loaded with presents. In order to shelter the port of Agadir and a spring which supplied water to the town, 'Abd Allāh had in 1557 built a battery, around which some houses were clustered; this agglomeration comprised the name of *Port* from the Portuguese *porto*. Agadir remained an important commercial point of the coast. In 1870 the only French commercial house in Morocco was established there; in 1875 the French tried to build there a fort. In 1773 Mūḥid 'Abd Allāh founded Mogador and transferred all the Portuguese to leave Agadir and to live in the new town. Since that time Agadir has been closed to European trade; its inhabitants are very faithful; and towards 1882 some commerce was permitted there on account of the famine, but the traders were obliged to encamp on the strand and were hardly badly received.

(Eckmann, *loc. cit.*). The Portuguese fortress is well preserved and it seems to present inscriptions.

(E. HUART.)

'AQEL, modern Arabic pronunciation for 'akāl' (q. v.).

AGHA, East-Turkish = 'elder brother'; comp. Yakut *aga*, 'father' (V. Thomsen, *Itinerarium de Orkneya*, l. 17—18, 1893). Kaitakchaghā, grandfather, uncle, Tatars, 'elder sister'. In (small) Turkish *agha* means 'chief, master, lord'. This title is nowadays borne by inferior officers up to the grade of captain; it is also that of the eunuchs of the imperial palace. Formerly it was conferred upon officers of a rather high rank. The *akāghas*, officers of the imperial army, were six in number: the chief of the *haskāshī*, the eunuchs, the chief of the *akāshī*, etc. The *agha karmakāshī* was a guard officer in service of the *agha* of the janissaries; he was looked from a high tower the different quarters of Constantinople; in case of a fire he took quickly information and hastened to report it to the *agha*. The eunuchs of the palace were divided into black (*hara-aghalar*) and white eunuchs (*akāghalar*), only the former exist now; their chief is called *akāgha*, 'the *agha* of the girls'. He has the title of *ilghatān*, and his rank is next to the grand vizier and to the *Shah* al-Islām. The chief of the white eunuchs was formerly called *Kapāgha*. — The *agha* of the janissaries (*yakāgha*) was the commander-in-chief of that militia and had the precedence of all the other officers as well as of the Ministers of the State. — Under the Mongols this title was likewise given to the princes of the royal family (Quatremère, *Hist. de Mongols*, pp. xxix, xl). The Persians write this word *āghā*, and erroneously pronounce it (A. L. N. Nicolas, *Seyid Ali*, *hommage à la Béd.*, Paris, 1905, p. 161, note 125). Just as for the rest, do the Osmanli-Turks.

Bibliography: W. Kailash, *Verwandtschafts-Verhältnisse*, l. 145; IL Vambery, *Seyid Ali*, *Verwandtschafts-Verhältnisse*, p. 6; Barbier de Meynard, *Notice turco-française*, l. 74; D'Ottavio, *Tribuna di Sempere ottomane*, ii. 14 et seq. 30 et seq. 313, 353. (CL. HUART.)

AGHA KHAN, title of the head of the Indian families or Khodjas (q. v.). The present Agha Khan Muhammad Shah, born in 1877, resides at Bombay and writes articles for English periodicals (*The Nineteenth Century*; *East and West*). He is the third Agha Khan, for his father and grandfather also bore that title. The latter, called Agha Khan Mahallat (after Mahallat in Persia, to the west of Kumb), was governor of Sam Mahallat under Fakh 'Ali Shah. Having accompanied in his revolt in 1838 against the grand vizier, he was obliged to flee to India. Mahallat's father, Khali Allah Salyid Khabli, was executed in 1817, son of Abu'l-Hasan, the governor of Kumb. The Agha Khans claim descent from Hasan Subhāy (q. v.).

Bibliography: St. Guyard, *Un grand maître du monde musulman* (Paris, 1891, 2^e éd., l. 337 et seq.); *Revue du monde musulman*, l. 48 et seq.

AGHA MUHAMMED KHAN, founder of the Rājshāh dynasty in Persia, son of Muhammad Khan, son of Fakh 'Ali Khan; born in 1753 (1747). When still a child he was made a eunuch by order of 'Adil Shah. On the death of the *shah* Kāshā Khan Zand, he retired to Asterābād, turning to his advantage the disturbances of Persia at that time; he made Teherān his capital and declared himself a king there in the beginning of 1201 (1786). He struggled for eight years with the prince of the Zand dynasty, Lutf 'Ali Khan, who fell into his hands through treachery, and perished under fearful tortures in 1209 (1794). A successful expedition against the Turkomans (1210—1795) re-established peace on the north-eastern frontier, another expedition in Georgia tore away the latter country from Russia; Agha Muhammad escaped a conflict with the latter power only thanks to the death of Catherine II. He seized the prince Shāhrukh, grandson of Nadir Shah, who, though blind, continued to reign in Meshed, and by torture extorted from him the diamonds which the conqueror had brought from India, then he ordered Khosrō to his States. At the age of 55 he was assassinated (1211—1797) by two slaves whom he had condemned to death, and buried at Nadī (Meshed 'Af). His nephew Bādā Khan, who took the title of Fakh 'Ali Shah, succeeded him on the throne. Agha Muhammad founded by violence and force a dynasty, whose chief merit consists in its restoring to Persia a which has remained till now.

Bibliography: P. Horn, in *Grande d. Iran*, *Pahlavi*, ll. 594, 604; *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, l. 411; Ruyter, *Dynastie of the Kajars*, pp. 9—29; 'Abd al-Baqāh b. Naḥaf Kull, *Min ḥikm al-sultān*, pp. 14 et seq.; Rika Kull, *Revised al-jawāz al-jadīd*, l. 104 30 et seq. (CL. HUART.)

AGHAC (Turkish: 'tree, wood', a second form to East-Turkish *yigān*), a land measuring the triple distance at which a man placed between two others can make himself heard by them, thus something like a paceship or a mile. A verse of Mir 'Ali Sher Nawāz is it *āghā* *hāri* (double cable, the length of the from the shoulder to the end of the middle finger); another verse of Makhdūm Kull estimates the dimension of the earth at 140000 *aghā*. Pietro della Valle (*Voyage*, III. 241) thinks the *aghā* to be equivalent to a Spanish league, or four Italian miles, and according to E. Flaudin and P. Conte (*Voyage en Perse*, l. 111), it is equivalent to six kilometres (a little less than four English miles).

Bibliography: Pavet de Courcelle, *Notice turco-orientale*, pp. 554—555; Solimān Khān, *Laḥat al-jawāz al-jadīd*, p. 13 (Paris, 1891, pp. 6, 105). Vambery, *Cognate Sprachstudien*, p. 357. (CL. HUART.)

AGHAC-ERI, (man of the woods, of the forest), of a people which Priscus quotes under the designation of *Agathari*; it is perhaps the same as the Mordvins (Russian *Mordva*, Arabic *Bardar*, *Bardar*) and other Finnish tribes (Marquart, *Streifzüge*, pp. xxiv, 41). The explanation of the Greek name by the Turkish is found already in Hammer-Purgstall, *Geogr. Anst. d. k. k. Hofe*, p. 16; Quatremère, *Hist. des Mongols*, (1816), p. 53, note; M. Th. Montau, *Les tribus arabes*, *Glossar* pp. 45, 49. (CL. HUART.)

AGHĀNĪ (A.), pl. of *aghānī* (q. v.), a song^o; for the Arabic 'Book of Songs' (*Kitāb al-aghānī*) see AMĪN-L-FARĀBĪ 'ALĪ.

AGHĀNĪYĀ (A.), pl. of *aghānī* (q. v.).

AGHLABIDES, a dynasty which ruled over Ifrīkiya during the whole of the 9th century of the Christian era, founded by Ḥaṣṣam b. al-Aghlab al-Tamīmī. Ḥaṣṣam, then governor of Yab, seized the power after he had rescued the 'Abbaside emir Ibn Muḥallā, and was invested by Caliph Hārūn al-Rāshid. It is in no way certain that further feudal treaties fixed more precisely the relations between the Caliphate and Ḥaṣṣam's successors. At any rate they contented themselves with the title of emir; the wording on their coins was extraordinarily simple. The relations between Baghdad and Kairawān were shown by mere civilities; Ziyād al-Allāh informed Caliph al-Ma'mūn of the Sicilian expedition which threatened the Byzantine empire, and sent him shortly afterwards *mithaqāt* coined in his name. But when the same caliph asked the same emir to extol 'Abd Allāh b. Tāhir in the *khutba*, the emir answered insolently. Al-Nuwairi says with reason that the ruler of Baghdad would have met with ill success if he had tried to interfere with the affairs of the successors of the dynasty, and it seems doubtful that a message of al-Ma'mūn should have influenced the abdication of Ḥaṣṣam b. Ahmad.

Thus **AGHLABIDES** rule in the **AGHLABIDES** hereditarily supreme over a territory, the boundaries of which **AGHLABIDES** exactly he defined and which is conventionally called Ifrīkiya. To the west it surely extended to Baza and comprised the whole country of the Kairawān. These Berbers, who seem to have formed a great confederation whose influence reached the present Kabylia, were kept under the Agglabide suzerainty through the Arab colony of Bilma, and as soon as the latter was destroyed by the last Ziyād al-Allāh, they became the first and firmest support of 'Abd Allāh al-Sūfī: they **AGHLABIDES** Khāridjites, perhaps Nakkariite Ḥafsiya. To the south-west Ifrīkiya extended to the Zāb and the boundaries of the Ḥafsiya kingdom of the Banū Rustam of Tahert; Baghaya and Tobas were under Agglabide rule, but with occasional Khāridjite revolts. **AGHLABIDES** south-east Tripoli formed an isolated post, exposed to the raids of the Berber Khāridjites of Djebel Nafusa. Ifrīkiya proper, partly occupied by Arab and Arabized Sanāites, furnished the contingents of the army, the *ghunāḍ*; though frequently divided by tribal quarrels and personal ambitions, they yet formed a religious and linguistic unit in front of the heterodox Berbers who surrounded and persecuted them.

In this Sanāite community, religious life was vigorous enough for differences of theory to enter upon the scene. It is under the Agglabides that the Ḥanbalite and Malikite doctrines are believed to have simultaneously been introduced into Ifrīkiya, doctrines which Fāṭimism seems to have supplanted during two centuries. For a certain time they were represented by the same person, Asad b. al-Farkī, who was first *qāḍī* of Ifrīkiya, then of Sicily and at the same time imam and emir. This scholar, who successively attended the lessons of Mālik at Medina, of 'Abd Ḥanbal's disciples in Yab and of Ibn Kāsim, Mālik's best pupil, in Cairo, taught the two doctrines at Kairawān; but his rivalry with the Malikite Saḥnūn accentuated

his Ḥanbalite tendencies. After his death Saḥnūn remained sole master of the place, and from 232 to 240 (857-865) he seems to have exercised over Ifrīkiya an absolute religious magistracy. He was liberal when he had near him his rival's Ḥanbalite pupils like Sulaymān b. 'Imrān, but he displayed real severity towards his unfortunate predecessor Ibn Abī Ḥawwād, whom he made to perish under the tool for the crime of professing the doctrine of the creation of the Korān. His *enfermement* of Ibn Kāsim's doctrines eclipsed the *shu'fiya* and became the canonical book of Maḥmūd Mālikīya. After him, the Malikite school remained supreme, yet the Ḥanbalite doctrines had their adherents; even the doctrine of the creation of the Korān had not disappeared: al-Farkī was threatened with death for this crime. But under the emir Abū 'Alī Muhammad, al-Sulaymān, the *qāḍī* and governor of Kairawān, an avowed partisan of this latter, was nevertheless entrusted with the task of restoring order to the administration. It is possible that the emir employed the *shu'fiya* as intermediaries with the people against the free tendencies of the Arab families, unable to remain grouped in a compact state in front of the dangers that threatened them on the frontier. The appreciation of the Arab historians, though vague and divergent, induce us to believe that the emir possessed courage and skill, knew how to maintain such a fragile political community and keep it in real prosperity, in spite of some financial trouble like the *dirham* edition.

The Sicilian expedition, begun by Ziyād al-Allāh I (212-237) and continued by his successors and the Fāṭimides, **AGHLABIDES** nothing else than the regulation of former piracy, the large island having existed on the pirates the main attraction which Spain **AGHLABIDES** upon the Berber dynasty of Morocco. The produce of the pillage, carried on for a pious purpose, the *ghazā*, furnished the emir with the means to build palaces and produced them other pleasures without **AGHLABIDES** too heavily their subjects. Al-Ḥayy al-Rāḍī, built under Ḥaṣṣam b. al-Aghlab, the great mosque of Kairawān and the *madrasa* of Ibn, built under Ziyād al-Allāh b. Ḥaṣṣam, the *madrasa* of Kairawān, the mosque of Sūf, Baghaya and Kayr al-Fark form an artistic group associated with Sicilian architecture.

After a line of rulers, who though not without faults were full of energy, the Agglabide dynasty could oppose to the storm raised by al-Shī'ī none else than emirs whose predominant feature **AGHLABIDES** the cowardly and refined severity of lords of harems and eunuchs. The last Ziyād al-Allāh took to flight before the Fāṭimides, without fighting, in 296 (910).

The following is a list of the Agglabide rulers, eleven in number:

Ḥaṣṣam b. al-Aghlab b. Salīm b.	
Ḥal al-Tamīmī	184 = 800.
Abū 'Alī Asad b. al-Allāh b. Ḥaṣṣam.	196 = 812.
Abū Muhammad Ziyād al-Allāh b. Ḥaṣṣam.	201 = 817.
Abū Ḥal b. al-Aghlab Ḥaṣṣam b.	223 = 838.
Abū 'Alī Muhammad b. al-Aghlab.	226 = 841.
Abū Ḥaṣṣam Ahmad b. Muhammad	242 = 856.
Ziyād al-Allāh b. Muhammad	249 = 863.
Abū 'Alī Muhammad b. al-Aghlab	250 = 864.

Husain b. Ahmed. 261 = 875.
 Abu 'l-A'ala. Abd. ALIB Muhann.
 med. in. fortitudo. 269 = 902.
 Abu Alodur Ziyadat Allah b. Abd. 'l-
 'Abbas. 269 = 902 to 276 = 909.

 (C. Desormères.)

AGHMAT, a place to the south of Marrakesh.
 Agmat is now a vast agglomeration of fields,
 gardens and earth houses, abundantly watered and
 shaded by trees of various kinds. It is one of the
 prettiest spots of that region. It belongs to the
 latitude of Marrakesh, at a distance of two or
 three kilometres from it to Warika, a large
 village with an important *medina* (Jewish quarter),
 which constitutes a separate *ghazda*. Both com-
 munes are irrigated by the Wadi Agmat which
 comes forth from the Atlas at Warika: the latter
 is indeed situated land by the foot of the moun-
 tains and ~~on its first slopes~~. The Wadi Ag-
 mat furnishes numerous *regas*, one of which goes
 to Marrakesh and contributes to furnishing
 the town with drinkable water.

Before the foundation of Marrakesh, Agmat
 was, besides Salla, the chief town of the region;
 it is mentioned as having formed a part of the
 hispano-egyptian. Later, before the Almoravide in-
 vasion, it is found to be occupied by the Magh-
 rawa, whose last emir was called Laghat or Laghat
 b. Yusuf, the husband of the celebrated Zaynab,
 who later married Abd. Bekr al-Ishirani and
 afterwards Yama b. Taghrib, the founder of the
 Almoravide dynasty. Agmat was taken in 440
 (1057-1058) by the terrible *warawid*, and Laghat
 sought shelter with *Taghrib*. After Marrakesh
 was founded in 454 (1062), Agmat lost its
 importance and since then has ceased to
 flourish. Al-Bakri, who wrote before the foun-
 dation of Marrakesh, distinguishes between two
 Agmats: Agmat-Alban and Agmat-Warika. Per-
 haps Agmat-Alban is identical with the Agmat
 of to-day while Agmat-Warika would correspond
 to the present Warika; unless Agmat-Albu be
 Agmat-Albu which is 7 or 8 km. and. At any rate
 the historical Agmat seems to answer to the place
 which is still called Agmat. There is still an old
 medina, large enough, and ~~many~~ tombs are
 found there. Perhaps it is ~~here~~ that we must
 look for the tomb of the unfortunate al-Mu'tamid,
 the last ruler of Seville and of Cordova, whom
 Yusuf b. Taghrib exiled to Agmat and whom he
 kept there a prisoner. Al-Mu'tamid ~~gives~~ a
 touching account of his captivity. This tomb existed
 in the 14th century, but we do not know what
 has become of it now, the ~~monument~~ to this modern
 being strictly forbidden to Christians and Jews.
 Around the medina there are found vestiges of
 old brick buildings, of a stone bridge and of old earth
 circunvallations. In the time of Leo Africanus,
 Agmat was already in utter decay; still pilgrims
 are yet made to the saint of Agmat. The
 region remained celebrated on account of its
 water, its shady trees and various fruits which
 supply the market of Marrakesh.

AGHRIDAGH = **FORNICATION**. [See **ABAS**.]
AGRA, capital of the district of the same name
 in British India, situated on the right bank of
 the Yamuna River. In 1901 the city counted
 118,000 inhab. (about a quarter of whom Musul-
 mans), the district (1845 square miles) 1,060,546
 inhab. — Agra is renowned for its many mag-
 nificent buildings from the time of the Moghul dy-
 nasty. Several of them, as the Moti-Masjid (erected
 in 1654 by Shah Jahan), the Nagina-Masjid
 and the Mina-Masjid, the public and private au-
 dience halls (*darul-i-aman* and *darul-i-shan*),
 the palaces known under the names of Shah-
 Mahal, Khajur-Mahal, and Jahangir-Mahal are
 within the spacious citadel (2½ km = 1½ miles in
 circumference, built by Akbar) surrounded by a
 moat and a wall 70 ft. high, access to the citadel
 may be gained by two gates, while a third gate
 on the side of the river is closed. On the oppo-
 site bank of the river is the tomb of 'Imad al-
 Daula (q. v.). The most famous monument of
 Agra is the Taj-Mahal (q. v.) For the rest the
 area of the present city is only about the half of
 what it was in the flourishing time of the Moghul
 dynasty.

History. — Agra has been known since the
 12th (q. v.) dynasty ruled there, and yet Akbar
 only made it his residence, in which he also
 died (1605); his tomb was erected by a monument,
 however, is not in Agra but in Sikandra (q. v.),
 which is at a distance of 8 km. (about 5 miles).
 The Akbarabad given to the city in his honour
 fell later into oblivion. His successor re-
 sided only now and then in Agra, and Aurangzeb removed
 his residence to Delhi. In 1770 the city was taken
 by the Marathas, who occupied it with a short
 interruption till 1803, when Lord Lake subjected
 the city to the English rule (battle of the 17th
 October 1803).

 rule in Agra* (1901); *Archaeological
 survey of India*, iv.

AGAD (A.) pl. of *agah* (see **AGAH**), meaning
 unit in arithmetic. In the science of tradition it
 is used as an abstracted pl. of *shahar al-mu'ad*,
 which are contrasted with *mu'ad* (q. v.).
 communications which come not from a
 larger number of trustworthy companions (*mu'ad*),
 but from a single person. By means of *shahar*,
 i. e. further extension by different *mu'ad* *mu'ad*, the
agad tradition was added to the rank of *mu'ad*.
 The discussion of the question: to what
 extent the *agad* contains positive science and may
 serve as a criterion for the practice, forms one of
 the most conspicuous chapters of the *agad* science.

Bibliography: W. Marquardt, *Le Talmud de
 Babylone* (Paris, 1902), p. 201; a detailed
 discussion of the *agad* questions: *Le Talmud
 de Babylone* (Paris, 1903), 1221,
 pp. 51 et seq.; Seder al-Shur'a (Talmud), *al-
 Talmud* (Paris, 1883), p. 361.

From a Shiite point of view: *Diwan al-Din al-Ash'ari, Al-Faḥm al-ḥadīd* (Lucknow, n. d.), (GOLDZIEHER.) p. 107.

AHAD (A.) = numeral "one"; also surname of God (see *Wahm*). From *ahad*, the first day of the week, Sunday.

AHADL, the cavalry guard corps in the army of the Great Moghul.

Bibliography: Horn, *Das Heer und Kriegswesen der Grossmoghuls*; W. Irvine, *The army of the Indian Moghuls*.

AHADITH (A.), traditions. [See *Ḥadīth*.]

AHADIYA (A.) = unity, technical term in philosophy denoting simply the indivisibility of God's entity, which in the teaching of the Sūfīs constitutes the highest degree (*ḥaqīqah*) of the divine Being. Comp. the definitions in the *Dictionary of the technical terms* (ed. Lees) p. 1463.

AHD (A.), pl. of *ahd*, covenant, covenant, alliance; hence *waḥd al-ahd* = successor to the throne by virtue of a decree of the reigning prince; *ahd al-ahd*, the people of the covenant, i. e. those who have made a covenant with the Muslims, namely the Christians and the Jews (see *ḤIMMA*). Further *ahd* means the document itself which contains the regulations of the alliance; hence *ahd al-ahd al-ahd*, the Old Testament and *ahd al-ahd al-ahd*, the New Testament.

AL-AHDAL AL-ḤASAN A. **ABU AL-RĪḤĀN** A. **MUHAMMAD AL-ḤASAN** **ABU** **AL-DĪN**, Arab historian, born in 779 (1377) and died in 885 (1480). One of his works is a compendium of al-Ḥasan's history of Yemen, entitled: *Taḥṣīl al-ḥasan fi ṣifāt al-Ḥasan*.

Bibliography: Brockelmann, *Gesch. d. Arab. Litt.*, II, 235; Kay, *Yemen, its early medieval history*, pp. xviii et seq.

AHDATH (A.), pl. of *ḥadīth* [q. v.].

AHL, Turkish word, whose real name seems to have been Heilī Ḥasan (Ḥasan with the halo). His father Sidi Ḥuday was a merchant in Tomya (not far from Nicopolis). After the latter's death Ahl went to Constantinople and chose for himself the career of a scholar, but he did not for a long time advance any further than the degree of a candidate (*mufaddi*), because he declined the position of Muḍarrī in Bayezid Paşa's Medrese in Brusa. Finally he obtained a similar though less important position in Kara-Forya (Bardow), where he died in 923 (1517). His left two unfinished poetical works, of which the titles are: *Ḥikāyat al-Ḥuday* and *Ḥikāyat al-ahd*. The latter work is an allegorical poem written in prose interspersed with verses, and is an imitation of Fattāh's [q. v.] work of the same title. Ahl has epitomized its contents in *A History of Ottoman poets*, II, 296, et seq.

Bibliography: Smiles Gibb, *loc. cit.*, *Laph* (Chester), p. 105; Hammer-Purgstall, *Gesch. d. Osman. Reichs*, I, 209.

AL-AHKĀF (A.) = "the sand dunes". The Arabs particularly apply this appellation to the large sandy desert south of the Arabian Peninsula, an entirely unknown region, visited by no traveller. — It is also the title of the 46th *ḥikāyah*.

AHKĀM (A.), pl. of *ḥukm* [q. v.].

AHL (A.), originally meaning those who occupy with one the *ḥimma* (Hebrew *ahel*), thus family, nation. Therefore *ahl al-ahd* means the household of the Prophet, his descendants. When the *ahl* (pl. *ahd*) of a town or country

is spoken of it denotes its inhabitants, sometimes, as in Medina (according to Burton), especially those who were born there and own houses. But this word is often connected with other nations, and then its meaning is still more subtle, so that it may mean so much as "abiding in a thing, belonging to it", or "owner of the name", etc. Some of the compounds with *ahl* must in use follow here:

AHL AL-AHWĀ (A.), sing. *ahwā*, predilection, inclination of the soul; comp. Koran vi, 151) is according to the view of the orthodox theologians the appellation of the followers of Islām, whose religious tenets in certain details deviate from the general ordinances of the Shiite confession (comp. *Zeit. f. d. Deutsch. Morgenl. Gesell.*, III, 159). As examples thereof mentioned: *Ḥashariya*, *Kadūliya*, *Kawāḍi*, *Khawāḍi*, anthropomorphism, *Muḥṣila*. From the above definition it may be inferred that in the sense of Musliman theology it is not proper either to designate these tendencies as sects. (GOLDZIEHER.)

AHL AL-BAIT (A.) = "the people of the house, of the family". With reference to Koran, cxviii, 35; the Shiites (and in general the Muhammadans friendly to Ahl) attribute to 'Alī, Fātima, their sons and their descendants to whom alone they restrict this appellation, the greatest moral and spiritual merits as well as the greatest influence on the political rule and religious guidance of Islām. These ideas come to the surface in a more or less exaggerated form with regard to the 'Ahlīs according to the views of those spheres (see *ḤIMMA*). In a notice by Ibn Sa'd (iv, 594) the appellation Ahl al-Bait is connected with Muhammad and Aḥmad and referred to the Prophet's family. In Shiite exegesis, the notion of Ahl al-Bait is in several ways extended to the branches of the Band Hashim including their *Mawālī* (see *ḤAWĀḤ*), in the sense of the law must be admitted to the making of the *shāfi*, see the codes, e. g. *Kudrī*, *Al-Muḥṣar* (Koran, 1880) p. 23; *Nawwī*, *Nihāyat* (ed. van den Berg), II, 205; *Ibn Kāṣim al-Ḥafṣ*, *Faṣṣ al-ḥafṣ* (ed. Van den Berg), p. 252. The Shiite interpretation accepted for the *ḥimma* part does not restrict the acceptance of the term to Hashimite descent in a narrower or wider sense, but counts among the Ahl al-Bait all the wives and children of the Prophet, and also 'Alī, his son-in-law. This prevents the specially 'Ahlī interpretation (comp. also *ḤI*). See the *Ḥimma* to Koran, xxiii, 35 and to al-Nakhr, *Ḥikāyah* al-ḥafṣ, No. 30 (al-Faḥṣiāḥ, vi, 151). An exhaustive treatise in anti-Shiite spirit on the comparison of the idea of Ahl al-Bait is to be found in *Ibn Ḥallāj al-Hamadī*, *al-Nasīb al-ḥafṣi* (Cairo, 1312), pp. 87 et seq. (GOLDZIEHER.)

AHL AL-BIDA' (A.) = "the people of innovation", i. e. *schismatics*.

AHL AL-BUYŪTĀT (A.), originally denoted those that belong to Persian families of the highest nobility (Madelin, *Gesch. d. Persien u. Arabien am Zeit der Sassaniden*, p. 71), then, the nobles in general. Other meanings given by Dozy, *Supplément*, I, 131.

AHL AL-DĀR (A.) = "the people of the house", in *ḤIMMA* literally the *ahd* order.

AHL AL-DHIMMA (A.), the *ḥimma* and Christians, between whom and the Muslims there is according to Musliman law a certain legal relation (see *DHIMMA*).

AHL AL-DJEBEL (A.) = „mountaineers“, particularly in Palestine the Bedouins of Hawrân.

AHL AL-FARP (A.) = „the legal heirs of the first degree according to Mahammedan right of succession“ [see 5411].

AHL AL-HADITH also **AYDIL AL-HADITH** (A.) = „the people of official tradition“ [see 5411], as contrasted with „the people of their own judgment“ (نفس) and with the sectarians in general. In India the Wahabîs [q. v.] call themselves so.

AHL AL-HAKK (A.) = „the people of the truth.“ [See 5411.]

AHL AL-HAWA (A.) = „libertines“.

AHL AL-KABALA (A.), a synonym of **AHL AL-DJIBBAR** [see 5411].

AHL AL-KIBLA (A.) = „the people of the Kibla“ [q. v.], appellation of the Muslims.

AHL AL-KISA' (A.) = „the people of the garment“, appellation of the family of the Prophet (Muhammed himself, Ali, Hassan and Husain). For the origin of the appellation see the traditions quoted above under **AHL AL-SAYY**.

AHL AL-KITAB (A.) = „the people of the Book“. Muhammed calls so the Jews and Christians, in distinction from the heathens, on account of their possessing divine books of revelation (*Tawrat* = Torah; *Zabur* = Psalter; *Injil* = Gospel), which, it is true, they turned in a falsified form, but the recognition of which secures for them a privileged position for the heathens. In contradistinction to the heathens Muhammed granted them (Qur'an, ix. 29) after their submission free public worship against payment of a poll-tax (*Jizya*, q. v.). The practical observance of the special conditions laid upon them ensures them implicitly the protection of the Mussulman authorities (as *mu'awana* of **AHL AL-DJIBBAR** = protégés in accordance with an agreement). Violation of this defensive alliance with the **Ahl al-Kitab** is considered as a heinous offence. Of course the proceedings of the Prophet with regard to the Beni Naafir and Beni Kurayb cannot be taken as a model. In spite of all fanatical sentiment expressed in odious terms the following principle is the basis of Muhammed's saying has been so ap: „He who wrongs a Jew or a Christian will have myself (the Prophet) as his inditer on the day of judgment“ (Dakikhat, p. 162). Likewise in the ancient instructions for the general sally out on expeditions of conquest as well as for administrators of the provinces stress is always laid upon the clause that the subjected **Ahl al-Kitab** must not be disturbed in their public worship and must be treated with humanity. To be sure after the death of the Prophet, who had begun with the expulsion of the Jews, the **Ahl al-Kitab** may in Arabia be said to have been tolerated to them. The Mussulmans based themselves on a saying supposedly uttered by the Prophet in his last hour, the purport of which is „two religions may not dwell together on the Arabian Peninsula“ (*Al-madina*, ix. 71, comp. Zuhri's commentary as to the geographical limits), a principle which is pretended to have been applied already by Abi Bekr in the message to the Christian inhabitants of Najran (Tabari, i. 1987, 1.). The restrictive, special conditions, which became always more oppressive in proportion to the increasing spirit of intolerance, are codified in their oldest form in a document which passes for the „Add' Omar, the treaty of 'Omar“ (with the Chris-

tians of Jerusalem), but which is certainly a production of a later epoch (de Goeje, *Musnad Omar de Omar et de Saïd*, 2^e ed., pp. 140 et seq.). This document is the basis of the interconfessional legislation in Islam, and it has been further developed in the codifications according to the ruling opinions of their respective authors. Within the right of free public worship the following question remained as the leading one: To what extent may the **Ahl al-Kitab** erect new prayer houses or restore old ones? It always gave rise to renewed negotiations. One may conceive that in different law schools in spite of the maintenance of the principle differences with regard to the treatment of the **Ahl al-Kitab** from the point of view of religious right became manifest. The principal differences appear in the questions of the *Qisas* (the *al-Kisas* (if the Mussulman may partake of what they slaughter) and of the *Munkafat al-Kisas* (to what extent a Mussulman is allowed to marry a wife of them). The assumption that the books which the **Ahl al-Kitab** possess are falsified and that they concealed their true contents (Qur'an, ii. 175; iii. 75; vi. 91), as well as the belief that Muhammed, his mission and the victory of the Arabs and Islam are foretold in the Holy Scriptures of the Jews and Christians and that the **Ahl al-Kitab** rendered obscure these prophecies by false interpretation called forth so extensive polemical literature, the materials for which the Mussulman theologians received in the first place from converts. With regard to the Jews a particular subject of polemic took the form the abrogation of the *al-Kisas*, i. e. the abrogation of the divine law affirmed by the Muhammedans and denied by the Jews.

extended very early the sphere of the **Ahl al-Kitab** beyond its original limits. Supported by the **Ahl al-Kitab** that Muhammed adopted the *Qisas* from the Paria in Hadrâ (Bahraïn), the Mussulmans included the *Qisas* too in that class. In the time of Caliph 'Umar (213 = 830) the heathens of Hadrâ succeeded in suggesting to the Mussulmans that they were the *Qisas* mentioned frequently enough in the Qur'an among the heathen nations, and that they possessed books of revelation brought to them by ancient prophets (Chwolson, *Die Sankir*, i. 141). In the 14th century a Muhammedan prince in India allowed the Chinese, against payment of a *Qisas*, to keep up a pagoda on Mussulman territory (Ala Ismaïl, iv. 2). The state of interior affairs in India brought it so that veritable idolaters were considered as **Ahl al-Kitab** (ibid., pp. 29, 233). Such extension could be made, however, only by concession of religious toleration. The two questions alluded to above (the law of food and marriage) were never taken into consideration beyond the sphere of the original **Ahl al-Kitab**.

AHL AL-KIVĀS (A.), those who consider
the conclusion by analogy (*hiyer*) justified in infer-
ring the legal decisions.

AHL AL-NAZAR (A.), philosphers.

AHL AL-SUFFA, more rarely: *Ayyah al-
Suffa*, isolated form: *Ayyah al-Zuila* (A.) = 'the
people (or owners) of the (mosque-) vestibule'.
Among the believing Mekkans, who had accom-
panied the Prophet in his flight to Medina and
among those who emigrated to Medina from other
places there were many without means from home,
others having left their sphere of action in their
native country because poor and suffered from want
of food, clothing and a house. Even the far extending
charity of the Medinan co-religionists was unable
to remove entirely the misery that prevailed in those
districts. In the meantime a vessel with parched
barley, bought with the money of the community,
was set up for the hungry people in the evening
in the yard of Muhammad's house. The homeless
persons camped under the *suffa*, i. e. the nar-
row part of the mosque covered only with a
roof but with open sides. They were an account of
this also called 'the guests of Islam'. Still on
the other hand even very poor immigrants are
said to have never entered there. Their number
is differently rated (10, 30, 70, 92, 93, 400 per-
sons), so in fact it has fluctuated and for instance
in the earlier time it was certainly greater than
later. *Suffa* people, who were with regard to their
tribe strangers in Medina, were for instance the
Ghassirite Abu Tharr, the Yemamite Abu Sa'ad, the
'Adite Hudhafa, the Ishirite Waila etc. further
the slave Abu Muawilab, Ammar, Bilal (an
Abyssinian), Khabab, Salim (a Persian), Suhail
(a Greek). Among the persons that were connected
with the Prophet Abu Haritha is at least to be
mentioned; but it is supposed that even Sa'd b. Abi
Wakka, one of the 'ten' (namely the ten most
intimate friends of Muhammad), was there once.

The construction put by many Muhammadan
theologians on Kor. ii. 273, 274; vi. 52; xviii.
27; xlii. 26, as referring to the Ahl al-Suffa gives
way for many reasons, one of which is the fact
that these passages were partly revealed in Mecca.
In later times the Ahl al-Suffa were very highly
respected, and placed even above the 'ten' (see
above), perhaps because, owing to a foolish ety-
mology, they were considered as the founders of
Sufism, whereas others emphasized and misun-
derstood by Koranic passages the fact that all are
equal in Islam and that it depends simply on the
degree of piety. Legend tells of them many other
things that they heard. The conversation which
Allah had with Muhammad during the nightly
travel (which, however, as everybody knows is
supposed to have occurred in Mecca). — Abu
Nu'aim al-Ispahani (d. in 430 = 1038) related
of them in his *Aḥḥad al-ahad al-awḥid*. Ibn al-
Ithb al-Sukri (d. in 756 = 1355) wrote a book
entitled *Tahḥiq al-ḥadith wa al-ahad al-awḥid*. Abu
Aḥmad al-Buhārī al-Buhārī wrote *Tarḥiq al-
ahad al-awḥid*. — Later on *ahl al-suffa* became the
designation for (homeless) beggars.

(KLEINBOELL.)

AHL AL-SUNNA (A.) = 'the Sunnites',
the orthodox people (see SUNNA).

AHLĀF (A.), pl. of *ahf* (q. v.).

AL-AHMAR (A.) = 'the red one'; also a per-
son's name: the Muhammadan pilgrims of Granada were
called *Khat' al-Ahmar*. [See NAZARIES.]

AHMED, one of Muhammad's names according
to Kor. ii. 6. Camp. Sprenger, *Der Islam und
die Lehre des Mohammed*, i. 236 et seq.

AHMED I., fourteenth Ottoman sultan, eldest
son of Muhammad III, born in 998 (1589), suc-
ceeded his father at the age of 14. Herogazing
the custom established by Bayezid I. Yildirim he
had assassinated his brother Mustafa when
ascending the throne. He removed his grand-
mother, Sultanah Safiya (the Venetian sister), who
had ruled over the empire under Murad III and
Muhammad III, as well as her confidants. He con-
tinued the Kapudan-pasha Civali with the chief
command over the troops led against the Per-
sians, who had just conquered Erivan, Akko, Halab
and Karp, but the sea-gods inflected a defeat at
the hands of Shah Abbas I. and died of grief
(1024 = 1605). The grand vizier Ismail Mustafa
Pasha received his order to relieve Buda, in which
he succeeded, but on the other hand was forced
by bad weather and by the cowardice of the *Agha*
of the Janizaries to abandon the siege of Pest and
Gran. A little later he conquered the latter city
after which he concluded with Austria the
Treaty of Sittau (11th November 1606) and renewed
the agreements with France, England and Ve-
nice. — About that time the passion for tobacco
was spread in Turkey. — Ahmed's grand vizier
Murad Pasha, surnamed *Kocja Kaykubad* ('the old
well digger'), defeated in Gazi-Ovuni the Kurd
Ali Dinkolad (3d Rajab 1026 = 24th October
1607), who had rebelled in Aleppo, routed Ka-
lender Ogulu and Kara Sa'd at Oskalan-Yala
(20 July 1608), made peace with the other insur-
gent chiefs by assassination and treachery in
this way he re-established peace in the Minor.
At sea Effendi of Kalcutia defeated ten Maltese
galleye in the harbor of Cyprus in the so-called
'Kara Bahannan Battle' (after the manner which
the Turks gave the red galleye commanded by
Frederick, and which they seized). The fleet
suffered great loss then, especially in a battle
against the *Ormus* of Aragon near Cape Corvo, not
far from Chio (1613), while the Ottoman admiral
ravaged the country of Malia and chastised the
boy of Tripoli of Barbosia and the rebellious
Mahnos; Sinop was devastated by an invasion
of Cossacks. He made peace with Persia, on the
renewation of the tribute of 200 bales of silk paid
by the Safawides and of the countries conquered
since Salim I. and later lost again Iskender Pasha
reconquered the rebellious Malakula and in the
28th Rajab 1026 (27th September 1617) con-
cluded with the Cossacks the Peace of Ilbas. Ahmed
I. died in the same year (23d Dhu'l-Hajja = 22d
November) in the age of 28 after a reign of 18
years.

In spite of the energy he had shown in the
beginning of his reign he was weak and unde-
cided and easily misled, his grand vizier Nayif
Pasha, whose arrogance had put him out of hu-
mour, was straggled by his order (1023 = 1614).
He had the regulations of the empire arranged
and codified them under the title *Aḥḥad al-
awḥid*. The erection of the Ahmediya Mosque on the

used to leave the town on account of the hostile attitude of the people towards him, and retired to his mother-country, Saghdaiyān (he. 335 = Febr.-March 947); the prince (two other brothers of Nuh besides Ibrahim are mentioned) allied themselves with Nuh; complete anarchy was assumed there. After his entry into Balkhān (Hamadān 335 = March-April 947) Nuh broke his promise and had all the three princes blinded. Ahmed gathered on the upper course of the Amu against Nuh a coalition of all the vassal princes; beaten in the open field, he successfully held his own in his mountain. Peace was concluded in Djamāda II 337 (December 948); Ahmed remained prince of Saghdaiyān; his son Abu'l-Mu'ayyid was sent as a hostage to Balkhān, where he was received with great honours. Towards the end of 340 (May 952) he was again appointed governor of Khorāsān; he then brought order in his province and renewed the war with the Buyides, which, however, was soon afterwards brought to an end by a treaty of peace. This treaty was rejected by Nuh and Ahmed was deposed, supported by the Buyides Ahmed rebelled again, made the prayer to be recited in his own name and that of Caliph al-Mu'iz (himself not acknowledged in Khorāsān), but already under 'Ad al-Malik I (q. v.), in the absence of his successor Bekr b. Malik, he was compelled to leave his province; he died in the end of Rajab 344 (November 955), shortly after the conclusion of peace between the Sāmānides and the Buyides; his remains were brought to Saghdaiyān.

The accounts of Ahmed by Ibn al-Athir and Gardizī (*Zain al-ʿĀbidīn*; extracts by Barthold, *Turkistan in the time of the Seljuq invasion*, I, 3-10) seem to be borrowed from a common source, probably from *Yāʿqūt's* *ʿUkhrāʿ* of al-Salāmī (comp. about this work, Barthold, *loc. cit.*, II, 11 and *Oriental Stud.*, VI, 171-172, *supplement*, I, 174), a contemporary of Ahmed. Comp. also the *Ḥawāṣil* (ed. de Goeje, p. 350) for Ahmed's great qualities as governor.

(W. BARTHOLD.)

AHMED 2. Abū Duʿād, Muʿtasilī ḥāfi, a native of Barmā, born according to some statements in 160 (776-777). Owing to his scholarship and piety he acquired influence among Caliph al-Maʾmūn, and became soon one of the latter's intimate friends. Al-Maʾmūn also advised his brother and successor al-Muʿtashim to place Ahmed, who was a fervent adherent of the Muʿtasilite teaching among his counsellors and never to leave him. After his accession in 218 (833) al-Muʿtashim consequently appointed Ahmed chief ḥāfi. The Muʿtasilite doctrine was already under the reign of al-Maʾmūn raised to the rank of a State religion and a formal inquisitorial tribunal was established. The office of the latter was to convert by suitable means the opponents of the officially recognized religious opinions. Ahmed presided at the discussions of the inquisitorial court in his capacity of chief ḥāfi of the capital, but he manifested a tolerance and humanity quite rare at that time. He exerted very great influence over al-Maʾmūn and he was on friendly terms with Caliph al-Wathīq. After the latter's death some of the highest officials and officers wanted to swear allegiance to his minor son, but upon the advice of Wathīq, commanding-officer of the Turkish guard, Dīʿfān, the brother of the deceased, was proclaimed

caliph, whereupon he received Osm al-Muʾtashim the surname al-Muʾtawakkil. As, however, the new caliph gradually began to assume a hostile attitude towards the Muʿtasilite teaching and in consequence to the orthodox party, the powerful ḥāfi, the chief advocate of the Muʿtasilite, could not for long maintain his influential position. Some time after al-Muʾtawakkil's accession he was stricken with apoplexy, and the office of ḥāfi was transferred to his son Muḥammad. But the caliph deposed him latter as early as 237 (851-852), threw him into prison together with his brothers and confiscated all Ahmed's property. It is true that the prisoners recovered their freedom but were obliged to sacrifice for it a great part of their fortune. Ahmed and Muḥammad did not survive long their fall. According to the usual *ḥisāb* Muḥammad died towards the end of 249 (May-June 864) and three weeks later (Muḥarram 250 = June 864) died his father.

AHMED 3. Abū ʿAlī al-Aḥwal, a cleric. He began his political career as a secretary and shortly after the accession of al-Maʾmūn was made vizier. He exerted soon great influence over the caliph; it was by that organ to confer the governorship of Khorāsān in 205 (821) upon Tahir b. al-Jaʿfari, then governor of Baghdad. Al-Maʾmūn had already appointed Ghassān b. ʿAdīl governor of that province, but when Ahmed pointed out to him that Ghassān was unequal to such a difficult task and stood security for Tahir's loyalty, the caliph let himself to be persuaded to put Tahir in place of Ghassān. In the meantime the shrewd Ahmed is said to have made Tahir's present of a couch, upon he ordered to poison his master in case he would manifest rebellious feelings. Thus when Tahir omitted the caliph's name in the *ḥuṭba* in 207 (823), and by that actually refused obedience to the Abbaside government, al-Maʾmūn ordered his vizier to depart immediately to Khorāsān and call the rebel to account. Ahmed could with great difficulty obtain a delay of twenty-four hours, but still before the expiration of this delay, the welcome news of the overthrow of the rebellious government arrived at the capital, just as Ahmed had interceded in favour of Tahir, he recommended now his son Talha. The latter was thus entrusted with the administration of the province in question. But at the same time al-Maʾmūn sent Ahmed to Khorāsān, to support Talha or rather to keep his eye upon him. The vizier pushed forward his Transoxania and conquered Ughuzistan. — The golden obtained by al-Maʾmūn's uncle, Ishaq b. al-Mahdi, who had come forth as a pretender to the throne and gone around disguised till he fell into the hands of the caliph's police. He also ascribed to Ahmed's influence. — Ahmed is said to have died in 210 (825-26).

(K. V. ZETTERSTEDEN.)

AHMED 4. Abū Tāʾūḍ Tāʾūḍ. [See *IMM* and *TĀWĀḌ*.]

was put to him by his son Saliḥ and his disciples with regard to them) and answers to the questions of his pupil Barī (Ibn Kāyīm al-Bayḥaqī, *al-Tawḥīd al-ḥakīm al-ḥayy al-ḥayy*, Cairo, 1317, pp. 251, 293 et seq.). Ibn Kāyīm, accessible will to the author just mentioned, amounted to about 20 books (inf.; comp. *al-Ḥaḍrat al-Bayḥaqī*, Cairo, 1323, p. 121). Still in his lifetime some of his disciples systematized his legal teaching, namely Abū Yaʿqub Ishāq al-Kawānī, who in doubtful cases applied to Ibn Hanbal for an instruction (Iḥṣān al-Taḥṣīl al-ḥaḍrat, II, 103), and a little later Abū Bakr al-Khulṭī, who died in Bagdad in 311 = 923-924 (Iḥṣān al-Taḥṣīl, III, 7). The latter's work is still quoted by Ibn Kāyīm al-Bayḥaqī (d. 751 = 1350). In his *al-Ḥaḍrat al-Bayḥaqī* (see the appendix to al-Tabarānī's *al-Muḥṣan al-ḥaḍrat*, p. 271), but certainly not from misapprehension. The course of teaching developed under the guidance of Ibn Hanbal's school was recognized by the *ijmāʿ* of the orthodox Sunnites as one of the four authoritative *madhāhib* [q. v.]: it is that of the Hanbalites. Ibn Hanbal, as an adherent of the Ahl al-Hadith (see *fiḥṣ*) makes the only those concessions that are urged by sheer necessity and where possible derives every law from traditional sources. This compels him to be very indulgent to the *sunna* and sometimes to admit very feeble traditions as the basis of his decisions. In none of the recognized rites has the prohibition of the *niḥā* [q. v.] been pushed to such extremes as in the *madhāb* named after Ibn Hanbal. Thence a far exceeding rigorism resulted in all ritual and social connections and a more literal interpretation than in the general orthodoxy. In dogmatic theology his school clings to the old pre-Ashʿarite orthodoxy; even al-Ashʿarī himself was compelled, in order to gain a footing in the general conception of the Muslims, to make several concessions in the doubtful formulation of his dogmatics, nay even to declare expressly that he was not fully harmony with the teaching of Ibn Hanbal and that he avoided everything that was in contradiction to it (Ibn ʿAṣṣār, *Spika, Zor. Grah. al-Muḥṣan*, p. 133). The totality of Ibn Hanbal's dogmatics may be found in the most concise manner in Abū al-Ḥaḍrat al-Bayḥaqī's *al-Ḥaḍrat al-Bayḥaqī* (Iḥṣān al-Taḥṣīl, 1314, I, 48-66).

The Hanbalites, who represent now the most spare Islamic *madhāb*, were till the 6th (14th) century much more widely spread in the countries of Islam. Maḥaddād finds them in Fez: in Ispahan, Rai, Shahrīz and other places, where their religious course seems to have been characterized by extravagances of various kinds. First of all they displayed in those places a particular predilection for the memory of Caliph Muʿawwaj (ed. de Goeje, pp. 305, in 384, in 399, 407, 412). This attachment to the memory of the Caliph of course not be intended for his merit as a pious man, but for the caliph recognized by the orthodox Sunnis. The favourable feeling for Vaḥīd, just spread among the Hanbalites, is to be interpreted from the same point of view (Illustrations for which in *Zeitsh. f. Orient. Mus., Leipzig*, III, 646, note). In Syria and Palestine, where the Hanbalite *madhāb* was introduced in the 5th (12th) century by Abū al-Wāḥid al-Shirāzī (*al-Ḥaḍrat al-Bayḥaqī*, p. 263), it was repre-

mented till into the 9th (16th) century (comp. *Zeitsh. f. Orient. Mus., Leipzig*, III, 364). Muḥṣir al-Dīn (d. in 927 = 1522), a Hanbalite himself, enumerates in his just mentioned *al-Ḥaḍrat al-Bayḥaqī* (pp. 393 et seq.) the usual renowned representatives of Hanbalism in Palestine from the 5th to the 9th (12th-16th) centuries. It was in this space of time that the appearance of Taḥṣir al-Dīn b. Taḥṣir (651-728 = 1253-1328) in Syria caused great *ḥaḍrat*. He took up anew the light for the Hanbalite theology (refutation of the rationalistic explanation of the Koran and traditions — *taḍwīl* — rejection of all innovations, as for instance visiting the tombs, venerating the *ḥaḍrat* etc.; comp. Schreiner, in *Zeitsh. f. Orient. Mus., Leipzig*, III, 340-363; III, 31-63) against the dogmatics that had dominated for a long time. But as he offended in this way the requisitions of the orthodox *ijmāʿ* he was persecuted. By his fall the prestige of Hanbalism suffered considerable loss. Until the establishment of Turkish predominance in Islam all the four schools, thus also the Hanbalite one, were represented officially by *ijmāʿ* in all Islamic centres. The predominance of the Ottomans has dealt Hanbalism a very severe *ḥaḍrat*, since then it has always been more and more dwindling away, although in its isolated apparition it has retained the recognition as the element of Sunni orthodoxy. In the Ashʿar Mosque it is, of course in a relatively small number, represented by teachers and students (*ḥaḍrat al-ḥaḍrat*); in 1906 there were 3 Hanbalite teachers and 28 pupils (out of a total of 312 teachers and 9069 students). On the other hand in the 18th century, it appeared in a new, vigorous form, namely in the movement of the *Wahābites* [q. v.], in which the *ḥaḍrat* after-effect of Ibn Taḥṣir's exertions has been pointed out.

The following are the eminent Hanbalite teachers in successive epochs: Abū al-Ḥaḍrat ʿUmar al-Kharrābī (d. in 334 = 945-946), whose compendium of Hanbalite *ijmāʿ* is extant; Abū al-ʿAzīz b. Ḥaḍrat (282-363 = 895-896-973-974), whose *ijmāʿ* has been for *ḥaḍrat* the groundwork for compendiums and commentaries (printed: *al-Ḥaḍrat al-Bayḥaqī* [d. 363 = 973-974], I, 870); Abū al-Wāḥid al-Bayḥaqī (d. in 515 = 1121-1122), who celebrated as head of a productive school; Abū al-Ḥaḍrat al-Bayḥaqī (471-561 = 1078-1166), who united central consideration as *ijmāʿ* with faithful adherence to Ibn Hanbal; Abū al-Bayḥaqī b. al-Bayḥaqī (508-597 = 1114-1115-1200); Abū al-Ḥaḍrat al-Bayḥaqī (d. in 600 = 1203-1204); Muḥṣir al-Dīn b. Taḥṣir (d. in 620 = 1223), who appended his much studied *ijmāʿ* as a commentary to Kharrābī's compendium; the celebrated controversialist Taḥṣir al-Dīn b. Taḥṣir (see above) and his faithful pupil Maḥaddād b. Kāyīm al-Bayḥaqī (see above), both known for the harshness of their dogmatic course and their intolerant controversy against those who believe and think otherwise. From the works of the two Hanbalite teachers numerous writings were recently published in the printing house of Cairo; they may serve as a manual of the scientific system of the Hanbalite school. Still in the 19th (17th) century some eminent Hanbalite scholars came from the little place Bahḍā (district of Maḥallat al-Kubra): Abū al-Bayḥaqī al-Bahḍā

(d. 1051 = 1641-1642) and his pupil Muhammad al-Buhārī (d. 1088 = 1677-1678; both lives and taught in Cairo, in the Ashar Mosque the *Naib al-Madina* (a commentary on the *Hadith al-Sharif* of Muḥammad b. Yusuf, otherwise known as epistolography, d. in 1030 = 1621) of 'Abd al-Jādir b. 'Umar al-Buhārī (d. in 1135 = 1623-1626) — printed in Delhi, 1258 — is taken as basis of Hanbalite instruction.

Abū'l-Fazl 'Abd al-Rahmān b. Rāḡib (d. in 795 = 1392-1393) wrote *Tadhkirat al-Fuqahā*, which is extant in manuscript (see Voisin, *Art. Leipzig*, No. 708). The literature of Hanbalite law is most copiously registered in the catalogue of the Cairo manuscripts, III. 293-301. Comp. further W. M. Patton, *Shari'ah in Egypt and the Sudan* (Leyden, 1897) and in connection with the Goldstern, in the *Zeitschr. d. Deutsch. Oriental. Gesellschaft*, III. 155 et seq.; idem, *Der Gr. d. Hanbaliten*, *Neuzeitung* (ibid., 1891); Brockelmann, *Gr. d. Arab. Litt.*, I. 181 et seq.

(GOLDSTERN.)

AHMED b. MUYAMMAR TARTAR, the 36th direct descendant of Isma'el, the son of 'Alī, was born in Herat in the 12th Muharram 1201 (24th October 1786). He was first educated at Lucknow, then he went to Delhi, where he became in 1222 (1807) a disciple of the famous Sufi Sayyid 'Abd al-'Azīz, the oldest son of Shāh Wali Allāh. The latter is said to have inspired him with peculiar religious views for which he became celebrated. After some years of instruction he started on a missionary tour as a religious teacher and reformer. His tenets were somewhat identical with those of the Arabian Wahābites in the adoption of a pure and simple form of worship, free from all superstitious innovations, or veneration for prophets and apostles. His chief disciples, and constant companions in his itinerant career, were two relations of 'Abd al-'Azīz: Mawlāwī Muhammad Ismā'īl, his nephew (author of the *Silsila al-Muḥammidiyya*, an important Hanbalite work on the tenets held by the followers of Saliyūl Ahmadi), and Mawlāwī 'Abd al-Majīd, his son-in-law. His reputation spread far and wide, thousands of Moslems adopted his religious views, and his name everywhere headed as the true Khalīfa, or al-Mahdī. One of his biographers, Mawlāwī 'Abd al-Ahād, asserts that more than 40000 Moslems and infidels became converts to Islam through his preaching.

In 1232 (1817) Saliyūl Ahmadi set out from his native city on a pilgrimage to Mecca and Medina, staying a few months at Calcutta on the way. On his return to India two years afterwards in 1233 he made active preparations for a *ghilz*, or religious war, in the Panjab, in order to remove the Muhammadism of that province from the alleged tyranny of the Sikhs. Having collected the sympathy and promised aid of his co-religionists at Delhi and Kandahar, he started on his expedition in 1241 (1826) with an army of ten or twelve thousand Muhammadite adherents, and attacked the Peshawar frontier. After several years of constant warfare, which ended in a decisive battle was fought at Butakot in 1246 (1831), in which he was killed, and the remnant of his army took to flight.

(BLANCHARD.)

AHMED b. SA'ID b. HAYYAT, of the aristocratic Dihli family Kinkariyān (who had settled near Meerut), which traced of Salsalan descent,

governor of Khorāsān. In order to avenge the death of his brother, fallen in a fight between Persians and Arabs (in Meerut), he had under 'Amir b. al-Laili an attempt of a rising of the people. He was taken prisoner and brought to Salsalan, whence he escaped by means of an adventurous flight, and after a long attempt of a rising in Meerut he fled for refuge to the Salmānide Ismā'īl b. Ahmad in Bukhārā. Ahmad took an active part in the battles of Khirāsān and Rai under Ismā'īl, and in the conquest of Herat under Ahmad b. Ismā'īl. Having been sent under the command of Nāṣir b. Ahmad against the rebellious governor of Khirāsān, Ismā'īl b. 'Alī al-Marwādī, he defeated his antagonist in Rai 1306 (Aug.-Sept. 918). He shortly afterwards he rebelled himself against the Salmānides, was vanquished on the Marghāb by the commander-in-chief Hamīdya b. 'Alī and sent to Bukhārā, where he died in prison in Shawwāl 1307 (May-June 920).

Comp. Ibn al-Aḍī (ed. Torsh, VII. 26 et seq.) and the same information in a somewhat more circumstantial wording in Gardizi, *Zain al-Akhbar* (extracts in Barthold, *Turkistan in the time of the Mongol Invasion*, I. 6-7); evidently there is a common source, probably al-Sallāmī's *Ta'rikh waṭi' al-Afshār*. (W. BARTHOLD.)

AHMED b. SA'ID, founder of the dynasty which is still reigning in Mekeke, in 1775, or according to others in 1783. Ahmed descended from an Aedite family which had a long time lived in Mekeke (Al b. Sa'īd), and during the occupation of that country by the then Sultan Sa'īd b. Sulṭān he was governor of Mekeke. There he managed to stand his ground against the Persians, and afterwards he made with them a treaty, which entitled them to Mekeke alone, and which obliged them to evacuate the country. Finally he took away from them Mekeke town also, whereupon he was elected Sultan by the Mekeke population, but he had his residence in Mekeke. In 1796 he undertook a military expedition against Hama and put the Persians to flight; after that the Ottoman Sultan paid him a fixed sum annually. He is said to have also made a treaty with the Great Moghul of Delhi.

AHMED b. TARTAR, founder of the dynasty of the Tartarides (q. v.), 30th son governor of Egypt and Syria who was only nominally dependent upon the caliph. The career of this Turk is typical — the founders of all the small states on the ruins of the Caliphate, crumbled to pieces, rose in the same way. — His father Tartar was brought in 220 (835-836) as a slave to the Court of Bagdad, but rose soon to an important position. Ahmed is supposed to have been born on the 23d Rabi'ul Awwal 220 (26th September 835), but perhaps a little later, and he received a thorough military and theological education — theology he partly studied in Fars. He had early the opportunity to distinguish himself, and acquired the favour of Caliph al-Musta'in, over whom he rose later to watch as a prisoner. He did not share in the caliph's assassination, on the contrary he gave him a proper burial and then

He returned to his Turkish countrymen in Hammat. Shortly afterwards his stoplaker Hayakub, having been invested with the governorship of Egypt, appointed him his lieutenant, and Ahmed entered Fustat on the 27th Rabi-ul 254 (13th September 868).

Ahmed's first endeavor there was to take into his hands the administration of the finances in addition to the military command. But the Misdabhis, a clever and skilled financial director, notorious for his introduction of new surposts, endeavored to thwart him. Both struggled for years for the administration, in Egypt personally and by surrogate through their rear-rank men. Ahmed showed himself the man as well as the stronger (through his connections), and yet he had to struggle for four years before he succeeded in removing the Misdabhis from Egypt. Thereupon he obtained the administration of the finances and with it the entire disposal of the budget by introducing a regulated payment of tribute. Before that already a favorable harvest had enabled him to contribute so much to good fighting him. In order to smother a Syrian rebel — later another person who entered with it — the caliph had authorized him to make a gigantic purchase of slaves. These troops laid the foundation of his power. He managed to bring their number up to 10,000. Thanks to his elaborate spying system he discovered in due time the intrigues plotted against him in Egypt and in the Coast, and made them ineffectual by means of numerous bribery and violent intervention. Thus when Alexandria, Darda and 300 districts on the Syrian-Egyptian frontier were also transferred to him, his power became towards the end of 354 (873-872) a factor, which had to be taken into account in Samarra.

THE same time the central government became strong again, where Caliph al-Muwahhid named his brother al-Mawaffak vice-regent of the empire. It is true that al-Mawaffak officially had only the eastern half of the empire under his authority, while the western half, in which was Egypt, was under the rule of the caliph's son al-Mufawwiz, but when hard pressed by the Zingis war al-Mawaffak endeavoured to mobilise also the finances of Egypt for his purpose. Ahmed refused to pay, and an attempt to compel him in it failed on account of the pecuniary exhaustion of the central government. When the governor of Syria died in 684 (1277-78), Ahmed occupied the latter country without that the people dared to oppose him. Hama, Damascus, Hama (Hama), Hamat, Haleb (Aleppo), opened their gates before him, only Antioch required a siege necessary. The victor's joy was troubled by the news of the revolt of his son Alad, whom he had left in Egypt as his lieutenant. Ahmed hastily returned to the Nile valley, where he soon became master of the revolt. Thus he became ruler of Syria and Egypt, and he appears as such on the coins from the year 686 (1279-80).

The latent conflict with the vice-regent al-Muwahhid was brought to a critical point by the defection of Lulu', a general of the Filistines, who, having been left in Syria, went over to al-Muwahhid. In order to counteract this Almod insisted upon the caliph al-Mu'izz, who was kept like a prisoner by his brother al-Muwahhid, to flee for refuge to him in Egypt. He himself hurried to Syria, where, however, his union with the caliph was at the

last moment, blighted by the vice-regent. Ahmad then assumed the rôle of defender of the empire's caliph, and strenuously brought about in Damascus the deposition of al-Muwaffak. This he carried out by a collective force obtained from the Jordanians, who adhered to him. Yet he did not think of freeing the caliph by force of arms; he rather availed himself of the occurrence to remove the last remainder of submission to the central government. Al-Muwaffak in his turn appointed a new governor of Syria and Egypt, who immediately "in paribus". Neither did al-Muwaffak dare to apply to arms for a decision. Both great rulers contented themselves with turning their eyes away from the plight of their respective countries. A few years later al-Muwaffak made overtures of peace by officially recognizing the ruler pro. The negotiations were still in their beginning when Ahmad, who had fallen sick in an expedition to North Syria, suddenly died (CHU'K-ka 270 = May 881).

Ahmed used his career to his ability, his luck and his connections. In order to maintain his personal authority, the only thing he had in his language, he gave his army a rigid military organization. Turks and Negroes were his main support. To keep these troops in permanence was possible only by the increase of financial resources; therefore he chiefly cared for the administration and economy. The withdrawal of the money to Baghdad having ceased, he could freely spend the surplus of the imposts on his own country, and particularly on buildings and, what was very natural, he was able to make a display of splendour to his Court. Fustat, ~~the~~ a large and magnificent town, a new quarter, al-Kahz, grew up; the Tulunide Mosques and other splendid public buildings were erected. It is in this way that Ahmed prepared the soil upon which the dynasty of the Tulunides flourished despite the enfeeblement of the central government. This dynasty shows in all its expressions a manifest imitation of the forms that grew up in Baghdad and in Samarra under Persian influence. With it a new period of culture began in Egypt (see KOTER and GILCHRIST).

AHMED & ZAHIR DARRAH. [See DARRAH.]

AHMED BABAL—Unsurvi, Asst. Magistrate belonging to a family of scholars that produced many kais. The 1. Alaga Ahmed Baba b. Ahmed b. Ahmed b. Ahmed b. Umar b. Muhammad Agha b. Umar b. Ali b. Valiya b. Tahir b. al-Sakhshi al-Musili of Tindivanam was born in the village of Aravali in the night between Saturday and Sunday the 29th

Abu'l-Fath al-Bara (29th November 1853), or according to al-Majidi and al-Wafai, 263 (26th October 1853) — but the former date was a Tuesday and the latter a Monday. — He studied Muslim science under his father, grandfather and several other members of his family, and his co-religionists considered him a great Maliki jurist.

Having refused to recognize the occupation of Timbuktu by the Moroccans, he was by order of General Mahmud Zaki sent with his family in chains and conveyed to Marrakech, where he arrived on the 1st Ramadan 1200 (21st May 1894). He lost on that occasion more than 1800 volumes, and on the way he fell down from his camel and broke his leg. During the 11th Ramadan 1200 (19th May 1894) he was set free on the condition that he would henceforth live in the capital of Morocco. There he devoted himself to teaching in the *Madrasa al-Burj* and his lessons were attended by a great number of people, among whom were al-Rudayfi, the Mufti of Fez, the *Shaykh* Abu'l-Hasan b. Abi'l-Mu'izz al-Ghazali, Abu'l-Hasan Ahmed b. al-Khalil, the author of the *Diwan al-Burj*, etc. He was several times charged with the *sermon*, which he held in abhorrence.

On the accession of Sultan Zaidin, he received in 1204 (1895-1896) his himself and his relatives that were still alive the permission to return to Timbuktu. He stayed there for the rest of his life devoting himself entirely to teaching law particularly.

He was strictly just even towards the most hostile men, and never was afraid to speak out what was right nor even when come and called.

He died Thursday the 6th Ramadan 1236 (22d April 1877), or according to al-Majidi, 1032 (6th June 1873), a date which seems to be erroneous.

He was the author of more than forty works, of which only the following are known: 1. *Naf' al-muhtaj ila al-Burj* (Fez, 1317). 2. *Al-Faraj al-muhtaj ila al-Burj* was done in 1317, a recent and abridged edition of the preceding work. 3. Two commentaries on *al-Burj* b. al-Burj. 4. *Al-Burj* from the chapter on the water till the middle of the chapter on the water. 5. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 6. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 7. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 8. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 9. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 10. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 11. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 12. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 13. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 14. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 15. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 16. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 17. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 18. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 19. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 20. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 21. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. 22. *Al-Burj* upon several passages of the *al-Burj* b. al-Burj. The latter three works are collections of papers for the

Project 23. A great number of quotations about different subjects, three of which are found in the *Bibliothèque Nationale d'Alger* (Fez, Catalogue, No. 532 n° 10, 11°).

understood by signs only, and often tell into riddles (mashā) According to some authorities the journey to Mecca was undertaken after a vision, but others mention that three consecutive visions, which commenced Ahmed's journey 633 = June-July 1246) to visit Laḥ, where Ahmed al-Kāfir (d. 570 = 1174-1175) and 'Abd al-Kāfir al-Ḥalāl (d. 561 = 1165-1166) had been worshipped as the greatest saints for two generations. Ahmed associated neither in the company of his eldest brother Ḥasan. From that time onward the reports became very fabulous and vague. The brothers visited, besides the tombs of the two "poets" mentioned above, a great many other saints, amongst them being al-Ḥallāj (d. 309 = 923-924) and 'Abd b. Muḥsin al-Bakrī (d. 356 = 1162-1163). Under the impression of these visits Ahmed's religious conscience entered on a new phase. Al-Ḥusayn and al-Muḥsin, the "owners of the keys of the countries" offer him a partnership in this possession, but Ahmed refused the offer saying that he would accept the "keys of his countries" from none but God. In Laḥ he subdued afterwards the indomitable Fatma bint Ḥanī, who had never yet surrendered to any man, and refused her offer to marry him. In the *Ḥamshir* and elsewhere this incident has been turned into a highly romantic story. A year later (634 = 1236-1237) Ahmed had another vision which induced him to visit Tānīḥ (Tānīḥ, Tānīḥ) in Egypt, where he stayed till his death. His last days Ḥasan returned from Laḥ to Mecca. In Tānīḥ Ahmed entered on the last and most important period of his life. His mode of life is described in the following way: "He climbed in Tānīḥ on to the roof of a private house, stood there motionless and ~~stood~~ up into the sun so that his eyes went red and sore and looked like two fiery slanders. Sometimes he would maintain a prolonged silence, at other times he would indulge in continuous weeping. He went without food or drink for about forty days". Tears of grief and similar nature have steadily been borrowed from the lives of Indian ascetics (*ṣaḥṣ*). In Tānīḥ and its neighbourhood he met both with friends and adversaries. In his search of a cure for his eyes he came across 'Abd al-ʿAlī, who at that time was still a boy and afterwards became his disciple and *Ḥafīẓ* (successor). He worked miracles and cures (*ḥuṣūṣ* and *ḥuṣūṣ*), many of which are described at some length in the authorities. These cures, who were still worshipped at the time of his arrival in Tānīḥ, found themselves eclipsed. Ḥasan al-Bakrī seems to acknowledge him and leaves the place; Ḥalī al-Maghribī returns to him and he for that reason allowed to remain in Tānīḥ. Waḥb al-Kāfir is carried by Ahmed and his slaves to Mecca and falls to ruin. His contemporary al-Maḥmūd al-Ḥafīẓ Ḥafīẓ is said to have worshipped him and to have kissed his feet. His disciples were called *ṣaḥṣ* or *ṣaḥṣ* (from our habit of living on the roof). His appearance at this period is described as follows: He was tall, strong, and hairy, his complexion *ḥamr* (the usual colour of the Northern Egyptians, whereas the Moroccan is of a darker hue as a rule); he had an aquiline nose (*ḥamr*), three pickles in his life, two on his nose and the scar of a knife-cut between the eyes. He wore a mantle (*ḥamr*) of red wool, which, along with his turban (*ḥamr*),

worn so long without once having been washed, was handed on to his *Ḥafīẓ* as the insignia of his succession. His death was, according to *Ḥafīẓ* = "by the Majesty of my Lord". He already seems to have felt anxious at the end of his life that he had subjected Egypt. That way I explain his words (*Ḥafīẓ* 1: 247, 2: 117). "My paddles which travel on the wide ocean; if the water of all the paddle-wheels in the world became used up, mine would still not be used up". In the night he used to read the *Koran*, in his prayers he was joined by two imams. Concerning his state of mind it is said: *Ḥafīẓ* 1: 247, 2: 117. "He was often in his senses than in a trance". After he had lived and worked in this way at Tānīḥ during nearly 41 years, he died on the 24th of Rabi' 1: 673 (24 Aug. 1276), that is on the anniversary of the Prophet's death.

Judged by his conduct Ahmed al-Badawī is a representative of the fanatic, mystic type of the devotives, and his intellectual and moral personality is of equally small importance. The following have been handed down to us as the productions of his mind:

1. A prayer (*ḥamr*), *Ḥafīẓ* 1: 247, 2: 117.
2. *Ḥafīẓ*, on which a commentary was written by the celebrated *Ḥafīẓ* of the 18th century 'Abd al-Rahmān b. Maḥmūd 'Adhamī (1135-1192 = 1722-1778) under the title of *Ḥafīẓ al-Ḥafīẓ* (Cairo 1911 vii 88).
3. His spiritual testament (*waḥy*), addressed principally to *Ḥafīẓ* and *Ḥafīẓ* 'Abd al-ʿAlī. The sayings and affirmations it contains are of such a general nature, are so late-individual and so exactly identical with the fundamental ideas of the Islamic asceticism of all times, and part of them even similar to those of the non-Islamic asceticism and mysticism, that it is doubtful whether they can be considered as the spiritual production of Ahmed al-Badawī and whether they may be ascribed to his moral personality. First comes the exhortation to adhere to the *Koran* and the Sunna. Nightly devotion is highly praised. Every single *ḥamr* by night is worth a thousand by day. The work of the *ḥafīẓ* is very strongly recommended; the heart must take part in it, else the *ḥafīẓ* would be nothing but mere dwelling (*ḥafīẓ*). The ultimate goal of the *ḥafīẓ* is the *waḥy*, the word of God, which, a beam of divine light, enters the heart of the devotee while at his meditations on the unity of God, washing him shudder all over. Then the longing for the loved one (God) is born in him, and he clings to him firmly. Faith is of the highest value; he whose belief is strongest (firmest) is the most excellent (purest). His ethics or that of his followers may be gathered from the *ḥamr* *ḥamr*. "That way (*ḥamr*) is built upon the *Koran* and the Sunna, on veracity, purity, truth, patient endurance of injury and faithful observance of engagements over made". At another passage: "Do not indulge in cruel enjoyment, do not slander, do not insult *ḥamr* harm on your neighbour, return him good for evil". The following words sound quite evangelical: "have compassion upon the upstart, clothe the naked, feed the hungry, pay due honour to the manager and the guest, and perhaps God will have delight in thee". Also: "Love of the world spoils a pious conduct, like vinegar spoils honey". The following words contain an allusion to the hierarchy of the

Sufis: the reputation of *ahmad* is amongst his people what the Prophet is amongst his community'. The temple *sufta* are here called *sufta*, whereas the people of the world are called *ahmad*. The usual name for the *sufta* is *sufta* the poor. The following remark, which is ascribed to Ahmad, is not perfectly clear: "The poor are like olives, some are small and some are big; he in whom there is no oil, that one's oil on it". Inferred therefore from John 15.2.

After his death 'Abd al-'Al, who had known him since his boyhood and had lived with him for forty years, became his *ahadif* and the possessor of the Master's *shikr*: the red cow, the veil and the red turban. He ordered a chapel to be built on Ahmad's tomb, which in course of time developed into a large mosque. He seems to have kept his adherents under strict rule, arranged the ceremonies (*ahadif*) and died in 733 (1332-1333).

The celebration of Ahmad's *wasit* and the veneration of the saint abroad seems to have increased rapidly, though not without opposition, strife and reaction. The opponents were partly scholars, who were hostile to all Sufism; partly politicians who objected to the *sufta* as rulers of the people. This may account for the fact that twice a *Khawfa* of al-Badawi was murdered (Ibn Ishaq ii. 51, 12 ff. 104; iii. 78, 12). Amongst the scholars, who were at first hostile to Ahmad, but afterwards believed in him, are mentioned Ibn al-'Arabi (d. 730 = 1329-1330) and Ibn al-Jabbar (d. 730 = 1329-1330). Already under the first *ahadif* one hears of quarrels between the followers of al-Badawi. In 850 (1446-1447) mention is made of the restoration of the *wasit* which had fallen into neglect (Ibn Ishaq ii. 30, 2). An ardent worshipper of Ahmad was Sultan Khat Bey, who visited his tomb in 885 (1483) and ordered the cemetery to be enlarged (Ibid. ii. 217, - 302, 23). In the processions of the Mamluk Sultan the *ahadif* of al-Badawi appeared on the side of the principal ecclesiastical dignitaries of the realm. Under the Mamluks the outward splendour of his cult seems to have diminished, because it annoyed the powerful order of the Turks. But this political attitude could not prejudice the veneration amongst the Egyptians. He has been for a long time the greatest saint of Egypt and a deliverer from all troubles. The deliverance of ungodly captives out of the hands of the Christians is supposed to have been one of his earliest achievements, to which he owes his name in *Shu'bi* (*Shu'bi* *ahadif* *ahadif* (cp. above *Shu'bi* *ahadif*)). No less than three *wasits* are celebrated every year in Egypt in honour of him, the dates of which are noteworthy from the point of view of the history of religion. As a matter of fact the festivals have been arranged according to Coptic *wasit* (generally speaking) according to the solar year, to wit: the principal *wasit* is in Miya (August); the middle one, also called *wasit* of Shu'bi, is in Ruma (March-April); and the most important one, also called *wasit* of *ahadif* or *ahadif* is in Aushir (February). It is evidently a coincidence that the date of Ahmad's death in 673 fell both on the *wasit* of the Prophet, and in August of the solar year. It may of course be questioned whether the date of al-Badawi's death was arrived at by deduction. However other observations

it probably that the dates of the *wasits* are founded on those on which the old Arabo-oriental and oriental feasts were celebrated. It is hardly possible to confuse this supposition by arguing that the appellation *wasit* *ahadif* must be explained as a derivation from the name of an element *ahadif* *ahadif*, and that the names of the middle *wasits* originate in a definite historical occurrence (Abd al-Malik 50, 11 ff.). The *wasit* and the middle *wasits* are essentially big feasts, whereas the principal *wasit*, apart from its commercial importance, is a politico-religious celebration in the grandest style with offerings, prayers, cows, *ahadif* and *wasits*; it ends with the *ahadif* (or the *ahadif*) *ahadif*, i. e. the solemn procession of the *ahadif* with his retinue through the town of Janta.

The followers of al-Badawi are called *Ahmadis* and are found all over Egypt and beyond. Their badge is the red turban. The *Ahmadis*, the *Shu'bis*, the *Ahmad* *Nah* and the *Shu'bis* looked upon as branches (*wasit*) of this order.

For a long time Ahmad has ranked as a *wasit*, in Egypt together with 'Abd al-Kadir al-Gilani, Ahmad al-Rifa'i and Ibrahim al-Nasafi, in what is called the *wasit*.

One of his greatest worshippers is 'Abd al-Wahid al-Sha'rawi (d. 973 = 1565), whose family, like Ahmad al-Badawi, came from the Maghreb, but had settled down in Egypt. Al-Sha'rawi called himself al-Ahmad after him (Vollers *Car. Isl.* No. 352); he went on a pilgrimage to his tomb, counted him amongst the greatest *sufta* and conversed with him in visions. In the course of one of these apparitions al-Sha'rawi was called by Ahmad the only *wasit* (of the *sufta*), which was not yet extinct, designating him thereby as the most genuine holder of his doctrine; cp. *Revue Africaine* xlv. (1870), 229. It is one of those mysteries of religious life that a man like al-Sha'rawi could be caught in the spell of al-Badawi, who was both intellectually and morally everywhere his inferior (cp. below).

It is altogether impossible to account for the historical importance of Ahmad al-Badawi by his individuality. It can only be explained by supposing that, both as a saint and as a saint, he had become the point of crystallization of many wants and tendencies of the new time and of those which were before and after him. In more than one point he has been transformed into mythical regions I have already mentioned the probability of the dates of Ahmad's *wasits* being a remnant of the old Arabian festivals. For the present I feel inclined to believe that the above-mentioned combat of Ahmad with *Wasit* (Ibn Ishaq ii. 217, which has not yet been explained, signifies something more than the mere naming of a *Wasit* Amara. It has already been noticed by Maspero, Flaubert and Goldschmidt, that old Egyptian elements have got mixed with the cult of Ahmad. In addition to the immorial features of his cult, which have been narrated by Goldschmidt, may be mentioned what al-Sha'rawi relates of his pilgrimage to the tomb of al-Badawi, being one day at the tomb of the *wasit* in the company of his newly married wife *Wasit*, whom he had not yet approached, he was surrounded by the (dead) Ahmad to deliver her before him at the tomb. The *wasit* to this act and its esoteric explanation are just as much in keeping with the cult

and the spirit of Ahmed, as they are opposed to the character of al-Sharawi, whose feelings were very delicate in matters of sex. I feel inclined to recognize a mythical trait of a sailor nature in the tale of Ahmed's double evil, which is related by al-Sharawi and others. Being one day asked by 'Abd al-Majid, the disciple, and afterwards the *Khawfi* of Ahmed, to lift his veil and show his face to him, Ahmed warned him saying "*La'la nafsi fi-rasadi*" = "each look costs a man's life". As 'Abd al-Majid insisted, the upper veil only was pulled aside by Ahmed and the other men immediately to the ground as if struck by lightning. Compare herewith what is told about Tim Qasbi of which form and meaning were already obscure in the old Arabic. Tabari II. 884, n. 886, 9; *Kamil* (ed. Wright) I. 108, n. 235, 1; Ibn Kathir (p. 73, 12) *Ma'asir* I. 399, 15; *Ar-Risala f. al-Khawfiyyin*, I. (1906), p. 177, 183.

All over Egypt prayers are addressed to Ahmed, and not only in Tawfik's tombs are celebrated to honour him, often in Cairo for instance by the Ahmediya, and even in small villages, e. g. Dismah (All. *al-Mubarak* I. 37, 11). It is more difficult to ascertain whether the tombs and chapels which bear the name of al-Badawi have anything to do with him. Near Aswan amongst the *Turabi al-Badawi* for instance I discovered a chapel al-Badawi. J. L. Marchant's (*Journal* p. 160) mentions a saint of this name near Farafra (Egypt). There is another one near Ghazala (Gubelina, *Arab. Studien* II. 328; *Zur ar. d. Deutschen Palästina-Forsch.* XI. 152, 153). The traditions concerning Ahmed are quite reliable, though tinged with a legendary colouring. All the oldest authorities refer to an account of Ahmed's brother Hassan, who still lived with him in Mecca and parted from him after the journey to Iraq. Ahmed's importance in the 9th (15th) century can be concluded from the fact, that al-Majid and Ibn Hajar al-Asqalani devoted biographical articles to him (cp. *Berlin Cat.* III. 218, 2350-1; II. 483, 10101); also al-Sayid (*Islam al-waqt*, Cairo 1899, I. 299 et seq.). The account which al-Sharawi gave of him in his *Fahras* was written with fervent piety (Alhagr. Cairo 1890: I. 245-251).

In 1028 (1619) a certain 'Abd al-Samad Zaim al-Din, employed at the *madrasa* at the same, wrote his *al-Majma' al-ghaniyya f. al-shaykh al-muhtashib al-Badawi*, in which he brought together everything on the subject which was worth knowing (Mss. in Götting, Leipzig, Berlin, Paris etc.; printed and lithographed at Cairo 1305 etc.). He drew not only from the above mentioned sources, but from unknown authorities too. e. g. Abu 'Isa'ud al-Waqfi, Sayid al-Din al-Mansuri, Muhammad al-Badawi and the "genealogy" (nisab) of Yusef (elsewhere Yusef, in 'Abd Allah, called Fakh al-Sayid). The anonymous *Nasab al-Badawi* (127 fol.), mentioned in the *Cairo Catalogue* v. 167, may be the work of this Fakh. 'Abd al-Samad gives an account of Ahmed's life and states his authorities; that comes a description of the houses of the services and of the *Khalfiya*; at the mention of Ahmed's death the elegies of his brothers and others are given; then he writes of the *madrasa*, his miracles, his *wasaya*, and adds numerous traditions on him, arranged alphabetically, by *Shaykh al-Ahkam*, *Shams al-Bakri*, 'Abd al-Ahmad al-

Imami (d. c. 890 = 1491), 'Abd al-Kadir al-Muniri and others; finally he treats of his followers and of the eight words of his last years after which he became *qasbi* (sacred). Much less important is the work of 'Abd al-Halim (d. 1034 = 1634-1635, v. *Nasab al-Badawi fi bayn haqaqat al-shaykh al-muhtashib al-Badawi* (Berlin Cat. II. 484, 10102). The author's principal aim is to praise asceticism and the piety of Ahmed. A London MS. (*Arab. Mss. Suppl.* N. 639, contains anonymous material of Ahmed (37 fol.); cp. also *Berlin Cat.* II. 486, 10064-10065).

The latest publication concerning Ahmed is the one by Hasan Rashid al-Mashhad al-Khawfi: *al-Nasab al-Badawi wa'l-dhawir al-qasbiyya* (Cairo 1301; 4th, 316 p.). Ahmed is often treated of along with the other *afkha*, for instance by Muhammad b. Hasan al-Adhili (c. 899 = 1494), cp. *Berlin Cat.* I. 60, 103; and by Ahmed b. 'Uthman al-Shamali (c. 950 = 1545), cp. *ibidem* III. 226, 3371. A short poem on Ahmed is found *ibidem* v. 29, 5437. In 1875, 3 (of the year 1275) later accounts, such as 'Ali Mubarak III. 48-51, borrow nearly from al-Sharawi and 'Abd al-Samad (cp. also E. W. Lane, *Modern Egyptians*, Brockelmann, *Gesch. d. arab. Litt.* I. 450).

AHMED BEY, bey of Tawfik (1837-1855), succeeded his father Mustafa, the sixth sovereign of the dynasty of the Husaynides. His government was notable for a persistent effort to endow Tawfik with western institutions and to bring about the permeation of the country by the modern spirit. He therefore in 1841 prohibited the exportation of negroes and set free the slaves belonging to his own household. In 1846, at the instigation of France and England, he formally abolished slavery in the Regency and closed the *Suk al-Baria* where slaves were offered for sale. He showed his tolerance by repealing the exceptional laws for the Jews. He also did his best to aid the development of education by allowing French men to open a school for girls at Tawfik (1843) and by permitting a priest of the same nationality to start an educational institution for boys. French engineers were commissioned from 1845 till 1848 to make a map of the Regency.

But Ahmed Bey was especially concerned about the organization of military forces after the European fashion. At the very outset of his reign he decided on the formation of a regular army. Barracks were built, two regiments of infantry, one of cavalry and four of artillery were recruited and drilled by French instructors. A polytechnical school was founded for the training of officers. But these attempts were not very successful. The officers, recruited from amongst the populace of the towns or the settled peasantry lacked military spirit and deserted; the officers were almost entirely ignorant; the equipment was so much neglected that during the Crimean war the Tunisian contingent had to be prevented from using their arms lest accidents should constantly be happening. Ahmed also wanted a navy. An arsenal was built, a harbour dug at Porto Farina and a fleet of twelve ships was bought abroad; they were understood to build a frigate in 1850. The work however was so deficient, that this unique specimen of Tunisian naval architecture was not launched until 1853 and proved incapable of putting to sea. As for the harbour, it became un-

navigable with the stream of the Mefferta secure it could be utilised.

Ahmed's endeavours to have an army and a navy of some importance can be accounted for in his later on yet in all circumstances as an independent sovereign. He was afraid of the overmastering of Turkey, which after having reestablished its domination over Tripoli, aimed at restoring the Regency of Tunis again under its authority, with the more or less openly confessed support of England. In his policy against Turkey the bey was backed by France, which, having taken possession of Algeria, could not allow the Porte to regain its influence in Africa. When, therefore, a Turkish expedition appeared in the Tunisian sea in 1537 rear-admiral Galata conducted a demonstration before Goletta, forcing the Kapodba-Pasha to retire. The Porte however made fresh attempts to establish its authority over Tunis in 1542 a representative of the Turkish government came to claim the payment of an annual tribute, but had to return without it. In 1543 the consular-general of Austria having presented himself with an "exequatur" granted by the Porte, was not received by the bey. And the latter finally succeeded in having his claims recognized. A *kafir shayf* acknowledged the independence of Tunis. This however referred to Ahmed Bey only, and did not apply to his successors; it was ~~some~~ the less an official statement of a condition of things which had lasted really for more than a century.

Under all circumstances the bey had every reason to be pleased with the attitude of France. Hence the influence of that power remained predominant in Tunis, in spite of the efforts of England, which, according to the very words of one of its diplomats, was "more dangerous in the absorption of Tunis by the French than by the Turks". The duke of Montpensier, who came to Tunis in 1545, was received with great pomp. In the following year Ahmed visited France. He crossed on a French ship, disembarked at Toulon on Nov. 8th 1546 and went to Paris. Wherever he passed he left a lasting impression of his courtesy and generosity, 1546 years praised him as a liberal sovereign, and the public and the royal family gave him a hearty welcome. As the Sultan he was treated as an independent sovereign. He had also intended to visit London, 1546 but gave up the plan, because the British government looked on his being presented to the Queen by the Turkish ambassador.

The Porte and Tunis however arrived at a better understanding 1548, owing to the good services of the British consul-general, Sir Stafford Canning. In 1549 the governor of Sahel, Sidi Muhammad, was commissioned by the bey to take some presents to the Sultan. In 1554, during the Crimean war, a Tunisian contingent of 8300 men went to join the Turkish troops. Ahmed however had taken care to specify that his sole motive for sending them had been deference to the head of the faith, and his personal friendship for 'Abd al-Majid. The Tunisian soldiers however did not take part in the military operations. They were despatched to Batum, chased out of that city by the Ottoman authorities, and their ranks decimated by the cholera.

Ahmed Bey died on May 30th 1555, leaving

Tunis in an awkward position. His indisputable good qualities were tainted with the worst faults of oriental despots. His generosity bordered upon prodigality, his taste for pomp and ostentation drove him into expending out of all proportion to the resources of the country. For instance he had sacrificed millions to the building of the Muhammad-Abdya palace, a conglomerate of gigantic structures, at a distance of eleven miles from Tunis on the banks of the Sebgha Sebgha, which were never completed and now are left in a dilapidated state. No less disastrous to the treasury was his loyalty to his favorites, Count Ruffo, an adventurer from Genoa who had become his minister of foreign affairs, and especially Mustafa Kharandir, formerly a slave, who from 1537 till 1573 was the actual sovereign of Tunis. The expenses of the government were such that the people revolted several times. An insurrection, which broke out in the Kaysa of Tunis in 1540, was only quelled with great difficulty. Another rebellion took place in 1543 in Goletta. The full weight of the fiscal changes was laid upon the populace of the towns and on the settled tribes, for it was considered safe to exact either tax or conscription from the nomadic tribes. In due, underneath a brilliant show the symptoms of a decadence were already visible, which became still more prominent under the successors of Ahmed Bey. In many ways this prince is responsible for the fall of the Regency.

AHMED BIDIÂN [See BIDIÂN AHMED.]

AHMED DJALÄR, the fourth sovereign of the dynasty of the Djalälides (763-813 = 1382-1410) was the fourth son of Sultan Uways. During the reign of his elder brother Husain he became governor of Bagdad in 776 (1394-1395). In 784 (1382) he became the founder of Isma'elism, took possession of the capital, Tishr, and had his brother executed. He was not however recognized as sovereign in all parts of the realm until after seven combats with his other brothers 786 = 1384. During the course of the following years he lost a considerable part of his territory to his enemies abroad, his capital, Tishr, was ravaged cruelly in 1384-85 787 (Dec. 1385-January 1386) by Tekumish, and again by Timur in the following year. After Timur's departure it was occupied by the Turcomans under Kars Muhammad in 790 (1387). In 795 (1393) the next important town, Bagdad, was also taken by Timur. His wives and his son 'Alî al-Dawla remained in the power of the conqueror; Ahmed himself had to fly to Egypt, where he met with a friendly reception from Sultan Barqâ (Safar 796 = Dec. 1393-Jan. 1394). With Egyptian help he succeeded in that same year in returning to Bagdad, where he stood his ground for some years against both Timur's generals and his own rebellious subjects, partly with the support of Kars Yusuf, prince of the Turcomans. Not until the end of 803 (July 1401) was Bagdad conquered again by Timur. Ahmed already left the town and went first to Syria, afterwards to Aila Minor, accompanied by Kars Yusuf. During the interval between Timur

and Ahmad he took his chance and renounced Baghdad; but he had soon to give way to his former ally Karā Vüsal and seek refuge in Syria, whither the latter also fled after the capture of Baghdad by Timur's grandson Ala Dür. Both were imprisoned in Syria and not until 807 (1405), after Timur's death, were they set free. Ahmad succeeded in a short time (807-808 = 1405) in recovering his entire dominions; but in the course of the following years he was dislodged from Adhmatkhan by Ala Dür, who in his turn was supplanted by Karā Vüsal. On the 28th of Rabi' II 813 (30 Aug. 1410) Ahmad was beaten by the latter and murdered on the following day. The authorities describe Ahmad as a cruel, covetous and selfish despot, but at the same time as a brave warrior and a patron of scholars and poets. He himself is said to have written Arabic and Persian poetry and several works on music (compare these Dawlatshahi, ed. Browne, p. 306).

Bibliography: A. Makham, *Catalogue of Djindiridjan coin*, Petersburg 1897 (in Russian), p. xii et seq. (the most important authorities are also mentioned there). Cp. also Howarth, *History of the Mongols* II. 659 sqq. (W. BARTHOLOM).

AHMED DJAMIL Persian poet, Abd Nasr Ahmad b. Abd Hamid Nisaburi, surnamed *Shamsi-ni*, *Shamsi al-Bihar*, was born in the village of Nisaburi in Khurasan in 447 (1049) and died in the month of Rabi' II, 536 (March 1143). He adopted the religious life in his 22^d year and is said to have converted 6000 persons to Islam. He was likewise but composed various writings: four *Shih* treatises are named by Eski; one *diwan* is preserved in the British Museum and lithographed at Lucknow. Both the mother of the empress Humayun, Miran Begum, and the mother of the emperor Akbar, Hamida Bano Begum, traced descent to him. So too did Shah Akha, the wife of Sultan Shihab al-Din Ahmed Raza Nishapuri, a kinsman of Hamida Bano and in the ultimate ancestry of Akbar in his early days of sovereignty.

Ahmed Djamil was buried at Tashkent, where which stands half-way between Makhod and Herat. In 1544, Humayun circumambulated his tomb.

Bibliography: Eski, in *Gleanings*, ed. from, *Manuscript*, II. 283. (A. S. BARTHOLOM).

AHMED DJAZZAR (See *DAVID BEN ABRAHAM*).

AHMED DJEWDET PASHA, an eminent Turkish scholar and politician, was descended from a family known by the name of *Kalut-brothers*, which, though originally from Kütahya, had been settled in Ispahan (about 1170) after the beginning of the 18th century. One of his ancestors fought against Peter the Great by the river Pruthi, another one was Muhi. His father and grandfather had made a pilgrimage to Mecca. He was born in 1235 (1822-1823) and acquired the rudiments of the Islamic sciences in his native home. But soon he was attracted towards the intellectual centre of his nation, Constantinople (1255 = 1840-1841). With continuous application he became absorbed in the various branches of theology, philosophy, Arabian literature, mathematics, geology and astronomy, and obtained a thorough knowledge of Persian (from the *Devaneri* and the poet Fehmi). After an amazingly short study of only four years he passed the usual examination splendidly, he at once got a stipend and a post, and a short time afterwards he also

obtained the certificate which enabled him to take a professorship in one of the mosques of the capital. The completion of the commentary on *Shih's Shams* procured him an appointment as a member of the school-board at the Education Department and the post of director of the seminary for public middle schools.

Along with his patron Ferid he took part in the famous mission to Kazerun (1848) and after his return he wrote at Bursa, in collaboration with Faki, the *Kitab-ı Akis*, the fundamental grammar of the Turkish language (German translation by Kellogg, Helsingfors 1895). After that he went, in the company of Ferid, for a short time to Egypt. In 1260 (1843-44) at the time of the mission was he got a commission from Sultan Abd al-Majid to write a popular history of Turkey from the peace of Kessik Yainarja till the destruction of the Janissaries (1774-1826), and already in the following year he was able to present to his sovereign the three first volumes, filled with youthful freshness. He was rewarded by being appointed Historian to the Empire. As a result of his work on the practice of the Muhammadan law (*Shari'at*), which two years later appeared under the title of *The procedure* and was received with loud approbation, the government appointed him a member of the learned council, which at that time was engaged in codifying the civil law, and also made him president of the committee for the state-archives. In the course of his official career he quickly attained by degrees to higher posts amongst which may be especially mentioned the office of *Vizier*, for which he gave up his title of Historian to the Empire (1281 = 1864-1865), and in 1284 the presidency of the committee for the redaction of the civil law code, which committee was to work with great energy, as soon became evident. He was consecutively *Wali* of Aleppo, Bursa, Marash and Janina, and afterwards twice *Wali* of Syria. Three times he was Minister of Education, twice Minister of Justice, once Minister of the Interior and of Trade and also Vice-president of the Privy Council. He was at his best as Minister of Education; he infused a more modern spirit into the public schools.

After his retirement from office he spent his long evening of life in the full possession of physical vigour, devoting his time with animated passion to his reading. His modesty never forsook him. He is shown to have been a devoted father by the literary productions of his son and daughter. He passed away, after a short illness, in the night between the 24th and 25th of May 1295, at his country-seat at Babek on the Bosphorus.

Besides his *Öttürm Kütür* which continue to be published in constantly improved editions, both in their original form and abridged, are two other philological works of his deserving of notice: *Mezhar*, *Mezhar* and *Mezhar*, introduction to literary style. He read and spoke Arabic and Persian like his mother tongue, he had also mastered French and Hungarian. Numerous of his poems are extant. They are simple and, though without faults, are more a display of skill than an outpouring of poetical inspiration.

The great juridical work of his epoch: the civil law code of Turkey, was completed during his second term of office as Minister of Justice (1293-1298 = 1876-1877) and appeared in print.

Ahmed Jewdet was greatest as an historian.

At the time, when his tribe was in everybody's mouth, about the close of 'Abd al-'Aziz' reign, he delighted the Turkish nation with one of the most valuable ornaments of Oriental literature, the *People's Tales and Collections*, which continue as far as the recollection of 'Uthman, Muhammed's son-in-law. Anyone who nowadays, even in the remotest districts, ventures into the domain of national literature, is sure to start from this book. But the work, which ensures to its name a leading place in the literature of the world, is the *Turkish History* (*Osmanlı Tarih-i Hümayun*), from 1885 till 1921 = 1294—1323, in twelve volumes. The first edition was printed in Constantinople 1874—1901; which was followed by several others, the latest of which appeared in a politically colored form.

Ahmed Dzewdet did not draw his material exclusively from the archives, but often also from his predecessors in the office of Historian in the Empire; first of all Waki, next such as Enver, Edib, Nuri, Pertev, Asim, Sikiatide and Esad; he also felt back sometimes on the great Arabian Historian 'Uthuri and others. It is an astonishing fact that, though writing of an epoch, in which France ruled over half Europe, never once consulted any of the famous French authorities, with the sole exception of Napoleon's reminiscences written at St. Helena. He has imitated the works of his predecessors in such an independent spirit, that the narrative, which bears the stamp of genius, is the entire production of his mind. During the reign of 'Abd al-Majid and 'Abd al-'Aziz he also descended into the vaults of the state-archives, but evidently not for the three last volumes. The continuation of the events is chronological as a rule, though wars and domestic commotions are with proper care thrown into a parallel for the sake of chronological order. His style, though not florid, resembles in the first five volumes the manner of the ancient historians with its splendor of rhetorical expression; but in the beginning of his sixth volume he suddenly abandons it and passes on to the simpler mode of speech which has come into fashion. On the whole it is certainly reliable. In a rapid survey of past events it is made of unimportant events as though they were brilliant conquests and decisive victories, whereas the crushing defeats which through about the half of the whole of Islam we passed by in silence; but such cases of veiling are rare and may moreover be excused with a reference to the example of Tacitus.

Ahmed Dzewdet was fully convinced of the educational value of historical study. He was his countrymen continually against the gangrene of Oriental administration; he gives his attention to every slightest semblance of progress and is splendidly apologetic whenever all is collapse towards the renaissance of their native country. Especially the first five volumes abound in great collections. Nothing annoys him more than the sudden stoppage from their business to the making of a mine, which had been conducted successfully for centuries. Victories of science cannot be pursued with greater enthusiasm than they are by him. With patriotic passion he announces conquests of civilization, made by his own country, such as the separation of civil and military authority, which was carried through in the 19th century, centralization of administration, and the regulation of the coinage by the state. In foreign politics nothing

affected him so deeply as an alliance with Austria against Russia. Turkey and Austria (both half-Slavic countries) could only be able to oppose the current of the pan-Slavic idea which came from Russia, if they were allies and not rivals.

Besides the above-mentioned works of Dzewdet Pasha are also noteworthy: *Harika al-Husna*, *Ma'asir-i Nispiye*, *Tarikh al-Muluk* and the conclusion of the Turkish translation of Ibn Khaldun's history.

Osmanlı Tarih-i Hümayun and *Ahmed Dzewdet*, *Osmanlı Tarih-i Hümayun* (Constantinople 1910); *Turkish History of the 19th century* (Constantinople 1908) 3rd number; *Uzun Yüzyıl*, *Harika al-Husna* in 1911 et seq. (K. SCHNEIDER.)

AHMED FARIS AL-SULAYQ. [See FARIS AL-SULAYQ.]

AHMED HIKMET a one of the modern Turkish novelists. He is also called Mustafa after his grandfather who was Mufti in Talyolma at the time when that city was the capital of the Peloponnese. He was born in 1870. After he had left the Lyceum of Galata Serai in Constantinople, he worked as a journalist and became later Vice-consul in the Thracian and in the Caucasus, and is at present Professor of Literature at the above mentioned Lyceum and the head of the Consulate department at the Foreign Office. A collection of his sketches and novels, which originally appeared in periodicals, especially in the *Yedigörmüş* and the *Tarikiyat*, was published under the title of *Abdülhakim magallat* (Thorn-garden and Rose-garden) Istanbul 1917 (1899-1900). Three of these tales have been translated into German by Fr. Schneider, and published under the title of "Türkische Frauen" in the *Türkische Bibliothek* edited by Prof. Jacob (vol. vi Berlin 1907). Ahmed Hikmet is one of the most important representatives of the modern movement, which advocates the idea, that the regeneration of Turkey is only possible on a national basis and cannot be attained by a blind imitation of Western civilization. His writings, which are often crowned with a fine humor, prove him to be an excellent writer and a skilled stylist.

Noveller by F. Schneider. *Abdülhakim* edited by G. Jacob vol. vi (Berlin 1907). *Introduction* (by Fr. Schneider).

AHMED İHSAN, an Ottoman author, is one of the few standard-bearers of the present literary movement in Turkey. He is the son of a subordinate employe at the Finance-Department, and was born in Constantinople on the 24th of April 1865 (7 April 1866). He was only seventeen when he passed his final examination at the school of administration. Shortly after his appointment as Interpreter at the Commander-in-Chief of the artillery, he was tried with an irrevocable longing for an independent position and entered on a journalistic career, but without direct opposition from his own family. Like every one else, belonging to the literary world of young Turkey, he got his schooling from Ahmet Midhat. At the age of eighteen he founded the fortnightly paper *İttihad*, which was discontinued (1890-1904 = 1305—1327). At the time he began his independent work: the translation of great French novels such as Jules Verne, Alphonse Daudet, Barrage, Octave Feuillet and others, making there-

by the most critical works of history of West-European literature accessible to Oriental circles, which has been hitherto scarcely mentioned either in any kind of reading or in the Western conception of life. The translations made by Ahmed Ghān number at present about fifty, amongst them 24 works by Jules Verne alone.

With the intention of giving his countrymen a modern and illustrated magazine instead of the old-fashioned periodicals which had appeared until then, he founded in 1307 (1891) the *Thürat-ı Fennî* and immediately afterwards went on a tour through Europe, for which he had been longing since his childhood, in order to become better acquainted with the mechanism of European reviews and their printing-offices. In three months, attended with work, he travelled through the whole of continental Europe, with the exception of Spain, Scandinavia and Russia. His experiences were described in an exceptionally charming manner in a big illustrated volume, which went through a second edition in the same year 1891, and was very soon out of print.

The young review profited indeed by his travels; its first year was favourably compared with any European family-magazine. Sending pictures of the great men of the day such as Lieberman, Renan, Grieg appear on its pages. The Ottoman affairs occupy only a modest, almost too modest place; one feels in the midst of universal activity. The magazine became a centre of the Turkish intellectual movement and is indispensable for the study of the somewhat peculiar development of modern Turkish literature. All the younger talents appear amongst its collaborators: Ekrem Bey (*Pastor in the Carriage*), Khalid Uyyâ (*Forbidden Love, Blue and Black*), Ahmed Rüşî and particularly Nâhi-Zade Nigâm (d. 1898), who made the most brilliant bit with his *Sin of neglect*. The Chicago international exhibition of 1893 brought Ahmed Ghān's civilising activity into prominence, and the Turkish Government followed this praiseworthy example. But soon afterwards another tendency gained the upper hand in Constantinople, which caused a fatal change of collaborators. Cawfi Filizet however joined the staff, a genius possessing a noble light of thought, which seemed capable of attaining the highest summit; and also Fevâzî Şihabî al-Dîn, a poet with a graceful and bright imagination, such as any nation could be proud of. But in 1900 the police interfered, because of an alleged revolutionary article. After the case had been on trial for seven weeks, the prosecution was withdrawn; the existence of the review was safe, but the *Thürat* resigned, and Ahmed had to trust to his own powers. This is the third stage in the existence of the periodical.

Ghān's original literary production is less important than might be expected of his talent. His complaints repeatedly of certain national circumstances. They form the main topic of two short but well sustained novels: *Al-Hayr* (*The Sacred Fountain* 1306) and *Uyyâ* (1309). The rest of his writings are mostly sketches: *Tragedy* and *Charm* (1308, both originally written for the stage), *Women and Secrets* (1306), *Peasants* (1308), and a European subject: *The Worker* (1308). Outside the dominion of literature he his *New System of Photography* (1306) and his clear and able *National Economy* (1309). (K. STAMMIG.)

AHMED GHAN, the son of Sayid Mahmud Mirza Mirza Khan, was born at Delhi, the 17th October, 1817. His ancestors came from Arabia to Herat and thence to India during the reign of Akbar Shah. When Sayid Ahmed was 19 years of age, his father died, and the year following (1837) he entered the service of the British Government as record-keeper in the Assam Government at Delhi. In 1841 he was appointed *Munsif*, or Subordinate Judge, at Ferozpur Sibi in the District of Agra. During the mutiny of 1857 he was *Munsif* at Jhansi, and saved the lives of the Europeans residents by sending them safely to Meerut. For his unwavering loyalty to the British Government, and his conspicuous courage, he was rewarded by the grant of a pension, and subsequently by the title of a Companion of the Star of India. When 52 years of age (1869) he visited England, taking his two sons with him in order to give them the advantages of a Western education. He took the greatest interest in the welfare and education of his co-religionists, and, on his return to India, he founded a college at Jhansi. Subsequently, on his transfer to Allahabad, he founded a Literary and Scientific Society, and finally succeeded in inaugurating the Muhammadan Anglo-Oriental College at Allahabad, despite much opposition from many who regarded the introduction of a system of Western education as being subversive of the orthodox faith of Islam. The college was opened in May 1875, and the foundation-stone of the present college building was laid by Lord Lytton in January 1877. An account of this institution is given by the late Theodore Beck, formerly principal of the college, in an appendix to *Lieut. Colonel G. Graham's Life and work of Syed Ahmad Khan* (London, 1885). He retired from service in 1876, became a Member of the Legislative Council from 1878 to 1882, and was made a Knight Commander of the Star of India in 1885. The rest of his life, till his death in 1898, was devoted to literary pursuits, and to the advancement of the interests of his college.

Sayid Ahmed's most important work is the *Akbar al-furaid*, an archaeological history of Delhi, written in 1867 (2nd ed. 1884), which has been translated into French by Garcin de Tassy (Paris, 1861). He has also written a Hinduist treatise on the causes of the Indian revolt, which was translated into English in 1873; also commentaries on the *Qur'an* and on the *Koran*, and a great many essays and lectures on social, religious, educational, and political topics, including a series of essays on the life of Muhammad. His letters written during his journey in Europe were published in the *Anglo-Indian Gazette*, a translation from which is given in Graham's biography of this notable Muhammadan reformer.

(B. M. M. M.)

AHMED KOPRÜLÜ. [See KOPRÜLÜ.]

AHMED MIDHAT is the most important author of modern Turkey. He was born in 1842 of *Armenian* origin. He received a good education, but as a young man he came in touch with the young Turks and, at about the same time as Nâzım Kemal Bey, who was his elder by four years, he was banished, a rather common punishment under the reign of Abd al-Aziz. His travelling years in Europe became a very important time of apprenticeship for Ahmed; he learnt to discern that the

young Turkish party was completely wrong in mingling literary and political tendencies, and that the emancipation of Turkey could only be possible, if the national education was raised and the present constitution was left intact. After 'Abd al-Hamid's accession to the throne he was pardoned, allowed to return and admitted into the civil service. Owing to his good knowledge of French and his writing activity he was quickly promoted. His literary merits brought him into personal contact with the sultan, who soon learnt to appreciate this loyal and energetic member of the Ottoman national spirit. Ahmed Mihai became an enthusiastic champion for the policy of Abd al-Hamid, which he supported in the papers *İstifad* (Istanbul) *İstifad* (Interpreter of Truth), both founded by him; and the sultan was delighted in acknowledging his merits as a journalist and an author. In 1905 he was appointed President of the international Board of Health, and honoured with the title of Excellence and with the Grand Cross of the *Ordre du Mérite*, besides other high distinctions. In addition to his literary work the sultan has awarded him an exceptional poet's pension. Ahmed lives in domestic happiness, and he is the idol of the younger Turkish writers, whom he befriends and encourages like a father. One of the most important amongst them, Mehmed Ahmed Nefi, who died in 1893, was his cousin-law.

Ahmed Mihai's literary programme is twofold. First of all he advocates the preservation of the pure Ottoman character of the written language, like *Şinasi* had done before him; but in the second place it is his aim, remote though it may be, to secure for his countrymen the means of acquiring a general education. That is the reason why, besides his purely literary work, Ahmed Mihai has written on any subject which seemed worth knowing in every branch of knowledge, history, science etc. These treatises, extracts and compilations were mostly taken from French sources, but always with great skill and in a clear and popular manner. As a journalist he has written of social, philological and economic problems, often with surprising ingenuity, always in a considerate and conscientious way. All along he has been striving for the adaptation of European knowledge to the Islamic fears of mind, withholding every element which is incompatible with pure Mohammedan feelings. If at the present day one can speak of an Ottoman civilisation, Ahmed Mihai's Herculean task must be gratefully thanked for it.

His main importance however is founded on his work in the domain of literature. Here also he has developed the same business spirit, the same astonishing rate of production; he invents and shapes with great facility. Amongst European authors Honoré de Balzac is the only one who in this respect can be compared to him. Ahmed Mihai has hit on the extremely fortunate idea of introducing the colloquial speech of the *Mevlevîs* (the public narrators) into higher literature by using it in his novels. The apostrophe to the audience in the form of questions for instance, which is so common with them, is a means of enhancing the attention, is also very often found in Ahmed Mihai's works. Many of the younger writers have tried to imitate this attractive chatty style, but with little success.

A list of his novels and tales alone would fill a good-sized catalogue. Only a few of the most important need be mentioned here. *Şinasi* (The author *Şinasi*), an imitation of Dumas' *Comte de Monte-Cristo*, which was followed by the continuation *Şinasi's* (The peasant *Şinasi*); *İki kadın* (Two women on earth), a book which at first gave offence in its unusually free idea.

Ahmed Mihai's charming gift as a narrator shows to still better advantage in his latest tale. He has collected them in a considerable row of volumes under the general title of *Leşkerî romanlar* (Entertaining stories). None in his *Leşkerî romanlar* has given an outline of the contents of the 25 first volumes, and E. Schade published an excellent translation of three of them (*The Glorious, the Marriage, the Love*) under the title of *Türkische High Life* (Leipzig 1893).

Ahmed Mihai's activity has also extended to the drama, but here he has little to show compared with the *roman* of his other works. He has written both tragedies and comedies, and especially the latter, amongst them *Şinasi* (Kardes) and *Şinasi* (The dancer), with great success. He himself has also written the music to *Şinasi* and a few others.

As a teacher and guide of the younger Turkish generation Ahmed Mihai is partly responsible for the fact, that the intellectual life of modern Turkey, with its tendencies towards European civilisation, has sought its nourishment exclusively in France and French literature. But the simple and straightforward Ottoman has nothing whatever in common with the character of French nation, and one day this national antagonism between the Ottoman and French spirit will emerge itself. Only by adhering to what is national in the Ottoman literature he endowed with lasting life, and it remains the principal merit of Ahmed Mihai that he has pointed out that right and only way.

AHMED PASHA, son of *Abd al-Hamid* (Wali al-Ham, Ottoman poet of the time of Sultan Mohammed II, was at first professor at the madrasah of Sultan Murad II in Brusa, *hüvi* of Adrianople, afterwards tutor of the princes, and Valer. He composed 33 ghazals, imitated from those of Mir 'Ali Navvayi. He died in 1498 (1496) and was buried at Bursa, near the mosque which he had founded and whence he had been banished because of an immoral adventure. Sultan Murad II had commissioned him with the administration of that madrasah. He was the first Ottoman lyrical poet: his works introduce the period of the elegant style of composition; he is the visible creator of the poetical language of Ottoman Turkish.

AHMED PASHA, Ottoman general of Sultan Sulaiman's time, took part in the wars against Hungary at Belgrade and Kaniša. He took the town of Sabac by storm (2 Sha'ban 927 =

16 July 1521) commanded a division of the army which was charged with the siege of Rhodes, was afterwards appointed commander-in-chief, reduced the besieged to extremity and obliged them to capitulate (25 Sept. 1522 = 21 Dec. 1522). Being of a violent and ambitious character he had hoped to be appointed Grand Vizier; but when he did not get this post he asked for the Government of Egypt, which was granted to him. He aspired to becoming an independent monarch, gained the sympathies for his cause, subdued the Janissaries garrisoned in the Citadel of Cairo, usurped the title of Sultan, and caused the *shahis* to be said and money coined in his name (January 1524). But he was betrayed by his confidant Mohammed Bey, who in the Sultan's name caused the *Shahih* Sherif of the Band Dekt to give Ahmed Pasha up to him. His head was sent to Constantinople.

AHMED PASHA, second Vizier of Sultan Sulaiman of Albanian origin, was appointed in 1550 (1552) commander-in-chief of the expedition into Hungary, named at Mohammed Schalls. He forced Temesvar to surrender, took Szatmar, and besieged Erlau (Eger), but without success. He was appointed Grand Vizier during the Persian campaign, but during the Sultan's illness on 20 Chul'haide 962 (= 28 Sept. 1555) his head was cut off, on the pretext of his intrigues in connection with the administration of Egypt, but really because the Janissaries feared him. He was her son-in-law Rustem Pasha called to the post that Ahmed Pasha occupied. He left several charitable institutions, among them a mosque near Bay Rapt.

Bibliography: Hammer-Purgstall, *Gesch. der Osman. Röhre*, cp. Index; Joazeiro and van Gayer, *Turquie*, pp. 125—126; *Gulistan-i mu'arrif* i. 556, Petrow i. 24, 274, 291, 352. (CL. HUARI.)

AHMED PASHA, Iskander Gedik, Gedik (cup-tough), Ottoman politician and general, rose from a common Janissary to the post of Beylerbey and Vizier. He was commissioned by Sultan Mohammed II. to subvert 'Alay, which was still ruled by the last surviving descendant of the Seljuks of Rum, called Khat Arslan. He obtained the surrender of the place (875 = 1470); after the defeat of Uzun Hasan at Tergin (16 Rabi' i 877 = 22 August 1473) he subjected Karamanie and Cilicia; after a fruitless attempt to make Mir Ahmed his captive by ruse, he drove him to committing suicide. After the death of prince Murad, and the execution of the Grand Vizier Mahmud Pasha, he became the latter's successor, and in this quality conducted the Crimean war, which caused to the Genoese the loss of Kaffa (4 June 1475) and Azov. Because he opposed the Albanian campaign, he was disgraced and imprisoned at Adana (1474); but the intervention of Mu 'Alam Hersek-bey brought him again into favour, and he was entrusted with the command of the fleet of 29 galleys, which occupied St. Maurice and Zante. He landed on the Italian coast and ravaged Otranto (11 August 1480). After the accession of Bayazid II. he went to join him shortly before the battle of Yedli-Shehr (25

Rabi' ii 880 = 23 June 1481). He was commissioned to prevent the fugitive prince Djum, got out of prison and was only saved by the Grand Vizier Ibrahim Pasha who procured him the order of permission Kasim Beg in Karamania. He was afterwards at the command of the Sultan, who had not forgotten the reproaches which, it is said, he had been obliged to endure in the midst of a grand festival (6 Shawwal 887 = 18 Nov. 1482) on account of the bad conduct of his troops. Being of a proud and inflexible character, Ahmed Pasha had greatly disapproved of various political measures which Bayazid had taken, such as the peace with Venice and the negotiations with the knights of Rhodes concerning Prince Isma.

AHMED PASHA [See *above*.]

AHMED PASHA A. HASAN PASHA, succeeded the conquest of Hamadhan, succeeded his father in the government of the provinces of Bagdad, Ray and Merdia, he recaptured Kermanshah and Andis (1144 = 1731) from the Persians. Taking advantage of the Turkish victory at Roshan he concluded a treaty, according to which the Arabs should be the frontier between the two realms, but Thir was contrary to the Persians. He defended Bagdad against the attempts of Nadir Shah (1145 = 1733), was commissioned to continue the negotiations of peace with the conqueror, not without incurring the suspicion of tampering with Nadir, and was appointed *serasker* (1157 = 1744). He died in 1160 (1747) during a campaign against the Kurds, after he had twice governed Bagdad, first for a period of eleven and the second time for twelve years.

Bibliography: Cl. Huari, *Hist. de Bagdad*, pp. 145-140; Hammer-Purgstall, *Gesch. der Osman. Röhre*, cp. Index; Shari, *Shahin* and *Shahi* p. 27 et seq.; Niebuhr, *Reise in Asien* ii. 254—256; *Gulistan-i mu'arrif* i. 121 et seq. (CL. HUARI.)

AHMED RASIM. [See *above*.]

AHMED RESMI. [See *above*.]

AHMED SHAH is the name of various Mohammedan monarchs in India. The most notable are:

1. **AHMED SHAH** BAHADUR MUHAMMAD AL-DIN AHU NAY, son and successor of Mohammed Shah, Grand Mogul of Delhi. He was born in 1158 (1745) and came to the throne in 1161 (1748). The actual ruler during his reign was Salim Dhang, Nawab of Delhi, who also was appointed Vizier of the new Emperor. In order to check the Rohillas he called upon the Mahabads for help, which resulted in their plundering the provinces of his realm, while the Afghans devastated the Punjab. Ahmed Shah himself was quite an incapable ruler and loved for pleasure. So after the dismissal of the Vizier Salim Dhang his reign soon came to an end, another Vizier, named Mirza Ghafar Khan caused him to be declared unworthy to govern, and him put into prison and his eyes put out (1167 = 1754). Ahmed Shah died in 1169 (1755).

2. **AHMED SHAH** I. K. DAWUD SHAH, a Bahmanide,

reigned from 825 till 836 (1432—1435) in Delhi and removed his residence to Multan (q. v., see RAHMANNIAH).

3. AHMED SHAH II, son and successor of the preceding, reigned from 836 till 862 (1435—1457). In the list of the Bahmanides he is often mentioned by his surname 'Ala' al-Din. He subjugated the Sultan and conducted successful wars against the Rulers of Ghazni and Candahar (q. v., RAHMANNIAH).

4. AHMED SHAH III or MAJID SHAH II, who reigned in name only from 924 till 927 (1518—1521) (q. v., RAHMANNIAH).

5. AHMED SHAH or MUHAMMAD SHAH SHAH AL-DIN, Prince of Bengal (835—846=1431—1442) (q. v., RAHMANNIAH).

6. AHMED SHAH I or TATAR KHAN, succeeded his grandfather Muzaffar Shah Khan (241) on the throne of Candahar, and reigned till 846 (1443). He removed his residence to the town of Ahmedabad, which he had founded.

7. AHMED SHAH II, also Prince of Candahar, reigned from 963 till 969 (1553—1561).

8. AHMED SHAH, or, as he is generally called, Ahmed Nizam Shah, founded the dynasty of the Nizam-Shahs. He was the son of Nizam al-Mulk Bahar, the Viceroy of the Bahmanide Mahmud Shah. After the assassination of his father he usurped his title and dignity, put to flight the troops which the Bahmanide had despatched against him (895=1490) and founded an independent reign in the new-built town of Ahmednagar. Ahmed Nizam-Shah died in 914 (1508) (q. v., NIZAM-SHAHS).

AHMED SHAH DURRANI, founder of an Afghan dynasty. Ahmed Khan (he was so called previously, the title Shah he took later only) was son of Zinhammed Khan, Sadat, a chief of the Abdalis who had settled in the neighbourhood of Herat in the time of Shah 'Abbas I. The family was recognized as the leading one in the Popalati clan of the Abdali tribe, and had been banished to Multan. About 1716 they were found at Herat, and a feud broke out between two branches of the family, which ended in the deposition and perhaps the murder of 'Ali Akbar Khan, the Chief, by Zaim Khan, who became the leading man in the tribe and extended their power greatly. They spread to Khuzistan and in 1723 went so far as to besiege Meshhed. Ahmed Khan was born about this time. At the age of 17 he and 'Ali Akbar Khan returned from Kandahar to Herat, and succeeded in turning out Zaim Khan. When Nadir Shah invaded Khuzistan in 1728, Atakhyar submitted, but the sons of Zaim Khan, Dhu'l-Fikar Khan and Ahmed Khan broke out again. In 1731 Nadir Shah took Herat and broke up the Abdali power. Many of the leading men were banished to Multan. Dhu'l-Fikar Khan and Ahmed Khan fell into the hands of the Ghilzais of Kandahar, and when Nadir Shah took that town in 1737, he released them, and took them into favor. He settled the Abdalis in large numbers in his army and settled them in their ancient territory near Kandahar which had been seized by the Ghilzais.

Ahmed Khan was appointed Governor of Mervistan and became a principal officer in Nadir Shah's army. After Nadir Shah's invasion of India he gradually became suspicious of the Shah's elements in his army, the Persians and Afghans, and changed favor to the Osbeys and

Afghans, especially the Abdalis. This led to the conspiracy in which he was killed (1103=1747). Ahmed Khan who was near by with a body of Afghans attacked a Persian camp and secured upon a large treasure, and then went off with his followers towards Afghanistan.

Kandahar fell into his possession without difficulty, and he was elected king by all the principal Abdali Maliks on the advice of a dervish named Sitar Shah. Besides the Abdalis the chiefs of the Baluchis, the Hazaras and the Ghilzais took part in his election, but the Ghilzais seem to have been treated as conquered enemies. Ahmed Khan, now about twenty-five years of age, took the title of Shah, and called himself Shahr-i Khuran, "Pearl of Pearls" (first Shahr-i Khuran, "Pearl of the Age" as sometimes called), and the Abdali tribe also from this time on were known as Durranis. After his coronation he marched to Kabul, but Kandahar remained his capital during his reign. He built a new town to replace the fortified town of Nadir Shah, and gave it the title of *Shahr-i Afsar* (the "Fortress of the Soldier"). Kabul was occupied with but slight resistance, he reduced Ghazni, subdued the Ghilzais and appointed Durranis governors over them, and then immediately proceeded towards India. It must be remembered that he regarded himself as heir to all Nadir Shah's Eastern dominions which included all the country west of the Indus called by Muhammad Shah. But Ahmed Shah aimed at rivalling his predecessor's exploits, and was by no means satisfied with this limited Indian province. The empire of Delhi was no longer formidable. Nadir Shah's invasion had shaken it to the core, the Sikhs were rising in power in the Punjab, the Marathas in central India, and there was every prospect of success for a bold invader. But Ahmed Shah's first invasion (1103=1745) failed. He took Lahore but was defeated at Sirhind (March 1745) by the Sikhs. He returned to Herat, and his brave son Mir Mannu, but the chief was killed in the action. The Emperor Muhammad Shah died soon after, which led Ahmed Shah to renew the attack (1103=1749), and Mir Mannu, now governor of the Punjab, receiving no support from Delhi, submitted to Ahmed Shah, and placed the provinces of Lahore and Multan under him. Ahmed Shah returned to Kabul, passing on the way through the Kohistan, Multan, Jhelum and the Bolan Pass.

During the next four years he was occupied with the affairs of Khuzistan. He took Herat and advanced on Meshhed, which he occupied. Shahrokh, the grandson of Nadir Shah, was left by him in possession there, and he succeeded in 1103 (1750) in taking Nishapur which Mir Mannu had asked him. The next year (1104) was seized and blinded by Mir 'Ali Akbar Khan of Balkh, but Ahmed Shah restored him to his throne and defeated and slew Mir 'Ali Akbar Khan. The same year he came into collision with the rising Kaffirs power, but was repulsed at Awarahad, and never advanced further to the west. A son of Ahmed Shah struck at Meshhed in the 5th year of his reign may be referred to this period.

In 1109 (1755) Mir Mannu died, and his widow Maghulshah Begum usurped the power in the Punjab, and ruled with her favorite Adina Beg. The viceroy Ghazni, who was in possession of Delhi, seized on the opportunity of recovering

the privilege for the empire. He married the daughter of Moghul Emperor, and carried her and her mother to Delhi, and seized upon Lahore.

Ahmed Shah immediately marched to Lahore (1170 = 1756) and expelled Adina Beg, who had been left in charge there. He then advanced to Delhi. Ahmad Shah and the helpless Emperor Alamgir II could offer no real resistance. Nadir al-Dawla Salala joined Ahmed Shah, and he entered Delhi cautiously with the Emperor and the ruler in his train. He spent only forty days in Delhi and it was thoroughly plundered by his followers. Gold and silver coins dated 1170-71 were struck in memory of this occupation. Nadir al-Dawla was also plundered, and Ahmed Shah, before he returned to Afghanistan, placed Nadir al-Dawla in power. He had already made his son Timur Nizam of Balkh and Multan, and arranged a marriage for him with the daughter of Alamgir II. He himself married a daughter of the late emperor Mohammed Shah. Timur was left to deal with the disappointed Governor Adina Beg, who was in revolt and had stirred up the Sikhs, now numerous and powerful. He was discomfited by the Marathas, who began to spread over the Punjab: Adina Beg took Lahore in 1173 (1759), the Sikhs took Amritsar and sacked Samund, and the Marathas reached Multan and the banks of the Indus at Ajak. These events brought Ahmed Shah into India a fourth time (1174 = 1760). The emperor Alamgir II was murdered by Ghazi Khan on his approach, and the young prince Ali Durrani, afterwards Shah Alam II, fled to the English for protection. Ahmed Shah came by the Bolan Pass and marched northward through the Saradhi to Peshawar and thence followed the ordinary route to Delhi through Lahore. The Marathas fell back before him, and he occupied Delhi, but a great Marathi army approaching from the north forced him to collect his forces and retire upon Panipat. This great force included all the leading Marathi chiefs under the command of Sadashiv Rao, and a body of 15,000 under Shriji Lal. This combination of the most warlike races among the Hindus, with the Marathas rallied under Ahmed Shah's banner, gave the war the aspect of a religious struggle. The Marathi army had a nucleus of troops drilled in the European fashion, with a numerous cavalry and powerful artillery. The strength of Ahmed Shah's army was in his Afghan force. The battle which followed had been preceded by numerous smaller engagements. It ended in the complete defeat of the Marathas, and with it ended their hopes of an empire in Northern India. Ahmed Shah, however, probably wisely, did not attempt to take this place. Lahore and Multan were difficult to retain, and he recognised the impossibility of holding a more extended empire. This campaign is illustrated numerically by coins struck at Delhi, Bareilly, Meerut, Agra and Sahind (for Sahind). He returned to Ghazni, and the Sikhs broke out almost immediately. They laid siege to Ghazni near Amritsar.

It was against these Sikhs that Ahmed Shah's fifth expedition (1175 = 1761) was directed. It is related in the *Wajiz-i-Durrani* that he was one night suddenly, picked a body of horsemen, and rode off into India, and that when he reached Ghazni he had but ten or twelve followers, yet such was the terror inspired by his name

that the Sikh army fled. He collected his army and pursued them and defeated them near Sahind and south of Ludhiana with enormous slaughter. This fight is known in the Sikhs as the 'Ghalughra' or 'great extermination'.

Ahmed Shah returned through Lahore, and left a governor in Sahind, who was shortly afterwards defeated by the Sikhs. The town of Sahind was destroyed (1176 = 1763) and is still a ruin. These events brought Ahmed Shah into India a sixth time (1177 = 1764). He traversed the Punjab and marched back again without effecting much; and three years later he entered the country again (Sikhs = 1767; his last invasion of India) and now tried to conciliate the Sikhs and to form a party among them. Ferozabad was made over to the Sikh ruler of the Patiala State, and the Maharajahs of that State still bear Ahmed Shah's name on their coins. Ahmed Shah's troops were, however, discontented, and a large body deserted him; his own energy was now failing, and he was harassed by the Sikhs. In his retreat, the Sikhs soon after took the powerful fort of Rohtak near Lyallpur which had been built by Sher Shah.

During the intervals of his Indian campaigns Ahmed Shah had occasional outbreaks to deal with in his country. The Ghazis rebelled about 1167 (1744), but they were easily subdued. Nizam Khan the Brahui chief of Khat who had been fealty to Ahmed Shah declared himself independent in 1171 (1758) and Ahmed Shah laid siege to Khat, but his army suffered greatly, and he at last accepted the terms offered by Nizam Khan. The Khans of Khat were from this time on independent in all but name. Many Baluch, however, continued to serve in Ahmed Shah's armies, and he also employed many Afghans. His army suffered much from the heat on his return from his fifth invasion of India in 1176 (1763), when he had to march rapidly to repress a rising among the Ahmad Shahi Herat. After his last invasion of India he also had to return suddenly in a similar manner, to deal with the affairs of Ghazni. Nizam Khan, son of Shahmukh was in rebellion, and a large combined Persian force opposed Ahmed Shah's army which was commanded by his son Nizam, assisted by Nizam Khan the Brahui chief. The Persians were defeated and were sheltered by Shahmukh himself in the sacred city of Mashhad. It was finally taken after a long blockade. Shahmukh was still treated with consideration by Ahmed Shah, who never forgot his obligations to Nizam Khan. He was left in possession of Mashhad, but provided Ahmed Shah the services of a body of troops and gave his daughter in marriage to Timur. Ahmed Shah's health had been very bad for some time, and he appears to have suffered from cancer. He retired to Mughal in the Toba hills in the Atakrai country and died there in 1184 (1773) in the sixtieth year of his age after a reign of twenty-three years.

Ahmed Shah was by nature a bold soldier and leader of men, but he failed to found an enduring empire beyond the limits of Afghanistan. He was very popular with his own tribe, the Durranis, even with the rival Ghilzai class, whose family proved fatal to his success. He was able also to establish Durranid control firmly over

the other Afghan tribes, and the Tajik Nation and tribes of Afghanistan, and that control remains firmly established till the present day. His success was due to his personal qualities, force and conciliation being both brought into play; and the revenues derived from his Indian expeditions enabled him to dispense with heavy taxation. He knew his own limitations, and did not attempt to extend his Indian rule beyond Lahore and Multan. He undoubtedly perceived the impossibility of maintaining distant conquests with the uncertain means at his disposal, and his later dealings with the Sikhs show that he contemplated the rise of a dependant Sikh power. He could hardly foresee how that power would grow at the expense of his weak and divided successors and of the moribund empire of Delhi. Lahore indeed was practically a Sikh possession at the time of his death, but Peshawar, Multan, the Deccan and Kashmir remained attached to the Turkish kingdom for nearly forty years longer. He had already recognized the practical independence of Baluchistan, and Khorāsān was evidently destined soon to become a British possession with the exception of Herat which is essential to the independence of Afghanistan. It is clear then that Ahmed Shah, though he did not found a great empire, is entitled to the credit of founding the State of Afghanistan much as it exists at present. As a military commander he takes a high rank. His overthrow of the Mahrattas at Panipat was a victory of the first order, one of those battles which affect the whole course of history; although its importance did not affect his own dominions except in so far as it strengthened the Sikhs by removing the Mahratta menace. Ahmed Shah must be considered as the most important man that the Afghan race has produced. His only rival was Shah Shāh Sor, but his exploits were confined to India while those of Ahmed Shah were intimately bound up with the fortunes of his own and enemy.

(M. LONGWATER DAWES.)

AHMED TA'IB *Ṭā'ib* (See 'OTHMANIYA').

AHMED TEKUDER (See TEKUDER.)

AHMED WAFİF (See WAFİF.)

AHMED WEFİK PASHA, Turkish statesman and famous man-of-letters, was born at Constantinople in 1235 (1819-1820) and began his diplomatic career as first secretary of the Turkish Embassy in Paris under the reign of Louis Philippe. He then filled the same office at St. Petersburg and after that lived a long time in Tehran as plenipotentiary, whence he was sent to Paris as Ambassador. Later on he was appointed *Awāz-Minister* at Constantinople. Here he occupied successively various high posts, became Grand Vizier and Wali of Baghdad.

(Buzess), was for a time out of favour with the Sultan, and spent the rest of his life in various houses in his country-seat in *Ḥamāmī* (Hamam) in the *Ḥamāmī*, where in March 1307 (1890) he died and was buried.

As an historian, a philologist and a translator he has made good use of his pen in promoting modern ideas, and in many ways has done good service in improving the modern writer's language. The most important of his works is the *Ḥikāyat-e-İslāmī*, first ed. 1293, second ed. 1306, a treatise in two volumes. The first volume contains the Turkish, the second the Arabic and Persian elements of the *Ḥikāyat*-Turkish vocabulary. The second volume was first published as an addition to the second edition (in the review by Barthelemy de Meynard in the *Journal Asiatique* 71, Paris, viii. 275-87, series, ix. 370). He also deserves to be mentioned as the first translator of Molière. He seems to have rendered the whole of Molière, and according to the *Grande Encyclopédie* "his principal oeuvre de Schiller et Shakespeare" as well. His nothing has appeared in print of the last mentioned works, and but very little of his translations of Molière. I only know *Les Femmes Savantes* and *L'École des Femmes*, which appeared in 1286 and are both in my possession. He also mentions only these two. They are not literal translations, but independent adaptations, skillfully arranged in our Turkish conditions. He had these plays performed by Armenian in his own theatre at *Ḥamām*. He also translated Fontenelle's *Télémaque* (*Telamün*, 1298) and Voltaire's *Œdipe* (published in 1298 as an appendix to a collection of *Œuvres* par *Abd al-Kārim*), other works of his are: 1. *Ḥikāyat-e-İslāmī* *Wāḡẓat* an epitome of the Ottoman history and the reign of Sultan 'Abd al-'Aziz, especially intended for schools, which has passed through several editions (1st ed. 1284), 2. An edition of *Gülistan* (1286), 3. An edition of a translation of *La Fontaine's* *Parallèle*, which had been prepared by *Wāḡẓat* (1286), and 4. an edition of the *Ḥikāyat-e-Afghānī* by Mir 'Ali Shīr Nawā'ī, in collaboration with *Wāḡẓat* (1289). He had planned the publication of an extensive *General* dictionary, but neither this nor any other of his *East-Turkish* collections have ever been printed.

Biography: The necrology of Ahmed Wefik Pasha in the *Ḥamāmī* *Ḥamām*, 10th year, 1307, p. 38, which was partly founded on the article in the *Grande Encyclopédie*, and *Journal Asiatique*, 6th series, ix. 368, 7th series, ix. 284, and 8th series, ix. 344. (F. Giese.)

AHMED YESEWI, one of the oldest and most famous *East-Turkish* *Shakh* and *sayyid*, was born in Yast (the present town of *Tashkent*) and died there in 362 (1166). The year of his birth is not known, but in his *Ḥikāyat* it is stated that he was 67 years old when he died. When he was seven he became a disciple of a certain *Shaykh* *Arslan*, concerning whom no further information has been found. After his death Ahmed went to *Ḥamām*, where he became an adherent of the celebrated *Shakh* *Yusuf* *Ḥamāmī*. Afterward he returned to Yast, where he remained until his death. In 300 (1397) Timur ordered a mausoleum to be erected on his tomb in *Tashkent*, which is at present being examined by Prof. *Vassilovski* by order of the Russian committee

for the exploration of Central and Eastern Asia. The Nagai legend represents the popular Turkish hero Hırsçıl as a descendant of Ahmed Yesewi. Ahmed is considered to be the chief of Turkish Central Asiatic mysticism, and is in such highly revered. Hakkı Ata belongs amongst others to the fourth generation of this School. Ahmed's mystic poems (*hişmet* or *mesnevi*) are much read. His *Divan* has often been published in Kazan under the title of *Ahmed-i Hakkı'nın Divanı* *Şerhi* *İzmir* *1275* *Ahmed* etc. This *Divan* has not yet been examined in detail. But it is sufficiently evident from its contents, that not all the poems can be the work of Ahmed himself. Unfortunately not a single old manuscript of the *Divan* has been found. Four later ones are in the Asiatic Museum at St. Petersburg: nos. 2931, 2932, 2933 and 2934. Ahmed's language in the manuscripts that are extant and in the printed edition has doubtless to a great extent been modernized by later scribes.

Bibliography: The legend concerning Hakkı Ata by C. Selmann (Kuzen), in the *Iranistik. Impres. Akadem. Nauk*, 1898, 12, 20, 2, and the above mentioned Kazan edition of Ahmed Yesewi's *Hişmet*.

(P. MILLERANSKY.)

AHMEDABAD is the capital of the district of that name in India (Presidency of Bombay), on the river Narmada. In 1901 the town numbered 185,599 inhabitants, of which 1/10 were Mohammedans, the district (3816 square miles = 9883 square kilometres) containing 795,967 inhabitants. Ahmedabad is one of the most beautiful towns of India and is famous for the manufacture of gold and silver brocade, of silk, cotton and wool (*khaddar*) materials. It is equally noted for its brass and bronze works, and for the manufacture of mother of pearl ornaments, of japanned goods and woodcarving (luteal-boxes f. l. *gondas*). There are also a great many monuments of Moslem art, amongst others mosques and minarets of the XIVth and XVth centuries.

Ahmedabad was founded in 1411 by Ahmed Shah I [q. v.], son of Ghalib (the same who made the old Hindu town of Ayodhya his capital), and he enriched it with countless buildings. In the first century of the Mughal dynasty it rapidly attained prosperity. But after that it fell into decline, enjoyed another period of prosperity under the reign of the Mogul emperors, until in the XVIIIth century it again began to decline. In 1818 the English took possession of the town.

Hüps, *Ahmedabad*; Fergusson, *Indian Architecture*; Schlegelweil, *Handel und Gewerbe in Ahmedabad* (Osterr. Monatschr. für den Orient, 1884, p. 160 ff. seq.).

AHMEDİ, with his full name Tâdî el-Mu Ahmed b. Ibrahim el-Ahmedî, was one of the most celebrated West-Turkish Ottoman poets of the 8th (14th) century. It is very believe Tâdî el-Mu Zâde he was born before 735 (1334-1335) in Germiân, at that time an independent principality, but now part of the vilayet of Rûm. According to Tâdî and the historian 'Atî (from Gallipoli) however, he was born in Sams. He equalled his brother the poet Mawlânâ

Yûnus in remarkable talents and ambition. After he had studied the sciences at home he went to Cairo, where he came into close contact with his countryman İzzeddin Fakih, who afterwards became a famous physician, and Mawlânâ Şems al-Dîn Muhammed el-Fârîdî. After his return he entered the service of the ruler of Germiân as *hâjjâ*. There he seems to have devoted his leisure hours to composing his *Alexander nâme*. His master however, Mîr Sülmân, to whom the work, according to the manuscript before 792 (1390), was dedicated, is said to have been but little edified by it. After that we find him at his new seat Amasia in the company of Timur. Their meeting evidently took place after the battle of Angora and the death of Bayezid I, about the time when the powerful conqueror, with a view of peopling Lâna again, the eastern country of the tribes of the Karamanians, caused these tribes to be removed thither from the country of Tokat, Amasia and Gâsarîya, where they peacefully lived for 150 years (1403). The proud monarch, who had subjected the whole of central and eastern Asia, is said to have honoured Ahmedî with his conversation on that occasion. Be that as it may, after the reappearance of the petty monarchs and the revival of their continuous feuds, Ahmedî in order to escape from the utter unsafety which prevailed in Anatolia, went to Byzantium's eldest son Salâmân, who beyond Bosphorus kept a splendid court in Adrianople (1402-1410), at which he gathered men of culture and talent from all the Ottoman provinces. The poet wrote a great number of *kasidas* and *ghazals* for the prince, which he afterwards collected into a *Divân* (*Tab. Vat. Cois.* p. 113; *Reichh. Verzeichn. d. Hschr. etc.*, in *Berlin* No. 366). His Salâmân fortune began to waver — in 1410 he was killed on his flight to the Greek Emperor in Constantinople — so Ahmedî lost Rumelia and returned to Amasia, his adopted country. There he died in 1413.

The poet's work consists in having first introduced profane subjects into West-Turkish literature. But his *Alexander nâme* is also the Turkish example of an epic describing the exploits of Alexander the Great, which shook the whole of the East. The campaigns of the great king (counted as far as Japan, west as far as Morocco) are described in 8290 couplets, and at the same time a mass of encyclopedic knowledge in a didactic fashion, put into the mouth of a brilliant staff of philosophers, amongst whom Aristotle and Plato are prominent. Psychology, medicine and astronomy are expounded, and finally Aristotle is represented as giving an account of universal history, in which he speaks prophetically of the events succeeding the time of Alexander. The arrangement of the subject-matter for the greater part founded on the history of Alexander as it is given in Firdawsî's *Shâh nâme*, in contrast to the *Shâh nâme* which was then in vogue Ahmedî still adhered to the prosaic style of expression (*şerâif* *halkî*), which was used by the oldest West-Turkish poets. But he handled it with such freedom, as to cause the higher *shâh nâme* of the leading Ottoman literary critics of the 16th century. According to a statement found in the poem, the work was finished on the first of Rabi' II (and not, as was erroneously read by Gibb, on the last of Rabi' I) of the year 792

(13 March 1390). But some copies continue the thread of the narrative till the death of Nizam al-Din, and mention Salim al-Din as the sultan reigning by right. In other copies Salim al-Din's defeat of Timur (813 = 1410-1419) is the concluding episode. To the list of manuscripts given by Rieu (*Cat. of the Turc. Mus. in the Bib. Mus.*, 1885, p. 765) must be added *Handschriftlicher Kat. der Kgl. Biblioth. zu Berlin*, *Indischer Teil*, No. 963.

Ahmed's first biographer Sahi (d. 1548-1549) also mentions him as a romantic poem *Shahid-e-Ahmed*. He is also said to have translated most of the *hikayat* of the Persian poet Salim al-Din into Turkish verse.

(K. SCHIMMEL)

AHMEDI is a gold coin called after Ahmed in India (q. v.).

AHMEDIYA is the name of the adherents of Mirza Qasim Ahmed Khalid of Kadian, district of Gurdaspur in the Panjab. In 1880 they were with their own approval entered under that name on the official census lists of the Indian Government, as a separate modern Muhammadan sect. The Ahmedis are especially numerous in the Panjab, but also in other provinces of the Presidency of Bombay and elsewhere in India. They are found besides in other Muhammadan countries such as Afghanistan, Persia, Arabia, Egypt etc. Their number is gradually increasing in consequence of religious propaganda. Their principal organ is the *Review of Religions*, written in English, which since 1902 has been published regularly once a month at Kadian. But they also make use of various other papers in Indian languages—weekly, monthly and quarterly. They have also separate extensive writings, amongst which *Harshina Ahmediya* (*The Arguments of the Ahmadiyah*), written by the founder Mirza Ahmed, is the most important. The first volume of this work appeared in 1880, and in it the author claimed the dignity of a Mahdi, though not until March 4th 1889 did he demand the homage of his adherents.

The doctrines of the Ahmadiyah agree on the whole with those generally taught by the Islam. The most striking differences concern only the Christology, the vocation of the Mahdi and the *ghibat* (the holy war). As to the first mentioned doctrine, they assume that Jesus did not die on the cross, but after his apparent death and resurrection migrated to India, strictly speaking to Kashmir, in order to preach the gospel in that country. There he is said to have died at the age of 120 years; his tomb at Srinagar is still known, but is mistaken for that of a prophet called Yuz Asaf (which according to the Ahmadiyah must not be explained as a corruption of Bodhi-sattva). As the investigation of a certain Musta Muhammad Husain *fatwa* against Mirza Ahmed was published in Kala, purporting that this doctrine disagreed with the Koran and therefore had to be looked upon as heresy. Regarding the vocation of the Mahdi and the *ghibat* the Ahmadiyah teach, that the task of the former is one of peace, and that the *ghibat* against the unfaithful must be conducted with peaceful means instead of instruments of war. Under all circumstances sincere abstinence must be given to the Khalid

Government. The Mahdi himself must be considered an incarnation both of Jesus and Muhammad. To believe in him is an article of faith, because first of all his coming only in the 14th century of the Hijra was predicted by Muhammad, and secondly because he proved his divine vocation by his prophetic gift. His entrance into the world was manifested itself; and only the terrible destructions caused by pestilence and earthquake during the last decades, but also the death of certain people are said to have been prophesied by him. When one of his last mentioned predictions came true through the murder of an inhabitant of Lahore, Mirza Ahmed was accused of the crime of three Christian missionaries, but acquitted in court.

Since the Mahdi (who died in 1908) resigned his leadership because of old age, the affairs of the Ahmadiyah have been conducted by the *Khali* Achumant Ahmadiyah.

Houtman; in the *Revue de monde musulman* I. 533 et seq. (derived from information supplied by the Ahmadiyah themselves). (M. Th. Houtman.)

AHMEDNAGAR is the capital of the district of that name in India (Presidency of Bombay) on the river Sira. In 1901 the town numbered 11,000 inhabitants, the district 65,800 square miles = 17,058 square kilometres) 537,695 inhabitants. The town was built in 1494 by Ahmed Nizam Shah, the founder of the dynasty of the Nizam-Shahis (q. v.), who reigned for about a century in Ahmednagar, until, after a brave defence by Chhatrapati, the place was taken by Akbar's troops and annexed to the Mogul empire. After the death of Aurangzeb, Ahmednagar became subject to the Marathas, and in 1803 Daulat Rao Shinde was obliged to surrender the town to the Duke of Wellington.

Bibliography: *Bombay Gazetteer* xvii. 1 (1904).

AHMEDU SHARIF D. AL-HAJJI 'OMAR, the founder of the Tijani empire in Western Soudan, was in 1862 left in charge of Segu by his father, before the latter had effected the conquest of the Macina, and he maintained his authority there, in spite of the opposition of his brothers, after the death of al-Hajj 'Omar in 1865. In 1877 he took the title of *Amir al-Mu'minin*, and while keeping the district of Segu under his immediate authority, divided the provinces of Upper-Senegal, Kaarta, M'pandjaye etc. amongst his brothers, who became practically independent rulers. But while the French troops were on the march to occupy the country, Ahmed succeeded in reestablishing the empire of his father for a short time, by poisoning Tijani, emir of Bandagara. Vanquished by Colonel Archimand, who took Segu in 1890 and M'pandjaye in 1891, Ahmed made friends with Sumory. But Archimand took Djenné and Bandagara (1893), and Ahmed on his flight eastward crossed the Niger and sought refuge in Sokoto. Cf. Le Clézio, *L'Islam dans l'Afrique occidentale* (Paris, 1899).

(O. DEMMEHNS.)

AL-AHNAP is the nickname of Sahib al-Kala (this podignie is given to him by Ibn Kutilub, *al-Ahbar* p. 216, 1; *Tahrik* II. 438, 1). Sometimes he is also referred to by the name of

al-Dabbāh, but it is not specially used and might moreover easily be confused with the name of the famous al-Dabbāh b. Kays. His kunya is Abū Bāḡh. He belonged to the Tamīmite race of the Murā'is. 'Uthāl, whose dialective name is often said to consist in the fact, that al-Aḥsaf had belonged to them, for he was looked upon by the Tamīmites of Bagra as one of their greatest men. On the mother's side he was descended from the Ḥabshīti Awd b. Ma'n. He was born in the time of heathenism. He was a delicate child and had crippled feet, for which he had to undergo an operation, and remained heavily-legged for the rest of his life ('Aḥsaf' = heavily-legged). His father was killed by Māzinītes in hunting times. The Tamīmites are supposed to have embraced the Islām at the instance of al-Aḥsaf; but the reliable documents do not contain any reference to it. During Muḥammad's life-time he did not attain especial prominence, but afterwards he took a leading part in the conquest of Iraq; first he was under the chief command of 'Alī b. 'Abī Tālib, to whom in 30 (650-51) the supreme command of the conquest of Khuzistān had been entrusted. Especially under the latter's command was al-Aḥsaf, at the head of the vanguard, one of the most active and energetic generals. He conquered the country of Kūbistān, the towns of Herat, Merv, Mervānd and Balḡh and other important places. Long afterwards a castle near Mervānd was still called by the name of Bāḡ al-Aḥsaf in honour of him, and a place in that same neighbourhood Ḥaḡḡ al-Aḥsaf. He even led his troops into the dangerous country of Tokharistān. He did not succeed, it is true, in preventing the escape of the Persian King Yazdegerd III, who returned gradually towards Central Asia; neither was he successful in his campaign from Balḡh against Khwarizm. Nevertheless it was prominently his doing, which hindered the Persian king from getting a firm footing anywhere; he also baffled the latter's endeavours to incite the Persian tribes against the Mohammedans, and he prevented the outbreak of serious difficulties with the Transoxanian Turks in the far East. He had moreover in guard a long and constantly endangered military route. He was also for some time deputy-governor of part of Khuzistān in the conflict between caliph 'Alī and the party of 'Aḡḡa; but he was personally a declared partisan of 'Alī's; but he was not able, it seems, to guarantee any actual interference on 'Alī's behalf by the Tamīmites. Still in so far did al-Aḥsaf contribute to 'Alī's success as to induce the Tamīmite contingent of the population of Bagra (which numbered 4000 men) to remain neutral during the "battle of the camel" (36 = 656). After the battle had been decided in 'Alī's favour, al-Aḥsaf is said to have been the first of the Bagra people to do him homage. Also in the battle of Ḥama (37 = 657) we find him on 'Alī's side. He is said at that time to have advised against 'Alī b. Mālik being appointed arbiter. The Umayyad government afterwards considered him a man of great influence with his tribe, as was evident from the fact, that he was one of the leading men, whom the emirs nominated in Damascus in 39 (675-676) in order

to get their consent to the designation of his son-in-law 'Uthāl to the succession. Al-Aḥsaf on that occasion spoke the well-known sentence: "I fear God if I live, and you if I speak the truth". But he expressed his aversion to the plan in unmistakable though respectful words, which however remained without effect. — In Bagra he exerted his influence over his Tamīmites to persuade them to remain for the present reserved towards the Arabians, who especially at that period migrated to Bagra in large numbers. The Arabians consequently accepted the help which was offered them by the Rāḡḡites. So al-Aḥsaf stood to see, that in the fatal antagonism between the Muḡḡa (to which the Tamīm belonged), and the Rāḡḡ, the Arabians adhered to the Rāḡḡ, in consequence of his own policy. During the disorders after the death of caliph Yazīd I, the governor of 'Irāq, 'Uthāl Allāh b. Zayd wanted to usurp the dignity of caliph. Part of the Tamīmites, who had done him homage, went over to his opponent 'Abd Allāh b. al-Zubair, and al-Aḥsaf tried in vain to bring them to reason, which he had secured the governor that he would be able to do. The consequence was that 'Uthāl Allāh sought an alliance with the Arabians, and they were supported by him in a battle with the Tamīmites, which, occasioned by a snow, broke out in the streets of Bagra. In an angry mood al-Aḥsaf at first kept away from the battle, and not until the danger was at its height could he be prevailed upon to organize the defence against the united forces of the Arabians, Bakrites and Ashḡalites. In his principal object was to reconcile the various tribes, settled in Bagra, to mutual forbearance, and to combine their forces, if possible, against their common foe the Khawāḡites. An energetic action against this sect was what he desired most. For that reason he began to negotiate for peace, before a regular battle (for which the troops of both parties had already selected their positions) could be fought in the large market place of Bagra. Although the conditions stipulated by the enemies were exceedingly humiliating (the Tamīmites would have to pay for all the damage caused by the preceding fights), al-Aḥsaf consented to them and paid part of the sum out of his own pocket. To his great satisfaction his Tamīmite fellows accepted the conditions of peace and appeared quiet returned to Bagra. — In 65 (684-685) the people of Bagra wanted him to march against the Aḡḡalites, but he referred them to al-Muḡḡalib as a man better qualified for that undertaking. In 67 (686-687) he opposed Muḡḡḡir energetically, and commanded the Tamīmite contingent in Muḡḡalib's campaign against Kufa, the residence of Muḡḡḡir. Shortly afterwards he died at an advanced age, without a descendant, and was buried in Kufa. (RECEIVED.)

AL-AHSA', also called LAḡḡ or AL-ḤAḡḡ, was originally a fortress in al-Baḡḡrān [q. v.], not far from al-Ḥaḡḡ, the ancient capital of this district. The Karmal chieftain Abū Ṭāḡḡ al-Ḥaḡḡ called founded it in 314 (936). He called the place al-Muḡḡḡḡ, but such name and history remained known by the old name of al-Aḡḡ. The Persian poet Nāḡḡī Khawāḡ, who visited the place in 443 (1051) has left us a description of al-Aḡḡ, and of the Karmal government there. Nowadays the capital is usually called Ḥaḡḡ [q. v.], though the name of al-Ḥaḡḡ is not quite unknown. But

was a masterpiece of the architect al-Malik al-Muḥammad Shārah al-Dīn 'Izz, who was governor of Damascus from 597 till 615 (1200—1218), and afterwards, from 615 till 624 (1218—1227) in lieu of the cousin of Damascus after the death of his father al-Malik al-'Adil. In 608 (1211—1212) the town of Salḥād in the Haurān and the surrounding districts were given to him in fee. He was also appointed Majordomo (Nāṣir al-Dīn). In the year 624 (1227), when al-Malik al-Muḥammad Shārah had succeeded his father 'Izz to the throne of Damascus, Aibeg was even raised to the dignity of regent of Damascus and as such held the entire political authority in his hands. After a short time however Damascus was conquered by Hwāz's uncle al-Malik al-'Adil. Aibeg was banished from the Regency, but he was allowed to keep his fiefholds in the Haurān. In 636 (1238) he is still called "Lord of Salḥād and Zūrā". But after that he became suspected of treacherous designs and lost his political position. He died in 648 (1249) at Cairo. His remains were removed to Damascus, and interred in a mausoleum especially built for him. Aibeg has rendered considerable service to the countries which he governed by the erection of various works of architecture. In Damascus he founded three Hanafite academies, and a fourth one at Jerusalem. As Majordomo he had to be especially concerned about the building of Khāna. As Governor of Salḥād he tried to promote the traffic along the commercial route from Northern Arabia and Mesopotamia to Damascus, as far as it ran through his domain. He erected the desert castle of Kalat al-'Asraḥ, had the large water-works (Maṣā'ir, otherwise Birka) in 'Irak repaired, and built a large Khān in Sela. His plans for building communicated itself to his subordinates, especially to his masterlike 'Alau al-Dīn Kayq. The following amongst his buildings in his domains deserve special mention: a Khān in Salḥād (611 = 1214—1215); a tower in the fortress of Salḥād (617 = 1220—1221); a tower (minaret) in the mosque of Salḥād (630 = 1233—1233); a castle in Kalat al-'Asraḥ (634 = 1236—1237); a Khān in Zūrā (636 = 1238); a reservoir in 'Irak (636—637 = 1238—1240); and a mosque in al-Hayā (638 = 1240—1241). About the year 630 (1233—1233) the mosque and Khān in Sela were also founded. The exact date is now known, the inscriptions having been preserved in a fragmentary state. — Both Shārah al-Dīn 'Izz and his masterlike Aibeg are well known from the time of the crusades.

Bibliographie: Ibn Khallikān, *v. v. al-Muḥammad 'Izz*; van Berchem, in the *Zeitschr. f. Deutsche Palästina-Forsch.* vol. 34 p. 294; Littmann, *Semitic Inscriptions*, p. 204 p. 205; Humand-Mueller, *Albanian dām in al-Bihar al-Sayyid* in *Syrie de Syrie* v. 36 p. 294; 336 p. 294. (LITMANN.)

AIBEG KUTB AL-DĪN was the first ruler of the so-called Slave dynasty, which after the death of the Ghaznawid Shāh al-Dīn (Muḥammad al-Dīn) Muḥammad (p. 6) came into power in Delhi. Aibeg was a native of Turkistān and had come to Nishāpur as a slave of the Kaḥl Fakhr al-Dīn 'Abd al-'Azīz. Afterwards he arrived in Ghazni as a slave of the above-mentioned Muḥammad Ghaznawid. The latter soon noticed the eminent talents of his slave. After Aibeg had vanquished the Rāj-

puts in a great battle near Narain and had conquered Aḡra and other places in India, Muḥammad Ghaznawid appointed him his commander-in-chief (Sipāh Sālār) in India, and entrusted to him the complete subjugation of the country. After that Aibeg conquered Mīrā and Delhi, took a prominent part in the conquest of Bannar (590 = 1194) and in the war of the Ghaznawids against the Rājās of Vārāṇas, gained a big battle against the prince of Anahawra, took the fortress of Kāndhār (599 = 1202), in short, the whole of Hindustan north of the Wendhya mountains was annexed to the dominion of the Ghaznawids mainly by his strategy. Meanwhile Aibeg had chosen Delhi for his residence, and after Muḥammad's death (601 = 1206) he was recognized by his successor (Shihāb al-Dīn Muḥammad) as an independent sultan. Then Aibeg began a war against another former slave of the Ghaznawids, named Vohān, who had risen to princely dignity in the same way as he had done. For forty days he besieged Ghazni, the capital of Vohān. Not long after his return to India he died in 607 (1210), in consequence of a fall which had been incurred while playing the Persian polo game. His son Arḥam Shāh being unable to assert his authority, Aibeg's dominion passed into the hands of his slave Muḥammad (p. 6) who had served him in the same way as Aibeg in his time had served Muḥammad Ghaznawid.

Aibeg was not only an eminent warrior, he gained great fame by his liberality, his justice and his love of art. The Kaḥl Mīnār, which can still be seen at the principal mosque not far from Delhi, was begun after him. The inscriptions which a century have been published by Thomas in his work *The Pathan Kings of Delhi*, p. 10, also *Archaeol. Reports* I, and IV.

Tānbi) al-Biḥār al-Munawwar al-Gharīb; *Tārīkh al-Furqān* I. 105 p. 106; Thomas, *The Pathan Kings of Delhi*; Hammer, *Geschichte* v. 172 p. 174; Klaproth, *The history of India*; Elliot and Dowson, *The history of India* II.

AL-AḤDARŪSĪ 'Aḥmad al-Kāḥl al-Nishāpūrī, born in 1015 (1222), was a mystic, belonging to a South Arabian family of derwishes, which had been famous for ages. In his youth he accompanied his father to India. But a couple of years later he returned to his native country and after a few years' journey he settled down in al-'Adīl. In 1074 (1260) he removed to Cairo, which he had already visited three times. Thence he undertook several journeys through Syria. He also went to Shambūl. A year after his visit there he died in 1103 (1278).

He wrote various works on mystical doctrines according to the ideas of the Nakshbandiyya order. He was also the author of a collection of poetry *Tawāṣiḥ al-Nāṣir*, which was printed in Cairo (1387) along with two supplements: *Tawāṣiḥ al-Nāṣir* (concerning his experience in Egypt), and *Ḥikāyat al-Nāṣir* (containing letters from Egypt).

(BROCKELMANN.)

flooded by its waters. This steep passage (*safah*) was called *Ashbat Alla* after the neighbouring town. The crusaders, desiring to extend their power also over the Red Sea, appeared in Alla in 1170, and annexed it to the principality of Cassan Mount. They fortified a little island opposite Alla and built a small castle in the main well, blocking thereby the connection between Egypt and Arabia (Syria). This made it necessary for Saladin al-Din (Saladin) to recapture both island and town. He had a fleet carried to the bay of Alla (the ships having been taken to pieces and loaded on the backs of camels), laid siege to both Alla and the island and took them in 1171. A similar episode took place in 1181, when Rengish, prince of al-Karak, also caused ships to be transported thither and surrounded the Muslim garrison until they were hard pressed. During the latter siege the stronghold on the island was levelled to the ground, and part of the town destroyed. But the latter soon revived, and maintained its importance under the sway of the Ayyubids and Mamluk rulers of al-Karak. The disorders of the 15th and 16th century paralysed the commerce of Alla almost completely and caused the destruction of the town. The climate on the coast-side alone was saved, that it might protect the steep passage (*safah*) of the Egyptian pilgrim road. It was called afterwards by the abbreviated name of *al-Aksha*, the word Alla having been dropped. At the present day al-Aksha is part of the Turkish province of Hama (not of Syria = al-Sham). It has been lately connected with Ma'an-Minaana by telegraph. It is the residence of a Muftay (*sheikh*) who is subject to the *Mutasarrif* (governor) of Midia. In 1898 al-Aksha numbered about 30 miserable cottages, built on a volcanic plain between the steep Djebel Luan Neela and the sea. About middle of the south end of the village the square circular mound, bounded by semicircular pavilions. It contains a garrison of 200 men. Twice or three times a year Ottoman ships touch the place in order to relieve and provision the troops. The climate is very unhealthy and the water which springs up from insuperable sources ~~is~~ by the sea is salty and spreads fever. The inhabitants earn a livelihood mostly by trade, and in a few cases by agriculture; they also cultivate palms. About 3500 date-palms in the neighbourhood of al-Aksha are the property of the chief ~~of~~ of Bedouin tribes, who pay about one half, two thirds or three quarters of their profit to the villagers cultivating them. There is no milling. In 1898 no one there could be found in the whole village. Little is left of the ruins of Alla (the according to the modern pronunciation), which are to be found at a distance of 1½ mile towards the north. But at the present day, west-east of these ruins a *yeyla-tree* (*yeyla-ajlita*) is still worshipped as the ancestor of its people (it is inhabited by a spirit), a circumstance deserving of notice, as the ancient town of Raith (= "holy") seems to have owed its name to it. — Bibliography cont. The history of Alla-Aksha is given by Meall, *Arabia Petraea* II. *Bildung* p. 305 et seq.; the same work contains a detailed account of its topography (II. 250 et seq.). 187 et seq.) and situation (III. 47).

(A. 5141)

AILUL. (See **AILLE**.)

ATMAK is an East-Turkish and Mongolic word, almost synonymous with the word named *Ata* in Turkish dialects. The original sense of both words is "father", but they are also used to denote larger tribal unions or political unions. Northern Mongolia (*Khalkha*) is divided into four unions on the basis of the four *khans* (Toghtay-khan, Toghay Khan, Sain-Noyon and Tseren-khan). In Afghanistan four nomadic tribes (*Wazirzai*, *Hazara*, *Pashtun* and *Tajiks*) are called by the comprehensive appellation of *Ata* (*Chakir* *Amak* (four unions)). (W. BARTHOLOMEW.)

ÂN (v.) = Law, institution. Various are the "institutions" of Emperor Akbar, collected by his Vizier Abu'l-Fazl [q. v.] in the third volume of *Akbar Nāma*, under the title of *Âmāl Akbar*.

AIN (أ) = Eye, also spring, substance etc., in the sense of "eye" the word is sometimes respectfully used in compound proper names (*Asaf*), such as 'Ain al-Daula (Eye of the government), and 'Ain al-Mulk (Eye of the realm). In the sense of "spring" it occurs in various geographical names, the best-known of which will be given below. — Concerning 'Ain as the name of an Arabic letter see the next article.

"AIN" is the name of the 18th letter of the Arabic alphabet, used as a symbol to denote 70. The original symbol in the North-Semitic inscriptions was a little circle like our o, whence, as it resembled an eye, the name was derived. It is the voiced (*mughammal*) glottal continuant, the break-coming with the deepest possible articulation (f. l. Linné in 349, *a' mawwalah 'l qurbihi kullika 'Bakim*); the ancient sound is *ā*, to which it is consequently assimilated (*Kamakhshari, al-furusiyyat* p. 192, ex. 114); it shifts its position place towards that of the *ḥ* where it is followed by a pause (*Istif.* p. 190, *al riḡḡ*). Although *ayn* has also been considered the *an* to be the deepest throat-sound, and in that sense he started his termion with that letter. Later writers on the contrary (amongst others al-Zamakhsari, who follows Sibawayhi: *Istif.* p. 188, 1) are mistaken in giving precedence to the final *h*. The Arabs consider it, along with *ha*, the purest and most pleasing sound in their language, because of its deep guttural articulation (*Linné ibid. sup:* "Ebnut's furus" *wa-shafih* *al-muwajjah*); in many Semitic languages, amongst others in Assyrian, but especially in modern Aramaic and Arabic dialects, *ayn* has shifted towards *h*. In general *ayn* denotes the second critical letter of a word e. g. *'ala shif'*.

(WED.)

AIN DILFE is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the ~~temple~~ of Hagar al-Hanani. Its source is on the northern slope of the Jebel Kharja and it runs through a narrow channel cut out in the rock into a pump-room (saki). According to a not yet published inscription, this pump-room was built in 872 (1472-1473) by an inhabitant of the neighbouring village, of the name of Muhammad b. Ahmed. It is highly probable that on account of the

spring a settlement already occupied the spot in ancient times. A few remains of buildings from the Christian era, still more from Islamic times, can yet be seen. There are also a few Muhammadan tombs. The place is now a very small village; it belongs to the people of Semeda. From there to their nomadic headquarters at Kuth encamp there in their tents. The spring is primarily important for the use of the caravans between Antioch and Aleppo, which often rest there.

'AIN DJALUT, 'spring of Goliath', owes its name to the tradition that by it David slew Goliath. It is situated close by the bank of the small river *Jalut*, east of *Le'at*. The crusaders called it Tubania. At this place the Mongols were beaten by the Egyptians under Sultan al-Malik al-Nasir in 658 (13 Sept. 1260). Cp. Weil, *Geogr. d. Chaldäer*, IV 16.

'AIN DRAHAM is a locality in the north of Tunisia, at an elevation of 3641 feet, on the very pass between the Djebel Ferg (3998 feet) and the Djebel Bir (3543 feet), through which the road runs, which leads from the valley of the Medjerda (Souk el-Art) to the Mediterranean (Taharka). Consequently 'Ain Draham is the most important strategic point of Khémis, commanding the whole of the mountainous region. During the French expedition of 1881 it was occupied by the troops of General Lebel. Since then a permanent camp has been established there. A European market-place has developed all round about the military station, numbering at present 500 inhabitants, who find their principal livelihood in exploiting the cork-tree forests.

Bibliography: A. Winkler, *Les principales points stratégiques de la Tunisie* (Paris, Tunisie, 1899); E. Vialat, *La Tunisie du Nord* (Tunis, 1906). (G. YVER.)

'AIN MUSA ('Moses' spring) is situated east of Petra in Edom. Islamic tradition connects it with Sara 3, 17; cp. Benbow and Drowns, *The Province of Arabia* I 431; Mühl, *Arabia Petrea* II 160, 1907 42, and the article *Wādī Mūsā*. — Other 'Moses' springs are: 1. Those at the foot of the Nebo mountains in Moab (cp. *Survey of Eastern Palestine* p. 39); 2. the spring near al-Kafr on the western side of the Hauran mountains (see the map of the Djebel Hauran in the *Zeitschr. d. Dmsh. Pal. Vereins* VII, 115); 3. those on the east coast of the bay of Suez, south-east of Suez. The so-called 'Ain Musa near Cairo is not actually a spring.

'AIN SHAMS is a town in Egypt. 'Ain Shams is the Arabic name of the ancient Egyptian town of On, which the Greeks called Heliopolis because of its famous sun-temple. A recollection of this cult is contained in the Arabic name (sun-spring, eye), which seems to owe its later popular etymology of an old name. In the early Arabians era 'Ain Shams was, according to some authorities, an important town, and the capital of a separate district (*Shams*); but others assert that at that period the place had already fallen to decay and was used as a public quarry. The Fatimide 'Ain built a few castles on the spot, but afterwards the destruction became complete. The extensive ruins, especially the two obelisks (*stelae*) of the temple, stirred the imagination of the Arabs. One of them has been

preserved until the present day; the other collapsed in 658 (1258). It is said to have contained over 200 *finger* of ore. Still at the time of the Arabs a statue of a bearded man with a sword on his back stood between the two.

The other curiosity of 'Ain Shams was its *harem-garden*, which was cultivated under the supervision of the government. During the Mamluk Age the *harem-garden* is said to have grown only here, though formerly it had also been a native plant in Syria. According to a Coptic tradition accepted by the Moslems, the Mother of Jesus had washed the clothes of the child in the spring there on her way back to Palestine after her flight to Egypt. Since that time the water had been salutary, and only on those fields, which were watered by it, the *harem-tree* was able to yield its product, which the Middle Ages held in such high esteem.

Bibliography: Maun, *Égypte* I, 228 et seq.; de Sacy, *Relation de l'Égypte* p. 10 et seq. 56 et seq.; Idri, p. 145; *Ann. Geogr. Arab.* (ed. de Goeje) I 54; VIII 22; Kikla, *arab.* (transl. by Winkler) p. 13, 96; Vailat, *Muséum* III 763; IV 554. 'AIN el-TAMIE (dawn-spring) was a locality west of the Euphrates, not far from Antioch, probably north-west of the latter place. As it was situated on the very border of the Syrian-Arabian desert, 'Ain el-Tamir was primarily important as a provision-market for caravans.

'AIN TEMUSHENT (Ain Temouchent according to the official French spelling) is a town in Algeria (district of Oran), situated at the confluence of the Wād Temouchent and the Wād Senia, at a distance of 45 miles south-east from Oran, and 36 miles north-west from Tlemcen. There are 7000 inhabitants, 4000 of whom are Europeans. 'Ain Temouchent occupies the situation of the Roman town of Albula. At the time of al-Bekri there was in that neighbourhood a locality called *Kayr ibn Sian*. It was found at a distance of a day's march east from the Berber town of Asla, and also at a day's march west from *Mā-rāwa* *Exilis*, a marketplace established by *Ubal-dū* b. *Sian* al-Badāh, the ruins of which can still be seen at the spot called *Medinat Arūn* on the left bank of the *Wād Salada*. The French occupied 'Ain Temouchent and fortified it with a *redoubt*, in which in 1845, 79 men withstood the attack of 7500 soldiers of Abd al-Kadir. In 1851 the place was raised to the rank of a commune. At the present day it is a flourishing centre of colonization.

Bibliography: Al-Bekri, *Description de l'Afrique septentrionale* (transl. by de Sacy) p. 168, 184. (G. YVER.)

'AIN el-WARDA is a locality, which according to Vailat is identical with *Pa's* 'Ain [q. v.]. It owes its name to the big battle of 24 Jumādā I 65 (6 Jan. 685), in which the *Shi'ites*

of Nafa were slaughtered by the Syrians. Cp. Weil, *Gesch. d. Califien* i. 500 et seq.; Müller, *Der Islam in Mesopotamien und Arabien* i. 374.

AIN ZARBA is a town in Ada Minor, in south-east Cilicia, north of Masya, the ancient Mopsuestia; to be more exact, situated in the angle formed by the Lihidan, the Pyramus of the ancients, and its tributary the Soubas. The town existed already in antiquity and was then called *Amurbaq* cp. Hirschfeld in Pauly-Wissowa, *Real-encycl. der class. Altertumswiss.* i. col. 2101. The Arabs connected the first element of the name, *Am*, with *am* = spring, cp. Sachse in the *Zeitschr. f. Assyriologie* viii. 98. Caliph Harun al-Raschid caused 'Ain Zarba to be strongly fortified in 180 (790). The town was especially flourishing in the 10th century, when it was supplied with new fortifications by the Hamdanide prince Isma'il al-Dawla. It was nevertheless captured several times by the Byzantines, notably in 962 (cp. Freytag in the *Zeitschr. f. Assyriologie* viii. 98; *Gesch. d. Araber*, al. 98; Weil, *Gesch. d. Califien* iii. 173). The emuliers took the town, which they called *Amurbaq*, and destroyed it. Afterwards 'Ain Zarba belonged to the Hile-Asmadian realm which was founded in Cilicia in the 11th century. The name of the town was corrupted to *Kawarza* in the 14th century. At the present day the place is a complete ruin known by the name of *Amurbaq*. — Cp. especially G. de Surugot, *The lands of the eastern Caliphs* (Cambridge 1905) p. 139; K. Ritter, *Erkenntnis* xix. 52. For further authorities cp. Hirschfeld in Pauly-Wissowa, *Real-encycl.*

'AINI (HAIANI) nicknamed *Muniri* (al-Bukhari) (contactor of the poets), was born at 'Ainab (1170 = 1256), studied with a view of entering the civil service, but afterwards abandoned the idea and got on appointment as professor of Arabic and Persian at the University of the Sublime Porte. He died in Sivas 1254 (May 1838) and was buried in the monastery of the Mendicant brothers of Sivas to whom he belonged. The lion of his poetical works is the *Sift-nama*, a summary of his philosophical reflections on human life. A posthumous work is a collection of *ghazals* and *fu'ûds* (choroographers). His panegyrics of the Prophet were collected under the title *Nasb-i Nisab-nabi*.

Al-Biography Hammar-Pargall, *Gesch. d. Islam. Litteratur* iv. 502; *Gibb, Hist. of Ottoman Turkey* iv. 336 et seq. (Cl. Ritter.) **AL-AINI** (Abu Muhammad Mahmud b. Ahmed b. Mu'izz Badr al-Din), historian and faqih, was born on 17 Ramadan 762 (22 July 1360) at 'Ain-ib, a locality between Aleppo and Antioch. He belonged to a cultured family (his father was faqih) and commenced his studies at an early age, first in his native town, afterwards in Aleppo. At the age of twenty-nine he visited Damascus, Jerusalem and Cairo. Having been initiated at Cairo into the mystical doctrines of Sûfism, he entered for some time the Bahkshya monastery of Sûfids, which had been newly founded. After several journeys to Damascus and his native town, he settled finally at Cairo and was there appointed *mufti* in 801 (1398-1399) under the reign of Sultan al-Malik al-Nasir. He was repeatedly dismissed and re-appointed, and finally succeeded in 803 in obtaining the enviable post of inspector of the pious institutions (*fuqar al-ahzâ*). At the accession of Sultan al-Malik al-

Nasir (803 = 1402) he fell into disgrace but soon after was received again into great favour and re-endowed with the post of *mufti*. His knowledge of the Turkish language was of service in negotiating him with the sultan Mu'ayyad, Malik Zahir Taim and Malik Nûsret Barak. For Taim he translated the treatise on law by al-Buhârî into Turkish. In the course of his long and eventful career, in connection with Sultan al-Malik al-Nasir he read aloud to him his *Amul* chronicle, composing it at night into Turkish. The former part of the *Bahkshya* had become a perfect mosaic, and composed, besides his other works, panegyrics in honour of his masters (a *Life of Mu'ayyad*, a *Eulogy of al-Malik al-Nasir*) having obtained the post of supreme judge of the Hanafites in 829 (1425-1426), he occupied it for twelve consecutive years. In 846 (1442-1443), in the age of eighty-three, he even succeeded in combining the duties of *mufti*, inspector of the pious institutions, and supreme judge of the Hanafites, a unique case according to his biographers. He was also professor at the Madrasa al-Mu'ayyada. In 853 (1449-1450) he was disgraced and two years later he died (4 Dhu'l-Hijja 855 = 28 December 1451). He was buried in the Madrasa 'Ainiya, which he had founded, and where, at a later period, another construction of al-Buhârî, al-Kashtani, was also to find a sepulchre.

The life of al-Aini affords highly interesting information concerning the connections of the literary set with the Mamluk sultans. He took an active part in the intellectual movement of his century, and had connections, — had though they were —, with two of the most eminent Muslim scholars of that epoch, al-Buhârî and the Shafii al-Islam Ibn Hadjar al-Asqalani. He supplanted the former in the office of *mufti*, and consequently incurred his hatred; against the latter he conducted a very animated controversy in support of his commentary on the *Sûfi* of al-Buhârî.

Al-Aini's works are very numerous. Some were written in Turkish; the majority in Arabic. The three which are best known are the following: 1. His General History entitled *As-Sûfi al-ahzâ* (an exact in French *des historiens du monde*, Hist. ar., iv. 183-254); 2. his commentary on the poetical examples quoted in four commentaries of the *Sûfi* of Ibn Malik, with the title of *al-Bahkshya al-mu'ayyada fi sharh al-Bahkshya Sharh al-Buhârî* (printed in the margin of the *As-Sûfi* al-ahzâ of al-Buhârî, Beirut 1899, 4 volumes); 3. his extensive commentary on the *Sûfi* of al-Buhârî, called *Wasit al-fuqar* (the *al-Buhârî* published at Cairo in 1308, at Constantinople in 1309-1310, in eleven volumes). In this last work al-Aini traces a certain method, which contrasts with the usual pell-mell of the Muslim commentators. In studying the separate hadiths he observes the following order: the connection between the hadith and the interpretation of the chapter; an examination of the *isnâd* of its particulars and of its authorities; an examination of the other works or of the other chapters of the *Sûfi* where the hadith occurs again; an examination of the literal meaning, and finally of the juridical or ethical rules which may be derived from the hadith.

"ANTAB" (Armenian Antaph) is a town in the wilayat of Haleb (Aleppo) capital of the **haza** (lands) of Antab, north of Haleb, numbering about 25,000 inhabitants, two thirds of whom are Moslems; the rest are mostly Armenians. The town is the centre of the American mission which was founded here the central Turkey College. Both commerce and industry are fairly important; especially the manufacture of cotton materials, pickers and brandy. An old aqueduct supplies the town with water. Amongst other ancient buildings the castle deserves to be mentioned. According to Yabul "Antab" was also called Dulab, the name which was properly due to the district. Actually Dulab (the ancient Dolicha) is situated two hours north-west of "Antab", which is probably identical with the **Adra** mentioned by Ptolemaeus. As a matter of fact the name "Antab" is never mentioned by the ancient Arabian geographers.

AIR (or ABER) is a townland in the Barony of the Sabina between lat 20° and 16° N. It is 280 miles in length from north to south, and 60 miles (width from east to west in its central part). Its area may be estimated at 5800 square miles, the population at a number varying between 50,000 and 60,000 inhabitants. This country is at present one of the least known regions of Africa. Barth explored it in 1850, and it was afterwards visited by L. de Lamy, who was prevented by the hostility of the natives from advancing beyond Agfiro. In 1899 the Sahari mission (Fouquet-Lamy) went as far as Ifereh with Agdet, from whence they reached Damerga. The latest traveller was the French geologist Clusseau (1905-1906). The information gathered by the Sahari mission rectifies and completes the statements of Barth concerning the geology, the climatology and the topography of Air. But still, the work of the German explorer remains the principal authority upon everything that concerns the ethnography and the history of the country, as a heavy autumn had enabled him to collect a great deal of information amongst the natives.

As is divided into three distinct parts. (Four can be)

1. Northern Air, being the summation ~~over~~ the Sahara-Thamud to Air proper. Plateaux and plains constitute its general aspect, the rising of the ground nowhere exceeding 2500 ft.
2. Central Air, stretching from the mass of the Tighari to the north to that of the Anderes to the south, 11 to 186 miles in length and forms a compact and homogeneous whole over a surface of about 110 miles. Prominent are the summits of the Tagides (3000 ft.) the Tighari, the Tamer, the Baidar, the Serou, the Agallan, the Tushien, the Agballan (the Agas of South, 5900 ft.), the Higelan (4250 ft.) — the latter two separated by the pass of Kerbala (2600 ft.) the Milla — (4000 ft.) and the Anderes, all of them rising above a foundation of granite and sandstone. All these elevations, with their abrupt flanks resembling

immense walls, and in deep, jagged or irregular and indented crevices. The decomposition resulting from the erosion has formed a high or low terrace, surmounted by a platform of accumulated blocks. Deep indented ravines penetrate into the very heart of the mountains. In spite of this disturbed relief, the area was deemed the name of "Alpionland" which Barth assigned to it. Indeed, not one single ~~small~~ ^{small} stream to have an absolute height of more than 5250 ft., even to rise above the level of the valleys any higher than 2400 x 3600 ft.

3 Southern Air, being a succession of rocky plateaus, sloping down towards the Sonian & single summit, the Tiberich, attain a height of 3300 ft.

Through Air belongs to the area of the Sahara. It is much more watered than the desert proper. There is a moist season from the end of June till the end of August, but the rains are not so regular in Air as in the tropical zone. They only strike certain parts of the massif, and come down precipitously in violent but short-lasting showers, leaving the immense beds of the "lidian" (sandstone) into impetuous but intermittent torrents. They are principally useful in supplying the *ghadis* and in maintaining the subterranean water reservoirs. Their frequency and abundance, however, vary from year to year. So for instance the year, in which South western Air, seems to have been exceptionally moist, but the year of the Sahara rebellion unusually dry. European hunters that currents are very rare. The rivers, according to his statement, are not "living", except at one and short intervals. As for the hydrographical system, it is still very little known. In considering the mountains, the valleys, and the "wadi" become less in the desert. Not in probability the waters descending from the northern massif flow towards the west, those of central Air towards the west and northwest, and those of southern Air towards the south and southwest, though on exact information concerning the principal basins in which they are received has yet been gained.

The comparatively small climate of Ai supplies it with a vegetation much richer than that of the Sahara, though less variegated than that of the Sonora. Most of the plants are of the pantical order. The fauna is represented by the lion, the wild boar, the jackal, the gazelle, the zebu, etc. In spite of the fertility of some of the valleys Ai does not deserve the name of "Sahara paradis". Agriculture is but little developed. Bamergui and the Sonora supply the millet which constitutes the chief food of the population of Ai. If they were reduced to relying on their own resources, they would see the risk of starving, as was stated by Ponsan, de Mary and Barth. Ai owes its place of importance to the economical life of the Sahara first of all in the situation it occupies at the meeting of the caravan routes between Sokala and the Niger regions on the one side and Tadmert, Ghad, Lipuloune and the valleys of Ahima on the other. Consequently various African tribes have disputed the possession of Ai amongst themselves, though it tends itself but little to the establishment of a powerful state.

The name of Ale is mentioned for the first time in the 14th century by Leo Africanus (l. 6). The original appellation however seems to have

low. Air, which Air is still called amongst the black population. The earliest occupants of Air were the Chaderwa, a branch of the Hausa tribe. According to Mahammad Balla they had come from the north-west and were perhaps related to the Capa. Towards the close of the 16th century of the Christian era the Herbers in their turn settled down in that country. On the road which at the present day connects Agades with Agades, at about 20 miles north of the latter, they built the town of Tin-Saman (or Anzaman), which became the capital of a flourishing state and attained a certain degree of intellectual culture. It is now a ruin. But the political aspect of the country was thoroughly changed by the arrival and subsequent settlement of fresh Herber conquerors, the Kel-Owi, about the year 1740 according to birth. From the information supplied to him it appears that the Kel-Owi came from the north-west, and that their most powerful families belonged to the confederacy of the Awragheh, whose language is still spoken by their descendants. The Kel-Owi, on the contrary, are said to have come from the Adalaka country, between Zinder and Kuka, a statement which was embraced by us. They had once not seem very well founded. Be that as it may, the Kel-Owi absorbed part of the population of Air and captured the rest, with the exception however, that neither slaves captured nor their children could be sold out of the country. They themselves took possession of the land, but however careful they were to preserve some of their customs (e.g. their peculiar rules regarding vengeance to power), they could not long escape the influence of the Hausa element. Consequently the chiefs vainly sought the habit of wearing agribes instead of Herber wrappers. That accounts for the Kel-Owi being much more a mixed race than the Touaregs in the north. Few individuals amongst them have a fair complexion (except in the Murnahm tribe of the Igghaleh). For this reason the northern Herbers despised them as "Kalan" or slaves. Their language became pervaded by a great number of Hausa expressions. Still worse, this language, the Awragheh, was ceased to be used in daily intercourse, and was reserved for the palaces and diplomacy. To the number of these tribes the Songhai of the Niger must be added, who as early as the Middle Ages had founded a few settlements in the region of Agades. They immigrated in great numbers during the 16th century, subsequent to the conquest of Mahammad Askia. Henceward about Agades and in the town itself the Songhai language is still spoken in the present day by the Igghaleh, a race sprung from the union of Herbers and Songhai.

The population of Air can accordingly be divided into two principal elements: the black and the Touaregs. The Touaregs of Air constitute two groups: the Kel-Owi in the north, the Kel-Owi and the Hausa in the south. The Kel-Owi comprises a group many subdivisions, the most important (according to birth) being the Igghaleh, the Kel-Ferwan (Tinellah), the Kel-Assoube (on the Illia road), the Chakson, the Kel-Taher, the Kel-Fata, the Kel-Fada etc. They are number 10000 men (birth).

The Kel-Owi and the Hausa have probably been established for a long time round about the

center of the Kingdom but they were expelled by the Kel-Owi and settled south and west of Agades. They seem to have preserved the physical characteristics of the Herbers much better than the Kel-Owi. Their number of warriors amounts to about 5000. They are excellent riders whereas the Kel-Owi make excellent use of the camel.

These Touaregs of Air differ in several respects from those in the south. They are less settled and only move if compelled by the change of pasture-grounds. The groups into which they are divided are more important than those of the northern Touaregs, but all too insignificant and disconnected to constitute a formidable people. Their political organization is rudimentary. Being excessively fond of their independence, they are incapable of putting a stop to their quarrels and have perpetual feuds amongst themselves. The chieftains or "emankal" of the various confederacies have but a weak authority. The most important amongst them, the emankal or sultan of Agades, who is often regarded as the sovereign of Air, has only a semblance of power. Isolated from the rest of the country, he is at the mercy of the Kel-Ferwan. His resources are limited to the tribute, which he levies on travelers who come from the north. Most of the localities of Air are only villages of hovels, or even simple encampments. There are Ferwan, Tinellah, Tafel and Assoube. The last one numbered formerly some houses and seven mosques, but only two dwellings have remained. The only conglomeration deserving to be called a town is Agades (or Eghadeh). Birth asserts that it was founded in the middle of the 17th century by the five large Herber tribes that had divided Air between themselves. It became the capital of a prosperous realm, and a commercial center for the merchants from the north and the Songhaie tribes. It attained the height of its prosperity towards 1719, when it was captured by Muhammad Askia, sultan of the Songhai. Part of the Herber population emigrated, the rest submitted and became mixed in course of time with their conquerors. Agades retained some importance until the close of the 18th century, though it never recovered its former prosperity. But the desert was recolonized by the army of Gago, the Niger, the starting-point for the caravans, which stopped at Agades before entering the Sahara, and by the congregation of the populace of the establishment of the Fulae tribes. In 1850 the town contained only 2 or 3000 houses, whereas in the 18th century, according to birth, it could hold 50000 inhabitants. Fewer than 5000 the present population at 5000 inhabitants, the people exposed almost to starvation during the rainy season.

The population of Air are black-skinned. Next every country, with a unique exception is a tale of a tool supported by poles or small stone walls. Agades alone possesses a mosque to which 4 columns in the shape of a pyramid lend an almost monumental aspect. At various spots one finds in addition certain places of prayer (sacred), rectangular enclosures of varying size, bounded by walls running from north-west to south-east, and having a semicircular projection facing south-east. The most celebrated of these places of prayer is the one which is called Mekham: al-Khadij al-

'Abd al-Karīm (Muḥam. Chaiḥ al-Baghdādī, according to Ponsou), at the end of the narrow pass that lead towards Awdagh it was erected in commemoration of a Musulman missionary, who converted the Hausa to Islam. In their dealings with foreigners, whom they like to treat as *ẓāfir*, the people of Air affect great religious rigour. But de Lacy and Ponsou agree in stating that their religion has been adulterated by the admixture of superstitious and fetishistic practices. Islam has none the less energetic and indefatigable propagandists in these regions. The most devoted auxiliaries of these marabouts of the north, and the most fervid adepts of the fanaticism amongst the natives are the *malikis*, who in Air, just as in the Soudan, enjoy very special consideration. The Tijaniya have indeed a good number of *shaykhs*; but they can not compare in importance with the *Saniya*, whose doctrines and influence are propagated by secret or avowed universities (at Tsi-polla or Tiat). Although Islam has conquered the country, the Arabic language has spread but little. It is taught in the Korān schools (the one in Agades numbered 300 pupils at the time of Barth's visit), but it is only understood by the learned.

AIRĀN (v.) is a beverage made of fermented cow's milk. According to Vansleb (*Das Türkische* p. 205) it is sometimes or even usually prepared from the milk of sheep and camels. The Altai people and other Turkish tribes concoct a kind of milk-brandy of airān and kumiss. Cp. Radloff, *Aus Sibirien* i. 297 ff. seq.

'Ā'ISHA was Abi Bekr, the favourite wife of the Prophet, was born at Mecca 8 or 9 years before the Hijra (613-614). Her mother was called Ummu Kinnas bint 'Umayr b. 'Amr, and her name *ḥanṣa* was Umm 'Abi Alīsh, after the name of her nephew 'Abd Alīsh b. al-Zuhair. After the death of Khadija Muḥammed was inconsolable. One day Khawla bint Hakīm, the wife of 'Othman b. Maṭṭū, suggested to him the idea of marrying either 'Ā'isha, who was still a child, or Sawda bint Zam'a, a widow of mature age. Muḥammed proposed for 'Ā'isha to Abi Bekr. At first the latter raised some objections but finally complied with his wishes. Muḥammed however had to wait until 'Ā'isha was disengaged from her betrothal to Ubayyir b. Maṭṭū, after which he married her, two or three years before the Hijra, when she was only 18 or seven years old. But the marriage was not consummated until six or seven months after Muḥammed's departure to Medina (April-June 623). Muḥammed's marriage amounted to 50, 60 according to Ibn Hishām (ed. Wüstenf., i. 1004) 400 dirhems. She brought him boys with her to the home of her elderly husband, who soon succeeded in winning the affection of Muḥammed, who sometimes joined in her games. But an unfortunate accident afterwards

endangered 'Ā'isha's power over her husband. It happened when Muḥammed was on his way back from his expedition against the Banu Muzallih in the year 6 (628). The historians do not agree in regard to certain details, although all found their accounts in 'Ā'isha's own statement. The majority of them assert that 'Ā'isha was her husband's wife-companion in that campaign, she having been appointed by drawing of lots according to the custom of Muḥammed (cp. however Mallet, *Her Islam as Morgan and Abenlind* i. 133, 134, 135). The life of Muḥammed iii. 238, 244). She travelled in a litter carried by a camel. As long as she was inside the chair, the curtains remained drawn but when there was a halt she dismounted and left them open. During one of these stops, not far from Medina, 'Ā'isha withdrew from the camp in order to perform her ablutions. When she came back to her litter she discovered that she had forgotten her necklace of Yemen shells, and went back to fetch it, leaving the curtains of the chair closed. In her absence Muḥammed gave the signal for the departure, and 'Ā'isha's retinue, seeing the curtains closed, concluded that she was in the chair. They loaded the litter on the camel and started on their journey. (She herself declares that her weight was next to nothing, as the food supplied to the women had been very scanty). 'Ā'isha finding her centre that she had been left behind, fell down on the ground and waited until some one should come to fetch her. Then Safwa b. al-Muṭṭal happened to find her there. He mounted her on his camel and led the animal by the rein. The sight of 'Ā'isha arriving alone in the company of a young man gave rise to grave suspicions. The principal accuser was 'Abd Alīsh b. Ubayy (q. v.), to whom the following remark is ascribed: "Safwa being handsome and young, it is no wonder that 'Ā'isha prefers him to Muḥammed". Other persons of note were equally vehement in their charges, amongst whom the poet Hishām b. Thabit, Musab b. Umayyā and Menas bint Ubayy — the last one having a grudge against 'Ā'isha because the latter had opposed the marriage of Muḥammed with her cousin Zaynab. — Hishām gave evidence that she had often seen 'Ā'isha in the company of Safwa. 'Ā'isha became ill with vexation (or perhaps indulged some jealousy), and the Prophet counselled 'Abi and Ubayy b. Sa'd as to what he should do. 'Abi advised him to repudiate 'Ā'isha (hence the hatred of the latter against 'Abi); but Ubayy did his utmost to prove the innocence of the young wife to Muḥammed. Finally the Prophet excused her by means of a revelation (Korān xiv. 11 ff. seq.), saying that on charge of adultery is valid, unless it is supported by four witnesses, and adding that those who co-erce but cannot bring forward four witnesses must be punished with flogging. In spite of that the suspicion does not seem to have lost its hold on Muḥammed's heart, and on his later expeditions he preferred the company of Umm Sulaym. According to Sprenger however (*Das Leben und die Lehre des Mohammed* iii. 73), who quotes from Rukhārī (iii. 241), 'Ā'isha accompanied him once more and again lost her necklace. But on this occasion she had some Muslims with her. The time of prayer overtook them when they were far away from the camp and without water for their ablutions. This circumstance induced the

Peuphet to prescribe that where water was lacking one must dig for it.

At the time of the Prophet's death 'Aisha was 18 years old. She has always remained a sacred personage to the majority of the Moslems. She often interposed in politics, and almost every insurrection was inspired by her. She opposed 'Othman and declared that he had to do penance in exile, and she doubtless had a hand in the intervention against that Caliph. Just when 'Othman was besieged in his palace ('the day of the house'), 'Aisha was not at Medina but had just returned from 'on a pilgrimage to Mecca'. When afterwards 'Ali, her mortal enemy, was elected Caliph, she did her utmost to raise the Moslems against him, under the pretext of wanting only to avenge the murder of 'Othman. She joined Talha and al-Zubair, who assembled a great army and provisions and started for Hira. The Tamimite Yathribi b. Murra, who contributed largely in this expedition, brought 'Aisha a thoroughbred camel called Ashar, for which he gave 200 dinars. The wives of 'Ali and of Talha and al-Zubair met in battle on 12 Jumad II 36 (4 Dec. 656). Victory was on the side of 'Ali. 'Aisha on her camel was in the thick of the fight; seventy men of the Banu Nufila, wanting to defend her, fell one after the other, until the camel was killed (hence the name of "Battle of the camel" originated). 'Ali gave orders to conduct 'Aisha to the house of Salma bint al-Harith b. Talha al-'Abdi, and supplied her subsequently with everything she wanted for her return to Medina. Seeing how much stronger 'Ali's party was, 'Aisha suggested to him that she should stay with him and be his companion on subsequent expeditions against his enemies. But 'Ali declined this offer and intimated that she had to depart. Once again she appeared on the scene at the death of al-Harith b. 'Ali. It was suggested that he should be buried at the side of the Prophet, but 'Aisha opposed this plan, arguing that the tomb was her property. That day she was again mounted on a camel; the people of Medina began to murmur against her, but finally gave way to her wishes. The date of her death is generally assumed to be 17 Ramadan (or 11 Ramadan) 58, but the years 56 and 57 are also given. But as the day of the week is stated to have been Tuesday, only the first mentioned date (17 Ramadan 58 = 13 July 678) is proved to be exact. Her last wish was to be buried at some place, and she was interred in al-Baqi' (the cemetery of Medina).

'Aisha occupies a prominent place among the most distinguished traditionists. 1210 traditions are recorded as having been reported by her direct from the mouth of the Prophet. She was often consulted on theological and juridical subjects. She is praised for her genius. She had learnt to read, and knew several poems by heart. Some writers assert that she possessed a special copy of the Koran.

(M. Wüstenf.)

'AISHA (AISHA b. 'ABU SAUD) was a celebrated Arabian woman. She possessed to a high degree all those qualities, which amongst the Arabs were valued most in the sex. She combined a rare beauty with noble descent and a lively, proud spirit, such as the Arabs liked in their wives. Her father was one of the most distinguished companions of Muhammad, her mother 'Umm Kulthum was a daughter of Caliph Abu Bakr, and the Prophet's favourite wife 'A'isha was her aunt. No wonder that the beautiful Arabian became one of the most celebrated women of her time. A governor is even said to have lost his post for her sake. Once staying in the holy city for the performance of her religious duties, she sent a message to the governor of the place, al-Harith b. 'Abd al-Malik, who was appointed master of ceremonies of the pilgrimage, asking him to defer the general service until she had completed the last of the seven prescribed processions round the Ka'ba. The governor indulged her in this request; his ill-timed gallantry aroused such indignation, that Caliph 'Abd al-Malik b. Marwan felt obliged to dismiss him. 'A'isha was married three times, first to her cousin 'Abd Allah b. 'Abd al-Rahman b. Abi Bakr, next to 'Ubayd b. al-Zubair and finally to 'Umar b. al-Khattab.

Bibliography: Ibn Sa'd viii. 343; *Annuaire Arab.* Chronol. (ed. Ahlwardt) p. 16, 204 et seq.; 122; *Al-Bihar*, passim; A. v. Kremer, *Culturgesch. der Orientalen unter den Omayyaden* i. 29; ii. 99. (K. V. Zetterstedt.)

'AISHA (AISHA b. 'ABU SAUD) was a younger sister of Muhammad b. 'Abd al-Malik (p. vi). She lived in 922 (1516) in Aleppo, but afterwards from 929 (1523) in Cairo, and died in Damascus. Her poetical talent appears from a few *ghazels* (Ahlwardt, *Verz. d. Arab. Litt. d. 8. Jhd.* in *Biblioth. n. 7933, 1-3*) and a *haddiya*, a poem containing model examples of the figures of rhetoric, entitled *al-Fath al-mubin B-madhi al-shaykh* (ed. n. 7378; *Klein, Supplement to the Catalogue of Arab. Man. in the Brit. Mus.* n. 965 vi; *Montana, Catal.* n. 62). The manuscript of the *Adab al-Nawawi* in the university library at Leipzig, n. 194, Voller, *Suppl. Catal.* n. p. 34) is in her handwriting. Her biography is found in the anonymous *Sayra*, *ibid.* n. 684. (H. Brockelmann.)

AISSAOUA is the French spelling of 'Aishu' (p. 14).

AIT (other forms: *Aij, Aih, Ait*) is a Berber word signifying "sons of", used exclusively in compound proper names, like *Ham* and *Amal* in Arabic. It is only used however by three groups of Berber tribes: in Algeria by the Kabyles of the *Ighargura* (e.g. *Ash Yenni, Ash Isken*); in Morocco by the Berbers of the Central Atlas (*Ali Aza, Ait 'Ayah*), and by those of the Sij and the Wad Dra'a (*Ali B. Amran*). Elsewhere (in the western Sahara) the words *Ait* (*Ait* or *Ait*), or *Ait* (*Touareg*), or also the Arabic words *Ham* (= *Ham*) or *Umid* (= *Umid*) are in use.

(R. Hassert.)

AIWALIE ("quince country"), in Great Syria, is a town of Anti-Mount in the province

was prescribed to relieve women in labour, to expel intestinal worms, etc. The blood was supposed to cure gravel. The thick secretion in the nostrils of the animal was considered an antidote against serpent's venom and poisons in general — (cf. also *Karwan* (ed. Wustenf.) i. 386 et seq.).

(S. SHARAF.)

AYYUB, the Job of the Bible, is mentioned in the Kor'an amongst the other just men. He is called there "the servant of God", and is represented as the patient man. It is told briefly in the Kor'an that God had put Job in the test, that the latter afterwards had addressed prayers to God, that he was restored to his former state and that God returned to him all his family and possessions (*Kor'an* xii. 33-34; xxviii. 20 et seq.). The Muslim writers, however, have made a great many stories about Job, which they derived mainly from the book of Job and the Jewish Targum. Job is generally represented as a Kuma, a descendant of Isaac (see *Treatment of Job*, ed. James, p. 1). He was the son of Anan (Anan; the spelling, however, is not quite fixed), and of a daughter of Lot. But according to one author, quoted by Talbot, he was the son of "him who believed in Abraham". The majority of the Muslim writers call his wife of Job Rahma, daughter of Ephraim, son of Joseph. But one isolated authority states her name to have been Ma-hin (Mishkin), daughter of Manasseh (Mishah), whose son was mistaken for a daughter. Usually his wife is also referred to by the name of Leah (Layla), daughter of Jacob (cp. *Wahdani on the Kor'an*, i. c.). This last statement was evidently occasioned by a confusion of the names of Leah, the wife of Jacob, and of Lina, his daughter, who in the Targum is said to be the wife of Job (*Dieu Notre*, p. 194; *Paragraphe Arabique*, 111; *Targum of Jerusalem on Job* ii. 9), and also in the *Treatment of Job* (i. c.). The traditional, amongst others, Kahl al-Ahli, have even described Job's appearance: a tall man with a big head, crisp hair, beautiful eyes, short neck and long limbs. His clothes are described according to the Book of Job, with some exaggeration of course. A certain author ascribes to him twelve sons and twelve daughters. Job was very poor and very generous, he was a kind guardian to orphans and a protector of widows. He was a prophet and God had sent him to preach monotheism to the people of his country, which, according to some, was the Hawan, and according to others Babilonia. Every evening all those who believed in his word assembled in his mosque and rested with him the same prayers (cp. *Dieu Notre*, i. c.; *Seid 'Oleis Kuma* xxi.; *Paragraphe Arabique* xxi. 9; *At-Tarikh al-Nawazid* ed. Sebechier, pp. 33-34) that The Muslim traditionalists have represented almost literally that part of the book of Job (i. c.-ii. 7), where it is narrated how Job was put in the test, and they add that Allah was drawn by envy to strike Job. When finally God had given him full power over the body of Job (except over his tongue, his heart and his intellect), Allah blew into the nostrils of the latter, causing thereby an inflammation of the body and filling it with vermin. The body began to swell so horribly that he was forced to leave the town and make his abode in a dunghill (cp. *At-Tarikh* p. 264; *Treatment of Job* vi.). The wife of Job had to seek work wherewith to care for herself

and her orphaned husband. Although Allah was that in striking Job he had spared his soul, he never ceased to receive new and awful means of torturing him until, more, he appeared under different forms one day to the inhabitants of the place, advising them not to give any work to the wife of Job, another time to the latter herself, trying to persuade her to believe in him, who could make an end of her husband's sufferings. All these means having failed, Allah declared himself satisfied. The majority of the Muslim authors are of opinion that Job was 70 years old when he was visited by Allah (see *Paragraphe Arabique* 111. 3, 10; 4; *Treatment of Job* xii. cp. however *Wahdani on the Kor'an* xxi. 83). The duration of his affliction is differently estimated by various authors, by some at 7 years (cp. *Treatment of Job* vi. 10; 7 years, 7 months and 7 hours; also at 3, 13 or 18 years. The Kor'an (xxviii. 41) contains a short account of Job making a well spring up from the ground by stamping on it at God's command, after which he bathed himself and drank from the water. The Muslim legend however connects the angel Gabriel with this incident in the following manner: After Job had addressed to God the prayer which is mentioned in the Kor'an (i. c.), he was enveloped in a cloud, through which lightning flashed and thunder rolled, and whence several voices issued exhorting him the pardon of God. On the following day, which was a Friday, before sunset, the angel Gabriel appeared to Job, lifted him up and commanded him to beat the ground with his feet. Gabriel gave him at the same time a pair of golden shoes encased with precious stones, and a quiver gathered in paradise. According to a certain Muslim poet, *Laylah*, *Laylah* (xxviii. 1-2) 265 (xxviii. 1) the wellspring was very far from the place where Job was, and as he was too weak to walk, Gabriel carried him on his wings. After his bath Job became again fresh and vigorous, the women which had eaten his body were changed into silk-worms and honey bees. The famous passage in the Kor'an (xxviii. 41): "Take a third part with it, and do not lose away thyself", is explained by the commentators as referring to Job's wife, whom he was commanded by God to beat, because he had sworn to give her a hundred blows. The reason for this oath has not been sufficiently ascertained; some are inclined to think that she incurred his anger for having been one day absent for too long a time, others assert that she had deceived him by suggesting to Job that he should pray to Allah. The same commentators add that it must have been a bush consisting of a hundred twigs, or perhaps a branch with a hundred leaves, so that he could atone himself at himself by a single blow. The exegetes do not agree in their statements regarding the children which were born to Job after his re-establishment. According to some they were the same children which had perished and had been called back to life, but others assert that his wife had become young again and borne him other children, their number varying up to 26. God let it rain golden coins on him, and he began to gather them. Then he heard a voice saying to him: "Hast thou not enough?" and he answered: "Who am I? enough to thy mercy?" He had two threshing-threshes, one for corn, the other for barley. God made two clouds descend,

which filled the lower floor with gold, the other with silver. Some authors fix the age of Job at 93 years, assuming that he lived 20 years after his recovery; but others affirm that he lived the same length of time after as before his affliction. Mas'udi relates that the corpse of Job, together with the spring in which he bathed himself, were still celebrated in his time, and that they were to be found at a short distance from Nawa in the province of Urdunna (cp. Yabli, *McGum* li. 645 & v. *Dale Alyab*). Still at the present day one is shown there the *hammam* (bath of Job) and in its neighbourhood the *wadai* Sheikh Sidi, formerly called *masjid Alyab*. The famous grave of Job (*Siddiqi Alyab*) is also here mentioned. It is actually an Egyptian monument of Hammam li, as is sufficiently well known. It is interesting to know that K-nogel, mentioned in the Bible (Joshua viii. 7 & vii.) is now *Shir Alyab* (the well of Job); cp. *Mudji al-Din, Hist. de Jerusalem*, pubd. in the *Fundgraben der Orient* ii. 1303.

ALYUB KHAN is the fourth son of the Emir *Shir* 'Ali of Afghanistan. He was whole brother of the Emir *Yakub* who succeeded *Shir* 'Ali in 1879, their mother being a daughter of the Khan of *Chitral*. *Alyub Khan* was intimately associated with his brother in the principal events of his life, and when *Yakub* was disgraced and imprisoned by his father he took refuge at *Mashhad* in Persia 1891 (1874), and was there for the next five years. When *Yakub* became Emir he appointed *Alyub* Governor of Herat, and on *Yakub's* fall he began to gather troops and strengthen himself in his government until the recognition of 'Abd al-Rahman as Emir by the Indian Government. On this *Alyub Khan*, who was a popular favourite throughout Afghanistan, advanced on Kandahar. He was met at *Mulwand* by a small British Indian force under Gen. Dargwa which he overwhelmed in July 1880. He then unopposedly laid siege to Kandahar, instead of advancing and raising the country from Kandahar to Kabul, where he had many supporters and 'Abd al-Rahman was not in great favour. The attack on the British army and the siege of Kandahar rendered his failure inevitable. Gen. Roberts with a force of 10,000 men marched rapidly from Kabul to Kandahar while Gen. Stewart after making over charge of *Mulwand* to 'Abd al-Rahman retired to India by *Hydrabad* and the *Shahar* Pan. *Alyub* was attacked and defeated by Roberts in Sept. 1880. Kandahar was retaken, and the scheme of a separate Government *Shir* having been abandoned, was made over by the English to 'Abd al-Rahman. *Alyub* who had fallen back on Herat renewed his attack the next year. In 1891 (1881) he defeated 'Abd al-Rahman's troops at *Ghor* and took Kandahar. 'Abd al-Rahman assembled his forces and also had recourse to bribery to detach *Alyub's* supporters, and finally defeated him in September. From this time *Alyub* lost all interest in Afghanistan, and fled again into Persia. During the Ghazal outbreak in 1895 (1887) he intrigued

with the Russians (Ghazal troops at Herat, and attempted to make his way into Afghanistan, but without success, as 'Abd al-Rahman was now too strong. *Alyub* now saw that his cause was hopeless and made up his mind to accept the terms offered him by the Russian Government. He surrendered to Gen. Murawiev the Cossack General at *Mashhad*, and went to India. He has since lived at *Kawalpindi* and *Marri*, and receives a pension from the Indian Government: which has accepted the responsibility of protecting him from enemy Afghanistan. *Alyub Khan* was a brave and popular prince, but fate has been against him. The murder of *Shir* *Mulwand* who was a prisoner in his camp at the battle of *Kandahar* in Sept. 1880 would if committed with his knowledge be a blot on his character, but his conduct has never been proved, and such an act is contrary to his previous reputation.

Bibliography: see under 'ABD AL-RAHMAN. (St. Petersburg Gazette).

ALYBIDES is the name of a dynasty in Egypt, Syria and Yemen, one of the most powerful of the mediæval east, so called after *Alyab* b. *Shah*, the father of *Saladin* (*Sally al-Din*). The latter was its actual founder, but after his death the realm was divided into various principalities, which were only temporarily reunited into a vast dominion. The separate branches of the race flourished in Egypt till 650 (1252), in Damascus and Haleb (Aleppo) till 634 (1260), in Mesopotamia till 643 (1245), in Hamat till 748 (1341) and in south Arabia till 625-626 (1228). The descendants of *Shah* b. *Shah*, a brother of the eponym *Alyab*, who from 574 (1178) till 604 (1202) were in power in Hamat (Emesa) are usually reckoned amongst their number.

Shah (or *Shah*), *Alyab's* father, was a Kurd and a native of *Tovin* (Tovin), a town of Armenia. Nothing is known about his ancestors; the only genealogists of the later *Alybides* have nevertheless derived for him a descent from a noble Arabian stock. *Shah*, together with his wife *Sally al-Din* *Alyab* and *Abd al-Din* *Shir*, migrated to *Bagdad*, and was appointed commander of the fortress of *Tikrit* on the Tigris, owing to the influence of a friend at the *Seldjuk* court. *Shah* died in *Tikrit*, and *Alyab* became his successor according to other authorities he, and not his father, had all along actually held that post. When in 546 (1152) the Atabeg *Zeng* of *Mosul* (*Mosul*) was defeated in the neighbourhood of *Tikrit* by the troops of the *Seldjucks* of *Bagdad*, he was aided in his escape by *Alyab*, the vassal of *Zeng's* enemy. This conduct was of course resented at *Bagdad*; and when, on the top of that, a few years later *Shir*, the brother of *Alyab*, slew a distinguished officer in a sudden outbreak of chivalrous passion, it had become impossible for them to stay any longer. In the night preceding their departure or shortly before, at any rate still at *Tikrit* and in the year 532 (1137-1138), *Saladin* was born. *Alyab* and *Shir* went to *Zeng*, who had not forgotten his services and gladly welcomed the brave warriors. They remained for some time at his court in *Mosul*, and took part in *Zeng's* campaigns. They aided him for example in capturing *Shir* *beke*, and *Alyab* was entrusted with the command of that place early in 534 towards the end of 1139. After *Zeng's* death the *Burids* at

tempted to reconquer the city, but Aiyûk, not being able to hold the town, went over to them of his own free will (541 = 1146-1147). He became a distinguished general, and finally even commander-in-chief. Shîrkûh in the meantime had remained in the service of Nûr al-Dîn Mahmûd b. Zangî, who had inherited Aleppo from his father. Nûr al-Dîn expired after the possession of Damascus, and Shîrkûh was commissioned to capture it from his own brother. But the two brothers made an agreement together, and Shîrkûh entered Damascus without a blow (549 = 1154). Aiyûk received great honors from Nûr al-Dîn and was appointed commander of Damascus, whereas Shîrkûh obtained Hama, which afterwards became the hereditary possession of his descendants.

When afterwards Nûr al-Dîn intended to interfere in the political affairs of Egypt, Shîrkûh went thither as his representative, and Saladin ordered to accompany him Amir al-Furûk combat, both military and diplomatic, with the Egyptians and the King of Jerusalem. Shîrkûh finally succeeded in mastering the situation and was appointed Vizier by the last Fatimid Caliph 'Adhîl. At his sudden death Saladin was called to the post. No sooner had the latter secured his position, than, at the instance of Nûr al-Dîn, he declared the dying Caliph deposed and proclaimed the restoration of the family of the Ayyûbîdî Caliph. Previous to that he had summoned his father and family to Egypt. Aiyûk arrived as a friend and counsellor, until 568 (1173), when he died in consequence of a fall from his horse. In the meantime the relations between Saladin and Nûr al-Dîn had deteriorated, owing to an evident explosion after independence on Saladin's part. At the very moment when hostilities seemed no longer avoidable Nûr al-Dîn died. Saladin had previously made himself out of a place of refuge to fall back upon in case of emergency, for he had taken to Nûbiya and also to Yemen, which had been taken for him by his brother Fûrûkân. But after Nûr al-Dîn's death he had nothing more to fear. He occupied Syria without much difficulty and extended his dominion also over Mesopotamia as far as the Euphrates. Then the time arrived for him to attack the crusaders with his whole power. The battle of Hattîn destroyed the forces of the Christians of Jerusalem (583 = 1187), and a few months later the holy city itself surrendered. It fell because the signal for the third crusade, which did not bring about much change in the mutual relation of the then opposing powers. Soon afterwards Saladin died (590 = 1193). Before his death he had divided his dominion amongst his sons and his brother al-Ashraf. The latter obtained the Mesopotamian possessions, al-Ashraf Damascus, al-Ashraf Egypt, al-Zahir Aleppo. Tughtekin, who had already during Saladin's lifetime succeeded Fûrûkân there.

No sooner had Saladin closed his eyes, than his sons began to quarrel. Al-Ashraf took advantage of these disorders and gradually implanted Saladin's sons, until he had united almost the entire realm of his father under his sway. But he repeated Saladin's proceeding, dividing his dominion amongst his sons during his lifetime. Al-Kamil became his representative in Egypt, al-

Mo'izz in Damascus, and in Mesopotamia al-Bakr, who was succeeded by al-Ashraf until 607 (1210), when he was in his turn followed by al-Ashraf. Aleppo alone remained in the power of Saladin's descendants. Al-Zahir was succeeded there by his son al-Ashraf in the year 613 (1216). Less important internal intrusions ended in smaller disorders, but were all of them subject to the supremacy of al-Ashraf. The latter died just about the time the expedition of Louis, Dauphin of France, was started, which intervened between the fourth and fifth crusades (625 = 1228). His son and successor in Egypt, al-Kamil, was compelled to retreat in consequence of insubordination in his camp. Louis was taken, but the united efforts of all the Aiyûbides prevented the crusaders from further conquests and retaken from them later on the only one they had made. Al-Kamil, leaving the intrigues of his brother al-Mo'izz of Damascus, began to negotiate with Emperor Frederick II. But the latter had not yet started on his crusade (the 6th), when al-Mo'izz died. Al-Kamil decided that his son al-Mo'izz should be supplanted by al-Kamil's brother al-Ashraf, as the latter also governed the possessions in Mesopotamia, and was believed by al-Kamil to be reliable. Frederick succeeded nevertheless, thanks to his diplomatic skill, in persuading al-Kamil to yield Jerusalem to him, along with a narrow stretch of land connecting it with the sea. In return for that he promised al-Kamil to aid him against all enemies and to prevent the reinforcement of the states of northern Syria. This famous treaty, equally condemned by both Christians and Moslems, was concluded in 626 (1229).

Al-Kamil showed great skill in putting a stop to the constant local jealousies of the various Aiyûbides by leading them to battle against a common enemy abroad. But his successes, gained over the Soldjûks of Iconium, aroused their envy again. An alliance was formed against him, which was joined by al-Ashraf of Damascus. But the latter was no longer alive at the time when al-Kamil appeared before Damascus, and his brother al-Zahir himself had to surrender the town. Immediately afterwards al-Kamil also died. That was the beginning of the end, for then began a fight of all against all. Al-Ashraf b. al-Kamil, who had been proclaimed al-Kamil's successor in Egypt, was soon supplanted by his elder brother al-Zahir Aiyûk. In Syria Damascus was recovered by al-Zahir himself, who concluded an alliance with other inland states against the Egyptians. Once more the Mameluke troops of the Egyptian rulers succeeded by dint of a barbarous warfare, in destroying the bulk of the former dominion of the Aiyûbides, but it was only an unimportant show of power; the dynasty had lost its inherent strength. When al-Zahir Aiyûk was lying on his death-bed, St. Louis with the chivalry of the sixth crusade appeared before Damietta. The town surrendered, but in an attempt to penetrate still further the entire French army was destroyed. In the meantime al-Zahir had died. His wife Shamsa al-Durr, an energetic, daring woman, kept his death secret, until Tughtekin, his successor to the throne, had returned from his absence. But the latter failed to make himself agreeable to the Mamelukes of his father, and was murdered in 648 (1250). Shamsa al-Durr was proclaimed Sul-

was in his stead, and after her the Mameluke
Ailab. The latter was the actual ruler, although
the minor great-grandson of al-Mutid, al-Ashraf
Munir, was enthroned in the Ailab until 632
(1235). Ailab was the final of the dynasty of the
Mamluk Mameluke sultans.

In Aleppo, al-Nasir Yusuf had succeeded his father al-Ash in the year 634 (1236). He conquered the city of Damascus after the death of al-Salih of Egypt. His claims in the possession of Syria led to conflicts with the Egyptian Mamelukes, which lasted uninterruptedly, until the Mongol invasion put a stop to them. The Mamluk invasion, whose al-Mu'azzar Qutub had been the latest ruler, succumbed in 643 (1245). Aleppo and Damascus were taken in 655 (1260). The Ayyubides of Hama, an independent branch descended from Saladin's brother Shamsuddin and founded by the latter's son al-Mu'azzar, submitted opportunely to the Mongols. Like the descendants of Shamsuddin in Hama they were deprived of their independence by the Mamelukes. They retained only a semblance of power as governors under the rule of Egyptian Mamelukes until 743 (1341), except for one long interruption, whereas the Ayyubides in Hama already died out in 661 (1263). More than 100 years before, in 632 or 630 (1238) the Ayyubides in Yemen had also been supplanted by the Mamelukes.

The many feuds within the dynasty and its separate families must not blind us to the fact, that the Ayyubids as a whole were an important phenomenon. They equalled the scattered remains of the Fatimid realm and the states of the Syrian Atabegs into a concentrated power which was able to oppose the crusaders. The dynasty has also produced such a number of powerful characters as to adduce even; not only Saladin, also al-Ashraf and al-Kamil were excellent rulers. They equalled, if not surpassed, the crusaders to Christian virtues, and many an Ayyubid prince was even dubbed a knight. Literary attainments of that period have left an interesting information about their administrative activity. They were personally concerned about agriculture and the irrigation system, which is so closely connected with it. They also showed a lively interest in commerce. Beyond commercial treaties with European countries were concluded during their time, some of which have been preserved. The military power of the realm was based upon the slave-guards and the feudal system, which, in contrast to that of Europe, resulted in an investiture with state revenues, the growing preponderance of the slaves, which were bought for military purposes, the so-called Mamluks, in the long run made the sultan princes especially the agent of their Mamluks.

The epoch of the Argutides is also remarkable as a new phase of culture. In Egypt they were the representatives of the religious reaction, brought about by the Bedouins, and of the constantly increasing Persecution of the interior East, which manifested itself in a new artistic style (modern architecture) in an alteration of court manners and titles, and in the development of the spectacular Turkish form of the feudal system. This culture is of such great importance, as it has exerted its influence on western Europe through the intermediation of the crusades. Many a rule and custom of European chivalry can be traced

back to Aethiopian practices, e.g. the hermetic system. The Masmalek, who is a true dilettante, followed the traditions of the Aethiopian: even on their illness, also continued at first the colours of their predecessors without any modification.

AK (1.) = white. They would often occur in Turkish proper names; the following statistics are the best known.

AK DENIZ (= White Sea) is the Tur-
 kish appellation for the Mediterranean Sea (in
 Persian a *white* *sea* = *ak deniz* or *Deniz-ak*).
 The name can certainly not be traced back to
 ancient Greek, in which it was simply called
Akadria, nor to the usage of the Byzantines,
 from whom the Turks might have borrowed it
 along with so many other words. But in spite of
 some modern Greeks, who adhere to the latter
 explanation, not a single passage can be quoted
 to support it. There is even reason to believe
 that the phrase *ak deniz* (*ak deniz* is
 less colloquial and restricted to the military lan-
 guage), which was brought into currency by the
 Hellenic populace of Turkey, was borrowed from
 the official Turkish language, which is the main-
 ally accountable, as formerly a great many Otto-
 man writers were recruited from among the Greeks.
 Since the domination of the Ottoman power the
 name *Ak Deniz* on the coast of Bosphorus and
 Asia Minor has been restricted to the Aegean Sea.
 Even the papers in Constantinople, when refer-
 ring to the Mediterranean, resort to chronological
 terms, mentioning the coast to indicate which sea
 is meant, as for example "the sea opposite
 Italy" etc.

1111 Kaita is al-Habib al-Hamad (his own name being Mahmud, according to Hajjaj Khayr), d. 1554-1555) presented about 1530 (1532-1534) to Sultan Suleiman an atlas (of which several copies are extant in Europe), containing 30 maps of the coasts of the Black Sea, the Aegean Sea and the Mediterranean as far as Constantinople. The work belongs to the most important productions of cartography (for further particulars see given by Peters, *Verzeichn. d. Turck. Mus. in Wien* n^o. 184) — Nefiz Celebi (d. about 1600 = 1579-1680) who arrived at the degree of Ciste (1604 = 1645), wrote an ample description of his voyage thither across the archipelago, which is included in the second of the ten volumes of his extensive book of travels, — in modern times, apart from insignificant compilations, only one book has been published: Suleiman Naki Efendi

illustrated *Asfar-i İbrâzî* (1871), which can contribute but very little to our knowledge.

The province of the islands of the White Sea (*Boğaz-ı Dâvâz ve İkiyâz*), which, with the exception of Crete and Samos, comprises those parts of the melipelago, which have remained in the possession of the Turks, is divided into the four sandjaks of Rhodes, Chios, Mytilene and Lemnos, with an aggregate population in 1890 of 125,000 souls, of which 73,000 belonged to Rhodes, 100,000 to Chios, 107,000 to Mytilene and 45,000 to Lemnos. Only 27,000 profess Islam, whereas there are eight times as many Greek orthodox. But the former manifest much more zeal to extend their education. About 50 of the 184 schools belong to them.

In spite of the rocky character of the entirely disafforested soil, and the competition of the western powers with their large capitals invading on all sides, the populace in the 19th century has since the Greek rising made gradual progress, which remained unimpeded by military complications. The principal products of the soil are grapes, olives, figs, which are also primarily important for the export trade. An agrarian bank, which was founded several decades ago, is especially credited with promoting the general welfare. In 1890 the Teneceia alone had an export of two millions, Mytilene of 19 millions of kilograms. The navigation in that year amounted to 27,000 vessels with an aggregate tonnage of 1,900,000. The steamers drawn from the islands by the Turkish government numbered 300,000 Turkish pounds, whereas the administration of the national debt raised an additional 60,000 by its own officials. Cf. Culac, *La Turquie d'Asie* I. 349 et seq.

(K. SIEGHEIM).

AK HİSAR (n. = White Castle) There are four places of this name:

1. The one best known is the town in the Anatolian province of Aidin, situated on a large plain on the left bank of the river Çönlük. In antiquity and in the Byzantine era it was called Thyrsitra; it owes its Turkish name to a fortress on a neighbouring hill. Three quarters of its 12,000 inhabitants are Muslims. With the exception of six mosques, the churches, the Government school and the bazaar, all the buildings are of wood, making the place look more like a big, prosperous village than a town. Ak Hîsar is connected by railway with Soma (the ancient Sardes) to the north, and with Magnesia and Smyrna to the south, and owing to these modern means of communication has grown into a considerable market place. It is the centre of a *kaza* (head) of 32,000 inhabitants, which produces an excellent white poppy and a large quantity of cotton (cf. V. Culac, *La Turquie d'Asie* III. 548 et seq.). Ak Hîsar is said to have been annexed to the Ottoman realm for the first time in 1781. During the disorders, following Timur's invasion, it was lost again by the Turks. The perpetrator Hîsâhîl, who had conquered that district, was defeated by Khân Vahîdî Bey in 1824 (1245-1246) and taken prisoner at the surrender of the fortress (cf. Hâdîdî Khânîsâ, *Takvîm-i Şifâ-ı Şâhî*). According to a statement of Çömet, which however is not supported by any authority, the Prince of Karamania presented in 1444 as far as Ak Hîsar and plundered the town. At the Humayun

rule brought peace to the province, the fortress lost its importance as a strategical centre.

Three men from Ak Hîsar, who lived in the most flourishing epoch of the Turkish realm, are well known:

a. İsmâ'il b. Mâdîd al-Dîn. When the Ottomans had reached the summit of their power (965 = 1557-1558) he ventured to write a book of prophecies (*Âşâf-ı mülk-i bâzî*), which forecasts the duration of the Ottoman realm, without hardly any calamitous interpretations, until the end of the world, and from the numerical value of the letters of proper names predicts the circumstances of the nation up to the year 2035 of the Hîjra (Portsch, *Forschungen* I. 106, II. 100, on Berlin, n. 45, 9; Kieff, *Flora* Acad. Catal. n. 301; Flügel, *Flora* Catal. II. p. 381).

b. al-Mawîdî Muhammed b. Mâdîd al-Dîn, the best known of the three. Amongst the Turks nowadays he is usually called Mûshî'î Akhîsârî, formerly also sometimes by his surname Mâdî'î-Dîn or, after the government-district, al-Sânîkhânî, still more rarely al-Kâdî and al-Mufarrî. It was he, who persuaded Sâdî to write his famous *Mâdî* commentary. In 981 (1573-1574) he began his esteemed and most commentary on the Koran (*Nurî al-fânî*) which he dedicated to the sultan. He was rewarded by his appointment as *Shâhîd al-fânî* of Medina. Afterwards (998 = 1590-1591) in Damascus he wrote an Arabic commentary on the *Divan* of Shams al-Dîn Muhammed al-Akhalî (Akhalwî, *Surat* Cat. n. 7795). He died in Mecca towards the close of the year 1000 (1592) according to 'Asîr's appointment to *Takvîm-i Şifâ-ı Şâhî* al-fânî, Hâdîdî Khânîsâ II. p. 381; *Takvîm-i Şifâ-ı Şâhî*, printed in 1047, p. 40. In the face of these authorities we can be put to Hâdîdî Khânîsâ VI. p. 339 and *Shâhîd al-fânî*, where 1001 is given as the year of his death.

c. Mawîdî Nayyî Nawwî (d. 1003 = 1594-1595), the translator of Ghazâlî's famous *Almîd al-fânî*. In 990 (1582) he was appointed tutor of the future Sultan Mehmed III. In this capacity he wrote a *Perrîdânî*, in which the duties of a ruler are displayed in the example of Alexander the Great (Rieu, *Cat. of Turk. MSS. in the Brit. Mus.* p. 117).

2. The capital of a *kaza* of the same name in the government district of Iznîk, situated on the left bank of the *Sakarya*. It is a station on the Anatolian railway and numbers 1300 inhabitants. The fortress, ungarraided at the present day, commands the vast plain. Already before its early conquest by the Ottomans in 708 (1308-1309) it must have been a flourishing place, as is shown by the remains of a great many ancient columns and other buildings, both in the town itself and its neighbourhood. Its ancient name however is unknown. The *kaza* Ak Hîsar, famous for its agriculture, numbers 22,000 inhabitants. Cf. Culac, *ibid.* IV. 377.

3. Ak Hîsar in Albânî, at the present day called Akhejîsar (Albanian: Këlye, Crje = well-spring), a town in the sanjak Shkërdh, which has revived to new prosperity in the course of the last decades. It has a wealth of gardens, and covers a large surface, inhabited by almost 10,000 people, all of them confessors of Islam. The place is mentioned in the chronicle of Akropolis (13th cent.) by the name of Kroua. In 1343 it was a

AK SARAI (T. = "white palace") is a frequent appellation in Turkish of towns, palaces and castles. The best known are the following:

1. **AK Sarai** (Agha) at the line of the Seljuks; in Antiquity (Archelaus), the capital of a kaza of the Sandjak Nigde (prov. of Konia), comprising 160 villages (of its 2500 inhabitants one fifth were Armenians). Its principal buildings are the mosque of Karaman (15th c.) and a madrasa of Ibrahim Bey, which has fallen to ruin; and the mausoleum Na'ir-i-Djami. After Sultan Mahmud II had conquered Constantinople, the inhabitants of Ak Sarai, along with those of Trebizond and Sioope, were summoned to repopulate the almost uninhabited capital, where they established themselves in a quarter, which is still **AK SARAI**. It was formerly known for its manufacture of rugs of sheep's wool, which were exported as far as India and China (Ibn Batuta in 1366). This industry is still in operation.

Bibliography: Fr. Sarre, *Reise in Kleinasien* pp. 93—95; Ch. Texier, *Asie Mineure* pp. 359, 365, 371; Ainsworth, *Trevels and Researches in Asia Minor* I. 197; E. Reclus, *Nouv. géogr. ann. t. 371*; Hamilton, *Researches* II. 222; *Gulistan-i-ahval* I. 321, 322, 323; 'Ali Djuwad, *Mamalik-i-ahmadiyah wa'l-ahval* p. 21. (Ch. Texier.)

2. **AK SARAI** in the town of Sivas, in 741 (1339-1330) erected for Tulu by architects whom he had carried away from Kh'arizm. The remains of this palace, one of the most beautiful buildings of that period, have been preserved up to the present day. The name was possibly taken from a similar one in Kh'arizm.

3. **AK SARAI** near Urgench, which is still mentioned in the "Shahnameh" (ed. Vambéry p. 393).

(W. Bactrian.)

AK SHAMS AL-DIN MUHAMMAD B. HAMZA, a physician who accompanied Sultan Mohammed II on his expedition, was born in 792 (1390) at Damascus. He was a pupil of the Shaikh Haiman of Hamash and the Shaikh Sari al-Din (1341). Seven times he performed the pilgrimage to Mecca; and was interested in Gnosticism. He made himself known by his discovery of the tomb of Abu Ayyub (q. v.) during the siege of Constantinople, and by his interpretation of the Sultan's dream before the battle of Tuzkhin (876 = 1473), in which Uzun Hasan was defeated. He is the author of a treatise on the prescriptions and dances of the Sema, entitled *Kitab fi tarar-in al-shifa wa-shifa* (Istanbul, ed. Filigul. II. 397). He descended from Muhammad b. Shihab al-Din al-Sufiwardi and was the father of the poet Mas'ud.

Bibliography: Hammer-Purgstall, *Gesch. der osman. Reiches*, sec. Index; Joussoin and Gayer, *Turquie* p. 77; Feduk-Bey, *Almanach* I. 48; Sa'id al-Din, *Tarikh al-awlad* I. 420, 534 (who does not refer to him as an interpreter of the dream); *Hist. of Ottoman poetry* II. 138 et seq. (Ch. Haase.)

AK SHEHR (Ak Shehr, "the white town"; the ancient Philomelium) is the capital of a kaza of the province and sandjak of Konya, which comprises 2 nahiyas (Daghlar Akat, Kizil Beyli) and 90 villages with an aggregate population of 39,821 inhabitants. This little town (8500 inhabitants) extends itself at the foot of the Sultan-dagh; its most interesting sights are a

mausoleum of Sultan Bayazid I.; relics of the of the Seljuks; the Tash-Memere which, during the reign of 'Isa al-Din Kai-Khusrow I. (1210); an inscription on an ancient monument of derwishes, built during the reign of 'Isa al-Din Kai-Khusrow II (1259 = 1261) and the tomb of Seljuk Shahinshah Khairum. Muhammad's rectangular pyramid (1211 = 1224). The tomb contains a modern work of Sayy al-Din Khairum (with the inscribed date 356 = 966).

Bibliography: V. Calvert, *La Turquie* I. 403, 418; Ch. Haase, *Konia, la ville des derwishes* (Paris 1897) pp. 109—117; *Biographie arabie d'Al-Buhārī* (Leiden 1894) pp. 28—34; Fr. Sarre, *Reise in Kleinasien* p. 21 et seq.; Ch. Texier, *Asie Mineure* p. 435, 436; Ainsworth, *Trevels and Researches in Asia Minor* II. 63; Hamilton, *Researches* II. 135; 'Ali Djuwad, *Mamalik-i-ahmadiyah wa'l-ahval* p. 21. (Ch. Haase.)

AK SONKOR AL-AMIRI, a Kurdish Emir, who after the death of his father Ahmed II (310 = 1300) succeeded him as lord of Maragha (q. v.). Ahmed II's grandfather Wakhshir b. Muhammad al-Rawandi, Lord of Adharbadjan, had submitted himself in 246 (1054) to the Seljuk prince Toghrulbeg. Ak Sonkor played an important part during the reign of Sultan Alparslan (311—325 = 1118—1131) who appointed him atabeg to his son Dawud. As Mahmud appointed toward his succession, Ak Sonkor occupied later on the most important place in the Seljuk empire. The oldest and mightiest Seljuk prince Sandjar, however, declared himself in favour of Toghrul, and when the latter in the year 326 (1132) overpowered the troops of his opponent, in the neighbourhood of Hamashan, Dawud, whose troops had perished, took flight with his army Ak Sonkor. Afterwards, however, when Dawud met Mas'ud in Bagdad, these two Seljuk princes became allies and, supported by the Caliph, marched to Maragha, where Ak Sonkor guaranteed them further aid, so that they could once clear the province of Adharbadjan of enemies, and march against Toghrul, who had drawn up his troops at Hamashan. This time Toghrul was no match for them and was obliged to withdraw to Ral Bai when Mas'ud had the town of Hamashan in his power. Ak Sonkor was murdered by some Bektas (327 = 1133) as his father had been before. — About his son, whom Weil and others erroneously also call Ak Sonkor, compare the article *Kasapoglu*.

Bibliography: Ibn al-Athir (ed. Torn.) II. 421, 461 et seq.; *Revue de l'orient* (ed. Montau) II. 160 et seq.

AK SONKOR AL-AMIRI (with his full name Abu Sa'id Saif al-Din Kasim al-Dawid Ak Sonkor al-Dumali), general and governor of the Seljuk sultans Muhammad I and Mahmud. He was a namesake of the Seljuk Emir Dursuk (q. v.) and therefore by the Western historians of the crusades he is always called by his name, under one of the corrupted forms Burgoldus, Kasepalmus, Boresepalus or Borese. He was a faithful companion of the Seljuk prince Muhammad I (1107—1118), who therefore appointed him police-prefect of Bagdad and of the whole of Iraq. While he held this office he fought several battles with the Arabic chief of Hilla, Sadaka b. Dabul, with the

Emir Sawli, who was then reigning over al-Mawṣil, etc. and after the death of Mawṣil (q. v.) 508 (1114) even obtained the prefectship of al-Mawṣil. At the same time he was charged with the conduct of the war against the crusaders. He marched up to al-Ruha' (E. Syria) and besieged it for more than two months, without success, however. He had better luck in Ma'āṣh, where the widow of the Armenian prince Kogh Wash, who had recently died, submitted to him. After an unsuccessful battle with the Ortokid light, however, the prefectship of al-Mawṣil was taken from him, already in the year 509 (1115), and until Muhammad's death he lived retired in al-Ruha'. Muhammad's successor Mahmud instantly appointed him prefect of Bagdad again. During the wars about the succession between this prince and his brother Mas'ūd, he again lost his office, but in 515 (1121) he got back the prefectship of al-Mawṣil, to which after a year the prefectship of Bagdad was added, as also the dominion of the town of Wash. This led to a new war with Dubais, the son and successor of Fadala. When after this the latter allied himself with the crusaders and supported Baldwin at the siege of Haleb (Aleppo), Ak Sonkor marched up to relieve the town (518 = 1125). After he had succeeded in this he left Haleb to his son Mas'ūd. The next year (519 = 1125) he took Kafarshāh, but at the siege of 'Asir he suffered a heavy defeat, which compelled him to return to al-Mawṣil. There he was soon after (8 Jum. 'l-Kāda 310 = November 26th 1126) murdered in the mosque by some assassins, who according to the *Kamāl al-tawārīkh* vol. i. 112, 113, were paid for that by the sultan's Vazīr al-Durgutai.

Bibliographie: Ibn al-Aṣṣir (ed. Turrill) x, 107 et seq.; *Kamāl al-tawārīkh* vol. i. 112, 113; *Revue de l'histoire des Séleucides* (ed. Houtsma) ii. 144; *Revue des historiens des Croisades* *Étude*, ser. i. see index; ii. 36-38; iii. 496 et seq.; Ibn Khallikān (ed. Wüstenf.) 98, 99; Wilken, *Gesch. der Kreuzzüge* ii. 342 et seq.; 521 et seq.; Weil, *Gesch. der Chelifen* iii. 155 et seq.

AK SONKOR (the father of Zangī, q. v.) a Turkish Emir in the time of Malikshāh. The latter, whose mother he had married, gave him in 486 (1087) the government of Haleb (Aleppo) and the title of ḥumayr Kāsim al-Dawla. In 489 (1095), shortly before his death, the sultan contemplated great plans; among other things the Fātimids of Egypt was to be brought to submission, and Ak Sonkor and also Ḥusām, the governor of al-Ruha' (E. Syria) received the command to join Turah, to whom the conduct of this war was to be entrusted, with their troops. However, when the three generals got to Tripoli, they fell out, it is said because the governor of this town, Ibn 'Ammār (q. v.), had killed Ak Sonkor and his vizier Zarrūk Kamār. However Ak Sonkor withdrew, and that compelled Turah also to abandon the expedition. A short time after this Malikshāh died, Turah made use of the occasion to claim the sultanhip for himself, and with this end in view he at once marched up to Haleb. Ak Sonkor, notwithstanding his hatred against Turah did not think it advisable to oppose him, and followed against his will, which Ḥusām did also. When, however, the troops had marched on so far, that a battle with Barkiyūkh, the right-

ful son of Malikshāh, must soon take place, they both deserted Turah and joined the side of Barkiyūkh. Turah was forced to withdraw to Syria but did not give up his ambitious plans and in 487 (1094) he once more appeared with his troops before Haleb. Near the village of Rāyān a battle ensued. Ak Sonkor's men took flight and he himself was led before Turah, who killed him on the spot.

Bibliographie: Ibn al-Aṣṣir (ed. Turrill) x, 107 et seq.; *Kamāl al-tawārīkh* vol. i. 112, 113; *Revue de l'histoire des Séleucides* (ed. Houtsma) ii. 70, 84; Ibn Khallikān (ed. Wüstenf.) 98.

AK ŠU (r.), 'white water', is very often used as the name of a river in the countries where Turkish is spoken. When a canal is made to branch off from a river, that part of the water which flows on along the original bed is as a rule called Ak Šu or Ak Daryā, and the artificial canal is called Karē Šu or Karē Daryā (black stream); but still many single streams and brooks bear the name of Ak Šu. The name has often been extended from rivers to towns and villages: especially well-known is Ak Šu in East-Turkistan on the river Ak Šu, a tributary of the river Yarkand-Daryā or Tarim. The Turkish name is not found until the 8th (14th) century; therefore the identification with the town of Auzakia in Sogdiana, pretty generally accepted since Deguignes will have to be rejected. In Chinese sources the town (already mentioned in the *History of the later Han*, 1st cent. after Christ.) is called Wen-an (still to the present day), Ta-shā or Yü-shu, written by the Persians Bantā (spelling and pronunciation uncertain) in the anonymous *Ḥudūd al-'ālam*, 4th (10th) century; and by Gardīz, 5th (11th) cent., the text in Barthold's *Östasiat. Reise in Srednaya Asiya* p. 91; comp. J. Marquart, *Entwurf eines und statistische Skizzen*, preface p. 20. — In Turān's time Chinese merchants are already spoken of in Ak Šu (in the *Zafar-nāma*) from which the importance of the town may be concluded. In the *Tārīkh-i-raḥīn* Ak Šu is described as one of the chief towns of East-Turkistan. Later on Ak Šu, compared to Yarkand, Kashghar and Turfan seems to have been of only secondary importance; by modern travellers Ak Šu, is described as a small town (about a kilometre in circumference). From 1867 until 1877 the town was in the hands of Yāqub-Beg (q. v.) after whose death the Chinese have re-established their power in Ak Šu as also in the whole of East-Turkistan. No buildings belonging to past ages have been preserved in Ak Šu.

'AKARA (A.) = a long, steep promontory, with a path leading to the top. There are numerous places bearing this name, the best-known of which are the following:

1. By al-'Aṣṣara, (without any further indication, it meant the hill between Mīnā and Mecca. This peak and word 'akā' was certainly already venerated before Muhammad, especially the spot where the *Ḥijāz* at al-'Aṣṣara now stands. This is a stone-column, at which stones are thrown by the faithful at the *Ḥajj*. In accordance with this tradition has it that in older times a *Shāykh* lived here. Except this, all memory of the meaning of the place in pagan times is lost. But the part which it has played in the biography of the prophet and in the history of the origin

of Islam is all the better-known. For it was here that Muhammad had some secret meetings with some men from Medina after his teaching had failed with the people of Mecca. About six of them had first embraced the Islam there, twelve more did homage to him, without however binding themselves to give real protection to the prophet. The biographers call this "the homage of the women" (*ḥuḍūd al-nisāʾ*) or "the first 'Akaba'" to distinguish it from "the second 'Akaba'" in the next year, where 70 men from Medina promised to protect Muhammad, in accordance with the sword (*ḥuḍūd al-sayf*). Afterwards a mosque was built in the neighbourhood of the above mentioned stone-columns, which in memory of the world-historical event which took place here, is called the "mosque of the homage". Comp. the art. *Ḍiyāra*.

Bibliography: Vāḥid, *Al-Faḥm* (ed. Wāḥid) iii. 693 et seq.; Ibn Ḍiḥān (ed. de Goeje) p. 209; Ibn Ḍiḥān (ed. Wāḥid) i. 288, 291 et seq.; Tabarī i. 1209, 1211, 1217 et seq.; Burckhardt, *Travels*, Burton, *Personal narratives of a pilgrim*; Hammer Purgstall, *Die Mohammedaner* i. 125 (Leipzig).

2. 'Akaba al-Aḥsa' Egyptian 'Akaba; see the art. *Aḥsa*.

3. Syrian 'Akaba to the east of z, on the Hajj-road from Syria to Mecca. Comp. Sprenger, *Die Geographie Arabien* i. 314.

4. 'Akaba of the woman, a spot in the neighbourhood of Bagdad in Syria, where one of the wives of Muḥammad b. 'Abd al-Malik was killed in an accident. Comp. Meladun (de Goeje) p. 167; Vāḥid, *Al-Faḥm* iii. 693. (Fr. Boust.)

'AKAID (See 'Aḥḥa).

'AKAḤ (or 'Aḥḥ, 'Aḥḥa; an onomatopoeic word) = magpie. — As this bird inhabits coasts, gardens and the margins of woods and spreads over Europe and Northern Asia, the Arabs probably got more intimately acquainted with it in the civilized countries which they conquered. It is hardly mentioned in pre-Islamic literature; but in the middle ages its characteristics are very well known; it is known to be fond of building its nest in the village as a dove-pigeon and its shining glittering objects, and to exchange its nest and its young for those of other birds, i.e. that it robs other birds' nests; that is why it was proverbially called thievish, faithless and stupid. Its cry was considered a sign of ill omen to travellers; to its body was ascribed valiant power, also in Europe; (German: *Makoulsven-pulver*) —; swallowing the blood and bones of a magpie was supposed to make one eloquent; the same substances were also supposed to extract alien bodies from the flesh; and the yolk of a magpie-egg was used as a cure for inflammation of the testes (*ḥaḥḥ*).

Bibliography: Damiel i. 176; Karwini (ed. Wāḥid) i. 419; Jacob, *Studien in arabischen Geographien* iii. 109-110. (HALL.)

'AKAL or 'Aḥḥ (A), a band made of goat's hair, generally black, which, going twice round the head, fastens the *ḥiḍḍa* (*hiḍḍa*, q.v.) and is generally worn by the Beduins. According to Dory, *Supplément* ii. 354 the classical spelling is 'Aḥḥ, but the modern pronunciation is as indicated above.

Bibliography: Dory, l. c.; Oppenheim, *Vom Mittelmeer zum persischen Golf* ii. 122.

'AKARIB (Sing. 'Aḥḥarib, according to Sprenger, *Die alt. Geographie Arabien* p. 80, identical with the *Agraei* of Ptolemy), a South-Arabian tribe in the neighbourhood of 'Aden. Their territory, which is very small (only about 2-3 square miles), is crossed by the lower part of the river of Lahad (q.v.), which here is nearly always dry. As rain is also lacking, the soil is barren and yields but little fruit. The chief town is Ba' Ḥamad, with some hundred inhabitants and the castle of the Sultan, who resides there. The sultan receives yearly subsidies from the English, to whom in the year 1868 the 'Akarib sold their coast, together with the volcanic Ḥabal Ḥawa (with the "double" craters, two rocky peaks). The English now also protect the 'Akarib against their Arab-enemies (the 'Aḥḥal or Lahad), with whom they fought for the last time in the year 1835. Comp. especially Maḥḥan, *Reise nach Ost-arabien* (Braunschweig, 1873) p. 314-323.

(J. SCHUMPER.)

'AKARKUF (sometimes pronounced and written 'Aḥḥakuf) is the name of a not unimportant group of ruins which lies 2½ hours to the West of Bagdad. The spot is often mentioned by Arabian geographers. References to it may be found in: U. le Strange, *The lands of the east* i. 261-262 (Cambridge, 1905) p. 67; comp. further: Well, *Geogr. d. Arabien* ii. 197; Wāḥid, *Al-Faḥm* i. 176; ii. 643; Hām, in the *Zeitschr. f. Deutsch. Morgenl. Gesch.* xxvii. 333. According to a Muslim legend already found in Arabian writings of the Middle Ages the name tells which the tyrant Nimrod threw Abraham to wit to have been 'Aḥḥakuf. That is why 'Aḥḥakuf has also been called Tell-Nimrod (Nimrod's hill) until the present day. However, the legend of Nimrod's name was never connected with other places, i.e. with Kūḥ al-Sabbā or Tell-Ibrahim (to the south of Bagdad). The hills covered with ruins of 'Aḥḥakuf have already been mentioned by European travellers since the 16th and 17th centuries; comp. the reports of older travellers in Ritter, *Reisekunde* ii. 347-352 and Tuck, *Die Nine mite* (Leipzig 1843) p. 202, 4. H. Kāḥḥan found in 'Aḥḥakuf bricks with the stamp of the town of Dūr-Karigala ("wall of Karigala") on them. Hence 'Aḥḥakuf was, probably rightly, been identified with that town, often mentioned in the cuneiform inscriptions, which was casted after its founder (or reconstructor), one of the two Kassite kings of Babylonia who were called Karigala (between 1200 and 1000 before Christ). About Dūr-Karigala comp. Fr. Delitzsch, *Die Inschr. d. Sargon* (Leipzig 1884) p. 207 et seq.; the same, *Die Sprache der Assyrer* (Leipzig, 1884) p. 2 and Fr. Hommel, *Grundriss der Geogr. und Gesch. des alt. Orients* (2d edition; Munich, 1904) p. 344. (STRACK.)

AKBAR Aḥḥa-PAḥḥ Dīḥāl al-Aḥḥa Muḥam. third Timuride Emperor of Hindustan, was born at Umarkot in Sind on the 15th October 1542, was crowned at Kalakot in the Panjab on the 14th Febr. 1556 and died in Agra on the 16th October 1605 leaving his throne to his son Salim (Jahangir). He traced his descent to Amir Timur Barlas (1336-1405); he was Ḥāḥḥ's grandson and the son of Ḥamāḥ and Ḥamāḥ's daughter, a daughter of a Persian scholar in the service of Hindul, Ḥāḥḥ's youngest surviving son.

Akbar was born in exile in one of the greatest

centuries of history and in it he was the greatest ruler. Not Europe only was in mental ferment; a heaven worked also in Hindustan, no manifestation of the presence of which there may be named the Kalid Panthi, the Ramgharia and the Rahim of which Shaikh Mahabuk Nigdyri was the exponent in closest touch with Akbar.

In the greatness of his accomplished kingly task, Akbar had an equal, second to him ranks the Englishman who was his contemporary.

It is a well-attested statement that through his long life of intellectual activity he did not master the arts of reading and writing. This is in him the more singular that he came of a family of traditional culture and that he lived not only amongst men of education but was closely associated with at least two men accomplished in letters, his wife, Salma Sultan, and his aunt, Gulbadan. His lack of instruction in childhood may well have been owing to his father's unsettled position and procrastinating character, but in adult life, only his own self-education choice will explain it. A keen character, avid of knowledge, a student of at least one branch of knowledge, Religion, his dependence on the ear is a fact of great interest which falls into place only when we recall blind men who have been distinguished. It seems as though Akbar learnt best by the living word.

The long story of his military success does not lend itself to summary and it will suffice here to set in opposition his territory at accession and at death. He had gone with his father to Hindustan in January 1555 from the battle of Sikandar Sher on the 22d June 1555, which gave Agra and Delhi again to the Timurids. When his father died (24th January 1556), he was with his begonia, Miran Khan Bahadur, pursuing Sikandar in the Panjab. On the day the only son he owned was a small part of the Panjab Agra had been taken by Hemu, Delhi had been evacuated by his general, Harnam Begam and Sultan Miran Bahadur had taken Kabul. He was 14 years old. When in 1563 he laid aside the cares of empire, he left to Salma a stable heritage of the whole of Upper India, Kabul, Kashmir, Bikaner, Bengal, Orissa and a great part of the Deccan.

Great as he was as a soldier, it is as an administrator that he has gained highest fame. His reforms with which the Hindu, Tatar Shah, is closely associated were pushed through all opposition and pursued unflinchingly; so too was the safeguarding of lowly people; he had the genius of taking pains and the open-mindedness which is symbolised by his favourite motto, "Peace with all." Changing perennial Muhammadan practice in Hindustan, he ruled for the Hindu majority of his subjects, and set them free from harassing and oppressive customs. In return they provided him with peace and faithful service.

Perhaps what drew attention to Akbar more than his genius as a sovereign, is his own pursuit of truth. It is well-known that he broke away from orthodox Islam and promulgated an eclectic *Tarika-i-Haqq*, a Divine Faith. This appears to have been pure Theism, the common element of all the creeds he sought into. If men craved for a symbol, as in truth his own researches have convinced him they did crave, he recommended for this the Sun or its earthly counterpart, Bro. Ho

allowed of no priesthood and inculcated purity and plainness of living.

What adherence the *Tarika-i-Haqq* obtained outside the inner Court circle cannot now be said; fifteen names are recorded as members of the Faith. Most of those inscribed are literary men, pointing one great aim only to them, 'Art Kaka, whom extortion in Akbar had driven from orthodoxy. There are men to whose influence Akbar's perversion from Islam was ascribed. Shaikh Mahabuk Nigdyri and his son Akbar's earliest interest was with the sect within Islam itself and he became disgusted by the enmity of orthodox disputants; he married a Rajput, the mother of Salma, and he studied Brahmanism from learned priests and through Hindu Scriptures which he had translated for himself. Still free-thinking was strong around him and Persian were of his home circle; he acquired special sympathy for the San-worship of the Parsis, a sympathy not likely to be less than Rajput claim to be the children of the Isurinary. To none of the Eastern creeds, however, did he give such close and absorbing attention as to Roman Catholic Christianity. Shaikh Nur al-Haqq who writes without the bias of either Abu'l-Fazl or 'Abd al-Haqq Dardani, says that the Emperor tried to take the good from all differing opinions and this with one aim object, the establishing of truth. What he finally accepted was but the bare fact of all creeds, man's first tenet, and to this he added a plain rule of conduct.

Abu'l-Fazl 'Allami, *Akbar-nama*; 'Abd al-Haqq Nadwi, *Mustafad al-tawarikh*, Shaikh Nur al-Haqq, *Zubdat al-tawarikh*, *Hadith al-mughal*, *Shams al-Ulama* Muhammad Muhammad (Lahore, 1898); Blochmann, *Amir-ud-din*; Count von Noer, *Kaiser Akbar* (Leipzig), French and (revised) English translations; Rhineland, *History of India*; Father Goidie, *Memories of the Great Akbar* (Dahli, 1897); H. AKÇA (T.) = whitish; a noun; silver coin, copper coin, especially small coins, f.l. in Russian countries = koppek or half-kopeck. In Turkey a coin of this name was used worth one third of a piastre = one paper (comp. the art 'AL' AL-DIN PASHA). In the same way *faṣṣ* and *faṣṣ* (q. v.) are used in Arabian and Persian countries.

AKD (A.) = agreement, contract, treaty, occurs in many compounds, f.l. *akd al-sulḥ*, *stage-contract*, *akd al-ḥimma*, treaty of protection etc.

AKDARIYA is the name of a well-known difficult law-question (inheritance which belongs to the *akd* *wasṭa* (l. v. questions 'called by special name'). When a *wasṭa* leaves bequeathed to her heirs: 1. her husband, 2. her mother, 3. her grandfather, and 4. her sister (whether she be *ḥaṣṣa*, i. v. her real sister, or her *akd* *ḥaṣṣa*, i. v. her half-sister on the father's side), then her husband gets $\frac{1}{2}$, the mother $\frac{1}{4}$ (*ḥaṣṣa*, Koran iv, 12-13), so that there would only remain $\frac{1}{4}$ of the inheritance for the grandfather and the sister. The latter two are generally considered, when they inherit together, as *ḥaṣṣa*, that is the sister inherits half of the grandfather's part, and together they get every-

1. *al-Djawāz al-maṣnūʿ fī ṭibb al-shahādāt al-faṣṣān*, about rheumatism with a commentary by the author, lithographed at Cairo 1290; with a commentary by al-Baḥārī (who died 1193 = 1778) libl. at Cairo 1290, printed libl. 1308, 1310 with glosses added by Maḥmūd al-Miṣṣāwī libl. 1308. — 2. *al-Saḥāb al-maṣnūʿ fī ḥikma*, about logic 60 qa. raḥḥa-verse, written in 941 (1554), printed at Cairo in 1318 with a commentary by the author, and glosses by Ḥafḍ al-Ḥalīm al-Tūmālī-Ḥijāzī in Khaddāra (d. 1066 = 1656), and in 1282, 1306 and 1308 with glosses by al-Baḥārī (d. 1277 = 1861); glosses by Muḥammad b. ʿAlī al-Ḥalīm (d. 1306 = 1792) on the commentary by Ḥafḍ b. ʿAlī al-Faḥḥ al-Muḥallī (d. 1181 = 1767) printed at Cairo 1311; commentary by al-Ḥasan al-Ḥarawī al-Ḥawāṣṣ al-ḥayy 1210 (1795), with glosses in the margin by Khayr al-Ḥayy, printed at Cairo 1322; commentary by Muḥammad al-Ḥawāṣṣ al-ḥayy 1211 = 1796) libl. at Fez 1313, with glosses by Ḥayy, printed at Fez 1313. — Four other small writings are to be found in Brockelmann, *Gesch. d. Arab. Litt.* II, 350. (BROCKELMANN.)

AL-AKHFAFI is the surname of several grammarians, of whom al-Suyūṭī, *Ḥazār li ʿashr* 128 1288 mentions eleven. The best-known are the following three:

1. **AL-AKHFAFI AL-ANṢAR** ʿAmr al-Ḥafṣ b. ʿAmr al-Ḥafṣ al-Ḥafṣ al-Ḥafṣ, a freedman of a tribe of Ḥafṣ (al-Bahar), the collector of numerous dialectical expressions only known through him, and the teacher of the grammarians ʿIsa b. ʿUmar and ʿAlī ʿUḥayr; he died in 177 (793). Comp. Ibn Taghribirdī I, 483.

2. **AL-AKHFAFI AL-ANṢAR** ʿAlī b. Maṣʿūd al-Ḥafṣ al-Ḥafṣ, the most famous man bearing this name, a freedman of the Yamanite tribe of Muḥallab b. Ḥarith, born at Balḥ, a pupil of al-Samʿānī, whom (although his elder) he overtook; and whose "book" he propagated by 100 teaching. He died in the year 221 (835) according to others in 215 (830). Of his own writings (*Ḥikma* I, 52) nothing remains. His *al-Ḥikma* (*al-Ḥikma* was still) used by al-Thaʿlabī (who died 427 = 1035), *Kit. Dir. ʿUḥayr*, n. 851, and his *Ḥikma al-Ḥafṣ*, which after the manner of the books *fī ṭibb al-shahādāt*: explained difficult verses, is often quoted in the *Ḥikma al-Ḥafṣ* (I, 391, 134 b. 300, 41) libl. 38 at the bottom, 327. n. Comp. Ibn Kṭāb (ed. 1912), p. 272; Ibn Khallikān (ed. Wüstenf.) n. 250; Ibn al-Athīr, p. 184—188; Brockelmann, *Gesch. d. Arab. Litt.* I, 103.

3. **AL-AKHFAFI AL-ANṢAR** ʿAlī b. Sulaymān al-Ḥafṣ al-Ḥafṣ, the pupil of al-Mubarrad and Thaʿlab, was not famous as an author, but he did a meritorious work by transcribing grammatical study from Nagdūl to Egypt, where Ḥafḍ al-Nahḥāz was his pupil. He died in Nagdūl in the year 315 (928). — Comp. Brockelmann, *Gesch. d. Arab. Litt.* I, 225; about all three of the names: Flügel, *Die Grammatischen Schriften der Araber* p. 61 et seq. (BROCKELMANN.)

AKHṬ (A.), = "the last" is one of the "beautiful names" of God. — *Maḥmūd* *Carḥūmā*, the last Wednesday in the month of Ṣafar, a Mohammedan festival, celebrated in India; it is said, because the prophet's suffering in his last illness was relieved a little on this day. The Indian Śaivites, however, consider this day an unlucky

one and call it *Carḥūmā* *carḥ*, i.e. the Wednesday of the last hour of the trumpet (on Thursday) *carḥ* *carḥ* is asked for this day, over which the *Ḥikma* is many times spoken in the name of the Prophet. Another custom is the drinking of the "7 waters", that is the seven Khorde-verse: 1211, 58, 1211, 77, 1211, 109; 1211, 120; 1211, 130; 1211, 77 and 1211, 5. These verses are written by a mulla on a banner or inscribed on a piece of paper, and while the writing is still wet, they are washed off. Whoever drinks the water used for this purpose may be certain of future peace and happiness. Comp. Herblot, *On the customs of the Mohammedans of India* p. 239 et seq. *Well, The faith of Islam* (2nd ed.) p. 313; Garcin de Tassy, *L'islamisme d'après le Coran* (3rd ed.) p. 334 et seq.

AKHṬ (A.), the fem. of the preceding word, is a term already used in the Koran for the life to come, according to the commentators properly *akḥṭ* *al-akḥṭ*, "the last dwelling", as opposed to *al-ḥayy*, "the present (dwelling place)", that is the present world.

AKHṬ (A.), plur. of *akḥṭ* ("character"). The *akḥṭ* are the traits of man's moral character, and the science of the *akḥṭ* (*akḥṭ*) is moral philosophy when presented in a didactic form. Passages concerning morality are found in many diverse branches of literature; they are found in the poets, in proverbs and in fables; naturally they are found in the Koran and its commentaries, and in the collections of traditions; also in the writings of lawyers, to whom morality chiefly appears in the form of casuistry, then in the historians and compilers of anecdotes, who are occasionally moralists. But the science of moral philosophy differs from all this; it is in existence of its own; it is not an extract from different literary works; it is a science which is in fact connected with the tradition of Greek philosophy, whether it be with the oral tradition transmitted by the schools and convents of Egypt, Syria and Persia, or with the written traditions handed down and renewed by the work of the translators.

Ḥafḍ al-Ḥafṣ has defined the science of the *akḥṭ* as: "a part of practical philosophy" (ed. Flügel, I, 200 et seq.). This definition presupposes a distinction between practical philosophy and speculative philosophy, which is already found in Plato, but which the Arabs chiefly knew through the tradition of the schools. Ḥafḍ al-Ḥafṣ adds, quoting Ibn Saḍ al-Muḥallab al-Shirwānī (died 1036 = 1620-1627), *Ḥikma*, companion of the *Ḥikma* *al-Ḥafṣ* and *al-Ḥafṣ* of al-Ḥafṣ al-Ḥafṣ: "This is the science of virtue and the way to acquire them, of vices and the way to guard against them. Character and acquired virtues, which are joined with the reasonable soul, are its data. — So this definition limits moral philosophy to the methodical study of *akḥṭ* *al-Ḥafṣ* *al-Ḥafṣ* *al-Ḥafṣ*; thus represented, the doctrine of the *akḥṭ* is nothing but the ethics of the peripatetic philosophy.

A preliminary objection may be raised against the very possibility of a part of that science: as it is a man's character which constitutes his personality, his individuality, it seems that character is an inherent part of the very nature of man, and cannot therefore be changed. So there may

exist a science the object of which is to describe different characters, but there can be no art that can possibly alter them. Haghaji Shahrî reports this objection, raised by Ibn Sadr al-Din, it is also found in many other moralists, for instance in Yahya b. 'Adi, Ghazali et Naqî al-Din al-Tusi. Ten Sadr al-Din even defends this objection with the inspired words: "morals correspond with the physical body and cannot be modified". His answer is that some traits of character are natural and others acquired by habit; that if those that are natural are fixed, those that are the consequence of habit may be changed, and that way of looking at it, which is in accordance with Greek tradition, is corroborated by a saying of the prophet saying: "I have been sent to bring good morals (*awâmir al-âhlîya*) to perfection." — The objection and the answer are almost the same in Ghazali; but he develops them at greater length and more brilliantly.

Moral philosophy thus defined should not be confounded with *adab* the Arabs call *adab*, good education, refinement of spirit and deportment, "phonétique" in the sense *adab* word had in France in the 17th century. *Adab* is something less deep than moral philosophy, and of wider compass, as the term comprises a good literary education, which can hardly be numbered among the virtues, as least not among the principal ones. With moral philosophy are connected the *usûl*, admonition or counsel, and the *wasfîya*, recommendation or testament; under these two heads Arabic literature *wasfîya* pieces, attributed to important personages, which contain moral precepts, but they do not treat of moral philosophy in a methodical way; therefore those essays have to be classed among the proverbs, apophthegms and maxims. Let us only mention, by way of example, the recommendation of the dying Nizâm in his four children, as told by al-Asma'i (*Ma'âdî* 'Asma'i, Beyrouth, 1896, I, 53). — Moral philosophy is primarily concerned with man in general; yet there are *wasfîya* on morals (the *wasfîya* *wasfîya* apply to certain particular categories of individuals. The most important ones are those concerning the morals of princely personages. These treat of politics, which, in the eyes of the Arabs as in those of the ancient philosophers, are a branch of moral philosophy. It is true, but a *wasfîya* important enough to be studied apart. There are also treatises on the morals of pious men, but these works do not really treat of moral philosophy, for morality, taken by itself, must be distinguished from mysticism and piety.

We are not perfectly sure which Greek works about moral philosophy were known to the Arabs. The *Nicomachean Ethics* are said to have been translated by Hunain b. Ishak in 12 books, under the title *Kitâb al-falâh*, but the *Nicomachean Ethics* only consist of ten books; hence we to suppose that to this translation have been joined the two books of the *Magis moralis*. Or is this only a variant of another piece of information with which we are furnished elsewhere, according to which Ishak the son of Hunain, and not Hunain the son of Ishak, is said to have translated the commentary of Porphyrius on the *Ethics* of Aristotle in 12 books, when the number of 12 books has also been obtained by annexing the *Magis moralis*. We know that Ishak the son of Hunain translated the comment-

aries of Themistius into Syriac and perhaps also into Arabic. Al-Farabi knew the *Nicomachean Ethics*, the *Magis moralis* and the *Moral Philosophy of Aristotle*; he himself wrote a commentary on part of these treatises; Averroës afterwards paraphrased the *Nicomachean Moral Philosophy*. A certain Ibn al-Khammîr translated a *wasfîya* on *adab* which Wenzel thinks must have been the *Ethics* of Aristotle. We do not possess in our libraries the Arabic translation of the *Nicomachean Ethics*. The physician Abu'l-Faraj 'Abd Allah b. al-Tayyib (died 435 = 1043) is said to have written a commentary on the *Ethics*; we possess a translation from the Syriac into Arabic by him of Aristotle's *ethica a Nicomacho*.

The moral writings of Plato bear more of politics than of moral philosophy properly so-called; let us only remember that his treatise about the laws was studied by Hunain the son of Ishak and by Yahya the son of 'Adi. Of Plutarch there was known a *Kitâb al-ghayb*, a book on moral exercises, an virtue, translated by Nasta the son of Lâza. A treatise on the "education of children" (*al-ta'dîb al-ghayb*), translated by Abu 'Amar Yâhanna, the son of 'Adi, was also attributed to Plato. Wenzel proposed, *wasfîya* very strong reason however, to change the name of Plato into that of Plutarch here.

Of the Pythagorean which the Arabs have known the golden verses (*carmina aurea*) which must be classed among the maxims, and also the maxims of the philosopher Socrates, the *Maximæ* has preserved an interesting moral treatise, entitled *Kitâb al-ghayb* which *wasfîya* to be a work of the Arabic school (edited by Hirschman, Leipzig, 1840, and by René Basset, Algiers 1898). Another methodical moral treatise, especially representing the Platonic doctrine, is that which bears the title *Ma'âdî al-nafs*, the resurrection of the soul; this treatise, edited by Hirschman (*Hermetische Erbschaften und apokryphen Schriften des christlichen Arabismus*, Bonn, 1873), is attributed sometimes to Hermann Trismegistus, sometimes by Ibn Abi 'Uthala, to Socrates and to Plato, and sometimes, in a manuscript at the Bodleian, under the title *Za'îr al-nafs*, to Aristotle. Its real origin is unknown; Hirschman thinks it is the work of a Musulman and compares it to the writings of the Brothers of Purity; Steinschneider (*Die arabischen Übersetzungen aus dem Griechischen*, p. 23), prefers to see in it a Greek work of so oriental Christian.

Passing by several "testaments" (*wasfîya*) and the "Book of the apple" (*Kitâb al-tufâh*, an apocryphal dialogue between the dying Aristotle and his pupils, written in imitation of Phaedon, *wasfîya* still mention: a treatise on *Esotericus* written by a Christian, which is at the Bodleian; a work by 'Ali b. Ridwan (died in 453 = 1061 or 460 = 1068), a kind of autobiography into which the author has inserted a passage about morality and politics, which was afterwards attributed to Aristotle and translated into Hebrew; and a *wasfîya* in morals (*al-ta'dîb*) supposed to have been written by Aristotle for Alexander, preserved in the British Museum (p. 203 of the catalogue).

About all these translations, authentic or apocryphal, *wasfîya* Wenzel, *De antiquorum Graecorum doctrinis in arabicis*, Leipzig, 1842; M. Steinschneider, *Die arabischen Übersetzungen aus*

des Kirchenarchivs in Halle für das Centralblatt
für Bibliothekswesen etc.; Leipzig 1893)

The Mussulman authors who have written in a methodical manner about moral philosophy are comparatively few; those amongst them who are famous have nearly all of them earned their fame by other writings, so that we must conclude that moral philosophy, considered as a pure and independent science, has not been cultivated with great profusion in the Mussulman world. There are three titles which occur with more insistence than the others. There are *Kutub al-akhlaq* or treatises on morals; *Tahsil al-akhlaq* or correction of morals, in Latin *De perfectione animæ*; and *Maqalat al-akhlaq*, what is honourable to morals. We have already met this last expression above; the treatises which take that as their title are as a rule collections of traditions attributed to the Prophet and to various other persons and tend to recommend or censure the different virtues.

The first epistolist, who wrote in the Arabic language, is the celebrated translator of *Kutub-madaniyya*, *Ham al-Muhallab*; after him the principal writers on letters are the Brothers of Purity (*Akhwan al-Araf*). The Madhawihi, al-Fihrazli and Nasir al-Din al-Fargi, whose treatise entitled *Akhbar al-kutub* is often met; let us also mention the *Akhbar al-kutub* and the *Akhbar al-kutub*, works widely read in the east. See Carré de Vaux, *Gesch. Paris*, 1892.

It is impossible to sum up in a few lines the moral lessons which these histories contain. Let us therefore content ourselves with offering some indications suited to prepare the mind for the study of works of this kind.

From the remark, which we have made, the most of the moralists of Islam were chiefly famous for words rather than for books or edicts, may be concluded that their moral philosophy reflects the nature of their mind and of their work, known from the rest of their productions. That the moral philosophy of a specially mystical author will not be the same as that of a chiefly dogmatic one; that of a dogmatic author will differ from that of a philosopher, and that of philosophers from that of a poet or an historian. Moreover, according to what our teachers of the school to which this author belongs, one will see whence whether his moral philosophy is likely to come closer to that of Plato or to that of Aristotle, to that of the writers of maxims or to that of the Fathers. Thus in the book entitled *Ash-shakhs al-ahs*, which, it is true, may not be the work of a Muslim, one finds the virtues described in the Platonic fashion: the principal virtues are here namely temperance, wisdom and strength. In *Nasir al-Din al-Tust*, who belongs to the school of the Philosophers, one finds them divided and described in the pythagorean and scholastic fashion, although the author assigns a prominent place for justice, according to the Platonic idea. In *al-Khazali*, who has fought against the spirit of the school of the Philosophers, and who is in a large measure assimilated himself to that of the Fathers, one finds an azoteness of analysis, a profundity of views, an intensity of sentiment which have nothing systematic about them, but remind one on the contrary of the experience of ecclesiastics, accustomed to the direction of souls. And *al-Ash'ari* one perceives especially a praiseworthy effort to unite by an appearance of phi-

inevitably order a large number of small facts which are in a way the crumb of history.

There are some features which all these moral philosophies have in common. The admiration especially accorded to certain virtues such as resignation, ~~submissiveness~~ with one's fate, command over one's tongue, patience, is a disposition which one finds in all these different authors and which is especially Islamic. The idea of considering the vices as maladies of the soul and moral philosophy as a kind of medical science is also common to them all; with the mystics the comparison is completed by comparing the spiritual direction to the doctor. Thus moral philosophy is the art to cure diseases and to keep us healthy. Its aim is the attaining of felicity; this aim is taught by Aristotle and by Plato. But also noticed in all these authors is a certain rather scholastic wish to effect a methodical division of the virtues, that division is founded on the analysis of the faculties of the soul, each faculty having its virtue and its vice, and sometimes the vice is conceived as the opposite of the virtue and sometimes the moralist admits two vices the one the result of excess, the other of want, lying on either side of a middle state, where the virtue resides: this is the well-known idea of the golden mean. The virtues which are often spoken of in Muslim ethics are, besides those we have already mentioned: the delight of the soul, exaltedness of thought, liberality, generosity, indulgence, gentleness, chastity, often blamed vices are: lying, envy, anger, intemperance, pride. Special chapters are often devoted to friendship, sociability and to the duties of the different classes.

ASHLAT or **KYLAT** (better than Khelat; comp. s. L. *Marzban*, ed. Juyaboll, p. 360) is a town on the **Shirvan** shore of Lake Uza, in the Middle Ages one of the largest towns of Armenia, very populous and strongly fortified. Comp. Ritter, *Erdbkunde* c. 324-328; G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905) p. 183; Ch. Schaefer, *Sefer-Namash* (Paris, 1881) p. 11 as **asr**, in the 9th century after **Abbas**. **Abbas** was taken by the Arabs, but in the year 928 it was again taken from them by the Byzantines.

comp. Well, *Geogr. d. Chalifen* II, 538. Later on Akhilat came again under the rule of native princes. In the year 1100 the family of the Salihid Saladin al-Khatib took the town from the Merwanides, then $\text{ḥ}^{\text{ḥ}}$ lords, and established his own rule. Comp. Tomachuk, *Souven* (= *Sitzungsberichte der phil.-hist. Classe der kais. Akademie d. Wiss.*, vol. 133, 2^d ser. p. 31 et seq.). About later sieges and conquests see Saint-Martin, *Mémoires sur l'Égypte*, I, p. 103 et seq. and Stanley Lane-Poole, *The Mohammedan Dynasties* p. 170. In the years 1732 and 1734 Akhilat was taken by the Mongols; cp. Tomachuk, *loc. cit.* p. 34 et seq.; Quatremère, *Hist. des Mongols de la Perse* (Paris, 1826) I, 320, 324. The Byzantine writers call the town $\text{Ḥ}^{\text{ḥ}}$ or $\text{Ḥ}^{\text{ḥ}}$; the Armenian authorities $\text{Ḥ}^{\text{ḥ}}$ (Chelak); according to the latter the town belonged to the canton $\text{Ḥ}^{\text{ḥ}}$ of the province of Tufayrahman; cp. Hülshagen, in the *Zeitschrift für Assyriologie und vgl. Ethn.* (1904) 328. The place still exists in this day and possesses very interesting ruins; cp. Ritter, *loc. cit.*; Reclus, *Nouv. géogr. univers.* 12, 376.

(STRECH.)

AKHIM is a town in upper Egypt. Akhim is the old Egyptian Epe or Ephen-Min, hence Coptic Shain, Arabic Akhim or Akhim; the Greeks called it Chemmis or Pausupolis. It lies on the eastern bank of the Nile 26° 35' N. lat. and has now 2800 inhabitants. In the early Axialian time it was the metropolis of a separate canton (*ḥ}^{\text{ḥ}}), from the end of the time of the Ptolemies until the time of the Mamelukes it was the capital of the province of Akhimya. To-day it belongs to the district Saïd in the province of Giza.*

In the Middle Ages Akhim was a flourishing town, surrounded by arable land, sugar-cane plantations, vineyards and date palms. It possessed two mosques and several Christian churches. Also weaving was practised on a small scale. It had already been done in Strabo's time and is still to-day; linen was probably also cotton materials were manufactured there for the inhabitants of the neighbourhood. As in all industrial towns of Egypt the Christian element predominated in Akhim; today 8000 Copts are still living there. They were famous for their magic art. All sorts of exorcisms and legends were connected with the temples, called *Ḥ}^{\text{ḥ}} or *Ḥ}^{\text{ḥ}}, which were still well preserved in the Middle Ages and the sculptures of which (human beings, animals, etc.) has given occasion to all sorts of fables. According to the Arabic one of these temples covered a surface of 220 × 160 metres, and numbered 40 pillars. The description of the temple has special interest for Egyptologists.**

AL-AKHIRAS 'Abd al-Qayyis a. 'Abd al-Wajid n. Wajid, an Arabian poet, who was born about the year 1220 (1805) in al-Mawqil, and died 1290 (1874) in al-Basra. His surname al-Akhira (the dumb one) he owed to an impediment in his speech. One of his passions, the call of Baghdad $\text{Ḥ}^{\text{ḥ}}$, sent him to India in order that he might undergo an operation. As this could not be done without endangering his life however, the operation was not performed. In his poems, which were very popular in his native country 'Iraq, he follows the example of his predecessors. He wrote many *Ḥ}^{\text{ḥ}} and *Ḥ}^{\text{ḥ}}, but did not take the trouble to collect them into a diwan. This was done after his death by Ahmed 'Izzat-Pasha al-Farisi, who in 1304 (1886/1887) had the collection printed at Constantinople under the title of *al-Thiḥ al-akhir* f. *Ḥ}^{\text{ḥ}}.***

Bibliography: Dihlī, Zaid, *Alfihār al-akhir* II, 200 et seq.; Ch. Hunt, *Librairie* (Paris) p. 126.

AKHSHAM (r.) = "evening", one of the five *ḥ}^{\text{ḥ}} with the Persians and the Turks.*

AKHSIKATH was in the 4th (10th) century the capital of Farshana; under Babir it was the second of the large towns and was then called Akhs; still in the 12th (17th) century the present capital Narmangan is spoken of in the *Ḥ}^{\text{ḥ}} (Kibé, *Indes* 1^{re} 375, 2^e 108) as one of the less important *ḥ}^{\text{ḥ}} (Fardis) of Akhs. According to Babir, Akhsikath was situated on the right bank of the river Sir, near the place where the Kasa-Sai joins it. At present there still exist (near the village Akhs and Shahan) the ruins of the old citadel (Ikt Akhs, 1000 steps from west to east, 600 steps from north to south, about 150 feet above the level of the water of the Sir; explored in the year 1885 by professor Vozlovsky from St. Petersburg). Information concerning the state of the ruins may be found in the *Spisaniye* 1885 (Russ.) Tashkent, July 1896.**

(W. BARTHOLD.)

AL-AKHITAL, an Arabian Christian poet, born about the year 640 of the Christian era at al-Hira (Aghda) c. 170) in the Syrian desert not far from Raqqa, where his clan camped; comp. the *Ḥ}^{\text{ḥ}} (ed. 1891—1892) (hereafter referred to as D.), p. 82, and Aghda at 35 et seq. His real name was $\text{Ḥ}^{\text{ḥ}}$ (Tahib). He belonged to the Taghlibite clan of the Qhulam b. Reir (comp. D. pp. 178, 179, Aghda III, 169; *Ḥ}^{\text{ḥ}}, 1904 (hereafter referred to as D.), at the bottom of p. 479), one of the most illustrious clans of Arabia. His mother Laila belonged to the Christian tribe of Yed. As he himself adopted the name Akhital, it cannot have reminded him of anything disagreeable; his enemies called him *Ḥ}^{\text{ḥ}} ("pig. wolf") (D. p. 1). From his eldest son he took the *ḥ}^{\text{ḥ}} Abū Malik. Being descended from the Christian Taghlibites, he lived****

and died a Christian: if necessary the entire of his work would prove it. His diwan shows few traces of his Christianity, which was, moreover, superficial in all religious faith among the Bedouins; amongst a mass of Sana'i, Sargis, of the cross, of martyrdom of Christian martyrs, to these may be opposed Islamic expressions — comp. *l.* pp. 78, 119, 184, 204; *Diwan*, ed. of 1903 (hereafter referred to as *D.*), p. 171, 1. — current expressions which prove the influence of his surroundings (comp. *Agghani* vii. 173). He appeared in public with a golden cross round his neck, according to the custom of the Arabian Christians, turned to the cross when praying, received communion and humbly submitted to the public penance that his confessor imposed on him. He proudly accepted the Caliph's offers, willing him to change his religion (*D.* p. 154) and reproached his adversaries that "anger and not conviction" had led them to Islam (*D.* p. 315, 1). The way he practised evangelical morality is more unpleasant: he was divorced and married again a divorced woman, a common practice among Arabian Christians. Did he add to these a slave-wife which a son of Zayd had given to him (*D.* p. 315, 1)? Margoliouth (*Arabian* p. 40) states he but does not prove it. Al-Akhtal was a great drinker, first apart from the influence of the ancients, whom he knew and imitated, drinking wine to the Christians a proof of their independence from Islam. Personally al-Akhtal, together with several fellow-Musulmans (*Agghani* viii. 15; ix. 76; xi. 39) was in it a source of inspiration. He was seen in public houses in the company of Umayyads and a son of 'Uthman (*D.* p. 27, 1; *D.* p. 174). In his whole conduct it is more difficult to condemn his intercourse with female singers of very loose morals, than his *husha*, a kind of platonic love (*D.* p. 479; *husha* *Agghani* f. 145) which became a common place subject of poetry. His diwan is chaste, owns very little passion (comp. *D.* p. 105, 106, 109-110, 105, 11) excepted, as is easily explicable considering the obscene character of Arabian satire. Let us only think of *Qasr*, *Farras* and a great lady of the Aysar, *Hamida* (*Agghani* viii. 139-140). Like all the Taghlibites, al-Akhtal belonged to the monophyletic confession; this, however, did not hinder him from being the friend of the very influential Melkite family of the Sargis.

When Ka'b b. Dhufal, the poet of the Umayyads, was invited by Yazid, the son of Mu'awiya, to attack the Aysar, he let the young al-Akhtal, who belonged to the same tribe as he, take his place. But the success of this virulent *husha* (*D.* p. 314) would have cost him his life, if Yazid had not intervened. From that time he shared his table and accompanied him to Mecca. At this period his panegyrics on the Umayyads began; Yazid, 'Abd Allah b. Mu'awiya (according to commentators in *D.* p. 107-108; comp. *U.* pp. 63-73; however the battle of Marj Dabiq, which took place after Yazid's reign, is mentioned); Khalid b. Yazid; on their lieutenants: Zayd and his sons, al-Harithiyya etc. Having been appointed official poet of the dynasty (*Agghani* vii. 172, 176) by 'Abd al-Malik, he sings the praise of the Caliph, his relations such as 'Umayr b. 'Abd al-'Aziz, his sons al-Walid, Salim, and the memory of 'Uthman (*D.* pp. 19, 1, 172-174), attacks his enemies: 'Ablan, Zuhayr, Aysar,

l. pp. 58-64, 73-76, 93-94, 264, 177-178, 189 etc.) the Khazir, hostile to the Musulmans since Marj Dabiq; a real political poet, praised by those in power and feared by the opposition! That part of his diwan has great historical importance: in it one finds the old *husha* still surviving, the echo of contemporary passions, and in the proud and independent attitude of al-Akhtal (*D.* p. 478-482) the tolerance of the Umayyads, who are still Arabs rather than Musulmans. The influence exercised by his Christian is not one of the least instructive aspects of that period of transition. According to *D.* p. 170-171, 'Abd Allah b. Dhufal al-Akhtal (and not *Agghani* as *D.* has it) had definitely allied himself with the Umayyads. The rivalry of al-Akhtal and *Qasr* has remained famous in literary history; as a rule the former had the advantage of his rival, who was less biting and more trivial; their *husha* = a favourite theme. Al-Akhtal, *Qasr* and *Farras* together form the first class (*al-furqa al-awla*), a group of three standing apart, with which Arabian criticism has found nothing to compare since Islam. But critics do not always agree about their respective value, a subject which has raised interminable discussions among the 'Arabists grammarians (*Alhaka*, *Madrasa* p. 458). If al-Akhtal had not been the Christian author of mischievous verses against Islam, they would have agreed to accord the palm to him, his style being usually more chaste, he reminded one more of the ancient models. In satire, in the *husha*, he is undoubtedly the first. In panegyrics his inspiration carries him to much higher flights than his rivals, who are much more vulgar. Notwithstanding his "Weltschmerz" which he frankly that of a Bedouin, we see the courtesy in his Taghlibite, who moreover, loves a roaming life and hates life at Damascus (*D.* p. 121, 1). The Christian betrays himself, we believe, not so much by professions of faith as by the rarity of obscene passages, which his rivals indulged in. In that respect al-Akhtal could say like Nisab (*Agghani* i. 145) that a young girl might read his diwan. As in the case of *Shamsh* and *Hamida* (*Agghani* viii. 102) one might find fault with some of his *husha* in that they are too artificial, do not run smoothly and are all of them difficult: he was not a *husha* poet and did not care to pass for one either. The eulogy on the Umayyads (*D.* p. 98-112) is considered his masterpiece, where may be read the verse which immortalizes the life of those caliphs: "Turbid in their wrath, when they are soothed, they are the most excellent men, notwithstanding their power" (*D.* p. 104, 5). Although it is true that al-Akhtal imitated his predecessors he borrowed their verses, yet he has never committed plagiarism with such brazen-faced cynicism as *Farras*. One part of his diwan (*D.* pp. 106, 129, 133, 135, 168-169; *D.* pp. 167-169; comp. *Qasr*, places 2, 8, 9, 10, 13) sings the vicissitudes of the wars of his tribe with the Khazir, who had first been their allies against Ka'b. Having fought in those wars, in which he lost his son, he assumes as if he showed great courage (*D.* p. 17); exaggerated praise! Al-Akhtal was a warlike temperament; from the butchery of *Qasr* (*Qasr*, 23, 1, 13) which his poetic he escaped by flight. Alluding to the cowardice of 'Abd al-Malik he cried out before him: "If

intemperance (*Aghani* xl. 59-60) had provoked the Komishites in their power refuse justice to us, we can leave them alone" (*D.* p. 111) — a revolutionary verse which comes close to that in which he declares the abascey 'Abd Allāh b. Sa'īd b. al-Aḡī, the descendant of a Taghlibite (*D.* p. 117-118) and the brother of the one who had all but overthrown 'Abd al-Malik, "worthy to command". These undacious utterances did not deprive him of the favour of the Caliph. Walīd I — his poet was called 'Adī b. al-Rikā' (*Aghani* viii. 179-184) — showed no very warm admiration for al-Akhṭar. This Caliph, not a very cultured man, paraded a Mussulman ferocity (*Aghani* vii. 69,). The Bakrites, for a long time the enemies of the Taghlibites (comp. *D.* p. 161-162), chose him as an abettor and al-Akhṭar pronounced judgment in the mosque. He must have died before the end of the reign of Walīd I. The 'Abd Rabbihī (*Aghani* l. 155; iii. 70) prolongs his life until the reign of 'Umar II, doubtless deceived by some version (*D.* p. 177-178) rooted before the accession of that Caliph. If we have been right in giving ± 840 as the year of his birth, al-Akhṭar attained his seventieth year and in that time his poetic career lasted about forty years. No descendants of his are mentioned.

Hiseloge 247: *Salḥān*, *al-Akhṭar* (*D.* p. 1-111, 1-400 (Boydron 1891-1892); the same, *Divan al-Akhṭar*, photographic reproduction of the Ms. of Bagdad (*D.* p. 1-111, text pp. 1-189 (Boydron 1905); the same in *Maṣṣarif* 1904 (*M.* p. 475 et seq.; *Aghani*, *fuṣṭūḥ*, especially vii. 169-184, the *Kutub*, *Alḥad al-Akhṭar* (ed. de Coetlog) p. 286; *Sayyid*, *Alḥad* ii. 117; the 'Abd Rabbihī, *Aghani* l. 53; ii. Laminana, *Le Chantier des Omīades*; notes bibliographiques et littéraires sur le poète arabe chrétien Akṭar (Paris, 1895) pp. 1-208 (extract from the *Journal*, d. 1895); the same, *Les poètes royaux à la cour des Omīades de Damas* p. 1-61 (extract of the *Revue de l'Orient chrétien* 1904); the same, *Studes sur le régime de calife Alḥad* p. 397-404; *Wiener Zeitschr. f. d. Kunde des Morgenlandes* 9. 160 et seq.; 24. 4 et seq. (H. LAMMERS.)

AKHTAR (v.) = *akṭar*.

AKHTAR is the *ṭaḥṭallag* of Maṣṭūḥ al-Dīn Maṣṭūḥ b. Shams al-Dīn al-Karabihī (d. 968 = 1561). He wrote an Arabic-Turkish Dictionary (952-1545), known by the name of *Akhṭar* *ḥakī* (there are also concise recensions), and printed at Constantinople (1242, 1256, 1292). Cp. Flügel, *Die arab. pers. u. turk. Lex. u. Wb.* 119-120.

AKHUND, also *akḥṭān* (Castell; Shakespeare; Polek, *Poésie* l. 269) and *akḥṭānd* (Shakespeare; Richardson, *Vallée*) = "schoolmaster"; East Turkish *akḥṭān*, *akḥṭān* (Vambery, *Geographische Sprachstudien* p. 205; Salmassian-Eleuill, *Langue* i. Cagatzi p. 6); *akḥṭān* *ḥakī* = "office of schoolmaster" (Quatremère, *Hist. des Sultans mamluks*, l. 69). — The original meaning of the word is "under-master", "substitute", from *akḥṭān* (*akḥṭān*, *akḥṭān*), contraction of *akḥṭān* (*akḥṭān*), which occurs in the compound names of Mīr-Akhund and Khān-Akhṭar. According to Quatremère (*ibid.* l. 65, note 96), it is not found in use until after Timur's invasion; — *Akhṭar* *ḥakī* is the name of a poet in Shirāz (Pertsch, *Cat. Bra. Berlin* p. 633; Jewi, *Iran. Namastah*

p. 130); *akḥṭān* = "the schoolmaster's son" is the surname of Mirzā Faḥr 'Alī (q. v.), a play-wright, who wrote comedies in Azgī Turkish (see *SHAWAN*). (Cf. *Huarta*.)

AKID (a.) = commander-in-chief in the wars and expeditions of the Arabian Bedouins.

AKIDA (a.; plur. *akīd*) is a word which signifies the article of faith, the proposition, to which the faith is strongly attached, as it is illustrated by the concrete term *akīd* "husb". The writer of the *Tafsīr* gives the following definition of the *akīd*: "that in which the dogma itself is kept in view, not the practice". They are indeed formulae, in more or less concrete phrasing, serving to express the principles of religion, the *akīd*; the latter, according to the definition of the *Tafsīr*, are the truths, "the reasons of which consist in themselves, and on which the others are based". There is a release of the *akīd*; the *akīd* do not properly constitute a science; they are only sayings. They can be considered as a preface in the *akīd*; the *akīd* of 'Ishāq ben the double title of "word" (*akīd*) of the people of the *Ḥanbalī*, or *ḥanbalī* (*ḥanbalī*) to the principles of religion".

In Islam as a matter of course an official declaration of the dogma of faith has never existed, the Islamic theory of the covenant precluding the appearance of personalities like the apostles of Christianity, composing a creed with help from above, but many doctors, mystics and even philosophers, have tried to give substantial expression to their faith; and several of these have since been adopted, taught and commented on by the theologians in the Islamic schools.

This kind of writings comes in go back as far as least as the 4th century of the Hījra. The one that was enjoyed the greatest vogue is that of Naṣṣā al-Dīn 'Umar al-Naṣṣā (d. 537 = 1142-1143); on it various commentaries have been written, notably by Saḥ al-Dīn Maṣṣā al-Taṣṣā (d. 791 or 792 = 1389-1390). To this commentary glosses were added by Muḥṣ al-Aḥṣā b. Māḥ, commonly called Khayālī (d. 800 = 1456), by Muḥṣ al-Aḥṣā (d. 902 = 1495-1496), by Muḥṣ al-Aḥṣā, tutor of Saḥ al-Aḥṣā, and by still another, *Maḥṣ al-Aḥṣā*, who has a long article on this subject, even quotes glosses on the glosses of Khayālī. It is in the treatise of Naṣṣā that 'Uḥṣā founded his exposition of the Muḥṣā doctrine.

When one studies theology in the universities from a series of works like those mentioned, the student, during the first four years, may only read the original treatise (*naṣṣā*) and its commentary (*akḥṭar*); only during the ensuing years he may study the glosses and the paraphrases (*ḥawāṣṣ* and *ṣafḥat*, see Pierre Arminjon, *Le régnement, la doctrine et la vie des sultans mamluks d'Égypte*; Paris, 1907).

Besides Naṣṣā, the oldest scholar who have written *akḥṭar* are al-Jahāz (d. 321 = 933) and al-Samarqandī (d. 342 = 953-954); and the most celebrated are: the Imam al-Jawāzī, the tutor of Khayālī (d. 478 = 1085-1086); Khayālī himself, who wrote a book under the title of *akḥṭar* as part of his great work *akḥṭar al-akḥṭar*; al-Jāzī, the author of the *Maṣṣāḥ* (d. 756 = 1355); the mystic and founder of orders *Ḥanbalī* al-Dīn 'Umar al-Samawānī, 'Abd al-Kāḥir Ghānī and Abū Maḥṣān; the voluminous

writer on philosophy Muhyi 'L-ʿIrāqī al-ʿArabī (d. 638 = 1240-1241); the Shaikh Abū 'Abd Allāh al-ʿIṣṣāqī, ḡāḥ of Tirmidhī (d. 593 = 1207). There are also ḡāḥ of the famous Naṣīr al-Dīn Tūṣī, of the celebrated commentator of the Korān al-Baḥārī (q. r.) and others of the mahdī Ibn Tīmīyā. There are 'ṣūfī in verse, e. g. the well-known poem of al-Ḥajj al-Farḡānī collected by ʿAbd Rāḥmān under the title of *Qasā'id wa-ṣaḥāb al-ḥikmah*; Kāwīqarī (1849), and that of al-Lakṣnī (see Brockelmann, *Gesch. arab. Litter.* II, 318 et seq.). — The treatises which amongst all ḡāḥ have been most commented on, are those of Tājī and al-ʿIṣṣāqī. The following gives for example a summary of three of them.

The *ʿAṣṣāḥ* of Naṣīr al-Dīn 'Umar al-Nāṣif is the almost direct enunciation of the dogma; the author inserts hardly any explanations and scholastic terms. After a short preamble on the theory of knowledge, he declares that the world was created, and composed of substance and accident, ḡāḥ is ḡāḥ, and that God is unique; he explains what are the qualities of God; he treats of the creation, the will of God, and the vision of God in ḡāḥ other world. In this connection he states the dogmas concerning the creation of the ḡāḥ, the last judgment, and ḡāḥ resurrection, and further on various creeds relative to death and doom: the chastisement in the grave, the interrogatory by *ʿAḥḥ* and *ʿAḥḥ*, the scales, the graduated ladder and the seven bridges. Then follow some propositions concerning the eternity of Hell: ḡāḥ Paradise, Hell created and eternal; but the faithful guilty of a serious sin are not to remain there for ever; next come other propositions concerning faith and works, and the everlasting life obtained in the other world; finally he treats of the isolation of the prophets, from Adam down to Muḥammad, of the Angels, the revealed books and the miracles of the Salāḥ. After these strictly theological creeds he gives an exposition of the perfect caliphate, completed by that of the imamate. The rest of this little treatise contains propositions a little ḡāḥ direct, some of which have the object of preventing heresies; one article for instance on the literalness of the scriptures is aimed against the ḡāḥ, another, on the Nothing, against the ḡāḥ; other sayings, without exactly logical order, refer to the prayer at funerals, to the prayer for the living and the dead, to indifference in religious matters, to the situation of the saint placed below the prophet, and to the place of man in general who is subordinate to the angels. — In the commentary and in the gloss, explanations of a philosophical nature abound.

In ḡāḥ philosophical considerations of ḡāḥ length go along with the exposition of the articles of faith, in accordance with the intellectual and literary habits of the author; with ḡāḥ the ḡāḥ develop immediately into ḡāḥ. The book of this long treatise, in which the ḡāḥ are contained, is entitled *ʿAṣṣāḥ al-ʿIṣṣāqī*, the foundations of the articles. It is divided into several sections, one of which is devoted to the formulation and demonstration of the essential dogmas of the theodicy, and has often been copied separately, under the title of "Epistle from Jerusalem"; each of these dogmas, accompanied by its traditional and rational proofs (*ḡāḥ*), forms a

principle (art). For example the principles in the section on "the essence and the unity of God" are: the essence of God, his eternity, that he is not in a place, that he has no body, that he has neither posteriority nor directness, that he is "established on his throne", as the Korān says, that he will be seen in the other life, that he has no associate. The rational proof of the existence of God is, that every product needs a cause to produce it, that consequently the world, being a product, needs a cause which is God. — In other sections of the same book, ḡāḥ treats of the qualities of God, of his works and a proof of his works, of the problem of free will in man. The section is especially devoted to the traditional beliefs relating to the resurrection, the judgment, the perfect caliphate and the imamate. In the course of his exposition ḡāḥ introduces very interesting speculations on faith, its nature, its degrees, the means to produce it, to defend it and make it grow; sometimes he calls it "attachment" (*ḡāḥ*), sometimes "confidence" (*ḡāḥ*); he distinguishes faith from Islam, faith being the belief in proposed dogmas, whereas Islam is the abandonment not of the spirit only, but of the heart and of the whole being to the will of God. ḡāḥ also discusses in which degree speculation is useful in the establishment and the defence of faith. This book of the *ʿAṣṣāḥ* is preceded by another one on science, which forms the preamble to ḡāḥ just as Naṣīf places a definition of what science really is at the head of his *ʿAṣṣāḥ*.

To the mystic 'Abd al-ḡāḥ ḡāḥ is in rhythmical prose ḡāḥ attributed, ḡāḥ are both poetical and very philosophical. In this short treatise the ḡāḥ moreover a painstaking care to preserve the purity of faith against the various heretical sects. There is no theorising about knowledge; it is the theodicy which appears as the very beginning: "Glory to God who is the mode of the mode, and is himself free of modality; who is the place of the place, and cannot himself be localized; who is to be found in everything, but is too busy to be adorned by anything; who ḡāḥ in every place, but ḡāḥ above every abode" This very abstract expression of the ḡāḥ of the theodicy is followed by propositions of faith on each and each a point denied by the sects: "We believe, contrary to the ḡāḥ", the author says, "that God leads the infidels (*ḡāḥ*) astray; that the Moslem sinners (*ḡāḥ*) are better than the Jews, the Christians, and the Magi, which is denied by the ḡāḥ; that God sees himself, and that he sees and hears everything, both ḡāḥ which beliefs are opposed by the ḡāḥ; that he has created man in the most beautiful state, and that he will make him return to his former state, a theory rejected by the ḡāḥ; and we maintain against the ḡāḥ that the friends of God will ḡāḥ him on the last day."

Then follow exhortations; the scholar addresses the soul in a more poetical than dogmatic manner; he praises the benefactions of God and the beauties of Paradise.

Dolphin in the *Journal asiat.* v. series, n. 356—370. — A Malay interlinear translation has been published by Chabouat (*ibid.* 1904) Cf. also this 'Afika and that of al-Samar-kandi which are very popular in the Indies: Van den Berg, in *Tijdschrift voor Ind. taal- en letterk.* en *volkenkunde* xxi. 537 et seq. — Amongst the Turks the 'Afika of Hingewi [q. v.] is much studied: it is the very one in which Garcia de Tassy has based his *Exposition de la foi musulmane*. (CARRA DE VALL.)

AKIF PASHA Mehmed was a Turkish statesman and one of leaders during the reign of Sultan Mahmud II; he held high posts of Minister for Foreign Affairs and of Home-minister. He was the son of the *paşa* 'Alimkhan Mahmud and was born at Yorghal on 15 Rabi' I 1203 (25 Dec. 1787). In 1228 (1813) he came to Constantinople and entered the administration under the auspices of his uncle Mustafa-Maghar, *reis-efendi*, whom he succeeded afterwards; when in 1251 (1836) this function was abolished, he was appointed Prime Minister for Foreign Affairs of the reform ('*Tanzimat*'), but was soon supplanted by his rival Pertev-pasha. In the beginning of the reign of 'Abd al-Majid, 'Akif retired to private life (1255 = 1839) to Adrianople and at Drusa, undertook for the second time his pilgrimage to Mecca (1263 = 1847), and died on his way *ibid.* at Alexandria (1264 = 1848).

Turkish owes first of all to him a reform of its written language. He tried as much as possible to exclude from the ordinary vocabulary of authors all the Arabic words excepting those which had been borrowed for scientific terms, and all those Persian words which were not indispensable to the rhetoric of the poet. He created a simpler and clearer style than the old phraseology of Ottoman authors. His poetry of which the most famous piece is the *Adem-fakih* (Ode of nothingness), is written in the ancient manner.

AKIK (A.; *coralline*; *akik*: 'Afika) is the name of the coralline, which is found in Arabia in various colours and qualities of which the red shade is especially in demand. The coralline has of old been exported from Yemen (al-Buhārī via *Yen'a*) to the ports of the Mediterranean. It was used for seal-rings, for ladies' ornaments and even for mosaic, for example in the walls of the great mosque at Damascus (according to Mu-kaddasī). It was used as a medicine for the preservation of the teeth; superstitious belief ascribed to the coralline in the casting the power of

poisoning the heart — especially in a contest — and of stopping hemorrhage. Even Muhammad is said, according to some traditions, to have shared this belief and to have confirmed the power of the stone to give happiness and to protect from poverty. Down to the present day the coralline has remained a favourite neck-ornament for women, and the name 'akik has been transferred to any kind of necklace which is of a red colour, whether made of glass or shells or other materials.

Bibliography: Karwīl (ed. Wüstenf.) i. 230; Ibn al-Buhārī, *al-Bihar* (Holtz 1291) iii. 128; Dory, *Supplément* ii. 145; Lano, *Mémoires Egyptiens* (London 1836) ii. 335; al-Bukhārī (ed. de Goeje) p. 157.

AKIK is the name of a valley. Two miles south-west of Hama in depression began, forming a valley of considerable width, in which the water is a wide-spread net of effluents was noted. Distinction was made between the greater and the lesser 'Akik. The abundant moisture underground supplied the two principal wells with excellent drinking-water, to one of which the people of Medina were supposed to owe their good-tempered nature. Numerous oases watered the palm plantations and the fields, the fertility of which formed a contrast to the surrounding volcanic aspect of the country. At one end 'Umar had established a *khim* or large stud. In the shelter of the trees villas were visible, country-houses of distinguished Moslem families, such as the 'Alida, and of men such as Sa'ī b. 'Abī Waqqar, Sa'ī b. 'Abī Sa'ī b. al-'Ajl (Bulak, ed. de Goeje, pp. 6, 12, 13, 21; *Afika*, v. 144; vi. 46; xii. 163, 168; Tabari ii. 232, 233; Ibn Sa'ī, ii. 104, 104, 279-280; Ibn al-Jarjar, *Afika* ii. 195). They went there for the spring season, until the heat drove them away to Ta'if.

But the greatest attraction of the valley was afforded by the well 'Akik itself, as it was the only spot in the Hijaz, which gave rise to the flow of a river. In winter rains were exceptionally frequent (Belaghor pp. 53-54), the bottom of the valley was transformed into a stream of the width of the Euphrates, foaming and overflowing like the latter river. At the new year the 'Akik was beginning to flow, the whole town was still at once (Ibn al-Buhārī, *ibid.* iii. 241). In a narrow the banks of the temporary river were covered with a motley crowd, anxious to bathe their feet and enjoy the various pleasures of hydrotherapy. In short the valley of the 'Akik was what might be called the 'Hajj de Roulogne' of Medina, or to borrow a phrase from the *Afika al-Kasbi* (ii. 173): 'the pleasure-ground of Medina during the rainy season and spring', the place where elegant society met, the famous pleasure-house, the connoisseurs of fashionable parties, a veritable other Baghdad, extension of the dissolute town, into which the home of Islam had been transformed. Among the very mixed crowd one might notice, besides licentious poets such as 'Umar b. al-'Ajl and al-Ahwar, musicians, dancers, and a special class of men known by the significant name of 'mushannagh' of the 'Akik'. Wine was drunk there in public parties were organised in the depth of night, which were visited not only by the 'jeune école' of Korah, the Hashimites, the descendants of 'Alī, of Zubair, of Hasan b. 'Alī and of 'Abd al-Rahmān b. 'Awf, but also by the members of the first families such as the famous Sulaym. —

was that the whole tribe was obliged to pay the wergild (Robertson Smith, *Kinship and marriage in early Arabia* p. 55; O. Freytag, *Über die Akila, bei den vorislamischen Arabern* p. 56 sq.). It made no difference whether the author of the deed had acted promiscuously or not. According to the Muslim law however the penalty can only be claimed from the kinmen in case of manslaughter, because according to the generally accepted version of the above-mentioned tradition the Makkian women had also slain her adversary unintentionally. The majority of the jurists agree that the author of the deed should not be obliged to pay the penalty. Only the Hanafites and a few Malikiite scholars maintain that he should be treated in the same manner as the other members of the family and therefore should contribute his share to the amount.

There are moreover various contradictory opinions regarding most of the special problems which refer to this matter. For example the majority of the Muslim scholars consider only the male relatives of the author of the deed as 'Akila. But the Hanafites maintain that in consequence of the altered political and social conditions now only the members of the family, but rather all persons who are obliged to help another (such as the members of the guild to which the perpetrator belongs, his neighbours, or the inhabitants of the same part of the town etc.) should be compelled to share in the payment. They defend this theory with an appeal to the example given by the second Caliph. The latter had commanded that in the various districts, lists (*diwans*) of Muslim brothers-in-arms should be drawn up. The persons whose names were contained in those diwans owed one another mutual assistance and had to contribute to the payment of the penalty for manslaughter committed by one of their community.

Kinmen (the 'Akila) have to pay the money within three years' time. The full amount, precisely fixed by the law, is a so-called 'light' penalty [cp. the article *UYYA*]. The question as to the amount of the share of each separate person has to contribute, is solved again in different ways. According to the Hanafites deceased give more than three or, at the highest, four dirham, i. e. only one (resp. 1½) dirham a year. According to the Shafites 1 dirham or 6 dirham may be claimed from well-to-do people, and according to the Malikiite and Hanbalite each person is liable to pay as much as he is able. Muslim tradition makes the Prophet proclaim emphatically, that neither will the children have to atone for the sins of their fathers nor the fathers to atone for the sins of their children. This statement applies, according to many jurists, that neither ascendants nor descendants are obliged to pay the penalty. Consequently they consider as wound to pay: first the brothers of the perpetrator, next the sons of those, then the uncles, then the uncles' sons etc. If the author of the deed has no kindred at all, the penalty must be paid out of public funds.

Al-Bihar al-Rai'at (Rahmat, *Sahih* v. (Leyden, 1908) 324-325; Karatibot v. 77 sq. sq.; *Shawkani, Na'it al-majlis* vi. 369-376. See further, besides the other collections of traditions the *Siḥ*-books of the various schools:

Mawarid (ed. Dinger) p. 393-394; Himmah, *Kahwat al-umma* & *al-Bihar al-Rai'at* (Bihar, 1300) p. 134; J. Koenigsknecht, in the *Zeitschrift für Deutsch. Morgenl. Gesch.*, VIII. 531-536; Freytag, *Einleitung in das Studium der arabischen Sprache* p. 192; E. Sachau, *Musmann, Araber und christliche Länder* pp. 764, 774-775; H. H. Visschers, *Etudes sur la loi musulmane (Rite de Akila)*, *Revue islamique* p. 83, 114 sq. sq. (Dr. W. J. VAN NELLE).

AKINDJI = 'skirmisher', 'warrior' (from *al-akind* = 'spear', 'rod of cavalry', from the root *akana* = 'to pierce', 'to cut'). At the beginning of the Ottoman conquests the *akindji*, as the name of the regular troops of the invading army, struck Oriental Europe with terror by the rapidity of their movements; they received nothing but pay, but lived on the booty they captured from the enemy. They appear for the first time in the early years of Orkhan's dominion, first in Asia Minor, notably in a combat, which Er-Tughtai gave to an army composed of Greek *Tatars*, in the plain of Bursa, towards the close of the 13th century. During the first siege of Vienna (1529-30), they advanced as far as Ratiboon, beyond lines which they passed on their way, devastating the whole country by fire and sword according to the account of Lamberti Jovius. The family of Mikhal-Ughla, which was descended from Kose-Mikhal and related to the Paleologues, bearing besides of a relationship on the mother's side to the Duke of Savoy and the King of France, possessed for a long time the dignity of commander of this troop.

Bibliotheca 171: Hammer-Purgstall, *Sur. de l'Empire Ottoman* I. 59, 128, 386; v. 118, 121, 122; Ahmed *Uyruks Bey, Tarih-i 'al-kara'* *Uyruks* I. 4 = *Uyruks* *Uyruks* I. 175; Margulies-Elsner, *Nachricht. über die Osmanen* I. 175. (Dr. H. H. VISSCHERS).

AKK is the name of an Arabian tribe. 'Akka means 'excessive heat' and 'very hot'; consequently the name belonged originally to a province (province), and was afterwards transferred to its inhabitants. As a curiosity one may mention here that the 'Akites were said to have founded Akko ('Akko).

Their genealogy is given by Wattenfeld, *Geneal. Tabell.*, A. Thine 'Akka and 'Akka are mentioned as the sons of 'Adnan. Others consider the southern Arab 'Udhra as their ancestor which has often caused mistakes in the texts. They appear always as southern Arabs. The 'Akites shared the place al-Mulayy with Khawlatites, the place al-Kadra' with Ash'arites and the place al-Sala' with Rakhites, Maqilites, Farasites and Kinkalites. But in the main their province is inhabited by them and Ash'arites, with whom they are closely connected; occasionally the origin of both tribes is traced back to the same ancestor. They often appear in joint columns; for example they have their governments in common. Also certain peculiarities of language are common to them both.

Habitation & Geography. Their country belongs to southern Arabia; it is the *Yamani* (lowland, inland) of Yemen. Their settlements extended north as far as the region of Hidda. Also according to the administration their country belonged to southern Arabia; sometimes however it was under the government of Mecca.

The Mountains in the *Shari*, the mountains

brother, whom he had come to congratulate on the recent conquest of Irbid, the principal part on the son of Murad, he suggested three important innovations to Orkhan. They are the achievement of a race, which felt conscious of having opened a new era, and dared look on all sides without fear. They proclaimed their wish that all the Turkish nomads living under the rule of Orkhan's family, shall be united under the shield of a firm dominion able to enforce obedience on every side. The three innovations are the following: a monetary system, an official costume and an organisation of the army.

It is almost certain that, after the collapse of the dominion of the Seljuks in 1307, Orkhan as a feudist of the last Seljuk prince 'Ala al-Din Kai Khosrow III, had the right to stamp coins in his own name; but according to a reliable authority he never made use of this sovereign's right. All 'Ala al-Din's suggestion the first coins were stamped in Orkhan's name in 724 (1328-1329). They show on one side the article of faith and on the other the name of the prince together with the optative formula *Allahü Akbar* *muhtesim* (may God make his reign eternal). The technical error which has crept in, the spelling Orkhan instead of Orkhan, is due to the Turcoman practice of sharing the κ . The name of Orkhan's father, the year and the place of coinage and also the prince's title are omitted. The characters are kufic. We only possess silver coins of Orkhan Bey, as gold pieces as a rule were not stamped in the Ottoman realm until the second half of the 9th (15th) century. The *Arabian* basis of the monetary system was abolished by the Ottomans and replaced by a standard of coinage which was first brought into practice by the last sultans of the Seljuks ('Ala al-Din Kai Khosrow III and his uncle Rukn al-Din), and was retained the coinage of the *Armenian* coins ever since. Its base is *akçe*, which is a translation of Greek *stater*, the name of a silver coin of the Byzantines, which had been current since the tenth century or even earlier. (owing to the want of contemporary authorities for the history of Aulak Mimar, the word is not found in the epoch of the first Ottoman ruler except, towards the close of the reign of the Mongol prince Orkhan (d. 703 = 1304), amongst the Turcomans of Adilshahidjan. The new coin was called *akçe* 'akçeset, now simply *akçe* is daily use. Its full weight amounted to six *dirhams* (i. e. a quarter of a *shikim* as fixed with great precision in Muslim law), although it was allowed a latitude of $\frac{1}{4}$ of the full weight. The actual amount of metal at that time was 51 *dirhams*, exceeding by far the lowest limit (51 $\frac{1}{2}$) of 51 *dirhams*. Consequently the *akçe* corresponded in weight to the present *para*, being bigger, as its diameter was 18 millimetres, but also thinner than the latter. Besides the simple *akçe* an other silver coin was stamped during Orkhan's reign. Of an explicit prohibition of the circulation of Seljuk money nothing is heard.

It is not very probable that the *akçe* of eight carats, which in 1334 was current in Rhodes (see K. Pavlou, *De numis. S. Johannis Baptiste*, Rome 1755, p. 319), was identical with the Ottoman *akçe*. Also at Trebizond, in Caucasian Armenia and the bordering countries of the Mongol Sultan Akh Seld the *akçe* was current coin

about 1334 (cf. Pavlou, *De numis. S. Johannis Baptiste*, vol. II, ed. by Pavlou, Lissos and Lissos, 1768, p. 10, 13).

The second reform of 'Ala al-Din consisted in the clothes of an official costume for the Ottomans, after the example of the Byzantines. Whereas the Cyprian castellans were conspicuous at a remote distance by their rich gold-embroidered head-gear, and even their servants wore a gold embroidered head-dress though of a simpler style, for the Ottomans a common cap of white felt was prescribed, on the ground of the highly esteemed Arabian maxim: 'the best garment is the white one'. This head-dress however was only intended as a mark of distinction for civil and military servants of the Sultan, whereas the rest of his subjects evidently remained free in the choice of their clothes.

The third suggestion, the organisation of the army, was the most important of the three, not so much because of themselves, which brought 'Ala al-Din to its conception, but because of its result. For it met with such appreciation from the side of the warlike nomadic people, that in a short time the Ottoman nation underwent a complete metamorphosis and became the most wonderful military mechanism, which had been seen in Europe in centuries. What 'Ala al-Din desired was a division of the troops into subdivisions, and the appointment of officers over the latter. Hence we may evidently conclude that until then the Turks, as far as they had sworn allegiance to Orkhan's race, were free to band together at random and to go marauding in hostile territory, which would account for the absence of an officially recognised supreme command. The right of *akçe* now became state privilege. Economical considerations seem to have had just as much weight with 'Ala al-Din as military motives. For details he referred to the 'judge' Kara Eshik, a relative of their father Orkhan, who was far superior to 'Ala al-Din in knowledge and energy. Whereas the latter was more concerned about outward things and unable to realise the actual faults and deficiencies, the Sultan with his military experience and the judge with his commanding view of the entire domain of state-affairs went at once down to the case of the matter. They came to the conclusion that lack of infantry had made the Turks weak as much then as prolonged sieges, not the least on that of Bursa. The three men discussed the matter together, and the *akçe* was a decision to form an army of foot-soldiers, which should only be summoned in case of war. It should be formed of young men of Turkish nationality, and have divisions and sub-divisions of 1000, 100 and 10 men, an organisation which seems to be a fundamental idea with all nations. The men during their service in time of war should receive a daily payment of one *akçe* each. This organisation, an army without drilling, had the germs of death already in itself, and was soon supplanted by the institution of the *janissaries*, which was the exclusive work of Kara Eshik. The name of 'Ala al-Din is not mentioned in connection with the formation of the latter corps, he certainly had no prominent share in it. His merit consists in having referred his brother to the incomparable organising genius of Kara Eshik.

We have no means to ascertain whether 'Ala

al-Īm at a later period played a prominent part since more, whether he held the post of ruler, as a later authorities have it with great pretension to exactitude, whether he lived the retired life of a pious private man to the Kalimat quarter at home he built a splendid monastery, and erected two mosques in the fortress which bear the approach to Kāpūkhā, near one of which he chose his abode.

He died at night in the year 732 (1331-1332), as according to Chalcondyles, who wrote, it is true, after the conquest of Constantinople by the Turks and took some freedom in handling the historical facts, Turkish had made away with him. He was interred at Bursa, his coffin is still shown there at the anniversary of his brother who more fortunate than he, had come to power.

Descendants of 'Alā' al-Dīn were still to be found at Bursa in the middle of the 15th century.

The above account, which differs in details from those of Hunnauer and Zinkeisen, is mainly founded on Neihart's and Latif's histories of the Ottoman realm. Sa'id al-Dīn, having no further material at his disposal, was the first to draw a little on his imagination, which he was to do again by Minnabegh d'Ottoman in his *Tableau de l'Empire Ottoman* (1788, vol. III. of the 1^{re} édition). Zinkeisen's version is based on an analysis of the accounts by Sa'id al-Dīn and d'Ottoman. Special articles on the necessary question are found in Bellin's *Essai sur l'histoire géographique de la Turquie* (Paris, 1807, vol. III, p. 221 seq.) and particularly in Juma' al-Dīn's *Ta'rikh al-Mamluk* (Constantinople, 1307); also in Ahmed Nizami's *Wadd'at al-Mamluk* (Istanbul, 1278) p. 301, and finally in Stanley Lane-Poole's *The story of the Turks in the British Museum* (London 1883), of which only a shorter use should be made. (K. SCHWARTZ.)

ALACA (s.), originally a derivative of *ala* (q. v.) = squirrel, partridge = alims with mountain-squirrels (cp. Vulg. and Harnett, *Madon-John*, c. in Allen p. 8 and 756); it is also found in geographical names (see for example the next article).

ALACA DAGH is the name of a mountain, constituting a part of the Kara Dagh in the territory of Kara. Near it Russian gained their well-known victory over the Turks on October 20th 1877.

ALACTAGA (Mongolic; also Alakdaga, Alakdagan, Alakdaga) = "horse-jumper", a species of the family of *cantharopidae* (mammals) which is closely related to the jerboa (Arab. *yawd* q. v.). The "horse-jumper" is found in south-eastern Europe, especially in the steppes along the Don and in the Crimea, although its native country is said to be 52° N. Lat. and west of Mongolia. It is about the size of a squirrel and its graceful little head is like that of a hare, for which reason it is called "ground-hare" or (on the folk) "little hare" by the Russians, and "camel-hare" by the Tatars. Its body and the long tail round one of a mouse, the hind legs are almost four times as long as the front legs. The alactaga is the object of a rather energetic persecution, partly because of its edible flesh, which is considered a delicacy by the steppe-dwellers, partly because of the harm which popular superstition ascribes to it. Its flesh dried and powdered is taken as a

medicine in various places. Cp. Bechou, *Fischden* (3rd ed.) II. 485 et seq. (Horn.)

ALADDIN (= 'Alā al-Dīn) is the hero of the tale of the magic lamp, which for the first time is found in Galland's translation of the Arabian Nights' Entertainments. The Arabian original was discovered again by Zornberg and published in 1888.

ALAROT. (See AL-BURR B. 'ABD AL-SAMMAN AL-BARAKAT.)

ĀLĀI (r.) = "procession", "pageant", "ceremony", also "regiment" in the military organization of the Turks. — *Ālāi ālāi* = funeral procession to the husband's home. — *Sā'et ālāi* = ceremony at the departure of the *šāh-zādai* (d'Ottoman, *Tableau de l'Empire Ottoman* III. 302). — *Bāleš-ālāi* = the Sultan's solemn procession to the mosque for the mid-day prayer on the two Bairams. — *Ālāi kumārī* = "pageants of the procession", the title of twelve eunuch-officers charged with the organization of the public processions; they were dressed in red velvet and carried a silver-mounted stick in their hand (d'Ottoman, *ibid.* VII. 179). — *Ālāi-ai* = a name formerly assigned to a fiscal officer, subordinate to the *sandjak-bey*, who to some of us had to conduct to the latter the contingents of the *āpādi* (d'Ottoman, *ibid.* VII. 574); at the present day it is a title borne by the colonel of the gendarmery of a province (*vilāyet*).

Ālāi-ay-ay-ay: *Ruthier de Moynard, Histoire turco-française* I. 101. (Ch. Horn.)

ĀLĀK (s.) = "star of blood"; *Sā'et ālāi*, title of the 95th *šāra*.

ĀLĀSA (s.) = "relation", used in grammar to denote the correlation between noun and verb (cp. Sa'y, *Gesammelte arabishe* I. 582), and in logic as a term for the connection of ideas, especially of judgments in a conditional proposition, which are necessarily associated, e. g.: "If the sun has risen, it is day". (*Dictionary of Islamic Science* p. 1012 et seq.) (Ch. Horn.)

ĀLĀM (s.), plur. *ālamān*, *ālamīn* = "world", a Hebrew (cp. Aramaic) loanword (= *olām*, *olām*), which already occurs in the Koran. In the technical language of the philosophers and poets it is often connected with various nouns and adjectives to distinguish between the visible and the invisible world, between the various degrees of mystic perception etc. Cp. *Dictionary of Islamic Science* p. 1053 et seq.; Zankar, *Türk. Arab. Pers. Wörterb.* p. 620; Dorn, *Supplement* II. 102.

ĀLĀM (s.), plur. *ālam* = "finger-post", "banner" (in the latter sense Arabic uses *al-ālam* and *ālam*). Already in pre-Islamic times each Bedouin tribe had its own banner, which differed in colour from those of other tribes. The banner was tied on to the lance, and it was usually the chief of the tribe who carried it in the war. The Prophet *SAW* his new banner, called *Ālām*, which is said to have been black, although tradition also attributes white banners to Muhammad. The black banner was afterwards chosen by the 'Abbasides, whereas the Umayyads adopted the white one and the 'Alids the green colour. A miniature in the famous Hariri manuscript (reproduced in Milon, *Manuel d'art musulman* II. 3) shows the black banner of the 'Abbasides.

to the house of Don Pedro Ruiz de Azagra, who had taken it from the Moors, and in 1231 it passed into the possession of Aragón.

(C. F. SEYMOUR.)

ALBATEGNIUS. [See AL-BATTĀNĪ.]

ALBISTĀN (ALBUSTĀN) is the capital of a kaza in the sandjak of Marāsh (vilayet of Aleppo), on the river Diāhān (Pyramus) at the foot of the Kard Dagh, at an elevation of 3900 ft. It numbers 6500 inhabitants, of whom 3346 are Moslems and 2954 Christians. The town is surrounded by woods and gardens, and a great many ruins of castles from the time of the little-Armenian kings are scattered about the environs. There are 10 mosques and 1085 houses. The people earn a livelihood mainly by agriculture. Various spellings are found for the name of the town, owing to popular etymology. The Arabs take it to be a compound of *al* and *harīra* (garden), or else of *al* and *istān*. This gives rise to spellings such as Alharīstān (Yāqūt), Albiastān, Abiastān, which however must all be traced back to an older form *Abharīstān*; cp. Saint-Martin, *Mémoires sur l'Arménie* i. 193. The town was from 1097 till 1205 in the possession of the crusaders, and afterwards in that of the Seljuks. In the plain of Albistān a great victory was gained by the Mamlūk Sultan Baibars over the troops of Aḥmed, on 25 Dhū'l-Ka'de 675 (18 April 1277). In 921 (1515) the place was conquered by Selīm I.

(CL. HUARY.)

ALBOHALI = Abū 'Alī. [See AL-BĪHĀVĪ.]

ALBOHAZEN, ALBOHAZEN etc. = Abū'l-Hāzim.

[See Abū'l-Hāzim.]

ALBUHATHER = Abū Bekr. [See AL-BĪHĀVĪ.]

ALBUCASIS = Abū 'Ukāim. [See AL-BĪHĀVĪ.]

ALBUFERA (Portuguese: ALBUFEIRA, ~~ALBUFEIRA~~, ALBUFEIRA; from Arabic *al-buḥaira*, small sea, lake) is the name of a lagoon near Valencia, the Palos ~~del~~ of the ancient. Part of it has been drained both with the sluiceway and by artificial means, and is now used for growing rice.

(C. F. SEYMOUR.)

ALBUFEIRA (for the type, cp. the preceding article) is a Portuguese seaport town in Algarve.

(C. F. SEYMOUR.)

ALBUMASAR. [See Abū 'Ukāim.]

ALBURZ (also *Elburz*), old Persian *Harā Berezaiti* (high mountain), is a mountain-chain in northern Persia, bounding the Iranian plateau on the side of the Caspian Sea. The average height in the western part is 9550 ft., culminating in the Dāmavand (p. v.) (18000 ft.). The northern slopes are covered with dense woods, the southern declivity on the contrary has no vegetation ~~what~~ over. In Hindustan *Alburz* is the name of a moun-

tain mountain in India: the Arabian geographers do not know the name. Harūl Allāh Mustawī is the first who mentions it. Alburz, Elburz must not be confused with the name Elburz in the Caucasus (p. v.). In Strabo, *The Geography of the Caucasus* p. 368, note; Massignon, *Les religions d'Iran* p. 21.

ALCABALA, ALCAVALA (Spanish) = "duty on mercantile transactions", from Arab. *al-qabala* (guarantee).

ALCABITUS. [See AL-BĪHĀVĪ.]

ALCAIDE. [See ALCAID.]

ALCALA (from Arabic *al-qala'* = castle, fortress, citadel) is the name of numerous Spanish towns. ~~There~~ most famous are: Alcalá de Henares, the ancient Complutum, taken in 1118 from the Arabs by the Archbishop of Toledo, and afterwards in vain attacked by the Almohades; Alcalá la Real, northwest of Granada, in Arabic called Kalāt Bant Sa'īd or Kalāt Yahyā because this family, which owes its name to the learned Ibn Sa'īd, was descended from Yahyā of Yemen; Alcalá del Río; Alcalá de Guadaira (near Seville). [Cp. CAJA ... (A) ...] — Cp. *Maḥṣan* i. 65.

(C. F. SEYMOUR.)

ALCALDE (from Arabic *al-qadī* = judge) is a Spanish name for "mayor", not to be confused with *alcide* (from *al-qadī* = leader, general) which in Spanish means "commandant of a fortress", "steward of a castle".

(C. F. SEYMOUR.)

ALCANTARA (from Arabic *al-qanṭara*, probably a ~~word~~ loanword = *arcus*, *centrum*), Spanish = "bridge" (mostly with stone arches), also "aqueduct". The town of Alcantara (Arabic *Qanṭarat al-Baṣī*) on the Tago, close to the Portuguese frontier, was its name to the order of knights, which was founded in 1156 for the war against the Moors and from 1213 had its seat in the town, which in 1266 had been captured by Ferdinand of León. The order has since been called after it. — The name of Alcantara is also given to the valley of a rivulet west of Lisbon, so called after the arches of the aqueduct thrown across it; this valley is well-known as the scene of Alva's victory over Antón de Castro, which made Portugal subject to Spain from 1380 until 1640. — As an appellative *alcantara* has become obsolete; hence for example the place-name "Fuente de Alcantara"; cp. the old "Alcantara" of Cynlora, Saragossa etc.

(C. F. SEYMOUR.)

ALCAZAS, ALCAZZAS, Spanish and Provençal: earthenware in which water is kept, from Arab. *al-kazza* (= *decoct*, *drink*).

ALCATIFA, Spanish (*al-qatifa* Portug.; *Al-katīf* in the Dutch East Indies): ~~name of~~ from Arab. *al-qatifa*.

ALCAZAR, Spanish (from Arab. *al-qasr*): castle, citadel (Portug. *Alcazar*). Famous are the Alcazars of Seville, Cordova, Segovia, Toledo etc. Alcazar is also a frequent name of places, e.g. Alcazar de San Juan, a town in the Spanish province of Ciudad-Real, Alcazar Qasir, the Spanish name of Kaṣr al-Khalīf (p. v.), a town in Morocco.

ALCHEMY. [See *AL-KHĪMĪ*.]

ALCHIA, a contraction of Arabic *al-Baṣra*, "island" (usually called in full *Aljandir Shuk* etc., rarely *Shuk alone*, = *Shuk Island*, in the *Shuk* = *Suq* = *Jānir*), the capital of a district

1. 30) He denied a possible authorship of our single writer, and (in the two last-mentioned discussions) took it for granted, that the book was written at a very late period. He fully disclaimed the existence of Persian and Indian elements, and a passage in the Arabian writer Mas'ûdî, where this statement is expressly made, was on that ground declared spurious by de Sacy. This passage being of the greatest importance for the entire history of the Alf laila wa-laila, I beg to be excused for translating it here. Mas'ûdî (ed. Barbier de Meynard is. 29) expresses himself as follows: "It is a matter done about these legends of Shahîdî. Al and his brother of Iran that al-Azharî is about the books which were translated into our language from Persian, Indian and manuscript has here: Pehlavi; and the Greek, such as for example the book of *Hezar ihsâs* — which in Arabic means 'thousand tales', because the Persian word *ihâsâ* corresponds to the Arabic *ihâsâ* (tale) —; this book is usually called *Alf laila* (two manuscripts have here: *Alf laila wa-laila*) and it narrates of the King, his daughters and his nurse (according to other readings: slave-girl); these two are called *Shahîdî* and *Dihshad*."

Contrary to de Sacy, Joseph von Hammer (*Wiener Jahrbücher*, 1819, p. 236; *Journal asiatique*, 1841, vol. 1, p. 303; *ibid.*, 1842, vol. 2, p. 303) and also *Die nach nicht überlieferten Erzählungen der Tausend und einen Nacht*, Stuttgart 1823) maintained the genuineness of the *ihâsâ* in Mas'ûdî with all its consequences.

William Lane, the excellent translator of part of the Alf laila, tried to prove that the whole book was the work of one single author and had been written in the period 1255—1255 (Preface to *The Arabian nights entertainments*, London 1859—1861).

In recent years the discussion was resumed by de Goeje (*De Arabische Nachtvertellingen in de Edda*, 1886, II, 355 and *The Thousand and one Nights*, in the *Reysepapier-Nattonica* xlii, 316). On the ground of a collation of a passage in the *Fihris* of Shamseddin al-Jahiz al-Warrâq, in which the *Hezar ihsâs* are said to have been written at the instigation of Humal, the daughter of King Bahman, with a passage in Tabari (I, 688), where Bahman is called the mother of Bahman and the name Shamseddin is assigned to Humal, de Goeje endeavored to show a connection between the frame-work of the Alf laila and the flood of Esther. The same idea was further developed by A. Müller (*Zu den Märchen der Tausend und einen Nacht*, in *Brennert'sche Beiträge* xlii, 202); he distinguished various layers in the work, one of which he supposed to have been written in Baghdad, whereas to another and larger one he assigned Egyptian origin.

The idea of the various layers was worked out with greater accuracy by Nöldeke (*Zu den Kephthischen Märchen in der Zeitrechnung, Sprach-Morphol. Gesell.*, xlii, 68), who gave an approximate definition of the texts, by which each could be recognized.

Stimulated by these studies Götting (Stadler *over 1000 Nae*, Copenhagen 1891. Russian translation: *Iskusheniia a 1001 noe*, Moscow 1903) attempted to group the separate tales into three layers, in which the first one was to comprehend the fairy tales from the Persian *Hezar ihsâs* together with the frame-work of the book, the second those

which had come from Bagdad, and the third one the stories which had been added to the body of the work in Egypt; certain tales as for example the extensive children romance of Umar b. Nu'mân and his sons were published as later accretions. To this elimination of the said romance exception has lately been taken by Seybold (*Stimmen der arabischen Literatur in Ägypten*, *Ägypten*, 1907, p. 75). To the above mentioned Russian translation a number of supplementary and critical notes have been added by A. Kulinski.

Now setting at the separate layers of the large collection was continued by Thurnwald in *Die arabischen Erzählungen in Ägypten* (Breslau 1891) he has demonstrated that the Egyptian layer contains again a few separate parts, one of Jewish origin. The same (in his *Hilfsgeschichte der arabischen Literatur* and in various short articles) and René Basset (*Notes sur les 1001 nuits*, in the *Revue des études arabes*, 1891, 1892 and 1893) have also contributed a good many valuable observations concerning details.

At the present stage of the investigation this much can be stated with certainty: "The original nucleus of the Alf laila wa-laila was derived from a Persian book of fairy tales called *Hezar ihsâs*, which perhaps in the third century of the Hijra was translated into Arabic; the subject-matter of these tales was for the greater part of Indian origin". The *ihâsâ* for the *ihâsâ* belonging to this oldest layer are parallel to Indian and Persian books, which have proved to have been written prior to the Arabian version. Such a parallel may be one of two kinds: It is either a complete duplicate of the Arabian tale, or it is some isolated trait which we recognize; the more characteristic such traits are and the more importance they have for the entire structure and the plot of the story, the more value we attach to them. Besides these we also have purely outward criteria, such as old Persian names or the mention of Persian institutions. Lane, while striving to defend the Arabian origin of the tales, overestimated the value of such criteria as *ihâsâ* be addressed in favour of his theory. For it is much easier to account for an Arabian story-teller or copyist inserting Arabian appellations and allusions in modern Arabian conditions, than for the occurrence of old Persian designations, unless we assume that the latter are fossil remains of an older stage of development. The outward tests therefore, which point towards India and Persia, must have comparatively greater weight than the others; the Arabian narrator knew how to add local colouring to their foreign tale, how to adapt it to native surroundings, but on the other hand they were destitute of that conscious artistic feeling, which enables one to lend to native matter a foreign touch and different local colour.

In the very first tale, which forms the frame-work of the book, both criteria for its foreign origin are found side by side. The names of Shahrîzâd, Shahrîyâr and others occurring in it are Persian, and the story of the infidelity of the wives of the two princely brothers, which occasioned the journey of the latter, has its earliest parallel in *Alf laila wa-laila* (see *Hezar ihsâs* and *Hezar ihsâs* xlii, July 1890, p. 266). Also the three incidental little fables, contained in the frame-work story, about the merchants, who ended

Nafsa, — The main is the relation between the story of 'Alf Laila and the Persian original, the former containing many details which occur in the probably later narrative of 'Nar al-Din 'Alf and the girl-child, also to be found in the Alf laila wa-laila; and on less satisfactory grounds in the case of the story of the golden casket and the story of Ahmed and Parwana, these two only to be found in Galland.

These take them from the *Hezar Afsana* contributed the nucleus, round which an Arabian grown various layers of other matter gathered. The first of these consists of matter from Bagdad and attaches itself to the name of the 'Abbaside Harun al-Rashid; some tales of this group are the product of free invention, others spun out and remodelled from actual anecdotes. An example of the latter category is the story of 'Alf al-Hakim or the scholar awakened; the anecdote is given by al-Ishraqi (Lane. *Arab. II.* 376). Also several of the anecdotes which were circulated about Abu Nuwas and Abu Ibrahim, were in a similar way turned to literary account. We must of course not forget that the name of Harun al-Rashid had at an early period become a common symbol of the good old times, of everything miraculous and fairy-like. Consequently we are not justified in assigning a tale to the Bagdad group on the mere ground of its containing the name of that Caliph; only internal evidence is here decisive. Apart, of course, from many details, which were surely doubtful, this general statement may be made, that the novels of middle-class life, short, simple tales of good and solid composition, with a love intrigue solved by the caliph as "*deus ex machina*" for their leading motive, are made up of Bagdad matter, whereas the picaresque novels and also the fairy tales (generally of clumsy composition), in which the element of the Djinn (demons) is extensively prominent, are of later, Egyptian origin. It is worthy of notice that in the oldest fairy tales of Indian and Persian origin the demon, as a rule, act on their own account and independently, whereas in the more recent tales they are always subject to some talisman or other; hence its owner decides the development of the action, and the Djinn and 'Ifrits themselves. In the Bagdad novels everything, as a rule, happens without any magic art. In the picaresque novels we possess something specifically Egyptian, as has been demonstrated by Noldeke (*Zeitschr. f. Deutsch. Morg. u. Gesch.* xli. 55); the classic model example of this entire genre is Herodotus' famous tale of the treasure of king Xanthopolis; an interesting analogue to part of the latter story is also found in the Alf laila wa-laila, in the story told by the eighth Mahadun to Sultan Bakhsh (Edition of Hübner and Fleischer vi. 375). The other, more recent part of the Egyptian group with its common fairy tales is probably the work of a Jewish-Egyptian author, as Chabas has tried to prove in *La littérature égyptienne au cours des siècles* (Paris 1899); from the æsthetic point of view these tales are the least important of the whole book.

Besides these four different layers, which, as has been observed above, cannot with perfect certainty be distinguished from one another in the present version of the Alf laila wa-laila, the book also comprises a number of larger collective stories, each of which is only found in a few

manuscripts, and evidently inserted for the sole purpose of making up the number of nights required. Such stories are: *The seven years* (with the imitations *The ten years* and *The forty years*), which are of independent Indian origin, and the story of *Kalid and Shamsa*. Questionable is the position of the cycle of Sindbad the sailor, which evidently dates from the time when Bagdad and Mecca had reached the acme of their prosperity; it seems originally to have been an independent work. It is a well-known fact that we possess a number of very old Egyptian and Greek analogues of the Sindbad matter. Originally foreign to the Alf laila wa-laila are the large abstruse romances of 'Omair A. Nafisa and his son; the story of *Sul and Shamsa* (ed. by Seybold, Leipzig 1903), and two didactic tales, which are widely different from each other: the history of the wife *Tawaddud*, which afterwards became a favorite chap-book in Spain (*La doncella Fiedra*, Tenedor or Tudur is a mistake for Tawaddud, for which palaeography can easily account) esp. Tickaut, *Historia de la literatura española, traducción por Pascual de Gayangos y Enrique de Vallés II.* 354), and the originally Jewish tale of the wife *Halima*.

The final selection of this voluminous matter took place in Egypt, probably during the reign of the later Mamelukes, and, as may be concluded from the frequent and minute mention of places in Cairo, it was done in the latter town. The same can be inferred from the language of the present version, which, in many respects bordering on the vulgar tongue, constitutes a free and easy development of late literary Arabic. But the redactors have not succeeded in completely effacing the original marked differences of style between the interwoven and concatenated parts. Also the various manuscripts diverge especially in this respect. Charvin (*ibidem*) has made an attempt to establish more precisely the literary identity of the text who revised the two Egyptian layers, and believes him to have been a Jew converted to Islam. But the number of redactions and professional tamers, who in consecutive periods had a share in remodelling the Alf laila wa-laila was probably so great, that from this entanglement to unravel the work of each individual reviser would be a task which no one will dare to undertake.

In the above mentioned quotation from Harun al-Rashid it is said that the Persian book *Hezar Afsana*, which translated literally into Arabic would mean *Alf Afsana*, was called instead *Alf laila* (the thousand nights). The formation of later date *Alf laila wa-laila* ("1001 nights") owes its origin to the expeditious version to round numbers amongst the Arabs (and Orientals in general), as has first been proved by Gildemeister (*ibidem* p. 36); the usual preference for a certain association in book-titles may also have contributed to the allocation. Not just as the Persian book *Hezar Afsana* did certainly not contain exactly 1000 tales, the numeral only indicating an indefinitely large number, neither was the fairy tale matter of the Alf laila wa-laila originally divided into 1001 nights, this arrangement being the work of later times. This is sufficiently evident from the fact that in this point the manuscripts diverge to a great extent, and it was not owing to the editors' efforts to make up the full number, that the re-

notes large insertion crept into the work. Besides, the name *Al-filā wa-lāla* being so popular, the copyists liked to conglomeration under that title all sorts of extraneous matter along with that which all manuscripts contained. A good example of the latter kind of manuscript is the Paris codex n^o. 1723.

A large majority of the tales in *Al-filā wa-lāla* contain a great many more or less lengthy verse quotations, the *Baydad* layer is conspicuous in this respect. The usual practice is to put these quotations into the mouth of the speakers, in all passages where the narrator comes at the expression of strong emotion, whether it be grief or joy; the person in question commences his speech in verse. These verses, however, in by far the majority of cases, are not in the least sense instrumental in continuing the action, but, like the verses in the *Imrās* drama, rather serve as pauses, sometimes interspersed with reflections and moralizings. This circumstance is a sufficient indication, that these verses are not equally old with the rest of the context, but were inserted at a later date. This inference is corroborated by the repeated occurrence of the same quotations in identical situations; and also the frequent accumulation of different verses conveying the same meaning and linked together by the well-known expression *wa-qad alima fī 'd-dā'irah* ("and again he spoke in the same circle"), seems to point at the same conclusion. There are also examples of verses sounding absurd in the mouth of the speaker, evidently owing to a mistake or clumsy insertion. Only in exceptional cases the verse of the poet who wrote the quotation in question is mentioned: *Qasid* who are referred to must be *Abū Nuwās*, *Abū al-Mutāz* and *Ishāk al-Basrawī*. In most cases stands the stereotyped phrase *wa-lāla 'alāhī* ("the poet speaks"). The majority of verses are of a later date and as a rule plainer and simpler than the older Arabian poetry.

The manuscripts of the *Al-filā wa-lāla* belong to three different groups, as has been demonstrated by Brockelmann (*Gesch. d. arab. Litt.* ii. 40) after Goerberg: an older Arabic group (the manuscripts belonging to this group are all except one incomplete, containing only the first part of the book) and two later Egyptian groups. The differences between the manuscripts are very great, though *Qasid* important between those of the first group. Brockelmann gives a list of the eastern and European translations (*ibid.*), which was enlarged and continued by Krinski (in his above-mentioned introduction to the Russian translation of *Goerberg's Studien*). An extensive bibliography is found in *Harvill's Bibliographie des ouvrages arabes* iv. 12-120. The most complete and exact translations of the fairy tale cycle in European languages are the English one by Burton (Newnes-London 1883, lately also published in German in the "Jahrbuch") and the French rendering by Mardrus (Paris 1899 and after). The most reliable Arabic text edition is still always the *Diwan* now in two volumes (1851); although the more recent Cairo edition in four volumes is more practical and more easily obtainable, as it has been published repeatedly.

(J. OSTENDORF.)

ALPARABI. [See AL-FARABI.]

ALPARD is the name of the second size in the upper part of the body of the *Hydra*. The

nature is similar and means "the smallest one." Cp. *Ideler, Untersuchungen über den Ursprung u. d. Fortw. d. Sternnamen* p. 169. (Alfard.)

ALFIYA (A) = "Alphabetical-ness", a poem in a thousand verses, a favourite number with the Arabs, especially for rhymed maxims (13233 *Shāfi'ī* (ed. Flügel i. 407 n. 49.) mentions several of them: the best known are the *Alfiya* of *Abū Mālik*, the one by the *Amīr*, both dealing with grammar, and *Alfiya* of *al-Jāhiz* on the *Uṣūl al-ḥadīth* (fundamental doctrines of the sciences of tradition). Further particulars are to be found in the articles on the authors.

ALFRAGANUS. [See AL-FARĀGHĪ.]

ALGARVE, from Arabic *al-Qharḥ* (= sea), was formerly a name for the entire south-western part of the Iberian peninsula: but it has since become a special designation of the southern province (the "kingdom") of Algarve in Portugal. It is the call of the *Umayyad* of *Constantinople* petty kings *Qasid* in Algarve (*Maḥmūd al-Farḥī* = *Qasid de Fārḥī*), amongst others the *Imām* *Muḥammad* in *Silves* (*Shāfi'ī*): *Qasid* like *Muḥammad* b. *Sa'īd* b. *Shāfi'ī* 410-442 (1023-1050) and *Abū 'Alī* *Algharī*, 443-444 (1051-1052); in *Santa Maria de Algarve*: *Abū 'Alī* *Qasid* b. *Harḥ* 407-435 (1016-1043) and *Qasid* like *Muḥammad* 435-444 (1043-1052) (in *Merida* the *Qasid* until 1044), who all were finally swallowed up by the *Abūshāfi'ī* (q. v.) of *Seville*. In 539 (1144) the *Qasid* rebel *Abū Qasid* (ibn *Qasid*) took to arms against *Qasid* *Almohades*, but in 546 (1151) he was supplanted by the *Almohades*. In 1283 *Sa'īd* I of Portugal conquered *Silves*, *Sa'īd* II (1225-1242) took *Tavira* *Qasid* *Almohades* III completed the conquest of Algarve in 1249. — In the 13th and 14th century the Portuguese conquests in the Moroccan coast, *Ceuta*, *Almohades*, *Tangier*, *Algharī* were called "Algarve *Almohades*" (*ulmohades*), Algarve across the sea.

ALGEBRA. [See AL-JABR.]

ALGECIRAS. [See ALGECIRAS.]

ALGAZEL. [See AL-GHAZALI.]

ALGHAD (from Arabic *al-ghadī* = young he-goat) is the ancient name of both the pole-star and the constellation of the capricorn; cp. *Ideler, Untersuchungen über den Ursprung u. d. Fortw. d. Sternnamen* p. 3, 43, 101.

ALGER (Arabic *al-Qharḥ*; English: *Algiers*) is a town on the northern littoral of Africa. It is the capital of Algeria, and the seat of the Governor General and the head of the military and civil services of the colony. Its geographical situation is 36° 47' N. Lat., 0° 44' E. Long. (meridian of Paris). The number of inhabitants according to the census of 1906 is 144,000.

We do not know anything certain concerning *Algiers* previous to the establishment of the Roman in that part of Africa, except that on the place of the present town a locality was situated, known by the name of *Iussium*. Archaeological discoveries, together with a legend about the foundation of *Iussium* by twenty companions of *Heracles* (*Sollman* iii. 3) would at the most justify the supposition that on this spot of the African littoral a Phoenician or Carthaginian factory had existed. The information concerning *Iussium* is also very scanty. It became a Latin colony during the reign of *Vespasian*, was captured in 371 or 372 by the *Herbert* prince *Flavus*, but some time afterwards restored by him

again to the Romans. It was the seat of a bishopric, which amongst others was occupied by bishop Victor, who assisted at the conference held at Carthage in 434 by order of the Vandal king Thueric. After the fifth century history is no longer mentioned in history. The town, which seems to have covered nearly the same surface as Turkish Algiers, was doubtless destroyed by the Arabian invaders of the 7th century and abandoned by the inhabitants. Some traces of ancient buildings were still to be seen in the 13th century. Al-Makri (al-Makrîb or *Dicer. de l'Afrique septentr.* trad. by de Slane p. 156) actually mentions the existence, at al-Makrîb of the Banu Magharib, of moine monuments, of multiple walls, of a theatre with a mosaic pavement, and finally of an irregular wall of a church. Other constructions and some inscriptions have been unearthed since 1830 (cf. *Corpus inscriptionum, Italia*, viii, 63, 70, and supplement; *Corr. Atlas archéologique de l'Afrique*, number 1, plate 1 and notes.)

The site of Icosium remained deserted until the middle of the 10th century, although at a date which cannot possibly be fixed, a Berber tribe of the family of the Kharidja, the Banu Magharib, had settled down to the neighbourhood. During the reign of Ziri ben Menad (945-971). Buluggin, the one of this prince, obtained permission to found on this spot a town which received the name of Khazir ben Magharib (the Khazir, *Mag.* transl. by de Slane: *Hist. du Berb.* ii, 6) because of the rocky islet which, at some distance off the coast, formed a kind of natural mole. Towards the end of the tenth century the new town had attained at a certain degree of prosperity, as appears from the description given of it by the Magharib. "Dicer, this traveller writes, it lies on a bay and surrounded by a wall; it comprises a great many houses and some wells near the sea, which yield excellent water. . . . The territory of this town was composed very extensive fields and mountains inhabited by various Berber tribes. The principal wealth of the inhabitants consists of cattle and sheep, which graze upon the mountains. Algiers supplies much honey that it forms an export article, and such a quantity of butter, figs and other provisions that part of them are exported to Palermo and elsewhere. A short distance from the coast, on island is situated, where the inhabitants find a safe refuge, when threatened by their enemies" (the *Magharib* transl. by de Slane, *Journal de l'Alg.* 1832, p. 185). Al-Makri, in his description of Africa (*ibid.*) refers to Algiers as a port well sheltered and frequented by sailors from Spain, Sicily and other countries".

The history of Algiers is closely connected with that of the central Magharib. For during the period between the 9th and the 11th century, al-Makrîb endured the domination of all the conquerors of the peninsula, who disputed this country amongst themselves. After it had formed part of the Hammudid kingdom, it passed into the possession of the Almoravides, after which, in 1152, it submitted to the authority of the Almohades. During the efforts of the Banu Khazir to reestablish in Africa the power of the Almoravides, 'Ali b. Ghinîya conquered Algiers (1153), but kept the place but a short time; the inhabitants rose in arms against him and sub-

mitted themselves to al-Makrîb. In spite of that Algiers was occupied by Yûsuf b. Ibrahim in 623 (1226), but recaptured in 628 (1230) by the Almohade Abd al-Malik. In 631 (1234-1235) it came under the rule of a Hafside governor. But already in 664 (1235-1236) the people of Algiers expelled the representatives of the Saljuks of Tania, organized a kind of republic, and remained independent until 676 (1277) when after two abortive attempts, the Hafside governor of Bougie succeeded in conquering the rebels. When afterwards the Hafside Abû Zakariya established an independent kingdom at Bougie, the inhabitants of Algiers recognized the authority of the prince (684 = 1285). However, they did not show themselves scrupulously faithful to him. A certain Ibn 'Alîs usurped the power (1307), expelled the representatives of the king of Bougie and, for fourteen years, withstood the attacks directed against him. He was at last vanquished by the king of Tlemcen, Abû Hammûd I. who laid siege to the town, forced it to surrender, and annexed it to his dominion (724 = 1313-1314). From 1347 till 1354, the period of Abû 'Ubayd's successful achievements, and again in 1360 and 1393, the Marinides, in the course of their struggles against the Abdalwadides, in their turn succeeded several times in recovering the town. As for Abû Hammûd II, he recovered it twice, but never gained definitive possession of the place. The treason of his officers expelled the inhabitants, and drove them successively into the arms of Abû Zakariya, king of Bougie, and of the Marinide Abû al-Asr. In the midst of this confusion, the *Tha'liba*, an Arabian tribe of the Mitidja, profited by the prevailing anarchy and made themselves the actual masters of Algiers, having previously expelled the *Sanadja* out of the Mitidja plain into the *Wâdî*. One of their chieftains, Salim b. Ibrahim, disposed of Algiers arbitrarily, securing allegiance alternately to the Zayyanites as the *Hafside*, to the Marinides and breaking his faith to one dynasty after the other, until Abû Hammûd II, who had repeatedly forgiven him, had him put to death (1378). Algiers, at that time, had nearly become the capital of the Zayyanide realm. Being afraid of the intrigues of his son Abû Taghrib, Abû Hammûd had secretly considered a change of residence from Tlemcen to Algiers; but he was obliged to give up the plan. In the 15th century, fresh *Sanadja* began. In 1438 a Zayyanide pretender, Abû Zakariya b. Hammûd, rose in arms against the sovereignty of Tlemcen, captured Algiers after a long siege, and made it the capital of a kingdom which comprised the Mitidja, Madaïr, Milla and Tenes. He put on the royal insignia and took the name of al-Musta'in bi-Allah. But his reckless rule irritated the people of Algiers to such an extent, that they massacred him in September of that same year. From that time until the establishment of the Turks, Algiers formed a sort of little municipal republic, governed by a civic oligarchy, under the self-interested protection of the *Tha'liba*. The Berber Algiers, the history of which has been sketched above, was, in reality, but a market-town of modest size. Only the neighbourhood of the Mitidja imparted some importance to the harbour, which was frequented only by Muslim sailors, but still also by Christian merchants. In the 15th century the Venetian and

Florentino fleets came into port every year (Maz-
Laine, *Travels entre Christian et Arabes* . . .
Inter alia, pp. 330, 333). The inhabitants
were neither remarkable for their intellectual
capacities, nor for their artistic taste. Men-of-letters
were rare amongst them. "On my arrival at Al-
giers", says Muhammad al-Abdari (who lived in
the second half of the 7th = 13th century) "I lo-
qured whether there were learned people
of exquisite erudition, but I felt like one who,
as the proverb says, looks for a stallion with
feet as for camel's eggs." We must, however,
make no exception for the marabout Sidi 'Abd
al-Rahman al-Thalith, renowned for his saintlike
life and his theological learning (789-873 =
1387-1468), whose pious personage was to become
the patron-saint of Algiers, whose life and memory
are still greatly revered. The mosques in Algiers
are a pile of clumsy buildings, without any ornamental
work, with irregular naves and covered with a
roof of tiles. Some of them are still extant: Sidi
Hafid, Sidi Hamud and especially the Great
Mosque, mentioned in an inscription of the year
409 (1018), which in 1324 was furnished with
a minaret by Abu Tashfin, king of Morocco.

In the last years of the 15th and the early years
of the 16th century, Algiers together with the
other towns of the African littoral suffered from
the effects of the Spanish "reconquista". The popu-
lation increased, it is true, in consequence of the
arrival of fugitive Jews and Moslems from Spain,
but the Christian crusade had to be resisted. The
Catholic kings had resorted to violence to their
authority all the places on the northern coast of
Africa. The conquest of Oran by Pedro Navarro
and Xuarez (1509) and the occupation of Bougie
(1510) marked the people of Algiers of the most
imminent danger. Unable to offer vigorous resistance
to the Spanish army, they declared themselves
willing to submit, provided to recognize the
Catholic king for their sovereign, to pay him an
annual tribute, to give up the Christian captives,
to refrain from piracy, and to prevent the exiles
of Spain from entering their harbour (31 January
1510). The shahk Salim al-Tum, escorted by a
delegation of notables, went himself to Spain, to
make the oath of obedience and deliver some
presents to Ferdinand. Finally, in order to assure
the execution of the stipulations with regard to
piracy and to watch the people of Algiers,
Pedro Navarro took possession of the islet of the
Pelon, at an unusual range from the town; he
built a fortress on it and garrisoned it with
300 men. Rattled by the suppression of their
piracy, the Algerines were soon tired of this state
of affairs and tried to free themselves from the
Spanish yoke. Provoked by the agitation caused
all over the Barbary States by the news of the
death of Ferdinand Catholic, they persuaded
Salim al-Tum to send a deputation to the Turkish
sultan 'Arad, who since 1513 had been master
of Djidjelli, and solicit his help. 'Arad went to
Algiers and was received as a liberator, but he
was powerless against the Pelon. He had himself
proclaimed Sultan by his own soldiers. The Al-
gerines then came to terms with the Thaalim
and the Spaniards to expel the Turks; but their
conspiracy was discovered, the leaders of the
plot were arrested and beheaded, and those
who were under suspicion and the discontented

were thrown into prison and executed. In that
way all desire of resistance was broken and 'Arad
remained master of Algiers. In 1511 the Spaniards
attempted to take the place from him. The expe-
dition against Algiers conducted by Don Diego
de Veto (1516) and by Don Lugo de Minerva
(1519) both ended in disaster. The Turkish power
however could not be considerably weakened as
long as the Pelon remained in the possession
of the Christians. The fall of the Spanish fortress
was long delayed, in consequence of 'Arad's death
and the subsequent difficulties which his brother
and successor Khair al-Din had to face at the
beginning of his reign. But in 1529 Khair al-Din
had at last conquered all his adversaries; Algiers,
from whence the Kabyles had expelled him five
years before, had received him again; and now he
was resolved to put an end to the Spanish posses-
sion. He attacked the Pelon at the beginning of
May 1529. The governor Don Martin de Vargas
had neither received signals nor reinforcements
from Spain. He nevertheless ordered the can-
nonade for twenty-two days. At last, on May 27th
1529, the fortress was stormed, and Vargas was
himself obliged to surrender, having only twenty-
five men left who were able to fight. He was
condemned to death at Khair al-Din's command,
the Pelon was razed to the ground and part of its
building-materials were employed to construct a
connecting dike between the islets of the head-
land. In that way the mole was built, which at
the present day is still called the mole of Khair
al-Din, and which, after having been completed
by a perpendicular mound, protected the harbour
against the north and north-west winds, affording
safe shelter to the Algerian vessels in winter-time,
so that they need not fear tempests or attacks
from the Christians. Batteries planted on the ver-
tices and a wall enclosing the town on the land-
side combined to make the place almost impreg-
nable. All these works of fortification were com-
menced by Khair al-Din and continued by the
Khalifa, his successor.

The installation of the Turks at Algiers was
a permanent menace to the Christian nations. Charles
V, therefore, undertook to crush their power. Al-
ready in 1535 he had conquered Tunis and ad-
joined it to the rule of a sovereign who owed alle-
giance to Spain, he then contemplated achieving
this work by the occupation of Algiers. After
long negotiations with certain native Christians
and Khair al-Din himself, he arrived in Africa
in September 1541. The expedition, which the
emperor conducted personally, comprised a fleet
manned by 12,330 sailors under the command
of Andre Doria, and an army of 24,000 soldiers.
Charles V was no less fortunate than Vero and
Moncada had been before him. He disembarked
on October 23rd at the mouth of the Mactrah and
at first succeeded in effecting a lodgment on the
height of the Kadyal al-Sabun, which commanded
the town. But in the night of August 24th the troops,
while exposed to a violent storm, had to endure
a very vigorous rally of the besieged. They were
thrown into confusion, and the disaster would
perhaps have been complete, but for the courage
of the knights of Malta, who repelled the assailants
into the town, where Hassan Agha had the gate-
shot with all possible haste. One of the knights,
Xarigues, thrust his sword into the gate of Sah
'Arad. A trumpet which rose during that moment

sight and destroyed 140 ships, depopulated the army of prisoners and made retreats inevitable. The empire regained Cape Matifou with great difficulty and at the expense of subaltern hardships. There he embarked the remains of his army. The expedition, which was to bring about the destruction of Algiers, proved in the end an advantage to the Barbary corsairs, who made an immense booty and henceforth believed themselves invincible.

From that moment the Algerines could indulge in piracy to their heart's content; they continued to do so until 1830. But the free-booting had gradually changed its original character: from a mode of warfare against the infidel, it had degenerated into a lucrative industry and become the only occupation of the Algerines. It enriched the government, which received part of the booty, the private persons, who went into partnership to equip vessels, the whole population also, which justified by the liberality of its tribute-corn and ship-swarm. It attracted numerous to the capital of the Regency adventurers from all countries, most of them of Christian origin, who "took the tortoise", that they might satisfy their desire of rapine or their longing for adventure. The corsairs indulged in by the corsairs, the outrages committed against Christian sailors, the ignoring of the ~~rights~~ concluded with the European states, inevitably provoked the sovereigns to make requests, which, however, were quite inane in the town of Algiers itself. The brave attempt of a Spanish sailor, Don Juan Gomez, to penetrate into Algiers, deliver the captives and put the corsair ships on fire, unfortunately miscarried (1657). In vain the town was successively bombarded by the English (1682, 1685, 1673) and the Dutch (1770). At France, because of its geographical situation and importance of its commerce in the Levant, was especially interested in the maintenance of free navigation. It made repeated attempts to conquer the insolent Algerines. The French ~~governments~~ denounced the mole in vain in 1663 and 1665. Duquesne conducted two naval expeditions against Algiers in 1682 and 1683. A first bombardment, lasting from August 20th till September 20th 1682, lost 50 houses in ruins and killed 500 inhabitants. A second (June-July 1683) caused heavy material damage, but effected a truce, in which the French merchants were permitted, amongst others, the consul, Father Laroche, who was elected to the marsh of a cannon. A third one, conducted by d'Estrees (1688) proved even more disastrous to the Algerines, and compelled them to sue for peace. But too much money and too many ships were wasted on these expeditions to repeat them very often in the 18th century, whenever France ~~was~~ to complain of the depredations. Spain, on the other hand, having received a declaration of war from the dey Mohammed in 1773, attempted an act of violence against Algiers. A fleet of 20 men-of-war and 24 bomb-ships, and an army of 25,000 men were placed under the command of admiral Don Pedro Castejo and general O'Reilly. The Spanish troops disembarked near the mouth of the Haradj on July 21st 1775, but being surrounded by the enemy, who far outnumbered them, and being commanded ineffectually, they had to re-embark on the following day, with a loss of 2800 men. A successful bombardment, which the Spanish

admiral Don Angelo Berardo directed against Algiers in 1783, was no efficient compensation. The peace experienced a veritable revival, owing to the war of the Revolution and the Empire, which turned the attention of the maritime powers into a different direction. After 1815, however, the European powers seemed determined to put an end to this intolerable state of affairs. Lord Bessborough, who, in May 1816, had been to signify to the dey the decisions of the congress of Vienna regarding the abolition of slavery, having met with insulting treatment at Algiers, the English government, supported by public opinion, resolved to revenge this outrage. A fleet of 32 sail under the command of Lord Exmouth, who was joined by the Dutch admiral van Capellen, appeared before Algiers, penetrated into the harbour under the shelter of the white flag, and opened fire upon the town. Five hundred Turks were killed, the batteries on the sea-front destroyed, and a thousand inhabitants wounded. But the Algerines defended themselves energetically and inflicted on the squadron of the allies a loss of 283 men (August 27th 1816). Only slight damage was caused to the place by a second bombardment, which admiral Don conducted in June 1825, after a difference which arose between Dey Hussein and the English government. Algiers was evidently able to resist successfully an exclusively maritime attack. Consequently the French government, when resolved, after a fruitless blockade of three years, to revenge the insult offered by the dey to coastal naval, turned to around the ideas suggested by commander Roussin of the corps of military engineers. This officer, who in 1808 had been commissioned by Napoleon to reconnoitre the defences of Algiers, suggested that the attack should be made from the land-side, and that of all points against the Emperor's fort, from whence one could command the town. This plan, revised and completed by the French general staff, was adopted and carried out. The French expeditionary corps landed at Sidi Perrache, 14 miles west of Algiers, on June 24th 1830, defeated on the 19th the army of the dey on the plateau of Staravali, and appeared on the 29th in front of the Emperor's fort. On the 30th of July, the day-break, the French batteries opened fire, and at ten o'clock the fort, partly dismantled and left by its defenders, was occupied by the assailants. The day after, Hussein signed the terms of capitulation drawn up by the commander-in-chief, and the latter entered Algiers at once.

The establishment and the persistence of the Turkish domination had made of Algiers one of the most original towns in the Mediterranean world. The small rather market-place had become a prosperous and populous town. Turkish Algiers extended on the rocky slopes that descend from the Kasba to the beach. Haseki, who has given a detailed description of Turkish Algiers, compares in circuit to a crown-bow, the walls constituting the bow and the sea-shore the string. The perimeter of the town, measured along the exterior walls, was about 10170 ft. The defensive works commenced by Ghazi al-Tu and continued by his successors afforded absolute security to Algiers. This defensive system consisted of a wall, at the Kasba, and of a certain number of forts and batteries. The wall was about 36 to 42 ft high, surmounted by a ditch and flanked with towers.

It had five gates: the sea-gate and the battery-gate on the side of the harbour; the gate of Bab 'Asin on the southern side of the town, near which the execution took place; the gate of Bab al-Wad on the north-side, where Christians and Jews were put to death; and the New Gate on the south-western side, through which the road passed which led to the Emperor's fort. The Kasba, built on the highest point of the town, had replaced since 1556 the ancient Breker citadel, which had occupied a slightly lower elevation. The Kasba became the residence of the dey in 1816, when 'Ali Dey had abandoned the Medina, the seat of his predecessors, which was situated in the lower town and consequently exposed to a coup de main of the Jeschid. The Kasba comprised barracks and arsenals, and, besides, the treasury and private apartments of the sovereign. Outside the town, on a height which even commanded the Kasba, rose the Emperor's fort (Turk. Sultan Kalesi; Arab. Qasr al-Faraj), built by Hasan Agia on the place once occupied by the camp of Charles V. The acroth was protected by the New Fort, the fort Bab al-Wad, the fort of the English, the fort Bab 'Asin and the batteries on the walls, which, in the 18th century after O'Reilly's expedition, and again in the 19th after the bombardment by Lord Exmouth, were reinforced with new armaments, amounting to no less than 150 pieces of large calibre.

Within the town extended on the slope of the hill. In its highest part, the "Djebel" as it is still called by the natives, the white washed houses supported by wooden pillars stood closely pressed together, the upper floors projecting the one over the other so as almost to meet at the top. Steep lanes with flights of steps, darkened by the vaults, mostly too narrow for two men to pass without pressing their backs against the wall, wound up the slopes. The lower part, traversed by the only street deserving of that name, the causeway between the gates of Bab al-Wad and of Bab 'Asin, had, since the close of the 16th century, served as the favourite residence of the ruler or coup d'etat. Their sumptuous dwellings, clustered near the sea, were peopled with their slaves; they gazed the harbour and thence was the mole, so that the whole quarter seemed as few than their eternal, in which they sat safe from a coup de main of the soldiers. (See *Journal, Hist. d'Alger sous le Gouvernement d'Alger*, t. 1, 1777). There rose the palaces of the most famous rulers of the 17th century, such as Mustafá, Ahmed, Sliman Rais, Mustafá Rais, 'Arabadji, 'Ali Hicidja, there also stood the mosque, on the building of which these adventurers had spent part of their wealth. Religious edifices were indeed very numerous in ancient Algeria. Towards the end of the 16th century it comprised 180 mosques, chapels and minarets. On the eve of the French conquest, we counted 13 large mosques, 180 small ones, 52 chapels and 2 minarets. The majority of them were certainly of modest dimensions, and many of slight artistic interest. The most notable were, besides the Great Mosque, which dated from the Berber period, were the new Mosque (now called Mosque de la Fakhra), built in 1660 for the Turks belonging to the Hemsudj tribe; the Mosque of the Kharja, constructed with poly-chrome masonry; the Lixim Mosque, the Mosque of Muzaiy, the Mosque of the Andalusians,

built in 1623 by the Spanish refugees; the Zawia of the Shurafa, erected in the time of dey Muhammad Bakir (1709), etc. . . . Public buildings were few in number. One need only mention the Djezira, an assemblage of palaces and barracks. The seven large "Casernes" or barracks of the janissaries, and the huggins where the slaves were detained. But a great many private houses hid behind their bare facade, an elegant or sumptuous decoration; patios with finely sculptured marble colonnades all round, panelings of cedar-wood, revetments of Indian and especially Dutch salience, furniture of which the separate pieces were either of European make or had been fabricated by native artisans in imitation of European models (See G. Margis *L'Exposition d'Art musulman*, in the *Revue africaine* 3rd and 4th quarters 1905).

The population of Algeria varied principally during the three centuries of Turkish dominion. Hadda, whose work appeared in 1622, estimated the number of houses and inhabitants at 12,000 and 60,000. In 1634, when the piracy flourished more than ever, 15,000 houses and 100,000 inhabitants were counted by Father Issa. The decay began with the decrease of the piracy. In 1789 Ventur de Perelli estimated the population at 30,000; which number had dwindled down in 1830 to 18,500. This population consisted of various elements, which can be arranged into three groups: Turks, Moors, and Jews. The Turks formed a very close aristocracy. They had for the greater part come from Asia Minor, and entered in the ranks of the Yoldakhs. The regulations, to which this army was subjected, allowed the Yoldakhs to aspire to the highest degree, that of agia, and even to the highest civil functions. The Turks, so much though they were simple janissaries, were united by the title of "Mench", as "great and magnificent signifier", and formed the upper tier at Algeria. Even after the militia had lost its political importance, its members did not lose their arrogance in the least. Many amongst them married women of the country, but the children born from such unions, the Keloghliars, were kept apart. Since the close of the 16th century they had been excluded from public employment, and in spite of their revolts, of which that which broke out in 1663 was especially dangerous, they were unceasing in getting this interdiction established. The Turks consequently always remained in a minority in the capital, as well as in the Regency itself. Their number may be estimated at 10,000 in the tier of Mustafá Rais, at 30,000 under the Beylerbey, at 20,000 in 1634, at 50,000 in 1789. In 1830 they numbered 4000. Immediately after the capture General de Bourmont decided that the numerous janissaries should be expelled and converted to Islam, a measure which was afterwards was extended to all the members of the militia. Besides the Turks, mention should be made of the mercenaries of Zanyara origin, who supplied the Algerian wars with engineers, artisans, pilots and some of its most illustrious leaders. Their number kept on decreasing at the same rate as the piracy became more difficult and less lucrative in consequence of the cruises and naval demonstrations of the European powers. From 30,000 in Hadda's time it dwindled to 100 or 200 in the close of the 18th century.

The Moors formed a large majority amongst the citizens of Algiers. Some were descended from

the ancient inhabitants of Algeria, others had come from abroad and, since the Turkish epoch, settled in the town, such as Andalusians expelled from Spain by the Christian persecution, European adventurers, Englishmen etc. Excluded from all share in public affairs, exempt from military service, they did not offer any resistance to the Turkish rule, and crowded indifferent spectators at the tragedies, which were performed on the stage of Algiers. The rich amongst them restricted their occupations to taking their share of the gain which the piracy procured, by contributing with their money to the equipment of the ships and by speculating on the sale of the booty and the slaves; the poor did nothing whatever, although they also derived enjoyment from the general effluence. The Moslem element of the population supplied the tradespeople and the craftsmen, who were incorporated in various guilds under the direction of *syndics* or *amirs*. Some natives from the inland had also settled down in Algeria. Kabyles, strictly watched by the Turkish authorities, were handicraftsmen and day-labourers; *Misirs* earned a living as camera, *Melabbes* as bankers. Each of these groups of *dividits* formed a small community governed by an *amir*, who was responsible for their orderly behaviour. The *Misirs* numbered 18,000 (the *Kulughies* included) in the year 1830; the *negres* 2,000; the natives of timber 1,000.

The Jews occupied a place which grew more and more important in Algerian life. The small number of native Jews had since the 15th century been joined by their co-religionists from Spain. The first settlements of the latter took place about 1591, under the rabbi Isaac and Haniel, but the great exodus was accomplished in the 16th century. *Shais el-Dra* allowed the Jews to take domicile in Algiers, but he limited the number of shops they might open, and compelled them to pay a poll-tax. In spite of all sorts of exactions with which they were plagued by Turks and Moors, such as the coercion to wear a special costume, in spite even of the enormous fines which were inflicted upon them repeatedly, they increased their numbers rapidly. According to Haido only 150 Jewish families were living in Algiers at the end of the 16th century; in 1638 Father Han estimated the number of Jews at 10,000; in 1755 Languet de May at 25,000, certainly not without some exaggeration. About that time a very sharp distinction began to establish itself between the "indigenous Jews", who were always miserable and badly treated, and the "Frankish Jews" of Italian origin, especially from Leghorn. Profiting, in their quality of foreigners, by the regime of the "Capitulations" and the protection of the French consul, and consequently exempt from the vexations which harassed their indigenous fellow-believers, they grew rich by their commerce with Europe and by the exploitation of monopolies, which the Turks had reserved for themselves. The most influential amongst them in the 18th century, such as Solomon Jaccari (d. 1725) and especially the Haccis and the Rasmachis, having become the bankers of the dey and the official intermediaries between the Regency and the European powers, played a considerable, sometimes even preponderant, part in the Algerian affairs. For twenty-five years (1780-1805) *Nephthi* Boucha exercised his power in making and unmaking the deys and the deys, had the

disposal of the resources of the country, in short, conducted the domestic and foreign politics of the Regency to the advantage of his own interests. This excessive power, however, brought on its own reaction. The murder of Nephthi Boucha, "the king of Algiers", by a janissary (1805) was followed by a bloody riot. The wealthiest Jews were massacred or banished, their shops plundered, their property confiscated. The Jewish nation never recovered from this disaster. Reduced to 4,000 individuals (Boucha) endured the Turkish yoke with difficulty. They welcomed on that account the fall of Hussein with the greatest satisfaction, and sided, without any appealant, with the conquerors.

The Europeans in Algeria were represented by the slaves and the free tradespeople. The former had fallen into the hands of the corsairs along with their prizes made at sea, or on their marches along the Mediterranean coast, especially on those of Spain, Italy, Greece and Sicily. Part of the slaves formed the *sharr-ies* to the *Maghrib*; the rest were sold in the highest auction on the place of the *Badestan*. The captives, according to the will of their masters, were either set to work in the house, or employed in the town itself, or else in the gardens outside the walls; they were also compelled to row on the galleys for a hard number of days. At night they were shut up in special establishments, belonging to the government or to private persons, which were known by the name of *lagunas*. The condition of these captives was less miserable than has been assumed. Except on days when a riot of janissaries or the appearance of a Christian squadron roused the fanaticism of the *Muselmans*, their lives were perfectly safe. The *lagunas* were even provided with a chapel with officiating priests, with an infirmary and a tavern, but the slaves could not recover their liberty, except when they were either ransomed by their families with the help of ecclesiastics such as Trinitarians, Redemptorists and Lazarists, who devoted themselves to that mission, or released in consequence of diplomatic negotiations. The number of slaves varied naturally according to the more or less flourishing condition of the piracy. It reached its maximum in the first half of the 17th century: 25,000 captives, according to Han, 35,000 according to Languet, peopled the Algerian *lagunas* at that period. Three fifths went down during the following century. In 1740 only 1,442 slaves remained; in 1762 there were no more than 2062; in 1769, 1500; in 1813, 1669; in 1818, finally, 1200, who were released after the successful naval expedition of Lord Exmouth.

Europeans, who enjoyed unrestricted liberty, were always few in number, as Algiers never had a commercial importance comparable to that of the other Barbary towns, least of all to that of the Levant ports. The consuls, amongst whom the consuls of France and England disputed between themselves for pre-eminence, and the employees at their offices, together with a few merchants, constituted a small colony, of a hundred people at the most.

Algiers during the Turkish epoch was governed by a separate administration, placed under the supervision of the "Kaimaghi", minister of finances of the Regency. The various ethnic groups (negroes, *Melabbes*, etc.) and the different trades formed

second mountain-range is formed by the mountains of *Thénia*, from whence a great many waters take their source, to which the vegetation all around the town of *Thénia* owes its equatorial freshness. These mountains are the *Tenissa* and the *Bent Chougga*, the summit of the *Ouassents* (6545 ft.), the *Libra of Aumale* (5942 ft.), the *Ughia*, traversed by the route from *Algiers* to *Constantine* through the pass of the *Iron Gates*, the mountains of *Constantine*, the *Maadid*, and the *Libra (Righa)*. Between the two bordering mountain-ranges, river valleys (*Chéiff*, *Wadi Sahel*, *Soybouss*) and plains alternate. Some of these plains, lying not far from the sea, are low and often swampy, such as the plain of the *Sig*, of the *Mitidja* and the plain of *Bona*. Others are higher and more salubrious, such as the plain of *Thénia*, of *Mascara*, of the *Arba (Arba)*, of the *Medjana*, and of *Sétif*. The *Tell* as a whole may be considered a cultivable region. On the littoral water-gardens and nurseries flourish, owing to the relatively abundant rains and the generally mild temperature; on the middle zone the basin-shaped plains, collecting the waters from the mountains, offer a good soil for the cultivation of corn. The mountains finally, although too often bare, are frequently covered by thick copse-wood. In *Kabylia*, especially on the heights of the littoral, they are overgrown by woods of cork oak and green oak; in some places, amongst others on the *Atlas of Blida* and at *Teniet el-Had* (*Teniet el-Had*) some cedar plantations can be found. These natural conditions account for the fairly dense groups of population in the *Tell*. There are to be found the principal town-like agglomerations: *Oran*, *Mostaganem*, *Ténia*, *Cherchell*, *Algiers*, *Dellya*, *Bougie*, *Philippeville*, *Collo* and *Bona* on the coast, *Thénia*, *Sétif*, *el Abbès*, *Mascara*, *Millama*, *Médéa*, *Blida*, *Aumale*, *Sétif* and *Constantine* in the interior country. The *Tell* is also, pre-eminently, and apart from *Kabylia*, the domain of European colonization, which prevails in the environs of *Oran*, in the plains of the *Sig*, of *Mascara*, of the *Mitidja* and *el Bona*, and shares with the natives the valley of the *Chéiff* and the high plains of the province of *Constantine*. The surface of the *Tell* is estimated at about 54,000 square miles.

3. The Region of the High Plateaux, which with greater exactitude should be called the "Region of the high interior plains", extends between the *Tell Atlas* and the *Sahara Atlas*. It is the very heart of Algeria. It comprises a series of plains with central depression, decreasing in height from west to east. The high plateau of *Oran* maintains an average elevation of 3280 ft.; the region of the *Zahres* is not higher than about 2625 ft.; the *Medjana* rises down to 1300 ft. Between the *Medjana* and *Tenissa*, the country is traversed by secondary mountain-chains isolating plains of somewhat narrow confines from one another. The aspect of these plateaux is greatly different from that afforded by the *Tell*. "They are vast spaces where nothing arrests the eye, without a stone, without a rock, without a tree; there are neither valleys nor hills, only slight undulations" (A. Bernaud and Lacaze, *l'Algérie au voyageur* p. 69). The *Sahara Atlas* forms the southern limit of this second zone. It appears as a series of narrow hills, occupying the neighbouring region by about 1000 ft. and separated from one another

by undulating plains. Even in the most hilly parts such as the *Arba*, it does not lose the aspect of a table-land (See *Arba*). The distribution of height and the mountains of the *Sig* (the *Libra* 6500 ft.) — the *Libra* 'Amir', flanked by the *Kell* (5000 ft.) on the west side and on the east side by the *Libra* 'Abd Kadir' — and the mountains of the *Libra* 'Nail' and the *Arba*. The *Sahara Atlas* does not constitute an uninterrupted barrier. Large openings intersect the various masses, facilitating the relations between the mountains and the plateaux, and allowing the desert to make its influence felt a long way north. The region of the *Sahara*, for example, with its dunes and its oases, seems just an annex of the *Sahara*. Being isolated from the sea by the *Tell Atlas*, the plateaux are a region of moderate rainfall (0.40 millimetres a year). The waters, which do not flow towards the sea, are lost in depressions called *chotts* (*chotts*, *chotts*, or *guaras* (*guaras*), which in winter are filled with a muddy, salty water, and in summer are desiccated and covered with a stratum of salt. The most important of these depressions are the *Chotts* (*Chotts* and *Chotts* (*Chotts*), the *Zahres*, the *Medjana*, and the *Guaras* of the *Tell*. The climate, one of extremes, the difference of temperature between day and night and between the seasons being considerable. However annoying this climate may be, it is not unhealthy. The plateaux, dry and barren as they are, are not fit for the cultivation of cereals, not even in the best favoured parts. The border of the *Tell* (plateaux of the *Sig*). They are nothing but steppes, which in the spring are covered by an ephemeral herbaceous vegetation, and also by perennial plants capable of resisting the drought, the alkali in stony places, the sterility in salt in the depressions, the alkali on the sands. The arboreal vegetation is only found in the lower grounds, the *chotts* (*chotts*) of the *Sig* where some oases of humidity remain. Owing to its height the *Sahara Atlas* possesses some mountain wooded by juniper, thuya, Aleppo pine, and in the *Arba*, by cedar. The valleys of the *Libra* 'Amir' give shelter to some pasture and some arable fields of only limited extent. Under these conditions the region of the plateaux is neither fit for European colonization nor even for the establishment of native settlers. It is a region especially favourable as cattle-breeding, although the breeding of big cattle is hampered by the scarcity of water. The sheep adapt itself very well to the meagre vegetation of the steppes since the remotest antiquity the 42,000 square miles of the plateaux have been the scene of the wanderings of the nomads. Their herds.

3. The *Sahara*. The *Sahara* is in all respects a strange region, no less so than Algeria proper. A considerable part of the *Sahara*, moreover, was detached from Algeria and received an organization and a budget of its own, by the law of December 6th 1902, which created the "Territories of the South" (See *Sahara*).

II. HISTORY.

During the first nine centuries of the Hijra (7th—10th centuries after Christ) the history of Algeria proper cannot easily be separated from that of northern Africa, and, for some periods, from that of Spain. The Moors came appeared

these for the first time in the second half of the 7th century after Christ, at the period of their establishment in Malyia. Their first expeditions are identifiably known and bear a legendary character. This much may be ascertained that 'Uthman, having founded Kairouan in the year 50 (630), undertook to convert the Berbers in the west. His rival Abu L-Muhallab, however, dispossessed him of the government of Africa, and to avoid to have himself advanced as far as the neighbourhood of Fleurance, to have defeated the confederacy of the Awastha, and capture their chief, Kumlila. 'Uthman, having been taken into favour again and recognised governor of Africa, advanced to the Atlantic, without retaining however into the Awastha (Aure) or attacking the towns on the coast occupied by the Byzantines. On his return he was surprised and killed at Takhla (655-665) [see *ALMANACH*]. The Berbers took advantage of this disaster to recover their independence and shake yoke which they had been compelled to assume. The indigenous realm, however, which Kumlila had founded, was only short-lived, although in the name of the Aure's resistance was continued under the leadership of the Kahina [see *ALMANACH*]. For a long time this prophetic sect lived years of hard struggle in the Arabian general Hisham b. al-Muhallab, who at last had been defeated and expelled into the country of Barca. In the meantime the last Byzantine places were conquered and at the beginning of the 8th century after Christ Arabian authority was acknowledged all through the central Maghrib. The Christian and Jewish Berbers were converted to Islam; not so much because of religious conviction as in hope of the booty which was promised to them by the Arabian generals, who recruited them in their armies and led them on to the conquest of Spain.

Consequently the Arabian conquest did not thoroughly modify the population; it simply introduced into the country a military autocracy of comparatively few members, and propagated a new religion. The Arabian power was at the mercy of the Islamised Berbers. They gave it a hard blow in the second half of the 8th century, being encouraged by the reaction of the governors, who claimed the right to impose upon them the *dhimma*, as they did on the Muslims, and being aided by the pride of the Arabian chiefs, they adopted eagerly the Kharijite doctrines imported from the East. These doctrines appealed to their democratic instincts and their desire of vengeance. So they rose in arms against the Arabs. The insurrection began in 123 (740), in the neighbourhood of Tangier, under the leadership of Mus'anna, and spread all over the Maghrib. It lasted until the close of the 8th century. That victory over the Arabian general Kulthum at Maghira rendered the Berbers masters of the whole of inland Africa. The disorders, which accompanied the fall of the authority of the Abbadides, retarded the impression of the rebellion. 'Uthman b. 'Uthman, commanded by Caliph al-Muwatt, re-established Arabian authority at Kairouan and in Malyia; but not in the central Maghrib and the extreme Maghrib, where Berber states had been organised. The Banu Ifren, who confessed to the Salafite doctrine, had founded a kingdom at Fleurance, 'Abd al-Rahman b. Rouman, having been pro-

claimed master by the Kharijites, had built the town of Taghdelat (now the present town of Tizer), which was the capital of a state extending some afterwards as far as Bouggara, Wargla and even Gabes and the Sahara. Finally, in the last years of the 8th century, the Arab 'Uthman b. 'Abd Allah conquered Tlemcen with the help of the Awastha. In 193, 'Uthman b. 'Uthman b. 'Uthman founded the town of Fez and organised the extreme Maghrib to his dominion. In spite of the rapid decadence of these empires, the Abbadides, (descendants of 'Uthman b. al-'Uthman, to whom Caliph Harun al-Rashid had entrusted the government of Africa), did not succeed in reconquering the central and western Maghrib, which remained in the power of the Berbers. They were only obeyed in Malyia and in the province of Constantine.

The Abbadides disappeared in the 10th century, vanquished by the Fatimides. The latter owed their victory to the Kahina Berbers, who had adopted the Salafite doctrine preached by the *da'i* 'Abd Allah and named the *imam* 'Uthman b. 'Uthman as their chief [see *ALMANACH*, *ALMANACH*]. The last Abbadides were expelled from Kairouan, the Kingdom of Tlemcen and of Bouffardine, were overthrown, and the Muslims reduced to a condition of vassals. The remains of the Abbadite tribes were transported to Malyia or emigrated towards the south [see *ALMANACH*, *ALMANACH*]. The Nekkassan Sahab, who, headed by 'Abd Yaqub, the son with the arm, took arms in arms, were exterminated (331-335-342-947). Profiting by the dissensions, the Fatimides of Cordova had installed tributary princes at Fleurance and at Tizer. Successful expeditions enabled the Fatimides to recover these countries and to subject the whole of the Maghrib down to the Atlantic. The Fatimide Caliph al-Muwatt, not being able to govern the government of the central Maghrib into his own hands, entrusted it to the chief of the Sanhaja tribe, 'Uthman b. 'Uthman, whose son 'Uthman became the founder of Algiers, Medea and Milyana. But as the Sahab fled far away in Gado, where, after the conquest of Egypt in 358 (969), they had fixed their residence (362-973), fresh disorders were evident. The governors fell in charge of the Maghrib on longer acknowledged the authority of the Fatimides and made themselves independent. One of them, called 'Uthman, founded a state extending from the sea to the Atlas and from the Atlas to Tizer. He built himself a capital, the Ka'ba of the Banu 'Uthman between Milyana and Bordj de Arzew, which became one of the most important towns of Africa. His successors had to sustain continual fights against the Kharijites, the Muslim Arabs and the Almohades. Some of considerable importance, such as al-'Uthman, who improved his residence from Ka'ba to Bouggara and entertained friendly relations with 'Uthman VI and the Italian emperor, and also his son al-Muwatt (481-498-1088-1105), who succeeded in repelling to the west the Almohades, who had advanced as far as the neighbourhood of Algiers [see *ALMANACH*].

So, at the beginning of the 11th century, Algeria was entirely divided between Berber confederacies, which were divided between the Kharijite sects of the Kharijites and the Fatimides of Cairo brought on the *da'i* 'Uthman [see *ALMANACH*]. After having

devastated Nafzra, the Arabian troops penetrated into the Maghrib, leaving only the mountains *unconquered* and the town of the Tell, which they were unable to capture from the Berbers, the hordes spread over the plateau and the plains of the inland. As they drove their cattle along with them, they destroyed all agriculture and substituted nomadism for settled life. The Arabs reached the central Zib and the banks of the Aurès, and pushed on as far as the Djebel Aoudjer; the Ghorab advanced into the eastern Zib and the Hodna, the Ma'af into the steppe of the province of Algiers. The Berbers, at any rate, part of them, sought a refuge in the mountain masses (Kabylia, Aurès), in the oases and in the Sahara (Mali, Wad Ghir, Saff), where they have succeeded in preserving their language and customs down to the present day. In the steppe and the plains, the other hand, the Arabian and Berber elements perished each other, their mixture giving birth to new amalgams. Towards the close of the 12th century the invasion proper had come to an end, although its migratory movements of the population in reaction made itself felt until the 14th century. By it the ethnography of Algeria was so profoundly changed, that, in the history of Algeria, the Hilal invasion may be regarded as the principal event, which unfortunately is not yet sufficiently known in its details. Millians, destitute of creative faculty, did no more than augment the disordered state of the country by their intrigues, and by diling the princes who disputed for the country amongst themselves, especially with the Zaidis and the Hammudidæ. This interminable anarchy left the central Maghrib a ready prey to the new invaders from the east. The Almoravides, after having subjected the whole of Morocco, crossed the Mulaya (Tenez) b. Taghla conquered Apudis (the ancient Tlemcen), founded Tazunt (the present Tlemcen), and for a short time ruled the whole country as far as Algiers. But he did not succeed in establishing his position (See *Almoravides*). The Almohades were more successful. 'Abd al-Mu'izz captured Algiers and Bougie although a blow (347 = 1152), destroyed the Kala of the Banu Hammad, of which the population was dispersed, put to flight the Hili-Bans in a 300 days' battle near Saff (Saff), and raised the port, which, profiting by the prevailing disorder, the Christians of Sicily had occupied. After the conquest of Ifrîqiya, he ruled over the whole of Barbary from the Atlantic to the bay of Gabès (see *Almoravides*, and *Almoravides*). During the reign of his successor peace was disturbed by the enterprises of the Banu Ghaniya, who, by alliance, were descended from the Almoravides. The eldest son, 'Ali, succeeded in conquering all the country between Bougie and Millians (380 = 1183-1184). After his death his brother Yahya continued the conquest until 633 (1236), with the support of the Illahian bands. Being an insatiable adventurer, one day victorious and the next defeated, but never despairing, he crossed the Maghrib in all directions from the coast to the Sahara, Algiers, Bougie, Tazunt, and even Makers were taken and plundered.

In the course of this same period the dominion of the Almohades became dislocated. The governor of Ifrîqiya, 'Abd Zakariya b. Kaf, belonging to the family of the Almohades, proclaimed himself independent at Tunis (634 = 1236-1237) and

founded the dynasty of the Hafsidæ. The Almohade heretics, repelled by the Hili-Bans from the Sahara towards the north, established themselves at Tlemcen, where their chief Yaghmuran b. Zalya usurped the power, which after him passed into the hands of his descendants the Zaidides. The Banu Muta, finally, occupied the valley of the Mulaya, from whence they advanced towards the west until they supplanted the Almohades at Fez in 668 (1269). These three dynasties disputed for the central Maghrib amongst themselves. At first the Hafsides succeeded, during the reign of 'Abd Zakariya, in subjecting the entire Maghrib as far as Tlemcen, but his successors could not even enforce obedience beyond Saff and Bougie. Eastern Algeria, moreover, was troubled by the rivalry of Hafsides princes, who several times founded ephemeral principalities at Constantine and Bougie, and shook off the authority of the sovereign of Tunis. At the close of the 14th century, Hafsides, Maraboutes and Zalyides warred amongst themselves, without one of the three dynasties being able to establish definite supremacy over the central Maghrib. The main events in this conflicts between the Zaidides and the Maraboutes were the two sieges of Tlemcen (698-706 = 1299-1307 and 736-738 = 1335-1337), and the occupation of that town by the Maraboutes (738-761 = 1337-1359). The temporary disappearance of the Zalyide realm allowed the Maraboutes to advance victoriously across the whole of the central Maghrib and occupy Bougie, Constantine and even Tunis. But after the Arabs had defeated the Maraboutes 'Abd 'Aziz near Salaway, the kingdom of Tlemcen was restored and experienced an epoch of glory and prosperity during the reign of 'Abd 'Aziz II (761 v. 766-791 = 1359-1389). After his death, however, it rapidly declined to complete ruin. Foreign wars and domestic struggles impaired its strength. The Hafside Ann Fâris conquered Tlemcen three times. A prince of the Zaidides, 'Abd Zain Muhammad, founded a state which comprised Tazunt, Millians, Algiers and the Mulaya; his son al-Mulawakkid succeeded in asserting himself at Tenez and in the valley of the Châf. The town, on the littoral, enriched by the piracy, organized themselves into independent republics. Finally the Spaniards, at the instigation of Ximenes, set foot on Algerian ground, in order to continue in Africa the crusade which they had brought to an end in the Peninsula. They conquered Saff al-Kabir (1505), Oran (1509) and Bougie (1512), Algiers, which they kept in vassal by the threatening canons of the fortress on the Peñon, and Bougie and Tenez offered submission and paid tribute. The same thing happened in the kingdom of Tlemcen, over which the Spaniards exercised a reliable suzerainty.

The arrival of the Turks stopped the progress of Christian invasion and ended Islam in Africa. The ruins of the small Berber states, which long anarchy had enervated, the Turks, by force of arms, established a Muselman state, which comprised the whole of the central Maghrib. Its founders were 'Artuf (q. v.) and Khair al-Din (q. v.). 'Artuf laid the foundations of the Turkish power by conquering Algiers (1516), but soon afterwards his career came to an untimely end. Khair al-Din was more fortunate. By rendering homage for his state to the Ottomans

Porte and accepting the titles of pasha and beylerbey, he procured himself the moral support and the material means necessary for the success of his enterprises. In the period between 1525 and 1530 he made himself master of most of the towns on the littoral and in the Tell (Bona, Collo, Cherchell, &c.), compelling the pashas of Kabylia to pay tribute to him, and by the capture and demolition of the Fesoua (1529) secured a definite possession of Algeria. The beylerbey who came after him, and their lieutenants continued his work. They repelled the attacks of the Spaniards, who attempted a renewal of hostilities (sackmaster of Charles V before Algiers 1541), and captured all the places possessed by them, with the sole exception of Oran. This town was to remain in the power of the Spaniards until 1707; they took it in 1732, but abandoned it finally to the Mohammedans in 1792. In the west, the successors of El Hajj al-Him conquered the kingdom of Tlemcen and warred unsuccessfully against the Sa'dian Ghazis, who contested that region. Salah Rais even occupied Fez (1553) and established a descendant of the Marabouts on the throne; El Hajj al-Him and other ben Fekih al-Him made successful incursions even into the suburbs of the Moroccan capital. In the east the Turks established their domination in the whole province of Constantine. At the close of the 16th century the "Regency" of Algiers had reached the limits which it maintained until 1830. The western frontier, however, was the scene of sharp conflicts between the Turks and the Mohammedans. Twice, in 1691 and in 1703, El Hajj al-Him attempted, although without success, to reconquer the regions of Tlemcen from the Turks. His successors had recourse to terrorism and diplomacy to weaken the power of their adversaries: they gave encouragement and subsidies to the marabouts and the fanatics which were hostile to the Turks, such as the Ghazis and the Tijanites, and these fanatics were pawns in the revolts which disturbed western Algeria at the end of the 17th and the beginning of the 18th century. On the east side the Turks of Algiers were in conflict with the natives of Tunis during the 18th century. Benefiting by the dissensions of the Husainide family, the Aggerians conquered Tunis in 1750, plundered the town and compelled the bey to pay tribute. Fresh hostilities between the two Regencies broke out early in the ensuing century, and did not cease until 1821.

The Turks have by no means exercised actual authority over the whole of the territory comprised between the sea, the Sahara, Tunis and Morocco. According to Rian, the regions placed under their direct administration covered a surface not exceeding 29,000 square miles, being one sixth of the territory of French Algeria. The rest of the country belonged to populations, which were either independent or connected with the Turks by ties of vassalage more or less close. To the former category may be reckoned the confederates of the Kabyles, of the Trarzes, the various federal republics; the nomadic tribes of the plateau and of the south (Sahara, Haoua, &c.); and as to the vassal principalities, such as Tougourt or 'Ain Madi. Having failed to subdue these groups or to make them obey, the Turks were obliged to tolerate them as their allies. The second category consisted

of tribal nations, that had preserved a direct complete autonomy, but in their relations with the Turks were dependent on treaties which it was the interest of both parties to respect. Such was the condition of the Uad Sidi Shakh, of the Haoua, the Haouach, the Annas, &c. But the Turkish policy was careful to keep the tribes divided, to keep up the discord between the nomadic families and the settled quarters in the republics, so as to prevent all agreements that might prove dangerous to the rulers of the Regency. The Turks also turned to themselves, in the course of each group, devoted partisans of their cause. This same system of "divides and govern" was also applied to the populations which the Turks had under direct authority. They were distinguished into two categories: subjected tribes or *raïas* and tribes under command or *tribes*. The former were constrained to the payment of the poll-tax, the *haraj* and the *achak*, and also 200 r. tribute in kind or in money (*haraj* = *haraj*). The latter were exempt from all taxes, canonical rules excepted, but they were at the service of the government and had always to be ready to march at the first signal. They supplied the Turks with warriors, conveyers and camel-herds, looked after the payment of the taxes and formed the police of the country. Revolts and rebellions were always planned secretly by their chiefs. The Turkish government maintained its authority with the help of the forces, which was a great deal more effective than that which they derived from the *raïas* of the provinces. These *raïas* tribes, hated by the natives whom they oppressed, remained necessarily faithful to the Turks. Military colonies or *smis* (plus, of *smis*) were also established at all points of some strategical importance. Finally, large branches of uncivilized and isolated indigenous groups from one another. In spite of these precautions, revolts were frequent, provoked in most cases by the extortion of the Turkish agents. The Kabyles were in a state of almost permanent insurrection during the 18th century and the earlier years of the nineteenth. Towards the close of the Turkish domination, the province of Oran was entirely dominated by the intrigues of the Moroccan agents and by the preachings of the Derwesh and the Tijanites. The revolts, of which that of Ben Shakh (1805) was the most dangerous, were only suppressed with the greatest effort. As to the inhabitants of the towns, the so-called *raïas*, being deprived of all share in political life, they did not even attempt to shake off the yoke. The *raïas* of the Haoua, half-breeds of Turks and native women, inspired the Turks with some fear in the 17th century. After that period they were consequently excluded from all the higher offices.

The exercise of power and the enjoyment of its profits were the privilege of the Turks who belonged to the military category. This institution, to which El Hajj al-Him owed his success in establishing his authority, formed a small military aristocracy, of never more than 25,000 members. These were recruited from amongst the populace of the town in Asia Minor, and also, at least in the 16th and 17th centuries, from amongst the European mercenaries, who were attracted to Algeria by the desire and the profits of a life of adventure. After their enlistment, the soldiers were either assigned to the service on land or on the

ships, their pay was raised gradually; they were dependent on no one except their officers: they passed through all the successive grades of the hierarchy according to juniority of appointment, until they became *aghas*, and might even then aspire to the highest civil functions. These *aghas*, though, who looked the army proper, served alternately one year in the garrison or *makas* (*armies*), which were found in the towns or at the most important stations (Algiers, Bougie, Bordj, Sétif, Constantine, Médéa, Miliana, Mascara, Mascara, Tlemcen), and one year in the ranks *campagnes* to collect the rates, after which they went for a year on furlough. Their inexperience and turbulence made them dangerous, not only to the natives, but even to the government itself, which tried to win them by gratifications and presents. The palace revolutions, which were the cause of repeated bloodshed in Algiers, saw the work of the *aghas*. The influence of the janizaries, however, was counterbalanced in the 17th century by that of the *akhs* of the *akhs* (*akhs* *akhs*), or corps of the *akhs* *akhs*.

The organization of the Algerian state, although in principle it remained the same as it had been, underwent by Khair el-Din, and even, nevertheless, modifications of some importance in the course of the three centuries of Turkish rule. In this respect four different epochs must be distinguished: that of the beylerbeys (1518-1537); that of the triennial *aghas* (1537-1559); that of the *aghas* (1559-1571) and finally that of the *aghas* (1571-1830).

The beylerbeys Khair el-Din, his son Hassan, 'Khalid' Ali and Hassan Youssef, as representatives of the *aghas* *aghas*, were personally, and at other times had them discharged for them by governors or *aghas*. Although acknowledging the suzerainty of the Grand Seigneur, they behaved as independent sovereigns. Indeed, and without reason, calls them the "kings of Algiers." All of them dreamt of reaching, in their own advantage, a kingdom comprising the whole of Barbary: they even tried to neutralise the excessive power of the janizaries by relying on the troops which were *aghas* from the *aghas* (*aghas*). — But their ambition caused an insubordinate in the Sultan of Tunis, that these desired to have themselves represented to Africa by *aghas* appointed for a period of three years. These officers, being first of all bent on the acquisition of a large fortune, did not give homage to their sovereign. During this period, the piracy developed considerably. Towards the middle of the 17th century, a military revolution broke out which brought the *aghas* or chiefs of the militia into power. The *aghas* only preserved some honorific distinctions. The period of the *aghas* was one of disorder and anarchy. The rivalry between the janizaries and the *aghas* provoked bloody attacks. All the *aghas* perished by assassination. — After the elapsing of twelve years, the *aghas*, in their turn, succeeded in usurping the power and appointed a *aghas*. His and three successors were also elected by the *aghas*, but the others were chosen by the militia, which finally re-conquered and maintained its influence. This period is marked by the disappearance of the *aghas* and the rapid decline of Algerian power. The Ottoman supremacy, it is true, was solely attacked by the restoration of

the *aghas* of honour and the diploma of investiture upon the new *aghas*. But, on the other hand, the cruelties and moral demonstrations of the great European powers impeded the piracy to such an extent, that, whereas in the preceding century it had enriched the Algerians, it now proved insufficient to maintain the treasury. The *aghas* had to take measures to extort from the natives, at the risk of provoking revolts, or to the help of the *aghas*, who were steadily gaining power. The *aghas* enjoyed, at the end of the 18th century, by Nephthali Binnach and Joseph Baci, "the king of Jews", called forth bloody riots in 1805. The militia, greatly reduced in number and gradually deprived of military qualities, became more and more enervated. They ruled and dominated the *aghas* according to their own caprice. Of 25 *aghas*, who reigned successively from 1671 till 1830, 11 perished by murder. Not until 1816 it occurred to 'Ali Bey, to abandon the palace of the *aghas*, in the low town, and shut himself up, with his *aghas* and his guards, in the *aghas* where he would be safe from military rebellions. [See ALGERIA.]

Having been elected by the militia, the *aghas* enjoyed absolute power. He was assisted by a council or *aghas*, consisting of five ministers with the official name of "Powers." These were the *aghas*: the minister of finance; the *aghas* of the camp, the commander-in-chief, the *aghas* of the militia, the *aghas* of the *aghas*, the *aghas* of the *aghas*, and the *aghas* of the *aghas*. The *aghas* of the *aghas* was in charge of the police and the jurisdiction in the capital. The *aghas* governed the province of Algiers, which constituted the *aghas* *aghas*, by the intervention of four Turkish *aghas*. The rest of the *aghas* was divided into three provinces or *aghas*: the west *aghas*, which had successively for its capital *aghas* towns of Mascara, Moudonia (from 1710) and Oran (since 1791); the central *aghas* or the *aghas* of the *aghas* with the capital Medea, and the *aghas* *aghas* with the capital Constantine. These *aghas* were again subdivided into *aghas*, comprising the territory of several tribes. These tribes again had *aghas* or assemblies of *aghas*. Each *aghas* was governed by a *aghas*, each *aghas* by a *aghas*, either a Turk or an Arab, and each *aghas* by a *aghas*. The *aghas* were appointed by the *aghas*, at a rate by *aghas* of money, the *aghas*, in their turn and under the same conditions, chose the various authorities placed under their commands. They exercised extensive power in their *aghas*, but were responsible for the security of the *aghas*, and for the collection, with the help of the *aghas* tribes, of the taxes. Every year, in the spring and in the autumn, they sent the proceeds of these taxes to Algiers, by means of *aghas* *aghas*. Every third year they had to appear there personally, to deposit the amount of customary duties (*aghas*) which was called the *aghas*. This journey was not always without danger for them; for the *aghas* took advantage of their presence at Algiers to make them pay back what they had stolen and even to get rid of them, if he suspected them. They certainly might be tempted to govern independently as they had the disposal of an army and an uncontrolled authority. None of them, amongst others Djamahmed el-Kahir at Oran, conducted themselves like independent sovereigns. The *aghas* of Constantine, in the 18th

and 17th centuries, caused the greatest annoyance to the Algerian government.

Although the representatives of the beylik were personally concerned about the collection of the taxes, still the main resource of the Algerian treasury, for a period of three centuries, was to be found in the piracy. Originally having been one of the forms of the holy war, the piracy became, towards the close of the 16th century, a virile industry which enriched the government and the entire population. Private persons and associations supplied the capital necessary for the equipment of the ships. A fixed duty was levied by the state on the sale of captured individuals and merchandise; what remained was divided between the shipowners and the crew. The captives, especially those who belonged to well-to-do families, gave rise to a lucrative trade: they were bought and sold; their owners entered into negotiations regarding their ransom, in some cases with the captives themselves, in others with the deputies of their families or the members of the religious congregations (Trinitarians, Mercanturians, Lazarites), who devoted themselves to this philanthropic mission. During the time of these transactions the slaves either lived in the hands of their masters or in the establishments appointed for that purpose, the so-called *bagins*. The piracy attained its highest prosperity during the last half of the 17th century, when even the rivals of Spain, Portugal and Italy were captured in the narrows of the Bosphorus; it was still indomitable in the second half of that century, in spite of the naval demonstrations of England and France (century of Blake, 1659; expedition of Beaulieu to Algiers, 1664; bombardments of Algiers by Duquesne in 1682 and 1683, and by d'Arques in 1688). But in the 18th century the freebooting diminished. The great maritime powers, France and England, succeeded in enforcing respect for their flag. The states of secondary rank (Sweden, Denmark, Holland, Naples etc.) had to make up for this by submitting to the compulsory payment of an annual tribute either in money or in kind, in exchange for a guarantee of more or less precarious security for their nationals. The wars of Napoleon, which turned public attention away from the Mediterranean, gave the piracy a chance to recover its former prosperity. After general peace had been restored, the diplomatics, in reply to the appeal of publicists such as Sidney Smith and Chateaubriand, sought means of putting an end to that state of affairs. But the Algerians refused to carry out the decision of the congress of Aix-la-Chapelle. Even the bombardment of Algiers by Lord Exmouth (see above) could not make them give up their old practices. The piracy was to last as long as the Turkish dominion itself, until the year 1830.

The conquest of Algiers and the destruction of the Turkish State were the achievement of France. After vain endeavours to obtain satisfaction for the insult offered to the royal flag in 1827, the government of Charles X abandoned the blockade, which had lasted for three years, and, instead of the usual conciliatory negotiations, decided on punishing the day Marston, in spite of the opposition of England, the minister Polignac organised an expedition against Algiers. The day appointed on July 5th. The town was immediately occupied, and Hussein and the Jan-

daris were compelled to retreat. Polignac was determined that France should retain the ports on the littoral, but he intended to let a congress decide what was to be the final destiny of the country. But even before the diplomatics had time to assemble, the revolution of 1830 overthrew the Bourbons. The July monarchy regarded Algeria as an "embarrassing legacy". The politicians, who had come into power were undecided whether to yield to the wishes of the "conquerors", who demanded the occupation and colonisation of the ancient regency, or, on the other hand, to abandon the conquest which was likely to prove a burdensome enterprise. Not until 1834, after the "Africa Committee" had formed its task, the government declared itself in favour of the maintenance of the French occupation. At the same time, also, a first attempt was made to organise the administration of the "French possessions in Northern Africa", which, until then, had been subject to military rule. The decree of July 22nd 1834 constituted the general government, in spite of some kind advocates (such as Marshal Clauzel) of the occupation by France of the whole territory formerly occupied by Turkish Algeria, the chambers and partly also public opinion preferred the system of limited possession etc. In other terms, the occupation of the towns on the coast and their surrounding districts. The islands, since 1830, had been the prey of piracy. The former bey of Constantine, Ahmed, asserted himself in the eastern province, and Abd al-Kader [q. v.] was beginning to establish a kingdom in the west of the country. Consequently the French advanced into the west, between 1830 and 1840. From 1830 until 1836 they only occupied Bone, Oran, Mostaganem, Arzew and Bougie. The capture of Constantine in 1837, after an abortive attempt in the year before, formed the occupation of the east province from the sea to the Sahara. In 1844, the French troops appeared at Miskra and penetrated into the *maïra* of the Aurès. In the west they had a harder struggle against Abd al-Kader. After an energetic and methodical warfare under the command of Bugeaud, which lasted from 1841 till 1848, the power of Abd al-Kader was crushed and possession was taken of the towns of the Tell and of the plateau (Tlemcen, Miliana, Blouda, Blida, Saida Bagha). Three conventions of 1845, which was the outcome of the treaty of Langres concluded after the Franco-Moroccan war of 1844, demarcated the frontier between Algeria and Morocco. The sending of French troops to the borders of the Sahara, and the establishing of fortified posts on the plateau secured the extermination of the nomads in the south. The aim of the Ziban had to recognise the authority of France after the suppression of the revolt headed by Ibn-Agha and the capture of Zantcha (1849). Equally successful as an agitator was the sheik Muhammed b. Abd Allah, who, in his turn, tried to incite the Saharan tribes. The French defeated him, captured Laghouat, and advanced as far as Wargla (1850—1854). Until these years of Miskra had remained independent, the two expeditions of Angoulême (1844 and 1847) and the campaigns of Saint Arnaud and of Randon (1851—1854) having effected only a preliminary occupation Kabylie of the Sahara, the region of the West Sahel which was destined to fall by the hands, and the valley of the S-

From this it appears that the native Mussulman population, which in 1830 did not amount to more than 2½ millions, now forms about ⅓ of the entire population. It is far from being homogeneous, the different groups being usually distinguished as follows: (1) the Berbers, who are descended from the people who inhabited northern Africa at the time when Islam was planted in those regions; (2) the Arabs, descendants of the conquerors of the 7th century and especially of the Arab invaders of the 11th century, intermixed with the Berbers; (3) the Moors or Maghars, living in the *oases*, who are descended from various African populations, which were joined by foreign elements, in the 15th, 16th and 17th centuries by Spanish emigrants (*Andalusians*), in the 18th and 19th centuries by European renegades; (4) the *Kulughis*, half-breeds born from the union of Turks and native women; (5) the Turks who remained in the country after 1830; (6) the negroes, who either have been brought into Barbary as slaves, or are the descendants of *negroes*. This classification, confirmed by usage, does not correspond to the actual state of affairs. These elements have *intermixed*, and now the fusion is so complete, that it is almost impossible to distinguish the separate races. Not even the two most important groups, the Berbers and the Arabs, can be distinguished from one another, neither their language nor their mode of life affording sufficient criteria for such a division. But the Arabised Berbers have renounced their language and their customs, and have even lost memory of their origin, amongst others the *Hamaks* and the *Nemaks* in the province of Constantine, who *call* themselves Arabs in spite of their actual descent from the *Libyan* Berbers, the *Lughas* *Kel*, who are descended from the *Kellins*, and the *Hans* *Wans* on the Moroccan frontier. Of Arabian tribes, on the other hand, nothing is left but their names, the infiltration of Arabised Berber elements having transformed them completely. This Arabisation has taken place all over Algeria, but it has been more general in the province of Oran than anywhere else. To summarise: "The dispersion of the Arabian families was accompanied by an equally strong dispersion of the Berber families, and since the 8th century their vicinity has enabled the Africans either to absorb the Arabs or to transform themselves in order to resemble them at the present day". As

to their way of living, similar habits are found in both groups: nomadism is not especially Arabian, nor is a settled life a distinctive of the Berbers; outside the towns occasionally *semi-settled* Arabs and nomadic Berbers in quite, however, of this general fashion, some Berber groups that were expelled into the mountains inaccessible to the invaders, have preserved their language and customs, such as the *Kabyles* (q. v.), the *Shamirs* of the *Aurès* (q. v.), the *Tuaregs* of the *Nadama* region (q. v.), the *Haut* *Sahel* of the *Tata* country, the *Haut* *Massara* of *Chenoua*, some tribes of the *White* *Atlas* and finally the *Maknass*, the descendants of the *Arabid*: *Zenatya*, who, besides the customs and the dialect of their ancestors, seem to have preserved their physical characteristics, which doubtless stamp them as representatives of one of the most ancient Berber tribes (see *q. v.*). A superficial estimate of the various linguistic groups has not yet been made with adequate precision. Suffice it to say that, in 1859, the number of people speaking a Berber dialect was estimated at 850,000. At the present day their number would amount to about one sixth of the entire population. Groups which have preserved really noticeable marks of distinction of the Berber race are but rarely found. Everywhere else the Arabs have imposed their institutions and their language on the tribes they conquered. Although, in some cases, they were influenced by the *indigenous*, whose mode of life presented some features very similar to their own (part of the Berbers, for example, according to ancient authors, led a pastoral life, just like the Arabs), the conquerors, in their turn, exerted an undeniable ascendancy over the African natives resulting in their assimilation to the Arabs. The common appellation of Arabs for the entire population of Algeria is, in fact, a convincing proof of this final process.

On the ground of their way of living the Algerian natives can be grouped into *two* categories: settled and nomadic tribes. Between the former, distinction is obvious: the townspeople do not resemble the inhabitants of the *Kabyle* villages, very much more than they do the *Bedouins* or the *fellahs* of the *Tell*. For a number of centuries they have occupied the towns of the littoral and of the *Tell*: *Algiers*, *Mada*, *Makla*, *Constantine*, *Bougie*, *Oran*, *Nedroma*, *Tlemcen*. They form a class of townspeople, *settled*, and use of letters, peaceful and industrious *citizens*, whose numbers have been increased since the French conquest by a proletariat of day-labourers, handicraftsmen, and other *incommensurable* individuals. They live in separate families, and, where they come in contact with Europeans, seem inclined to adopt western habits. The *Kabyles* throng together in large villages, *agglomerations* of many houses affording shelter to the inhabitants and their cattle, and little in common with the *nomads* living between the valleys (see *Kabyles*). Judging from the number of people who live in these places they would for the greater part deserve to be called towns. In the mountains of the south (the *Flouja*, the *Syde*, the *Djebel* *'Anelle*) the settled part of the population occupies fortified villages (*Agars*) built of "plaster" or rammed earth, which, at *some* times, serve as warehouses for the provisions, as markets and *for* *traders* (see *ALGERIA*, *ANNA*). In the plains of the *Tell*, the *fellahs* or husbandmen are equally settled: he lives in a "house" a hut constructed of twigs,

covered with *dir* (a kind of reed) and surrounded, at some distance, by a hedge of thorns or cacti: a collection of several of these little enclosures in a circle is called a *dwara*. Elsewhere the winter enclosures or *waghas* (literally "winter camp") of the same size and shape as the *gawahs*, surrounded by thickling-fences and in harvest time, and by others, where the cerea are sown. The felids, however, is not so definitely settled as the *nomades*; he likes to live in a tent just as well as in his *gawah*, and easily changes his abode. Some spend the winter in the *gawahs*, and live under a tent in summer; others remove their camps several times a year. In order to utilize pieces of land lying far apart. They generally cultivate trifling vegetables and barley. Their agricultural implements and methods are still of a rudimentary nature; the results obtained depend first of all upon the abundance or the scarcity of rains. The farmers only move away from the Tell, the less favourable the climatic conditions become to agriculture, which then is substituted by cattle-rearing. In that case the settled or *gawah* settled life, which predominates in the Tell, passes gradually into the nomadic mode of existence, which predominates on the *plaine*.

It is very difficult to give an exact list of the *nomades*, as the majority of the *Arabs* tribes are "more or less nomadic and more or less settled". According to Villot, the *nomades* usually called *Arabs* may best be divided into two categories: *Arabs* with a limited range of migration, and *Arabs* of *Al-Bidja* (i.e. *Arabs* "of the migration"), the latter being *nomades* properly so called. Bernard and Lacroix distinguish the following categories: (1) the *nomades* with a very small range of migration (from 15 to 30 miles), circulating on the border of the Tell at definite periods in search of fresh pasture grounds for their cattle; (2) the *nomades* with different winter and summer camps, lying only a short distance from each other; some of these *nomades* hibernate in the south, others in the north of the Sahara Africa, (3) the actual *nomades*, who spend the winter in the Sahara, and, in the spring, leave their migration grounds in the south in quest of pasture and water amongst the tribes of the Tell, which allow them a right of usage. The *nomades* (*Arabs*) of Laghouat, for example, advance as far as Ténis al-Hadid; the tribes of the Ziban and the *Sharika* *Arabs* to Châteauneuf du Sahamel, between Constantine and Skik, other tribes of the southern region of Constantine even go as far as to call on the *Arabs*. These pastoral migrations are called *regas*; they are undertaken by sections under the conduct of their *shaykhs*, according to *tribal* rules and along fixed routes. Formerly they used to give rise to active hostility in the towns lying on the borders of the Tell and the *plaine*. The *Turks*, who expelled from the *nomades* the payment of certain duties called *dhim*, took care to establish *Maghrib* tribes in the neighbourhood of those market-places, that they might secure or, if necessary, enforce the payment of this tribute. Wool and skins, in exchange for corn, used to be the principal articles of traffic; to these, at the present day, must be added a certain number of objects manufactured in Europe. These have become indispensable to the *nomades*. Their own industry is extremely primitive and mainly practised by the women; it only consists in the making of *ghas* (beating bands of wool and

camel hair which, when together, form the *tray*), of woollen clothes, of rugs and of some domestic utensils. Both nomadic and the settled mode of life are not only closely dependent on geographical and climatic conditions, they are also subject to the effects of historical events and of economical changes. The *libal* invasion, for example, over-ran Africa, compelled certain *nomadic* tribes to become settled. The French occupation, which guaranteed both safety and relative prosperity, produced either similar or contrary effects. At various places, especially on the border between the Tell and the *plaine*, an evident tendency towards the building of *waghas* and a *domestic* settlement can be observed amongst the *Arabs*. In other regions, however, tribes may be found, which at one time had been reduced by misery and insecurity to throwing together in permanent abodes, but, under the present improved conditions, have resumed their settled life, abandoned the home for the tent, collected fresh herds and returned to pastoral and nomadic habits. This seems to be the case in the country of the *Nigra*.

The social organization of the *nomades* is still thoroughly patriarchal. The family has remained the basis of society. The father possesses absolute authority. The woman, being in most cases deprived of the guarantees which *Muslim* law affords her, lives under unfavourable conditions. She is married at an early age, in spite of the attempts to prohibit the marriage of girls not having arrived at puberty, and, as a rule, is compelled to the heaviest work, being no more than a servant. Nevertheless, her influence remains considerable, in consequence of the passions she excites; jealousy is frequent, in spite of the women being watched jealously by their husbands and heavy punishments being inflicted on transgressors. Polygamy, however, a rarely practised, lack of resources preventing the men from keeping more than one wife. According to a statistical estimate of 1891, the number of polygamous households in proportion to the totality of marriages was 1.000 in 100,000 (149,000 to 150,000). The family has almost complete autonomy, can do what it likes with its movable and immovable, may even abandon the tribe it belongs to and join another. These tribes (*ghas*), into which the families are grouped, comprise the descendants of the epigynous ancestor and families connected with that of the founder by ties of clientage. Tribes which can trace their origin back in a direct line to Arabian or Berber ancestors, without the admixture of foreign elements, are extremely rare. For the greater number have sprung from a commingling of various elements effected in the course of centuries. During the Turkish epoch, for example, *tribal* cities were formed by individuals of various origin being raised military colonies. An analogous phenomenon has taken place in the neighbourhood of the most renowned *tribes*; these so-called *tribal* cities have constituted themselves, the members of which pretend to be the descendants of a *tribe*, whose children they style themselves (*tribal* *tribe*), claiming, on that account, a kind of religious nobility. Such are, for example, the *tribal* *tribe* (*tribal* *tribe*). The tribe possesses a domain of its own (*tribal*); in the province of Oran *tribe* = *tribal*, a real collective and indivisible property, of which the possession is not the usufructaries. Before the

of Bouïssa, St. Ahmed is 11,000; and finally the Souk-à-Tel, scarcely a thousand in number.

Both the towns and brotherhoods tend to keep strict separation and isolation which prevail in all Algerian tribes. To make any distinction, as regards education, between Arabs and Berbers is contrary to fact; for the Kabyles, who are Berbers, know all other Muslims in ignorance, and the Kabyles put blind trust and faith in the marabouts. "The slight ~~and~~ ~~scattered~~ ~~all~~ over the mountains", writes M. Wahl, "and of mountains swarming and covered, makes one imagine oneself in a Muslim Spain". As compared to the marabouts, the Muslim official clergy lacks prestige. It owns its organization to the French government, which, on the occasion of the *gribs* to the shrine, undertook to keep places of worship in repair and to pay the clergy. These comprise 25 *caïds* (amongst whom is one *Hamad*) who are in charge of the principal mosques, *imams* who have to preside at the Friday prayer, *mudarris* who teach theology, *qur'ân* who recite the *Qur'ân*, and *maraboutins* whose mission it is to summon the faithful to the prayer, in all 573 functionaries officiating at 174 mosques, all recruited from the pupils of the three *madrasas* of Algiers, Constantine and Tlemcen.

2. THE PRESENT ORGANIZATION OF THE COUNTRY.

The Government of Algeria was declared, by the constitution of 1848, an integral part of French territory. Its administration, however, differs in more than one respect from that of the mother-country. The numerical disproportion between the Europeans and natives, and discrepancy in customs, religious and social conditions, did not allow of the unqualified introduction of French institutions desired by the advocates of racial assimilation. The government and the higher administration are centralized at Algiers in the person of the governor-general, who represents the government of the French republic through the whole of Algerian territory. All the various branches of the civil service are placed under his control, with the exception of the non-Muslim jurisdiction, public education and the treasury. He takes all measures necessary for the maintenance of internal order and the defence of the country; and the military and naval officers, charged with the carrying out of these measures, cannot correspond with the respective ministers except through the governor-general, who, moreover, is entitled himself to correspond directly with the minister resident at France at Tunis and the minister of France in Morocco on matters concerning both these countries and Algeria, especially on such as concern peace on the frontier. He is assisted by a government council consisting of the heads of the civil service, whilst a "council supérieur", formed of high functionaries and delegates from the elective assemblies, prepares the budget in co-operation with him. An elective assembly, the so-called "délégation financière", divided into four sections, *européens*, *arabes*, *algériens* and *Kabyles*, enables the French taxpayers and subjects to express their opinion on financial questions, and, to the ~~extent~~ ~~of~~ ~~the~~ ~~budget~~, to initiate the measures or reforms which they consider most *urgently*. French citizens also return three *deputés* and seven *senators* to Parliament.

Further, Algeria is divided into civil and military territory. The former comprises the whole of the Tell and the greater part of the plateau. It has been enlarged considerably since 1870 at the expense of the military territory. In that year it covered an area of 1,790,361 hectares peopled by 493,000 inhabitants; in 1900 both the ~~area~~ and the number of inhabitants had increased tenfold, 14 millions of hectares and 4,500,317 inhabitants). ~~The~~ ~~territory~~ ~~has~~ ~~an~~ ~~administrative~~ ~~organization~~ ~~of~~ ~~its~~ ~~own~~. The civil territory is divided into three departments (Algiers, Oran, and Constantine), which are governed on much the same ~~lines~~ ~~as~~ ~~the~~ ~~mother-country~~. Two kinds of communes, however, must be distinguished in those parts: the so-called "*communes de plein exercice*", established in regions where European interests predominate, and provided with an elected municipal council; and the "*communes mixtes*". The latter, to the number of 92, are mainly peopled by natives. Each covers an area of about 200,000 hectares and comprises a population of about 35,000 inhabitants, and is governed by an official, "*administrateur*", generally called *préfet* by the natives, elected by a municipal council partly elected, and by native *conseillers*, who are called *élus* or Arab *caïds*, and presidents in Kabylie. These *administrateurs* are appointed by the prefects and are displaceable at will by the governor-general. They serve as intermediaries between the French authorities and the native population, and receive a salary of one tenth of the total proceeds of the taxes paid by the latter. — The military territory, the extent of which decreases gradually, covers a part of the plateau and of the Sahara. Peopled almost exclusively by natives, it is ruled by the generals of the three military divisions, Algiers, Constantine and Oran and their subordinates, and is divided into "*circles*" governed by superior officers, and into "*arrondissements*" and "*postes*", which are under *commandants* belonging to the staff of the "*affaires indigènes*", — a mere continuation of the "*chefs de tribus*" system, with a few alterations in detail. Immediate authority is exercised by native *chefs*, *tribes*, *tribes*, *tribes*, or *tribes*, under the control of the officers. There are also "*communes mixtes militaires*", and native communes. The population of the military territory amounts to 225,442. Interest has been diminished not only by the gradual increase of the civil territory, but also by the creation, in 1900, of the "*Territoires du Sud*" (Touat, Ghardaïa etc.) with separate budget and organization.

Legal status of the natives. ~~The~~ ~~Muslims~~ ~~are~~ ~~subjects~~ ~~of~~ ~~France~~. The "statute-comité" of July 14th 1865 declares them Frenchmen, with this restriction that they are to continue under Muslim law "so far as concerns personal status, the family, succession, and real estate in so far as it be not held under a French title to proprietorship". The natives, however, have a right to disclaim their status in matters of justice, although the case be *for* Muslim law. They are admitted to military service and may even attain to the rank of officer (with the native title only, unless they come out of a special school); they are competent to fill certain civil posts, and may even become French citizens on request, but in that case they must disclaim their personal status and submit themselves to French law, but *in* *as* *much* *as* this, by the majority of the natives is

regarded as a form of slavery, it is not of frequent occurrence. The natives who are not naturalized are not completely deprived of political rights: they are excluded, for example, from political elections, but have a vote in municipal elections. Although the voters are very limited in number by the system, and the deputies who represent them in the various assemblies, municipal delegations, and general and municipal councils, are sometimes appointed by the government, and sometimes chosen by their fellow-believers but never by menhood suffrage. Each municipal council, under the system, numbers from two to six native councillors amongst its members, each general council six Muslim members, and the General Delegation 21 Arab and Kabyle members.

In matters of finance the natives are subject to a regime different from that applied to Europeans. They are liable to various taxes, making up together the "impôt arabe". Two of these taxes are of a general character and are collected all over Algeria on an almost uniform system. These are: the "impôt annuellement en tant de la production de la vigne" and the "impôt en tant de la production de la vigne", both in character, are the same, originally laid out in the best of the use of the "impôt arabe" and still collected as a ground-tax in the province of Constantine; the various taxes such as that of Greater Kabyle, paid in regard to commerce, which is a sort of poll-tax and a substitute for all other taxes, the "impôt arabe", imposed on every fireplace in Lesser Kabyle; and the "impôt arabe", levied in places where this tax is cultivated by the natives, for example in the "impôt arabe" and in the case of southern Constantine. These so-called "impôts arabes" are identical with those collected during the Turkish epoch, except that they have lost their religious character and are paid into the Treasury.

The legal system offers some particular features. Penal justice is exclusively the province of the French magistrates ("conseils d'arrondissement", "tribunaux de première instance", "justice de paix") in the civil territory; "conseils de guerre" in military districts. Violations of the law by natives are dealt with by special courts with a view to prompt, efficient, speedy, and cheap justice, suited to the customs and the intelligence of the natives. Such are, for minor offences, "délits", the so-called "tribunaux répressifs", founded by decree of March 29, 1902 and reorganized by decree of August 19, 1903. The sessions are held in the chief town of each "justice de paix", and are presided over by the "juge de paix" assisted by two judges, one French and the other native, drawn respectively from the functionaries and notables. Criminal cases are dealt with by the "tribunaux répressifs", organized by decree of December 30, 1902. These hold their sittings in the towns appointed to be seats of the "tribunaux répressifs", and consist of three magistrates and four jurors (two French and two native). Finally, both civil and criminal government have a rather wide disciplinary power which enables them to punish offences peculiar to the natives who are subject to such particular rules. They are bound, for example, to provide themselves with a license for travelling in the interior of the country, for possessing weapons, for wearing a pilgrim's cap (keffiyeh), for wearing religious ornaments etc. Sentences pronounced against French, against the execution of

the orders regarding the rights of property and of personal status, the refusal to do forced labour when ordered by the government, are also dealt with on warrant by the "tribunaux répressifs". This much questioned system is justified by the necessity of immediately suppressing, by means of light penalties, such offences as likely to disturb public order. The "tribunaux répressifs" of the "impôt arabe" are reserved for civil suits, but their powers have been gradually extended to the gain of the European nationals. There is a "tribunal répressif" at Algiers, and in various places in the three "départements", the Magistrates have their "tribunaux répressifs".

Public education for Europeans is subject to the same conditions as in France. Higher education is given in the "écoles supérieures" of Law, Medicine, Science and Letters at Algiers, which are open to both Muslims and Europeans. The teachers at these schools are largely concerned with native questions. The School of Medicine goes to better the natives by training a staff of "auxiliaires médicaux" able to give immediate aid to their fellow-believers, and to spread amongst them elementary notions of hygiene. Muslim law and native customs are taught at the School of Law; lectures on Arabic language and literature, on vulgar Arabic, on Berber dialects, on Muslim sociology, and on the history and geography of northern Africa are given at the "École des Lettres". Public schools of Arabic, in connection with this school, exist at Algiers and at Constantine. Secondary education is given in "lycées" and colleges, which are open to natives. Muslim primary education long neglected, has since 1881 received due attention from the government. A decree of November 24, 1887 laid down the principle that primary education was to be given in public schools open to children of all nationalities and in special schools reserved for the Muslims. These special schools have to apply measures adapted to the requirements of native life, under special programmes, which prescribe instruction in agriculture and in handicrafts, together with the study of the French language. The principle of compulsory attendance at school applies only to boys, and its duration is limited by the government. At the present day the native schools, which are particularly numerous in Kabyle, are attended by about 30,000 children. Muslim education (properly so-called) is given in the Koranic schools (madrasas) and in classes of theology held in the principal mosques by "maîtres". And the madrasas were reorganized in 1895, in order to adapt them for preparing for different careers, both legal and ecclesiastical persons possessing, in addition to a knowledge of Islamic law and theology, some acquaintance with French law, history, geography, literature and science. Knowledge from these schools may play a large part in bringing about a better understanding between natives and Europeans.

Whether this be possible is a problem which, since 1830, has often been put, discussed and answered, sometimes in the affirmative, sometimes in the negative. The dream entertained by early enthusiasts of fusing natives and Europeans into one single nation by the mere force of institutions and systems, have long since been dispelled, and their failure has lost force in the contrary belief that Islam opposes an insurmountable barrier to all attempts at mutual unity, and that the relations

between Europeans and natives are destined to remain for ever those of conquerors and conquered. The truth seems to lie half-way between these two extremes. Even if the fusion of the two populations be not an illusion, the policy of subjugation and of isolating the natives is quite out of date. A policy of assimilation based on community of material interests is inevitable. That Muslims are not impervious to such a policy has been evidenced by the improvement in agricultural methods, by the institution and development of pecuniary societies, and by the favourable reception given to the founding of native dispensaries and infirmaries. And besides, although we may not give up all hope of radically transforming the native mind, it is far more visionary to aim at developing Muslim civilisation within its own limits. To effect this will indeed be a work of patience, and one requiring much lapse of time for its result to become apparent.

level, in the angle between the Court of Myrtles and the Court of Lions.

That, at one time, courts in the style of the Patio de las Leones existed everywhere in the Islamic countries on the Atlantic coast, and especially in Sicily, can be proved indirectly, because the well-known courts in the style of the Court of Lions with their courts and fountains like the monument can only be accounted for as imitations of these Moorish palace courts. The many colonnaded colonnades, surrounding the cloisters of the monasteries of Cîteaux in Lorraine and at St. Paul in Spain, as well as the famous cloisters of Montreuil, whose scheme of ornament is clearly related to that of the Alhambra. Again in the "Court of the Lions" we notice, on its longitudinal axis, arcades with three or four columns in the corners and two in the middle; and the fountain in the centre. In the Court of Montreuil the same recess occurs, but in the corner only, the number of arches is the same, not is the fountain lacking. Another point of resemblance between the "Court of the Lions" and the cloisters of the Italian monasteries is the bold cylindrical variety of their supports. In the Alhambra single columns alternate, apparently at least, with pairs or with groups of three or four. Such groups occur likewise at Montreuil and, alternately with pillars, in Rome. The shafts of the Alhambra columns are smooth but for the series of rings above and below; but the last is hard work to carve on the walls, which is also found in Sicily, and throughout the East, proves beyond all doubt that the "technique" of the columns fashioned in the style of the Court of Lions was borrowed from Islam.

The capitals of the Alhambra (fig. 3) have a circular base, decorated with an undulating ornament, above which rises a square superstructure with a profusion of arabesques. Analogous forms are frequent in northern Africa, in the East, however, not a single one has yet been found. Nevertheless, this design must also have been imported from abroad: the bell-shaped capitals of the Tulun Mosque at Cairo, are an indication of the oriental origin of this design. For the rest, the Alhambra decorations differ from the Persian decorations of the Tulun Mosque, which is about 500 years older, in that they were cast in moulds and were put together as is to form a continuous surface, whereas the Tulun Mosque exhibits bands of decorative work fashioned with a free hand. A comparison with the wood-carvings of the Minaret (the pulpit) of Kairouan, which are of nearly the same period as the Tulun Mosque, and the fact that designs on flat surfaces based on one fundamental element were already in use in the ancient East, suggest the conclusion that the designer of the decorations of the Alhambra did not strike out any new path of his own. They are a continuation of the usual polygonal ornament, which predominates in the lower parts of the walls, the arabesque which provides so many elevated parts and leads up to the stalactite and, finally, in capitals, employed for decorative purposes, there in the Alhambra being of special interest, so they are often represented as addressing the visitor in their function of ornament (cf. Schack, *Reise und Skizzen der Araber in Spanien und Syrien*, 2^e édition, II, 349-350). The niches, for example, in which plaques are placed, speak themselves in the following words:

My wisdom and my robe are matchless in splendour:
The stars of heaven gaze down to me full of longing....

or:

The artist's hand has embellished me like a robe of silk
And has adorned my slippers with glistening jewels.....

The Hall of the Sisters sings:

I am a garden full of beauty, clad with every ornament,
Recognize what I am, while you feast your eyes upon my charm!....
The stars would gladly descend from their seats of light
And wish they lived in this hall instead of in heaven:
Fain would they join themselves to the company of the slaves, Lord,
And, full of reverence, do them service in both halls.

The Tower of the Captives praises itself in a similar way:

Nothing can match this work etc....

And round the base of the famous fountain in the lions one reads:

Uncomparable is this fountain! Alas, the excellent one, desired
That it should surpass everything in wonder-ful beauty!

It is worthy of note that this kind of inscription, as outside the Alhambra, of rare occurrence as compared with the usual historical inscriptions and verses from the Koran. It would be a matter of interest in the history of art if the origin of this class of inscription were exactly determined.

The Alhambra exhibits two monuments of art, which, even amongst the surrounding profusion of decoration, are particularly striking: the Fountain of the Lion and the three obelisks of the so-called "Hall of Justice". In the centre of one of the two central towers are standing in a circle, each electing through a tube to its mouth; they are designed in somewhat the same style as the animals' heads on the Persian vessels amongst the treasures discovered at Nagyszentmiklos. Such monuments are often mentioned in literature; they originated in ancient oriental art, and have also passed into Christian art. — The obelisks of the Hall of Justice are of interest not only in connection with the Gothic art of Spain: they represent scenes from tales of chivalry and hunting episodes, and also writings carved in a row on a long scroll. One feels tempted to connect the figures with the hunting and harem women of Bagdad, and the king, with the enthroned figure on the front wall of this circle of the desert. Their explanation will need to be based upon an examination of Persian miniature painting.

Schrift, 1875, Utauh de l'Espagne, Asie et l'archéologie des Arabes et des Perses (1847); M. J. Goussier and Owen Jones, Plans, elevations, sections and details of the Alhambra (1848); Calvert, Moorish remains in Spain; The Alhambra (1907); also various monographs such as Dornmann, Die Alhambra in Granada (1816)

at difficult, which compelled him to redouble his literary activity. He dedicated to his sovereign a concise narrative of the creation and the miracles of the prophets under the title of *Advar-i Ahval* (Flügel, *ibid.* II. 94; Perisch, *Verz. d. Türk. Hes.* . . . in Berlin, no. 35 and 358). A year after his return from the Pashalik he completed the *Book of Victory*, containing an account of this campaign (see especially *MS. 1000* in Rica, *Cat. of the Turk. Mus. in the Ser. Mus.* p. 61). He could already claim the authorship of 17 works, when, caused as he had gained the good-will of Sultan 27 years before, he succeeded in humiliating himself with the crown-prince Mehmed, who had then arrived at manhood, by his description of Mehmed's circumcision festival, one of the most remarkable Ottoman history (Nis-i 'Osmanliya Library in Constantinople, no. 4713).

Ali became more and more engrossed in history. In 905 (1587) or shortly afterwards he collected the most interesting material concerning several hundreds of masters of calligraphy and the art of book-binding (both important branches of industrial art in the East) under the title of *Talakat-i edevat* (Flügel, *ibid.* II. 356). His *Collection of histories* (*ibid.* II. 901, a Turkish translation of an admired work of the 10th Arabian epoch, seems to belong to this period. He even thought it worth while to cultivate the mystical and poetical literature which flourished especially in Persia: in his *Comment of man* (cf. Rica, *ibid.* p. 29 and Perisch, *Die Türk. Hes.* . . . in Berlin p. 73) he gave an accurate account of the grades of saints and of the power of their words (999 = 1590-1591). About that time he also arranged a collection of poems both of a general and of a personal tenor, entitled *Esfer-i mesnevi*, which are of great interest for the knowledge of his character (Rica, *ibid.* p. 261). Finally he attained to a high post in the administration of the public revenue, and, shortly afterwards, appointed chief secretary of the *fermanlar*. No wonder that at this time, when he had the disposal of the necessary means, Ali undertook the tempting task of giving a general survey of historical events down to his own time. Sultan Mehmed, immediately after he had ascended the throne, allowed him a considerable salary. But Ali wanted to write the work in Cairo, so that period the greatest book-market of the Mohammedan world. The Sultan made no objection, and for the intrigues of jealous rivals he would have obtained the post of director of finance in Egypt. From 1002 at latest until 1003 (1593-1594) he was engaged in writing his masterpiece, his *Source of History* (1277-1285) in four parts, which, in conjunction with Mustafaîdîm Haghi's work, is the most important General History which has ever produced by the Ottomans. It was printed at Constantinople in five volumes, though without the final part of the book, which treats of the 150 last years of Ottoman history. Although frequent allusion is made to European nations, it never occurs to the faithful Muslim to state any details concerning them. In the first section he expatiates upon the old myths of the prophets, in the second part the personality of Mohammed and the first glorious achievements of the new religion come into prominence. The author is so conversant of the importance of his race for the extension of Islam, that he gives the life of

"Turkish-Tarikh" in the third section which contains the history of the caliphs and of the Mohammedan feudal princes. The fourth part, comprising the Ottoman history, represents this epoch as the crowning achievement of universal history. A detailed genealogy is added to the whole of the work. Ali's compilation of references concerning pre-Islamic history is not more reliable than that of other Mohammedan works of history. The value of his book is to be found in the last sections. It is a curious fact, that amongst the 130 predecessors, whom he quotes as his authorities, not a single one, as far as we know, has ever touched upon the subject of Ottoman history. The 16th century especially has received thorough treatment at Ali's hand. His love of truth in describing the acts of his sovereigns and his tolerance when writing about heterodox people, are especially pleasing features of his work. The style of the last volumes is so much overburdened with poetical allusions that one is reminded of Wessely, but towards the end he descended to an unaffected mode of writing. After the completion of this work, yielding to the urgent requests of his friends, he wrote a concise history of the Islamic realm under the title of *Deer and formation of state*, which has become one of the most widely read books and is to be found in all libraries of any importance. Not long after his appointment to the post of *Paşa of Medina* (a reward for his great literary achievements), he closed his literary career with the publication of his interesting little work *Hasbi al-Kalâm min al-Hadîs al-Hakîk* (Library Esad Efendi at Constantinople, no. 2407; Turk. Cat. of the Khedive Library at Cairo p. 107). He died in the same year 1008 (1599-1600).

Ali is one of the most attractive personalities of the Turkish bureaucracy. In an epoch, in which intrigue and violence were paramount, he shines forth as a model of rectitude and integrity. We wonder that his honest and steady character did not appeal to the iron-handed men of that pitiless period, and that they did not require his services. The Grand-Vizier Sinan Pasha, one of the most striking personalities of the whole Ottoman world, looked down upon him with especial contempt. But, on the other hand, hardly a single author can be found who was not a personal friend of Ali's.

The number of his works amounts to more than thirty, according to a statement which has been corroborated by Hamann without cause. The fullest account of his life and writings is given by Hamann, *Verz. d. Osman. Literatur* IV. 308 and 651. cf. esp. *Verz. d. Osman. Literatur* III. 115 et seq., and by Mehmed Tahîr Rîfât, *Menâkıb-i 'Osmaniyeden 'Alî mîrââtı* (Constantinople: *Osmanîye-i İlmîye* (Salânik 1322 of the official Ottomans = 1906). See also *Cat. cod. or. bibl. univ. Lips.* *ibid.* v. (1873) p. 57; Flügel, *l.c.* II. p. 54; *Journ. Asiat.*, 6th series XIV. (1889), 76, 90-91. Writings of inferior authors are often attributed to Ali.

(R. SCHMIDT.)

'ALİ (ألي), adj.: 'high', often used as a personal name. *Alî 'Alî* is one of the surnames of Ali's.

'ALÎ is 'Amr. ALI' is 'Amr. ALI' is the ancestor of the 'Abbasides. According to Mohammedan tradition, 'Ali was born in the year 40 (661), the very same night, in which the caliph 'Abi was assassinated; but there are also other statements concerning the year of his birth. His

mother was called *Sura* bint *Muḥammad*. His grandfather *Abū* was the uncle of the Prophet, and on account of his high birth and his personal gifts, *Alī* attained to great distinction. He was looked upon as the handsomest and most pious Kinsman of his time, and received the surname of *al-Saḥbān* (the who prostrate himself often) because of his constant praying. His piety did not prevent him from fighting bravely against the Unbelievers, and was therefore rewarded from the capital by Caliph *Walid* I. He went to live in the province of *Sham* on the border between Arabia and Palestine. Here he died in 117 (735-736) or 118 in the village of *Musayna*. This place remained the headquarters of the *Alid* propaganda after *Alī's* son *Muḥammad*, the father of the future Caliph *al-Saffar* and *al-Muḥaddid*, had been recognized as the head of the *Alid* faction.

Bibliography: Ibn Sa'd i. 229 et seq.; *Yāqūt* (ed. *Montagu*) ii. 312 et seq.; *Tabaṭ* ii. 16 et seq.; Ibn al-Aṭṭar (ed. *Totah*) ii. 16 et seq.; Ibn Khallikān (transl. by de Slane) ii. 216 et seq.; Weil, *Gesch. d. Chalifen* 3. 133; U. 13; Molier, *Der Islam im Morgen und Abendland* i. 444. (K. V. Zetterstedt).

ALÍ b. *Abī* *Tālib* was a *ḥashimī* and the cousin of the Prophet *Muḥammad* and the fourth orthodox caliph. His father, *Abū* *Tālib*, whose name signified the heathen name *Abū* *Munaf*, was the son of *Abd al-Muḥallib* b. *Ḥāshim*; his mother was called *Fāṭima* bint *Asad* b. *Ḥāshim*. *Alī* received the surname *Abū* *Tālib* (q. v.) from *Muḥammad*, whose daughter *Fāṭima* he married. Concerning his descent some *ḥashimī* *ḥadīth* ascribed to him an age which cannot be ascertained with certainty, and after *Ḥāshim* was the first Muslim (Ḥunabā b. al-Kharrābī, etc. in *Abū* *Ḥanīf*, *al-Muḥallab*, *Abū* *Saīd* al-Kharrābī etc. in the second (after *Abū* *Bakr*; *Muḥaddīd*, *Tanbīh*, ed. de *Ousef*, p. 231, transl. by *Carra de Vigna*, p. 306). He was one of the ten to whom Paradise was expressly promised by the Prophet, and one of the six counsellors on whom the Prophet on his death-bed set his hopes. He had a dark brown complexion and big protruding eyes; he was corpulent, bald, and rather short than tall; he wore a thick, long, white beard, which he dyed sometimes; his face was handsome; he showed his teeth when he smiled (*Tawḥīd* p. 397, transl. p. 355; *Nawāṭ* p. 441).

History. When *Muḥammad* first decided to emigrate to *Yathrib* and suddenly disappeared from *Mekka*, his escape was facilitated by *Alī*, who made people believe that he was still in the house he had occupied. He also stayed behind a few days in order to return to the women the deposits which had been entrusted to the Prophet. *Alī* accompanied *Muḥammad* in the battles of *Badr*, *Uhud*, *al-Ḥunayn* ("the ditch"), and in nearly all his expeditions, except that of *Taḥuk*, during which he had the command of *Medina* in the absence of *Muḥammad*. He himself conducted an expedition to *Kaduk* against the Jewish tribe of *Ḥuday* (6=628). He received sixteen wounds at *Uhud*, and on the day when *Ḥabib* was slain he carried the banner. The Prophet sent him to *Mina* (9=630) to read in public several verses from the *Qurʾān* (*al-Naḥl*), which had been revealed to him shortly before and at the same time, to proclaim that *ḥashimī* with regard to the prohibition of polytheism from the

polytheism to the circumambulation of the Ka'ba, which no-one was to make naked; to the entrance of the Muslims into *Yathrib*; and to the observation of the time granted for their conversion. In the year 10 (631-632) he conducted an expedition to *Yemen*, in consequence of which the *Ḥimyarites* were converted. It was *Alī* who advised *Umar* to adopt the *ḥijra* in the migration of the Prophet as the starting-point of the *Ḥashimī* calendar. He was entrusted with the task of making representations to *Uthman* on account of the complaints which came from the provinces; when *Uthman* began to feel uneasy about his safety, *Alī* was the intermediary between him and the discontented; in the name of whom he accepted the three days' delay demanded by the caliph; during the siege of *Uthman's* house (*ḥaṭṭ* al-*ḥaṭṭ*), he showed himself favourable to him and inclined to support him. At first he modestly refused to take the power into his own hands, but five days later he accepted it, and on Friday 25 Rabi' al-Awwal 35 (June 24=656) *al-Ḥajjaj* was put to him as *Ḥāshimī* in the Mosque of the Prophet at *Medina*; he was the first to ascend the pulpit for this ceremony. In the year 38 (656) he left *Medina* once to enter it again; he marched against *Ḥajjaj* when *ʿAlī*, *Jafar* and *Zubayr* refused to acknowledge him and defeated them in the "battle of the camel" which took place at *Kharrāb*, outside *Ḥajjaj* on 10 Rabi' al-Awwal 38 (Dec. 8=656). He beheaded the fallen, had them honourably buried, and waited three days before entering the town. He sent *ʿAlī* back to *Medina*, escorted by a train of attendants amongst whom were forty women of distinction. He distributed amongst the inhabitants the money which he found in the treasury, and proposed the same amount to them for the projected campaign in Syria. A month later he entered *Kufa*, where his faithful lieutenant *al-Aghīl* had prepared the way for him. From thence he went to *Cirāḥān* (al-*Ḥadāṭ*), crossed the Euphrates at *Rahha*, and, to the plain of *Ḥalīl*, gave battle to *Mo'awiyā* in a series of combats which lasted two days (Rabi' al-Awwal 38 till *Safar* 37=June-August 657). *Alī* almost gained the final victory, owing to the bravery of *al-Aghīl*. *ʿAmr* b. *al-ʿAṣ* thought of advising *Mo'awiyā* to have recourse to a stratagem which proved successful. The Syrian troops furnished five hundred copies of the *Qurʾān* to their leaders, to indicate that they appealed to the judgment of the book of God. This stratagem disheartened the troops of *ʿAlī* and made them think of submitting to *God's* word. *Alī*, therefore, yielded to the urgency of his companions; he arms and accepted the instrument proposed by *Mo'awiyā*. The latter appointed *ʿAmr* b. *al-ʿAṣ* his arbitrator. *Alī* was angry, against his will, at *Mo'awiyā* and *ʿAmr* b. *al-ʿAṣ*. The two arbitrators met in *Ramadhan* 38 (Febr. 657), furnished with a written document (*ḥaṭṭ*) giving them full power. *ʿAmr* b. *al-ʿAṣ*, who wished to see his nephew-law *ʿAbd* *Alloh* b. *ʿUmar* become caliph; but himself he intended by *ʿAmr*, who made him admit that *Mo'awiyā* was fully entitled to revenge the murder of *ʿUthman*, of which, it was secretly rumored, *ʿAlī* had been an accomplice. So *ʿAbd* *Alloh* *disappeared*. *ʿAlī* (*Tabar* i. 335; *Muḥaddīd*, *Ḥadīth* iv. 397 addit. "by taking off his turban", which detail seems to have been inserted afterwards). *ʿAmr* followed his example, after which he proclaimed

in Spain and the Balearic island. During the era of the Almoravids only three members were called 'Ali b. Ghaniya: one was the son of Muhammad, who was appointed governor of the Balearic islands in 520 (1126); he was the grandson of the lady Ghaniya, the second was governor of al-Mahdiyya (in Bilgaya) in the year 600 (1203-1204); he was the son of al-Mu'izz b. Abd Allah and great-nephew of the former; the third was a son of Ishak, who succeeded Muhammad as governor of the Balearic islands, which post he occupied until 579 (1183-1184). This third personage, in the family of the Banu Ghaniya, who bore the name of 'Ali, was the nephew of the first 'Ali (see the genealogical table in A. Del. *Les Rois d'Espagne* p. 205). It was this last one, 'Ali b. Ishak b. Muhammad b. 'Ali, great-grandson of Ghaniya, who rose in arms against the Almohades.

The rapid annihilation of the Almoravid rule in Africa and Spain by the Almohades, became a serious warning to Ishak b. Ghaniya, who governed the Balearic islands on behalf of the Almoravids. Every year he went personally to the sovereign of Marrakech. In 536 (1142-1143), the Almohade emperor Abd Yaqub summoned the governor of the Balearic islands to appear before him and pay official homage as his vassal. The reply to this summons was delayed until Ishak's death in 579 (1183-1184). He left thirteen sons to take possession of the inherited inheritance. His eldest son, Muhammad, was appointed governor of the Balearic islands by the Almohades with settled there. But Muhammad realized that the Almoravids had could not much longer maintain his independence; he also knew, however, that neither the members of his council, nor the numerous Almoravid nobles who he sought refuge in the islands would ever let him submit himself to the Almohades. Nevertheless, in compliance with the urgent solicitations of the sovereign of Marrakech, he finally accepted the oath of allegiance required of him, whereupon an Almohade officer came to establish himself in Majorca to superintend the governor Muhammad's administration and represent the Almohade government.

A conspiracy was formed, headed by the brothers of Muhammad; the latter was thrown into prison together with the Almohade representative. The government was entrusted to 'Ali, brother of the deposed governor (580 = 1184).

While these grave events took place on the Balearic islands, the Almohades witnessed the terrible defeat of Saurasen, which compelled them to concentrate all their forces upon Christian Spain in order to recover their lost province of arms. So their attention was momentarily diverted from the Balearic islands.

But 'Ali b. Ishak did not doubt but the hour of revenge was near at hand. He began, therefore, to organize the defence of the islands with great activity. But fearing, on good grounds, that he would not be able to sustain for a long time the attack of the Almohades, he began to negotiate with the Africans, especially with the inhabitants of Bilgaya (Algiers). As soon as he recognized that he could count upon the support of at least a part of them and that he could stand without difficulty on the coast by that town, he armed all the ships he possessed, so according to some, 32 according to others, embarked 200 horsemen and 400 foot-soldiers, and, well supplied

with money, set sail for Bilgaya where he landed without difficulty; he captured the town on 6 (Julian 580 (Nov. 1284), during the absence of the Almohade governor of the place. 'Ali had only reigned over the Balearic islands for a few months on leaving for Bilgaya, he remained his post to his brother Yaqub. 'Ali and his companions were never to return to the Balearic islands, which, however, did not until the year 600 (1203-1204) fall into the power of the Almohades.

At Bilgaya, 'Ali found amongst his allies amongst all the discontented, especially amongst the partisans of the ancient Hammadide realm the Almohades had destroyed, including the Kabyles. Afterwards, as we shall see, the Arabs who had invaded Northern Africa in the 11th century (see p. 266) joined him in 1284. Having learned that the governor of Bilgaya, the Sid (= Salyid) Abu 'l-Rabi', had learned that he was coming to attack him, 'Ali advanced against him and defeated him so completely that he dared not stop in his flight until he was safe behind the walls of Tlemcen. After this victory, 'Ali organized the administration of Bilgaya and appointed his brother Yaqub military governor of the place, after which he left it to march towards the ~~west~~ and conquer other countries.

It seems to have been the intention of the leader of the Almoravids to penetrate to the very heart of the Almohade realm, the capital Marrakech. Numerous Arabs and Berbers came to join him in hope of booty. At-Bjarr (Algiers) was conquered. He left it upon the command of his nephew Yaqub b. Yalya, and captured the towns of Alkaiya and Millana. Considering himself sufficiently strong to continue his conquests any further, and feeling perhaps not perfectly sure of the fidelity of his allies, he thought it wise to check his march at Millana and turn eastwards again, along a different route, further south than the one by which he came. He captured the ~~city~~ of the Haud (Haud) on his way back, and laid siege to Constantine.

The Almohades became disconcerted by so many successful attacks; the Caliph al-Mu'izz dispatched against 'Ali an army of 20,000 men and a fleet with a view to the recapture of al-Bjarr and Bilgaya. At the approach of his expedition, all the towns that 'Ali b. Ghaniya had conquered, expelled the Almoravides and submitted themselves again to the Almohades. 'Ali's two brothers Yalya and 'Abd Allah, who had remained at Bilgaya, left the place precipitately when the hostile fleet appeared, and went to join 'Ali before the walls of Constantine (Constantine). Bilgaya was retaken in 581 (May 1185), after an Almoravid interregnum of only seven months.

'Ali b. Ghaniya, seeing all his late allies forsake him after his successive reverses that he had suffered, did not wait to see the arrival of the enemy's army before the town of Constantine. He fled to the desert across the Hodna, while the commander-in-chief of the Almohade army, the Sid ~~Yaqub~~ Zaid, took possession of Bilgaya, that town being the capital of the government which the Caliph al-Mu'izz had assigned to him.

In the Jurd (Jurd), 'Ali scattered money freely among the natives, and so succeeded in securing the help of the ~~tribes~~ Wyal and Djordjan Arabs. Together with his allies, he conquered

Tunisia and Gafsa, after that he went to Tripoli and concluded an alliance with Karamanli, prince of that region. All the unsettled and surrounding borders of the Hilli Arabs of this country round the two new allies, who soon conquered the whole of the hill. Karamanli captured Gafsa and made it his capital (581 = 1185-1186).

In 582 (1186-1187) the whole of Irshiya except Tunis and al-Mahdiyya, had fallen into the power of the rebels and the Arabs, who committed the most outrageous crimes. 'Alī b. Ghaznā was recognized as the head of the whole country, and ordered the prayer to be said in the name of the 'Abbasid Caliph al-Nāsir b. al-Muẓaffar, to whom he sent an embassy to swear the oath of allegiance. Following, herein, the custom of the Almohade sovereigns. He acquired, thereby, the official title of legitimate head in the eyes of his adherents, and, at the same time, hoped to secure the definite support of the caliph of the East for the complete overthrow of the Almohades.

Yielding to the urgent entreaties of the Almohade governor of Tunis, the Caliph al-Muẓaffar decided to take upon himself the command of an expedition for the re-establishment of Almohade authority in Irshiya. Early in 583 (1187) he advanced towards Tunis. At his approach, 'Alī retreated into the desert. From Tunis, where he had established his headquarters, al-Muẓaffar dispatched an attacking column against Gafsa; this expedition, numbering 6000 horsemen, was completely defeated by 'Alī near Gafsa (Rabat I 583 = May-June 1187). Al-Muẓaffar, in his own march, at the head of all his troops, against the Almohades, who, in his turn, was vanquished at al-Hammam and fled into the desert. Gafsa, Fawar and Gafsa were retaken successively by the Almohades, and Irshiya became again subjugated. Al-Muẓaffar transported 'Alī's former allies, the Buzhan and Blyāh Arabs, to the ~~desert~~ provinces of the extreme Maghrib, and returned to his capital.

But no counts had al-Muẓaffar left Irshiya, than Karamanli and 'Alī responded to the south and recommenced the campaign. The events subsequent to the departure of al-Muẓaffar from Irshiya and the reappearance of the two leaders of the revolt are insufficiently known. It is, however, on record, (it may be said, the historian Ibn Khaldūn), that 'Alī met his death in a battle against the wife of the Naṣirwa, in the year 584 (1188-1189). The chronicles of the Almohade dynasty, al-Marrākushī, states, to the contrary, that 'Alī died of the wounds he received in the mortal battle at al-Hammam, where he was defeated by al-Muẓaffar.

His death, in any case, did not put a stop to the struggle which the last representatives of the Almohade empire had commenced against the Almohades. 'Alī was replaced, at the head of the rebels, by his brother Yahyā, who waged war to the knife against the Almohades for nearly half a century, dealing such terrible blows to the empire of Marrākush, that he contributed largely to the dismemberment and the final destruction of this Berber empire.

Bibliography: al-Marrākushī, *al-Mawāṣiṭ*; French transl. by Fagnon, in the *Revue africaine*, 1891-1893 (printed separately at Algiers 1893); Ibn al-Athīr (ed. Tardieu); French transl. of the extracts relating to the Maghrib by Fagnon, in the *Revue africaine*; al-Dīlāwī, *Al-Bīdā* (see A.

Del., *Les Années d'Algérie* (supplement)); apart from these authorities, which may be considered of primary importance, reference should also be made to chapters relating to the history of the Almohades during the epoch of 'Alī b. Ghaznā, in the Arabian chronicles of later date and to the entry in the polygraphical example the Abū Zafar, *al-Karīmī*; al-*Ḥusaynī*; Ibn Khaldūn, *al-ʿIqd al-Farīd*; Ibn al-Dīnār al-Kharrāzī, *al-Muṣannaf*; al-Muṣannaf, *Maṣṣaf al-Fih*, etc. It is also advisable to consult the works of the western authors who have treated of this subject. *The History of the Mohammedan Dynasties in Spain* D. supplement p. 120; *Algeria* (supplement), *Descriptive Statistics of the Administration of the State of Algeria* (Paris 1881); *Cadastre, Description y designación de los Almohades en Argelia* (Barcelona 1899); Alfred Del., *Les Années d'Algérie* (Paris 1903).

(A. DEL.)

'ALĪ b. al-ḤASAN b. al-DĪWĀNA. (See Ibn al-Muẓaffar.)

ALĪ (Sidi 'Alī) b. IḤSĀN, who as a poet called himself *Karīm al-Ḥusaynī* (the simply *Karīm* or *Karīm*), was a Turkish admiral who distinguished himself as an explorer and oceanographer. Following the example of his grandfather and father who had both been administrators of the arsenal at Galata, he entered the navy and was present at the conquest of Cyprus (1422). After that we lose sight of him; we only know that he took part in the famous voyages on the Mediterranean of Kādir al-Dīn Paşa, Sinan Paşa and other captains, and that he boasted of knowing every corner of that sea. In 1548 he accompanied the Italian army (Garcia and Adhemar) on the expedition against Persia. He styled himself of the conviction of his abilities during the winter to take lessons of Aleppo from a philosopher and astronomer, and, at the latter's suggestion, undertook an amplified Turkish translation of the classical work which Mawṣilī 'Alī Paşa had written in Persian entitled, in 'Alī's translation, "On the Art of Astronomy" (*Uṣūl al-Fīkḥ al-Fī al-Fīkḥ*, p. 120; *Uṣūl al-Fīkḥ al-Fīkḥ*, p. 120). The sailor's literary fame was greatly enhanced by Sulaimān's third Persian campaign in 1553. Again he accompanied the Sultan and, as before, they spent the winter at Aleppo.

While the European wars of the Ottomans brought consolation to their western frontier, heretofore efforts were made by them to prepare the complete overthrow of the Persian Safavids by a series of campaigns on the Persian Gulf and on the coast of the Indian Ocean, but they all ended in bitter disappointment. After a fresh discovery of the Turkish admiral in the Indian ocean, Sulaimān commanded 'Alī at Aleppo to save the Turkish fleet which was anchored at Basra by conducting it to Egypt. But 'Alī was defeated by the Portuguese at Ormuz had been before him, and, with the wretched remainder of his fleet, which had never been numerous, he was forced about by repeated gales which lasted for months, and finally driven on the Indian coast, where, in his extremity, he was glad to mortgage his fleet to one of the sultans of that country. At Ahmednagar, the capital of Gondal, he finished, in 1554, his great compilation, *Tā' al-Ḥusaynī* (al-Mawṣiṭ), which,

ceeded in exciting to rebellion those slaves employed in the salt-petre mines, claiming to be of the house of the 'Abides and to have been called to their deliberative by vision and occult science. It was in this manner that he crossed the terrible negro insurrection which occupied the Caliph al-Mu'izz for nearly 15 years (355-270 = 869-883). During this time 1½ million Muslims, or, according to some reports, as many as 2½ million lost their lives. It is at all events certain that the slaves, who succeeded in surprising the rich-commercial cities of Oholla, Alimda, Hagra and Wash, plundering them and laying them waste, spared no man and butchered the entire population of the captured cities with the most horrible cruelties. Their leader sought to pollute this by making the principles of the Assassites [q. v.] his own. The extreme difficulty of putting these excesses to an end was due to the nature of the ground in which the insurrection took place. The swampy districts, divided up by many canals, by the lower Euphrates offered the rebels numerous hiding-places. They were difficult of access and which rendered a successful attack on the part of the troops sent out against them impossible, so that the latter were thus once sustained heavy losses and were obliged to retreat without having accomplished anything. It was not till al-Buhārī, the brother of the Caliph, took the management of the war into his own hands and proceeded systematically, shutting up the negroes to al-Buhārī, the fortress erected by them, that he succeeded, after a strenuous siege, in storming it and rendering their leader harmless. — That the latter was not an 'Abid is certain; but he was probably an Arab of the tribe of 'Abid al-Kala.

Biography: Tabari iii. 742 ff. (107); (ed. Paris) vii; Laug, in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xl. 607 ff. (1871); Noldeke, *Orientalische Studien* pp. 155-184. 'ALI b. MUHAMMAD al-ABDARI. [See al-ABDARI.] 'ALI b. MUHAMMAD al-KIRMANI, i. e. the 'Abdaron' (so called because his father was the successor of 'Ugh-ling [q. v.]) was a famous astronomer and geographer, who died in 879 (1474). He studied at Samarkand and afterwards went to Kerman, where he wrote a commentary on Najm al-Din al-Jami's *Tafhid al-kutub* for the Timuride Abd-Said Kirgiz. Later he returned to Samarkand, finished the astronomical tables named after 'Ugh-ling and went to Tihit to Gnu Han, the prince of the Ab-Kayrulu, who sent him on an embassy of peace to the Ottoman Sultan Muhammad II. The latter induced him to return to Constantinople after carrying out his mission and appointed him Professor at the Ayas Sophia. Here he wrote astronomical treatises both in Persian and in Arabic. For his Arabic works cf. Brockelmann, *Gesch. d. arab. Liter.* ii. 234; Wopke, in *Journ. asiat.* 5th series, etc. (1862), 120 ff. (1871); for his Persian productions Kiaz's catalogue of MSS. (p. 139), that of Burn (p. 304) and that of Rieu (ii. 456) and Paresch (Berlin: p. 351).

'ALI b. SALLU. [See SALLU.]

'ALI b. SIBAWI al-DIM was the author of a history of Gilan entitled *Tafhid al-Bihar* and comprising the years 850-920 (1475-1514). According to the introduction, the book would appear to have been written by Sultan Ahmed Khan, but 'Ali seems to be the real author. The work

has been edited by B. Dorn, *Musammantische Quellen zur Geschichte der ehrl. Kastrader der kaiserlichen Armee*, vol. II. Cf. the preface of this volume, pp. 15 ff. (1871).

'ALI b. VUWAI b. TAYYIB (477-531 = 1084-1141) was an Almoravid Sultan. He was one of the five sons of Vuwai b. Tayyib, the founder of the Almoravid empire and dynasty; he was born at Genta (Sijima) in 477 (1084) and was the son of a Christian female slave named Kuntz, one of Vuwai's wife, the Saracen Zaynab, who died in 464 (1071). It is noteworthy that this son — who seems to have been the eldest of Vuwai's children — was born when his father was already 77 (lunar) years of age if the chronicles are to be believed, and are unanimous in giving the date of the father's birth as 400 (1009).

Being chosen by Vuwai as his successor, 'Ali was proclaimed Sultan, first at Marrakech on the 12 Muharram 500 (September 3, 1106), the day of his father's death, and on the third of the same month he assumed the title of *Amir al-Muslimin*, which was borne by all the Almoravid Sultans, while that of *Amir al-Mu'minin* was left to the Almohade Caliphs, whose spiritual supremacy they recognized.

Once acknowledged to his capital, 'Ali sent messengers throughout the whole extent of the empire, to announce his accession to all the governors of cities and of provinces, Yabys b. Abd al-Jamal, the Governor of Fez and cousin of the new monarch, expected to pay homage; 'Ali marched against him, compelled him to submit and pardoned him; but he deprived him of his governorship. Following his father's political attitude, he continued the war in Spain against the Christians; it was more brilliant than expeditions in Africa and also more meritorious in the eyes of Muslims, and the new king did not think of extending his way further east than Bilgaya (Nougie).

In Africa the empire retained the limits which 'Ali b. Tayyib had fixed: it comprised the districts of the Tili included between the mouth of Nougie and the Atlantic Ocean; to the south-west it stretched as far as the Sudan; to the south it added the whole of Spain and the Balearic Islands.

Arab chroniclers are fond of representing 'Ali as abandoning the administration of his empire to the clergy and doing nothing without the advice of the *fukhah* who surrounded him.

None had access to the Palace of the Muslims, nor had any influence over him, save those who knew the science of jurisprudence, according to the Maliki school. So the treatises of this school were then in favour and served as guides to the resolution of all else, so much so that they began to neglect the study of the Koran and the Traditions; no human man of this period was entirely devoted to these two branches of study, and at that time any one who studied any branch of scholastic philosophy was treated as impious. The *fukhah* around the prince vilified this science, and declared that the first Muslims abhorred it, carefully avoiding everyone who had any taste thereof; it was, they said, a novelty introduced into religion, which often raised the faith of its disciples. These and similar discourses, raised in the mind of the prince a hatred of theology and of those who studied it, in such a manner that he sent out into the land strict prohibitions against

His study and efforts against the Jews should be found to possess any tincture whatever on this subject. When the works of M^r. Howard Johnson reached the West, the prince ordered them to be burned and threatened with pain of death and confiscation of property anyone who should be found to have any fragment of these books; the most severe commands were issued on this matter. M^r. Al-Wahidi at Mecca (1841), transd. Fagnan. *Histoire des Abyssins*, Algiers (1842), and *Armenie* (1843) 196-197.

The administration of cities and provinces was of two kinds: civil and military. The king was the supreme head, he was aided by a military government. For Spain, see *Spain, Her Administration & Government* to 228 of 1876.

The reign of Ali was in the whole turbulent; his li was troubled by the foundation of the Almohade community by **Abū Mahdī** Ibn Tūmāt (515 = 1121), who declared a Holy War against the Almohade (see **ALMŪHĪDĪ**), and by the great expedition to the modern Morocco by the founder of the Almohade dynasty, **ʿAlī al-Muʾīn**. The end of this campaign was the victory of the Almohades; it was marked by the capture of Marrakech, which happened in 543 (1146-1147), about 4 years after the death of Ali.

"All, who died a natural death, had appointed von Tschin to succeed him; & himself seem to have abandoned the usual exercise of administrative functions in 1533 (1536-1539), to devote himself to deeds of charity, being as a recluse, fasting and praying. If certain chroniclers are to be believed, [For bibliography, see ALMONDITE.]

'ALI b. ZAFIR AL-AZHI ABU 'I-HASAN BAKSI AL-DIM, Arabic historian and man of letters, was born in 607 (1212); for became his father's successor as Professor at the Madrasa al-Madaniya at Cairo, and later, as Wells, he entered the service of al-Malik al-Nasir Muhammad al-Kamil, who assigned to Mesopotamia from 698 year 697 (1299). His principal work is a history of the Mamluk dynasty *Kish al-daw al-mamluki*, in 4 volumes, of which only the last, dealing with the history of the Mamluks, Bahri, Turabi, Khayhita, Bahiti and 'Alidiya, until the year 692 (1293), is preserved (Kenchik, *Die Arab. Lit.*, v. 2, 2. Aufl. 1955) Rice, *Supplement*, 90, 961); the history of the Bahiti has been published by Furst in *Lehrbuch der Arab. Lit.* (Hann, 1823); that of the Turabi in *Zeitschr. f. Deutsch. Arch.*, *Geogr.* u. *Arch.* 439 ff. 1891; in Wattenafeld's *Sachthaller von Ägypten und Geschichte der Kulturen* we have been made of this work in the Egyptian Academy in addition he wrote an *al-shi-ba al-sha'ir* *al-sha'ir*, a collection of jokes, witty replies, improvisations, etc., in Cairo 1287 and 1316, in the margin of the *Shahid al-sha'ir*. The *Shahid al-sha'ir* *al-sha'ir*, written in 687 (1293), dedicated to Salih al-Dim, and dealing with poetic comparisons, forms a supplement to a (Ep. 18. *Shahid al-sha'ir*, *Lehrbuch*, *Arch.* u. *Geogr.*, 439).

'ALL' AZİZ GÜLBİLİR, Turkish novelist, a native of Çankırı, died in 1923 (1870-1879). He composed three *Şahkadeş* (Reveries), one of which was translated by Gibb in 1884, under the title *The Story of Feridun*. Cf. Gibb, *History of the Ottoman Empire*, 2, 17.

ALI BEY (al-Hallij) 'Ali Bey li. With-
nash Bey al-Akkah), pseudonym of the well-
known traveller Nedli y Lehtik. See *Sieuan*
Reise III, 373.

'ALI BEY, famous for his successful revolt against the Sultan's Power in 1825 (1273), was a Circassian by birth. According to his contemporary biographer Khatim, he was born in the year 1728 and named Yildiz by his father David, a priest of the Great Church. At the age of thirteen, i.e. in 1741, he is said to have fallen into the hands of brigands who sold him to a certain merchant named Ahmed. This man, after he said to have brought him to Egypt where he was transferred to Ibrahim Katkhuda who immediately had him circumcised and renamed 'Ali. 'Ali was then put under the care of a tutor whose duty it was to instruct the youth in reading, writing and the recitation of the Koran. As he was an apt pupil and showed signs of genius, Ibrahim at the end of eighteen months made him one of his ~~disciples~~ by the year 1750 he advanced from the humblest position to that of ~~scholar~~, enjoying the complete confidence of his master. In the same year, Ibrahim was obliged to accompany the ~~imperial~~ caravan as guide. Ali, who ~~went~~ with him on this journey, distinguished himself both as the way to Mecca and return home by repelling the attacks of marauding Arabs, thus winning for himself the nickname of 'Ali al-Fatih and a certain reputation of renown. Ibrahim thereupon took ~~deliberate~~ to have his favorite, whom he had granted his liberty some time before, advanced to the rank of bey al-Mulgan over the ~~entire~~ government of a province, ~~assigning~~ him twenty-four of whom Egypt was divided and who formed the divan or governing body under the Pasha at Cairo. This ~~after some years~~ ~~Ali~~ al-Fatih, was finally accomplished, but Ibrahim Katkhuda thus made an enemy of one of the Beys named Ibrahim whose party later in 1758 put him to death. The chronology of these events given by Khatim does not agree with that of al-Jahiz. According to this author, who is taken from Marzi and Volney, Ibrahim Katkhuda commenced the pilgrim caravan in 1751 (1273), in the year 1766 (1272) he dispatched another under 'Ali Bey and died a natural death in 1768 (1274). 'Ali only receiving a ~~small~~ ~~title~~

However this may be, the biographers agree that the period of "Ali's life following his master's death was a stormy one. Continually beset by a wicked gang in the petty squabbles of the hays, Ali did not fail to strengthen his power by purchasing numerous slaves and elevating them to high positions, as that finally in 1777 (1763) Amir al-Hajjaj Bey, the son of [redacted] former master, remonstrated that "Ali's good will and endurance

was necessary in order to retain his position, proposed that he should be made their leader, the *amīr al-balad* or mayor of Cairo, to which all agreed. 'Alī's first act after leading the *Andalūzī* *amir* was to elect his cousin Muḥammad al-Khaṣṣābī, likewise known as Abū Dhahab, to the rank of *bey* and to exile 'Aḍ al-Raḥmān and numerous others. Of these, Ṣāliḥ Bey, not content with his lot, gathered other exiles about him and established himself in Upper Egypt. Here he was attacked by *Al-Furqan* under Husayn Bey al-Kashlāwī and forced to retreat. Husayn had no sooner gained this victory than he was sent into exile. Instead of following the invitation, continued in the mandate of exile and going to Lower Egypt, he returned to Cairo. From this moment 'Alī and Husayn plotted to get rid of each other; the strife finally culminated in 'Alī being exiled to Syria in 1799 (1765-1766). For two months he stayed at Jerusalem. At the expiration of this time he journeyed to *Ḥama* where he became acquainted with the Shaikh 'Umar al-Zahrī who later went to become *amīr* ally. Thence 'Alī suddenly returned to Cairo where he forced the boys to exile him to al-Nawāḥ in Lower Egypt, whence later he was removed to Ayyūṭ. At this place he succeeded in mustering a large force of *eslāw* and *ḥana* *ḥawāra*, and with some difficulty won over Ṣāliḥ Bey, his former enemy, by promising him Upper Egypt if he was regained control of Egypt again. This he finally accomplished by defeating the forces of Husayn Bey Kashlāwī. On the 30th of Jumādā I 1181 (24th October 1767) he entered Cairo and was reinstated as *amīr al-balad*. The *amīr* leaders, especially Husayn Bey and *Ḥayḍ*, now levied forces as *ghazas*, whether they had had, and invaded Egypt in 1182 (1768). Their attempt was futile. For wounded by 'Alī's forces under Abū Dhahab, they were forced to ask for a truce and induced to believe that Abū Dhahab would act as intermediary for them. Upon their arrival at his house for a conference, they were annihilated. Ṣāliḥ Bey's assistance was rewarded in similar manner.

In the same time, the strained relations between Turkey and *Ḥama* had resulted in the declaration of war by the *amīr* *Ḥama*; and at the end of Rabi' al-Thawī (November 1768), a letter ordering the departure of troops arrived from Constantinople. While employed in the levying of these troops, 'Alī's enemies, among whom was the paṣṣa Muḥammad, wrote to Muḥammad that the levied *ḥana* were in reality for the Russians. 'Alī, informed of this and the fact that the sultan had demanded his head, assembled the boys of whom sixteen owed their position to him and proposed an open revolt. The *ḥana* immediately agreed and the paṣṣa was expelled. Thereupon an invitation to join was sent to Zahrī of 'Alī's. This the *amīr* accepted and rendered valuable aid in repelling the paṣṣa of Damascus whom the Sultan had dispatched against 'Alī. The Egyptian attack was first directed under the leadership of Abū Dhahab against Makkā and the neighbouring territory to the North. Makkā itself was captured in Rabi' I 1184 (July 1770) and 'Abū Dhahab made *ghazā* instead of *ḥana*, the brother of *amīr* Muḥammad, who had just died, to return for this. 'Abū Dhahab gave the title of "Sultan of Egypt and the two seas" in the following year (1185 = 1771), a much greater conquest, that

of Palestine and Syria, was undertaken by Abū Dhahab, an alliance being made with count Oudot the commander of the Russian troops. With remarkable celerity Abū Dhahab accomplished his task advancing as far as Damascus after capturing Jubbā and the coast north of Jubbā (Aleppo). 'Alī, alarmed at the success of his general, commanded him to carry his conquest as far as possible. Abū Dhahab, however, perceiving that his troops were tired of waging war and secretly harboring danger in becoming ruler of Egypt, called them to a conference and persuaded them to return home with him. Upon his unexpected reappearance, 'Alī endeavored to have him put out of the way. Abū Dhahab, well aware of the fate in store for him, fled to Upper Egypt where he collected an army. Against these *ḥana* 'Alī was dispatched; but, upon meeting the enemy, he desisted to them. A second expedition in Muharram 1186 (April 1772) met with overwhelming defeat. 'Alī was once more forced to flee to Syria. Here he remained for almost a year capturing Sidon and besieging Jubbā with his friend Zahrī and some Russian battalions. In 1187 (1773), led to believe that he would be welcomed back at Cairo, he mustered as many troops as possible, 6320 men in all, and set out for Egypt by way of Ḥama. On the 28th of Safar (24th of May; Lulaghā: 15th of April = 1800 of Muharram), near Salhiyya, Abū Dhahab met 'Alī's forces; victory for a short time favoured the latter, but the infantry deserting, the invading army was cut to pieces. 'Alī, wounded and crippled, was left on the field of battle. In this condition he was taken prisoner and transported to Makkā, where he either died of his wounds or was poisoned. A month or more later, the 15th of Safar 1187 (20th of May 1773; Lulaghā: 20th of April = 27th of Muharram) and was buried with his predecessors in the Kaṣṣā at Cairo.

ALĪ CELEBĪ. [See WAKĪ 'ALĪ.]

'ALĪ EFENDĪ. [See 'ALĪ.]

'ALĪ EKBER. [See 'ALĪ AKBAR.]

'ALĪ ILĀHĪ (also 'ALĪ ILĀHĪ, i. e.

'defier of 'Alī'), a sect of extreme Shi'ites (*ghulāt*), which is even now widely diffused in Persia, and whose name is due to the fact that they consider 'Alī an incarnation of God. This has caused them to be identified with the Nizārīs, but wrongly, according to Zuhakfeld and Dammān. They give themselves the appellation of Alī-

Hal). They do not frequent the mosques, nor recognise any ritual observances; they eat pork and drink wine. They do not permit polygamy. At their wedding festivities, they have round dances in which the women, who are unveiled, join hands with the men. Divorce is not allowed. In their cosmogony, the creation is the work of five emanations from the godhead, i. e. five powers. The *Philosophen*, the *Beniamin*, the *Isawid*, the *Kehbar*, the *Mut*. They have a kind of communion, called *Al-kawm*, which consists in sharing and eating in common sugar candy, a sheep, and an animal resembling an ox, in the case of the sheep, the service is named *farida*, and in that of the ox, *far-ahar*. The head of their religion bears the title of *pir*, he is represented by *shams* (shams) who conduct the ritual ceremonies, and by *shaykh*, who are charged with the task of distributing the portions of the communion. They are divided into eight sects: *Naqshbandi*, *Dawlati*, *Mut*, *Sahib-i-Nabavi*, *Khamshah*, *Yulghar*, *Shah-i-oyat*, *Kabirshah*. They claim that *Musa* (Musa), *Yusuf* (Yusuf), his sister *Hala* (Hala), and the *Sayid al-Haydar*, belonged to their religion. They possess books written in a Kurdish dialect, of which the principal one is said to be entitled *Al-kawm* (Al-kawm), or *Al-kawm* (Al-kawm). Their priests practice juggling, and sit on burning coals without suffering any harm. Their head quarters in Persia, are at *Kirmanshah*; they are also numerous in India. Cf. the art. *Naqshbandi* and *Yulghar* (1907). — The other *Shiites* give them the nickname of *Khurshah* (rock-dwellers), because they have the custom of sacrificing a cock at the end of the three day's fast which they observe.

ALI KHAN. [See **Wahid Ali Khan**.]

ALI KHAN *Aliyeddin* *Shahmardan* *Ala-ud-din* *Al-Khwarizmi* *Al-Shirazi*, author of biographical works and a book of travel, was born about 1053 (1642) at *Madina*. He was a descendant of *Shaykh al-Din* (q. v.). In 1083 (1672), he followed his father to *Madina*, whether the latter had been summoned in 1054 (1644) by *Shah Shams al-Din* *Ali* *Shah*, *Shahmardan* *Kutubshah*. When *Ali*'s father died in 1083 (1672), a year after his patron, *Ali* himself feared the displeasure of the *Shah* Sultan *Abu al-Fazl*, and was thrown into prison. He succeeded, however, in escaping to the court of *Amir al-Din*, who named him *Shah* and *Divan* at *Bukhara*. He died at *Shiraz* in 1104 (1693).

In 1074 (1663) he wrote a description of his journey from *Mecca* to *Mashhad*, entitled *Shams al-Ma'arif* *Shams al-Din* *Al-Khwarizmi*, *Pers. d. arab. lit. d. Shiraz*, *Sh. d. Shiraz* II. 6336. He is best known for his work on the poets of the 11th century of the *Muhammadan* era. His was written as a supplement to the *Shams* of

Al-Khwarizmi (died 1084 = 1673) q. v. in 1084 (1673), under the title *Shams al-Din* *Al-Khwarizmi* *Shams al-Din* (printed *Shams* 1324). As a supplement to the commentary on his *Shams*, he gives biographies of writers on literature. Lastly he wrote a work on the classes of the *Shams* literature.

Biography: *Shams al-Din* *Al-Khwarizmi* (1800) I. 363—365 (quoted by *Shams*, Supplement II. 690); *Wahidshah*, *Shams al-Din* *Al-Khwarizmi* *Shams al-Din* p. 389; *Shams*, *Shams al-Din* *Al-Khwarizmi* II. 421.

(*Shams al-Din*).

ALI MERDÂN is a name borne by three important personages:

1. Name given by the *Shiites* to *Ali*, abbreviated from *Shams al-Din*, "king of men".

2. A certain *Shams al-Din* *Ali* of *Lakhnawati*, whose historical title was *Shams al-Din*; account of the assassination of his benefactor *Muhammad*, son of *Shams al-Din*, he fled, and sought the protection of *Shams al-Din* *Ali*, the ruler of *Dehli*, whom he accompanied in *Chitragarh*. During the last retreat of his protector, he was taken prisoner by *Turks*, the palace of *Taj al-Din* *Yulghar*, and taken to *Kashgar*, whence he escaped. *Ali* then joined him with the rest of *Lakhnawati* (Shams); but at the death of his overlord, he declared himself to be independent, maintained most of the *Shams al-Din* empire, extended his rule in *India*, and conceived vast plans of conquest, but his cruelty brought about a conspiracy which ended his death at the close of a reign of about two years, 604-605 (1207-1208). These dates are uncertain.

3. A *Shams al-Din* *Ali* of *Lakhnawati*, Persian general in the service of *Shams al-Din*, who fought against the *Osmanians* (1136 = 1723), and commanded the Persian army at the battle of *Karaj* (13 *Rabi* I 1144 = 15 Sept. 1733), under *Tahmasp* *Shah* *Shah*, who retained him in his office. In 1164 (1750), he captured *Isfahan*, and, together with *Karim* *Shah* *Shah*, he established *Shams al-Din* *Shah* *Shah* (11); afterwards he quarrelled with *Karim*, was defeated by him on the banks of the *Karun*, established a puppet-king at *Isfahan* under the name of *Shams al-Din* *Shah*, and was assassinated by *Muhammad* *Shah* *Shah* (1165 = 1751).

Biography: *Shams al-Din* *Ali*, *Shams al-Din* *Ali* *Shams al-Din* I. 348; *Shams al-Din* *Ali* *Shams al-Din* p. 195; *Shams al-Din* *Ali* *Shams al-Din* p. 258; *Shams al-Din* *Ali* *Shams al-Din* pp. 376—380; *Shams al-Din* *Ali* *Shams al-Din*, *Shams al-Din* *Ali* *Shams al-Din*, see index; *Shams al-Din* *Ali* *Shams al-Din* *Shams al-Din* p. 209; *Shams al-Din* *Ali* *Shams al-Din* *Shams al-Din* III. 168 ff. 191; *Shams al-Din* *Ali* *Shams al-Din* *Shams al-Din* I. 7 ff. 191; *Shams al-Din* *Ali* *Shams al-Din* *Shams al-Din* *Shams al-Din* p. 7.

ALI PASHA is a name and title borne by numerous governors and generals of the *Osman* Empire. 1. *Ali* and general of *Murad I* *Shah* *Shah*, rejected the proposals of peace made by *Ali al-Din*, prince of *Karaman*, at the time of the advance of the *Osmanians* on *Konya*, was then ordered to invade *Bulgaria*; he captured *Tarnovo*, *Shumen* and *Nicopolis*, where the *Kral* *Shah* captured (1391 = 1390); chosen as *Shams al-Din* by *Shams al-Din*, he ordered the latter to indulge in his shameful debauches, while at the same time he introduced improvements in the administration;

be obtained from the Sultan, the opportunity of such employment, his policy, and caused a new embassy to be sent. He was charged with the execution of Theodore Palaeologus, brother of the Emperor Manuel, and sent to besiege Constantinople in order to compel the Emperor to appear before the Christian Sultan, his overlord; but he was won over by the bishop of John, the archbishop and successor of Isaac, whom he left in possession of the town (1299 = 1396). — 2. Emrah and battles of Roonia, received orders from Huzayn II. to invade Melchite, whose viceroy he attempted to seize at Kerman (891 = 1486); in the same year, after the defeat of the Ottoman troops fighting against the Egyptians in Cilicia, he was ordered to reinforce the Grand West. Dawud Paşa, and assist in the campaign; he took the field in 893 (1488), captured Ain Zuhra and other strongholds, lost the battle of Agha Çain against Osbez (8 Ramadân 894 = 16 August 1489) and was deprived of his command; in 897 (1492) he was expelled from Transylvania and defeated by Stephen of Thurgoy at the entrance of the Red Tiger Pass; in spite of these disasters, he succeeded Murad Paşa as Grand West, and later Murad Ahmed Paşa (909 = 1503), being a partisan of Ahmed, son of Huzayn, he wished to add his assistance to the throne, and to this end he defeated the troops of Salim I. Ak-Köyünk, at Agha Çain (1917 = 3 Aug. 1511). He took command of the army in Asia Minor and crushed the rebel Shah-kulu, commander of Hamat-kulu, and perished at the same time as the latter in the battle of Sürmeliçli (Çoruh) (1917 = August 1511). He was the first Grand West to die on the field of battle; an enlightened patron of learning, he employed six months in his palace school and poets, and acted generously towards them; he compiled an *amman* and an *amman*; the poet Mevlâ has immortalized him in an elegy and the Persian poets on whom he bestowed the title of *Hamamogha* (*waft* *amman*), dedicated to him his *ghazal*. — 3. Governor of Iuda (Hama), successor to Karam Paşa, marched to the help of Khayr Bey, who was being besieged in Saqqadiya by the Turkmens, and delivered him as the result of which he became the object of the Sultan Sulaimân's attention (959 = 1553); he afterwards captured Werswan (Wersban), the *amman* of Dargah, and other strong positions, but was unsuccessful at Eger (Kisias), in consequence of which he fell into disfavor. He was later reinstated at Iuda, beheaded Selçuk without reason (963 = 1558), was defeated near Balak, and shortly afterwards died of grief on that account. He was an *amman* and very able, but was a man of gross courage and of unusual military ability. — 4. Ali Paşa, nicknamed Sami (the lion because of his complexion, governor of Egypt), was the son of a lieutenant from Bursa, had been enrolled in the *amman* of the janissaries; he became their *amman* and governed Egypt for four years. He married Rukma Paşa as Grand West, arranged the treaty of Turgas with the Austrian emperor; he died in 1566; he died in 1565. He has become famous for his witty *ghazal*. — 5. Ali Paşa, born in Melchite (the *amman*) and *amman* the eldest son of Ahmed of Koy, was successively Saqqadiya, Bey of Hamat, *amman* of Venice and of Karam West married with the *amman* of Hamat and of Koy.

afterwards Kapadok-Bashi, and he succeeded Otman Mohammed as Grand Wazir; he had great influence over Sultan Mahmud II. and made himself conspicuous by his harsh treatment of the representatives of Christian sects; he ordered the Venetian interpreter Ruzai who demanded the revocation of a gelder, to be strangled (Feb. 1820); he extracted money from the Greek contractor Scutari, under the pretext, and from numerous Musulmans as the result of which he was able to offer his lord magnificent presents; he died of cholera on March 9, 1821. — G. A. Pascha, captured Damascus the man with confidence, a native of Linnah, occupied in succession various posts in the treasury and finally became first Hofmeister; afterwards in the quality of Wazir, he governed Egypt and Tripoli in Syria and finally was chosen a Grand Wazir by Sultan Ahmed III (16 Raghib 1102 = 15 March 1694) He carried on the campaign against Hungary, which proved unsuccessful. He managed that a council of the ministers should be held on four days every week, and changed the Egyptian customs which had previously been let on lease and burdened with a yearly rent, making a law free on a lifetime (Mukatafat). The nature of the janissaries, which began the beginning of the reign of Mustafa II cost him his life. After 22 years, his prodigality had ruined him the continuation of his property only produced a ridiculously small sum. — Y. Corlie Ali Pascha the son of a peasant (find name, Y. Pascha c. 1760) at a tender age came to Morocco from Cairo, took part in campaigns there, Toulouze, (publican) exhibited several times; Wazir, he was named chief officer of a house, Governor of Tripoli (Morocco), then came more military, was appointed to succeed Halidji Muhammad a Grand Wazir by Ahmed III. (in September 1768 = May 1766); the kidnapping at Acre, the Armenian Patriarch who was hostile to the Catholics, from China, by Russia, the French Ambassador, occasioned persecutions of the Catholic Armenians and the Jews of Galata, who were accused of complicity in the plot; *Ali Pascha attempted to reform the power of the Sheikh Al-Islam, and to reform the administration; he instituted the supervision of the expenses of the imperial harem, fixed the number of the defendants (condition released from military service in case of war); he built vessels, cut canals and canals, for which he established a special treasury at the arsenal; he built the mosque which stands before the Pasha's and repaired the monument of Mahkadi at Constantinople. He married one of the daughters of the deposed Sultan Mustafa II. As he wished for war with Russia, he promoted *Ismael XII of Sweden the candidate of the Khan of the Crimea in consequence of which he occurred upon the bank of Poltawa July 9, 1709; the diffidence created between Peter to the army of the king of Sweden at Bender to the company the Russian who entered *Ad Pascha from office (18 Rabi I 1422 = June 16, 1709) and transferred him as Governor of Kaffa; he died at Malgara in 1123 (1721). — S. Hakkimade (Arabic origin) Ali Pascha, son of Nuh Efendi, a Venetian cosmographer and physician to Mustafa II, born 13 Rabi II 1100 (June 2, 1689); Secretary under the Sultan Mahmud I., in the campaign against Persia, marched on Hamadan, defeated Shah Tahmasp III on the plain of Kar-
Jan 12 Rabi I 1144 = Sept. 15, 1711; captured

Vizier (15 Rabi' I = Nov. 15), and Thibis; was elected Grand Wazir when peace was concluded (15 Rabi' I = March 22, 1732). Improved the coinage, awarded himself the title of General of Constantinople (*Kapudan Paşa*), with the insignia of the two horse tails (*paşa*); built a large mosque at Constantinople; was dismissed from office, in spite of his wise consideration and successful administration, because he had expressed the wish that he himself might command the army sent out against Persia (22 Safar 1148 = July 24, 1735); was appointed Governor of Thibis; shut himself up in Trawak in order to check the Austrian generals who had invaded the province, ordered the inhabitants to be enrolled in militia; fought French Marshal Miltburghsen beneath the walls of Bechtuk, and relieved the town (August 6, 1737); induced the Albanian insurgents; ravaged the country between the Kupa and the Vusar; was re-instated as Grand Wazir to succeed al-Bakr al-Ahmed (1 Safar 1155 = April 7, 1742) and once more departed in the following year, when it became known that the Persians had marched on Baghdad and Hama; was elected Governor of Aleppo (1158 = 1745), and chosen to command, as Serasker, the troops sent out to Hama, against Khair al-Din; the peace which shortly followed rendered his cabinet useless, on the accession of 'Othman III, he was for the third time appointed Grand Wazir, while he was Governor of Katakia (4 Thuwadul I 1168 = Feb. 16, 1753), and dismissed from office fifty-three days later in consequence, as was alleged, of a terrible conflagration, but really on account of his quarrel with the favorite Sillidar of the Sultan; imprisoned in the tower of Leander (*Khalek*), then banished to Famagusta, and later sent to Egypt as Governor; he found this province in a state of absolute anarchy, and when he was recalled (1170 = 1757), he was permitted to settle down to his district of Asia Minor; he died in the first year of the reign of Mustafa III (1171 = 1758). He left behind him some mystical hymns (*Wahid*, 135 = 137. Hammer-Purgstall, *Dem. Dialect.* v. 177). — 9. Arslanli 'Alī Pasha, a native of Oghli, 8th lieutenant of the Imperial Silerup; was appointed to the post of Grand Wazir by Sulaiman II, after the death of Mustafa Khuruli at the battle of Simlaman (Aug. 19, 1691); punished Muhammadan Righli, the Agli of the Janissaries, by dismissing him from office, and ordering him to be driven home on a chariot drawn by oxen (whence the surname of 'Arshad given him by the people, — "coachman"); when he wished to use the same procedure with Ismail the Khizurgha, Negli, the latter's successor, obtained his discharge and his estate Rhodes (5 Rabi' I 1105 = March 23, 1693).

Biographical: 40 *Yusuf-nama*, *Hadikat al-Muhammadiyya* (Constantinople 1271, pp. 20, 33, 52, 62, 148, 151; 10 *Shah* pp. 15, 19, 22, 83; 200 *Shah* p. 39; Hammer-Purgstall, *Geogr. der Osmanen*, *Anstalt von Indica*, (Ct. H. 1840).

ALĪ PASHA DASHA, Turkish statesman and general born at the village of Selar, on the banks of Lake Nizwa, succeeded the Abuz Sulaiman al-Niliidar; became the favorite of Sultan Ahmed III, who gave him his daughter Fatma, then aged five years, in marriage (6 Rabi' I 1121 = May 26, 1709); succeeded in bringing about the dismissal from office of his enemy, 'Alī Pasha of Sarkis, and the ap-

pointment in his stead of the incapable Noman Kapulu, afterwards of Dalgadu Muhammad Pasha; the Kapulu-pasha, Ibrahim Khudja, who had been appointed Grand Wazir, plotted to assassinate him, but was detected and 'Alī Pasha succeeded him in the highest dignity of the Empire, 1 Rabi' II, 1125 = April 27, 1713). He concluded the Peace of Adrianople with the Russians, by which the frontier between the Samars and the Ors was fixed (Sept. 1713); he sent 'Abd al-Latif Pasha Mahwashid to Egypt, to put an end to the revolts of Kaitas-Beg; he commanded the Ottoman troops against the Venetians in the Morean Campaign (1127 = 1715), crushed the Slavates, and secured Modon; he re-established at Galata-Serai the school of the *le-oghlan*, maintained the established order of promotion in the college of the 'Ulama' and organized the postal service and administration of Anatolia. An alliance between Austria and Venice and a letter sent by Prince Eugene demanding the same fulfilment of the treaty of Carlowitz, decided him to declare war (1128 = 1716). He fell, struck by a bullet on the forehead, during the battle of Peterwardein, when the Turks were already completely routed (Aug. 22). His interment at Hagia Sophia; twenty years later, London conveyed the coffin to Vienna, where it remains to-day, in the *Museum des Kaiserlichen Hofes* (*Fundgruben des Orient* v. 331; *Vierteljahr, Kleinere Schriften* II. 509 et seq.). He was the patron of the historian Rishid.

(Ct. 11622.)

'ALĪ PASHA MURADAK, officer of the Egyptian engineer corps, statesman, and man of letters, was born in 1239 (1823-1824) at New Herakli (Nakadillya, Nile Delta). Though of humble origin and of the peasant class, his industry, ambition and ability enabled him to become a pupil of different schools. It was decisive for his later career that, in 1252 (1835-1836), he went to the school of Hagi al-Aini, afterwards (in 1252) to that of Abu Zakai at Cairo, and that in 1260 (1844) he was sent to Paris with the "Mission Egyptienne". In this city, and at the artillery-school at Metz, he perfected himself both as an officer, and in the status of an engineer, which had already been the object of his ambition in his native country. On his return to Egypt (in 1266 = 1849-50) he won the favor of 'Abbas, and gained high positions; in the Crimean War, he was actively engaged at Constantinople, in the Crimea, and at Gumushkhane; under Said he resigned, but under Ismail he occupied one after another almost all the ministerial posts, and other responsible offices. Everywhere he introduced reforms, although acting with well-meant real rather than deep understanding. To him is due the establishment of printing-offices, and the printing of school-books, especially technical ones, the work of the large *Ma'arif* (of *Ma'arif al-Masriyya*), and at the Conference of Suez, the construction of railways, and irrigation-works, the foundation of the "Lis al-Ulum", which may be described as an "École normale", and of the "Midiyeh Khediviale" (1870). In matters of education he was fortunate enough to obtain the advice and co-operation of that admirable Swiss

She'ah dagmaras — Yesterday afternoon we celebrated S. M. rain fell in answer to his prayer, and his intention in which previous day rain-ward was directed: he secured a good crop by sowing from a seed by sowing it with a piece of wood; he informed 'Abd Allah b. Mughira of a prayer which the latter had made at Mecca, he knew what passed in the hearts of men and gave many examples thereof, he knew beforehand the hour of men's deaths in midwinter he made the grass grow in a garden and the grapes ripen. The third hour of the day is devoted to him: his intercession is requested for a favourable journey by land or sea, and to order to be delivered from the sufferings of *mal' al-ayman* *al-ayman* (ibid. l. 14. XV).

ALI SHER, [See next p.]

'**AL-TEGIN**, a prince of Tirmidhians (his war' al-Nahr) of the house of the Ishkhanas. Nothing is known of the details of his genealogical relationships with the other princes of this house; according to Ibn al-Athir (ed. Voth, fr. 223), he was a brother of the ~~son~~ governor of Mā war' al-Nahr (Nagr l. 'Alī), yet this statement (which seems to have originated as a mere interpolation) must probably be rejected. The name 'Alī b. 'Alī is not mentioned on any coin of this period, on the other hand we find that of 'Alī b. Husayn, who might perhaps be identified with the 'Alī-Tegin of literary sources (cp. Howarth in *Journ. of the Asiatic Soc.* xxx. 485-486). We know just as little as to where and how he acquired his authority. Balhaf (ed. Morley, p. 418) represents the West Asian 'Ismā'il Mahmūd as saying in the year 423 (1032), that 'Alī-Tegin ~~was~~ born in Mā war' al-Nahr for thirty years. In 418 (1027) 'Alī-Tegin had to defend himself at the same time against Mahmūd of Ghazna and the powerful Kadir-Shāh of Kashghar; the sultan of the allied tribes took place not far from Samarkand; 'Alī-Tegin was forced to ~~leave~~ his capital Samarkand and to retreat ~~to~~ the steppe, during the pursuit his wife's daughter fell into the hands of the enemy (for details see Howarth, *Sources of Islam*, pp. Cambridge, King's College of 213, fol. 123-124, and see Oxford, Bodleian, Quaeley n° 249, fol. 153-154, quoted by W. Barthold, *Turkistan during the epoch of the Mongol invasion* (*Turkistan u. Japan nachrichtliche Nachrichten*) vol. 15-17). Mahmūd's union with Kadir-Shāh is briefly mentioned in Balhaf, ed. Morley, pp. 98 and 105. On the land was soon cleared of Mahmūd and his allies, so that 'Alī-Tegin was able to maintain his rule. In 423 (1032) the Khwarizmshāh Anūdshāh appeared before ~~the~~ Khair with an army, by order of the Sultan Mas'ūd, and captured the city; he was however mutually wounded in the battle of Dzhingya, as the result of which his West was compelled to conclude a treaty with 'Alī-Tegin, and to lead his army back to Ghazna (Balhaf pp. 424-425). 'Alī-Tegin's death must have taken place towards the end of 425 or the beginning of 426 (in Autumn 1034). When Mas'ūd received in Ghazna, 425 (beginning of October, 1034) a report from Ghazna, Alī-Tegin was mentioned

ALI TEPEDELENLI, born at Trpoda (Albania) in 1741, was a descendant of the old Deys of the land. His father having been deprived of his seat, Ali gathered together a number of brigands and succeeded in re-capturing Tepe-delen. To the Sultan's Porte he rendered the service of subduing the Pashas of Scutari (Shkodra) and Delvina; was confirmed in his office of Dey; became Pasha of Trieste in 1787; 1808 Janina in the following year and became Governor of it; in 1797 he had it fortified by French engineers; the English ceded Targui to him in 1817. He ruled in Albania, Epirus and part of Thessaly, and declared himself independent in 1824 (1819), when he was summoned to Constantinople to justify his conduct. In order to defend himself, he enlisted Greek volunteers and English Brigands, in the Morea, in Livadia and in Ionida, as well as Servians and Wallachians. His sons, Ahmed, Ismail, Wali and Hafiz, who were in command at Berat, Prizren, and Lepanto (Gino-bakhet) respectively, were either defeated, or abandoned him, in successive Overpowered himself near Janina by Pehlivan and Ismail Pasha (see Ulum-bekia, 1835 = Aug. 31, 1820), he shut himself up in the citadel, with 800 men and 200 pieces of cannon; held out for several months, so bravely that Khurshid Pasha, discouraged, retired to Arta and did not succeed in regaining his advantage till the year following (1837 = 1821). Hemmed in at close quarters in a tower of the castle on the lake, 'Ali Pasha surrendered on condition of a safe-conduct; but the Sultan Mahmud having ordered his death, he died defending himself against the execution men to arrest him (13 Rumi 1, 1837 = Feb. 5 1821). Avaricious, cruel and uncharitable, but of remarkable energy, he lent powerful aid to Greek independence by calling the insurgents of Greece to his assistance.

ALL WABI. [See Wabi² 414n.]

ALIDAD(E) (See AL-FIDKUA.)

ALIDS (descendants of) Abi Tath, who had fourteen sons and at least seventeen daughters, namely: 1. by Farhan, daughter of the Prophet, his only lawful wife while she lived. al-Hasan, al-Husain, Muhammad (Imam among the

Rasid, who died in 240 (900), of the branch of Zaid b. Ali b. al-Rasid, at Sa'da in Yemen, until 686 (1228); 6. *ḥadīth* of Tabaristan, from 250 to 310 (864—928); 7. *Zaidiyya* of Ḥamīr, descendants of Ḥamir v. al-Muḥammad.

AL-ḤANẒAL (ḥanzal): 1. *Ḥanẓal* al-Muḥ at Mecca and al-Medina, from 350 to 453 (961—1061); 2. *Ḥanẓal* al-Muḥ at Conlara and Meḥalga, from 407 to 440 (1016—1057).

ALIF is the name of the first letter of the Arabic alphabet, with the unvoiced voice *ʾ*. Being ignorant of the origin of this name, the Arabs have invented a curious etymology (*Ḥadīth* no. 310, 1: *ḥawḥanīqat al-ḥafāʾ al-ḥawḥanīqat al-ḥafāʾ al-ḥawḥanīqat al-ḥafāʾ*, i. e. because it can be associated with any of the other consonants). According to the character of the Semitic alphabet, which can only include consonantal sounds, we understand by it solely the voiceless laryngeal explosive, which, according to tradition, was pronounced with an especially strong intonation by the Tamimites, almost like *ʾāḥ* (c. g. *ʾāḥ* instead of *ʾa*) — hence the designation *ʾāḥana* for this dialectal peculiarity, Arab philologists, however, not in *alif*, which as matter of course it denotes the prolongation of the sound *ʾ*, a sign to be distinguished from the consonantal *alif*, and go so far in their error as to analogize it in this case another place of articulation. This latter, which cannot be combined with a vowel of its own, is named by them *ʾalif al-ḥifāʾ* or *ʾal-ḥifāʾ*, while on the other hand they call the true consonantal *alif* *ʾalif al-ḥifāʾ* or *ʾal-ḥifāʾ*. As, however, in this last character the *alif* is always written with the sign *ḥamza* (), they also give it the appellation of *ʾalif al-ḥamza* or *ḥamza ḥamza*. This distinction between *alif* and *ḥamza* which they what they lay down and strictly to the linguistics is untenable; in practice they themselves frequently use *alif* in the wider sense to denote the consonantal sound. The *alif* of the article, of the verbal forms 7—10, and of a few nouns (c. g. *ʾimraʾ*, *imraʾ*) is only a phonetic *alif*, which is not pronounced in continuous speech (al-Zamakhshari, *al-Mufaḥḥisat* p. 169, 1. 11; 167, 1), distinguished three kinds of *alif*: 1. The transformation of the *alif* into *waw* or *yā* (*ḥadīth* al-ḥamza), 2. the approximation to either of these two letters in the pronunciation (*ḥadīth* al-ḥamza *ḥamza* *ḥamza*) and 3. the complete elimination (*ḥadīth*). Doubling or assimilation of *alif* consonantal *alif* can only take place in cases like *ʾalif al-ḥifāʾ* (*al-Mufaḥḥisat* p. 192, 1. 1); with regard to the *alif* of prolongation, this is of itself inconceivable.

On account of its manifold application in Arabic, the Arabs have introduced names (*ḥadīth* al-ḥifāʾ) for the different functions of *alif*. The *alif* *al-ḥifāʾ* or *ʾalif al-ḥifāʾ* (the "dialectal" *alif*), occurring at the end of some verbal forms (c. g. *ʾimraʾ*, *imraʾ*, *imraʾ*) has only orthographical significance; *ʾalif al-ḥifāʾ* (the affixed *alif*) has a consonant etymological force in the case of

monosyllabic and feminine nouns, and is either *ʾalif al-ḥifāʾ* (liable to abbreviation) as in *ḥifāʾ*, *ḥifāʾ*, or *ʾalif al-ḥifāʾ* (liable always to be in *ḥifāʾ*, *ḥifāʾ*; c. g. *ʾalif al-ḥifāʾ* can be used either as *ʾalif al-ḥifāʾ* or *ʾalif al-ḥifāʾ* (the *alif* which influences meaning) to form the *ʾ* prefix, for — in addition mention must be made of the interrogative *alif* (*ḥadīth* *ḥifāʾ*), the *alif* of the negative *ʾalif al-ḥifāʾ*, the *alif* expressing a negation (*ḥadīth* *ḥifāʾ*), further that which forms the plural (*ḥadīth* *ḥifāʾ*; c. g. in *ḥifāʾ* and *ḥifāʾ* which forms the dual (*ḥadīth* *ḥifāʾ*). In all Arabic lexicons at the beginning of the articles *ḥamza* and *ḥifāʾ* *ḥifāʾ*, these and other cases are specified, and the same grammatical term *alif* is as an auxiliary and supplementary letter (*ḥadīth* *alif* *ḥifāʾ*) in special paragraphs (c. g. *al-Mufaḥḥisat* p. 170, 1. 1).

Alifography: *Ḥadīth* al-ḥifāʾ p. 311—312; *Ḥadīth* al-ḥifāʾ p. 111—112; G. Weil, *Die Entwicklung der Hamzafälle* (*Zeitschr. f. Arabische Wiss.* 1. 1873); *Ḥadīth* al-ḥifāʾ p. 43—47; *Ḥadīth* al-ḥifāʾ p. 1—18.

ALIGARH is the capital of the district in British India. It has the same name, *Aligarh* (Almā) in the "United Provinces". The district (1926 sq. miles, or 5924.5 sq. km.; had 1 200 823 inhabitants in 1901, and the town 20 424 (of whom 27 515 were Muhammadans). The town was originally called *Almā* (Almā), while the citadel, which was erected in 1524, was named *Aligarh* ("high fortress") after its restoration in 1776 by Nadir Khan. Before this the fortress was called *Kanpur*, and occasionally one also comes across the name *Sabirgarh*, after a certain *Sabir Khan*, and *Muhammadgarh*. The modern Aligarh is principally noted for the Anglo-Oriental College. This was founded in 1825 by Saiyid Ahmed Khan (q. v.); although it was not until January 1877 that the Viceroy, Lord Lytton, laid the foundation-stone of the present college. The erection was considerably enlarged later by the foundation of a hospital and of the so-called "English House". During the lifetime of Saiyid Ahmed Khan (i. e. until 1828), the management of the affairs of the College, especially the finances, were in his hands, and earned him considerable anxiety. He had, however, the good fortune to procure in 1828 an excellent principal for the College, who during his term of office (1828—1899) was able to surmount all difficulties, and raised the establishment to a flourishing condition. The loyal worthy endeavours of Th. Munro (1809—1892) and W. A. J. Archbold, who at present holds the position. Although the original intention of the founder aimed at introducing *Western* education, the school soon developed into a College on English lines, which the Government now striving to convert into a Muhammadan University. In 1891 the number of students was 3101 (the year later it increased to 500, and at the present time reached to upwards of 800. Instruction is given in the following subjects: English, Arabic, Persian, Sanskrit, History, Mathematics etc. Eight teachers of European origin, and a certain number of Indian graduates, are engaged in the work; the appointment of Dr. J. Horowitz

to the Chair of Arabic arose from the efforts which are being made to furnish the students with European standards of research in this branch also. The management of the College lies in the hands of a number of Mahomedan trustees, and is independent of the British Government, although the latter promotes the enterprise in different ways.

History: Coll. which was certainly of ancient foundation, was captured towards the end of the 12th century by Khat al-Mu'ayyid [q. v.]. After this it is often mentioned in the history of the Mahomedans of India and has been described by many Muslim authors, as for example by the famous traveller Ibn Battuta (cp. the Paris edition of his *Travels*, iv. 6), who visited it in 1342 A.D. In 1783, the town fell into the hands of the Mahomedan chiefs of the Sindhis family, who with the help of the Frenchman de Baigne, settled their troops in European fashion, but were finally compelled to yield the town to the English under Lord Lake (1803).

ALIMA, pl. of *Ilah* [q. v.].

ALILAT, according to a much discussed but very doubtful passage in Herodotus, is the name of an Arabian goddess. In stories of Arabia in which she is mentioned, known as *Opal* by the Arabs, and *Urania* (i.e. Aphrodite Urania), whom they name "Alila". On the other hand he says (i. ch. 131), that Aphrodite Urania is called Mylitta by the Assyrians, and "Alila" by the Arabs. Hence the question arises, which form is the correct one. Herodotus proposes to change Alila to Alila; but it is just as probable that in this second passage the name Mylitta which precedes may be responsible for the corruption of the authentic Alila. Proceeding from Alila, the form can be explained either as *alila* (i.e. form of *il*), cp. *il* of the Phoenicians and the South Arabians; or as a contraction of *al-Ilah* (i.e. form of *il*). According to the latter explanation, whose upholders have in part proposed to read "Alila" for Alila, the name would be identical with *al-Ilah* [q. v.]. Glasser and Hommel compare the Egyptian "Weret" with Alila.

ALIM (a), wise, learned (cp. *alim*); *al-'Alim* is an epithet of God.

ALIM (a), knowing, acquainted with (cp. *alim*, *allam*, *allama*); the form *alima* (pl. *allima*) — in Egypt *alima*, whence the French *clair* — has also the meaning "female singer, or dancer" (cp. Lane, *Modern Egyptians* (London 1862) i. 245; ii. 72).

ALINDJAK is a fortress in the district of Nakhilwan (Kashgharia).

ALISA (ALISA) (ALISA) is mentioned twice in the Koran (ii. 255, xxi. 84), both times after Isma'il (Isma'il). Isma'il (Isma'il) says that Isma'il and Isma'il read Alisa, and he remarks that in order reading in the syllable is the definite article. Although in 1 King, xxi. 26, 29 — and that Isma'il was the son of Shaphat, the Muslim commentators on the Koran and chroniclers call Isma'il's father Isma'il. Khondemir makes him a descendant of Ephraim son of Joseph. His first meeting with Isma'il (Isma'il) is related as follows. Isma'il once came into the house of a poor old Israelite widow, whose deceased husband was called Isma'il and who had a young paralytic son named Isma'il. Isma'il cured Isma'il through his prayer, and since then Alisa accompanied him in all his travels. This has evidently been adapted from 1 Kings xxi. 26, although in xxi. 26 it is said that Isma'il when he first met Isma'il had both his parents living. Certain authors identify Alisa with the prophet generally designated as *Isma'il al-Isma'il* ("the son of the old woman"), but Talmud (i. 535) applies this appellation to Isma'il (Isma'il). Alisa was the successor (cp. *Isma'il*) of Isma'il in prophecy; he was also in charge of the Ark of the Covenant, which according to Muslim writers was handed over from one prophet to the other. After having preached to the Israelites the unity of God, Alisa prayed to God to take him away from this world and place him near Isma'il. His first wish was granted, he died leaving Isma'il 'Isma'il as his successor. — The Muslim authors assign Alisa a much earlier epoch than that in which the Biblical narrative places him, i.e. long before King David (i. 359) even says that it was Alisa whom the witch of Endor made to rise from the grave for King Saul (see 1 Samuel xxi. 2 of *Isma'il* that there is much confusion as to his identity; both Talmud and Isma'il quote the opinion of certain authorities who identify Alisa with al-Isma'il, while Khondemir quotes the opinion of one who identifies him with Isma'il 'Isma'il.

ALIZARI (ALIZARI) (ALIZARI) (ALIZARI); according to M. Dole, *Historique des mots d'origine arabe* from the Arabic *al-Isma'il* (i.e. *al-Isma'il* passed-out Isma'il) denotes the portion of the foot of the mountain which is under the earth, from which alisa is formerly obtained; cf. H. Ballew, *Dictionnaire de l'Isma'il* i. 110. (J. HALL.)

ALJAMIA and **ALJAMIA** are the Spanish designations for "Spanish", written in Arabic characters. The word is derived from the Arabic *al-jamia*, which primarily denotes any foreign, non-Arabic language; so in the East, especially Persia, in Syria and the whole of North Africa, the "Jama' al-Jamia", which contains chiefly of Romance and some Arabic elements; in the Iberian peninsula, the native, Romance dialects (in

ALLAH, the Supreme Being of the Mohammedans:

I. *Before Islam*. That the Arabs, before the time of Muhammad, accepted and worshipped, after a fashion, a supreme god called Allah, — "Ibo Allā", or the god; if the form is of genuine Arabic origin; if of Aramaic, from *Allāh*, "the god" — seems absolutely certain. Whether he was an abstraction or a development from some individual god, such as Hubal, need not here be considered. For the archaeological and non-Arabic evidence are well known. *Revue archéologique*, *Revue des études orientales*, 2^e éd., pp. 117 et seq., and especially Nöldke's article on Arabs (ancient) in *Hausling's Dictionary of Religion*, *Revue des études orientales*, I. 682. Here it will suffice to give the evidence of the Koran. There, the Meccans admit that Allah is creator and supreme provider (xlii. 17; xxix. 61, 63; xxi. 24; xxix. 39; xlii. 8, 87; it is surely a strain on xli. 18 and xxix. 63 to make them prove that Allah was a rain-god; they call upon him in times of special need (x. 23; xvi. 55; xli. 65; xxix. 31, but these passages hang together and hardly have independent weight); they recognize him by various names and especially by him (vi. 109; xvi. 40; xxix. 40); they assign him a separate portion, distinct from that of all other deities (vi. 135); they state that he had never forbidden them to worship other gods with him (vi. 149; xxix. 168). But they also recognized and tended to worship more recently and directly other various subordinate gods. Here it is not always easy to distinguish between their views and the interpretation of their views adopted by Muhammad, especially between their terminology and that of Muhammad. It is certain that they regarded particular deities (mentioned in lii. 19-20 are al-Lāt, Manāt, or Manāt al-Lāt (2); some have interpreted vi. 179 as a reference to a perversion of Allah to Allat) as daughters of Allah (vi. 100; xvi. 54; xxix. 149; lii. 21); they also asserted that he had sons (vi. 100). But whether the Meccans used of these the term *al-awlad* we cannot tell; perhaps less probable is that they spoke of them as *natat*. On all ordinary occasions they worshipped these rather than Allah; their offerings were made by preference to them, and Allah was deferred (vi. 137 et seq.); at least these would interfere with Allah (lii. 26); yet the Meccans were uncertain as to whether these were creators (xlii. 17 et seq.) and in all emergencies they came back to Allah; as to him there was no doubt. Certain also is that they asserted a "kinship" (*qarab*) between Allah and the *Ilāh* (xxviii. 158; comp. for Koranic use of the word *qarab*, 56, xlii. 103), made them partners of Allah (vi. 100); made offerings to them (vi. 128); sought aid of them (xlii. 6). Whether they had the idea of angels and named their "partnership" is not so certain; that may be Muhammad's interpretation (vi. 100; lii. 26). As for Muhammad, his attitude in these matters is also clear. Besides Allah, there existed angels and Jinn with Satan and the Satans in some relationship to the two latter. These, in reality, are the beings on whom the Meccans call; but they can do nothing for them (xvii. 36), making them feminine and giving them names is unwarranted invention. It will be seen, then,

that whatever may have been the earlier case in Mecca and whatever the case in the rest of Arabia, and whatever may have been the origin of the *qarab* applied, the religion of Mecca in Muhammad's time was far from simple idolatry. It resembled more a form of the Christian faith in which saints and angels have come to stand between the worshippers and God. And Muhammad naturally regarded himself as a reformer who was preaching an earlier and simpler faith and putting angels and Jinn back to their true places.

II. *Muhammad's Doctrine of Allah*. His attitude is stated simply in the first article of the essential Muslim creed: *La ilāh illa Allāh*, "There is no god save Allah." This meant for Muhammad that the Meccans, that of all the gods whom they worshipped, Allah was the only real deity. It took no account of the status of God in the abstract, only of the personal position of Allah, "Allah". Therefore, and as the proper name of God among Mohammedans, it corresponds to Yahweh among the Hebrews and to Ahimsa. No plural can be formed from it. To express "gods", the Muslim must fall back upon the plural of *ilāh*, the common noun from which Allah is probably derived; this Muhammad frequently when speaking of the "other gods" (e.g., *al-awlad* vi. 19) which the Meccans joined to Allah, and Islam has followed him, with, however, a preference to use instead the noun *al-awlad* *qarab* or *awlad*, "idols". Comp. article *Allat* in *Hausling's Dictionary of Religion* and *Islam*.

But, though the name was the same for the Meccans and for Muhammad, their conceptions of the nature of the bearer of the name must have differed widely. The Meccans, evidently, had in general no fear of him; the fear of Allah was an essential element in Muhammad's creed. Allah lay in very shadowy remoteness from Meccan life, he was very far from Muhammad at every moment — *farther* than the unknown (i. 15). The Meccans did not hesitate to disregard him and to cultivate the minor gods; Muhammad knew him as a jealous and vindictive sovereign, who would assuredly judge and condemn in the end. A vague abstraction had become an overwhelming personality.

We must now analyze that personality, as Muhammad conceived it. Fortunately, the exigencies of the *suḥr* chapter led him to characterize Allah by a number of epithets, and later Islam, in gathering up these "Most Beautiful Names" (*al-asmā al-ḥusnā*) — the phrase itself occurs several times in the Koran (vi. 179; xlii. 110; xx. 7; li. 34) and shows Muhammad's own relish for such descriptions — and using them devoutly, has followed a sound instinct. They express the concrete direction of Muhammad's God far better than the lists of qualities (*ḥuṣn*) of the scholastic dogmatists, and may be used safely as an aid in correlating and stating Muhammad's too often episodic and contradictory utterances. Comp. on them the article by Röllig in *Journal of the Soc. of Sci.*, 1880, vii. 1-69.

First, Allah in and by himself. The descriptions are at first sight a strange combination of anthropomorphics and metaphysics. Yet when Muhammad speaks of Allah's two hands (v. 64; xlviii. 75) or of his grasp (xxix. 63) or of

express in the Correspondence Rabbinic, according to the degree of animosity which is ascribed to *Abraham*. These are the most frequent of the epithets and stand at the head of all the names but one. Also *Abraham* was at one time used by Muhammad as a proper name equivalent to Allah, and the Moslems regarded this as one of his numerous names. Compare the story of the serafim of Qumran where they rejected the friendly overtures of Allah and insisted on the old Hebrew form "In thy name, O Allah!" (Kaddish, on Koran xviii. 26; Ibn Hisham, 23 Waddan, 747).

That Muhammad derived the formula from South Arabia seems proved by a paper by Streckmann and Müller in *Wiener Zeitschr. f. d. Kunde d. Morgenl.* x. 285 of 1891. But it was no more than a name. Allah's standing naked, defenceless and helpless in God's presence was one of Muhammad's most dominant ideas, and is expressed in these Names more frequently than any other. From the root *waḥḥ* "to forgive" comes a triad of three: the Forgiver (*al-ghafūr*, ii. 154; xl. 2 only), the Much Forgiver (*al-ghafūr*, often), the Forgiver par excellence (*al-ghafūr*, ii. 84 etc.). He is also the Pardoner (*al-ḥamīd*, iv. 41 etc.), the Clement (*al-ḥamīd*, often), the Repentant (*al-ḥamīd*, ii. 35 etc.; used also of man), the Gracious (*al-ḥamīd*, xvi. 27 etc.; used also of man), of man, and explained by commentators as meaning in the case of Allah "the acknowledgment of thanksgiving"; the Very Patient (*al-ḥamīd*, not as proper to the Koran, but used frequently). Two more intimate Names of the same class are the Kind (*al-ḥamīd*, ii. 178 etc.) and the Loving (*al-ḥamīd*, ii. 178; xxix. 12 only). But he is also the Watcher (*al-ḥamīd*, ii. 178), the Knowledgeable (*al-ḥamīd*, iv. 38; xxiii. 39 only), the Wise (*al-ḥamīd*, often). Again, as man's behalf, he is the Faithful (*al-ḥamīd*, of man it means "the believing"), the Protector (*al-ḥamīd*, ii. 33 only), the Guide (*al-ḥamīd*, often), the Guardian (*al-ḥamīd*, often), the Power (*al-ḥamīd*, often). The last word is used of man also, and is the basis of the doctrine of *imān* in Islam. It means, literally, one who is *ḥamīd* a comrade or companion, and thus can be either the aiding patron or the dependent client. That there is a special class of the latter, the *ḥamīd* or *ḥamīd*, the proof lies in Koran x. 63: "Not the walls of Allah, there is no fear upon them, and they sorrow not". Naturally, then, he is the *ḥamīd* (*al-ḥamīd*, not as epithet in Koran; but comp. ii. 96), and the final Offices (*al-ḥamīd*, xxv. 25, and in other forms) who judges and distinguishes and divides between men — used also to indicate the "opener" of gain and victory. And as all things are to his hands, as all comes from him, he is the Great (*al-ḥamīd*, iii. 6 etc.), the Provider (*al-ḥamīd*, ii. 35 only as epithet; but the idea of the dependence of all creation upon him from Allah is very frequent), the Answerer of prayer (*al-ḥamīd*, xl. 64 only; but the conception of prayer and petition is frequent); the Great (*al-ḥamīd*) and the Sublime (*al-ḥamīd*), when later the words of the Prophet do not occur as epithet in the Koran, but their ideas are fundamental. Comp. e.g. ii. 33 and ii. 129.

Man's relation to Allah, then, is that of dependence. He needs Allah's forgiveness and patience. Allah is a watcher and examiner over him; but he is also a faithful protector and guide. From

him comes all "sustenance" in the widest sense. He does everything directly — hence there is nothing — and, logically, no angels or intermediaries are needed on the scheme. They must be so, because Muhammad found them to be the fundamental religion of his time and had to accept them. And all in his life will. The leading saying about the will, and guidance which whom he will" (xvi. 27; xvi. 95; lxxv. 34). Each one, as he knows, that Allah will guide him right, commit himself to Allah in absolute fear, and trust that Allah will not cause him to forget and he of the losses in the Plea (ii. 19, 20). As Muhammad had no reason for Muhammad. He, evidently, never thought about intermediaries and, as such, whatever they might have put into his mouth, he expressed each side as he saw it at the moment, and as the need of the moment struck. So Allah is kind, loving, patient, and above all, and above all, and above all, he says: "I created and the (human and animal) are that they should worship me. I seek not from them any sustenance, and I seek not that they should feed me". Allah is the Sustainer, the of strength, the Firm (ii. 36-38). Again he is the Haughty (*al-ḥamīd*), the Tyrant (*al-ḥamīd*); if he will, he also distresses (ii. 36). Again "Whom Allah guides right, he allows himself to be guided right, and whom he leads astray, they are the losers" (xvi. 127). And so frequently Allah is said to lead astray (xvi. 127). And whenever the root *ḥamīd* occurs (ii. 154; vi. 98, 99; ii. 178; x. 23; xvi. 110; xvi. 59; xl. 27; xlviii. 28; lxxv. 34) it expresses the fundamental fact that Allah "leads" the basis of the unbelievers that they may not believe. These aspects of Allah may not be contradictory; their separate statements show and the emphasis upon the last were laid as meaning for the future theological development.

Muhammad's position, then, was that in the highest degree, and his theology was theocratic. Yet it might rather be said that he was *monotheistic*, that he had a theology. Certain ideas and phrases dominated him, and he neither thought nor cared whether they might lead him to Allah was for him the Reality (*al-ḥamīd*); but he never asked what that meant. He would have said, without hesitation, that there was when there was nothing but Allah. Whether he would have gone on to say that there would be when there would be nothing but Allah — did some later sect — is uncertain. If put in a rhetorical form, he would probably have expressed it as an exulting of Allah over his enemies. In fact, he pushed in certain phrases the *ḥamīd* exulting of Allah so far that the later, pantheistic development is simply continued and explained. This *ḥamīd* especially in connection with the phrase "the Face of Allah", a phrase of unknown origin, but which for some reason seems to have impressed him deeply. The word "face" (*ḥamīd*) in the Koran is used frequently with the meaning "well" (*ḥamīd*, *ḥamīd*) in comparison with men (e.g. ii. 104; iii. 18; ii. 143; ii. 79; x. 105; xvi. 29, 30; xvi. 32; xxix. 25; perhaps the origin of the idiom), but when used of Allah, more colour and strength of the original metaphor seems to remain, though the ultimate meaning is undoubtedly "well". Thus, men are not out of their minds (Face of Allah) (ii. 27; iii. 23; vi. 20); they "desire" or "seek" for (Face of Allah) the Face of Allah" (xl.

53; will. 27, etc. 37, 58); they "act for the sake of the Face of Allah" (Ixxv. 9). Then come the great words: "Allah" are the East and the West; wherever ye turn, there is the Face of Allah" (ii. 129); "Everything goes in destruction (Allah) except his Face" (xxvii. 88); "Whoever is upon it [the earth] is flowing (Feni), and the Face of the Lord abides, He of Majesty and Generosity" (lv. 26). In each case "Allah Himself" could be substituted with no essential loss; but Muhammad, undoubtedly, felt the picturesqueness of the phrase, and later Sufis built thereon the theories. With the commentators, the explanation is that all things ~~except~~ Allah are only "penal- ties of existence" (*qasb*), while he is "necessary of existence" (*wajib al-wujud*); they say, therefore, he described according to their common- sense definition as "non-existent" (*la-shay*); &c. because they may go in destruction, they are going in destruction. It is ~~not~~ doubted whether such a distinction, or, in fact, any clear thought was in Muhammad's mind.

The last, then, this problem for the future Islam. It had to reconcile the intense personality and clear separateness of Allah from the world with a direct working in the world, which amounts to immanence. The problem was further complicated by diverse phrases which suggested the essential non-existence of everything except Allah. It may be said here, in short, that the scholars theologians followed the idea of personality, and separated Allah from his creation to a point where it was hard for them to explain how he could affect the world; to doing this they developed the doctrine of *qasb* (removal) and *wasfah* (distinction), i. e. removal of Allah of all qualities of impermanence, and assertion of the essential difference of his qualities with the essentially limited qualities of human beings. The history of the development of Islam, on the other hand, is that of a gradual working of the world in Allah, until it could be asserted that Allah was All. The Aristotelian-Neoplatonic philosophers followed a third line. Working essentially in accordance of the exigencies of the Koran, but seeking, for protection of faith, to adapt themselves to its statements, they touched the other pantheistic position that All is Allah. Aristotelian World, Allah. It was the life work of al-Hanbal; to mediate, and to show a position which orthodox Islam ~~was~~ not yet prepared.

It should now be in place to take up the position of Muhammad as developed in the traditions, that is attempt to find in the traditions that can be assigned to him with history. Certainly it is perfectly hopeless. A large element, it is quite plain, cannot be due to him; and what nucleus really came from his lips we probably never shall know. Chistlicher has taught us that the traditions are really a record of the first centuries of dogmatic Islam, that therein is their true historical value, that that record is confused, mutilated, indirect, misleading, that it can be used only to illustrate and supplement other more direct sources. Any consideration, therefore, of the traditions, either with reference to the views of Muhammad or to those of the early Muslim Church, must now be brief. Even where the traditions have points of similarity with the Koran, these are deceptive. Thus, in the Koran Muhammad develops quite entirely two

separate views of Allah's working—one strictly predestinarian and the other leaving scope for free-will. This was due to a confusion in his own mind. But the Muslim phenomenon in the traditions had a different origin. There it was due to the contradictory traditions having originated in opposing schools, who freely lapped and lathered them on the teacher in support, each, of their own views. There are traditions which state very clearly that Muhammad objected to all such discussions, when there are others, in which he came on the subject at length. But the two of these are equally acceptable with the second, they are probably due to that party which objected to being in the line of reason (*al-hikm*) in theology, and comforted itself with repeating the formulae which tradition brought to them (*naql*). In the traditions, then, come the following expectations and differences. There is a marked my- thological character. The figure of Allah becomes more ~~personified~~ and his relations to the angels and ~~other~~ men detailed. The function of the latter is more developed, and the complexity of Allah's working disclosed (frequent in al-Bukhari's *Sahih*, see especially *Kutub al-munawwir* and *Umm al-Bihar*). The Face of Allah occurs, and also his throne (*Arsh*); his cosmography of the heavens and the earth is worked out. The descent to the lowest heaven (*al-hawm*) occurs, and comes "Is there a supplanter? Is there a seker of forgiveness?" (*Kutub al-munawwir* in *Sahih* of al-Bukhari, ed. Cairo, 1312, iv. 179). Then there is the story of the man who will be last in Paradise, and of how he will ~~be~~ Allah laugh (*id.*, iv. 172, 173). At last, Allah will take the earth on one of his fingers and the heavens on another, and cry aloud: "I am the King, where are the kings of the earth?" (*id.*, iv. 167, 181). He will press his ~~foot~~ down in hell, so as to make smoke there (*id.*, 167, 173). His eyes, mentioned in the singular and the plural in the Koran (e.g. in xx. 40) are opposed to the one eye of al-Dajjal (*id.*, iv. 169). Secondly, his qualities become still more fully contradictory. A saying runs frequently: "My enemy overcomes or precedes my wrath" (*id.*, p. 167, 169, 175), and, on the other hand, there is the monstrous tradition: "These to heaven, and I am to hell, and I am not" (*id.*, p. 167, 169, 175), with comment of Bayhaqi *Musnad*, vol. vii., p. 308). It is significant that it is precisely on such questions of salvation that the most glaring contradictions appear. At one point, the rectitude of the first half of the creed and a minimum of works is judged enough, and at another, 999 men out of 1000 shall go to the Fire, it is true that God is tempted to a test; the one or to be made up out of the people of Paradise and Hell (*id.*, p. 143). Evidently, we have here echoes of later controversy, still clearer in this when it is said that the saved remnant of the people will be in Syria (*id.*, p. 176), an unmistakable reference to the Umayyads. Again, there is the absurd explanation of the uncovering of the leg at the Last Day (Koran, lxxviii. 42), an explanation that Muhammad would never have dreamt of, but Allah has become dead in Muslim exegesis (*Sahih*, p. 173; *Umm*, *Umm* of al-Bukhari, ed. Chistlicher, p. 69). A similar attempt is made to create the strange name of *al-ha*, *shadhu* (al-Bukhari, *id.*, p. 167). There are long traditions, too, on free-will etc. (p. 176),

on the doctrine of intercession (pp. 169, 184); others of Muhammad's tendency (pp. 175, 180); that Allah can be called a "thing" (ibid., p. 170); that Allah was and there was nothing before him (the *Allah waslam* verse, see below, p. 170). With the last, we fairly reach Mu'tazilite metaphysics. The traditions, plainly, are no literature at all.

III. *The doctrine of the person of Allah as developed in the Muslim Church.* The theocentric nature of Muhammad's religious ideas and the influences which were active in the later development, especially that of the theology of the Greek Church, with its great emphasis on the person of God — as opposed to the Latin Church with its doctrine of God, and the Reformed Churches with their doctrine of Scripture — made this doctrine (as I attempt, "the unifying") cover the greater part of the field of Muslim theological thought. Similarly, the expressions of Muhammad, partly more crudely poetical, partly partly crudely metaphysical, and to constitute their controversies. With only a little ingenuity in one-sidedness or absolutely anthropomorphic deity could be put together, or a practically postheistic, or a coldly and slowly rationalistic. The only impossibility, as the Mu'tazilites found in the end, was a *reluctant* God, a stopped, abstract idea.

It is obviously impossible within the limits of an article to trace this development pro development. The most that can be attempted is to give the different tendencies with the influence had upon them and the results to which they ~~came~~ For details and a more precise working out of historical relationships, the present writer ventures to refer to his *Development of Muslim Theology*, etc., p. 209-267.

The first steps towards resolving Muhammad's faithful contradictions seem to have been taken by the early civil wars. Men were compelled to ask themselves what really constituted a Muslim — what was of faith as to Islam. What view of Allah must be held: of man's responsibility and of Allah's supreme control? Naturally, some would demand all who did not hold and profess in every particular with themselves while political necessities would lead others to ~~some~~ simple external test, leaving the rest to Allah, who alone knew the hearts of men. ~~The~~ the Mu'tazilite sect arose with its doctrine of *legis*, postponing such questions to the Last Day. Similarly ~~the~~ free-will, the fatal extremists appeared with the usual attempts at ~~mediation~~. Such ~~and~~ such political opponents could or could not help what they did. So the *Kadrites* and *Abolutes* arose.

Not very soon other unifying, or complicating, influences came to bear from without. The elaborate doctrine of God in the Greek Church, especially as formulated by John of Damascus, led ~~men~~ from the simple notions of Allah to questionings as to his Qualities (*gifs*). Muhammad could call him this and that, but what was meant thereby? they were forced to ask. They found that men explained the persons in ~~the~~ Christian Trinity as by qualified qualities. Evidently they must run no risk of this and ninety, various in Allah. Yet the very acquiescence in Muhammad's statement of these qualities raised dangers. There was ~~growing~~, also, a belief that one of Allah's qualities — although not expressed in a Name — must be Speech (*kalim*). This, especially, must be granted

against opposing into a Logos. At all points there was need of constant definition.

A further influence was Greek philosophy. The students of it in Islam were going to the roots of all things, and, with it as a guide, they attacked the problem of the nature of Allah's unity (*tauhid*), religiously and philosophically. They had no previous; but, in preserving it, the nature of Allah himself was gradually reduced to a bare, unadorned something, described in negatives. For example, Allah for Muhammad was the Knower (*alim*). Therefore, he ~~must~~ have the quality *not known*. But of what was his knowledge of something within himself or without? If the first, there was a duality to himself; if the second, his knowledge depended upon something outside of himself and was not absolute; therefore he himself, the possessor of this quality, was not absolute. Evidently, if Allah's unity and independence were to be preserved, he could not be given any positive description.

In this development three tendencies permanently appear. There is traditionalism (*tauhid*), the acceptance of a doctrine because it was accepted and taught in the past. Its followers were ~~the~~ the people of tradition (*ahl al-sunnah*); they followed proofs which they had heard (*ahlu'l-sam'iyyah*), derived from the Koran, the Sunna (Sage of the Prophet as expressed in *tauhid*) and the Agreement (*ijma'*) of the Muslim people. For their reason ~~must~~ not be applied either as criticism or to expand. The statement must be taken just as it stands. For example, in the Koran we read that Allah has settled himself doubly upon his throne (e. g. Koran 22, 4). That must be believed; we must not argue about it; we must not ask how he got there; we must not go on to compare his sitting with that of a man; we must say by the recorded word. This has developed into the phrase *Allah La yuwalad*, "without enquiring how and without making comparison". But it is obvious that this is not a permanent position. And so, two further steps were taken, one by the general body of Muslims, the other by certain more logically logical. There developed the doctrine of *tauhid*, "difference"; everything in Allah is different from the similarly named thing in men, we must not think of it as ~~the~~ him. This is also called *tauhid*, "removing", that is removing Allah from any danger of confusion or association with his creatures. In general, this process stopped at a point where it was still possible to form a conception of Allah. He was different, it was conceded; but still, Allah must be thinkable, and these names and phrases gave a thought of him not essentially wrong; we could not get from them what he was, but something like what he was. Others, however, went further and argued that from these expressions we could gain an conception of Allah's real nature. That nature must always be a mystery to us, and we need not think that even the Name gave any light. The Koran calls Allah "the Most Merciful of them that show mercy" (vi. 150. vi. 84, 92; xii. 83); but that ~~cannot~~ mean for us that he has the human quality of mercy, or of anything in any way similar. The course of things in the world disprove that. He has only given himself that Name, and what the Name means we cannot know and should not enquire. The great question here lies in deciding as to rejecting the possibility of any discern-

ing of the nature of ALĀH other than purely negative—he is not that, he is not that, but, naturally, these have been many subdivisions, varying from simple affirmation to hold the faith of the Fathers (*al-kalām*) and not equally well cloaked into the sacred mysteries by a sweeping application of the thesis that the Absolute is the unknowable. Only, in taking the latter position does not lead to agnosticism, but back to a dependence on authority. The main tendency now seems to be towards that latter position, and though the work of earlier theologians is accepted because of familiarity and antiquity, formal theology at the present day is more and more *taqlid*. In Cairo, at present, the rhyme is extreme: *ʿAlīh ʿal-ḥaṣr ʿal-ḥalīl, fakhḥan ḥalīl, ʿal-ḥalīl ʿal-ḥalīl*, "Everything *ḥalīl* comes into your mind is perishing, and ALĀH is different from that". That is, ALĀH is different from any thought we can possibly have, for any thought is of transitory things.

The second tendency is rationalism. All would recognize the necessity of the use of reason (*ʿaql*), but would differ as to its being a natural source of theological truth. We *ḥalīl* already seen the beginnings of this in the study of Nimrod philosophy. The Muʿtazilites [q. v.] continued that development, and frankly remained on their religious position, creating their theology by means of reason. In the doctrine of ALĀH, they, as we have seen, especially objected to his qualities. These were contrary to his unity; at least they must be described as being his essence, not as in his *ḥalīl*. But they tended to reject them altogether, and to reduce ALĀH to a single unity. They further objected to absolute predestinationism as contrary to ALĀH's justice (*ʿadl*). Their rejection of the possibility of the Heistic Victim of ALĀH in Paradise was part of their jealousy for *ḥalīl* spirituality. These three points, then, unity, justice, spirituality, are their position in brief, which they founded on and maintained by dialectic. This, of course, drove in time the traditional party to similar weapons but with them dialectic was purely defensive; the doctrines were already given and accepted. Yet remonstrance could *ḥalīl* fall *ḥalīl* go so, if only in form of statement.

It was in the early part of the fourth century of the Hijra, and especially at the hands of al-Ashʿarī [q. v.] that the use of dialectic (*kalām*) was finally and fully accepted by orthodox Islam. Thereafter, only extreme traditionalists objected to it; scholastic theology was founded. The great system of al-Ashʿarī himself followed strictly orthodox lines. It was simply *ḥalīl* phrase: "without expiating harm, and without making comparison". The first element was directed against the Muʿtazilites, and the second against anthropomorphism (*naḥw*). On the whole, he took a middle *ḥalīl* and taught a doctrine, the miracle of Islam ever since. It is that there is in the creature a certain power of "expiating" (*istisnāʾ*) his actions, which, though they are strictly produced by ALĀH, makes them also his own.

The school of al-Ashʿarī followed him closely in its trend; but developed his metaphysical ideas into a system which was finally formulated by al-Bayhaqī [q. v.] (d. 403 = 1012-1013) and thereafter won its way to being the ultimate Muslim conception of the nature and relationship of ALĀH and his world. It has been stated thus (Marsden,

History of Muslim Theology, p. 201 et seq.).

"Thus as to ontology. The object of the Ashʿarite was that of Kant to fix the relation of knowledge to the thing in itself. Thus al-Bayhaqī defined knowledge (*ʿilm*) as cognition (*ʿilm*) of a thing as it is in itself and in something that 'thing in itself' they were much more thorough than Kant. Only two of the Aristotelian categories answered their attack, substance and quality. The others, quantity, place, time and the rest, were only relationships (*ʿiṭāf*) relating subjectively to the mind of the knowers, and not things. But a relationship, they argued, if real, must exist in something and a quality *ḥalīl* exists in another quality, only in a substance. Yet it could not exist in either of the two things which it brought together; for example, in the cause or the effect. It must be in a third thing, but in bringing this third thing and the first two together, other relationships would be needed and other things in these relationships to exist in. Thus we would be led back to an infinite sequence, and they had taken over from Aristotle the position that such an infinite series backwards (*ʿal-ḥalīl*) is inadmissible. Relationships, then, had no real existence but were mere phenomena subjective non-existent. Further, the Aristotelian view of matter was now impossible for them. All the categories had gone except substance and quality; and among them, pushed, matter, then, could not have the possibility of suffering the impress of form. A possibility is neither an entity, nor a non-entity, but a subjectivity purely, but with the suffering matter, the active form and all causes must also go. They, too, are mere subjectivities. Again, qualities, *ḥalīl* these thinkers, became mere accidents. The fleeting character of appearances drove them to the conclusion that there was on such thing as a quality planned in the nature of a thing; that the idea "nature" did not exist. Thus this drove them farther. Substances exist only with qualities, i. e. accidents. These qualities may be positive or they may be negative; the ascription of negative qualities to things is one of their most fruitful conceptions. When, then, the qualities fall out of existence the substances themselves must also cease to exist. Substance as well as quality is fleeting, has only a moment's duration.

"But when they rejected the Aristotelian view of matter as *ḥalīl* possibility of receiving form, their path, of necessity, led them straight to the atomists. So atomists they became, and, as always, after their own fashion. Their atoms were not of space only, but also of time. The basis of all the manifestation, material and physical, of the world in place and time, is a multitude of moments. Each has certain qualities, but has existence neither in space nor time. They have simply position, not bulk, and do not touch one another. Between them is absolute void. Similarly as to time. The *atom* is the expression only of a moment, are equally unextended and have, also, absolute void—of time—between them, just as space is only in a series of atoms, so time is only in a succession of unextended moments, and leaps across the void from one to the other with the jerk of the hand of a clock. Time, in this view, is in grains, and can exist only in conjunction with change. The moments differ from

See his description of his religious experiences, in his *Kitāb al-Ḥayāt*. His statement of the anthropomorphisms is in the *Ḥayāt*. Yet he marvels once at the mystery of Allah's "keeping some of his creatures in the dark that they cannot understand the difference, even between relative and absolute priority (See also in Allah's speech). There, he comments ironically upon their insisting on a wrong use of words, although their ideas were correct enough. The Karāmītes (q. v.) used "self-existence" (*qāḥ*) of Allah, thinking that self-existence meant "an existing being and in a place", but "existing in itself". The Hanbalites (q. v.), and Karāmītes both used "body" (*jism*) of Allah, in the sense simply of "an existing being", or "one existing in himself". The anthropomorphisms generally, being in the expression that Allah had direction, is indeed their conception of his action on his throne required; that, namely, in Part I, Source VI, there is a most absolute statement that any resemblance is impossible between Creator and creature, which is hard to bring into agreement with the later sections of his book, where the mystical *Ḥayāt* is taught and with his exegesis of the Kor'anic passages, where Allah breathes into man of his Spirit (*ruh*, ar. 29; spirit. 72) and of the revelation that Allah created Adam in his own form (*ḥawā*). See reference above in the *Maqām al-ḥayāt*, pp. 24 & 29. But in the same book he takes up this very problem. He has such views, it is asked, with regard to the soul of man destroy Allah's "difference", and *ḥawā* is applied, making a resemblance? Al-Ġhālī replies (*loc. cit.* p. 24) that *ḥawā* applies only to Allah's most peculiar quality (*ḥawā* *ḥawā*). He is *ḥawā* (self-subsisting), subsisting in himself, while everything else subsists in him, not through its own *ḥawā*. Nay, things through their own *ḥawā* have nothing but non-existence, and existence comes to them only from something else, by way of him. But this reference of *ḥawā* is essential, un-borrowed. This reality of self-existence belongs to Allah alone.

This, then, is the essential explanation of the prohibition of *ḥawā*. It rules out *ḥawā* materialistic *ḥawā* of the anthropomorphists. But practically leaves free scope on the mystical and spiritualizing side. In another of his *Ḥayāt* (*Ḥayāt al-ḥayāt*, ar. 47 & 48) al-Ġhālī discusses the double danger of, on the one hand, too much *ḥawā* in describing Allah leading the masses to *ḥawā* and on the other, the use of ambiguous and pictorial *ḥawā* leading them to *ḥawā*. The danger from *ḥawā* he considers much the greater, and advises that the people should be addressed in language and figures that they can understand. An economy of teaching should also be exercised, which does not mean that they should be taught anything positively *ḥawā* is not so; only that certain subjects need not be considered with them.

We have, then, to regard what is given in his statement of the Ash'arite position as *ḥawā* side only. It is complete from the point of view of the dogmatic theologian, and it is a dogmatic theologian that he here writes. Yet a careful but careful comparison that is de-humane a system should have obtained such a control that a man like al-Ġhālī had to cast his dogmatism into its mould. He, certainly, believed greatly in the fact

that Allah and the thought of the *Ḥayāt* had been a powerful influence in his own conversion; but it is plain from his writings elsewhere that his own Allah was by no means the unconditioned Force here supposed. To produce this personification of the Unconditioned, non-sensory and immovable, starting at once, the Muslim theologians must have passed through a stage of detaching their faith by showing its agreement with the facts of life and that made Allah to exemplify the kind of things it they are. With this object, they took from Muhammad's representation the elements which suited them.

In consequence, the already narrow character of the Allah of the Kor'an is still further impoverished. Another weighty influence in the same direction was the historical necessity of representing Allah as unconditioned Being. They had, therefore, to eliminate from him, so far as possible, the elements entailing relationship and all human attributes.

For al-Ġhālī, therefore, as a mystic, a becoming necessary to implement this system; and so he gave it its essential basis in the subsequent chapters of his work, especially where he deals with "the secrets of the heart", and describes how the heart sees and knows God. "He who knows his own heart, knows his Lord", says the tradition; and on that teaching the mystical life is founded. But here we pass from theology to religion, and from the doctrine of the person of Allah to the psychology of belief, and the present writer would refer to his Haskell lectures on *The religious attitude and its development*. For the doctrine itself it may be broadly that it is still unchanged, and that there exist the same different aspects of faith, *ḥawā* and the mystical vision in varying proportions in the faith of every Muslim of the present day. The use of reason has gone, except to demonstrate the possibility of a doctrinal tradition, rather than the words of Muhammad and the Father; mysticism has become the chief Aristotelian-Neoplatonic philosophy, and so far as a Muslim, now, is a thinker he is a mystic. For the later plainly pessimistic development in Persian and Turkish Sufism, see *ḥawā*. The views of the philosophers do not *ḥawā* within the scope of this article; but reference may be made to the essays of Averroes on what may be called the theology of an educated man, which was published at Munich by M. J. Muller, in Arabic in 1899, and in a German translation after Muller's death, in 1875. They are an attempt to render it possible for a thinking man to remain in connection with the Muslim Church, as largely directed against al-Ġhālī, and, as they have been reprinted in the East, may be of importance for the future development of the doctrine of *ḥawā*. A Muslim who did not know Averroes' real philosophical position could study them, agree with them and still remain in his faith.

Whether, as J. Marquart asserts (*Orientalische A. und verwandte Streifzug*, Leipzig 1903, p. 167) the true name of the same nation *As*, was already known in 9th century as well can hardly be proved; there are proofs, however, that it does not appear until the time of the Mongols (when it is also written *al-as*), but is used in oriental writings only; in the communications of European missionaries and travellers the people are called only *Alani* even in the latest middle ages. The form *As* is the base of the name of the *Osses*, descending from the *Alani* (trans. Cauc.) derived from the Georgian form of the name of the country, *Ussseti*.

Converted by Byzantine missionaries, the *Alani* are said by Mar'ab (*Mar'ab*, Paris II. 43) to have apostatized from Christianity in 320 (932) and to have expelled their bishops and priests according to the Russian (*Hist. Georg. Arab.*, 185 de Georg., vii. 148) only the chief of the *Alani* was a Christian. In the 13th century, however, the *Alani* are mentioned as Greek Christians by all authorities. Their settlements extended at that time much further east than formerly; at the time of the first invasion of the Mongols the territory immediately to the North of Derbent and over the country on the eastern of the Volga was in the possession of the *Alani*, probably in consequence of the downfall of the Khwarezmshah. Conquered and subjugated by the Mongols, a part of *Alani* were moved to different districts in the Mongol empire, a colony of Christian *Alani* is mentioned by the Roman Catholic missionaries in China, the Persian authorities of this time also speak the *As* as Christians at the court of the Mongol sovereign. The *As* in Syria on the Volga are called *Mosliman* by the *Magyar* (cf. *Deichmeyer* and *Senguer* II. 448). At the present day among the *Ossetes* only those are left of Christianity who well remember of Islam.

CC. The *As* is accounted in J. Marquart, *op. cit.*, esp. p. 164 et seq. (where the principal *As* are quoted), for *As* was with the Mongols, the *Al-As* (cf. *Turabi*) xii. 232 and F. M. Schmidt, *Die Arabische Nation* (Berlin, 1885, p. 64, for the *As* in Mongolia, d'Olivier, *Histoire des Mongols* II. 235, for the *Alani* in China, *Al-Buhārī* *Historia Tartarorum recentiorum* (Leiden, 1741), app. (W. KERNER.)

ALDA, a name (lost in the Crimea, north of Sinferopol), is only known through the battle of September 20/8, 1854 (victory of the allied armies of the French, English and Turks over the Russians under *Mikhailov*). (W. BARTHOLO.)

ALMA-DAGH is a name often met at present for the entire mountain-chain of northernmost Syria, which mountains were known to the classical authors as *Amorus* (in cuneiform writing *Almanus*). The *Alma Dagh* (*Almanus*), a branch of the Taurus-system of Asia Minor, breaks off in the neighbourhood of Mar'ab to the south of the river *Qishan* (Pyramus) forms the volcanic mass of the *Karadagh* Dagh, runs parallel to the Taurus and Antimerus-ranges from N. E. to S. W., surrounds with another ridge, branching off to the east, the whole bay of *Lukamata* (*Alexandria*), and ends abruptly in the sea to the south of *Is'at* of *Qishan* (i. e. pier head 3000 ft.) with the *Ubad* *Alma* (Mount of *Alma*) or, as it is also called, *Ubad* *Alma* (i. e. the Red Mountain,

3250 ft.) part of the *Ubad* *Alma*. The deep recesses of valley of the *Qishan* and the passages of al-*Am* separate the *Alma Dagh* from the *Lebanon-chain*, which still also in their geological structure mostly independent from that of the Taurus-system. With its offshoot, the *Alma Dagh* is all *Alma* entirely from Syria and the Mesopotamian Hinterland; apart from a few peaks that are more isolated, the part of *Is'at* (i. e. the only connection between Asia Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately known, the average height is said to lie 3650 ft., and some peaks reach 7300 ft. or more; at the highest point *Dumayir* gives the *Alma*, 7450 ft. In the northern part jagged, steep peaks prevail, in the south more rounded outlines. The *Alma Dagh* with its fresh verdure is an attractive sight, for its sides are thickly grown with trees, out of which the bare dolomite peaks project. The ridge of the *Alma Dagh* north of *Qishan* forms together with the sides sloping to East and West an administrative unit, the *Sandar* *Ubad* *Alma* (cf. *Deichmeyer* in the *Strassburger Anzeiger*, 1892, p. 314).

Usually no one common name is used for the whole of the *Alma*, in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the *Alma* we find the name *Alma Dagh* or *Ubad* *Alma*, i. e. *Alma* Mountains of the *Alma*; H. Kiepert in his *Carte générale de l'Asie Mineure* (Berlin 1892) makes the *Alma Dagh* reach about as far as *Is'at* (*Nicopolis*, 32° N. E.). the continuation of this mountain-chain as far as the neighbourhood of Mar'ab he takes as *Qishan* *Alma*, i. e. *Alma*. Kiepert's map for *Sachau's Reise in Syrien und Mesopotamien* (Leipzig 1883). In H. Kiepert's map for von Hippelheim's *Von Antiochia zum persischen Golf* (Berlin 1900) *Alma Dagh* only appears as the name of one single mountain to the north of *Is'at*; *Alma Dagh* does not appear at all on it, in its stead we find *Sur-Dagh*, *Adir-Dagh*, *Qishan-Dagh* as names of single peaks between Mar'ab and *Is'at*. The northern *Alma Dagh* is continued according to E. Reclus with the southern *Alma* by a mountain plateau in the depth of which is situated the *Qishan* (i. e. the lake of the *Alma*). The name of *Qishan Dagh* is a small circle in the sketch of the *Alma* (e.g. in the map of *Levy and Mardani*). Reclus does not call the southern *Alma* *Alma Dagh* but in accordance with a number of travellers *Qishan-Dagh*. *Benjamin* is evidently mistaken in calling the northern part of the *Alma* *Qishan-Dagh* and the northern part *Alma Dagh*, seems to stand quite alone in calling the *Alma* *Qishan-Dagh*. This name is evidently the Turkish translation of *Qishan al-Jubban* (also *al-Jubban*) "black mountains" (*al-Jubban* "black" of the Arab geographers of the Middle Ages, the name *Is'at* of the Byzantines) for the name *al-Jubban* designating nearly the same as *Alma* of *Sachau*, *op. cit.*, 1892, p. 323. By a misnomer the *Alma* or *Alma Dagh* is the more limited name (north of *Is'at*) is also often called *Nawin-Dagh* by travellers, which name according to Kiepert (cf. also the map by E. Kie-

port, mentioned above) belongs only to the north-east part of the [Habal] Arabs (north of Hedjaz).

ALMADA. [See ALMADEN.]

ALMADEN, Arabic *al-madin*, town, and generally speaking a spot where something is found in abundance, e.g. also a (poor) fishing place, is especially the name of the ancient large quicksilver-mines in the centre of the Pyrenean peninsula, in the South West of the province now called United Ariz, the old *ariz*, Arabic *al-aziz* or *al-aziz al-aziz* (from *aziz* in Spain) = *al-aziz* = *al-aziz* (quick-silver-mines). To the S.W. of it, in the northern part of the Sierra de la Almadena, it still bears the name Almadeneja, to the northwest Salinas de Villalba mentioned by 'Abd al-Wahid al-Muqaddasi (p. 264). — Also the Portuguese Almadia to the south of Lisbon is in Arabic *al-madin al-aziz*, 'Fort d'Almadia (Almadia), ainsi nommé parce qu'on y fait des sels de millon d'années de l'azur' (Lévesque, *Description de l'Afrique et de l'Asie* p. 184 = transl. p. 223); cf. the author of *Tabula* and the author of *Tabula* of Canones (Lusitania). (H. STROOK.)

ALMADIA, Arabic *al-madīya*, means in Spanish 'small', in Arabic it means moreover a (large or small) fortification in literature (cf. *al-madīya* is used for a 'small town' in general).

Bibliography: Dözy and Bangemann, *Glossaire*, *Almadia*, *Almadia* des Sultans *Almadia* (transl. by Quatremère) ii. 4, 150, with 30 'tele and Bursell, *Moqaddimah*, i. v.

ALMAGEST, more correctly *al-Majisti* (also *al-Majisti*) or *Almagest*, was so the Arab astronomical name of the great astronomical work by Ptolemy *αγωνα εστραβη* (the great compilation). It has been supposed that the Greeks or the Arab translators in their translation for the great work turned *αγωνα* into *αλμαγεστ*, hence the book was simply called *al-Majisti* by the Arabs. In a way this is already easily corroborated by Arab writers. Al-Yahya says in his historical work (written in 278 = 891, edid. M. Th. Houtsma, Leiden 1893, p. 131): 'The book *al-Majisti* treats of the sciences of the stars and their movements; the meaning of *al-Majisti* is "the greatest book" in this sense was not accurately either from *Almagest* (p. 185) explained; he says quite rightly that *al-Majisti* is the language of *al-Majisti* but the meaning of the word he gives "the greatest" (consequence) "the correct explanation that *al-Majisti* simply means

"the greatest" he quotes further down (p. 184) from an occidental writer, the Augustinian monk Ambrosius Calepinus, author of a large lexicon, who died in 1511 at Bologna. — M. Kooppe, *Die Arabische und Syrische und die Arabische und Syrische Literatur*, *Wissenschaftliche Zeitschrift*, Bonn 1890, p. 34 with whom I. Reclus (*Les grandes villes du monde*) has taken this view. Kooppe, Leipzig 1894, p. 77 et seq. agrees, but his derivation; he believes that *al-Majisti* comes from a corrupt form of *al-majisti*, viz. *al-majisti* to be found in a translation of the *Almagest* from the Arabic into Latin. We consider Kooppe to be mistaken on the contrary *al-majisti* has been formed by the Latin translators in the Middle Ages from the medieval Arabic *al-majisti* by a false reading. For the present we adhere to the first explanation — For Arabic translations of the *Almagest* and translations of them of *Almagest* *Almagest* v. 383 et seq. and *Almagest* in the *Almagest*, d. *Almagest*, *Almagest* i. 200 et seq. (H. STROOK.)

ALMAGRA, Spanish: name of iron, from Arab. *al-magra*.

ALMALIK. [See *ALMALIK*.]

ALMANZOR. [See *ALMANZOR*.]

ALMÁS is frequently regarded as a detached word (*al-mas*; correctly *al-mas* according to Ibn al-Arabi, in *Almas* vii. 17, the *al-mas* to the end in *Almas*), a corrupt form from the Greek *αλμας* (i.e. *αλμας* *Almas*) — the *Almas* mound. According to the pseudo-Aristotelian *Almagest* which — on the basis of cognate Greek words — agrees to the main with the statements of Pliny, the diamond cuts *al-mas* which except lead, by which it is itself destroyed. On the frontier of Khordad is a deep valley in which the diamonds are guarded by poisonous snakes whose looks alone are enough to kill man. Alexander the Great procured some of them by a trick he had contrived made in which the snakes saw themselves and died; then he had the flesh of sheep thrown down into the ravine so that the diamonds which were brought up by vultures who seized the pieces of flesh. This story, already found in Ptolemy's *Almagest* is generally known in the East (*Arabian Nights*). — Almagest and Ptolemy relate that the pieces obtained through crushing *al-mas* are all triangular (subdivision of the octagonal schists), the former also says that the diamond attracts little feathers — it is generally mentioned as being used for cutting and piercing other jewels. Almagest is said to have been used for destroying stones in the bladder. The powder of it must not touch the teeth; applied externally it is a good cure for colic and *al-mas* (schists).

ALMÉE. [See *ALMA*.]

ALMERIA, the capital (situated close to the site of the old *Utri*) of the most eastern province

This is the pleasure presented to the eyes of the youthful Barber student of the great tribe of the Maghribi, Ibn Tūmār. In the East, where he travelled for a long time as a student, he had not only had the opportunity of becoming acquainted with into the theories of al-Ghazālī but he had also studied the science of the *usūl al-fiqh* which had been completely abandoned in the West. Moreover he familiarised himself with the theological principles of the Ash'arite School and was to have known well the writings of the great Spanish Zāhirite Ibn Hāzim under whose influence he came. Ibn Tūmār's works show us in fact that if he holds aloof from the Zāhirite theories in matters of dogma and replaces them by those of the Ash'arite School, he at least adopts their principles in the matters of legislation.

Ibn Tūmār goes further than al-Ghazālī: he absolutely condemns the study of the *fiqh*, while al-Ghazālī, frankly refusing to this study the name of religion, science, still avows that it has some value from the point of view of civil law and of moral observances; again he differs from the great Hanbali in placing himself with his sharpest theories on the subject to the whole of the uneducated Barber nation, while al-Ghazālī is anything but partial to giving the common people a teaching in theories above their comprehension and capabilities. Al-Ghazālī only addressed himself to the intellectual elite, like Erasmus in the Reformation of the Christian Church; Ibn Tūmār, like Luther, addressed himself to the masses.

The foundations on which Ibn Tūmār has grounded his new juridical doctrine have been described at length in his *Uṣūl*. Abū al-Wahid al-Murrikhī has shown us in his *History of the Almohads* how the theories were applied by the first sovereigns of this empire. The character of Ibn Tūmār's doctrine cannot be better described than in the words of Goldziher: "It is evident from his discussion of Ash'arism with the *Yahūd* that the essential element of his doctrine on the foundations of the law may be summed up in this axiom: *al-shay' la yuḥallu ḥal ḥal* *ḥal* *ḥal*, i.e. 'the smallest possible place must not be left for reasoning in the laws of religion'. It is the objective, material sources which must be regarded as the basis of legislation, that is to say: the *Qur'ān*, tradition transmitted by authentic means and the consensus of the *ummah*, founded on the traditions that have been supported for generations together by numerous authorities, forming one uninterrupted chain (*isnād*). The subjective, personal element is thus absolutely excluded, that he calls the *gawā*, hypothesis, opinion, which we must add *ḥal* under the form of the consensus of the *ummah* necessarily formed a part of the regular *ḥal* of the law from the very beginning of juridical speculation in Islam (cp. Goldziher, *l.c.*, p. 44).

As for the traditional *qall* of which he approves of Ibn Tūmār yet prefers those of the Medinaites and he says: "All that the scholars of Medina have banded down and all that has guided their action, that is the straight path (Islam), the laws, the Prophet and his companions acted in Medina at a time when in no other part of the earth was there found either religion, or prayer, or call to prayer or a trace of the law for this epoch the true religion existed neither in Irak nor in the other countries. So the people of

Medina can justly serve us as proofs against all others that if common sense forward saying: Yet we have received from the Companions some sayings by the Prophet which do not agree with the Medinaites' practice; why then have the Medinaites gone away from these traditions in the application of the law? If anyone puts this question we may answer him that this consideration can be explained in three different ways: 1. either the Medinaites have shown with regard to these traditions a conscientious and intentional opposition; 2. or they have acted in ignorance (i.e. involuntarily); 3. or, lastly, they have been led to it by lawful reasons. To suppose the first would be an absolving for that would mean that the people of Medina are just the opposite of what God has declared them to be, viz. the people of the Prophet walking in the straight path. It is just as impossible to accept the second explanation, for we know how zealous the Medinaites have shown themselves for religion; moreover they all were in the company of the Prophet (and must therefore have known his wishes).—There remains only the third explanation. There may be a lawful reason for opposition, either when the contents of the tradition under consideration have been legally abrogated, or when the tradition in question are suspected of being false or interpolated or do not create sufficient confidence. Without any doubt the practitioners of the Medinaites gave enough arguments against everything opposed to them" (cf. *Omnes al-Baṭṭānī*, Goldziher, *l.c.*, pp. 48-49).

In short, Ibn Tūmār excludes from his legislation the *qall*, formally condemns the *ḥal* and *ḥal* and admits the speculative use of analogy (*qiyās*) as a source of the law. For the only sources from which *ḥal* and *ḥal* are the *Qur'ān*, the *ḥal* and the consent of the Companions of the Prophet (*ijmāʿ al-ḥal*). In theology he follows the strict dogmatism of the pure uncompromising of the Ash'arite schools. A very strict follower of *ḥal*, Ibn Tūmār was brought to look upon the religious opinions of his contemporaries of the Maghribi as *ḥal*. Whether follows, he said, the literal interpretation of the *Qur'ān*, must inevitably come to *ḥal* as anthropomorphism, to the materialistic conception of God existing in his material attributes; this person certainly is a *ḥal*, and because of this fact should be under the *ḥal* of religion and be expelled from Muslim society. This was the case with the inhabitants of Spain and the Maghrib under the reign of the Almohads.

Ibn Tūmār, apostle of the *ḥal*, according to the material definition of the essence of God and His attributes, makes the sovereign responsible for the faults of the people and declares the *ḥal* *ḥal* against the Almohads.

*The difference existing between Ibn Tūmār and other theologians who had already tried before *ḥal* to combat anthropomorphism by the allegorical interpretation, called *ḥal*, was that he lifted his doctrinal difference with the anthropomorphism to the height of a sacred faith. He regarded anthropomorphism as infidelity (*kufr*) and as infidelity favoured by the highest authority in the country (the Almohads); he was of opinion that this was a sufficient reason for fighting this authority in the name of religion and for overthrowing it. The holy war against the

Almoravids was 1044 as much a religious obligation (fajr) as a war against any other infidels. Therefore the war was necessary to the individual de-nomination of the Almoravids on the lips of Ibn Tūmart and the Almoravids.

Anthropomorphism and Christism (Alamī) are the enemies whom the Almoravids were bound to fight especially. The war against Christism they waged in common with the whole of Islam of that period as well as with their political predecessors, but the struggle against *crispin* and its partisans was their special domain, in which no other dynasty had gone before them with such energy as was with him and around. As it is their particular property: "scarcely throughout the whole of the Almoravid dynasty the paper and ink freely faced in their traditions" (cf. Goldziher, *Die Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xl. pp. 67-68; quoted in Alfred Lablitz, *Die Fiktion Götter* pp. 34-35).

Before he openly declared war on the Almoravids, Ibn Tūmart passed on a course of public morality as *Amīr al-Mu'minīn* (the Almoravids); he broke the wine-jars and musical instruments wherever he found them, he openly blamed civilised authority. One day in Marrakech he violently admonishes the pious Sultan, who in the religious overstep, because he had been in the town with him uncovered. At the same time he publicly teaching his theological theories to whoever wishes to hear them. He is every where expelled, especially from Bougie, Tlemcen, Fez, Marrakech and Agades and he finally refuge with his tribe the Maghribis to whom he teaches the Koran and the principles of the true faith. The author of the *Kitāb al-Mawā'id* (the book of the words forming the first chapter of the Koran) as a name for each one of his pupils in a branch of the Maghribis, in order to make them hear it by heart. It was in these mountains of the Maghribis in 515 (1121-22) after having received the homage of the principal Arab tribes, that he took the title of *Mahdi*, i.e. he who is called by the divine will to stop injustice and put an end to error, that order, justice and the true faith may reign. As Mahdi he regarded to himself the right to use violent means in order to establish the reign of pure orthodoxy. From this moment the Tūmart's political rule really begins; from 515, the Almoravid empire is said to date, although the Almoravid capital was not taken till about twenty-five years later.

The first of the companions to whom Ibn Tūmart gave his discipleship after his return from the East was 'Abd al-Mu'min, the same who had in later years himself the direction of the Almoravid affairs after the death of the founder of the empire. Owing to this he must be mentioned here. 'Abd al-Mu'min, a Berber of the tribe of the Kūfāya, was the son of a pastor of Nedrum but he had distinguished himself as a student at Flenem. The meeting between him and Ibn Tūmart, which came about accidentally according to some indications, according to others took place without doubt somewhere near Bougie from which even the young Maghribis preaching had been compelled to flee just before in order to save his life.

Having become Ibn Tūmart's intimate companion, 'Abd al-Mu'min received the teaching of this master, who laid before him the details of his

doctrine, the purpose of his preachings and perhaps his future plans.

When Ibn Tūmart took the title of Mahdi he is said to have already succeeded in converting round him numerous Berbers whose chiefs were his companions and disciples. In these he gave the name of *Falās* (students seeking the true knowledge); of others, i.e. to the people who regarded him as their spiritual and temporal leader, the name of *Mo'addin* (followers the disciples of Tūmart) whence Almoravids.

Thenceforward his policy was to win over followers enough that he might begin open war against the Almoravids, in order to give them their authority in the name of religion and to substitute his own.

On the Berber mountains he had already made a great impression by the reputation of wisdom and by the austere life he led, but he had to convince the poor and uneducated people by facts more palpable than theological theories, which they grasped or understood which they could not understand at all in a country where materialism has been a success at all times and under all forms. Ibn Tūmart posed as a possessor of miracles, he was credited by these people in convincing the masses of the superior and supernatural power he would command.

While he convincingly criticised the Almoravid administration he showed the Berbers round him how much exposed they were to the variations of the government, in particular of the tax-farmers, and how easily they could resist the attacks of the sovereign of Marrakech in their almost inaccessible mountains.

The result of the Mahdi's exhortations was that several tribes committed acts of hostility against the Almoravids; they refused to pay taxes and and threatened or put to death the agents charged with collecting them.

The Almoravid governor of Seville who meant to attack against the Berghon and Christian Spain, was beaten in them and shamefully fled with the poor remains of his army. This first victory gave the Berbers confidence and the number of tribes rallying round the Mahdi increased rapidly. Then Ibn Tūmart moved definitely in the country of the Thawal, which was very difficult for the enemy to enter; there he built a house and a mosque near the source of the river Nakti where he fixed his residence. This was the beginning of the town of Tūmal, the first capital of the Almoravids; on this very spot were also located the Mahdi and the Almoravid sovereigns. (The mosque of Tūmal and the ruins of the town have been discovered by Edmund Douce during his exploration of 1901 in Morocco, *cf. Journ. R. G. Soc.* xix. 1901-2, p. 1).

After 527 (1133-34) the Mahdi, thinking that he was strong enough not to be always on the defensive, decided to come forth with a strong armed force against Marrakech. His army commanded by 'Abd al-Mu'min, who then took for the first time the title of *Amīr al-Mu'minīn* — according to 'Abd al-Wahid al-Marrakushi — was completely routed by the Almoravid army that marched against it. Then Ibn Tūmart proclaimed, just like the Prophet after the defeat of Uhud, that all his partisans killed in this battle had died the death of martyrs; he was greeted by his clever proclamations in common.

acting the dismay which such a calamity might have caused.

The contradictory dates given by the authors, makes it difficult to state accurately the several periods of the struggle between the Mahad and the Almohads up to the death of Ibn Tūmart. Even the date of his death varies in the different sources mentioning it. According to Ibn Khaldūn the Mahad died in 522 (1128), according to others — and they are in the majority. — in 534 (1139). These divergences may easily be explained by the fact that Ibn Tūmart's death was kept a secret for a long time by his intimate companions. The Mahad himself, feeling that the end was near, or that he had recommended society and the Berbers should be prepared for receiving this important intelligence calmly and proclaim as leader the man chosen by the Community, it was 'Abd al-Mu'min whom the Almohads recognized as leader of the Community, under the title of *Ḥafīẓa* or of *ḥafīẓ al-Mu'minin*. The new chief of the Almohads had a glorious reign (see *Abd al-Mu'min*); he realized beyond expectation the ambitious projects of the Mahad, destroying the Almohad empire and introducing by main force into the whole of North Africa and into Spain the doctrines so ardently preached by the Tūmart.

The politico-religious organization of the Almohads established by the Mahad was as follows: 1° The people of the Almohads formed the Community, the members of which were regarded as the only true believers; except themselves all other men were infidel; against whom they had in wage war without mercy. 2° At the head of the Community was the infallible Imam, first the Mahad, subsequently the Caliph, his successors. It was in the name of this leader of the Community that the public prayer had to be said. 3° The Mahad was surrounded by 10 councillors, chosen from among his oldest disciples. This council was simply designated by the name of *al-ḥuṣnā*, the assembly. It was the Great Council of the Government and the members of this assembly besides having a voice in the important matters of State, could take the Mahad's place at the head of the army or for instance preside in the public at the Friday prayers. 4° Another council composed of 50 members represented the Berber branches forming part of the Almohad Community. This was the council of 50 called *al-ḥuṣnā* by Ibn Khaldūn.

This organization was modified by 'Abd al-Mu'min and the two assemblies seem to have been fused into one.

When the Mahad died his successor as chief of the Community, 'Abd al-Mu'min, was first agreed upon as chosen by the council of Ten, next this choice was ratified by the council of Fifty and finally by the People.

From this epoch the Almohad power always remained in the family of 'Abd al-Mu'min, until the conquest of Marrakech by the Marabuts in 683 (1289), eleven descendants of 'Abd al-Mu'min's

succeeded one another on the Almohad throne.

The numerous provinces of this vast Almohad empire were always held by members of the reigning family, and its descendants of the famous ḥafīẓ *Abd al-Ḥafīẓ* in order to understand this system employed by the latter we must observe that *Abd al-Ḥafīẓ* was chief of the *ḥafīẓa*, one of the most powerful branches of the Ma'mūnids in the Mahad's time had been one of the first to receive from the Tūmart's name, by thus giving the banner of the Almohad empire the valuable support of his tribe he had rendered him a considerable service. He rendered 'Abd al-Mu'min and the Almohads some other service one of the Mahad's death. The latter having already shown his preference for *Abd al-Mu'min*, the ḥafīẓ *Abd al-Ḥafīẓ* not only refused an offering, but according to Ibn Khaldūn it was he who had the Tūmart's death kept a secret in order to have time for himself preparing the Ma'mūnids for the acceptance of *Abd al-Mu'min* as Caliph, because he saw that the latter was a stranger in the tribe would not have failed to unite against him. For this same reason 'Abd al-Mu'min always treated *Abd al-Ḥafīẓ* absolutely on his equal.

When *Abd al-Ḥafīẓ* died 1578 = 1195-1196, his children and grand-children were always treated as considerably and with the same honour as the descendants of 'Abd al-Mu'min himself.

Abd al-Nāṣir reports that the fourth Almohad Caliph *Abd al-Nāṣir*, wishing to leave the province of *Ḥafīẓa* in the hands of a trustworthy governor, did not choose him from among his own family; he sent to seek *Abd al-Mu'min*, son of ḥafīẓ *Abd al-Ḥafīẓ*, to say that he regarded him as his equal and if he did not choose to remain in authority over *Ḥafīẓa* then it would be the himself, *Abd al-Nāṣir*, who would take that place but then he could call upon him to go to Marrakech and reign there in his stead. *Abd al-Mu'min* remained in *Ḥafīẓa* and afterwards his successors made themselves independent at the decline of the Almohad dynasty, reigning in Tunis under the name of *Ḥafīẓa*.

It must be observed that the princes of the house of 'Abd al-Mu'min are called *Sayyids* while those of the house of *Abd al-Ḥafīẓ* are called *ḥafīẓs* which makes it easy to distinguish them in the history of the Almohad empire even if they have the same names.

The Almohad empire was the best state since the establishment of Islam in the West, uniting under one single authority the whole of North Africa from the gulf of Gabes in the Atlantic Ocean together with Muslim Spain.

The break-up of this immense empire began, however, less than a century and a half after its foundation, in 633 (1235-1236) *Yaghmurīn* b. *Zayn* rose at Tlemcen against the Almohad authority and founded the *Abdal* kingdom of central Maghrib. In 634 *Abd al-Zakariya*, the Almohad governor of *Ḥafīẓa* had himself proclaimed as an independent sovereign met took Tunis as his capital.

CHRONOLOGICAL TABLE OF THE ALMOHAD SOVEREIGNS.

1. *Muḥammad* b. *Tūmart*, *al-Mahad* 515 (1121-1122) to 522 or 523 (1128 or 1130).
2. 'Abd al-Mu'min, *ḥafīẓ al-Mu'minin* 522 (1128) to 538 (1163).
3. *Abd al-Ḥafīẓ* *ḥafīẓ*, *ḥafīẓ al-Mu'minin* 538 (1163) to 580 (1184).
4. *Abd al-Ḥafīẓ* *ḥafīẓ*, *ḥafīẓ al-Mu'minin* 580 (1184) to 593 (1195-1196).
5. *Muḥammad* al-Nāṣir, *ḥafīẓ al-Mu'minin* 593 (1195-1196) to 610 (1213-1214).

of his kingdom, perished in a battle and his capital was taken (447 = 1035-1036).

The death of Yahya b. Yusuf which took place at about 447 or 448 (1035-1037), his brother Abu Bekr became commander-in-chief and marching northwest continued the conquest begun in the south of the extreme Maghrib. The cities of Sids and their capital Tadmert were subjugated, next Agghust and on previous submission to the power of the Almoravid conquerors Abu Bekr married the widow of the king of Agghust, the beautiful Zarah, of the tribe of the Nafzawa, who was destined to play a certain part in the establishment of the Almoravid empire.

Subsequently Abu Bekr and Abu Yusuf attacked the Berghwaja Berbers, whose territories extended as far as the Atlantic Ocean. The Berghwaja professed the subversive doctrines of their prophet Sidi, it would be a good work to bring them to Islam. But these Berbers energetically resisted the attack of the Almoravids and the Yafsa, taking an active part in the military operations, found his death in a battle (451 = 1039). Perhaps Abu Yusuf appointed a spiritual leader to take his place at the head of the Almoravids. Abu Bakr b. Yahya was such an 'Abid who, if he did exist at all, played a very subordinate part compared with Abu Bekr b. Yusuf. The latter appears as the real chief of the Almoravids and had calm strength in his nature; he continued the war against the Berghwaja and subjugated them (452 = 1040). Shortly afterwards he was informed that Balagha, lord of the Galla of the Great Hamad, was marching with a large force against the countries of the extreme Maghrib, and at the same time that those portions of the Saharja who had remained in the desert were carrying on war with one another. He took advantage of the latter fact to leave the Maghrib for the time being and go back to the desert in order to re-establish peace among the Almoravids. Before leaving, Abu Bekr gave the command over the troops in the Maghrib and the direction of affairs to Yusuf b. Tashfin (q.v.); he also abandoned to him, after divorcing her, his wife Zarah, who thus became the wife of Yusuf b. Tashfin (453 = 1041). This woman of remarkable intelligence, rare energy and great beauty acquired considerable ascendancy over her new husband's mind and had a happy influence on the fate of the young empire. Yusuf b. Tashfin continued the conquest in the extreme and in the central Maghrib. Abu Bekr, after having re-established order in the desert and having received the news of his lieutenant's success, returned to the North to take again command over the Almoravids. But following Zarah's advice Yusuf b. Tashfin loaded him with presents and made him understand clearly that he was not at all disposed to give up the supreme authority. Abu Bekr judged it wise not to insist; he retired to the Sahara and in the Sahel where he died in 480 (1037-1038).

In his quality of supreme chief of the Almoravids Yusuf b. Tashfin founded Marrakech which became his capital and that of his government; then he went on with his conquests in the extreme and in the central Maghrib as far as Algeria. In 475 (1032-1033) he came back to Marrakech after having left Almoravid officers in the conquered countries as governors.

Crushed by the Muslim princes of Andalusia (referred

to *Fuqes*), and to particular by al-Muhammad b. Abbad, king of Seville, Yusuf decided to cross to Spain with a strong army in order to make war against the Christians under Alfonso VI, king of Leon and Castile. He gained over the Christians under the great victory of Zalaca (12 August 479 = October 23, 1086) which was for the Almoravids the prelude to the conquest of Spain. Certain authors maintain that from this day Yusuf took the title of *Imam al-Muhammadi*. This assertion is doubtful, as many of these authors say that the great Almoravid conqueror long retained this title denoting temporal and spiritual authority at the same time. We can know as a fact beyond dispute that the Almoravid sovereigns, while maintaining for themselves temporal authority with the title of *Imam al-Muhammadi*, attributed supreme authority and supremacy in matters spiritual to the *Abbasids* in the East with the title of *Imam al-Muhammadi*, given to the Caliph.

The party Muslim kings of Andalusia, al-Muhammad included, were afraid not less the Christians, their authority and their riches ran through the Almoravid chief, were much more formidable than those they feared from the Christians. They were even jealous of their dignities and troubled by Yusuf b. Tashfin, who left in Spain Almoravid troops and governors, chosen from among his relatives.

When Yusuf b. Tashfin died in 500 (1086-1087) he bequeathed to his son 'Abd al-Rahman, comprising the countries of the Maghrib, a part of Ifriqiya and Muslim Spain (extending to the north as far as Pange). His descendants succeeded each other as the lords of Morocco for more than half a century and the Almoravid dynasty was destroyed in Africa when the Almohads, led by 'Abd al-Muhammadi, conquered Marrakech (531 = 1146-1147) and killed the last Almoravid king of the house of Yusuf, 'Abd al-Rahman b. 'Abd al-Rahman. Soon after the Almohads conquered Spain with the help of the Andalusian Muslims, who had been tired of the cruel Almoravid yoke for a long time. Since 530 (1144-1145) Almohads armies had crossed over to Spain and at the death of the Almoravid governor of Spain, Yahya b. Qhantya (543 = 1148-1149), the authority of the Almoravids in Spain gradually was at an end. (See 'Abd al-Rahman).

In short, if we do not count the resistance of the last representatives of the Almoravids in Spain and on the Balearic Isles nor the existence of the Banu Qhantya — what is properly called the Almoravid empire had become extinct at the death of the last king of the house of Yusuf b. Tashfin in 543 (1146-1147). The rough Saharja men and the privations and fatigues of desert life and suddenly transported by the whims of fortune to the fertile regions of the East and Andalusia, were brought into a new environment through contact with these riches, this life of luxury that they had not known with them. They came to Spain at a period when literature, poetry and intellectual pleasures had long since replaced the love of war and the thirst for conquest. Doubtless this state of things facilitated their settling in the country but it was the cause of their ruin as well. The sudden contact with a civilization so advanced, for which they were in no wise prepared, ruined them just as it had ruined, some eight centuries before, the

without any of a copyist), was a Turkish slave, later general to the Khawarizm Shāh, Tegin and to his two successors. From within under Shāh Tegin he attained the highest rank in the body-guard of his sovereign, that of a "Gizān" (body-guard). Under Shāh Tegin he commanded the right wing in the great battle against the Khawarizmīds (22 Rabi' II 398 = 4 Jan. 1008; in 401 (1010-1011) he is mentioned as Governor of Herat. After the conquest of Khawarizm in 408 (1017) he was appointed Governor of this province with the title of Khawarizmshāh and maintained himself in this position until his death in 423 (1032). Al-Buhārī seems to have administered the advanced border-province with energy and foresight and to have effectively guarded it against the neighbouring Turkish tribes; yet by this means he secured his own rule rather than that of his Sultan, for which reason his measures were always regarded with suspicion by Al-Buhārī or by Shāh Tegin; both rulers made attempts, it is said, to remove the troublesome Governor by treachery. In the spring of 423 (1032) Al-Buhārī, by order of Sultan Mahmūd undertook a campaign against Al-Buhārī (q. v.) and received a mortal wound at the battle of Dabūsh; his son Mahmūd succeeded him as Governor, although Mahmūd retained for his own son Bāzī the title of Khawarizmshāh, and only continued the administration of the country to Mahmūd as the Sultan's representative. In Rabi' II 425 (Aug. 1034) Mahmūd proclaimed himself independent, but in the very next year he was killed at the instigation of the Khawarizmīds; his brother and successor Jamsīd Khwandār ruled the land till 433 (1041), when he was supplanted by Shāh Malik, the Prince of Ghazni, by order of the Khawarizmīds. Thus ended the dynasty founded by Al-Buhārī.

Bibliography: 'Ota, *Yamūt* (Gardai, *Yamūt al-Buhārī*) (Excerpta in Herbold, *Turkica* = *opella arabica*, *enclitica*, part I, 15-15) and particularly Bahārī (on Mas'ūd, pp. 52 et seq., 91 et seq., 389 et seq., 419 et seq., 499 et seq., 834 et seq.); the dates in the al-Buhārī are to be rectified by these sources. Cf. also the anecdotes which are probably taken from the last portions of Bahārī's great work in *Al-Buhārī al-Muḥīṭ* (Sijar al-Nawā, ed. Schefer, p. 206) and 'Awā' in Herbold, *Turkica* etc., part I, p. 80. (W. HAUERDORF.)

ALUDEL (from Arabic *al-Uḍḍī*, *al-Uḍḍī*) is also found. It is the Greek *alūda*, which came to the Arabs through Syriac, an apparatus for the sublimation of quicksilver, sulphur etc. It was composed of glass or clay and had the shape of a basket with a lid and a tube. It was an ell long and a span broad.

ALUK (A.), a kind of demon (See AL-UKH).

ALUSŪ-ḌADE is the name of a learned family of Baghdad, whose ablest representative Mahmūd b. 'Abd Allāh Ḥabīb al-Dīn Abu 'l-Thamīn al-Buhārī al-Baghdādī, was born in 1218 (1803); he was a prolific writer, who in his clerical career rose to the post of Mufti of Baghdad. In this position, however, he came into conflict

with the Pasha of the town and was deprived of his office. He wrote to plant the cause in person in the capital, but set out in Jumādī 1268 (March 1851), passed through Mosul and Diyar-Bihar to Samarra, and there embarked for Ummayyiyah. But he did not find the reception he expected from the Grand Wazir and was compelled to return home without having fulfilled his purpose, and died at Baghdad in 1270 (1853). He wrote an account of his journey for his son in Ummayyiyah 'Abd Allāh Muḥṣī entitled *Maḥṣūn al-Buhārī* (q. v.) and *al-Buhārī al-Baghdādī* (q. v.). In London (Ch. Rien, *Supplement to the Catalogue of Arab. Mus. in the British Museum*, London 1894, no. 623) and Cairo (Fihrist al-Kutub al-Masriyyah, vol. 1, p. 1081). His principal work is a commentary on the *Ḥikāyat al-Buhārī*, composed in the years 1250-1267 (1836-1850), printed in 8 parts, 1268 (1301-1310 (1883-1892)). In his youth (1257 = 1842) he also wrote *al-Buhārī*, which he published shortly before his death in 1270 (1853), and which appeared (M. S.) in Baghdad in 1273 (1856). 'Abd al-Buhārī Muḥṣī edited a *Ḥikāyat al-Buhārī al-Buhārī* with a commentary at Fihrist al-Masriyyah, vol. 1, p. 1313 (1895). Finally he also wrote a commentary to the *Ḥikāyat* upon the south, entitled *Ḥikāyat al-Buhārī al-Buhārī* (q. v.) and a commentary on a *Ḥikāyat* of Muhammad al-Buhārī on the death of Abu 'l-Bahār Khālīd al-Buhārī (q. v.). (Cairo 1270 = 1857), M. S. Cairo 1278 (1863), printed 1287 (1870).

A relative of his, Ḥusayn Khān al-Dīn al-Buhārī, also resided in Baghdad, wrote an eulogy for the Taimiyah, entitled *Uḍḍī al-Aḥmad al-Buhārī* (q. v.) and a commentary on a *Ḥikāyat* of Muhammad al-Buhārī on the death of Abu 'l-Bahār Khālīd al-Buhārī (q. v.). (Cairo 1278 = 1863), M. S. Cairo 1278 (1863), printed 1287 (1870).

A third member of this family, Mahmūd Allāh 'Abd al-Buhārī Muḥṣī, competed with an essay on the evolution of the pre-Islamic Arabs for the prize offered by King Oscar of Sweden on the occasion of the Congress of Copenhagen at Stockholm in 1899; his attempt appeared under the title *Uḍḍī al-Aḥmad al-Buhārī* (q. v.). (Cairo 1278 = 1863), M. S. Cairo 1278 (1863), printed 1287 (1870).

Bibliography: Herbold, *Turkica*, p. 80. (W. HAUERDORF.)

ALWAND-KÖH (KAWAN),

ALWAND-KÖH (KAWAN), is an isolated mountain-group lying to the west and southwest of Hamadan in al-Lijlān (Media), rising to a height of 3745 metres according to the latest calculations of Stahl. For the rest the accounts of travellers and maps differ considerably in the statement of the actual height (3400, 3270 metres and so on). To the north and northwest the Alwand-Köh steeply descends to the plain by some rocky spurs and more rounded foothills. To the northwest it is joined to the Kelāgh, a continuation of equal height, which is joined to the Arzaghān or Abundāgh by lower mountain-chains. The latter forms the north-western extremity of the entire Alwand system. The core of the peak Alwand consists of granite, judging from the geological formations only at the base is there to be found

moist red clay of salt formation. With rocky precipices, bare cliffs and gorges alternate with fertile mountain pastures, but no single tree now grows there. The Alwand-Köh is noted for its abundant water-supply. Mutschlitz describes in his geography, written in 740 (1240), the *Alwand al-Küh* (Pömbay 1311 = 1844), p. 152, that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from this central portion of the mountain chain, some of which are tributaries of the Tigris, others turning seawards, flow to the interior of Iraq. As the result of the plentiful irrigation by the Alwand stream the plain of Hamadân has always been considered as the most highly favoured region of Asia. Hamadân itself, the old Rhodana, which is built to ~~the south~~ along the foot of the mountain was a favourite residence for the Achaemenid kings on account of its cool, lofty position (1886 ~~map~~). Two cuneiform inscriptions dating from Darius I and Xerxes I still testify to the riches of ancient Persian times at a place named *Gard-Nahush* (= treasure-house) on the slope of the Alwand-Köh. Olivier was the first European to climb the summit which he crossed with snow for eight months of the year; this feat was accomplished in 1796.

Oriental writers relate many legends but few facts concerning the Alwand-Köh. Kasimî (Vol. 88 = 1883) gives the best account, he names it *Köh Armanî*. Yâqût also uses the form *Armanî*, whereas other Arabic writers employ the later term *Alwand* (Biswawî: *Alwand-Köh*). The Old Persian name *Armanî* (*Armanî* and *Plamî*: *Armanî*) appears in Greek writers (Polybius, Plutarch, Diodorus) in the form *Armanî*. In Old Armenian the word is found as the name of persons in the form *Armanî* (*Armanî*); cp. H. Hübner, *Armenische Grammatik*, Leipzig 1897, I, 40, and in the *Indogermanische Sprachwissenschaft*, 261. (Grunberg, 1904), p. 426. The "white mountains" mentioned in the cuneiform inscriptions are probably to be identified with the Alwand-Köh; cp. Streck in *Zeitschrift für Assyriologie*, ix (1900), p. 371. Perhaps moreover, the "white mountains" of the Old Babylonian Gûgûmish epic refers to the Alwand-Köh, as Jensen has conjectured in Schröder's *König von Elam. Biblioth.*, vol. VI, part 1 (Berlin 1900), p. 573.

Wasmuth), II, 230, 311; Voller, *Lexicon Persico-Latinum*, I, 83 (s. v. *Armanî*); G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), pp. 22, 195; K. Ritter, *Erdbkunde*, VIII, pp. 48 ff. 83-98, II. Kiepert, *Lehrbuch der alten Geographie* (Berlin, 1878), p. 69; E. Reclus, *Nouv. géogr. anc.*, in 1883 et seq.; Fr. Spiegel, *Iranische Altertumskunde*, I, (1871) 103, 104 et seq., *Iran*, in *Grundriss der iranischen Philologie*, II, 427 (on the places of worship of old Persian deities on the Alwand); S. Hübner, *Der Zagera und der Voller = Die alte Orient*, ix, 28, 34. Leipzig, 1908, pp. 26-28 (calculates the height of the Alwand-Köh quite inaccurately); L. Olivier, *Voyage dans l'empire Ottoman, l'Égypte et en Perse* (Paris, 1881) I, II, 163; H. Petersen, *Reisen in Orient* (Leipzig, 1856), II, 252, S. F. Stahl, in *Petersen's Geograph.*, *Altiranische*, 1907, p. 205 (geological observations) and also 1909, p. 6. (Ed. Streck.)

ALWAR (*Alwar* according to English orthography), a native name in Great East India (Kodjohana) founded in 1772 and named after the capital Alwar. The state (314 150 sq. miles) contains 480,000 inhabitants (about one-fourth are Mohammedans), the town 38,000. Among the Mohammedan buildings the mausoleum of Balh-tamir Singh and Patai Dzing are worthy of mention (see Ferguson, *Indian Architecture*); in the Palace of the Mahadja there are splendid collections of books, precious stones, armour etc.

Bibliography: Imperial Gazetteer, *Indo-Persian Gazetteer*.

AMA (A.), female slave, maid. [cp. 'Amr]
'AMADIYA, a town in Kurdistan, 18 hours north of Mosul (Mosul) on the slope of the Tigris mountains [4. v.], Lat. 37° N. and long. about 43° E. (Greenwich). European travellers use the form 'Amadiya, Amadî, Amadî and Amadiya. Although there is good authority for the form *al-Amadiya* in Arabic writers (cp. i. 2. Vâqût s. v.) the pronunciation 'Amadiya, 'Amadiya seems now to prevail. According to Muzawir 'Amadiya takes its name from the Sassanid prince 'Amid al-Dawla (ob. 338 = 949); others, e. g. Vâqût ascribe the foundation or restoration to 'Imad al-Din Zengi, who is said to have built the town in the year 537 (1142) on the site of a ruined Kurdish fort named *Aglib*. The town is situated on a hill, and is dominated by the citadel, built on a steep rock and long held to be impregnable. The water-supply of the citadel is furnished by cisterns hewn in the rock. In spite of its high exposed position, the climate of 'Amadiya is proverbially unhealthy, in summer the air is so hot, that the inhabitants are accustomed to leave the town in this season and take up their abode on the mountain-heights at a distance of 2-4 hours, where even in summer snow still lies. The principal valley of 'Amadiya is connected with the valley of Rawandiz (Rawandiz). As the result of its favourable geographical situation, near the watershed between the heads of the *Shabûr* and that of the greater *Zâb*, 'Amadiya was for long a commercial centre and residence of the mountain Kurds for barter with the merchants of Mesopotamia. A Jewish colony of 1000 souls recalls this commercial period. The majority of the 5000 inhabitants are Kurds of the tribe of the *Ukân* (*Ukân*), which has its head quarters here. The administration of the town was formerly in the hands of hereditary princes who traced their descent to the 'Abdallî; at present it belongs to the Turks, who maintain there a strong garrison, for 'Amadiya possesses a strategic importance as the key of Kurdistan. The Turkish administration has attached the *Kaza* 'Amadiya which belongs to the *Ukân* district, formerly to the Wilâyet Wan, sometimes to the Wilâyet Diyar in the last few decades.

(S. J. J. J.)

AMAL (A.; plural *amāl*), action, administration, plan, detail, result; hence 'variable, tax-collector'; *amālān*, current, patent etc. In German *amal* denotes rather the influence of one word on another. Cf. dictionaries, especially *Dory*, *Supplement*.

AMALIK (or **AMALIGA**) the Amalekites of the Bible. Muslim historians differ as to the genealogy of 'Amalik' according to some he was descended from Lul, according to others from Arphaxad, while others consider him a Hamite. The 'Amalik' are generally considered to be the remains of one of the most ancient Arab tribes, of the same descent as 'Fara, Qadila and Himsil. The Arabs say that after the entrance of tongue, God himself taught the 'Amalik the Arabic language. The great antiquity attributed to them has led the Arabs to identify them with other biblical peoples. According to them, the Canaanites and the Philistines, (hence also Goliath, or Goliath), were 'Amalik, as were also the Pharaohs of Egypt; Heliopolis was moreover inhabited by this people, and it was against the 'Amalik of Yathrib that Moses sent a body of Israelites with the orders to exterminate them (cp. Exodus, XVII, 8 et seq.).

AMAN (A.), security, protection, inviolability. Infidels in the dominions of Islam have a legal claim to the protection of the Muslim authorities, if they are either recognized as 'dhimmis' (q. v.) or if a Muslim has granted them this status. According to the religious law every Muslim, not only freemen but even slaves and women, is entitled to offer security to an infidel. The Prophet has said: "All Muslims are bound to protect an infidel if security has been expressly guaranteed to him (though it were by the lowest of the Muslims). According to the Malikites and Hanbalites, even infidels are authorized to grant the amān if they have attained years of discretion.

W. J. J.)

AMARA, the capital of the sanjak of Amara (vilayet of Hamy); it is a modern town on the left bank of the Tigris, and was only founded in the second half of the 19th century; it has 4300 inhabitants.

Bibliography: Collett, *Le Tour du Liban*, iii. 279.

AM-A'MASH (Salim bin al-Muharrir Abu al-Muhammed), an Arabic traditionalist, born in 60 (879), or according to others in Aghlabi Bay 61 (882 to 886) the day of Husayn's death. He was the son of an Iranian of Tabaristan according to others of Umayyad, heard traditions in Hama from the lips of al-Zuhri and Abu al-Muharrir, lived as a client of the Banu Kahil b. Asad in the quarter of the Banu 'Awi, a sept of the Banu Sa'ad, at Kufa. There he died in Rabi' I 146 (May 763, according to others 147 or 149). — He was a great admirer of Ali and furnished the poet al-Buhārī al-Himyari with the materials for his panegyric on Ali.

Bibliography: *Tabari* (suppl. iii. 250); *Ibn al-Khalikan* (Bihar, 1293), i. 267, no. 257. *Agbari*, iii. 2d, vii. 15; *Abi*, vii. 14.

(M. S. J. J.)

AMASIA, a very ancient town, the capital of the kingdom of the same name in the vilayet of Erzurum; it lies on the Yeşil Irnak, was known by the name Amasia already in antiquity, and contains 30,000 inhabitants (about one third of whom are Armenians). The ruins of the citadel (Acropolis) built on a rock, the old walls which surrounded the town and the so-called Royal Palace, date from antiquity. The mosques, *imams* and medresas, which were erected by 'Abd al-Khalik and are still partly preserved, belong to the Middle Ages. The most beautiful mosque in the town is that founded by Bayezid I, after the town had been incorporated in the Ottoman dominions under Bayezid I. The modern town owes many improvements to the German *Reza Paşa* (q. v.) and is renowned for its orchards and excellent fruit.

Bibliography: K. Ritter, *Reisekunde*, vol. 12, part 1, pp. 154 et seq.; Collett, *Le Tour du Liban*, i. 741 et seq.

AMAZIGH, Berber tribal name meaning 'free man' (pl. *Amazighin*) and used in this sense in the Koran, in Sura, in Shari'a, at Damask, in the Koran of South Oranais, at Ghadames and in the *Libra* of Nefusa. The *Amazigh* (*Amazighin*) denotes the Berber language in the same dialect. In accordance with the rules of the pronunciation of consonants, the *z* is represented by an *h* in most of the *Teher* dialects (hence *Amazigh*, pl. *Amazighin* in *Amazigh*), or by a *gh* or a *z*. These distinctions can be traced in antiquity: in the name of *Mazighana*, a Berber tribe which invaded Egypt under the 12th dynasty, or recognize the present *Amazigh*, which is the name borne by the *Amazigh* and the southern tribes. The *Amazigh*, who ravaged the borders of Egypt at the time of the late Empire, before the Arab conquest, are related to the tribes which are today called *Amazigh*. (K. Ritter.)

AMBALA (Amrāla), the capital of the district of the same name in the Division of Ambala, Punjab Province, British India. The town was founded in the 12th century, and has 70,000 inhabitants of whom 32,147 are Muhammadans.

Bibliography: *Imperial Gazetteer*.

AMBRA. [See **AMBAR**.]

AMEDJIL (A.), the title of the Grand Secretary and Chief of the Cabinet of the Sultan, who directs the correspondence with the Sublime Porte.

pothesis is the more plausible. The Jacob 'Amila are said to have formed part of the tribes settled at Hama and also of the subjects of the legendary Zuhra-Zenobia (Jahrb. f. d. O. 1883. *Nachtr.* xl. 163; xv. 274; *Monatsh.* iii. 189; At the time of the Muslim invasion we find them settled in E. of the Dead Sea; they are mentioned among the Syro-Arabian tribes which joined Heraclius (the *Lebanon*, ed. de Guize, p. 59; Tahari, l. 2341); but do not appear again in the history of the conquest. Shortly afterwards we find them established in Upper Galilee, which is named after them *Lijbel Amila* (Yahia, ed. de Guize, p. 162; Hamdan, pp. 129, 132). They play a very unimportant part and are almost completely absorbed by the Banu Ishak. 'Abd b. al-Rika', the poet of al-Walid I, was their chief poet; he celebrated the *Umayyad* *Rashid* *al-Mahdi*, as the saviour of his tribe (*al-Mahdi*, viii. 179, 182); and thereby gave a further proof of their small importance. The *Qasid* (*al-Mahdi*, pp. 222-225; cp. *ibid.* l. 17) finds few *Umayyad* men among them, and rarely deals with them (e.g. *ibid.* l. 12). After the 11th century A. D. the 'Amila seem to have spread S. of the Lebanon, in the present district of *Wadi al-Shaikh* which is still called *Djebel Amila* (*Abu l-Fida*, p. 218; *Dimshki*, p. 211).

According to *Yahia* (*al-Mahdi*, l. 291), they also occupied a part of the country of the *Isma'iliya*, a day's journey to the S. of Aleppo, which in 225 was named *Amila* Mountain. This isolated reference (cp. *Yahia*, l. 1855, l. 48) is the more surprising in that the corresponding text of the *Al-Bihar* gives 'Amila instead of 'Amila. To avoid the difficulty, *al-Isma'iliya* (*al-Bihar*, p. 75) suggests an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonymy 'Amila-Djebel (*al-Bihar* in *historia* in *cruciatu*, *ibid.* vi. 11, for *al-Bihar* read *al-Bihar*, l. 491, 243). The application to the 'Amila of the passage *al-Kamil*, lxxviii, 1, by the poet *Qasid* is only a case of the *Amila* who was jealous of the favours enjoyed by the *al-Rika*. (H. LAMBERT.)

AL-'AMIL MUHAMMAD b. HIZAN BANU AL-AMIL with the pseudonym *Shahid*, the author of a number of writings both in Arabic and in Persian on different subjects. (H. LAMBERT.) In 953 (1537), he died in 1030 (1621). He was a native of *Lijbel Amila* in Syria, travelled to Persia and finally obtained an honourable post in the court of *Shah 'Abbas*. He is best known for his *Anthology al-Nasab* ('the beggar's bowl'), which has often been printed in the East; in addition he wrote a work on *Shi'a* dogmatics (in Persian) entitled *Qasid* *al-'Abbas* and several mathematical and astronomical treatises. He acquired a reputation as a Persian poet by his *Al-Bihar* entitled *Al-Bihar* *al-Mahdi*, which according to *ibid.* forms a kind of introduction to the *Al-Bihar* of *al-Bihar* *al-Mahdi*. His second *Al-Bihar* entitled *Al-Bihar* *al-Mahdi* is not so well known.

Biography (7: *al-Bihar*, *al-Bihar* *al-Mahdi*, l. 440 et seq.; Goldhahn, in *Sitzungsber. d. Kaiserl. Akademie der Wissenschaften in Wien, phil.-hist. Kl.*, lxxviii, 138 et seq.; *Reichle*, *Geogr. d. Arab. Literatur*, II. 414; *ibid.* *Grundriss der Arab. Philologie*, p. 301.

AMIN (A.), signifies 'ama'. cp. Goldhahn, *Arabische Namen-Formen in Kairo seit 1800* (1881) 1.

AMIN (A., pl. *amin*), trustworthy; whence al-Amin with the article or an epithet of Muhammad in his youth as a noun of respect. In its whom something is trusted, administrator, overseer: e.g. *Amir al-Mahdi*, he who is entrusted with the revolution, i.e. the sultan. The word also frequently occurs in titles: e.g. *Amir al-Dawla* (see *al-Mahdi*) and other names, *Amir al-Mahdi* (see *al-Mahdi*), *Amir al-Mahdi*, *Amir al-Sultan*.

AL-AMIN (Muhammad b. Hisham al-Bakri), a Caliph. His mother was the famous *Zuhra* (and *Djafer* b. al-Mahdi), and he was born shortly after Hisham's accession to the throne. By reason of his illustrious origin he was preferred to his brother *Abd al-Mahdi*, who was born a few months earlier — the son of a Persian slave-girl, and as early as 173 (789-790) or 175 (791-792) Hisham ordered him to be put to him at *Qasid* under the name of al-Amin. A few years later *Abd al-Mahdi* was appointed successor to al-Amin, under the name of al-Mahdi. In addition Hisham handed over to *Abd al-Mahdi* the administration of the eastern provinces from Hamadan to the Indus, and in 180 (795) his third son al-Nasir obtained Mesopotamia and the border provinces belonging thereto. In order to avoid uncertainty the Caliph drew up two documents in one of which *Amir* was expressly excluded from the throne if he should assert the rights of al-Mahdi, while the other contained a solemn promise on the part of al-Mahdi to remain faithful to his brother. The empire was thus virtually divided by these fateful measures and al-Amin's power was reduced to the way of *Irak* and *Syria*, together with *Arabia* and *Africa*. The ill effects soon appeared, and after the death of Hisham at 191, in 193 (809) a violent struggle began between the new Caliph and the Governor of *Khorasan*. The two brothers were very unlike, *Amir* frugal and pleasure-loving, the other cold and calculating. In addition there was the wide contrast both in religion and in nationality between the Shiite Arab and the Shiite Persian to the latter of whom al-Mahdi was chosen by the mere fact of his Persian descent. First of all al-Amin resented the troops which had set out at the command of Hisham. al-Mahdi whom Hisham had sent in advance, irritated at haste to *Shiraz* at the news of his father's death, but took the oath of allegiance to his brother, without creating any difficulties. Then al-Amin deprived his other brother, al-Nasir, of the governorship of Mesopotamia which had been conferred on him and only confirmed him as Governor of *Khorasan* and the border-provinces. The weak *Amir* who too willingly allowed himself to be led by others was being more and more investigated against his brother by the *Wakil* of *al-Bihar* and in 194 (809-810) he ordered that his son *Mahdi* should be mentioned together with al-Mahdi in the Friday prayer, thus signifying his intention of appointing him his brother's successor. Al-Mahdi now broke off all communication with the capital; at the beginning of the year 195 (810), however, al-Amin definitely deposed him, and shortly afterwards sent out an army to the East under 'Abd al-Mahdi. They encountered al-

Muhammad's army under Tahir b. al-Husain at al-Hajir. Ali was slain, and his troops took to flight. A new army dispatched by al-Amin against Salim was likewise defeated, and when the caliph in 836 (837) ordered his troops to take the field for the third time to halt the further advance of the Khawarizmians, the spirit of Tahir succeeded in saving dissimulation in the camp at Shahtin, and the whole army returned to Baghdad without having accomplished anything. In addition there arose dangerous disturbances and disorders in Syria. In the capital ~~838~~ Hunsu, one of the 'Ali who ~~838~~ Salim b. al-Rabi succeeded in setting on foot a conspiracy against the Caliph in March 838 and captured him in person together with his mother and although al-Amin was soon afterwards set at liberty by his partisans, his situation was becoming more and more dangerous, in the sense that the troops of Tahir were approaching nearer and nearer. Shortly afterwards ~~838~~ the holy cities of Mecca and Medina paid homage to Muhammad, to whom the whole of Eastern ~~838~~ had already yielded, and finally the capital alone remained to him. Invested by Tahir and Muhammad b. A'yan, al-Amin's best generals, deserted to the enemy, and some quarters of the city ~~838~~ another was stormed. When the Caliph at last was compelled to submit to negotiations up to the capitulation, it was agreed that he should be taken away from his palace at night in a boat to Humsa, and that the officials of his office should be handed over to Tahir. The boat however was attacked by Tahir's men. Muhammad and al-Amin escaped by swimming. ~~838~~ on reaching the land the Caliph was captured and put to death the same night, at the end of Muhammad 298 (September 833).

Bibliography. Jahari, ii. 803 et seq.; Ya'qubi (ed. Heintze), ii. 401 et seq.; Ibn al-Athir (ed. Torab.), ii. 74 et seq.; Well, *Geogr. d. Chalifen*, ii. 163 et seq.; Müller, *Der Islam im Morgen und Abendland*, i. 498 et seq.; Muir, *The Caliphate, its rise, decline, and fall* (3rd ed.), p. 472 et seq.

AMIR is **AMIR** **AL-AWAMI** AL-MADANI an Arab traveller; he was first Minister of the mosque of the Prophet in his native town of Medina. It was here that he published in 1092 (1075) a pamphlet against the veneration of idols, especially the hair of the Prophet. Afterwards he travelled in the Muslim East and in Europe as a ~~838~~. In 1053 he even came to Amsterdam and Leiden, where he made an important collection of manuscripts in the Leiden Library. Later we find him in Bombay (where he died), engaged in literary work. Among other works he wrote a history of Dawud Pasha, *Asas al-Dawla* ~~1053~~ *al-Dawla* ~~1053~~ *al-Dawla*, 1504 (1087) and pamphlets against Mirza Zaidin (q. v.), entitled *Asas al-Dawla* ~~1053~~ *al-Dawla* ~~1053~~ *al-Dawla*, Bombay, 1307 (1890) and against the Rifa'i Salihi Ahmad Ahmad entitled *al-Sayid al-muqarrir* ~~1053~~ *al-Dawla* ~~1053~~ *al-Dawla*, 1312 (1895), the last-named under the pseudonym 'Abd al-Malik al-Muniri.

AMINA, a legendary wife of Solomon. He one day returned to her the ring, on which his

dominion and his wisdom depended. She gave it to a demon who had assumed the form of Solomon, and it only returned to the king after many adventures.

Bibliography. Grünbaum, *Neue Beiträge zur arabischen Literatur*, pp. 222 et seq.

AMINA, Muhammad's mother. According to the genealogies she was the daughter of Wahb b. Abd. Manal of the family of Zahra and of his wife Harra of the family of 'Abd al-Dar, both families of Mecca. The expression of the poet Ma'ann b. Thabit of Medina: 'we have brought him (Muhammad), forth' (Nasbe, *al-Bihar*, p. 74, 1) would, according to ordinary usage, signify that his mother was of Medina; but according to the traditions of the Arabs this is not possible, and this expression is also the allusion to Muhammad's maternal uncle as living at Medina (the *Highland*, ed. Wüstenf., i. 107; Tabari, i. 980; Ibn Sa'd, iii. 12, 13) only refer to the wife of his grandfather 'Abd al-Shaykh (q. v.). The mention of Amina as a woman of high rank (Tab., i. 1078) is due to the later legends which embellish the facts (the expression in ~~838~~ poem in the *Highland*, i. 30, 1 is probably a later term of politeness, if indeed the poem is authentic). For her marriage with 'Abd al-Malik b. 'Abd al-Muttalib, see the latter. The accounts of her visions during her pregnancy (Ibn Sa'd, i. 60 et seq.; Tab., i. 968, 979) are legendary traits and should not be made use of, as Sprenger does, to give psychological explanations of the prophetic disposition of her son. She died, when Muhammad was 6 years old, at Mecca (q. v.), after taking her son on a visit to Medina (Ibn Sa'd, i. 107; Ibn Sa'd, i. 73; Tab., i. 980).

(*See* **AMIR**.)
AMIR, the name of a South Arabian tribe (*see* **AMIR**).

AMIR I. (al-Malik al-Zahir Salih al-Din) founded in Yemen the dynasty of the House Tahir, after the fall of that of the Rasulids about the year 855 (1431) in conjunction with his brother 'Ali al-Malik al-Mudharid Shams al-Din. He lost his life during an unsuccessful attempt to capture the town of Su'if (870 = 1466), cf. Johannsen, *Historia Yemenitica*, ii. 180 et seq. ~~838~~ the *amir* ~~838~~.

AMIR II. (b. 'Abd al-Wahhab, al-Malik al-Zahir Salih al-Din), the last prince of the house of the Tahirids; ~~838~~ ruled in Yemen 904–923 (1488–1517). Already in 922 (1516), the Egyptian admiral Husayn occupied the capital of Yemen, Zabid, because 'Amir refused to supply the fleet ~~838~~ out against the Portuguese with provisions. Husayn left his brother Barakat behind in the city; and in the following year 'Amir who had taken flight together with his brother 'Abd al-Malik fell in a combat with Barakat. As in the interval the Rasulid dynasty had been overthrown by Selim, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

AL-AMIR **AL-DIKR** **AL-AMIR** **AL-DIKR** **AL-AMIR** **AL-DIKR**, the tenth Fatimid, was born the 13th of Muhammad 490 (Dec. 31, 1096). As a mere child of five he was proclaimed caliph on the 14th of Safar 495 (Dec. 8, 1101) by his father al-Mustazzir.

vizier al-Afjal. This one straightway assumed control of the government and was all but its name king of Egypt for the next twenty years. His rule was a mild and just one, and to it, as much as to his energy and firm control, the country owed the internal quiet and prosperity it enjoyed during his viceroyship. It was during this time, indeed, that strife with the crusaders in Palestine raged fiercely. In 489 (1096), the ~~first~~ crusade began its march, in 491 (1098), Sidon, Antioch, and many fortresses were taken; and in 492 (1099), Jerusalem itself fell into the hands of the Christians. Though al-Afjal unflinchingly waged war against the intruders at various times dispatching forces under Sa'd al-Din, al-Fayyaz, Ahmad al-Dabbi his son, Farq al-Agha, & others. Dismal al-Mulk with whom the Atabeg Tugtekin made common cause and Sa'd al-Mulk al-Umawi, and later Mas'ud and al-Aziz b. al-Lahyan, by the year 518 (1124) the greater part of Palestine and of the coast of Syria, Tadmor, Akko, Tripoli, Sidon, and Tyre fell into the hands of the crusaders. Egypt itself, indeed, was invaded in 521 (1127), by Baldwin, part of Faramus being burnt. Arrived at Tinnis, however, he was forced to retreat because of his illness. The Egyptians attempted no reprisals and henceforth until the end of the Fatimid dynasty, defensive diplomacy was the prevailing policy of their rulers. In the meantime the rise and fall of al-Afjal had come to an end. Al-Amir no longer wishing to be constrained and to be a mere figurehead, had ~~the~~ great vizier assassinated in the street at the close of 525 (1131). To his successor, the al-Hafsi al-Mu'izz, fell the task of repelling the Hawsan who invaded Egypt in 527 (1133). His tenure of office soon came to an end. Though a capable financier and tolerant, he could not keep his place. Al-Amir had him imprisoned in 529 (1135) and afterwards executed. The caliph hereupon acted as his own vizier, aided the monk Abu Nudbah b. Kanan as general collector of revenues. Displeased at the airs of his assistant, he had him dragged to death. Oppression of every kind and wanton executions were carried out by the caliph, until he was finally assassinated as he rode back from al-Ismaili on the eve of the 14th of 534 (Oct. 8, 1140).

2690, 2691, 2692, 2693, 2694, 2695, 2696, 2697, 2698, 2699, 2700, 2701, 2702, 2703, 2704, 2705, 2706, 2707, 2708, 2709, 2710, 2711, 2712, 2713, 2714, 2715, 2716, 2717, 2718, 2719, 2720, 2721, 2722, 2723, 2724, 2725, 2726, 2727, 2728, 2729, 2730, 2731, 2732, 2733, 2734, 2735, 2736, 2737, 2738, 2739, 2740, 2741, 2742, 2743, 2744, 2745, 2746, 2747, 2748, 2749, 2750, 2751, 2752, 2753, 2754, 2755, 2756, 2757, 2758, 2759, 2760, 2761, 2762, 2763, 2764, 2765, 2766, 2767, 2768, 2769, 2770, 2771, 2772, 2773, 2774, 2775, 2776, 2777, 2778, 2779, 2780, 2781, 2782, 2783, 2784, 2785, 2786, 2787, 2788, 2789, 2790, 2791, 2792, 2793, 2794, 2795, 2796, 2797, 2798, 2799, 2800, 2801, 2802, 2803, 2804, 2805, 2806, 2807, 2808, 2809, 2810, 2811, 2812, 2813, 2814, 2815, 2816, 2817, 2818, 2819, 2820, 2821, 2822, 2823, 2824, 2825, 2826, 2827, 2828, 2829, 2830, 2831, 2832, 2833, 2834, 2835, 2836, 2837, 2838, 2839, 2840, 2841, 2842, 2843, 2844, 2845, 2846, 2847, 2848, 2849, 2850, 2851, 2852, 2853, 2854, 2855, 2856, 2857, 2858, 2859, 2860, 2861, 2862, 2863, 2864, 2865, 2866, 2867, 2868, 2869, 2870, 2871, 2872, 2873, 2874, 2875, 2876, 2877, 2878, 2879, 2880, 2881, 2882, 2883, 2884, 2885, 2886, 2887, 2888, 2889, 2890, 2891, 2892, 2893, 2894, 2895, 2896, 2897, 2898, 2899, 2900, 2901, 2902, 2903, 2904, 2905, 2906, 2907, 2908, 2909, 2910, 2911, 2912, 2913, 2914, 2915, 2916, 2917, 2918, 2919, 2920, 2921, 2922, 2923, 2924, 2925, 2926, 2927, 2928, 2929, 2930, 2931, 2932, 2933, 2934, 2935, 2936, 2937, 2938, 2939, 2940, 2941, 2942, 2943, 2944, 2945, 2946, 2947, 2948, 2949, 2950, 2951, 2952, 2953, 2954, 2955, 2956, 2957, 2958, 2959, 2960, 2961, 2962, 2963, 2964, 2965, 2966, 2967, 2968, 2969, 2970, 2971, 2972, 2973, 2974, 2975, 2976, 2977, 2978, 2979, 2980, 2981, 2982, 2983, 2984, 2985, 2986, 2987, 2988, 2989, 2990, 2991, 2992, 2993, 2994, 2995, 2996, 2997, 2998, 2999, 3000, 3001, 3002, 3003, 3004, 3005, 3006, 3007, 3008, 3009, 3010, 3011, 3012, 3013, 3014, 3015, 3016, 3017, 3018, 3019, 3020, 3021, 3022, 3023, 3024, 3025, 3026, 3027, 3028, 3029, 3030, 3031, 3032, 3033, 3034, 3035, 3036, 3037, 3038, 3039, 3040, 3041, 3042, 3043, 3044, 3045, 3046, 3047, 3048, 3049, 3050, 3051, 3052, 3053, 3054, 3055, 3056, 3057, 3058, 3059, 3060, 3061, 3062, 3063, 3064, 3065, 3066, 3067, 3068, 3069, 3070, 3071, 3072, 3073, 3074, 3075, 3076, 3077, 3078, 3079, 3080, 3081, 3082, 3083, 3084, 3085, 3086, 3087, 3088, 3089, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125, 3126, 3127, 3128, 3129, 3130, 3131, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3150, 3151, 3152, 3153, 3154, 3155, 3156, 3157, 3158, 3159, 3160, 3161, 3162, 3163, 3164, 3165, 3166, 3167, 3168, 3169, 3170, 3171, 3172, 3173, 3174, 3175, 3176, 3177, 3178, 3179, 3180, 3181, 3182, 3183, 3184, 3185, 3186, 3187, 3188, 3189, 3190, 3191, 3192, 3193, 3194, 3195, 3196, 3197, 3198, 3199, 3200, 3201, 3202, 3203, 3204, 3205, 3206, 3207, 3208, 3209, 3210, 3211, 3212, 3213, 3214, 3215, 3216, 3217, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3226, 3227, 3228, 3229, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, 3242, 3243, 3244, 3245, 3246, 3247, 3248, 3249, 3250, 3251, 3252, 3253, 3254, 3255, 3256, 3257, 3258, 3259, 3260, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325, 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459, 3460, 3461, 3462, 3463, 3464, 3465, 3466, 3467, 3468, 3469, 3470, 3471, 3472, 3473, 3474, 3475, 3476, 3477, 3478, 3479, 3480, 3481, 3482, 3483, 3484, 3485, 3486, 3487, 3488, 3489, 3490, 3491, 3492, 3493, 3494, 3495, 3496, 3497, 3498, 3499, 3500, 3501, 3502, 3503, 3504, 3505, 3506, 3507, 3508, 3509, 3510, 3511, 3512, 3513, 3514, 3515, 3516, 3517, 3518, 3519, 3520, 3521, 3522, 3523, 3524, 3525, 3526, 3527, 3528, 3529, 3530, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3538, 3539, 3540, 3541, 3542, 3543, 3544, 3545, 3546, 3547, 3548, 3549, 3550, 3551, 3552, 3553, 3554, 3555, 3556, 3557, 3558, 3559, 3560, 3561, 3562, 3563, 3564, 3565, 3566, 3567, 3568, 3569, 3570, 3571, 3572, 3573, 3574, 3575, 3576, 3577, 3578, 3579, 3580, 3581, 3582, 3583, 3584, 3585, 3586, 3587, 3588, 3589, 3590, 3591, 3592, 3593, 3594, 3595, 3596, 3597, 3598, 3599, 3600, 3601, 3602, 3603, 3604, 3605, 3606, 3607, 3608, 3609, 3610, 3611, 3612, 3613, 3614, 3615, 3616, 3617, 3618, 3619, 3620, 3621, 3622, 3623, 3624, 3625, 3626, 3627, 3628, 3629, 3630, 3631, 3632, 3633, 3634, 3635, 3636, 3637, 3638, 3639, 3640, 3641, 3642, 3643, 3644, 3645, 3646, 3647, 3648, 3649, 3650, 3651, 3652, 3653, 3654, 3655, 3656, 3657, 3658, 3659, 3660, 3661, 3662, 3663, 3664, 3665, 3666, 3667, 3668, 3669, 3670, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3680, 3681, 3682, 3683, 3684, 3685, 3686, 3687, 3688, 3689, 3690, 3691, 3692, 3693, 3694, 3695, 36

quest at the approach of the Muhammedan army. In the battle on the meadow of Bikit they fought for Ibn al-Zuhair together with other Kaisties and also took part in the subsequent deeds. In the 4th (10th) century "Amirlik" appeared in the Kaimukh name. (HARRINGTON.)

AMIR is AL-TURAK, leader of the Banu 'Amir b. Sa'ida, was born in 555 on the day of the battle of Jabbala, and died towards the year 611 = 632; he is especially known for his enmity against Muhammad, whose envoys he put to death at the well Ma'ina. An allusion in the throno brought upon him by Muhammad's cause is given as the cause of his death; the allusion fell upon him when he met the prophet in person and persisted on refusal to accept Islam. — 'Amir, a cousin of the poet Labid [q.v.], also enjoyed the fame of a poet; his large poems of his do not survive; fragments are to be found in the *Shamsa* of Abd Tammam and in that of al-Rohar as also in Ibn Kutila. *Arabia al-Shar.* pp. 191 et seq.

(A. HARRINGTON.)

AMIR (ay pl. *Amir*), Emir, leader, commander, in Greek transcription *Amir*, *Amir*, *Amir*, *Amir*, *Amir* (whence the word Admiral) etc. In Persian pronunciation often abbreviated to *Amir* [q.v.]. During the rule of the Seljuks there was a chief Amir who bore the title of Amir-i-Aranda or Amir-i-Aranda. The commoner combinations are as follows:

AMIR ARHUR, Persian *Amir Arhur*, High Equester, one of the highest officials in the court of Oriental princes. Among the Egyptian Mamluks he held the fifth place. Cp. *al-Arthur* *al-Arthur*.

AMIR DAD, Emir of Justice, Minister of Justice during the dominion of the Seljuks, especially in Asia Minor; at other periods certain Emirs bore this title permanently. Cp. Ibn al-Athir (ed. Tornik), Index s.v.

AMIR AL-HADID, leader of the caravan of pilgrims to Mecca. The first to bear this title in Islam was Abd Sids (in 9—530). Under the later Caliphs governors of the ruling dynasty were charged with this function of honour, to come where the caliph did not undertake it himself (a custom which soon fell out of use). The duties of the office did not merely consist in conducting the caravans to and from Mecca, but they also included the moral and police supervision of the pilgrims during the journey, the leading of the ceremonies at Mecca, 'Arafa and the other holy places. During the troubled times of the second civil war it happened that some leaders of the faithful planted their banners at 'Arafa, because there were that number of pilgrims in the throng, as in the year 68 (685): Muhammad b. al-Mansur, Ibn al-Zuhair, Khalid b. 'Araf and Marwan, the Umayyad. After the fall of the caliphate the most powerful Muhammedan princes, e.g. the Mamluks of Egypt and the Ottoman Sultans, each appointed an Amir

al-hadid, who had to conduct the caravans of pilgrims from Cairo and Constantinople (via Damascus) to Mecca. For the festivities which take place annually at the departure of these caravans, see *Amir al-hadid* and *Qurra*. According to Barrois, *A pilgrimage to al-Masjid al-Aqsa*, I. 402 notes, the office of Amir al-hadid was not only honourable, but also profitable, because those who held it, legally inherited the provisions of pilgrims who died on the way (the right of *shahada*, *shahada* d'habib).

Bibliography: A. von Kremer, *Culture-protector*, I. 452.

AMIR AL-KABIR was originally the title of the oldest Emir at the Mamluk court, later, after Baibars al-Qasbi had borne it 1752 = 1352, it was the designation of that Emir who stood nearest to the Sultan. After the Amir al-Kabir there came (cp. Khalid al-Zuhair, ed. Reiske, I. 1143): 1. the Amir al-Salt, 2. the Amir al-Madina, 3. the Amir al-Dawla, 4. the Amir al-Dawla, 5. the Amir al-Dawla, 6. the Amir al-Dawla, 7. the Amir al-Dawla, 8. the Amir al-Dawla, 9. the Amir al-Dawla. The bearers of this title were always chosen from among the leaders of 1000 (*al-Masjid al-Aqsa*), cp. *Maqrizi*, *Histoire des sultans Mameluks* (transl. by Quatremère), I. 3.

AMIR KHAN, was the first Nawab of Tonk, of Afghan origin, and was born in Rohilkhand in 1182 (1768—1769). In his twentieth year he began an adventurous life as leader of a band of brigands, entered the service of the ruler of Malwa, Bhopal, Indore and Nagpur and caused great mischief in Malwa lands by his ravages and plundering. Finally driven into a corner by the English, he concluded a treaty with them in 1817, binding himself to disband his troops, in return for which he was confirmed in possession of the territory which Rao Hulees of Indore had allotted him; thus the Nawab of Tonk was founded, in which his successors have since ruled. He died in 1834; and his life has been written by one of his officials under the title of *Biography*.

Bibliography: Harsanyi, *La Mamluk* of the Pathan collection of letters, the Nawab Amir and Danish Mamluk Amir compiled in Persian, translated into English by H. T. Prinsep (Calcutta, 1833); H. T. Prinsep, *History of the political and military transactions in India during the administration of the Marquis of Hastings* (London, 1825).

(J. HARRINGTON.)

AMIR MADJLIK (or AL-MADJLIK), Minister of Justice or Censor, one of the highest dignitaries at the court of the Seljuks of Asia Minor. Under the Egyptian Mamluks he held the third place among the Great-Emirs (see *AL-AMIR AL-KABIR*) and had the supervision of surgeons and physicians. In Egypt he has formerly been named *Amir al-Madjar* cp. *Maqrizi*, *Histoire des sultans Mameluks* (transl. by Quatremère, I. 12, 97; M. van Berchem, *Mameluks pour un corpus inscript.* *arab.*, pp. 274, 585).

AMIR AL-MUMININ, i. e. lord of the faithful. 'Omar was the first to bear this title. In the East the Umayyad and 'Abbasid caliphs followed his example, as did those of their opponents who thought themselves entitled to claim the Caliphate (Aids, Karmay, Pishida). It was not till the fall of Baghdad (656 = 1258)

that the smaller rulers in the East also styled themselves Amir al-Mu'minin.

In the West the title occurs more frequently; it was borne by the Rasmids, Aghlabids, Fatimids, Hammūdids, the Umayyads after 319 (928) and some of the petty Spanish kings. On the other hand those dynasties which recognized the supremacy of the Abbāsid, contented themselves with the title *Amir al-Musannifin* (q. v.), e. g. the Almoravids. Their opponents, the Almohades, founded again the independent African Caliphate and called themselves 'lords of the faithful', as also in part the Almoravids, Marinids and Zayyanids. At present the Sherifs of Morocco and the sultans of Turkey are still styled Amir al-Mu'minin. — It may be added that as early as the year 2 of the Hijra 'Abd Allāh b. 'Ubayy took this title during his expedition to Najd.

Bibliography: M. van Berchem, *Titles califaux d'Orient* (Journ. As. Berlin 10, xi, 245—335), where complete bibliographical references are given. (A. J. WATKINS.)

AMIR AL-MU'IMIN, i. e. lord of the Muslims, a title which the Almoravids first assumed, in contradistinction to *Amir al-Mu'minin* (q. v.). The latter title was borne by the independent dynasties; the Almoravids, however, recognized the supremacy of the 'Abbāsids and did not wish to arrogate to themselves this title of the Caliph. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these titles, according as they sought after the independent caliphate or recognized its supremacy.

AMIR BILĀH, the title of one of the highest dignitaries at the court of the Egyptian Mamluks, who supervised the royal arsenal (*Silāh-khān*) and the armed men (*Silāh-dār*). He occupied the second place among the Great-Emirs (cp. *AL-AMĪ AL-KADĪM*).

AMIR AL-UMARĀ, chief Emir, commander-in-chief of the army. As the name shows this dignity was originally confined to the military command, but the position continued to become more powerful, and already the last holder of the title, the sultan Bilāl, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Mustadīr owed his rescue on the occasion of the conspiracy on behalf of 'Abd Allāh b. al-Mu'tazz in 908 (908). After the appointment of 'Ubayy b. 'Ubayy the governor of Wasil in 325 (Nov. 950) as Amir al-Umarā' by the 'Abbasid al-Rāfi, this desperate ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayers together with that of the Caliph. So the Emir became in reality virtual ruler, while the Caliph sank more and more to mere shadow of his former power.

Müller, *The Caliphate in its origin, decline and fall* (3d ed.), p. 568; De Rémery, *Almoravides et sultans de Tunis*. (A. J. WATKINS.)

AMIRQHANĪYA (cp. *AL-MU'IMIN*).

AMIRIDS, the descendants (and successors; also clients and feudatories) of the great regent of the last Umayyads in Spain, al-Sayyid al-Abī 'Amir (i. e. Almoravids, q. v.; died in 392 = 1002) of the Yemima family of 'Abd al-Malik al-Ma'ālī, who had come to Spain with 'Ubayy. 'Amir's sons 'Abd al-Malik and 'Abd al-Qāsim (Sancho), i. e. al-Ma'ālī (q. v.). 'Abd al-Qāsim al-Ma'ālī (q. v.), the son of the last mentioned, was the founder of the dynasty of the Amirids in Valencia, where he ruled, 412—453 (1021—1061). He was succeeded by his son 'Abd al-Malik al-Ma'ālī (q. v.) 453—457 (1061—1065). After the ten years' interregnum of al-Ma'ālī (of Toledo), 'Abd al-Malik's brother 'Abd al-Qāsim al-Ma'ālī ruled in Valencia, 458—478 (1065—1083). In this year the city was wrested from 'Abd al-Qāsim, the 'Abd al-Qāsim b. 'Abd al-Qāsim and fell into the hands of al-Qāsim who had been stationed at Toledo. Among the former clients of the house the slave Moḥammad al-'Amir, who raised himself to be ruler of Denia and the Islamic ruler of the mentioned. (C. F. SCHACHT.)

'AMĪ (or *AL-'AMĪ*) a vast plain of southern Syria, surrounded on all sides by mountains and situated at an elevation of 121 m. above the level of the sea. It is bounded on the west by the Amanus (Alma-Dagh, q. v.), and on the east by the most southerly spur of the Kurd-Dagh ('Kurd mountain'). Numerous water-courses, belonging to the basin of the 'Aḥsā ('Aḥsā, Taurus) and to that of the Kar-Sā ('black mountain'), drain this plain, which in one of the most fertile and densely cultivated districts in Syria and infected with malaria. Volcanic phenomena of all kinds make the 'Amī noteworthy; geologically it represents, according to Schaeffer, a depression which matches in the continuation of the Orontes valley as far as the mountains of the Taurus. A layer of blue clay, sand and gravel covers the surface of the plain to a depth of 60 m. According to Schaeffer (*Revue de Géographie*, 1908, p. 460), the soil has not the appearance of a swamp but the character of a meadow, such as is sometimes found on the banks of rivers, where the surface of the ground consists of a thin layer of soil of little thickness so that it is possible to stomp in and under certain conditions to disappear entirely. Towards the edges of the plain the ground becomes firmer and there are a few villages. Here and there isolated groups of house columns rise up here among the reeds and the green meadows; and on them the wretched dwellings are perched like storks' nests. The inhabitants are Arabs and live on their isolated which lend a contemplative solitude to the moor. Besides the 'Amī serve as pasture land to nomadic Beduins, Kurds and Turcomans. In the midst of the low-lying country stretches the smooth surface of a lake called by the Arabs Bahūrah, 'Aḥsāyah (the 'lake of Amīyah') or simply al-Bahūrah, by the Turks Ah Dehis (the 'white lake'). Until the 19th century the name 'lake of 'Aḥsāyah' was also in use after a locality of that name situated to the north of the lake. 'Aḥsāyah signifies in Aramaic 'hill'. With this name Arabic writers of the Middle Ages were already familiar (cp. for example Yāqūt, *Ma'ādhim*, i, 516); they also use the name Bahūrah al-Sayyid or Bahūrah ('red lake'). The Kar-Sā and the Bahūrah which proceeds from the Bahūrah-Jaf (which

eye, the conjunctiva, cornea, the pupil, the albuginea and the visual nerve. The descriptions of diseases and of their treatment etc. in general very clear, often, of dramatic vividness especially when he describes operations that he performed himself. That is especially the case in the six cases of operation for cataract which Ammar describes. His principal significance lies in the radical operation for cataract constructed by section through a hollow metal tube invented by him. Ṣalāḥ al-Dīn of Hama (end of 12th c. = 13th century) has borrowed this part of this subject almost verbatim in his *Maḥ al-Ḍaym*. An earlier date al-Ghaffār (7th c. = 10th century) had made considerable use of Ammar's book in his medical work *al-Mawṣiṭ*.

(Of the Arabic original) the first two thirds are preserved in ms. 889 of the Escorial (Catal. I, p. 317). The manuscript is mutilated, and breaks off in the middle of a sentence. The last third is almost completely preserved in the third part of the MS. donated by Casiri as "anonymous" = Cod. Res. no. 894. The Hebrew translation of the work is completely preserved; the work of Nathan ha-Meleḥ, who lived at Rome in the 13th century A. D. and who also translated the *Kanôn* of Ibn Sīnā (Avicenna) into Hebrew 'Yidū translation of Nathan' is excellently done, it is much more intelligible than the hitherto mutilated translations of Arabic medical works into Latin. Short chapters and sentences, which occur only in the Hebrew translation show that Nathan's copy represents a later recension of the text than the Arabic MS. which . . .

The Latin translation *de oculis Casimirus* of David Hermann in David Ammann (printed Venice 1497, 1498, 1500; newly edited by Kanner, Paris 1904) pretends to go back to 'Ammar al-Mawṣilī' (first recognized by Steinschneider, *Die Hebräischen Übersetzungen des Mittelalters*, p. 607), but it is a crude forgery, has nothing to do with the original of 'Ammar and is therefore of no value for forming a judgment of the merits of his work.

The German version 'Ammar's *Almanach* is in vol. II of the work *Die arabischen Augenärzte nach den Quellen bearbeitet* by J. Hirschberg, J. Lippert and F. Minnich (Leipzig, 1905). Bibliography: cf. Introduction of the latest work with Ibn al-Qayṣarī (cf. A. Miller), II, 89. (E. Hirschberg.)

AMMAR n. YASIN n. AMR n. MARR of the Madhāḥijī tribe (son = possessor of 'Alī, His house is Abū 'I-Yahyā, he is also called Ibn Samiyya [cf. below]). His father came to Mecca in the 6th century A. D. with two brothers, in order to seek another brother of his and he there came under the protection of the Mahomedite Abū Hudhaifa, who gave him one of his female slaves named Samiyya to wife. She was then manumitted, but the family remained with Abū Hudhaifa till his death. They accepted Islam rather early. 'Ammar, it appears, in Abū Ḥanīfa's house. Father, mother and son are said to have been put in the torture for religion. 'Alī, the mother, the first female martyr of Islam is even said to have been stabbed. (She is occasionally confounded with a free woman Samiyya, the mother of the famous Zayd 'Alī Abī Ṣaffiyya, commonly known as Ibn Abī Ḥāshim). 'Ammar is reckoned among those

who denied their faith under torture, and received pardon from Mahomed. He was one of the converts to Islam and took part in the Hijra. At Medina he remained near at the building of the first mosque, took part in the early and campaigns e.g. in the numerous expeditions to Najd, then in the battles of Badr, Uhud and in almost all of Mahomed's expeditions. When Mahomed established the bond of brotherhood between the men of Mecca and Medina, he entered into that relation with Hudhaifa b. al-Yaman. Under Abū Bakr he fought bravely on the day of Yamama, when he lost an ear "thou hast called against my better ear", he is reported to have since remarked to some one who called him "one-eyed". In 22 'Ammar appointed him successor of 'Alī b. Abī Wakkāḥ in the governorship of Kufa, and he was given a share in the command of the conquest of Khuzistan; the battle of Suddawud took place at this period. As the people of Kufa were so little satisfied with him as they had been with his predecessor, he was replaced by al-Mughira b. Shu'ba after a year or two. He subsequently opposed the election of 'Uthman; then during the rule of this Caliph, he belonged to the opposition, offered the Egyptian party his moral assistance at Medina, and during the open rebellion against 'Uthman he played at least an ambiguous part. He had from the outset declared for 'Alī and according to tradition, withheld his aid from 'Uthman (from paying homage to Abū Bakr, for this reason; and after 'Alī's election to the caliphate (35 = 656) he was an ardent partisan of his and enjoyed his special confidence. When the war with Talha and al-Zubayr had become inevitable, 'Alī sent him to accompany his son al-Muḥanna in Kufa there to carry on his propaganda among the inhabitants, and the decision of Kufa for 'Alī is principally to be attributed to his efforts. In the 'Battle of the Camel' (36 = 656) he was among those who dragged 'Alī's horse from his litter, thus his camel had been brought to the ground, and through his aid a prisoner to Baza. In the battle of Jiffin (37 = 657) the old man of 81 or 94 fought like a youth for 'Alī against Mu'awiya and died a hero's death at the head of the infantry of Kufa (which cavalry was commanded by al-Aghar). Counting that his tomb was still pointed out at Jiffin, 'Alī left in him "one of his two right hands" (the other was al-Aghar who shortly afterwards was poisoned).

'Ammar passed on to one who possessed accurate knowledge of the traditions concerning the Prophet, and upon the esteem to which he was held principally to his great piety, trustworthiness and devotion. In the end. The Ahlul-Bayt historians, however, did not fail to glorify the memory of the latter enemy of the other 'Umayyads, who lost his life in fighting against them, with legendary touches, inventing occurrences of importance concerning him, and discovering allusion to him in the Koran, in order to exalt his energy, disengagement etc. In the brightest colours. The following passages in the Kor'an are referred to him, mostly on account of his persecution by the heathens: 2, 177; 3, 102; 4, 117 and 118, and 28, 2, 27, 29, 1; 30, 20. The Prophet is said to have declared that if ever infernal wars were to break out, the truth would be on Ammar's side, and the Mecc. The legends died at length with him

circumstances co-operation in the creation of the first mosque at Medina and the remarks made by Muhammad on this occasion. The Prophet even wrought a miracle for him on one occasion: when he was being burned in the fire by the heathens, or Muhammad's command the flames were changed into a refreshing coolness, as in the case of Abraham. Moreover an exact prophecy is attributed to the Prophet concerning 'Amr's death by the "rebel-lious mob", whom he consigned to hell, and al-Zuhair is said to have become successful as to the righteousness of his own sake, when he heard that 'Amr was in the camp of the enemy. The news of his death is said to have produced a most gloomy impression in al-Madīna's camp e.g. on 'Amr b. al-'As. Many pious sayings are attributed to him, which were uttered, as we are told, on the day of his death.

'Amr had a son Muhammad, who also passed on authority for traditions, and a daughter Umm al-Hakam. (II. REFERENCES.)

'AMMARIYA, an order of Dervishes in Algeria, which takes its name from 'Amr b. al-Samit, born about the year 1717. 'Amr's tomb is at BG Hammam in the province of Constantine, where also is the head quarters (the *Madīna*) of the order. The order was really founded (in 1822) by al-Hajj al-Bukhari al-Maghribi al-Buhārī. According to Depout and Coppolani, *Les mœurs religieuses musulmanes* (Algiers, 1897), p. 356 ff. 109, the order numbers in Algeria 20 *Madīnas* and 6435 members. — Rina does not mention it.

AMORUM, according to Arabic pronunciation, 'Amurriya, a well-known Egyptian city in Ancient Phrygia, on the great road from Constantinople to Cilicia. Its exact situation had for long been unknown, until Hamilton discovered it in 1848 (p. 11) 1/2 an hour from the present village of Irbid. Amorium was repeatedly besieged by Arab military leaders (among others by Maslama in 189—805) and in 223 (838) it was captured by the Caliph al-Mu'tasim after a siege of 55 days and levelled to the ground. Complete details are given in Arabic historians, especially al-Jahiz (ed. Goeje), iii. 123 ff. 129. *Bibliography*: Hamilton, *Researches in Asia Minor*, i. 431 ff. 437.

AMR (A), signifies command; affairs. *Al-Asas wa-l-hady* means unlimited authority. — In Grammar *Amr* denotes the imperative.

'AMR b. al-ANAN al-TAMIMI al-MINKARI, a member of a politically gifted family; and himself fond of using satire and rhyme. He must have been born shortly before the Hijra, for in the year 4 (630) when he came to Medina with the embassy of his tribe, he is said to have been a youth. In the year 11 (637) he followed the prophet Sa'd, but was later converted to Islam and took part in the wars of conquest. He informed 'Umar in verse of the capture of Hadya. — Little of his poetry is preserved; according to a contemporary judgement they had more outward brilliancy than depth of idea. He was famous on account of his physical beauty, which was like the *amr* al-Mukhmal ('the polished').

(A. J. WESSING.)

'AMR b. al-'As (al-'As) al-SAMMI, a contemporary of Muhammad al-Kuraishi's birth. The part which he played in Islamic history begins with his conversion in the year 8 (630). At that time he must already have been of considerable age, for at his death which took place circa 43—665 he was over ninety years old. He passed for one of the most witty politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mecca already foresaw shortly after the unsuccessful siege of Medina that this fact was the turning-point in Muhammad's career. It is not strange therefore that men like Khalid b. al-Walid, 'Uthman b. Talha and 'Amr b. al-'As went over to Islam even before the capture of Mecca. Not much importance is to be attached to the story of their conversion. That of 'Amr is said to have taken place in Abyssinia under the influence of the Christian Negus — Muhammad at once made use of his newly-gained assistance; after a few small expeditions he sent 'Amr to 'Abyssinia, where he entered into negotiations with the two brothers who ruled there, Djabar and 'Aldad b. al-Harith, and they accepted Islam. He was not to see the Prophet again. The news of the latter's death reached him in 'Abyssinia, and occasioned his return to Medina. But he did not remain there long. Probably in the year 13 (633) Abu Bakr sent him with an army into Tabaristan. The accounts of the conquest of this country (p. 11) are known to be somewhat confused (cp. also Cantani, *Amr al-'As*, p. 11, 12), but this is certain, that in this undertaking 'Amr played a most prominent part. The subjection of the country west of the Jordan especially was his achievement, and he was also present at the battle of al-Jiddat and the Yarmuk as at the capture of Transjordan.

Yet his real fame is due to his conquest of Egypt. According to some sources he bore with himself there with his troops, on his own responsibility. It is more probable, however, that 'Amr was informed of the matter (cp. Wellhausen, *Skizzen und Vorarbeiten*, vi. p. 93) or even that it was undertaken under his orders. It is certain that reinforcements were soon sent out to him, under al-Zuhair. For the history of the conquest cp. the article *EGYPT*; only the following need to be mentioned here: In the summer of 29 (646) the Greeks were defeated at Heliopolis; in 30 (647) Babylon was occupied by the Arabs; in 31 (648) Alexandria lay in their power; in 32 (649) Egypt was the work of the genius of 'Amr; he regulated the government of the country, administration of justice, the imposition of taxes. He founded Fustat, which was later called *Amr* and in the 10th century al-Qahir.

We can understand, that 'Amr felt himself wronged, when the Caliph 'Umar recalled him in favour of Abd Allah b. Sa'd, shortly after his accession to the throne. He retired in disgust from active life, occasionally giving audience to his mortification. When circumstances became thir-

each good under his government for a long time so there was under his government a number of years as under some the equality of all subjects under the power of a military despot was effectively established; the great were rigorously supervised by specially appointed spies and were not allowed to molest their slaves, in the original source. And is frequently depicted as a man, a wise, elderly and therefore loved ruler, yet both in his residence in Stedden and in his own country Stedden the erection of many buildings of public utility is attributed to him.

AMR b. LUQAIE, legendary chiefdom of the Naqā Khawāṣ, who, according to Muslim historians, held the sovereign power at Mekka. 'Amr is accused of having corrupted the religion of Abraham (al-ḡanīṣya) by introducing idolatry into Mekka. He is said to have ~~introduced~~ the Ka'ba with idols, among which was the famous Huhlāḥ, which some historians declare him to have received from Ma'ab (Mushā) as a present from the 'Amīlik, or according to al-Amālī (Wattasī, *Die Chroniken der Stadt Mekka*, i. 133), from Meccan polytheists. Historians also attribute to 'Amr the introduction of certain superstitious customs relating to animals, which under certain circumstances become sacred, al-Shāhrazādī (cited Carsten, ii. 439 et seq.) asserts that 'Amr b. Luqaie brought Hābal to Mekka at the time of Sābiḥ Ughl-Abūḥ, i. e. in the first half of the third century A. D. He however according to the same authority (see *ib.*, p. 59). 'Amr ~~was~~ his descendant reigned for ~~100~~ years, and according to Mās'ūdī, 'Amr himself lived 345 years, it would be sufficient, in determining the precise date at which this event was supposed to have taken place.

"AMR" a Minabian (Abdullah) and "Abdullah," chief of an Arab tribe and poet, said to have been born about 300 A. D., and died about A. D. 642. He was descended from a family of the tribe Zuhrah in Yemen; he is described as a man of quite exceptional bodily strength, and is said to have distinguished himself in the battle of Badiaz, although he must have been over a hundred years old at that time. He had accepted Islam after a personal interview with Muhammad. No long poems of his are extant.

(A. HAFSEL.)
'AMR' is Sa'ib al-Ashmar, governor of Medina
at the time of Fakhri al-Mu'awiyah's accession to
the throne in this year 60 (680). In the same
year he was appointed governor of Medina.

and at the command of Yazid sent an army to Makkah against 'Abdallah b. al-Zubair, the rival caliph. He entrusted the command of this expedition to a brother of 'Abdallah, 'Amr b. al-Zubair, who was taken prisoner and, with the consent of his brother, flogged to death at Makkah by his personal execution. 'Amr b. Sa'ad was disposed at the end of the following year. Later he accompanied the caliph Marwan on his expedition to Egypt, and when Mu'awiyah b. al-Zubair attempted to regain Syria during the absence of the caliph, and invaded Palestine, 'Amr was sent by Marwan to oppose him and forced him to retire. Already after the death of Yazid, when the question of the succession was under discussion, 'Amr had been mentioned as a possible successor to Marwan. He was very popular in Syria, being a nephew of the caliph on the mother's side and, as a member of the Umayyad family, also related to him on the father's side. Under these circumstances he might easily have become dangerous, but when Marwan had established his authority, he designated his two sons 'Abd al-Malik and 'Abd al-'Aziz as heirs to the throne, and the oath of allegiance was taken to them in spite of this fact: 'Abd al-Malik was afraid of 'Amr even after his accession to the throne and, as events showed, not without reason. For when the caliph undertook an expedition to Isfah in 689, 'Amr made use of his opportunity to put forward his old claims to the caliphate, and stirred up a dangerous insurrection at Damascus. 'Abd al-Malik was forced to return, and by the promise of life and liberty caused his rebellious cousin to submit. Very soon after, however, the caliph resolved to rid himself for ever of this danger, and in the year 70 (690/91) he summoned 'Amr to the palace, and according to the customary tradition, blotted him with his own hands.

(K. V. ZETTERSTEN.)

AMR II, ~~BRAND~~ AND OTHERS, one of the earliest Ma'axillies. Originally a follower of the secret school of Hassan al-Bayr, he adopted the opinion of Wadī h. 'Agha' on the question as to the status of the Moslem who has fallen into sin. We have no information about his literary activity, but it is known that he was distinguished among his contemporaries through moral earnestness and piety. It is in keeping with this character that he joined the party of Yāzīd III, who claimed the throne at a rival of the first-mentioned Wadīd II. Later on 'Amr was in very friendly terms with the 'Abbasid caliph al-Muqawwim. He died in 125 (762) at Marrāq on his return from the pilgrimage to Mecca.

AMRA (Sugar) AMRA, the little castle of 'A), an old Umayyad castle, situated in the country east of the Jordan, about $36^{\circ} 31'$ E. of Greenwich and $31^{\circ} 50'$ N. lat., due east of the river.

thern edge of the sand sea and beyond the water-bed of that depression. Kusair 'Amra was discovered in June 1898 by Alois Musil, who revisited it in 1900 and 1901 accompanied by the painter A. L. Mellich and under the auspices of the Vienna Imperial Academy of Sciences, and made a complete survey.

It is a building of moderate size, the rooms of which are arranged in the following manner: coming from the North the visitor first enters the westernmost hall of rectangular shape, which is divided into three aisles by two semi-circular wall-ribs which support three longitudinal barrel-vaults. The centre aisle ends in a spacious recess which, although ending in a right angle, resembles an apse and is roofed with a barrel-vault. From this recess two small doors lead into two square-like cells situated in the continuation of the side-aisles. From the east wall of the large hall a door gives access to three small rooms, the first two of these communicate with one another and occupy together the same depth as the large hall; the third adjoins the second on the East. The first of these rooms is rectangular and has a barrel-vaulted roof; there are benches along the south and east walls, and beneath the bench on the south is a hole in the ground for the discharge of water. The adjoining room is square with a groined vaulting, and is enlarged by a rectangular niche with a small window. It has this characteristic feature: about six feet above the floor, the upper parts of the wall jut out about 4 inches, and beneath this projection there are four clay water-pipes amounting about $2\frac{1}{2}$ inches in diameter. The water was conducted along the roof to cemented channels. In the pediments of the groined vaulting there are four clay pipes which served to ventilate the room. The third room, of great architectural perfection, it also square but roofed with a cupola rising on pendentives. A ~~small~~ decorated with a strip of zigzag ornament, forms the cornice of the cupola, in which there are four small semi-circular windows. In the north and south walls of the room there are deep recesses of semi-circular shape with ledges which resemble benches. Another ledge consisting of two steps and resembling a seat, leans against the plain east wall. In this room also the upper part of the walls juts out over four water-pipes. Another room adjoins these three in the East, though now no longer communicating with them by any door; it is a narrow vaulted chamber, as wide as the east wall of the third room, and opens out with its whole width on a larger rectangular room. The roof of this apartment, which no longer survives, was obviously flat. Here was a tank for water and apparently a heating apparatus. As for the decoration, the large hall and the three rooms have marble floors, which in room 2 and 3 are hollow after the fashion of the ancient hypocausts. The two cells south of the large hall have mosaic floors. The lower surface of the walls of the large hall and the three rooms was faced with slabs of marble; the two small rooms adjoining the large hall are plastered. The surfaces of the upper parts of the walls and of the vaults are without architectural decoration, but covered entirely with paintings.

No comparison with similar buildings in the neighbourhood, such as Kubba al-Bir, is needed

to show that Kusair 'Amra is a bath-house. Oriental baths, as is well known, can be traced back to the ancient Assyrians; here we see clearly that the first room with its two benches, without water-pipes, but furnished only with an outlet for water represents the apodyterium; the second room is shown to be the tepidarium by its water-pipes, and the hollow heated flooring, while the third and most richly decorated apartment situated near the heating apparatus is the caldarium. The arrangement is similar to that at Khirbat al-Bir, where the entrance hall represents the apodyterium and the fourth and last room the caldarium; but while it is easy to fix the purpose of these two rooms it is uncertain whether the two intermediate apartments served as frigidarium and tepidarium respectively, or were both tepidaria. At Kusair 'Amra the large hall served as entrance to the bath and may also, with its two closets, have been used for some domestic purpose. Musil thinks that a door communicating between the third of the smaller rooms and the eastern ones was the original entrance, but that it was subsequently closed; he founds this theory on the style of vaulting in the different rooms as compared e. g. with that of Kubba al-Bir, the first (1) having a cupola, the second (2) groined vaulting. But this hypothesis does not accord with several facts: the survey gives no space for assuming that any such re-building has ever taken place, and makes it even less probable that the door leading from the large hall into the first small room should have been added at a later stage. Nor do other parts of the building show any signs of different periods of construction. It seems moreover that the arrangement of the bath, which necessarily begins with the apodyterium and ends with the caldarium, excludes the possibility of such an alteration and I am convinced that the entrance to the bath was always through the large hall.

The outward architecture of the building is a mere reproduction of the structure of the interior, the extrados of the vaults showing the same bare rubble-walls. This feature of the construction has its explanation in the climate of the country, and as similar climatic conditions are frequently found in the East but hardly ever in the West, the complete harmony between the structure of the interior and the outward appearance gives the building a typically Oriental character. The technical construction of the walls is as follows: they are about $2\frac{1}{2}$ feet thick, and built of large blocks of lime-stone of double chiseling-grain, except for the door-lintels and window casements which are fashioned blocks of black basalt. The colour of these materials is very vivid. The masonry is not very solid, but a compact mortar has given it a stability enabling it to last more than a thousand years without suffering serious injury. For the roof and the water-conduits cement has been used.

A distinguishing feature of Kusair 'Amra, in which it equals all similar monuments of the neighbouring country and of the more distant regions of Egypt Syria, is its rich pictorial decoration; nowhere else have pictures been preserved in such perfect condition; another interesting feature (of very common occurrence elsewhere) is the presence of inscriptions which enable us to fix the date of the building and by means of comparison of several other monuments as well. Frescoes are found in all the rooms, the large

hall and the hall itself, being absent only from the east chamber. Their state of preservation corresponds to their age; that, that, the smoke of fire and graffiti have done considerable damage. In painting the pictures, the colours were laid broadly in flat tones on the white smooth surface without much care in the treatment of the half tones; these were partly aided in a way similar to that found in the Egyptian tomb-paintings of late Egyptian art. The careful finish of the details and of the drawing betrays an unusual certainty of touch and considerable skill in the use of colours. The white surface is frequently scratched at local colour, but coats of white paint are also laid on. No part of the paintings is drawn by rule and compass, but they are all sketched on the wall with a free and sure touch; yet the work on the walls was very laborious. This freedom of treatment is clear evidence of a long-established practice, and the painters of these pictures followed an old tradition. Besides black, white, their colours include blue, dark-brown, red, light-brown, pale yellow and sometimes green. — The blue is natural ultra marine; the red oxide of iron; the dark brown is red covered with a thin coat of ultramarine; the light brown is ochre; the yellow this same ochre mixed with chalk; the green ochre with a coat of ultramarine.

The subjects of the pictures are bathing-scenes, gymnastic exercises, shooting of all sorts of game, with jacks of boards, as nets, or from boats; coats of pictures represent trades, there are also some symbolic figures, such as the Ages of Man, History, Philosophy, Poetry, a catfish as his throne represented as Pontifex, the enemies of Islam, and a rich man. Of a more decorative nature are the numerous female figures in the niches, heads in oval frames surrounded by foliage, figures of men and animals in torques. The ornament consists of draperies, foliage growing out of vases, vines, laurel, palm-trees with clusters of fruit, and borders with birds of the desert. — Some detached parts of these frescoes, viz. a nude female figure with a rich head-dress interwoven with pearls, and the fragment of an inscription, are now in the Kaiser Friedrich Museum at Berlin. — The pictures are arranged in rectangular borders, or in lozenges, circles and in circles, as in a picture-book; the composition is of an epic-narrative character; and both in form and contents the gyro-hellenistic tradition is predominant. Certain features, especially the epic style and perhaps the type of some of the female figures, seem to be derived from old Oriental art, while the aquatic scenes and the clouds with oars remind us of the art of the Sassanid period. Other elements, such as the acanthiform of the dark-green and niches with their spiral columns, give a definitely Byzantine impression; while the laurel-panels and draperies recall western classical art; some features, finally, such as the birds of the desert and the palm-trees are copied directly from surrounding nature. The more architectural too corresponds to the style of the pictures: the groined vaulting seems to be of western origin, while the vaulting of the large hall and the shape of the apse in the caldarium appear to be of the Syrian type: the general character of the building as a whole is hellenistic, and the outward appearance typically oriental.

It would therefore have been very difficult to date the monument by the aid of criteria furnished

by the history of art. The building presented an altogether new type, and it is not surprising, that the pictures were at first taken for classical works of the 14. or at most the 5. century A.D., and that the Christian kings were thought of as hellenists. The case of the other famous Daphnion chapel, at Hagia Sophia, was similar: it was thought to be of post-classical, Sassanid or Sassanid origin. In the case of Kasir Amra some pictures of the large hall, which bear inscriptions, definitely fix the date: these are the pictures of the easternmost caliph and that of the emperor of Islam. The first has a long Arabic inscription, unfortunately so damaged that it has not been possible hitherto to decipher it; in the second the figures have bilingual inscriptions in Greek and Arabic; in the third place there are Greek inscriptions on the allegorical pictures representing History, Poetry and Philosophy (wisdom). The fact that the inscriptions are bilingual as well as the shape of the earlier Arabic letters indicated from the outset that they belonged to the end of the 1. or the beginning of the 11. century of the Hijra; the interpretation of the pictures representing the enemies of Islam, which was worked out successfully by C. H. Becker with the assistance of Th. Noldeke and K. H. Rieu, fixed this date with conclusive certainty. (Munich had already arrived at the true date by means of detailed historical arguments and by a correct appreciation of the inscriptions and pictures; but he was unable to put forward the reasons for his view in the great book published by the Vienna Imperial Academy, because the historical part of the work had been entrusted to other hands.) The important pictures in question represent, besides ten uncertain figures, the emperor of Byzantium, Roderick the Visigoth, the Sassanid Vahagard III, and the Negus of Abyssinia, with the following bilingual inscriptions:

[KASIR AMRA] KASIR AMRA KASIR AMRA

كاسر أمرا كاسر أمرا كاسر أمرا

(The underlined letters are considerably damaged.)

Kasir Amra was built therefore in the first half of the 11th century, between the years 711, when the Arabs fought against the last king of the Goths, and 750, the date of the fall of the Daphnion dynasty. Within these limits the fact that direct relations existed between Roderick and Walid I speaks for this caliph, while the historical accounts, collected by Muhl, which speak of Walid II's passion for building and of his residence in the district of Kasir Amra favour the claim of the latter.

Some new and important suggestions are found in a recently published study by M. Van Berchem. Starting from the fact that the six figures of the pictures representing the enemies of Islam are arranged in two groups, he points out 1. that the figures in the first group are those of the sovereigns of great empires, while the second group contains none; 2. that the arrangement of the three figures in each group from left to right corresponds to their geographical situation from West to East. Hence it follows that the third figure of the first group must represent some great Asiatic sovereign dwelling in the East of Persia, while the third figure of the second group must stand for a monarch of the second

cent to the East of Abyssinia. Van Berchem draws attention to the fact that the death of Rudatich coincides in point of time with the following events: in the year 722 Kotalla was victorious over a war of the Khazars under the walls of Samarkand; five years earlier the Arab general had won a battle against the Eastern Turks between Meru and Bukhara. It is possible that in both battles the Turkish armies were led by Koltogai who is mentioned in the Uyghur inscriptions as nephew of Metshun, supreme chief of the Eastern Turks. Van Berchem asks whether the third figure of the first group may not represent Koltogai or Metshun, or perhaps the emperor of China himself. The last figure of the second group may thus stand either for one of the Turkish chiefs involved in Kotalla's wars, or for one of the Hindu kings, who at that time were crushed by the general Mohammed on the Indus near Multan, e.g. the king Dahi who was killed in 712. By combining all the historical data supplied by this picture and by the whole building, van Berchem arrives at the very plausible conclusion, that so far as the date of Kusair Amra is concerned, probability is in favour of Wallat's and the years 712-715.

AMRAM. [see 'AMRA.]

AMRITSAR, capital of the division of the Panjab (Panjab), ਅਮਰਿਤਸਰ the same name. Population: 162,429 in 1901, of whom 77,793 were Muhammadans, and 17,860 Sikhs. It owes its foundation to Rana Dita, the fourth guru of the Sikhs (1574), successor Arjan (Arjun) conquered the 'golden temple' (Darbar Sahib) of the Sikhs, which stands on an island in the 'sacred tank' (Amrita varas), whence the name of the town is probably derived. The Sikhs of Arjan were obliged to leave the town; and the last guru died ੧੬੦੬ until 1708. The golden temple was taken up by Nadir Shah in 1762, but was restored when Nadir left India, and Amritsar became the capital of the independent Sikh state. It passed under British rule in 1849, together with the rest of the Panjab, and is now important for its carpet and silk industry.

'**AMS** (pronounced 'amra, *Bahara* p. 23) cabalistic word used by the Muslims; it is formed from the initials of the three names 'Alī, Muhammad and Salim al-Fāṭimī, and symbolizes the manifestation of the Trinity of *muḥam*, *wa* *muḥ* *wa*, in the

merito and last era, the era of Muhammad; 'Alī is the incarnation of *wa*, Muhammad of *mu*, and Salim of that of *am*. It is called the 'triple of right and justice' by the *Ṣaḥīḥ* *Ḥadīth*, and plays a great part in the ceremony of initiation. It is called the mystery (*raḥ*) of *wa*, and its meaning is revealed to the initiate only by degrees.

AMSELPELD [see KOSOVA.]

AMTHAL (A.), plural of *Maḥal* (q.v.).

'**AMUD** (A.), pillar, club; in mathematics technical term for the vertical line.

AMU-DARYA, one of the two principal rivers of Russian Turkestan. The old name 'Amu' (Am) is derived from an Iranian form *Wakhshu*. As late as the x. (xi.) century *al-Biruni*; *Wakhsh* is mentioned as the *gradus* (*valley*) of water in general and of the 'Amu' in particular; in modern maps the name *Wakhsh* (in medieval geography *Wakhshid*) is confined to a tributary rising on the Alai, which is also called *Sarkhad* and *Rail-Su*; the natives are said to apply it also to the *Fanaj* and other head-waters. Other names are: *Pahlowi*, *Wakhsh*; Chinese *Kel-shan*, *Wu-shan*, *Po-shan* and *Fo-shan*; Arabic and Hind. Persian *Djakhsh* (a word used in Persian sources — by *Gardizi* as early as the v.-xi. century — to denote large rivers in general.) The modern name is derived from the name of the town of Amu (which like Amul in *Taharistan* has been traced back to the pre-aryan people of the Amud; cp. J. Marquart, *Untersuchungen zur Geschichte von Iran*, II, 57) later *Amu* and *Amu* (the modern *Chirchik*), hence *Amu Amu* or *Daryā Amu* (the river of A.). Owing to its situation on the chief route from Khorezm to *al-Nahr al-A.* was a town of such importance, that it could give its name to the whole river.

Modern geography regards as the principal head-water the *Al-Su* rising on the *Lesser Pamir*; the natives (as well as the medieval geographers) suppose it to be the *Fanaj* (medieval name *Jaryal*) which rises on the *Greater Pamir* and in its upper course bears the name *Wakhsh*; *Pandjsh* was originally the name of the place where the *Wakhsh* joins the other streams and the 'Amu' head-waters become a single river, (thus mentioned to the beginning of the vi.-xiii. century; *Iskhar* (ed. de Goeje, p. 296) mentions as head-waters besides the *Fanaj* and *Wakhsh* the *River of Harkak* (the names *Akhsh* and *Raksh* or *Rakhs*, perhaps to be read *Talsh*, occur in spite of *Iskhar*'s view to have denoted the same river, now called *Kulab-Darya*), the *Farghar* or *Farghar*, the modern *Kirghiz* or *Kirghiz* and the *Andkhar* or *Andkhar*, (this confusion in the spelling hints, as is well known, at the sound *ā*, hence *Andkhar*, modern name *Tajik*). The only tributaries of the *Pandj* on the left, mentioned by Arabic authors, are the *Kakir* and *Al-Sami*; the pronunciation of the old names cannot yet be established with certainty. The main river is further joined on the right by the *Kash-Nil* (in the Middle Ages *Kash* which is now the name of a head-water) and the *Sarkhad* (called in the Middle Ages and as late

at the time of Timur Caghan-Röghni the *Zafar-Nāma* gives it as *Biyaḡ-koḡ*).

The district through which the head-waters flow consisted of the following countries: The Fānāq, after leaving the country of Wakhshān, separated Barakshān from Shuk-ru (also written Shukman, Shikman and Shikina) and Kaserān (probably the modern Keshan and Kaserān; the latter name is mentioned under Timur and his successors). Between Fānāq and Wakhsh were devoted the mountain district Khastal or Khastalan and the plain Wakhsh (the modern Kurgan-Tube). The Wakhsh flowed through the districts Fānāq written Fānir and Nānāq; the name apparently included the Aba-valley, Kashi (called Kāsh-Tegān at the time of Timur; modern name Karakotān), Kāsh-ūlā (written Kāshūlā as Karakūlā, the *Sayyās* form of the Ancient). Between the Wakhsh and the Kāsh-Nihān (the modern Kurgan-Tube) was the district, the modern Fāidābād (the district) and Kāsh-ūlā (now called Kāsh-ūlā). The mountain-country containing the head-waters of the Kāsh-Nihān and the Barakshān was inhabited by the people of the Kūmāsh (as we ought to read up, *al-Bihar* ed. de Goeje, p. 283; cf. the passages from Balhār quoted in Barthold, *Travels* p. 10). In his valley of the upper Kāsh-Nihān (the district of the modern towns Dzhambā and Kipār) were situated (from East to West) Shukman and Kharqan or Akharān; the valley of the Kurgan formed the kingdom of Caghanlyān (Arab. *Saghiniyan*); the country of Gūshān referred to in the history of the Arab conquest is probably identical with the district of the modern town Shikān. On the left bank between Barakshān and Kipār lay Tokharistan in the narrower sense (also written Tokharistan); in its wider sense this name (derived from the people Tokhar who appear first in the 11. century B.C.) comprises all the mountain-districts on the right and left banks of the upper Amu-Darya which was dependent on Balkh.

In these districts only the water of the mountain streams which flow into the Amu-Darya was used for purposes of irrigation; the canals derived from the Amu-Darya itself only began near Zhetysay on the left bank, the modern Karkit; today the irrigation-channels start further up-stream near Karkit. From Aral (the modern Carak) onwards a strip of cultivated land followed the left bank without interruption, although its breadth was subject to many changes; to-day the greater part of the bank between Carak and the frontier of Shikān is filled up with sand; and from Hamid Allah Karkit it appears that as early as the 11. (xiv.) century the strip of cultivated ground was no longer continuous. Karkit = Carak, the country irrigated by the lower Amu-Darya, began in the 11. (x.) century near Tashkent, 5 days journey below Aral; from the 7. (xi.) century up to most recent times the town of Darghan (called by Arab-Geogr. Darghān; now ruins of Darghan-Ara) which according to Hamid Allah Karkit lay 16 parasangs below Tashkent, was regarded as the southern frontier-town of Khwarezm. The modern frontier above the town of Pishan was only determined after the Russian campaign of 1873; near this spot the mountains slope down close to the bank, so that the riverbed is narrowed down to a third of its ordinary width, this 'gate' is about 100 feet wide, and is called Darghan-i

Shik (the Iron Mouth), then already in Hamid Allah Karkit and Pishan. According to a legend about a jump of Pishan, the town hidden by the valley Aral. On the right bank the cultivated land only began 4 parasangs below these rapids near the town of Shikān (leaving out account the old town Pishan or Pishan situated opposite Carak).

The formation of the soil in Karkit = Carak covers the first to split up into several branches in its lower course. The delta slopes down in two directions, in the North to the lake Aral, and in the West to the basin of Sāi-Kamish, which is now almost completely dry, though at its deepest point (about 50 feet under the level of the Caspian Sea) several lakes still exist. The Sāi-Kamish basin is connected with the Caspian Sea by the Ushat, a depression, which was formerly thought to be the bed of a dried-up river, though now opinions as to its origin are divided; it does not extend to the present shore of the Caspian Sea; at the time when the delta still carried water, the low land on the banks to the S. of the railway-station Nela-Tubā must have been submerged.

Owing to several causes, both natural and artificial, the precise nature of which has not yet been sufficiently explained, the water of the Amu-Darya was directed into several branches on the right to lake Aral, sometimes on the left to the Sāi-Kamish; this circumstance caused considerable changes in the direction of the lower course even in historical times (there is no historical evidence for changes in the upper course above the southern frontier of Khwarezm). The accounts of the Arab writers who only knew the Caspian Sea, and of the Chinese who were only acquainted with lake Aral, do not allow us to discover the conditions of their time with any certainty; many precise descriptions are given by the Arabic geographers of the 11. (x.) century. The gradual destruction of the outlet of Karkit on the right bank (the old capital of Khwarezm, now Karkit 'Ardak Wall'), which happened at that time, seems to indicate that the riverbed was diverted to the right; at the same time however a tradition of a previous diversion in an opposite direction had been preserved, and the eastern branch Karkit (not once more the main channel) was regarded as the old bed of the river. The earliest detailed description of the lower course is found in the *Rote* (end of the 12. = 13. century. *Murqat*, *Intervall*... *Strassburg*, p. 25) in fact the 12. = 13. = 14. as the *freedom* part given for the *Rote*'s work; but his arguments are not convincing, but it only deals with the left channel, which was then of secondary importance. According to the *Rote* the branch left the main river at a point below the town of Darghan (Arab. *traveller* of the Persian *Gargān*, and the modern Karkit-Vergat); at a distance of 4 parasangs from this town it reached the mountain-chain Siyāh-Kōh (i.e. the Ark, the margin of the plateau *Ust-Ust*), also referred to in the description of the western shore of lake Aral; and near its mouth formed a number of small lakes (called *Kharak*). The opening of the main river into lake Aral is only referred to in general terms; it appears that the *Rote* (ed. de Goeje, p. 91) or his authority knew from personal observation only the left arm here described. As

this branch is said to have reached the Cink and then to have flown on some distance further, it seems clear that the group of lakes called *Yulghun* must not, as 1397 been misinterpreted, be sought at the *Shingir*, but at the *Sait-Kamish*. None of the later geographers seems to have known the delta from personal observation; al-Buhārī and the *Haraj* place the fishing-village *Khajalish* at the spot where the river enters lake *Arak*. At the time of al-Buhārī, who wrote in the year 375 = 985-986, or his authority (for there is no doubt that he himself never visited *Khajalish*) the left arm of the river west of *Gurgandj* seems already to have been dry; and the building of a dyke for the protection of the town of *Gurgandj* is given as an explanation for the drying-up of this river-bed. The writer is then said to have traced 'eastward', and to have flowed 'in one direction only'. (*Mus.*, p. 288, 289-301). No details are given as to the direction in which the main stream, after being dammed off at *Gurgandj*, flowed in lake *Arak*, nor was we told whether the *Kashgar* joined it or reached the lake independently.

Al-Mukhammad already knows the *Labot* as a dried-up river-bed, which even at his time was regarded as the old bed of the *Amu-Darya*; the drying-up of this river-bed and the desiccation of the region near the *Balkhan* mountains were connected with the rising prosperity of *Khwarezm*, although the river could have reached the *Sait-Kamish* and the sea only by way of *Khwarezm*, (traces of a course farther south have not as yet been identified with any certainty). That the view given by Al-Mukhammad was universally prevalent, is proved by the *Ush* *Khwarezm* as applied to the *Balkhan* district in the *al-Atlas* (ed. *Tornh.*, II, 267). It is still impossible to say with certainty, whether the report that a town existed at the *Belghun*, rests on any basis of historical fact; the suggestion made by *Tommichok* (*Seydiana*, p. 94 and 112) and *Marquart* (*Erden-Nama*, p. 35) to identify *Belghun* with the Chinese *Po-lo* and the town *Kashgar* mentioned by *Ptolemy* (V, century A. D.) cannot be accepted without reservation.

In the VII (XIII) century after the Mongol invasion and perhaps in consequence of the devastation of the country and the destruction of almost all the dykes, the course of the river seems to have been diverted towards the left. We are told that several towns on the left bank, among them already *Kharazm*, were flooded, and that the Mongols at the capture of *Gurgandj*, which was then the capital, (*Safar* 618 = April 1232) destroyed the dyke and thereby completed their work of devastation. A few years later the town (called *Urgent* by the Mongols and later by the *Chaghs*), was rebuilt; but it then lay (like the modern *Kunya-Urgend*) on the right bank of the branch which flows past it. During a space of 330 years this branch which flows towards the *Cink* mountains and the *Sait-Kamish*, is referred to in all descriptions of travel and historical accounts (that in the history of Timur's campaigns) as the main river, while the *Arak* branches are mentioned under various names as merely subsidiary. It seems probable a priori that after filling the basin of *Sait-Kamish*, the water found its way to the *Caspian* Sea through the channel of the *Labot*, and *Hamid Allah Kharizmi* (630 = 1239-1240) and *Hasan Ali* (820 = 1417) state expressly that this

was the case. De Goeje (*Dez-El-Ha* *Dez-Dez*, Leiden, 1875) and others have impugned the statements of these two writers on the ground that the other geographers of the same century all speak of the *Amu-Darya* as flowing into lake *Arak* only; closer investigation however shows that all these geographers, including *Yaqut* (2. 381-1446) and so forth, regard as particularly trustworthy, were completely dependent on the written sources of the preceding centuries; in addition to the Arabic geographers of the IX, X, XI century *Yunghun* used, and sometimes copied verbatim, the Persian *Yuzan-Nama*, composed only in the VII (XIII) century for the *Khwarezmshah* *Muhammad*. Even the remark that 'the desert between *Khwarezm* and *Shirvan* is so well known that no detailed description of it is needed', is taken word by word from the *Yuzan-Nama*, (cp. the text in *North's* *Iranian* *Geography*, *ed. North*, I, 81), and can therefore not be taken as referring to *Yunghun*'s own observation. The statements of *Hamid Allah* and *Hasan Ali* on the other hand cannot be traced to any written sources known to us; and the trustworthiness of the former is particularly supported by the fact that he mentions a large waterfall on the *Labot*, for the modern dry bed actually shows traces of falls of considerable height (up to 26 feet). *Abu* *Abdullah* in such a waterfall are also found in ancient authors (*Herodotus* quoted by *Strabo* and *Polybius*); but the assumption, that *Hamid Allah*'s statement may go back to those or similar sources, is made impossible by the fact that he mentions the Turkish name of the fall (*Gharat*, III, 1008, 1009, 1010, 1011). In the account of 1184 *Ali* the statement that the *Labot* joined the *Amu-Darya* and that the combined river flowed into the *Caspian* Sea, deserves special notice; for this there is no other literary authority, but *Abu* *Abdullah* such a junction of the two rivers are preserved both in old riverbeds and in local tradition; the statement has certainly nothing to do with the opinion of the *Amu* which regarded the *Jesartes* as an independent tributary of the *Caspian* Sea. *Hasan Ali* wrote his historical and geographical works at the court of *al-Nasir* *Shah*, at a time when *Khwarezm* belonged to the dominions of the *Mongol* monarch. This fact alone makes it hardly probable that his information on the lower course of the *Amu-Darya* should have been incomplete. At the same time it must be admitted that neither *Hamid Allah* nor *Hasan Ali* knew the *Labot* from personal observation. A more important source (not used by de Goeje) are some contemporary accounts of historical events (campaigns etc.) which took place in the region of the *Labot*, especially the following two: 1. *Zafar al-Din al-Iraqi* (ed. *Don*, text p. 236, 237, 238, 239) narrates how at the command of *Timur* the sultan of *Masandaran* sent in 794 (1392) brought in a ship to *Aghr*, (this is in *Khak* *Arak* and later in *Abul-Ghar* the name of the place where the river enters the *Caspian* Sea), and thence up-stream as far as the *Belghun* as far as a certain place (belonging as far as the waterfall); the author's father, then twelve years old, is said to have accompanied them on this journey. 2. *Khondamir* in the *Asatir al-Siyar* (ed. *Talbot*, III, 241-246) describes the campaigns of *Hasan* *Bagdar* (who later became sultan) from *Astrakhan* to the *Uzbek* in 824 (1420) and 828 (1424); in the year 824 *Hasan* goes

from Astrakhan to 'Aghra and Adak' (a fortress of this name is also frequently mentioned in the accounts of the campaigns of Khān Muḥammad Shāhshāh; it is to be sought on the left bank of the Volga on the chief route between Khān Aḥmad and the cultivated district on the northern slope of the Kizil-Dagh and Kopet-Dagh; perhaps where the well of Kurkūsh now is), after seven days he reaches the Amu-Daryā which he crosses on horseback; in 868 he leaves Astrakhan in the same direction, loses his way, and suffers much 'owing to the proximity of the sea and the great quantity of clay and mud', he reaches Adak, whence he crosses the Amu-Daryā, his army encamps on the bank of the river Agha-Ḥisār and later occupies the recently founded town of West (situated according to Abū'l-Ḥisār in the foot of the Ust-Urt, at a distance of 6 parasangs from Urgent). Both narratives prove very clearly, that the Volga at that time carried water in its lower course, and that it was regarded as a continuation of the Amu-Daryā. There is no reason to assume an alteration of the historical accounts under the influence of pre-conceived geographical opinions (such as might have been gathered from Isma'il Al-Jah and Hah, especially not in the case of Khondemir, who in the edition on geography appended to his grandfather Shāhshāh's *Kawāṣir al-Jafā* and his own *Ḥaḥḥ al-Sayr*, uses only the geographical authors of the 10th (x.) century, and still makes the Amu-Daryā flow into Lake Aral only).

We do not possess a detailed description of the course of the river for the time from 868 to 11th (xii.) to the 16th (xvi.) century. According to Abū'l-Ḥisār both banks of the Volga down to the Caspian Sea were not only inhabited, but also under cultivation; the road from Urgent to the bend at the Balkhān is said to have led 'from end to end', and we are told that fields and vineyards ran along both banks (though not 'in an uninterrupted line' as the French translation has it); the occupiers are said to have been semi-nomadic Turkomans (such as now inhabit the district on the Gorgon). Considering that at the time of Abū'l-Ḥisār the banks of the Volga had long been desolate, it is probable that his contemporaries had an exaggerated idea of the splendour of this past prosperity; in Hah's *Alam* account the course of the Amu-Daryā is given to the Caspian Sea goes for the greater part through desert country. From the present state of exploration of the bed of the Volga and the surrounding district it appears that only the water of the Sārt-Kamīsh and the upper Volga were used for the purpose of irrigation; further down stream the water probably contained salt, owing to the obdurate constituents of the soil, as is now the case in the Atrek. The fact that Sārt-Kamīsh was connected with the Caspian Sea was therefore hardly of great importance either for navigation (because of the large falls) or for the spread of cultivation. In the 16th (xvi.) century the course of the river was again diverted towards the right. In A.D. 1558 the district was visited by the English traveller Jonhinson, who regarded the Sārt-Kamīsh as a gulf of the Caspian Sea. Although describing it as a freshwater lake, there is no doubt that the Sārt-Kamīsh is referred to, as the editors E. Delmar Morgan and C. H. Coote rightly saw, and not the Atrek as had been assumed by Leach and de Goeje). At that time the water was being diverted more and more into

the right branch — the Kurdaṣ of the Asiatic geographers (called by Jonhinson *Ardauch* prob. for the Turkish *Artik*) although the left branch flowing past Urgent and West was still regarded as the main proper feeder by Jonhinson Oughet. We are told that the river at that time no longer reached the Caspian Sea.

Soon afterwards the water definitely diverted into the right branch, and in spite of a few isolated attempts (during floods) at breaking through in the opposite direction (such as took place as late as 1879) the river has since then flown in that direction. Abū'l-Ḥisār (born A.D. 1603 according to the cyclic reckoning; the year of the Hijra is erroneously given as 1014 instead of 1015) states that the event which ruined Urgent, then the capital, and its water-supply and resulted in the gradual destruction of the whole district took place 30 years before his birth; and it is already referred to by the Tatarish Sult who wrote in 990 (1582). In the 16th (xvi.) century Khān takes the place of Urgent as the capital of the country; later on the towns of Urgent and West are founded in the same district, obviously in place of the deserted towns on the dried-up dry bed; the island in the delta Arak (which has given its name to the lake) belongs to the most recent history of Khānism an importance which had never belonged to it before. It was not until the last century that some canals were again directed to the left, and that the town of Kuyay-Urgent (prop. Kulma-Urgent, 'old Urgent' to distinguish it from Urgent near Khān) was rebuilt except for a few years these canals have no longer been able to reach even the Sārt-Kamīsh. The project of constructing an artificial connection between the course of the river and the Sārt-Kamīsh and the Caspian Sea, has been under discussion, but the enterprise would be of no advantage in any respect, it has been given up since.

Bibliography. Dr. George Allen *alt. Rett der Ural* (Lond., 1875, contains a collection of the sources); *Early Voyages to Russia and Persia by J. Jonhinson and other Englishmen*, ed. E. Delmar Morgan and C. H. Coote (Lond., 1886; Hakluyt Society, N° 703) — Barthold's *Historical Geography of Russia*; esp. the account of them in the *Abhandlungen der Seminars für orientalische Sprachen*, *Wien*, *Studien*, II. 85, v. 46, vi. 100 seq., 211 seq. Quite recently cf. de Saunze, *The lands of the eastern caliphate*, p. 433-439, and de Goeje's reply in the *Deutsche Literaturzeitung*, 1905, N° 45, col. 3598-3600.

(W. BARTHOLD).

AMUL, name of two towns:

1. A town north of the Hamāwand, situated at 36° 25' N. Lat. and about 52' east of Greenwich, at a distance of about 12 miles from the northern shore of the Caspian Sea, in the district which, according to the accounts of the Arabs, was the home of the *Malayā* (*Amulān*); Amul is the regular Hind. Persian form of the (hypothetical) old Persian *Amurtha*. In the period of the Sassanid Amal together with Gōlān (the modern Gilan) formed a Neastorian episcopal see, cp. *Ziṣṭār*, *W. B. Morgan*, *Göteborg*, *SLIB*, 407. The town is also mentioned several times in the *Khān-Nāma*, in the Muslim period Amul became an important seat of commerce, and under the last 'Abbasids took the place of Sīrīya (the modern Sir) as capital of Tabaristan. Ibn Hawqal describes

Amul in the year 367 (973) as a very populous city, larger even than Keshik. The town was also a centre of active industrial life (carpet-weaving; and of scholarship; it is said to have possessed 70 madrasas (academies) in the 18th (18th) century. The famous historian al-Buhārī was born here in 309 (921). The prosperity of the town was seriously impaired through Timur's devastations in the end of the 15th (15th) century. To-day Amul is the capital of a large district of the province Khwarezm (corresponding more or less to the old Tabaristan). The rapid stream of the Herkhes which leaves the mountain-glens of the Alburz just before reaching Amul, flows in several branches through the town, which for the greater part is built on its left bank. The old town was situated to the west of the modern Amul; it is said to have been destroyed in an inundation, and extensive ruins (especially of an old fort) still indicate its site. The number of inhabitants, estimated by Pevsner at from 35,000—40,000 in 1873, is stated by Molgouof at 10,000 in 1860, and more recent estimates give somewhere 8,000, somewhere 20,000. These fluctuations find their explanation in the large diminution of the population during the summer, when a considerable number of the inhabitants go to the mountains with their herds. Amul lies to the centre of an open, well cultivated district, still characterized as already in the Middle Ages, by extensive orchards and rich orchards (famous plums). The small town of Herkhes, the 'Ala alom of the Arabic geographers (Vāḡat, I, 409; Al-Buhārī) situated where the Herkhes enters the Caspian Sea, serves as harbour of Amul.

A small town, south-west of Tikhvsk, situated at 37° N. Lat. and 62° 33' east of Greenwich, at a distance of about 3 miles from the left bank of the Oxus (Amu Darya). In the Arabic Middle Ages Amul belonged to the large province of Khwarezm, now it is (under the name of Chirchik) a part of Russian Turkestan. Although surrounded on all sides by the desert it once was of great importance for the caravan-trade as meeting-place of the route leading from Khorezm to Transoxiana. It was near Amul that in 237 (900) the 'Alid Muhammad b. al-Buhārī and his army were routed by the Samanid forces, who put Muhammad to death. The town is frequently

mentioned in the official records dealing with the fiscal taxation and the campaigns of Timur. The name Amul (like that of Amul N° 1) is probably connected with the people of the Marsh (Amud), more especially with an eastern branch (Cp. Vāḡat, VI, 47). In order to distinguish the town from the place of the same name in Fakhri districts definitions were sometimes added to the name, as Vāḡat reads, and it was called either Amul Zamm (Cp. e.g. Beladkhan, ed. de Goeje, p. 416, 420) i.e. the Amul near Zama (south-east of Amul), and the nearest fort, or Amul Darya, i.e. the Amul on the Darya (Oxus), or Amul al-Sharq i.e. the Amul of the river (the Oxus). Yet another name of the town, which occurs already in the Middle Ages, is Amul (Cp. e.g. Beladkhan, p. 416, Vāḡat, I, 365) or Amul (Cp. e.g. Wüstenf., I, 70), this is perhaps a more dialectal form of Amul, from which the later medieval name of the Oxus, Amu-Darya (river of Amul) may have been derived (Cp. Barthold, op. the article *Amu-Darya*); it may be questioned, however, whether Amul may not rather be derived from Amul, an ancient local name of the Oxus. The earliest name of the town, Chirchik (for Chirchik) the four rivers' refers to the important fact that the Oxus is the neighbourhood.

Hydrography. Vāḡat, *Madison* (ed. Wüstenf.), I, 69, 365; G. Le Strange, *The Lands of the Eastern Steppe* (Cambridge, 1905), p. 403 et seq., 434; Marquart, *Erkenntnis u. d. Geogr. d. Pers. Mittel-Nordwest* in *Abhandl. d. Kgl. Geogr. u. Hist. Mus.*, N. F., Vol. III, N° 2 (Berlin, 1901), p. 129, 131, 136; *Unterwanga u. Grsch. von Iran* (Leipzig, 1905), II, 57.

AMULET (See HAMAZIL)

AMUR (Hijab) a mountain range of Southern Algeria, situated between the Kab mountains to the S. W. and the mountains of the Aoudj Nadj to the N. E. (see *AMUR*, 414). It is an elevation stretching from N. E. to S. W. at a length of about 80 and a breadth of about 37 miles, and covers an area of about 3700 square miles. Its height is only from 650 to 975 feet above the plateau from which it rises in gentle slopes, towards the Sahara, however, it slopes down fairly abruptly. The structure of the massif is rather irregular, though several ridges and a few dominant peaks can be distinguished; to the north the *Amur* (5005 feet); the *Djebel Sah* (5544 feet); the *Urru* (5345); the *Djebel Naga* (4606); the *Djebel Sid el Madi* (4505); to the south, the *Djebel Sid el Madi* (5014), the *Djebel Sid el Madi*, the *Djebel Urru* (5014), the *Djebel Sid el Madi*. A characteristic feature of the eastern part of the *Djebel Amur* are the 'gates', vast plateaus of sandstone cliffs, bordered by escarpments and surrounded by terraces with steep walls of a height from 460 to 500 feet. These 'gates' are covered with pasture and forests; accessible only by means of steep, narrow paths they serve as natural fortresses to which the inhabitants can retire with their herds. The most important one is the *Gate of Kufra*, situated between the two branches of the *Urru* Mts, the *Gate of Kufra*, and the *Gate of Mada*.

Owing to its high elevation the *Djebel Amur* receives abundant rain and, in winter, snow; it is an important hydrographic centre from which

water-courses descend in all directions, forming nothing more than deep, open valleys, which, after leaving the massif, lose themselves in the sands of the Sahara or in the closed basins of the high plateaus. Such are, in the S. E. the Oued Melah, the valley of which, narrowed by the gorge of the Khroug al-Melah is one of the ways of access to the Sahara; in the South the Oued Ma which, after flowing through the South of Algeria under the name of Oued Mess and Oued Saïk, loses itself in the Shari; Melghir; in the North the various streams forming the Oued Seloug, which flows into the basin of Tugata whence the chief rivers in the Northwest the Oued Mili al-Najer flowing towards the Shari al-Bahr.

The high situation, the comparatively freshness of the climate and the abundance of water have favoured the development of agriculture and of vegetation in general. Fields of barley and wheat deep down in the valleys, in the depressions which extend between the mountain-chains, yield in normal years sufficient grain for the needs of the population. There are also meadows and orchards full of fruit-trees. In these regions are situated the villages which are inhabited by the sedentary part of the population and serve as winter-homes for the nomads. The following are the most important of these villages, the largest of which contain hardly a hundred households: in the north, Sidj Bu Zid, and the administrative centre of the district, and Talmassa; in the South al-Rigla, Tawila, al-Hamida, and al-'Alam. The mountain-slopes and the heights of the 'gades' are covered with trees (cyclobaths, thuyas, Aleppo pines, ilexes, and oaks with edible acorns), which grow so thick as to give the country the appearance of a real forest. Altogether the Djebel 'Amur is a very different country from the regions adjoining it to the South and North. It is a real belt of the Sahara... It always surprised the natives as a fairy-country which their imagination has painted in speckling colours. The Djebel 'Amur, as is proved by drawings scratched in the rocks, and by the tombs found everywhere in the massif, has been inhabited since a very ancient period; at the time of the first Muslim invasion it was occupied by the Waghar, a group of Berber tribes belonging to the Zaouia. Towards the S. country of our era the Rashid, a sub-tribe of the Beni Wafin, settled in the mountains, and gave them their name (Jebel Rashid); they were driven forth however by the Beni Hilal. An Arab tribe belonging to the Al-Bedl group, the 'Amur who later on were joined by the 'Uraw, settled towards the end of the 11. century on the eastern slopes and the surrounding plateaus; thence they advanced gradually, displacing the Rashid on the North and South, until in the 15. century they became master of the whole district as far as the high mountains. The name Djebel 'Amur was then substituted for that of Djebel Rashid.

Owing to the protection afforded by their mountain the 'Amur practically preserved their independence until the French conquest. The Turks were unable to subjugate them, and the bey of Oran never succeeded in gaining possession of Tawila, the principal Kyar of the country. They therefore had to content themselves with a nominal suzerainty, and the Djebel 'Amur was in

possession of but a kind of hereditary Bey held by the family of the Beni Yahya. In 1830 Abd al-Kader, the head of this family, succeeded in putting an end to the intestine wars, which had devastated the country, and established his own authority over the whole massif. The 'Amur were at that time divided into seven septes: Awlad Mouta, to which the Beni Yahya belonged; Awlad Beni 'Amur; Awlad Rahmoun; Amara; Awlad Ya'kub; Makna; and Hachet; they were capable of putting in the field 6000 horses and 3000 men. To them must be added the Xenam, a Berber tribe, of whom the chiefs only spoke Arabic.

The 'Amur preserved their independence until 1845, when they submitted to General Marry-Fongt; after 30 years of tranquillity, however, they rose at the instigation of the Awlad Sidj Shakh and took part in the insurrection of 1864-1867. — Even before the French conquest a fraction had separated from the rest and constituted as far as the district of Sigat; they were called 'Amur Sahara to distinguish them from the Djebaltia, the inhabitants of the massif. In the treaty of Talle Moghnia concluded in 1845, the 'Amur Sahara were recognized as subjects of Morocco.

(O. YVES.)

AMURATH (see MURAD.)

AMWAS (or 'AMAWA), the ancient Emmeusa mentioned several times in the time of the Maccabees and in Josephus; situated in the plain of Judaea, right at the foot of the mountains, and called *Nikopolis* since the 11. century A.D. The town was taken by 'Amr ibn al-'As; formerly the chief place of a toparchy it remained a provincial capital under the Arab domination, until the seat of administration was transferred to al-Ramla (q.v.). The modern 'Amwas is a miserable village with few old remains. The Castellum Emmeusa mentioned by the Crusaders may perhaps be identified, as Robinson has done, with the ruin of the castle of Laram at a distance of little over a mile. 'Amwas is especially known for the fact that it was a chief centre of the plague of the year 18 (which already 17) A.H. (638-639), which for this reason was called the plague of 'Amwas (or plague of 'Amwas and al-Jabal). Sabat, ed. 1800, page 1, 2316, n. 10. Its victims are said to have been 25,000, among whom were 'Abd 'Uddin, Mu'adh ibn al-Jadid, and Yaqub ibn al-Sufjan.

ANA (see ANAK.)

ANA, town in the Diocese (Mesopotamia), near the frontier of Irak, situated at N. Lat. 34° 27' and E. Long. (Greenwich) 41° 18'. It is a very old town known already to the cuneiform

inscriptions as Anai (Khanat), and to the Ancients as Anathia (Anath); cp. Frenkel, in *Real-Encyclop. der class. Altertumswissenschaft.*, a 2009. Munich, 1904, Supplement, v. N° 1, col. 77, and in the *Zeitschr. f. Assyriol.*, xix, 251, and in *Nhr.*, xi, 197. In Sumerian inscriptions 'Ana is referred to as a military station (cp. *Zeitschr. f. Assyriol.*, xxxviii, 1913, 201). In antiquity and during the Middle Ages (cp. cp. the Septuagint, 190—203, the *Hebr.*, 367—378) 'Ana was the name of a settlement on an island in the Euphrates; the modern 'Ana is situated on the right bank of the Euphrates, stretching alongside the river at a length of about 2 hours; this length is due to the fact that gardens are situated between the separate houses, and that the mountainsides which come very close to the river prevent an expansion in another direction. The modern 'Ana ends near the old town on the island with which it is connected by means of a stone-bridge. The population (consisting almost entirely of Arabs) was estimated by Gurney (1873) at 4000, whose chief means of support is industry; their principal produce is cotton, out of which they manufacture Arab cloaks (about 3000 annually); the commerce is also considerable, as 'Ana is the principal market for the caravan's dwelling between Syria and the Euphrates. The zone of palm-trees extends on the Euphrates as far north as 'Ana; the town was famous for its date plantations already in the Middle Ages, and even now it resembles a large grove of palm-trees. The Arabs also praise the local wine; cp. S. Frenkel, *Die arabischen Formeln der Arab. Lit.* (Leiden, 1886), p. 157; G. Jacob, *Arab. Beduinendicht.* (Leipzig, 1897), p. 93, 218. Besides 'Ana Arabic authors (e.g. Beladhorst, ed. de Goeje, p. 179, n. 182, 3) occasionally use the form 'Anai derived from the Aramaic (Syriac) 'Anath. The modern official spelling is 'Ana P.), cp. M. Hartmann in the *Zeitschr. der Deutsch. Ost. Ges.*, cxlii, 122. If the name is derived from the Aramaic it may be explained as (place of) goats'; cp. Frenkel, *loc. cit.* Under the Turkish administration the base 'Ana belongs to the liwa Bagdadli, cp. M. Hartmann, *loc. cit.*, cxlii, 2.

ANADOLI, Anatolia or Asia Minor, originally the name of the largest military district (Armenia) in the Asiatic portion of the Byzantine empire (Anatolia, the Khandaqchik has al-Nizhar) extending from Mesopotamia to Cilicia. Under Ottoman rule Anatolia comprised all Asia Minor west of the Kizil-irmak (Halys) and north of Karaman (corresponding more or less to the present Wilayet of Konia), with the exception of the provinces Konya, Sil, Bigla and Sogha (Smyrna) which were under the jurisdiction of the Kapaduk-Pasha. Kütahya was the capital of this large province and the residence of the Pasha. In a wider sense all Asia Minor was called Anatoli, and

this usage still prevails (Cp. the art. TURKEY.)

ANADOLI HİSAR, a castle erected by Bayezid I in 1398 (1399) on the Asiatic coast at the northwest part of the Bosphorus. Its original name was Güzelçe Hisar. It has now fallen into neglect. On the opposite coast Muhammad the Conqueror built in 1456 (1457) the castle of Rumeli Hisar, in order to bring Constantinople completely in his power.

ANARID (Anarid), Persian name of the planet Venus (Arab. Zuhra).

ANĀK, the karakal (from the Turkish Kara Kalib, 'Black Zay' in Persian. Sogh. Gush), a kind of lyra which was supposed to ward off evil of the lion, in order to announce its approach. In Assyrian 'Anā; in the name of the star ζ in the great bear and of γ in Andromeda (cp. Ideler, *Ursur.*, after also *Ursprung*, etc., v. der Sternnamen, p. 19, 126).

ANĀM (a.), plural of nām, cattle (also the name of a river).

ANĀMÜR, the ancient 'Anamur, a promontory and harbour in Asia Minor; now only a landing place (Scaia) and chief town of a kaza in the cağakli İli, vilâyet Adana. The ruins of the ancient 'Anamur still exist under the name of Eski Anamur).

Bibliography: V. Cornet, *La Lyrie*, *l'Asie*, II, 31, 32.

ANANIYA (a.; derived from ana, I, I-am; cognate).

ANAPA, Harbour on the Black Sea, in the district of Kuba (Russian Caucasus), with an old fortress captured by the Turks in 1751; belongs to Russia since 1825.

ANAS a. HANSA HANSA, one of the most prominent traditionalists. After the Hajj he another gave him to the prophet as servant; according to his own statement he was then ten years of age. He was present at Badr, but took no part in the battle, and is therefore not counted among the combatants. He remained in Muhammad's service up to the time of the prophet's death, later he took part in the wars of conquest. He also played small parts in the civil wars. In the year 63 (684) he officiated as imam of the salat at Umayy, acting on behalf of the real caliph 'Abd Allah b. al-Zubair. At the invitation of 'Abd al-Rahman b. al-Ash'ath he was represented by al-Harithi with being a partisan of the rebel just as he had formerly taken the part of the enemies of the Umayyads, 'Ali and Ibn al-Zubair; and although he was highly respected as a companion of the prophet al-Harithi had some people reporting round his neck a cord with his seal (72 = 691). It is said however that the caliph 'Abd al-Malik asked his pardon for al-Harithi's disapproval. ana died at Umayy at a very advanced age, which is variously given at from 97 to 107 years. His dates most frequently found are 91—93 = 708—711). — His reputation as a traditionalist is one of the highest. 'Abd Hanita, it is said, refused to acknowledge his authority in matters of tradition; and his version of the *so'fat* (Muhammad's ascension to heaven) as well as others of his traditions prove that he did not shrink from fantastic stories. A large collection of his traditions is found together in the *Mustad* of Ahmed b. Hanbal.

Bibliography: Ibn Hanbal, *Mustad*, II, 92 et seq.; Beladhorst (ed. de Goeje), p. 381.

the Syrian desert, the 'Anaza also advanced from the Nejd; the few tribes to have been to have been the Fedan and Wazem, who with the assistance of some of the Hadrami drove them from their seats by the Euphrates, forced the Euphrates to cross the Euphrates; they were followed, as it seems, by the Haddad, Sabs and Wadai. At last came the Anaza towards the end of the 17th century, and in the second half of the 18th century the Tawf and Erudat. At the Turkish government were powerless to interfere in these nomadic movements, the Anaza became undisputed masters of the Syrian desert as far as the Euphrates, where they stopped all traffic and commerce. Down to the second half of the 18th century, the district on the Euphrates was in their undisputed possession, and therefore a desolated and almost impassable country; in the last decade of the 18th century they made a raid on Aleppo and looted the town. Early in the 19th century 'Ali Pasha, the governor of Baghdad who was then fighting the Persians (Shummar) called upon the 'Anaza for assistance against the Shummar; they came in such numbers that the governor who scarcely had disposed of the Shummar soon began to be afraid of his friends and allies; he vainly attempted to persuade them to return, on the plea that they were no longer wanted: they demanded a reward for having come to his help from such a distance and settled on the pasture-lands near Baghdad. 'Ali Pasha now incited the Shummar against them, but when war broke out the 'Anaza were victorious, and ravaged the Shummar country; they also gained a decisive victory over the government troops and besieged Baghdad which was full of refugees, but retired before the savage Zuhdi whom 'Ali Pasha had summoned against them. The troubled condition of the Syrian desert and the Euphrates district, for which the 'Anaza were responsible, began to improve slowly after 1865 in consequence of the vigorously conducted campaigns of 'Umar Pasha, the governor of Aleppo, and later of Midhat Pasha who at that time was governor of Baghdad. There is much ill feeling between the 'Anaza and the tribes of the Haddad, not only because they have put a check on their predatory raids, but because the protection which they afford other nomadic tribes enables the latter to remain on raids against the much more powerful Anaza. It is for this reason that during the great rising of the Hawran Druses (1896), the 'Anaza remained loyal to the Turkish government and took part in the suppression of the insurrection. — They seem to be very negligent in observing the Muhammedan religious law (e. g. prayer). When the Wahhab movement spread in Syria they were obliged to receive the pious Wahhabis and to submit at least outwardly to the strict observance of Wahhabism; but after the fall of the Wahhab power in Syria they were quick to throw off this ignominious yoke of strict piety.

ANBAR (A.), ambergris (ambergris) is a substance to distinguish it from *ambra* (amber), a substance of sweet musk-like smell, rarely fa-

table and burning with a bright flame; highly valued in the East as a perfume and in a medicine. It is found floating on the water in tropical seas, (spec. gravity 0.92–0.93), or on the shore, sometimes in large lumps. Ambergris probably is a morbid secretion of the glandular system of the sperm-whale in whose intestines it is found. Various theories are together with sulphur, asphalt, mineral tar and naphtha, and states in addition to various marvellous theories of its origin that it is secreted by an animal and found in the body of sea-fish. There is, to say, no difference of opinion as to its origin in the sea; the Sea of Zangé especially (i.e. the part of the Indian Ocean stretching along the east coast of Africa) washes it ashore at certain places in big lumps, usually of the size of a head, the largest lumps weighing 2000 *maunds*. — Its uses further, that it strengthens the brain, the senses and the heart in a wonderful way; it increases the cerebral substance, and is of the greatest use to old men owing to its subtle warming effect. — The false economy of the medicinal effects of ambergris are found in the al-Baithi, the most detailed account of its origin of the various commercial varieties and their proveniences in the *Encyclopaedia of Natural History* who follows Ahmed in Vahidi and Muhammad b. Ahmed al-Tamimi co-operatively. There is an interesting reference to varieties called 'fish-ambergris' and 'beak-ambergris': the former also called 'swallowed ambergris' (*al-madhi*) is said to be got from the belly of a large fish called *al-fish* or *ambar* who swallows the ambergris floating on the sea and dies in consequence; the body is cut above and burning open gives forth the ambergris which it contains. The 'beak-ambergris' (*al-madhi*) contains the claws and beak of a bird which alights on the lumps and being unable to get away perishes on them. This fable is obviously founded on the fact (pointed out by Dr. Swinhoe) that ambergris frequently contains the hard mandibles (beaks) of a cattle-fish which serves as food to the sperm-whale.

(J. Kenna.)

'ANBAR (A.), ANBAR, an Arab tribe whose name is derived from ambergris or the sperm-whale (see the preceding article). The grammatical construction *al-anbar* = an abbreviation of the name, but this form occurs only very rarely in literature. *Khayman* is also given as the name of their ancestor.

The genealogy is: *al-Anbar*, *Abu al-Tahiri*, the Hadrami, *Umayyid* and others were brother-tribes, the *Yahudi*, *Kadi*, *Mali*, and *Hadrami* sept of the 'Anbar. The 'Anbar and *Hadrami* belonged to the *Yahudi*. A numerous genealogical entry about the many marriages of their ancestors from *Sham* is found in *Yahudi* I. ed., vii, 79; 2. ed., vii, 75; *Ambar* (ed. Wright) I. 265. Their seats were in the Yamama. Of modern tribes, belonging to them there are mentioned *al-Wahabi*, *Yamya*; of *Wadi* and *Wadi*:

al-A'ala, al-Fak' (occupied since its inhabitants had previous with Mesilima), Fa'ih, al-Khall, al-Khamisi, al-Lahiyān, Miswiya (in the valley of Fakh), Marwāhūn, Mundadji, al-Furghūba, Thirāk, Uaila; of localities: Dhi Salsā, al-Fak' (inhabited by the Qabāh and 'Anbar), Ilay-dhi-tamawāh (palm-plantations), Laylāh (inhabited by the Mabitāh and 'Anbar), Ma'ashū, al-Kāgha (palm-plantations), al-Kahmāh, Shūh Fīrā (palm-plantations and fields) History. When Muḥammad made war against the Tamīm in consequence of the refusal of one of their tribes to pay the tax on their cattle, he sent the Qabāh against the 'Anbar. The latter were beaten and had to leave a considerable number of captives in the hands of the Musilmān. This induced the whole group of Tamīm tribes to render their submission through their sheikhs. In the inscription of the year 11 (632) the 'Anbar seem to have been among the loyal Tamīm, and later they took part in the expedition of 'Ikrima.

(REMARKS.)

ANBAR, a town on the left bank of the Euphrates, in the north-east of Irak (Babylonian), situated under 33° 40' E. long. (Greenwich) and 33° 43' N. lat. According to the Arabic geographers the distance between Anbar and Bagdad on the main route was 12 (Yāqūt: 10) parasangs (= about 68 km. = ca. 42 miles, reckoning the parasang = 5.7 km.) (Cp. Streck, *Entstehung und Entwicklung der Gegend von Bagdad*, Leiden 1900, I. 9). The town is said to have been built by the Sāsānid king Shāpūr II (Arab. Shābūr) who migrated from A.D. 310—379; this statement however in all probability does not refer to an actual new foundation, but to the rebuilding and fortification of an older settlement already existing on the spot, especially as the survey of the ruins still extant on the site, which was undertaken by Ward and Illingworth, has furnished definite grounds for assuming the existence of a pre-Sāsānid town. Anbar soon became one of the principal towns of the Sāsānid empire, and already in the time of Ammianus it was regarded as the most important town of Babylonia after Ktesiphon. As a strong military station intended to protect the capital in case of attack from the side of the Eastern Roman Empire, it was of pre-eminent strategical importance, and thus played a considerable part in the emperor Julian's well-known campaign against Persia. The importance of the geographical position of Anbar was chiefly due to the fact that the first large navigable canal of Babylonia which served as a communication with the Tigris, branched off from the Euphrates at a short distance below the town. This canal called Nahr 'Isā in the Arabic sources (cp. Streck, *loc. cit.*, I. 23 et seq.; G. de Sazege, *Bagdad during the Abbasid caliphate*, Oxford 1900, p. 71 et seq.) undoubtedly belongs to the pre-Islamic period, and seems to have been cut by one of the Sāsānid kings, most probably Shāpūr II. Being situated in the midst of the most fruitful provinces of the Persian empire and connected with the capital Ktesiphon by a short and convenient waterway the strongly fortified town was chosen by the later Persian kings for their ornamental palaces. It is to this circumstance that the town owes its name; for the word Anbar, which the Arabs regarded as a plural, is derived from the Persian (Old Iran. hypoch. *anbarā*, Mod.

Pers. *anbar*, *anbar* *anbar*) and signifies a store-house or treasury; cp. Müldner, *Grammatische vergleichende Sprachlehre* (Leipzig, 1868), p. 495; S. Frankel, *Die aramäischen Formenwörter im Arabischen* (Leiden, 1886), p. 136; Hübner, *Armenische Grammatik* (Leipzig, 1897), I. 278; Schiefelowski in *Die Sprache der Völker des Morgenlandes*, Grönlitz, II. 699. Among the Arabs this appellative almost entirely supplanted the official name of the town *Pardisāpūr* (Arab. *Fairā-Sābūr*) = *Victorious* (cp. Shāpūr, derived from the name of its second founder, the Sāsānid king. The Persians were always to have used the name *Pardisāpūr*, by which it was also known to the Romans: *Ammianus Marcellinus*: *Historiae*: *Ammonius* *Berytensis*); it is also used by the Syrians who had a Nestorian bishop residing in the town (cp. Gohl in *Die Zeitschrift der Deutsch. Morgenl. Gesellsch.*, XLII. 413). The Byzantine knew only the form *Ἀνβαρ* (*Ἀνβαρ*, *Ἀνβαρ*) which they first heard from the Arabs. The latter retained the name *Fairā-Sābūr* only as the designation of a district (*ḥaṣṣa*) in the province (*amṣar*) al-'Alī, of which Anbar was the chief town; cp. Streck, *loc. cit.*, I. 16, 19.

Anbar remained a flourishing town during the early centuries of Islam. It was taken as early as the year 12 (634) under the caliphate of Abū Bakr, by Khalīd who defeated the allied Persians and Byzantines in a sharp conflict near the town. For a short time it even was the seat of the caliphate; the first ruler of the 'Abbāsī dynasty, Abū 'Abdillāh al-Saffār (132—136 = 750—754) made Anbar his residence and was buried there in the palace which he had built; and his successor, Abū 'Isḥāq al-Mansūr, resided in the town until the foundation of Bagdad in the year 145 (762). After that the importance of Anbar gradually diminished; its capture and devastation by Abū Tāhir, the leader of the Fātimians in 315 (927) accelerated the process of decay. In the time of al-Muḥaddad (375—385) the number of inhabitants was already small. The palace of the caliphs was still extant in the days of al-Muḥaddad (340—351), though in a partly ruined condition; it is mentioned once more in Rashīd al-Dīn's account of the Mongol advance against Bagdad in the year 656 (1258).

Today the site of Anbar is quite waste; the situation of the town is indicated by the ruins of Tell 'Akbar ('Akbar, 'Akbar) and Anbar (Chusay; Omān Harāb), in which latter form it has already recognised the old name of the town.

The Nahr Salsāwān which leaves the Euphrates to the west of these ruins cannot (at any rate in the earlier part of its course) be identical with the above-mentioned Nahr 'Isā (differently H. and R. Kämpf; cp. the map in H. v. Oppenheim's *Vom Mittelmeer zum Pers. Golf*, Berlin 1899). The very extensive remains of ruins which indicate a town of considerable size, have recently been visited and described by J. B. Bawden and Ward (together with Illingworth).

Wüstenfeld), I. 367; III. 949; *Belkhor* (ed. de Goeje), p. 246; *Rashīd al-Dīn, Hist. des Mongols de la Perse* (ed. Quatremère) = 380; G. Weil, *Gesch. d. Califat* (Stuttgart, 1846) 199, 203, 244; II. 609; III. 276; R. Ritter, *Erdbau*, 2. 145 et seq. 144 et seq.;

in the power of the Muslims, and finally limited to the eastern kingdom of Granada. The Christians of Northern Spain did not know it at all, but used the old name *Hispania* or *Spain* for the Arab South, while calling their own country by specific names like *Autania*, *León*, *Castile*, *Aragon* etc. This is pointed out in a similar way by al-Idrisi (p. 174). Cp. Dozy, *Recherches sur l'Histoire et la Géographie de l'Espagne* (3. ed.), I. 301—303; Abu 'l-Idrisi, *Taqwīm al-Ard*, transl. by Kieffer, II. 254; Goetze, *Die Araber*, p. 83; *Maršid al-Fihri* (ed. Juybaili), IV. 178.

Following the unknown and distorted map of Volney, beyond whom they did not easily venture in tracing the exterior boundaries, the Arabs frequently describe Spain as an irregular triangle with the following points: Punta Martor (or) Tarrifa (Marat Tarrif) on the Straits of Gibralter which is called *al-Zuhayr*, the road 'ear' (Kaysir, in the South, Finisterre in the North West, Cabo de Gata and Port Venados (Katum Venados = Hekal al-Zuhara) in the (North) East. Similarly the whole coast from Tarrifa to Gata (cp. al-Manskhah, *al-Bihar*, p. 4) or at any rate as far as Tarragona and Barcelona is sometimes regarded as the southern frontier, while the chain of the Pyrenees summed in two almost due north to north and thus drawn in the map appears as the frontier up the east. Later on however 'Shark al-Andalus' (East Spain) is of course also used more correctly to denote the later Kingdoms of Valencia and Murcia. The western frontier on the Atlantic (Shar al-Zuhara or al-Zuhara, al-Bahr al-maghrib = more benevolent; al-Bahr al-maghrib al-azim, *Ar-Rub al-Hamra*, al-Bahr al-Sharq contrasted with al-Sharq, al-Sham, al-Shamal, al-Madina, the Mediterranean) is also frequently reckoned only from Tarrifa to Cape St. Vincent as to Cabo de Gata near Lisbon; the northern frontier beginning there is made to turn round the corner of Galicia and to reach the West Pyrenees near Fontenay. The Pyrenees are usually called *Jabal al-Bihar*, mountain of the purities (mountain-passes) or *al-Jabal al-Bihar* or *al-Bihar*, the separating mountains (*al-Bihar* = *al-Bihar* or *al-Bihar*), the mountain ranges of Castile bear the name *Jabal al-Bihar*, mountains of the Sierras, and the Sierra Nevada is called *Jabal al-Bihar*, snow-mountain, or *Jabal al-Bihar*, moon Solotus.

As regards the descriptions and maps of Arab Spain which have hitherto been published, e.g. in the atlases of Spruner and Mevius (2. ed. 1880) and Dreyer (1894) cp. also the maps in August Müller's *Der Islam im Morgen und Abendland*, II. and especially in Stanley Lane-Poole's *The Arabs in Spain*, 1. ed. (1887). It must unfortunately be said that all without exception are inaccurate and full of errors which are handed down almost uncorrected from the unhappy times of Casiri, Conde, Lebeau, Jaubert, Gayangos, Hammer, Mehren etc.; even the labours of a Dozy seem to have left almost no trace in the geographical exploration of Arab Spain, and that great critic and historian himself was not nearly critical enough in dealing with the impossible names and distorted forms in the section on Spain of the *Description de l'Afrique et de l'Espagne* par Edrisi (text and arabic text and translation, des notes et un glossaire, par R. Dozy et M. J. de Guignes, Leyde 1845; cp. on this

work E. Saevedra, *La geografía de España del Edrisi*, Madrid 1882—1883), though the responsibility for the mistakes probably rests with the original text of al-Idrisi. Apart from such sporadic corrections of details, and identifications of names and sites as are found scattered throughout the works of Dozy (op. especially *Observations géographiques sur quelques anciennes localités de l'Andalousie* in the *Recherches*, 3. ed., I. 295—347) and in the writings of Saevedra, Esnassary, Egmont, Codera and Raset, very little has hitherto been done for a scientific treatment of the geography of Muslim Spain. It will therefore be necessary to collect from all accessible printed and unprinted sources all the notices referring to this large subject, which Arabic geographers and historians, as well as the biographical dictionaries and anthologies, material thus brought together will have to be compared, arranged and subjected to critical analysis, and to be used as the basis of an entirely new geographical description and for the preparation of new maps, which all can be derived from the strictly historical and unscientific identifications of Casiri and Conde down to those of Hammer and Mehren; it will be sufficient to compare only the unprinted work of 833 place-names of the Iberian peninsula, put down without all critical selection in the most arbitrary forms, pronunciation and circumstances, which Hammer's blind encyclopaedia has compiled chiefly from Casiri, Conde, Jaubert and Gayangos and on which he wasted 47 pages of the *Sitzungsberichte der Wiener Akademie* (1854). In the field of history the great Dozy seemed to throw overboard all the old material (Conde etc.), before he could write his monumental *Histoire des Musulmans d'Espagne* by the help of the Arabic sources, first critically edited and exploited by himself; in the same way it will be necessary for geographical research in turn even an entirely new leaf, before a really critical exploration and description of Arab Spain — *al-Andalus* — is possible. I have shown in isolated examples the method to be followed (involving of course, where necessary, the comparative study of the Medieval sources, both Latin and Spanish, and even of ancient classical literature); and I have indicated, how from the study of Arabic sources results can be gained even for determining and identifying ancient classical place-names and for fixing the corresponding sites; cp. *Olbia* = *Albia* = *Ulpia* = *Albia* = *Al-Bia*, *de Cádiz* = *Onuba* in *Homages à Don Francisco Codera* (Saragossa, 1904), p. 115—119; *Almoghara* et *derivées d'Almogara* (in *les auteurs arabes et O. Archéologie Portugaise*, VIII. (1903); *Zur spanisch-arabischen Geographie*, *Die Provinz Cádiz* in R. Haupt's *Korale* II (1905); *Die geographische Lage von Cádiz-Saragossa* (1906) und *Alarcos* (1908) in the *Revue Hispanique* for 1906; cp. also David Lopez, *Toponymie arabe de Portugal* in the *Revue Hispanique* for 1902. Owing to the fact that during the Reconquest especially after the capture of Granada (1492) invaluable treasures of historical and geographical literature, especially dealing with Spain, were sacrificed to blind fanaticism and irretrievably destroyed, the material about Spain which still exists scattered in North Africa and the East, should be brought together from all quarters; the whole material should then be made accessible to a wide circle

of scholars, geographers and historians, by means of critical translations accompanied by detailed commentaries. The whole geographical and historical literature of the Arabs, in so far as it contains any reference to Spain, should be treated in this way, beginning with Ibn Khordadbeh's short notice written in A. D. 846, and the works of al-Ya'qubi, al-Buhārī, etc. (cp. especially the monumental *Bibliotheca Geographorum Arabicorum* ed. de Goeje, 1870-1894) down to the last gigantic compilation which the Maghribī al-Muḥarrir collected at Damascus in the years 1625-30 out of 100 Arabic sources, and which may be described as an encyclopedia of Muslim Spain, especially as Gayangos' so-called translation of this mine of information, *The History of the Mohammedan Dynasties in Spain* (2 vols. 1840-1843) is most inaccurate, uncritical and obsolete, and avoids difficulties by ignoring them. All geographical references and names should moreover be collected from the vast Arabic dictionaries of learned men and of scholars especially as many of these books treat of a surprisingly large number of Spanish places, thereby giving the flourishing condition of Arabic letters in Spain; the principal work to be used in this way is of course Codrès's *Bibliotheca Arabico-Hispanica*, the ten volumes of which contain biographical works specially dealing with Arab Spain; (it is unfortunate however that false readings and corruptions are particularly frequent in the case of place-names).

The history of Muslim Spain can here be only treated in its outlines. It begins with the marvellously rapid Arab conquest of the Peninsula (from 711 onwards) the story of which has been embellished by many legends; but at first until 755 by the quickly changing governments of the Umayyad caliphs of Damascus (more than 30) the Arabs boldly advanced as far as the heart of France (732 Tours-Poitiers), there followed the civil war between Northern and Southern Arabs and Berbers, and in the year 756 the foundation of the separate emirate of Córdoba (Cordova) or al-Andalus independently of the 'Abbasids by 'Abd al-Rahmān I, the Umayyad who had escaped from the ruin of his family. The rule which he founded reached its highest point of splendour under 'Abd al-Rahmān III (912-961; caliph 929); soon however it began to wane, especially after the death of the pious regent (al-Muḥaddid) al-Ma'mūn (1002) (q. v.), the greatest statesman and general of Arab Spain, who may be called the Hamarok of the 11. century; and in 1031 it disappeared entirely. Out of the ruins of the great caliphate there arose numerous but short-lived petty states under princes (*ḥakims al-ḥawāṣif*, *Reyes de Taifa*) who for the most part were men of high culture. In the years after 1080 (victory of Yusuf b. Tashfin over the Christians at al-Zalāḥa = Santolae north east of Badajoz) these small dynasties were destroyed in a single manner by the rough force of the Almoravids (*al-Murābiṭūn*), Berbers from Morocco, who in their turn were supplanted both in Africa and Spain (1145-1150) by another religious and political sect and dynasty, the Almohads (*al-Muwahhidūn*) = Unitarians. The power of the Almohads in Spain gradually dwindled down after their heavy defeat at Las Navas de Tolosa (al-Bāḥ) in 1212; and after 1230 the Arab domination was restricted to the small, but

industrially active kingdom of Granada which, though protected by the mountains, yet had to acknowledge the suzerainty of Castile. The town of Granada was taken in 1492; there followed the instructions of the Moriscos, especially in 1568-70, and at last in 1609, the final expulsion of the Moriscos, Mudjars and Jews. A detailed treatment of this long history would be out of place here, and we must refer the reader to the special articles dealing with the various subjects. Here we content ourselves with an enumeration of the various dynasties which ruled in al-Andalus, with the names of their capitals:

Umayyads (Cordova)	756-1031.
'Abbasids (Seville)	1031-1091.
Ḥishmīyah (Cordova)	1031-1050.
Ḥammūdīyah (Malaga)	1035-1057.
Zirīdī (Granada)	1015-1090.
Ḥirshīdīyah (Carcass)	1029-1067.
Bakrīdīyah (Almería)	1011-1031.
Banū Vahyā (Níola)	1023-1051.
Banū Maymūn (Sútra)	1008-1051.
Ṣaḥbī b. Ḥabīb and son Muḥammad (Santa Marta de Algarve)	1011-1050.
Afṣarīdīyah (Bisaya)	1022-1091.
Banū Ḥabīb (Toledo)	1036-1085.
'Amrīdīyah (Valencia)	1021-1065.
Banū Ḥabīb (Sagunto)	1039-1110.
Banū Ḥabīb (Almería)	1026-1103.
Banū Ḥabīb (Alpuente)	c. 1025-1092.
Banū Ḥabīb (Almería)	1022-1091.

Cp. the chronological table in Dory's *Historia* (appendix), which is followed in Stanley Lane-Poole, *The Mohammedan Dynasties* (abridged; London 1894); Antonio Vives y Escudero, *Monarquía de las dinastías arábigo-españolas* (Madrid, 1893); Cortés, *Tratado de numismática arábigo-española* (Madrid, 1879), and his smaller special contributions: *Junco de Hierro de la Roda y Delgado, Catálogo de monedas arábigo-españolas que se encuentran en el Museo numismático nacional* (Madrid, 1893); H. Laval, *Catálogo de monedas musulmanas de la Biblioteca Nacional, España y África* (Paris, 1891).

For the period from 711-1150 we have Dory's work, *Historia des Musulmans in Spanien* (Leiden, 1861; German tr.: Leipzig, 1874; Spanish by F. de Castro, 2. ed., Sevilla-Madrid 1877-1878), an abridgement of which is given by A. Müller, *et. c.* For various controversial points and disputed questions recent investigations must of course be consulted e.g. Saavedra's *Historia sobre la invasión de los árabes en España* (Madrid, 1892), where it is made probable that Rodrigo escaped after the first battle against the Arabs and Berbers to the Laguna de la Janda in 711, not put up a brave fight in the North West until 713, in which year he was killed fighting against them in the battle of Segoruela and Tormes, south west of Salamanca, a theory supported by the traditional site of his tomb at Velez in northern Portugal. (Cp. also Saavedra, *Ante. Madrid 1906*; Juan Menéndez, *Legendas del almoravismo* (Madrid 1906)). — The times of the Almoravids, Almohads, and Nasrids or Ahmarids (Banū Nāsir, Banū 'Aḥmar; 1232-1492) of Granada, i.e. the period covered by the 13-15. century, still wait for a second Dory, whose first task it would be to make full use of the Arabic sources. Sporadic contributions like Codrès's *Dynasties y dinastías*

Don de los Almorávides en España = *Crónicas de España* (ed. in Zaragoza, 1890) are of course to be welcomed gratefully as authentic material which ought to be critically analysed. Fagnan's French translations of several Arabic sources for the history of Spain and the Maghrib are also very excellent. *L'histoire des Almorávides d'après l'histoire de l'Espagne* (Algiers, 1893); *Chronique des Almorávides et des Hafsides attribuée à Ibn al-Battûn* (Constantine, 1895); *Ibn al-Athîr, Annals du Maghrib et de l'Espagne* (Algiers, 1898-1901); *Histoire de l'Afrique et de l'Espagne illustrée d'après l'histoire de Ibn al-Athîr*, I. (Algiers, 1901) II. (1903); *En Nedjem et en Aïme: Extrême-orient en Maghrib* (out of Ibn al-Athîr) by Tadjanbardi, Constantine, 1907; unfortunately the place-names do not receive sufficient critical treatment.

It is only the last episode of the chivalrous struggle protracted through 800 years for the possession of the beautiful peninsula, which has again and again inspired historical works either of more or less romantic tendency or of serious purpose, there will have to be given their due share of attention in a final history of Granada and its Almorávids, e.g. L. de Eguíluz Yanguas, *Historia histórica de la Conquista del reino de Granada por los Reyes Católicos según los cronistas árabes* (2. ed. Granada, 1894), one of the latest contributions. For the special geography of the small kingdom of Granada Simon's (*ibid.* 1897) *Descriptión del reino de Granada segun de los antiguos árabes* (Madrid, 1860; 2. ed. 1872) is still the foundation, though even in its second edition it must frequently be used cautiously and critically. The same author's monumental *Historia de los Almorávides de España ilustrada de los mapas y de los antiguos testimonios de los escritores cronistas y árabes* (Madrid, 1897-1903; Tomo xii. of the *Memorias de la Real Academia de la Historia*: 58 pp. preface + 976 pp. of text) is to be consulted for the whole Arab period. Of the many histories of towns and localities, so popular in Spain, only a few are of special historical value, e.g. Alvarez Campaner y Ferraz, *Historia histórica de la dominación islámica en las Islas Baleares* (Palma 1885) on which cp. Codrès, *Estudios críticos de historia árabe española* = *Selección de Estudios árabes*, vii, Zaragoza 1901, p. 249-301; Alfred Bel, *Les Baies d'Alger, les mers représentatives de l'Empire almorávide et leur rôle contre l'empire almorávide*, Paris 1903; Mariano Gaspar Remón, *Historia de Murcia musulmana* (Zaragoza 1905) etc. Alvarado's more recent comprehensive manual *Historia de España y de la civilización española* (8 vols. Barcelona 1900, 1903, 1906 down to the year 1700) is also occasionally useful, although its treatment of the Arab period is based on secondary sources only and must be used cautiously and critically. A good survey (based chiefly on A. Muller) is also given by Th. Lindner, *Weggen und der Islam in Spanien*, in *Zeitschrift-Berlin*, 1902, 102-140. As a valuable geographical contribution must be mentioned: F. Pons Baiget, *Estudio geográfico sobre los Almorávides y conquista andalusí* (Madrid, 1893); Brockelmann in his *Geogr. arab. d. lit.* also deals with the Spanish-Arabic writers, although his accounts (especially in the first volume) are frequently less complete than might be desired.

Schick, *Spain and Islam in Arabic in Spain and Sicily* (2. ed. Stuttgart, 1871) gives the best account of the particularly rich (and as) literature of the song-loving Spaniards as well as of the so-called Moorish, as developed especially in their architecture which is characterized by a wealth of decorative detail (arabesque, arabesque, and ornamental inscriptions) and in which the ornamental element predominates over the constructive; its development is traced by Schick from the great mosque of Cordova (786) to the jewel-mosque, the Alhambra. The best pictorial reproductions — many of them in colour — are in yet Calvert's *Moorish remains in Spain* (Cordoba, Seville, Toledo, Granada; 1900/1907). The manner and the extent of the influence, which the medieval civilization of Arab Spain exercised on the West, has so far been scientifically investigated to a small extent only; this applies e.g. to the still unsolved problem of the so-called school of translators at Toledo and the intermediary rôle played by the Neo-Hebraic literature of the Spanish Jews which reached a high state of development under the influence of the Arabs. Cp. also Schick's annual bibliographical reports (since 1871) in Vollmöller's *Neuzeitliche Zeitschriften*; *id.*, *The Arab. Sprache in der roman. Literatur in Göttingen* *Grundriss der arabischen Philologie*, II (1904), 315-323, *id.*, *Hispano-Arabia in the East*, *Der Deutsche*, *Abhandl. Geogr.*, *ibid.*, 350-364 and article *ARABIA*, besides the article *ARABIA*.

(C. F. SEYMOUR)

ANDARĀB, Khâdic Period (hypothetical) Andar-pak ('Between the waters'), a geographical name occurring several times in connection of Iranian speech to denote rivers and localities.

1. The river on which Andarāb is situated, belonging to the system of the Aras (Araxes), rising on the north slope of the Sawalio chain (the Sahlan of the Arabic geographers, see above p. 134b) it flows in a curve round these mountains, first in a north-easterly, and below Andarāb, in a north-westerly direction. The sudden change of direction is caused by the mountain of Qilan which obstructs the course of the river like a dam and prevent it from flowing into the Caspian Sea. To the north east of the Sawalio-Dagh the Nahr Andarāb joins the river of Alar coming from the west. The united river — the modern name of which is Kāra-Sa — flows northward to join the Aras. The Nahr Andarāb is nowadays called Balī-Sa ('fish-river'); the name Kāra-Sa is also frequently extended to it.

2. Name of a town situated at a distance of a few parangs from Dardānā, the capital of the province of Aras (q. v.); also name of the Iranian district of which Barjān is the center.

3. Town in Khorāsān, 3 parangs from Merv; also called Andarāb.

4. Town and river, five days journey south-east of Simingān (to the south east of Balkh), like No. 3, it is also called Andarāb.

ANDIJAN, chief town of the district Farghāna in Russian Turkistan, important commercial town with 49,672 inhabitants (1900). Under the name of Andukhan it is mentioned as early as the 15. (16.) century; it is said to have been rebuilt towards the end of the 17th century by the Mongol rulers Dawa and Kuddū; under the Timurids and later it was the residence of the princes or governors of Farghāna; in Eastern Turkistan all inhabitants of Farghāna are still called Andijānāt. All buildings of the modern town (mosques, madrasas etc.) belong to the last century. In 1898 there was a rising against the Russian government, which was suppressed in a few days; in 1902 occurred a great earthquake, in which nearly all the houses of the natives were destroyed, and which claimed 4500 victims. As in most towns of Turkistan, a Russian quarter has then side by side with the original Moslem town.

(W. BARNHART.)

ANDJUMAN (Turkish pronunciation *Enghuman*), a Persian word the original meaning of which is 'union, assembly, group' (Arabic equivalents: *wasfiyya* and *wasfiyyat*). For a long time however, as Champian points out, the word *andjuman* has been used to denote especially religious or denominational associations such as the Zoroastrian societies of Yezd and Kerman which exercise judicial functions, and the municipalities of *darwishes* founded by Zahir al-Dawla, the governor of Hamadshān. Since the introduction of parliamentary government the word has acquired a new meaning and the political groups which came in great number at first in the provinces and later in Teheran, were called *andjuman's*. In the 19th century the word has frequently been rendered by 'club', a translation which, though incorrect, yet serves to express adequately the character of these societies of modern Persia. Most of them undoubtedly present a striking analogy with the Clubs of the French revolution, and exercise the same kind of political activity. At the same time however they play, according to their importance, the part of provincial parliaments or municipalities. There have also been *andjuman's* formed as philanthropies, clubs for technical societies, or even as professional syndicates; but all these associations, whatever their name, were devoted to liberal and constitutional ideas, and exercised some political activity.

The most famous of these societies is the *Andjuman-i-Milli* (National Club) of Teheran founded on the 1st Ruzdagh 1324 (17th December 1905) by the leaders of the constitutional movement after leaving the British consulate where they had taken sanctuary (see). At first it consisted of twenty merchants and a few 'ulama'; but the number of members increased rapidly and soon included representatives of all classes of the community. From the very beginning its influence was such that the *wafta* 'ulama, Muhammad 'Ali Mirza was represented in it by an accredited deputy. Nor was the growth of its authority impeded by some conflict with the Chamber of Deputies, especially when the latter ordered the recall to Teheran of the called 'ulama', or by the difficulties attending the vote on the law concerning the provincial assemblies which desired to obtain legal recognition at the earliest moment. The club was temporarily dispersed after the coup-

d'etat of June 1906, but re-assembling soon afterwards, it seized the supreme power in Adhar-beyghān and appointed Sa'adat Khan and Nādir Shāh generals of the constitutional party; working in agreement with the other *andjuman's* of Persia it organised the well-known gallant resistance against the protracted government. Although supported all through by the press, the National Club decided to found an official organ, the *Ujda-i-Mill* which published the minutes of their meetings.

The next in importance after the Teheran club is the sacred club of Isfahān, founded in 1907; it consists of 18 members, 3 from each class of the community, and ordinarily meets every Saturday. It is the *andjuman* of Isfahān which organised the resistance against absolutism in the South of Persia; it also secured for the constitutional party the powerful assistance of the Bahāyists and freed Fārs from the domination of the Shah. Other societies of no less activity were founded at Meshhed 13 *andjuman's*, of which some charitable, and another educational, Hamadshān, Ardebil, Kermān, Shiraz, Bender-Bilūcher etc. At the last mentioned place the opening of the meeting was announced by salutes of artillery and the troops presented arms before the delegates of the people.

The capital was somewhat slow in following the example set by the provinces. At first it had only meetings of corporations for the purpose of preparing the elections—for which each class of the population nominated its representatives separately.—But as soon as the *andjuman* had been approved of by the religious authorities of its district number multiplied rapidly. A separate one arose in each quarter of the town, and a central *andjuman* served as a municipal council and originated many important reforms. Other societies were formed to include people belonging to the same province, or following the same occupation, e.g. students, professors, physicians, and telegraph officials, or interested in the same questions; similarly there was founded a society for Public Education, which had representatives in the provinces, an agricultural club and many charitable associations. The *Andjuman* of the Brethren admitted Zoroastrians as members. There was even a society of women: the *Andjuman-i-Niswan* which met every Friday for the discussion of social questions of interest to women. During these meetings ladies were not permitted to smoke or to drink tea, nor were they allowed to bring their children. In June 1906 Teheran possessed no less than 114 *andjuman's*; nearly every inhabitant of the town belonged to one, and many to several. It must be admitted that apart from a few exceptions, these societies in spite of their great number and varied aims, maintained on the whole a perfectly correct attitude. Their meetings were much frequented, and the influence of the constitutions facilitated the acquisition of new members.

Several Persian *andjuman's* were formed in foreign countries; at Bombay e.g. there exists a Persian patriotic society called the *Andjuman-i-Wajmahāddin-i-Iran*. After the formation of constitutional government in Turkey several liberal associations, among them a Persian Committee of Union and Progress, were founded at Constantinople in order to collect financial assistance for the champions of freedom, and to secure for them the sympathies of Europe. Persian societies for

mutual assistance have for a long time existed in the Caucasus and in India.

In India the name of andjuman has been adopted by a large number of Muslim societies, on which cf. A. la Chaire's important article on the *Asr al-Azhar* in the *Revue de l'Asie musulmane* (November 1906, p. 77-78) and also *ibid.* November-December 1907, p. 579, January 1908, p. 172, March 1908, p. 800. Such societies are e.g. the Andjuman-i Ulama at Bombay which has done much to improve the state of the Indian Muslims; the Andjuman-i Ulama of Patna, Lahore, Bangalore, Calcutta, Trichinopoly; the Andjuman-i Musafiri of Bombay; the Andjuman-i Masid Ahl-i Islam of Vellore; the Andjuman Masid-i Islam of Madras and others.

(L. DOUAR.)

ANDKHUL, in Vilkho (*Andkhan*, ed. Wadant, l. 372; *Andakhul*, also written *Andakhul* and *Andakhul*, name of a province (Chikna) and town in Afghan Turkestan. The town is situated on the river Sengalik and serves as an intermediate station for the caravan trade between Afghanistan and Uzbekistan.

Bibliography: G. de Saugué, *Les lands of the eastern caliphate*, p. 426 and the authors quoted in the *ibid.* in that passage.

ANEIZA (see *ANAZA*.)

ANFAL (A.), plural of *Infal*, booty; *Shari'at al-Fal* in the title of Sur. 8.

ANGARES (see *ANGAR*), a few houses and covered with leather, used in the Sudan.

ANQORA, the ancient *Anqra*, called *Anqia* by the Arabs and *Angureya* by the Turks, capital of the vilayet of *Anqra* since 1860 in Asia Minor. The town which, according to Cuvier, has 2783 inhabitants, is built upon the slopes of a rock which rises above the plain to a height of about 500 feet; at the top of the rock is the citadel (*Asr al-Fal*). The most notable building is the mosque of *Al-Bayt al-Nabawi* dating from the time of Sultan Soliman, at the north side of which are found the remains of a Roman temple with the inscription of the emperor Augustus (*Augustionem Augustinum*). Since 1890 *Anqara* has been the terminus of the Anatolian railway. The town is also known for its goats wool, but the formerly flourishing wool-industry and the important export-trade in materials made of goats hair has now ceased; at present these materials are only manufactured in a single village of the vilayet called *Sunay* or *Itanay*. The distillation of spirits is now a flourishing industry, and the surrounding district produces excellent wine and other kinds of fruit.

History. During the prime of the Arab caliphate the town suffered frequently through

the annual raids against the Byzantine empire; it was not, however, permanently occupied by the Muslims until the time of the Seljuks. After the fall of this dynasty the district of *Anqara* was temporarily independent, until it was incorporated in the Ottoman empire by Timur (1701-1793 = 1359-1389). In the neighbourhood of the town is the plain of *Al-Bayt al-Nabawi*, the scene of the battle between Baybars and Timur (1389-1390). In 1390-1391 the town was destroyed and taken prisoner.

Guichet, *La Turquie d'Asie*, t. 279 et 280; Pauli-Wisnowski, *Asien-Minor*, p. 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

ANHALWÄRA (ANHALWÄRA), the former capital of Gujarat, taken by Mahmud in Ghazni in 410 (1023). The site is now occupied by the town of Patan (in northern Baroda).

ANANIURI or *ANANI* (ANANI), modern Syrian-Arabic name, the name of whose province was published at Damascus 1885 and Beirut 1886, under the title *Sifr al-Sayr al-Mawdu'at*. An elegy on the death of his relative Yuhanna al-Anani who died in Paris on the 13. Anani (March) 1890 (cf. *Journ. Asiat.*, 1890, t. 1, p. 333) was printed in the collection of *Aschshikhr* published as a memorial to the latter (Beirut 1890, p. 21). Two other works *Asr al-Anani* and *Aschshikhr al-Anani* are mentioned in Kahlili's catalogue for 1900/1907, on p. 105.

(L. DOUAR.)

ANI, an Armenian town, the ruins of which are found on the right bank of the Arpa (as called by the Armenians *Akhuryan*) at a distance of about 20 miles from the point where that river flows into the Araxes. The origin of the name is unknown, though the suggestion has been made that the town may owe its name to a temple of the Persian goddess Anahita (the Greek *Anaitis*). It is certain at any rate that the district was inhabited in the pre-Christian period, pagan tombs having been found in the immediate vicinity of the town. As a fortress Ani is mentioned as early as the 7. century A.D.; it was bound to be chosen for that purpose owing to its strong position between the ravine of *Trakotashan*, through which a stream coming from the hills of *Ala* flows down to the Arpa; and the steep bank of that river, in the middle centuries the royal house of *Kamran* had a castle at Ani, the foundations of this building, erected of stone blocks without mortar joints on the rock, have been discovered during excavations in the citadel. The oldest portion of the building seems to be a little church built perhaps before the castle (towards the 10. century), which later was incorporated in the castle and used by the *Kamran* as a domestic chapel.

From the 11. century onward the district of Ani, like the rest of Armenia, was under the suzerainty of the caliph. During this period the dynasty of the Bagratids succeeded in gradually enlarging their possessions and in establishing their power as a firm basis. The princes of this house endeavoured to enter into direct relations with the caliph without having recourse to the Muslim government of Armenia. In A.D. 887 the Bagratid *Ashot* 'Prince of the provinces of Armenia and Georgia' was proclaimed king by the order of his country and confirmed in this dignity by the caliph. The son of this first king, *Smbat*

(called by Arabic authors *Sankh* b. *Aghut*) was crushed in the year 914 by the governor Yusuf b. Ali 'I-Saj, whose act is stigmatised as 'tyranny and rebellion against God and His prophet' by Ibn Khalkal (ed. de Goeje, p. 232). Even under Sankh the kingdom of the Bagratids is said to have included the whole region from Dvin (Arab. *Dabli*) to Bardha's reaching southwards as far as the frontier of Mesopotamia (al-Buhārī; *Iran al-Islāqī*, ed. de Goeje, p. 188 and 194). The son of the murdered king, Aghut the Imam, succeeded, partly with Byzantine assistance, in re-conquering his kingdom; as ruler of Armenia he was the Persian title *shahshāh* (king of kings) which had already been conferred on his predecessor and rival, Aghut son of Shaguh, by Saluk, the sultan of Mosul.

As early as the first half of the ix. century the Bagratids Aghut Mankar bought the district of Ant from the Kamasarakas; but it was not till the reign of Aghut III. (961-977) that Ant became the royal capital. The wall which is now extant was built by Sankh II. (977-989); the site of an older wall erected in 964 has been fixed by the excavations of 1893, and a comparison of the spaces enclosed by the two walls shows that a few decades had been sufficient to witness a considerably increase in the number of inhabitants. At a later period town life was undoubtedly not restricted to the comparatively narrow space within the walls. The Bagratids built several bridges over the Arpa-Chai thus enabling the trade between Trabzon and Ponto to take the shorter route through Ant instead of passing through Darts. Their dynasty reached the summit of its power under Gagik I. (1000-1020), and the most flourishing state of the capital would naturally coincide with this period; from 993 onwards Ant was the residence of the Catholicos of Armenia. An inscription of the 11th century, Gagik retained the Persian title of *shahshāh* which also appears in an Armenian form (*shahyats arshak*); he was also styled 'king of the Armenians and Georgians'. The remains of a church erected by Gagik in 1001 were excavated in 1905 and 1906; among them was found a statue of the king which represents him as wearing Muslim head-gear (*turban*); the arms headgear is also found in a relief portrait of his predecessor Sankh II. preserved in the monastery of Haybat.

Under Gagik's successor the kingdom rapidly hurried towards its close, and as early as 1034 it became a part of the Byzantine empire. The growth of the town of Ant however was further encouraged by the Byzantine governors (*catapans*); an Armenian inscription ascribes to the catapan Aaron the erection of a magnificent aqueduct conducting water from the hills of Akhla to the town.

The Greek rule was ended by the sultan Alp Arslan who conquered and destroyed Ant in the year 1064; according to Ibn al-Athir (ed. Lebn, v. 27) the town possessed at that time 500 churches. In 1072, a year after the defeat of the emperor Romanos Diogenes, the sultan sold Ant to the Muslim dynasty of the Shaddadids (probably of Kurdish descent, mentioned as early as the 2. century as rulers of Gazak), and down to the end of the 12th century the town remained apart from a few interruptions the residence of a branch of that family. At that period the town had

two mosques, one of which is still preserved and has been used, since 1907, as a museum for the objects discovered during the excavations; the other collapsed during the second half of the 12th century. There are also Christian buildings belonging to the same period; the Shaddadids acted as benevolent rulers even towards their Christian subjects, and being related by marriage to the Bagratids, they were recognised by the Christian population as native and lawful lords. The walls of the town were repaired and furnished with some towers during their rule.

Ant was for the first time conquered by the Georgians as early as 1124, under David I. who laid the foundation of the power of the Georgian kings, after the final expulsion of the Shaddadids the town became a part of the kingdom of Georgia, but was left to the protection of the Armenian dynasty of the Zakharids who held it until 1267. Under the Zakharids the walls of the town were extended so as to reach the steep banks of the Arpa-Chai. The ecclesiastical buildings of the period show that the Georgian rulers (like their Greek predecessors) favoured the so-called 'Chalcedonite' (Greek-Orthodox) community which ecclesiastically predominated at the time, — a fact underscored by the Armenian tradition. There was no religious persecution of Mohammedans during this period; just as there had been no persecution of Christians under the Shaddadids; a Muslim contemporary (cp. Ibn Khalkal, ed. de Goeje, p. 232 *et seq.*) bears witness to the fact that the Georgian king protected Islam against all injury, and that under their rule no distinction was made between Muslim and Georgian.

Ant was besieged unsuccessfully by the Khazars in 1267, and conquered by the Mongols in 1269; but even after this conquest the town remained for a time in the possession of the Zakharids; an inscription on the main gate shows that at a later period it was considered the 'private domain' (*shahyats arshak*) of the Mongol rulers of Persia; but it never regained its former importance. According to tradition Ant was finally destroyed by an earthquake in the year 1319, but both inscriptions and coins of a later date have been found. A variety of copper coins struck at Ant by the Sultan Süleymān (1339-1344) is called by the Turks 'mankry-çakm' (*manikry-çakm*), the coins bearing the image of a hairy figure. Money with this inscription Ant was struck as late as the second half of the 14th century by the *Yakshis*, and even in the 15th century by the *Kazak-çakm*; but their mint is probably to be sought in the vicinity of the town, perhaps in the fortress of Mahaspart at a distance of less than 3 miles from Ant. It is impossible to determine when Ant town was finally abandoned by the inhabitants; the excavations show that after the decay of the palaces and churches a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter's visit (November 1805) it was possible even without excavations to distinguish clearly these houses and their separate rooms, as well as the streets of the later period, which are only 12-14 feet wide. Ant is now the name of a Turkish village situated near the ruins. As the villages of the neighbourhood possess no mosque for the Friday service, the mosque of the town which is still comparatively well preserved, was

down to recent times used for the purpose. This is done even now on occasion in the year, although in the eyes of many Muslims the building has been desecrated, since the objects found during the excavations, including the statue of King Sargis and many urns with coins, were brought into the mosque.

Bibliography: Accounts of the history of Ani are chiefly found in Armenian sources, especially in Stephan Asotik, a contemporary of King Gagik I. The Arabic and Persian sources are extremely scanty, the town is mentioned at all by the Arabic geographers of the 10th and 11th century; Yāqūt (ed. Wüstenf., I, 70) gives it a single line; Hamid Allah Harsoti (cp. Nisām al-Mulk, *Sihārat-Nawā*, ed. Scheller, Supplement, p. 229) states merely that the district has a cold climate and produces much corn and little fish (translated in *The lands of the eastern caliphate* by G. le Strange, p. 183: 'a town in the mountains where much corn was grown'). Ibn al-Athīr (ed. Turrin, I, 27) seems to be the only Muslim author who describes (not quite accurately) the situation of Ani.

The ruins were first mentioned in 1693 by Gemelli-Careri (*Viaggiato di suoi tre viaggi fatti nell'Asia minore*, II, Paris 1788, p. 94) and described at length in 1837 by Ker Porter (*Travels*, London 1841, p. 172—175). Since the peace of Turkmenchay (1828), in which Persia ceded the district of Kilvan to Russia, the Arpa-Chai constitutes the frontier between Russia and Turkey; the ruins of Ani therefore, although on Turkish ground, were now situated close to the Russian frontier, and travellers could visit them from Russia without danger or difficulty. Plans of the town were sketched by Tschir (1839; cp. *Reyze in Asien*, Paris 1842, *Atlas*, plate no. 14) and Alitch (1844; cp. M. Brunet, *Rapport sur un voyage fait à Chirvan et dans l'Arménie*, St. Petersburg 1851, *Atlas*, plate no. 23 and id., *Les ruines d'Ani*, St. Petersburg 1850, *Atlas*, plate no. 30). Alitch's plan was still used during the excavations of the last years. The Christian monuments were specially described by Mumuksew (1848; cp. *Grants*, *Arménie*, St. Petersburg 1848); an account of the disintegration inscriptions is given by Khanyanov (1848; cp. *Mémoires de l'Académie*, I, 70 1849, and M. Brunet, *Rapport sur un voyage fait à Chirvan et dans l'Arménie*, St. Petersburg 1851, *Atlas*, plate no. 30). The album compiled by Khanyanov (1850) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian and Georgian inscriptions on 21 leaves (cp. Brunet, *Les ruines d'Ani*, p. 10—63). Among Armenian writers special recognition is due to Nerse Sargisyan and Sargis Djabalyantz for the collection of Armenian inscriptions. A study on the history of the town based on the material published by the Armenian Alighan (Venice 1855, in Armenian, cp. *Arménie* in the *Atlas de l'Arménie*, IV, 393—412); the writer had not himself visited the ruins, but his researches have only been made obsolete through the excavations of the last decade.

Ani became a part of the Russian empire through the conquests made in the war of 1827—1828; but the excavations were not begun until 1892; they were interrupted for 11 years

since 1893, and continued systematically since 1904. The results of these investigations conducted by Dr. Mart show new light on the history of the town, buildings which formerly had been attributed to the Bagratids have now been recognised as dating from a later period; on the other hand discoveries have been made both in the town and in its surroundings of buildings belonging to the earliest period of Armenian Christianity, when the influence of the Syrian Church had not yet been supplanted by the Greek civilisation. The excavations have brought to light clear evidence both of Hittite and of Arab and Persian influence, where the tradition of the church has preserved no record of such connections with foreign culture. The results of the excavations have therefore acquired considerable importance not only for the investigation of Armenian history but also for the treatment of general historical questions on the relations between the civilisations of Christianity and of Islam.

As the excavations have not yet been completed, only separate articles and reports by Mart are so far available: 1. *Ani, ruines d'un Arménien* (St. Petersburg 1898, from the collection *Grantsyayevskiy arménien*); cp. *Mémoires de l'Académie des sciences et belles-lettres*, St. Petersburg 1900, II, 93 et seq.; 2. *Nakopleniye i obrabotka dani* (St. Petersburg 1900, from the *Iskustvo* sup., *Archeologicheskiy Komitet* part 18); 3. *O nakoplenii i obrabotke dani*, *Iskustvo* 1901, 2. *Nakopleniye i obrabotka dani* (St. Petersburg 1901); 4. *Zapiski* (ed. old. imp. Russk. Arkh. Otdel., VIII, protokoll, p. xix—xxvii) (on the excavations of 1905). A systematic study of the history of Ani based on the results of the excavations is still wanting. The facts brought together in 1898 article are derived partly from the reports quoted and partly from direct communications from the explorer and his collaborators.

(W. BARTHELEMY.)

'ANĒĀ, a large legendary bird, which is said to have received its name from its long neck or, according to others, from a white collar on the neck. (The name of the biblical 'Ani' is derived from the same root). The further accounts of AnĒĀ's nature are given both the griffin and the phoenix, and legend connects the 'AnĒĀ' with the apocalyptic (q. v.) mentioned in Rev. 19, 11 and 20, 1. Although it is generally assumed that the bird only existed in the remote past, the Khalkishan (quoted by al-Damiri) claims to have seen it in the historian al-Farghānī, that an 'AnĒĀ' was to be seen among other strange animals in the zoological garden of the Fāṭimid caliph. The description which he adds indicates that he alludes to a species of modern (Quana) occurring in Upper Egypt.

Bibliography: Khalkishan (ed. Wüstenf.) I, 419 et seq.; Damiri, *Hayāt al-Hayawān* I, v. 1; Freytag, *Lexicon Arabicum*, II, 25; Lane, *1001 words*, ed. 20, note 22.

'ANKABUT (A.), the spider. Al-Kawwini and al-Damiri mention several species, the most dangerous of which is the poisonous tarantula, al-Kutābī or al-Kutābī. Al-Damiri also describes a bulbous spider of reddish colour with fine hairs on its body; at the head it has four claws with which it bites; it digs a nest in the ground, and seizes its prey by sight. The weaver spiders make their

Antakya fell into the valiant hands almost without further resistance; 20000-25000 Christians are said to have perished at the capture of the town, 200 000 to have been led away in captivity; the whole town including the Citadel was burned down, and the spoil taken was enormous; Antakya never recovered from this blow; it has remained under Muslim rule ever since, but its importance has decreased steadily.

The situation of Antakya is most delightful; it lies in the richly-watered valley of the Orontes which is here 140 feet wide. The favourable climate and the great productivity of the soil make it one of the fairest spots in the East; and Christians make Antakya a most pleasant town of Syria after Damascus. The abundant rainfall to which it is exposed — and which according to Petermann has gained for the town the nickname of *Wasserkopf* (= plumed, Weinsack's caricature of Petermann's *Wasserkopf*) produces a luxuriant vegetation.

The modern Antakya is situated in the plain on the southern bank of the Orontes and extends as far as the slopes of moun Silpius (Arabic *Tabib al-Nadhihr*, 1525 200 above the level of the sea) which belongs to the Caesaria chain. The town is surrounded by extensive gardens in the East, and the pleasant fruitful land of the immediate surroundings affords a vivid contrast with the wild and rugged mountains of the neighbourhood, the sharp outlines of which present a very beautiful view. In antiquity the slopes of the Silpius were covered with houses, but modern Antakya occupies hardly a tenth part of the ~~area~~ which it occupied before Justinian's time. Its extent at that period can still be clearly determined by the traces of the ancient walls which suffered no serious damage at the conquest of the town by Khawwas I, and the centre of which can still be recognised everywhere. The town as rebuilt by Justinian occupied a smaller space within these walls.

By far the most interesting of Antakya's ancient remains is the enormous pile of fortifications of which considerable portions are still extant; it follows a wide curve round the little modern town situated in the north-west corner of its circumference. The magnificence of the walls, led boldly over the height, as well as the enormous dimensions of the foundations which, for the medieval art of war, were practically unsuitable, still excite our admiration. Their length is more than 2 miles; numerous towers of distance rise from the walls at distances of 20-30 paces from each other (altogether, it is more than 360). The destruction of the walls has advanced rapidly during the last few decades, as after the last great earthquake (1872) the inhabitants received permission to use them as building material for their houses. The Citadel built by Nikephoros Phokas on the Silpius has been in ruin since it was destroyed by Moslems. On the Silpius is shown the martyr's tomb of the 'prophet' Habb al-Nadhihr (i. e. Agabus: Acts 12, 28) said to have been the first Christian of Antakya. It is regarded by the Muslims as an honoured place of pilgrimage, and has given to the city its modern name. The most important remains of antiquity are situated on the slopes of the Silpius, the ruins of the colonial aqueduct being especially noteworthy. Of the ancient gates

a few are still tolerably well preserved; the interior of the modern town has no buildings of importance, the 14 minarets of the town are unimportant. The houses give an impression of great poverty, and the frequently recurring earthquakes have left everywhere vast heaps of rubbish and ruins. The grounds on which the town is built can in many places be clearly recognised as similar rubbish heaps of an older period.

The ancient Antakya situated at the meeting-place of the trade leading from the Euphrates to the sea, with those leading from Syria to Asia Minor, was the chief centre of traffic between the East and the West; today trade and industry are in a state of absolute decay. The town is unimportant and not much frequented. The most considerable of local industries is the manufacture of soap for which Antakya is the most important town in Syria next to Haleb (S. E. of Haleb). Other occupations of the inhabitants are the production of silk, the cultivation of cereals and olives; eels are also caught in the Orontes in large quantities. The appellation *Antakya* = 'coarse carpet' indicates the former importance of the town as a seat of textile art, cf. Brandt, *Die aram. Fremdwörter im Arab.* (1886), p. 44, and Zuhar, *Arabische*, 2 (9), Var.

In Antiquity Seleucia Pieria (Arabic *Sa'adkya*) served as harbour of Antakya, in the Middle Ages al-Sawadkya situated farther to the South at the mouth of the Orontes. Both harbours are now in a state of absolute decay. The modern Antakya suffers not only through the want of a protected harbour, but also through the fact that the upper part of the river is so low the town is not navigable. One of the chief reasons why the town in spite of its magnificent and advantageous situation never again rose to any degree of prosperity since it was captured by Moslems, must be sought in the fierce hatred with which Moslem fanaticism regarded the former capital of Oriental Christianity. Another obstacle to economic progress was the frequently recurring severe earthquakes (see the enumeration in Ritter, *Arch. Anst.*, xii. 1155 et seq.); the most important shocks of recent date occurred in 1722 and 1872. Since the decline of Antakya trade and traffic was more and more directed to Haleb (Aleppo).

The number of inhabitants, which was very considerable in Antiquity and the Middle Ages, is now greatly reduced; in the last decades a slow increase of the population can be observed. In 1823 H. Petermann counted about 10 000 inhabitants (one third 80 whom were Jews and Christians, chiefly Greeks and Armenians); another estimate dating from 1848 states the number as 17 000 (1500 Christians); later authorities give only 6000 inhabitants; Sachau's informant in 1880 estimated the size of the town as containing 3500 houses, i. e. about 17500 inhabitants (among whom 2500 Christians and 250 Jews); Cuinet (1890) notes 23 000 inhabitants. Cosnier (edition of 1900) 28000 inhabitants (4000 Christians, a small number of Jews). In the Arab Middle Ages Antakya was the capital of the *Awajim* district (q. v.) i. e. of the 'military frontier' erected against Byzantium on the frontier in Syria and Asia Minor. Today Antakya belongs to the wilayat of Haleb. It is the seat of a *hukumat*. Of the five existing 'patriarchates of Antioch' belonging to the different Christian ~~sects~~ (on which cf. Naber

in Kaulen's *Archäologien*, Freiburg 1852 et seq., I. 948 et seq.) was has now its residence in Antakiya itself.

Bibliography: The account of Antakiya given by the Arabic geographers are collected and translated in G. le Strange, *Palatium under the Muslims* (London 1890), p. 36, 62, 72, 367—377. — Important information about the author's native town is given by Yahyā b. Sa'īd al-Anṣārī in his chronicle entitled *Ta'rikh al-Nasir*, on which cp. Brockelmann, *Gesch. der arab. Litt.*, I. 145. Extracts from this work relating to Antakiya were translated by A. v. Kramer in the *Denkschriften der Wiener Akad. der Wissensch.* (1852), III. Abt. 2, p. 24 et seq.; the same scholar gives accounts of Antakiya by other Arabic authors, II, p. 21—31. — Al-Mas'ūdī (wrote 333 = 943) gives trustworthy information, based on personal observation, especially on ancient Antioch (foundation, walls, Church of St. Paul); see his *Murūf al-Afkhād* (Paris), II. 126 et seq., 222 et seq.; III. 408—410; IV. 55, 91; VII. 65—70. — An anonymous Arabic description of Antakiya (Cod. Vall. arab. n° 286) edited and translated by E. Guitt in the *Rivista della reale accad. di Torino*, ser. IV. vol. 7 (Rome 1897) is valuable. It possibly goes back to a Syriac original and cannot have been composed before Nikephoros Phokas c. before A.D. 968; important corrections to Guitt's edition derived from a Boilestin ms. were given by D. S. Margoliouth in the *Journal of the Roy. Asiatic Society*, 1898, p. 157—169. The same account of Antakiya was quoted in the universal geography of Ḥabīb al-Khalīfā entitled *Dihān Nūmā* (Santal 1145 = 1732, p. 595 et seq.). — Abū Ḥasan al-Muḥṭar b. Ḥajjān (died 455 = 1063) describes his experiences at Haleb and Antakiya in a *Kitāb* which was largely used by Yahyā in his article on Antakiya (*al-Ma'ārif*, ed. Wüstenf., I. 382 et seq.); cp. on Ibn Ḥajjān: G. le Strange, *loc. cit.* p. 7; Brockelmann, *loc. cit.* I. 423; *Wörterb.* (1898), p. 22.

II. On the history of Antakiya during the crusades cp. F. Wilken, *Gesch. d. Kreuzzüge* (Leipzig 1807—1832), I. 173—263; II. 52, 300, 319, 380; III. II. 243; VII. 523 et seq.; H. Kögler, *Gesch. d. Kreuzzüge* (Berlin 1850), p. 44—56, 89—95, 116, 218, 389—390; R. Röhricht, *Gesch. der Kreuzfahrer Jerusalem* (1100—1291) (Leipzig, 1898), Index; R. Röhricht, *Gesch. der armen Kreuzzüge* (Innsbruck, 1901), p. 102—152; cp. also Weid., *Gesch. der Christen*, III. (1851), p. 103—109 (events of the years 1097—1098).

III. Of books of travel the following are worthy of notice: R. Pococke, *Descriptive of Mount Lebanon*, german ed. by Breyer and Schramm (Köln, 1791), II. 273—280; Pococke who visited the East in 1737 is the first author who gives topographical details. — C. Niebuhr, *Kristen- und Muhammedanische Reise* (1774 et seq.) III. 15—18 (corrects Pococke's plan of Antakiya to several details). — J. Ruggier, *Reise in Europa, Asien und Afrika* (1847), I. 363—373; Chenevix, *The expedition for the survey to the rivers Euphrates and Tigris* (London, 1850), I. 435 et seq.; Sandrætti, *Reise nach Arabien und durch Kurdistan nach Urmia* (Santagat, 1857), III. 487 et seq. — H. Petermann, *Reisen in Osmien* (Leipzig,

1867), II. 366 et seq.; E. Sachau, *Reise in Syrien und Mesopotamien* (Leipzig 1883), p. 452 et seq.

IV. The following works give comprehensive accounts of Antakiya: Onā, *Ma'ārif*, *Antiquités Antiochenes*, Göttingen, 1839; E. Ritter, *Reisekunde*, VII. 1247—1250; L. Kiepert, *Neuere geographische Werke* II. 766 et seq.; *Sketches in Kaulen's Archäologien* (Freiburg, 1852 et seq.), I. 941—945; V. Cizek, *Le Turquet d'Asie* (Paris, 1890 et seq.), II. 193—197; J. Neudörfer in *Pauli-Wissowa's Realencycl. der class. Altertumswissenschaft*, I. 2443—2445; R. Parlez, *Antiochia am Orient in the Jahrb. der deutsch. archäolog. Institut*, VII (1897), p. 103—149 (an important historical account of the building of the town); S. Krauss, *Antioche in the Roman d. Byz. Zeit*, 1902, n° 59 (collects and discusses all the accounts found in Jewish sources concerning the foundation of Antakiya, the history of the town until A. D. 70, the Christians of the town, and the Byzantine and Arabic periods); Schäfer, *Palästina und Syrien*, 3. ed. (1900), p. 437—453. (Stamk.)

'ANTAKIA) n. **SHARAF** a. 'AMR (according to others h. 'Amr b. Shadruf) a. **SHARAF** al-'Amr, an ancient Arabic poet who flourished in the last decade of the 6th century, two generations before the victory of Islām. He was the son of a black slave-girl called Zabiba, and he therefore acquired among the *Adīb al-'Arab*, 'the arena of the Arabs'; he was not until he was grown up that his slavery was forgotten by his father's recognition as a legitimate member of the family. According to Nöldeke's observation (*Arab. Nights* etc. II. 9) he delays himself as a half-caste in lines 25 and 27 of his *Mu'allaka*, where like a true upstart, he refers to black slaves in somewhat contemptuous terms. It is not very probable that he was known by the nickname al-Fallāḥ, 'of the cloth lip', as in that case he would hardly have represented a man with this infirmity in his *Mu'allaka* (line 41; Nöldeke, *loc. cit.* p. 10, note 1). 'Antakia) took a prominent part in the war of Dāwūd and 'Ubayd' (cp. A. Müller, *Die Islam im Morgen- und Abendland*, I. 5 et seq.), and in his old age was killed in a battle against the tribe of Taly'. He has become the most popular Arab hero whose memory is still preserved in the entrance of 'Antak (q.v.) and in numerous place names (cp. Goldammer, in *Glossar* XIV, 55—57). His poems, although for the most part only preserved in fragments, were held in such estimation, that al-'As'ad (q.v.) gave them a place in his collection of the six poets. The only complete poem of his which survives, is ranked as one of the *Mu'allakāt*. It is a typical *ḥajḍa*, unusual only in the length of the *waḥ*, which owing to the insertion of several descriptions and similes extends to 55 lines. He similarly breaks through the conventional form of the *waḥ* in poem n° 20 (of al-Bihar's ed.), where he combines it with pieces of himself. It may be in allusion to this that a later poet prefixed to his *Mu'allaka* that line in which he complains that the poets had left him nothing 'to match'. In an *ḥab* verse of his *Mu'allaka*, line 64 et seq., his manner is quite modern, recalling almost the style of 'Imam al-'Alī Rabbī (Nöldeke, *loc. cit.* p. 43). A noteworthy feature of his technique is the comparatively frequent occurrence of enjambment (e.g. 15, n. 20, 20, 40—41).

EXPLICATION OF PLATES.

Plate 1.

1. Berlin, Emperor Frederic Museum, plaster relief, 'Isak', 1st-3^d cent. II.
2. Cairo, Mosque of 'Amr, northern portion, wooden abacus, 1st cent. II.
3. " " " , wooden abacus in columns near western wall of Haram, 2nd cent. II.
4. Hama, Great Mosque, capital from the middle gateway, 1st-2^d cent. II.
5. Baghdad, Djami' al-Khayriah, from the old Mihrab, 3rd cent. II.
6. Fairsawn, doorpost of the gateway of Sidi 'Ukba, 262 II.
- 7-10. Cairo, Arab Museum, Room VI, nos 16-19 wood panels, 2nd-3^d cent. II.
11. Cairo, Mosque of Ibn Tulun, western colonnade, surface of arches, 262 II.

PLATE 19.

1. Hama, *Djāmī* al-Kalā, gateway, 576 H.
- 2—4. Hama, Mosque of Nār al-Dīn, three pieces from the Minbar, wood, \pm 550 H.
5. Aleppo, Minaret of the Great Mosque, stone entablature, 483 H.
- 6 and 6'. Aleppo, faïssid building, near the Bāb Anṣṭīliya, bracket and ugeç, 545 H., stone.
- 7—10. Mawṣil, Great Mosque, four pieces from the old Mihrāb, 543 H., stone.
11. Ḥalab near Aleppo, from Ḥalabid tomb, 6th cent., H.
12. Maṣṣūḥ near Aleppo, stone frieze of the aḥṣāb gateway, \pm 600 H.
13. Konia, Mosque of Aḥḥ al-Dīn, from the border of a carpet, 6th—7th cent. H.
14. " " , Kara Fai Madrasah, mosaic of enameled tiles, 6th cent. H.
15. " " , Aleppo, Bāb Anṣṭīliya, wooden frieze, 6th—7th cent.

the Dead Sea. It is a large bare desert of undulating ground traversed by the beds of streams; the mountain-ridge *Libi al-Hawar* divides it into two unequal parts, the larger of which belongs to the Dead Sea. Much conjectures that even in historical times a narrow strait of the Red Sea reached as far as Ghazala. To the North is situated the fruitful plain of *Chir Fala* which extends as far as the *Sekkuh*, the Biblical Valley of Salt. Cp. detailed description in *Musé des Arabes*, 110 and 111, where bibliographical references are given.

ARABESQUE. In German the word *arabesque* denotes the foliage ornament of Muslim art; in a wider sense current already since the Baroque period it is applied to the ornament of that art in general. The word *arabesque*, properly referring to the art of Arabia, Spain, is almost synonymous. Modern usage frequently applies the word *arabesque* to that style of Renaissance ornament, which more correctly is called *grotesque*. — It is similar in English: the word is used in a general way, but without historical accuracy, to denote decoration of the grotesque style, and the *mosaïque* is frequently distinguished from it as being the ornament of Muslim art proper. — In French the adjective *arabesque* is form of old applied to works of art from the countries of Islam; since the Renaissance it is also used as a noun for the corresponding ornamentation, whence it was transferred to denote decoration in the *grotesque* style.

It is probably not without reason that in all three languages the term was transferred to an object which on the surface seems to have no connection with its original meaning. The *grotesque*, it is true, in the first instance is a Renaissance revival of that form of ancient classical ornament, which was first discovered in the vaults of the *thermae* of Titus excavated at that period. The attention aroused by these discoveries led Raphael to decorate the *loggia* of the Vatican with his famous *grotesques*, wherein he was imitated by his pupils Giovanni de Udine, Giulio Romano, and Gian Francesco. As the vaulted chambers of the *thermae* of Titus had been buried under the ground, they were called *le grotte*, whence the strange style of ornamental painting discovered in them got the name '*grotesca*'. The *grotesque*, which is derived from purely classical sources, is an architectural ornament. The ornament of Renaissance style and crafts however, especially in tapestry, pottery, metal-work and book decoration, exhibits before and after the discovery of the *grotesque* numerous elements, which are obviously drawn from the ornament of Muslim art. Such *arabesque* elements are found even in architectural decoration; it is only necessary to mention the churches of San Michele at Pavia, of St. Francis of Assisi, and of San Donato at Bologna. The *arabesque* influenced even the *grotesque* proper, a fact which may have facilitated the general transference of the word *arabesque* to the ornament of the Renaissance, and to the *grotesque* in particular. The influence of the *arabesque* is especially prominent in the ornament of the Renaissance at its prime, and in that of the late period, where it is frequently due to conscious imitation of oriental models. This is particularly noticeable in the French Renaissance in the style of Henry II, especially in book de-

coration; in Germany, to mention only a few examples, especially in the decorative work of Peter Flurer and Virgil Solis of Nuremberg.

This popular meaning of the word *arabesque* must be distinguished from the form as now used in the history of art, and as it ought to be used, i.e. as denoting the ornament of the art of the Muslim countries. It would even be preferable to restrict it to the foliage ornament, being the dominating element of that ornamentation; it would be difficult however to separate this from the other elements, such as interlaced bands, motifs derived from writing and the less frequent figurative subjects. There may therefore be included in the meaning of the term.

The foliage ornament as conceived by Muslim art can hardly be described and analyzed as a unity, since it exhibits considerable differences according to time and place. There are however some general characteristics which distinguish it clearly from the foliage ornament of other periods e.g. from that of classical antiquity. As to its origin it is certainly derived from the classical foliage ornament with its conventional forms, always unrealistic however realistically treated, consisting of palm-leaves, acanthus and elements derived from these. In Greek antiquity we observe a gradual striving towards lifelike forms, a constantly increasing approximation to nature, which reaches its culminating point towards the early hellenistic period; later however there begins a reaction which is caused partly by other, unbelieved ideas and views of art, but partly also by the decline of technical skill. These under-currents become dominant in the art of latin, which in a general way may be regarded as representing the further development of the reaction, beginning already in the classical period, of the original hellenistic provinces against those of the West. The *arabesque* of Muslim art shows from the outset a consistent tendency to become more and more abstract and to treat the foliage ornament more and more as a geometrical design. This tendency finds expression in the following principles which are of universal application. In the design of the foliage there is no longer any notion of truth to nature, whence formerly the principle had been it not to imitate nature, at any rate to avoid direct opposition to it. The design of the foliage is now only determined by a regard for the symmetry which may be required by the pattern itself or by a pendant corresponding to it. The vegetable motif loses almost entirely its character as a part of a plant, and becomes a mere geometrical form combined to pleasing figures and compositions, but wanting in so a representation of a natural object. The leaf similarly loses almost entirely its vegetable character and gives up all pretensions to realism, although it is still possible to trace its derivation from the conventional leaf of hellenistic ornamentation in the drawing of the contour and the internal design. This however is not the only source of the treatment of the leaf. The ornamentation of the *Tillaish* and early Egyptian monuments, as well as that of the buildings of *Mir al-Din Mahmud* in Mesopotamia, show clearly how the whole composition and its separate elements frequently go back to the classical scheme of foliage growing out of a vase, together with many negative

elements like cornucopias, vases etc. In the fully developed arabesque even these objects, cornucopias and vases, have become abstractly conceived designs of leaves. Abstraction goes so far that the whole wealth of decorative elements taken from plants consists only of stony combinations of a small number of patterns some resembling palm-leaves and others wholly untrue to nature. Stalk and leaf are no longer as in nature — two co-ordinate but formally distinct elements — but have conformed to such an extent, that the leaf no longer grows out of the chief stem on a small stalk, but represents simply an expansion or outgrowth of the chief stem. The want of realism, or rather the direct opposition to nature, is further emphasized by the fact that the stalk grows through the leaf, to other words the leaf does not represent an end, but develops into a new stem and so on in countless repetitions. This is connected with the fact that the composition of the arabesque is usually based on the principle of infinite correspondences, that is to say each surface, however small, is ornamented in such a way that by putting together the design we get a doubly symmetrical surface pattern capable of infinite expansion. This law of composition governs not only the ornamentation of surfaces, but also that of borders, although the latter, by their nature, are capable of infinite expansion in one dimension only. In spite of this fact their composition is frequently of such a nature as to admit of infinite continuation, without change, in their secondary direction, viz. that of width. In the case of borders there frequently appears the cognate principle of reciprocity, in which two corresponding parts of the pattern stand to each other in the relation of punch and matrix, so that the infinite correspondence is effected by a means resembling the reflexion of mirrors. Apart from this the ornamentation of borders exhibits the conventional schemes of single, double, and undulating intermittent foliage with a wealth of variations. Another composition of frequent occurrence is that representing the foliage as growing out of a vase. It is determined by the principle of strict symmetry in relation to a single axis, as is also the scheme of composition known as the 'horalike style'. Another form of composition, closely related to the leaf and vase, namely radiating or radial, from a point, represents the foliage growing up as a tree, and may be connected with the old oriental ideas of the tree of life. — While these principles are universally applicable to the arabesque of all periods, other features are subject to variation according to time and place. The quantitative relation between surface and pattern, and that between stalk and leaf, varies between two extremes. One of the extremes is represented by the type of arabesque best known from the stucco decoration of the mosque of Ibn Tulun at Cairo, where the leaf covers almost the whole surface. The stalk very nearly disappears altogether, so that leaf grows out of leaf. The result is that the ornamented surface is entirely covered, and nothing is seen of the ground. This is the 'thicker' style of ornamentation. It follows that the design of the positive ornament is effected merely by means of a few negative lines, especially spirals which pass through the foliage. The artists in executing the design, draw or carve or paint not so much

the ornament itself, as the ground. The opposite extreme is found e.g. in the ornamentation of the buildings of Nur al-Din Mahmud; here the leaf plays a quite secondary part, the pattern consisting of stalks ingeniously and elegantly interwoven. The positive ornament is equally balanced, or even dominated by the ornamental ground. All the other principles of form and composition are preserved.

The tendency to a geometrical composition of arabesques finds an unmistakable expression in the intertwining of several systems which are frequently arranged in such a way, as to create a contrast between larger and smaller geometrical compartments, or between compartments ornamented with greater or less fineness, or in different styles of design. Besides the ornament consisting of foliage only, geometrically intertwined bands are similarly combined with foliage. This combination is the most common form of arabesque. The later medieval geometrical design forms a complicated framework; the manifold irregular polygons formed by the mutual crossing of the lines are filled by the foliage, either separately or in a connected pattern. These forms pass into arabesques of a purely geometrical nature, i.e. those consisting of intertwined bands. Here all possible combinations are represented, from the simplest plaiting, the mere intertwining of systems of parallel lines, to the most complicated geometrical figures. As in the case of the foliage ornament the effect aimed at is the creation of a contrast: a linking up of the positive pattern by means of larger or smaller portions of the ground surface. A wealth of polygonal shapes or stars appear as the fixed points which create order in the kaleidoscopic confusion of small irregular polygons. These compositions, which are often most ingenious, are formed by the well-thought out and frequently surprising use of a few lines not infrequently hooked; it is often very difficult to disentangle their fantastic play so as to arrive at the system. A certain advanced stage of the power of geometrical vision is an indispensable presupposition of this kind of composition. The systems most favoured are those founded on polygons or stars with an odd number of angles, e.g. pentagons or nonagons, or stars with seven or fifteen points.

In addition to these two prevalent elements — foliage and intertwined bands — there appears a third specific feature in the motifs derived from the Arabic script. Writing itself as a decorative element plays a much more important part in Islam art than in any other. It is undoubtedly an expression of a certain bigotry on the part of the Muslims, that they ascribe nearly every article of artistic craftsmanship with some verse from the Koran, the confession of faith, or with inscriptions, sometimes rather poetical, formulas of blessing or congratulation. But besides these ~~inscriptions~~ proper, which we may well except with gratitude because of their historical importance, there frequently occur groups of letters which do not form intelligible words or sentences at all. This should by no means lead us to the conclusion that the objects thus inscribed are the work of illiterate men. It is rather a purely decorative use of the characters, an ornament in the shape of letters. The letters most frequently employed in this way are, on the whole, Alif-Lam

and Lām-Aḥīl, which often form whole borders. We may suppose that these are not quite meaningless characters, but that they were a kind of 'sigils', being in fact an abbreviation for ornamental purposes of the *Shādhān*, which already in the papyrus cartouches is enlarged to a number of Lām-Aḥīl's. The decorative value which the letters of the *Shādhān* already ~~possessed~~ owing to their symmetrical and symmetrical shape, is still enhanced by this abbreviation. — Other meaningless groups of characters are inaccurate copies of the *Shādhān* and congratulatory ~~words~~ which occur so frequently; and finally, the nature of which has been completely misunderstood, are found on objects made by non-Muslims, especially on Western imitations of Arab works of art. Finally — and this of greatest importance for the arabesque — the decorative writing developed into a particular kind of linear ornament, in which all connections of the original nature of the letters was completely lost. This phenomenon appears very clearly in carpets from Asia Minor.

The term arabesque in its wider sense, in denoting the ornament of Muslim art in general, also comprises a number of figurative elements. It would indeed be possible to distinguish these from the arabesque, taking this word in a narrow sense, and to class them under the term 'iconography'; but the value of these figurative elements is for the most part purely ornamental, while their composition is frequently closely connected with an even inseparable from the arabesque. A short survey of these figurative elements belongs therefore to an aesthetic analysis of the arabesque. — The most independent elements are a number of genre pictures: hunting scenes, banquets, games, occupations are represented sometimes in a whole series of pictures. They usually fill appropriate spaces of the rich arabesque in the form of medallions. In subjects and style they depend chiefly on miniature painting, and frequently show the influence of Eastern Persia and Central Asia.

Another class is formed by representations with an etiological or originally symbolic meaning, which have become merely decorative forms. Their widespread occurrence is due to the decorative value inherent in all symbolic representations, a fact which it would be easy to illustrate by instances from all periods of art. To this class belong pictures of the Sphinx and griffons, genii or angels, the signs of the Zodiac, the seven planets, centaurs with horns and arrows, and animal combats. None of these decorative motifs has been created by Muslim art; they all belong to the inherited stock-in-trade of other periods of art. No essential change was made even in their specific forms. We may include in this class the somewhat rare old representations of dragons, of St. George slaying the dragon (*Khiḍr*, *Uyḍ*), probably also the ~~winged~~ winged creature which frequently bears the Persian sign of the *Shādhān* (unless we ought to adopt a recent suggestion and read in its Arabic 'Fayr') and the royal ram. In the same connection should be mentioned the Chinese motifs, frequent since the Seljuḥid period, but occurring even earlier, such as the dragon, the phoenix, and both together forming the Ming crest, the Killa and the Fohy, the line of clouds 'Cl' symbolizing immortality, and many others; finally Indian sub-

jects, such as the three spheres as a Buddhist symbol and the Angurān garment. Some figures have even been identified as Buddhist and Buddhistes, but this identification is disputed. — Another frequent feature of the arabesque are the representations of animals belonging to the so-called heraldic style. They are placed facing each other according to a strict principle of symmetry, some vegetable element serving as axis. The most frequent animals are lions, griffons, deer, horses, parrots, peacocks, etc. Besides this animals also occur in another scheme of composition, known already in antiquity, viz. in an undulating foliage ornament interrupted by pictures of animals. — Another group is formed by heraldic representations. The Ming crest has already been mentioned. Others consisting merely of an animal emblem, such as the lion or leopard or the double eagle, belong to the Turkish war, and probably go back to primeval totemistic ideas. There are further the emblematic crests of the Mamlūks which are directly connected with the ornamentation of pottery and enamelled glassware, and such isolated subjects as the Man with the Moon, the coat of black al-Dīn Lūḥ. In Spain we find representations resembling castles, which recall the crests of occidental towns. These especially, but also the other motifs, are found in close organic connection with the arabesque. — Lastly there occur isolated figurative elements, such as the heads of lions and other animals, the bodies and wings of birds, claws and hands, which combine with the arabesque and are of the same ornamental value as the foliage. This phenomenon can be observed particularly in the ornamentation of Mesopotamian art in the period of black al-Dīn Lūḥ, but it also occurs in later Eastern Turkish and Turkish works of art.

It is clear that the arabesque as described above according to its principles of composition and its separate elements, did not suddenly come into existence ready made at the time of the rise of Islam. The aesthetic description of the arabesque is something given, must therefore be followed by an inquiry from the point of view of the history of art, which regards it as something in the process of becoming. There is no obstacle in this route of inquiry in the fact that our knowledge of monuments varies considerably according to time and place. — As there are wide gaps in our knowledge, it is somewhat dangerous to draw a rapid sketch of the course of development. — So far as we can survey the growth of the arabesque, we may say that the first step in the art and crafts of all the provinces of the caliphate meant an uninterrupted continuation of a received tradition, a fact which has recently been emphatically demonstrated by the monuments of Mshatta and Khayr 'Amra. As mentioned above, the already existing tendencies, which had started as a reaction of the oriental provinces of Hellenistic art against those of west, gradually gain a more and more extended authority. The different provinces naturally exhibit considerable differences of style, and some characteristic provincial features of the earlier period are adopted locally. As the material has to a great extent become known quite recently, or is still unpublished we cannot avoid the enumeration of definite examples. Generally speaking the arabesque continues the tradition of the universal hellenistic foliage ornament with

its international flora consisting of acanthus, vine leaves and trofoil. In the mosque of 'Amr in Old Cairo we still see carved blocks of wood over the capitals of some of the columns of the entrance hall, which exhibit an acanthus border of quite classical forms. They belong without doubt to the first period of construction, and have at a later stage been imitated in a degenerate form in a few examples on the western narrow wall of the harbor. In Egypt the dependence on ancient classical forms of ornament can also be studied on the tomb-stones belonging to the first three centuries of Islam, on which the inscriptions are usually given in the form of a *tabella ansata*. In Syria the preference where good traditions had been observed most faithfully during the late classical period, the good traditions of craftsmanship survived the Muslim conquest. The only reason why it was possible to regard Hagia Sophia at first as a classical building is the fact, that its rich foliage ornamentation had preserved an extraordinarily classical character; altogether it may be said that the buildings of Syria belonging to the late classical period give a much more artistic impression than the contemporaneous buildings of a province like Asia Minor. Specifically classical ornamentation is found in Syria even late in the Middle Ages, thus on the large old minaret of the Great Mosque of Aleppo, built by Al-Soulor during the reign of Malikshah, on a building near the Bab Antakya in the same town dated 543, on a minaret of Kiz al-Din Mahmud in the masjid Ibrahim al-Khalli in the citadel of Aleppo, on the minaret of the Umayyid Masjid al-Hamza, and in the form of an acanthus finis on a mosque of the same town al-Din al-Hakha (possibly the remains of the decoration of an older building). — In Egypt the Coptic style of ornamentation predominated as appears from the objects in the Egyptian and Arab Museum at Cairo when compared with the ornamentation of the mosque of Ibn Tulun. The style of arabesque exhibited by the latter is of the specific Egyptian-Coptic type, of which however examples are also found in Syria and Mesopotamia (on all the monuments of Kiz al-Din and e.g. on wood-carvings from Tadmor in the Kaiser Friedrich-Museum in Berlin), and in Asia Minor (one of the *ghosf* at Kiz al-Din, 576 = 1180-1181). — The vestibule of the Khazret Sultan at Bagdad contains a very old mihrab framed of a block of yellow marble, which exhibits splendid Byzantine ornamentation of the arabesque and vase type; the very archaic form of this ornament leads us to place its date in the first two centuries of the Hijra i.e. in a period preceding the foundation of Bagdad. Of fragments of stucco decoration, which are brought to the Baghdad market from the ruins of Syria and the Persian-Turkish frontier (some specimens in the Kaiser Friedrich-Museum) we find typically Sassanid motifs, such as the winged palm-leaf, the royal sun, and angular huzlele forms resembling squares and lozenges; the same motifs, as is well known, occupy a large part of the rich decoration of the Hagia Sophia. It would not be difficult to add to this list of examples illustrating the early stages of the arabesque as an immediate continuation of provincial peculiarities.

The present list however is sufficient to enable us to state the historical problem. This is twofold: the question arises 1. how did the arabesque

become a dominant feature of supreme authority for the whole art of Islam? and 2. how was it possible for the arabesque, derived as it is from many heterogeneous sources, to become a single organic unity? Both questions can only be answered when treated in connection with the whole of Muslim art. In order to find an answer to the first problem we must remember, that the Muslim outlook on life, as contrasted with that of classical antiquity and even of christianity, left, strictly speaking, no room at all for art on a large scale. The whole character of the Muslim view of life explains the gradual disappearance of the figurative element from their works of art, whereas in antiquity figures had formed the essential part and vegetable ornament only an accidental by-work. The development of ornamental decoration as exhibited in the arabesque, was favoured by the prejudice against the large forms of art in general and against the representation of figures, which latter applied equally to the detailed work of the craftsman; the great wealth on the other hand created a desire for luxury, art and ornament.

It is even more difficult to find an answer to the second question. An analogy to the unity of Muslim art may indeed be found in the unity of hellenistic art, as the provinces influenced by it extended to the East and West even beyond the frontiers of the kingdom of Alexander and of the Roman Empire. We may even regard the unity of hellenistic art as a necessary condition without which the rise of a homogeneous Muslim art would have been impossible. There is however a great contrast between the conditions at the beginning of hellenistic and Muslim art. In the one case the conquerors were the more artistic nation that has ever existed, and in this respect contributed most to their relation to the conquered peoples. The case of the Muslims was completely different. The Arabs had no artistic gifts, and the conquerors were the receiving element in all matters affecting culture. The hellenistic countries were welded together by Greek civilization; the link which bound together the countries of Islam was only the community of religion and government; the arts were left entirely to the subject population. In the hellenistic provinces the participation of the subjects caused the change and the decay of Greek art; in the Muslim countries it created the art of Islam. In view of these facts the only explanation hitherto advanced for the homogeneity of artistic style, and for the dominating position of the arabesque, was a reference to the general economic situation and to the state of Muslim civilization. All the lands of the caliphate were united by empire and language. The pilgrimage to Mekka afforded an opportunity for intercourse and exchange between the inhabitants of the East and the West. In spite of the imperfect means of transport, freely traffic circulated through all the Muslim countries, as formerly through the Roman empire. A great number of individuals travelled through large portions of the known world; while commerce, the most important factor in the spread of art, extended with fewer limitations than at any previous period, through all the countries of Islam. Although these considerations afford a perfectly opposite contribution towards an explanation of the fact of artistic unity, they are yet of such a vague and

South. It is a poor country, possessing, it is true, a great number of wadis (valleys) through which after heavy rains mountain-streams (and) flow towards the sea, but yet suffering much from drought. Fortunately the Qajihila live here, at present the Hawalibi, who are regarded as the descendants of the old Nabataeans.

The road from 'Akaba to Medina, the old pilgrims' road from Egypt, goes along the coast at Yotba or a little farther to al-Bah, the old harbour of Medina at a distance of two days' journey from this town. The only place worth mentioning on the Gulf of 'Akaba is Mahan whose inhabitants as early as in the year 9 (630/631) concluded a treaty with the Prophet from which it is evident that they were western and Suberians. Next we mention al-Wadja were the territory of the Habi-Arabs before and which offers an excellent roadstead for small ships. Close by is the mouth of the great wadi 'i-Hamm, which begins to the south-east of Khailan not very far from the source of the wadi Ruma. It first turns to the South-West, then passes near Medina and making a great bend goes on to the North-West to pre-historic times this must have been an important stream; now it only occasionally has water after heavy rain-fall. Farther inland but more to the north are the ruins of Madyan (q. v.). From Madyan the road used to lead straight through Hadra to Wadi 'i-Kura ('the valley of villages'), of which Hadra was formerly the principal place. Here the road from Egypt to Mecca joins the pilgrims' road from Damascus which goes east of the Hama-mountain just Ma'ra, Fahk and al-Bidr, or Ma'ra to Bahly. Springer regarded al-Wadja as the harbour of al-Bidr which corresponds to Herodotus' Eger. On the coast south of this place was Had al-Hawar ('the white village'), in which Springer recognised the old Leukekoma. Here is the end of the Habi-territory and the beginning of that of a kindred tribe the Qajihila. The country between al-Bidr and Wadi 'i-Kura used to be the territory of a famous even up to the present day for their depth of passion, the 'Udhra, 'who were when they were'.

The whole country round about Medina is volcanic — the volcano used to be said to reach from Palmyra as far as Mecca — and even in historical times have been a few eruptions. The last of which we know, took place in 634 (1266) see Samhodi, p. 40. In Arabia the black volcanic mountains are called Harra or Laha (lava). Mecca itself is situated between two of them; hence the phrase: 'what is between its two harra (or lava)' for 'the whole town'. The valleys in these harra are remarkable for their comparatively great fertility. The cultivation of dates especially has been of importance for centuries past.

Less than an hour north of Medina is the hill of Uhud (q. v.). To the territory of the town belongs the big farm of Khailan (to the east of Wadi 'i-Kura) where the wadi Ruma has its rise. Thina (Thina) is the east of Tabuk on the west frontier of the Habi-territory and even the oasis Dima (also Dimat al-Jinnal, i. e. the Dima built of gravel) called at present al-Jowf or al-Lid (q. v.) and situated on the south-west boundary of the Naufal-territory at a distance of 13 days' journey from Medina and 10 days from Damascus.

are also reckoned to belong to the territory of Medina by the Arabic geographers.

From 'Akaba it is possible to travel along the coast to Jidda and from there in two days straight to the east to Mecca. The Habi-territory (al-Hijaz, now also often called al-Judal, i. e. 'land of Hazan', the frontier of the Hijaz) is entered at 'Asir at a distance of a day's journey from Mecca where the mosque of 'Alaba stands. In all other directions the boundaries are further away from Mecca. Even before crossing the frontier the 'i-Ham is put on. The pilgrims from Najd and Yemen put it on at Kari al-Masail, in the vicinity was the once famous market of 'Alaba where a competition between poets took place. Almost two months' 36 miles from Kari al-Masail is 'Alf situated high up in the Hama-mountain hills, the summer-resort of the well-to-do Meccans. The air here is invigorating so that all south-European fruit grows in abundance. Especially famous since older times, are the grapes and raisins of this district. According to al-Jahiz the mountains of 'Alf are the only place in Hijaz where in winter the water freezes. (This happens on many mountains of Yemen, e. g. according to Glaser on the Hadra).

The hills in the south of Mecca have been inhabited from very ancient times by the Habi, who produced many talented poets in their neighbourhood and even in the present day the Habi to whom 'Alf formerly belonged. Near the mountain-range, called further on Sarit, mountains are and become an Alpine country. This is the most fertile part of the Hijaz. The mountains themselves are inhabited by Yemenite Arabs called 'Al-Habshi (i. e. 'outlet-like') by the al-Bidr on account of their rough customs. The instances he gives are partly corroborated by Burchard. The Qajihila relates that they believe very disreputably in Mecca in what is still Arabia's most sacred month, the month of Rajab, but that people had to put with their conduct because of the rich supplies they brought to market. At the time, in the 11th century, they were still called 'Al-Habshi, now they bear the name 'And (q. v.). The eastern part of the alpine highlands is the territory of the Qajihila, who are for the greater part camel-breeds. They are a very old but still a vigorous tribe from whom most of the Yemenite-Arabs claim descent.

Yemen — properly the country 'on the right', i. e. the southern country, also the happy country — has been famous from time immemorial for its great fertility and its riches. It consists of two unequal parts: Thama al-Yaman (the highland of Yemen) and Najd al-Yaman (the highland of Yemen), also Djal al-Yaman, the mountain of Yemen, with the plateaus of Najd in the North, Ma'ra in the East, San'a' in the centre, Ta'ra in the South. The Yemenite Thama is the continuation of the Thama of the Hijaz, according to Glaser's observations it grows ever broader, owing to the proximity of the sea.

The road from Mecca to the highland of Yemen goes round the mountains on which 'Alf is situated and leads over the well-known stations Taraka and Bahala to Busha, the chief town of a flourishing fertile district on the wadi Bahla which continues as far as Central Arabia. Journeying from Hijaz to Yemen the frontier is crossed between Tabuk, situated at about the

same latitude as al-Nadīm and Laysah. From them the main road goes straight up to Sada, while a branch way leads eastwards to Dajila [p. 1].

From Sada the road goes southward to Zanā, the capital of Yemen. To the east of Zanā lies Maṣā [p. 1]. The territory of which Maṣā is the capital, is now called al-Ḥaṣā (p. 1). It stretches from Nedjān to the south and Dajila to the south-west of Maṣā. Everywhere traces of former prosperity are found. In al-Muḥallawī mentions a town of importance Maṣāh, famous for antiquity. The first Europeans who visited these regions with great dangers to their lives were Amīn and Hāṣī. The part of Yemen farther south has recently been described at length by Landsberg (p. 1).

Coming southward from Zanā through Maṣā (p. 1), famous for its horsebreeding, Yāṣīn is reached, the village where Forssk., Niebuhr's companion died; half a day's journey farther are situated the ruins of the capital of the Ḥamās, Zaḥā in the longitude of Sada, and the latitude of Zaḥā. From here the road led over Sada, famous for its cotton spinning — the Prophet's body was washed in a stream of Sada — to Ḥamā, formerly the second capital of Yemen with the famous mosque of Maṣāh & Ḥamā, not far from Taḥā. In the vicinity of Zaḥā was situated the famous fortress al-Muḥallawī, the seat of the Ḥamāsian rule over Yemen. The town farther south in the mountains of Taḥā, in the middle of the 19th century ago, a place of great importance, the capital of the Ḥamās, is now in decay. The mountains are here called Ḥamā, situated to the west of Maṣāh — the Prison of Yemen's mountains, and famous for its coffee plantations reaped in terms and an excellent system of irrigation, and for the cultivation of the betel (collembola). The young sprouts of these plants, which are highly valued as an indispensable are exported in large quantities to all the towns of the Ḥamā. To the north of these mountains, between the (Alib) and Maṣāh (p. 1), also called Maṣāh (p. 1), is the watershed between the Indian Ocean and the Red Sea. Here are the sources of two perennial streams the wādī Zaḥā flowing to the North and the wādī Maṣāh (Maṣāh) flowing through the old walled Maṣāh and opening out into the Gulf of Aden to the east of the mouth of the wādī Ṭāḥā or Maṣāh. Another road, which Maṣāh has followed, leads from Maṣāh straight southward to Aden. The road from Maṣāh to Zanā over Maṣāh (the chief staple for coffee) has been described by Glaser.

The old division of Yemen into Maṣāh, Maṣāh, which also applied to Maṣāh and the Maṣāh, has long been obsolete.

South-Arabia. To the east Yemen is bounded by the province of Maṣāh, now usually pronounced Maṣāh. This is a mountainous country intersected by many valleys, whose luxurious enterprising inhabitants in more than one respect resemble the Suda. Since very early times they yearly have sent part of their young men to other regions to try fortune and they are not only found in the seaport towns of Maṣāh but also in Egypt and in Bahrā and Maṣāh. About all the Arabs both the last named countries are Maṣāh. The country is intersected from West to East by a wide valley, the wādī Ṭāḥā. This wādī

has a perennial stream which flows into the sea on the east frontier near Maṣāh; the two largest rivers Maṣāh and Maṣāh are connected there. To the south east of the latter town, at the entrance of the wādī Maṣāh (Maṣāh), Maṣāh, named thus after a still active volcano, is found the grave of Asaph (Maṣāh), well known from the Korān. Here begins the great desert which extends to the north-west, the south and the east. The best part of the country is Maṣāh (the name means simply Maṣāh) is not improbable that this place is identical with the Maṣāh (Maṣāh) in the Arabic geographers for in Yemen numerous ruins and ruins point to Maṣāh as a region of considerable prosperity and wealth.

To the east of Maṣāh, which perhaps corresponds to the old Maṣāh (Maṣāh), named Maṣāh and Maṣāh called Maṣāh by the Arabic geographers, a name meaning Maṣāh in the old language of South Arabia. The name Maṣāh is now limited to the first (western) part. The eastern frontier is Maṣāh at the west of Maṣāh. The latter place has an excellent harbour but it has decayed to an unimportant village. The town which is now called Maṣāh lies to the west of the harbour. Originally Maṣāh was the harbour of the old, now depopulated capital Zaḥā. This town was devastated according to Ibn al-Muḥallawī in the year 618 (1221), in the Maṣāh's time however it still was an important town. The latter speaks of the Maṣāh which are still caught there in such enormous quantities that camels are fed on them. In the country they are called Maṣāh and also Maṣāh. In the mountain chain which runs parallel to the Maṣāh grows the incense-tree. According to Ibn al-Muḥallawī everywhere between Maṣāh and Maṣāh traces are found of former terraced cultivation. This is corroborated by Maṣāh's description of this remarkable district. The cultivation of incense is now very limited. The Maṣāh of the Maṣāh mountains and of the Maṣāh (Maṣāh) between these mountains and the sea are partly Maṣāh. The Maṣāh to the east of Maṣāh as far as Maṣāh is said to be devoid of trees and shrubs, the island is absolutely unexplored.

North-Arabia. Maṣāh, the easternmost province of Arabia, is for the greater part a very fertile mountainous country with a coast rich in harbours. The Gulf of Maṣāh abounds in fish and from Aden Maṣāh the people along the coast have been recruited with Maṣāh, only founded in the 11th century and once a beautiful fortified town is now in decay. Maṣāh on the other hand, of little importance in the middle Ages — al-Maṣāh (Maṣāh) is a beautiful place with an abundance of fruit. Ibn Maṣāh not even mentions it — is at present the most valuable town of this country and has the best harbour on the Persian Gulf. According to European travellers the best there is even greater than at Aden and almost unmatchable. This is probably the reason why the Maṣāh's residence is rather at al-Maṣāh or Maṣāh (Maṣāh), both in the Green Mountains (Maṣāh Maṣāh). The latter town, named by Maṣāh is still flourishing. To the north of Maṣāh lies Maṣāh, the old capital, therefore also called Maṣāh (Maṣāh) or Maṣāh (Maṣāh) now generally called Maṣāh. Because of its extensive trade with the East al-

Mahdawi calls this town "the portal of China." Ibn al-Muqaddasi says that it lay waste in his time. It must in water have remained almost empty. Well-known description: it is a well-fortified town of some note. To the north of it, on the east side of the peninsula, the point of which is formed by the promontory Ras Musaidam (Munadham), lies Ushak (or Ushak), which was already in the time of the prophet a town of great importance and even now the capital of North Oman. Opposite on the west side of the peninsula lies the flourishing export town of Shurda. About the aboriginal population of Oman we have no information whatever. Tradition only says that after the breaking of the alliance of Hishak the Aul migrated to Oman. The former inhabitants seem to have been Moslems, as Oman is also sometimes called. The Aul appear to have maintained the prevailing tribe although great numbers of them migrated to Isfah in the time of the Ghaznavids. They belong to the Hishak (q. v.). Talysh also settled in Oman and a branch of these, the Nakhsh, has for a long time held the upper hand. Even Northern Arabs (Black Ghazis) later settled in Oman. Dates are the favourite food and are largely exported to other countries.

The country stretching to the west and north-west of Oman as far as the boundaries of Irak was called in the golden age of the Arabs al-Bahra, (now the name of the island itself), or also the capital Bahra. In the beginning of the 2. century the Karmanians built their residence al-Ahka, also pronounced Lahsa, not far from Bahra; this al-Ahka (or al-Ahka) is at present the basis of the country. The southernmost region is named after the tribe which inhabits it, the Karman (Karman), who are nomadic people; further west is the peninsula of Bahra. From very old times the inhabitants have been seafarers and traders. The capital is Bahra, called either Bahra or Bahra (Bahra) which name is not mentioned by Arabic geographers. A few hours further east lies the harbour of Qala. Further Mahara, lying not far to the north of Bahra is identical with the old Mahara. It is difficult to locate because the description of the country given by the Arabic geographers is altogether very superficial. To the north of the district Bahra lies that of al-Bahra named after the well-known project. The coast was formerly called al-Bahra, after a harbour from which the Arabs got the Indian spices. In later times so that an able person speaks of carrying dates to Bahra in the sense of carrying goods to "Samarra". For centuries the 'Ahl al-Bahra' tribes and the Tanima have contended for the overlordship. The latter held it as long as the power of the Karmanians lasted (close on two centuries). About the coast from al-Bahra to Kowab nothing need be said. It is hot and sandy. Kowab — the name means "the little hot (sandy)" — is also called Kowab ("the little hot"), now pronounced Kowab, hence the English spelling Kowab. It lies on the south entrance of a bay and will probably become an important trading-place. For the sake of the Shumra it is the nearest port for traffic with the East. The Shumra of the territory is under Turkish suzerainty but practically independent. On the west side of the bay the Kowab, the most important

station on the road from Bahra to Lahsa and to Yaman.

Central Arabia. To the east of Yemen, north of Hadramaut and Mahra and west of India as far as Central Arabia there extends a vast desert, of which we know the borders only and these imperfectly. It seems to be similar to the Nafud desert in North Arabia. Water is scarcely to be found. After rain the ground is covered with vegetation and abounds in pastures. Then the Bedawis journey inland with their camels, sheep and families and live there for three or four months. Neither they themselves nor their cattle need water: the people live on milk, and because of the abundance of the herbage — the most juicy plants grow on the richest spots — the cattle have no need of water and even refuse it when it is given to them. As soon as the summer heat has dried up the plants they go back to the settled regions of their tribe. This is the custom of all Bedawis who live at the edge of the desert. How far they actually venture into the interior is unknown to us. The desert has several names. The part between East-Yemen and Northwest-Hadramaut is named Sahal; to the North and the East of Hadramaut it is called al-Ahka (the desert); the part north of Mahra the Arabs call Bahra; but generally it is called al-Bahra, 'the red country', after the colour of the sand. On maps it is indicated as al-Kub' al-Ahka, i. e. the empty quarter. Whether there is any water in the interior so that at least animals may live there is quite uncertain but not impossible. The Bedawis of Mahra, whose deer stamboules (called stambou) are famous all over the world put down this excellence to the fact that their stamboules are sometimes covered by camel-stamboules of the Djinn. This might lead to the supposition that there are still wild camels living in the interior as is asserted by the Arabs who call them *ghazal* (wild). Perhaps the same applies to the camels of West-Yemen which are equally famous. The assertion that a people speaking an unknown language dwells there (cf. v. Oppenheim, *see Mittheilungen aus Persien* Oct. 11 1912), is not likely to be true. According to Ibn al-Muqaddasi Bedawis as late as in the 13th century ventured to travel right across the desert to Merv and Samarkand for the exchange of goods from Irak. On the southern border of the vast desert, a three days' journey from the south of the Yaman and nearly as far from Mahra, lies the formerly flourishing, well-watered oasis Vahra which was devastated by the Karmanians, after the conquest of the desert in connection with the sand of Yaman. The way from Oman to Mahra goes through this oasis. From here a spur of the desert stretches to the North between Bahra and the Yaman, which is also called al-Bahra or Nafud and sometimes 'the sand of Ahik'. It is described as rich in pasture and is intersected by timbered mountain-ranges, residence in which is said to be agreeable and healthy. On the west and north-west border of the great desert is found the territory of the Karman and the large depression which was formerly called Bahra but is now named Wadi al-Bahra (nowhere) after an Arab tribe. Its continuation south-west of Yaman is the Wadi al-Bahra (formerly Bahra al-Ahka).

To the north of the desert commences the

central highland (Nadīd), the heart of the peninsula and without doubt the most healthy and in Arabia the finest part of Arabia. The south-eastern province (often not counted as belonging to the real Nadīd) is the very fertile Yamama (q.v.). Yamama and Bahraïn are together called al-Bahraïn.

From the Yamama two mountain-passes ('Oyala' and Haratimā) lead to 'Haramāda', which is already situated in Wāḥm (also Wāḥmā) and from there farther northwest to al-Bahraïn, the chief town of this province, and in 9 hours to 'Ubaïda, the principal town of the province of Najm, which is bounded on the North by the Shammar country, and on the West by Khallāt in the territory of Medina. We owe to Doughty a detailed knowledge of this country. Two hours north-east of Bahraïn lies Buraidā. Right across Najm goes the large wādī Rumma which comes from the hara of Khallāt (3000 feet high) and extends so far as the vicinity of Najm. This is a depression, now probably the bed of a stream in prehistoric times. Although a good many wells open out here it and through the beds of limestone (luff) conduct into a considerable quantity of sub-water, still the wādī Rumma, after a day's journey wide, is generally dry — only twice or thrice in a century does it become a real river — but the water runs through the ground and sometimes is visible in places. Najm owes its fertility to this circumstance. To the west of Najm the wādī goes between the two hills of Aḥsa (well known through the Arabian ports), of which the northern is called the black and the southern the red, formerly the white. The width of the valley is here from two to three arsh miles. The part of Najm which lies farther north-east is now called Sodnā (some pronounce Sodalā, Sadelā; Doughty even has Shidā). The name is modern. In the *Qibṭān Akwa* it is the name of a station on the pilgrim's road from Najm (cp. Nörberg's translation, ii. 235 and 201). In older times the different parts of Najm were named after the tribes.

To the West the province of Najm is bounded by the territory of the Shammar, named thus after a branch of the great tribe of 'Ul (q.v.) after whom it used to be called 'the two mountains' of the 'Ul."

The Shammar mountains form the north boundary between Najm and the Nufud or Dahna; the real desert with exactly the same characteristics as the *ghāṣ* desert in the South. After the rain it is covered with green, juicy herbs: moss and bean like for some weeks in abundance. But later the sun scorches everything and the country for want of water becomes a bleak waste, perilous for the traveller who loses his way. Several Europeans have crossed this wilderness among whom Lady Mont and Euting deserve to be mentioned. The soil consists of reddish sand and gives the impression as if a bed of gigantic dunes had slipped through it from East to West (Euting). On the west side of the *ṣafā* (ṣafā, ṣafā), as such a hoofprint is called, is a high sand-ridge, at the east base of which the bare stone often shows; then the ground rises gently towards the East. The depression is called *ḥāṣ* in Arabia; the high sand-ridge *nifā* or *nifā*, the plural of which *nafā*, (also *nafā*), now denotes the whole desert, just as in the South the synonymous *ahṣā*. This *nifā* of which on times it is to be found in the latest language, has probably arisen

through metathesis from *ḥaf* or *ḥafā* (with the plural *ḥafā* and *ḥafā*). The facts that these *ṣafā* always retain their shape leads to the supposition that the sandy formation already had the described form and that the real wind has blown the sand against the ridges and piled it up there. The area of these depressions as well as their depth differs greatly. The length of the largest is calculated at just over a mile, the depth does not exceed 150 feet. The journey from Ḥayl to Ḥawā (Ḥawā) was done in the opposite direction by Euting in 8 days, by Lady Mont in 10. After three days the oasis of Ḥubla reached where numerous inscriptions and paintings on the rocks show that it has been visited since remote times. Not quite a day's journey from Ḥubla there is a well called Shāḥī, which Euting (1883) however found filled up. Ḥawā, already described above under its old name Ḥama, is situated on the wall Sirhan, a hollow which stretches through East to the Ḥawra right across the stony desert, which is at present called Ḥama, a name not to be found in the written language. Perhaps, as Wallis supposed, the real form is *ḥama* from the verb *ḥama* meaning 'to be barren'.

The name *Ḥadīya al-Sham*, Syrian desert, was limited by the Arabs to the western part; the eastern part was called in the South *Ḥadīya al-Sham*, desert of Sham, in the North *Ḥadīya al-Sham*, mesopotamian desert, also *Ḥadīya*. The southern part was also often called *ḥadīya*. The *ḥadīya* slopes from West and North to East and South and is intersected by numerous streams whose water accumulates partly in ponds (*ḥadīya*) partly in bigger masses which flow out into the Euphrates. In spring there is an abundant growth of grass and near the wells some-like gardens, in some spots where the soil is more loose or consists of limestone covered with a layer of sand it remains quite sterile. An expedition right across this country from Trip to Syria such as Ḥadīd b. al-Walīd undertook in the year 13 (634) with his horsemen is a fascinating enterprise. The boundaries of the territory expand or contract according to the weakness or the strength of the surrounding civilized states. At present the al-Ḥadīya mountains south of Aleppo form the north frontier according to Suchan, yet summer bedouins travel often as far as Marash with their herds.

Climate. Products. On the whole Arabia suffers more from heat than from cold. Yet in the highlands the nights are often cool even in the summer and in winter the icy cold north wind becomes more disagreeable. — Poets look upon the east wind (*qaf*) as the most delightful. Much feared on the other hand is the *ḥamā*, now generally pronounced *ḥamā*, the 'poisonous' scorching landwind. All prosperity depends on rain, hence it is often called 'God's mercy' (*rahma* *ḥamā*) and herbage and *ḥamā* are often synonymous. The time that the rains, the *ḥamā*, is the hottest time of the year. There grow the herbs and the grass needed by the camels. The camels are specially fond of prickly plants among which the *ḥamā* is foremost, so that the proverb says 'It is prickly but not like the *ḥamā*'. In men the *ḥamā* (newer) yields the *ḥamā* (a kind of mercury, antimony), now called *ḥamā* (a name probably derived from *ḥamā*). Its reddish grains give a fine taste to the *ḥamā* from which is much used for the cooking

'*Uthbi* (*Uthbi*) etc., together with the *Uthbi* descended from *Uthbi*, and that the *Uthbi* tribe represents the *Uthbi* Arab (*Uthbi* Arab), however, is also said for the *Uthbi* who speak the *Uthbi* Arabic. The plural *Uthbi* or *Uthbi* is even used exclusively for them. They are called *Uthbi* (of which *Uthbi* is really a plural) because they live in the *Uthbi*, the open country, in contrast to the inhabitants of fixed abodes, the *Uthbi*, they are also called *Uthbi* on account of their dwelling in tents of camel- and goat-hair while the *Uthbi* for *Uthbi*, have city houses.

The division of the Arab into northern and southern tribes is an actual fact. The southern tribes are called *Yemenites*, the northern ones *Nabateans* or *Bedouins*. Already in Muhammad's time, however, the *Yemen* of Yemen were found long settled in the *Yemen* half, and in the South there were a few *Nabateans*. Tradition connects the migration of the *Uthbi* to the North with the breaking of the *Uthbi* over *Uthbi*. How far this is historically we cannot decide from the dates that have come down to us, in any case there must have been other contributory causes and other wanderings must have taken place.

The condition of the country itself keeps the nomadizing Arab constantly moving about. The *Uthbi* which surrounds Arabia in the North, East and South yields after the rainy season, extraordinarily pasture-land for some three months, so that man and beast can live in abundance. Thither they take their children and baggage and return to the territory of their tribes when the soil becomes barren again. Often, however, when their own country cannot support them all, parts of the tribe travel to other regions where they seek a new home continuously by force. The *Uthbi* are very prolific and under favourable conditions a small group of families grows in a comparatively short time into a powerful tribe. Then the repulsion of neighbouring tribes or emigration is inevitable. As the southern territory of the *Uthbi*, between the desert and the coast on the coast is limited, the *Uthbi* of the South were obliged to migrate to a far greater extent than those of the North. Already centuries before Muhammad the powerful *Yemenite* tribe of the *Uthbi* had conquered a territory in the North of *Uthbi* and the *Uthbi* tribe had settled in the East and the South of *Uthbi*. Hence migration of northern *Uthbi* to the South takes place only in exceptional cases.

The opposition between the southern and the northern tribes may be due first of all to the fact that the latter regarded the former as intruders. Through contact with the inhabitants of the southern *Uthbi* (Yemen, *Uthbi*, *Uthbi*) they had acquired in it a language and perhaps as their customs some peculiarities to which the northern people were not used, and which they therefore resented. After the *Uthbi* increased very much and finally became a great country in consequence of the rivalry of the *Uthbi* — the *Uthbi* — who were of *Uthbi* origin, the *Uthbi* — the *Uthbi* — also belonged to the *Uthbi* tribes. This antagonism has become stronger for the Arab race. It even exists at the present day.

The foundation of the tribe is the

family. To have a many ready men to fight — the Arab's ideal — through this his family becomes of importance and acquires importance over the kindred families who even recognize him as their elder (*Uthbi*) and call themselves his children. But in this spring — the which is joined by other and weaker tribes if it is powerful and wealthy. Different tribes also often join forces for mutual help or for great enterprises. Such a complex of tribes has a common name, generally that of the principal tribe also often one chosen at random, like the *Uthbi* (*Uthbi*), the *Uthbi* (*Uthbi*) or all different tribes are regarded as the descendants of one father or of one mother. In all other times the antagonism between *Uthbi* and *Uthbi* was not so great as later, we often find in tribal groups that are mainly *Uthbi* and some immediately *Uthbi* tribes, and sometimes the reverse is the case.

In the genealogical tables of the Arab *Uthbi* is given as the progenitor of all *Uthbi*. It is worthy of note that the *Uthbi* still exist as an important tribe in the country to the west of South-Arabia and North-Yemen and reaching as far as the great desert. Whether the name of *Uthbi*, according to them the name of the inhabitants of the *Uthbi*-country, is identical with *Uthbi* I do not venture to decide. South of this territory is that of the *Uthbi* tribe from which the most important of the two groups of *Uthbi* tribes are said to be descended.

To the *Uthbi*-group belong or did belong:

1. the *Uthbi*, who have held for about two thousand years the two mountains named after them (*Uthbi* and *Uthbi*). The *Uthbi* and *Uthbi* called all Arab *Uthbi* (q.v.) the *Uthbi*. Now they are *Uthbi* and the *Uthbi* are one of their branches which gained supremacy. The ancestral seat of the *Uthbi* was the village of *Uthbi* in the *Uthbi*-mountains. At present the name *Uthbi* only belongs to a few small tribes in Mesopotamia which acknowledge the authority of the *Uthbi*, but do not pay any tribute (protection-money) and are regarded as of equal birth. The *Uthbi* did not come to Mesopotamia where they are ruling now, until the end of the sixth century, being driven out of the Syrian desert by the *Uthbi*.

2. the *Uthbi* and *Uthbi* tribes, which for the greater part have remained in Yemen. To the latter belong e.g. the *Uthbi*, living in the southern of *Uthbi*, and the *Uthbi* who played a great part in the conquest of *Uthbi* in 630 A.D.

3. the *Uthbi* and *Uthbi* tribes, who early called *Uthbi* the *Uthbi*, founders of the kingdoms of *Uthbi* and the *Uthbi* and the *Uthbi* who had the upper hand not only in their native country of *Uthbi* but also governed the *Uthbi* in the *Uthbi* and whose *Uthbi* even bore the title of King. The famous *Uthbi* *Uthbi* belonged to the royal family.

4. the *Uthbi*, a powerful group of tribes which conquered *Uthbi* and called in the *Uthbi* and a branch of *Uthbi*, the *Uthbi*, founded a kingdom in Eastern Syria; other branches of this group are the *Uthbi*, once masters of *Uthbi*, and the *Uthbi* who invaded *Uthbi* (*Uthbi*): the *Uthbi* and the *Uthbi* (*Uthbi*).

To the other group of descendants from *Uthbi*, at the head of whom the *Uthbi*

legions put Himyarit, belongs the great confederacy of the Kinda, of which the Habs and the Tanukh, who settled very early in North Syria from a part, the Habs, occupying the valley of the Wadi Hama in the Hauran and the ancient Habs, who lived in their vicinity and are famous for their depth of position; the Kabs, inhabiting the Syrian desert; and the Habs who settled in the Northern Hauran. In Omar's time large parties of the Habs and the Ghassan were moved to Egypt.

The North Arabian tribes are called *Nakhar* or *Ma'addites* after their supposed ancestor. The latter name is found in Hieroglyphs as the designation of a group of tribes, the former occurs in an inscription of 328 A.D., discovered by Dussaud at al-Namara in the vicinity of the Gila (to the east of the Hauran). This inscription says of Mar' al-Kais b. 'Amr, 'King of all Arabs' that he ruled the *Amal* and the *Nihar* (Habs) in the *Esphar* (ii. 34). Not counting the group of the *Yahid*, once powerful but already *dead* to sight before Islam, they are divided into two great groups: the *Rahit* and the *Mughar*. The dissolution of these groups had taken place long before Islam. The two tribes which had the upper hand, emigrated to Mesopotamia, where the two provinces of Diyar-Rabi'a on the Tigris and of Diyar-Mulur or the Euphrates preserved their names for a very long time. These provinces were afterwards occupied by the Taghlib and the Nakhla.

To the *Rahit* group belong the *Anasa* and the closely related *Anad* who lived near each other to the north of the Wadi Rumma. The pilgrims' road from Hama to Medina crossed their territory. The *Anasa*, who are said to have driven the *Kabs* from Arabia in the seventh century kept the supremacy. In the second half of the 7th century they occupied a subjugated nearly the whole of the Syrian desert. To them belong the *Amal* tribe to the North-East and the *Kabs* in the West. Arab *ma* still found in *Yahid*. Closely related to them are the *W's* divided into two important groups: the *Habs* and the *Taghlib*; the *Amal* between these two after the murder of *Kabs*, who was in authority over the *W's*, became famous for *Yahid* both migrated to Mesopotamia with the kindred tribe of *Nakhla*: the *Bahr* in the northern part in the province called after them *Diya* *Bahr*. The capital *Amal* still bears that name. The *Taghlib* and the *Nakhla* occupied the southern part. They were Christians and therefore had to pay the double poll-tax in Islam. To the *Bahr* b. *W's* belong among others the *Amal* *Habs*, lords of the *Yamama* and the neighbouring *Shahab*. Also the *Amal* *Kabs*, who lived in *Yahid* are considered to belong to the *Rahit* group.

The first place among the *Mughar* group was originally held by the *Kabs*, who were of such importance that very often all non-Venetian Arabs were called *Kabs*. At present it is only the name of a small, half-nomadic tribe on the Euphrates which has to pay the *khawa* (a) to the *Shammar*. To the east of them live the *Adwana*, who under the authority of the *Shammar*; they formerly lived near the *Faram* and the *Musallat* in south *Yahid*. To the *Kabs* group belong further the *Hawazin* and

the *Sulaim* who possessed the western part of *Yahid* to the east of *Medina* and *Makka*. At the beginning of the 6th century the *Kabs* and their neighbours the *Habs* (considered to belong to the *Hawazin*) became so troublesome on account of their large numbers, that they were dangerous to the safety of the holy cities and had to be forcibly restrained. They decided to emigrate to Egypt, where at last they settled in the Nile-delta, then they were obliged to move to Upper-Egypt and in 444 they were persecuted by the promise of a camel and a horse each to cross the Nile and to emigrate to North-Africa. *Mos* *Amal* *Hawazin* in North-Africa claim descent from these two groups. The *Habs* still live in popular stories, *ma* in Central-Arabia. Formerly they belonged to the tribal-group of *Amal* b. *Sulaim*, to which also the *Kabs*, the *Hawazin* and the *W's* (*Agil*) were considered to belong. The last mentioned tribe is still of importance in *Yahid*. They supply the greater part of the camel and the carrier for caravans from Syria to *Yahid*. A branch of them are the *Ma'addites*, who were already powerful in the 6th century and still remain so. Their territory lies on lower Euphrates.

The *Kabs* group also comprises the *Yahid*. Their two principal tribes the *Amal* and the *Hawazin* are well-known through the famous war between them caused by two daughters and called after them the war of *Yahid* and *Hawazin*. The principal branch of the *Yahid* were the *Faram*. To the *Ma'addites* belonged further the *Habs* and the *Tanukh* who occupied the regions in *Yahid* which had been formerly inhabited by *Habs* and *Taghlib*. The *Tanukh* are a large tribe and have spread in all directions. True *Hawazin* of this name are no longer to be found in Arabia (though there are some on the lower Tigris), yet a large number of the inhabitants of the *Yahid* towns consider themselves to belong to this tribe. The large *Hawazin* tribes in *Yahid*, all of them *Mughar*, are now the *Yahid* (*Ma'addites*) to the east of the *Yahid* dominating the road between the two holy cities; to the west of them, separated by the west-Namara, the powerful tribe of the *Yahid*, and to the east of these the *Ma'addites*. The *Hawazin* of the *Yamama* are also *Mughar*; their importance has diminished under the rule of the *W's*.

Finally there belong to *Yahid* the *Yahid* who from ancient times have inhabited the mountains in the neighbourhood of *Makka*; and the *Kabs*, were a powerful group in South *Yahid* to which the *Namara*, the old ruling tribe belong. At present this famous name is only known by a small tribe of shepherds in the territory of *Makka*, the only one among the *Namara* tribes skilled in the art of *Yahid*.

The conquest of *Yahid* have caused considerable changes in the *Yahid*-world. The *Yahid* provided very strong contingents for the *Yahid*, and when in *Yahid* and in Syria large military stations had first been founded, new centres were formed for these forces in the East and in the West to which other contingents of *Yahid* were moved. On account of this some tribes were so much weakened that they had to join others and lost their independence in Arabia itself.

Between the *Rahit* and the *Mughar* tribes jealousy has existed for ages to

such a degree that the former often killed themselves with Yemanito tribes against the Magarites.

The Lihiam who live scattered in the *Wādī* and *Najd* are not counted among the *Araba*. They are excellent hunters; their hands consist of small castles; they also often do smaller work. Related to them are the *Qasābi* in the south-west of the Syrian desert who breed riding-camels. Still farther removed are the *Qasābi* (*Qasābi*), "the glories of the desert", really hunters but more the less excellent hunters (with the passages quoted by Oppenheim, *l.c.* II. 118, 119). They ride on camels only. In modern Arabic literature they do not seem to be mentioned at all.

The sole *Araba* seems handicraft: cattle-rearing, trading, hunting and robbery are in his opinion the only occupations worthy of men. Agriculture and navigation are he regards as beneath his notice. The *Araba* were often unskillfully called "nomads" by the *Latin*, because their kindred to *Qasābi* were nomadic; the *Kurdish* looked down on the *Medians* because they tilted the soil. Their principal food is milk. From this they make by evaporation a kind of curd which becomes palatable again when mixed with water and is often carried on journeys. It is called *qasābi* (now *qasābi*), *qasābi* or *qasābi*. Butter is generally churned and kept in this form. Generally speaking the *Araba* do not know the art of cheese-making. Meat is not every-day food. Except on the few important occasions when they are obliged to slaughter them, they kill their cattle for festive occasions and for guests only. But as a rule to do *badawī* though the guests very often, his family can eat meat every day. Butter, wool and milk come from camels or goats' hair, and — more important — these animals themselves and bones (where they are cooked), are brought to market by the *Araba* and are received in exchange dates, corn, clothes and household utensils. In pre-Islamic times many a rich *Araba* obtained the expensive, ready wine in this way; now coffee and tobacco have become indispensable to all *Araba*. Even those most conservative of all people have to obey the spirit of the time. Thus bows and arrows have been replaced everywhere by the rifle. So long as the *Wahhabī* were in authority smoking was tolerated in some of the *Araba* under their influence.

The *Araba* have taken just as advantage on a large scale only to the extent of providing the camels for the caravans and guarding these against hostile attacks for which protection they received black-mail (*ḥisāra*). Even now powerful *Araba* living along the high roads receive "protection" (*ḥisāra*) from the Government. Townspeople travelling through the territory of a *badawī* tribe were established with *ḥisāra* the kind of "brotherhood" (*ḥisāra*, derived from *ḥisāra*), which they buy for money. The weaker tribes to want of protection have also to pay for this "brotherhood".

Nothing with greyhounds (*ḥisāra*) and *ḥisāra* (*ḥisāra*) is much indulged in. The big game consists of gazelles, mountain-goats, wild cattle, a kind of antelope with large, upright horns, or all probably the prototype of the fabulous "unicorn" — and wild asses. The chase of the latter, the *ḥisāra* runners of all, is the principal sport of the *Araba*. The chase of the wild ass is

the most of every kind of chase. Of small game there are a few kinds of partridges, hares, jacksnipes (*ḥisāra*) and the big birds called *ḥisāra*. *Araba* are also especially for the *Araba* and the *ḥisāra*. These birds are gradually disappearing, however, in the North-Arabian desert.

Raid (*ḥisāra*) play an important part in the life of the *Araba*. A part of the raiding life of the *Araba* (*ḥisāra*) — we think the camp of the *Araba* (*ḥisāra*) and then there happens to them what does happen and sometimes, as coming down to the *Araba* (*ḥisāra*) our brother, if we find no one but our brother. So it has always been and so it will. To rob exactly and often wives and children as well from any tribe, but of all from a hostile one, and to spill a little blood as possible that no blood may be spilled, is the *Araba*'s ideal life. The women and children can be captured, the booty is divided according to fixed rules. The *Araba* who live in keep up the tribe's dignity and must have the necessary means for this — a large share in the other hand the less is lost by all the men of the plundered camp and the *Araba* is expected to contribute handsomely. It is chiefly for these still that *Araba* are raised. Those who take part ride camels, the horses are only mounted in the fight and when retreating. A good horse is its master's pride but it is a very great expense, if only from the fact that he must always have plenty of water for his horse. The filibustering expeditions are altogether one of the chief means of the impoverishment of the people of the desert. The place of destination is often a great distance and the journey thither very tiring for men and horses. When they have reached their end they have to much home possessions in order to escape the pursuing enemies, in this way not only the *Araba* but also the plundered people and animals suffer a great deal. If the pursuers succeed in winning back the prey they will suffer losses through the forced marches in which their animals are exposed. And the fortunate raiders are threatened by the same danger from some other direction. A weak tribe therefore is obliged to join a more powerful one. When men are in such a state the consequences may be disastrous because if no blood-money is paid or accepted a blood feud ensues which may bring about the fall of a whole tribe.

The *Araba* (*ḥisāra*) (*ḥisāra*), though often a young man) of the tribe is really only a young man, and in this respect dignity is not necessary. As long, however, as he has some credit through ability and wealth — generally remains in the family. As a rule he is at the same time *Araba* (commander in chief or *ḥisāra*) in time of war. The latter is now generally called *ḥisāra*, while the title of *Araba* belongs to the ruler of a province, or for instance to the prince of the *ḥisāra*. *Araba* the *ḥisāra* is a judge, a *ḥisāra*, whose dignity is usually hereditary. Justice is administered according to the law of custom (*ḥisāra*, *ḥisāra*), which agrees with Muslim law by the extent in which the latter is founded on the former; but in the *ḥisāra* only gives advice and never commands, so the judge's sentence involves only a moral obligation.

The solidarity of the tribe and the responsibility of the whole tribe for every single member obliges the *Araba* to exercise some sort of police-

supervision. If a man commits a deed in which the tribe refuses to bear the consequences or offends his own tribe, he is expelled and is a lost man if no other tribe will give him protection. The feeling of solidarity and the duty to uphold and promote the interests of the tribe with all one's strength is called *ghayrah*. Unfortunately this often degenerates into blind partisanship. The bedouins are the most matter-of-fact and the most realistic people one can imagine. The matter of religion they are not only lukewarm but indifferent; they have little faith. Where the Wahhābīs have had some influence, however, the commandments of Islam now at least outwardly obeyed, as for instance now in Najd. Their gloomy fundamentalism however has spoiled the character of many animals. — The settled Arabs on the other hand are religious and are only led to infidelity.

Most bedouins have only one wife. As a rule they only take another when the first is barren and they do not want to divorce her. The settled ones have three or four wives, sometimes for political reasons, in order to be related to an influential family, sometimes, but more rarely, to give a home to a woman. Often the girls are only twelve, even all when they marry. For this reason and because the women nurse their children for some of these years they soon grow old. Besides they have much work to do. They have to provide fuel and water, to milk the herds and make butter, usually to cook the food and to weave tent-coverings, blankets and clothes. The nomadic women have all this done by the servants. Yet the position of the bedouin woman is much better than that of the women of the town. She enjoys much more freedom and is generally respected. The noble maidens (*harāth*) of the desert are very dear to all the people; the maids often have a considerable influence in the decision of matters of importance, but a woman hardly ever enters the men's division of the tent. The veil is not generally worn. The bringing up of the children is very simple, but even in the toughest tribes they are accustomed to obedience to the parents and respect for grown-up people.

The bedouins possess, according to the maxims laid down in all travellers' accounts of dignity. They are conscious and self-conscious and as a rule generous. That is the kernel of the manly excellence, which the Arabs call *sharaf* (virtue). They are keen on winning booty but theft is a crime to their eyes. They are hospitable, though often only for the reason that they, with their guests to repeat their praise. For to be a person of note, to be praised everywhere as noble, generous and brave, to be feared and admired, is the highest ideal of the aristocratic Arab.

The rivalry of the bedouins is a constant danger for all states situated in the desert. These states have to be strong so that the bedouins may not venture to enter their territory without permission. If not, they have to buy their peace and must even then suffer the bedouins to enter the frontier and devastate them country. In fact some wild stretches of uninhabited land because of the *ghayrah* of the bedouins is for instance at present a great part of Iraq and even regions beyond the Nile. Or again Arab kingdoms arise on the frontiers, which reach to the sea and the cultivated

states like Persia and India. In antiquity, the kingdom of the Sheikdom of Egypt and in truth that of the Ishmaelites, the long before Islam. In modern Arabia the Wahhābī rule has established a fairly good condition of order, and the heir of their power, the prince of the Shammas in Ha'il has considerable influence over the bedouins in Najd and in the western part of the Arabian desert. In the frontier districts the bedouins usually become half-civilized, they do not even murder of cattle and subsequently take to tilling the soil. The reverse process, that farmers take to a nomadic life, happens only very rarely. Life in the desert is much too hard for them and involves too much privation. Only the bedouins without a doubt nature can bear it.

The feeling of solidarity with other tribes is usually but a faint one. Nor is there always harmony within the tribe. This makes it easy for the power of the authority at any given time to subdue and conquer the otherwise formidable tribes one by one. Owing to this same cause they hardly ever join forces for common enterprises. Acknowledged evils that might easily be removed by concerted action, remain in existence for years while the people resign themselves to the will of God.

The Arab kitchen is very simple. Formerly the daily food was a mixture of flour or roasted or fermented corn and dates, raisins and water or milk. At present it is beside the main dish Persian, powdered wheat or Indian corn steamed over water; for the benefit of nomadic people butter, mutton fat or cow milk is added and sometimes cooked meat is put in. The bread was still not in Meccah until 1817, since the famine in the Hijaz, however, in 1830, when was imported from Egypt. Bread is still a very thin flat cake. Milk is drunk a good deal and for refreshment they use sour milk (*laban*). Dates form the principal food for many Arabs. In need of food the bedouins take whatever they can find, not only the hard *qat* and *jerban* (*qat*), but even snakes, lizards, the kind of lizard, according to others more a rabbit, water and foxes, or well as many kinds of plants and fungi.

Their clothes too are simple. Those who are not well off wear a shirt only (*thawb*) with a belt and an upper-garment (*shawl* or *shirāz*). The wealthier people wear over the shirt a kind of kaftan and in winter over this a lined jacket, in place of which others wear a sheepskin coat. In place of the former turban, the *litham* (at present generally pronounced *litham*) has become the general headwear; it is a piece of cloth held together by a black sash (*hijab*). Trowsers are not used. Most people do without foot-wear, only the well-to-do wear boots and slippers.

The clothes are not washed in water is generally scarce. Owing to this some women wash their bodies in the sea or in the river. For bathing the children and for their own hair they have to use camel-urine. Wherever the bedouins come across a pond of water they make a bath. In the case of the desert-people bathing with sand is the usual custom.

Each tribe has for its chief a special mark (usually by which every bedouin recognizes them) it is often painted on the rocks to indicate the

monsters of a tribe's totem. The Arabs who can write like to scratch their names (not to) with or without additional remarks etc. Formerly they also painted pictures, which do not give us a high opinion, however, of the artistic talents of the desert-people. Nor have they reached a high state of development in architecture. They are much more proficient in ornamentation, and have a taste for music but Islam has not favoured this art. They were first and foremost, however, as warriors and speech.

For the same reason, by which the Arabs were known in Palestine and in the West as general, see etc. /M. J. de Surget/

2. HISTORY.

ARABIA BEFORE ISLAM.

All that we know of Arabia from pre-Islamic and, further back still, from pre-Christian times, falls naturally into two main divisions, one purely historical, the other standing rather with civilisation than religion.

Our knowledge of the history we owe partly to inscriptions found in the country, partly to contemporary writers in the literature of other nations (Babylonia and Assyria, Egypt, Greece and Rome) partly also (for the centuries immediately preceding Muhammad) to early Arabic tradition. If our sources were more complete and especially if our chronology were more certain, we could perhaps draw a picture more or less free from gaps from about 1000 B.C. onwards (or even earlier), but, as it is, we do not even know for certain how far back we can carry the date of the oldest South Arabian inscriptions.

As early as the 2nd millennium B.C. the old Babylonian inscriptions mention a King Maribai (also in the fuller form Maribai-dam) of Magan or East Arabia; there is much to be said for the view that Magan was only a Semitic rendering of an Arabic Ma'an, and that from this centre was founded (at a date unknown to us) the South Arabian kingdom of Ma'an (later vocalisation Ma'ana) in the Minæan state, which perhaps in the beginning embraced the whole of South Arabia (including Katsân and Hadramawt). In addition a district named Ma'akh is mentioned as lying further off, probably covering Central and North West Arabia, from which as well as from Magan the Sumerians, e.g. Gilgamesh (about 2550 B.C.) imported a large quantity of produce (wood, stone and metals) for their temples. Hubert Grémar has given an explanation free from objection of the name Ma'akh from the Old Testament 'Amalek' (broken plural of a singular Amlik; with a prosthetic vowel hardened as often in Arabic: cf. *ma' and with the meaning (for which analogies may also be found) of 'dog' as an aquatic quadruped like those in Mesopotamia; thus there would really be epigraphic sources for the existence of this 'first of the nations' (Gen. xiv. 30) as early as the second half of the 2nd millennium B.C.*

The South Arabian inscriptions begin at the latest from about 800 B.C. and very probably extend centuries earlier. The more exact understanding of these — not merely as regards the grammar but particularly the subject-matter, has not only laid the foundation for the history

of Arabia before Islam, but has actually opened up a new era for Semitic archaeology. The largest acquisition of this epigraphic revolution, which was very early up to the middle of the last century (now we have about 2000 inscriptions) was due to the increasing capture of Jewish History and Edward Wilson. These inscriptions fall into two large chronological groups: the so-called Minæan and the Sabæan. In the first, the Minæan group, belong not only the numerous texts dating from the period of the Kings of Ma'an (see the names above), whose capitals Karna' and Yafit lay in the South Arabian highland north-east of Saba', and north-west of Ma'akh respectively, but also the majority of the Katabanian and inscriptions not made known by Glass, and the few Hadramawt inscriptions that have been found up to the present. Future journeys of exploration should come with the latter, for it is known by report that hundreds of inscriptions exist in Saba' and the highlands situated around the capital of Hadramawt. The Sabæan inscriptions on the other hand begin in the period of the so-called Fréarings (which is a mistake of moderns in the date of Saba', about 700—500 B.C. This is the old Babylonian epoch, in which may be included the first period of monumental art; from about 500—425 B.C. the official title 'King of Saba' is borne by the Fréarings ruling in Ma'akh besides whom the only kings still existing were those of Katsân and Hadramawt. Then a new element appeared, the Himyarites, who probably first made themselves masters of Katsân and then established themselves also in Ma'akh, and whose rulers bore the title 'King of Saba' and (of) this Ma'akh' (after the mountain Ma'akh near the Katabanian capital Tamos' south-east of Ma'akh); it is fairly certain that the 425 B.C. used in later inscriptions dates from the critical point, which is probably significant. (If this era — as e.g. Lucien Cl. 799 — is longer, the 425 — is named after a certain Ma'akh bin Aduq, who is probably the arch-enemy of Saba' and Hadramawt, who was the Saba' and Hadramawt, like the Assyrians, and this work of reckoning the years. The title mentioned above was assumed about 300 B.C. when the independence of Hadramawt came to an end, and henceforth the King of Saba' and Ma'akh and Hadramawt and Yafit were united, in which a further addition was soon made; and of that Arab in the mountains and in the Himyar. After a short Ethiopian invasion occurring in the middle of the 1st century A.D. these nations, with the long titles held their position without a break from about 575—525 A.D. when their place was taken by the Aramites. In this period too, we still have long South Arabian inscriptions especially the long, dated inscription dealing with the local of the famous Ma'akh; it has been discovered and published by Glass and belongs to the year 657 and 658 of the above-mentioned era (that is 542 and 543 A.D.). This inscription begins: In the power and grace and mercy of the Most High (Allah) and of the Holy Spirit, this memorial stone was inscribed by Ahraba, the governor of the Gharbi (i.e. Arabian) King Ramihi Shyaman (or Zuhayman), the King of Saba' and Ma'akh and Hadramawt and Yafit and Ma'akh and the high land and the low land', it

medals among other things embossed of the King of Fara and of the King of Fara, and of Muḥammad (— al-Muḥallab) and Ḥarīṣ ben Gabaṭ and of Abū Karīb ben Gabaṭ, so that thus the great power of the period shortly before Muhammad, Huzayn and Fara and likewise the outburst plotted by them on the Arabian frontier, the kingdom of Hira (al-Muḥallab) and that of Ghassan (in the land east of the Jordan), are fully represented here in the distant South, with their interests and intrigues. — An exceedingly interesting fragment in the Ottoman Museum D. M. 231, concludes: 'In the name of the Merciful and he son Kertan the victorious (ḡalīb) and of the Holy Spirit', it mentions a King of Saba Sam'alī Athwa' and a Sam'alān (ḡalīb) Elā-Aḡlaba (probably a mistake of the writer for Elā-Aḡlaba), King of Ḥabashat (Habesh), with which compare the Ḥabash inscription, dating from 525 A.D. (There we have Sam'albeel Yakbul and Ḥabsh Karibān Vahī as sons of Sam'alā Aḡlaba, the 'Emperors of Prosopis').

The Ethiopian rule, during which the above-mentioned Abrahā not merely defeated and deposed the last King of the Himyarites, Ḥabsh Nuwās (cf. also Ins. Hal. 63, 7), but later wrested with his famous elephant right up to Mēkka, was followed about 525 A.D. by the conquest of Yemen by the Persians under Khosrow I, who installed a certain Wabīr as governor (but finally Yemen also succumbed in the conquering power of Islām. The last Persian governor, whom Khosrow II Barokhad had appointed, was Ḥabshā, who, after Khosrow's death (628 A.D.) accepted Islām and recognized Muhammad as supreme lord.

It is not practicable to place the beginning of the Himyarite kingdom much later than 700 B.C. there otherwise we cannot possibly find names for many names of kings already authenticated (from a still very incomplete knowledge of the epigraphic material which once undoubtedly existed), and though frequently fathers and sons or brothers ruled at the same time, yet we can establish from the inscriptions a large number of genealogical series (often 3 generations, father, son and grandson), and historical experience of all periods, but particularly of antiquity, teaches us that such a series of four members occupies on the average a century. Consequently the above estimates (Old Sabaean epoch 700—500 B.C. etc.) are rather to be regarded as minimum dates, especially (and this applies in particular to the two following epochs, the Kings of Saba and the Kings of Saba and Ḥabshā) as we are still far from knowing all the kings and therefore up to the present can establish only a more or less defective sequence.

Now the important question arises, in what chronological relation do the Sabaean (and Himyarite) inscriptions, for which at least 500 years are to be assumed, stand to the Sabaean. While it was regarded as obvious at an earlier period (e.g. by H. B. Müller of Vienna) that they were contemporary, Edward Glaser, who is followed especially by Hugo Winckler and the writer of these times, has championed, as is well-known, the theory that the rule of the Sabaean kings preceded that of the Himyarite (and also that of the so-called Himyar-Kings), an hypothesis

which would certainly presuppose a much earlier date for the Sabaean (1200—700 B.C. at the least). Lately, however, the hypothesis of contemporaneity has been again defended by several scholars, particularly by the Arabian scholar Ḥaimann and the historian Edmund Meyer; while Ḥaimann, it is true, now admits that the golden age of the Sabaean kingdom preceded that of the Himyarite he holds nevertheless that the oldest Sabaean inscriptions are contemporary, and assigns the important inscription Gl. 1255 = Hal. 535, in which mention is made of the incense trade of the Minneans with Egypt, Aḡshūr and 'the Nabataea (comp. Gaza), as that of a war between Egypt and a people named Aḡshūr, to the year 525 B.C. Identifying these Aḡshūr with the Medes (= Persians) under Cambyses, it is far more probable however, that in Aḡshūr Ḥaimann has conceived, and finally also the name Medhiya, which was that given to the Sabaean of Saba by the ancient Egyptians for Aḡshūr also (plural of a singular Aḡshūr) and 'the Nabataea we have again (viz. Aḡshūr, abbreviated to Ḥabsh, in the north of the peninsula of Saba and 'the Nabataea = region of the Nahr or of the Wādī of Gaza, which is still called Nahr at the present day), more suitable than Assyria, which was no longer in existence in 525, and the Persian province Khle-Nār = Syria and Palestine.

At the most it may be admitted that the oldest Sabaean inscriptions may have been contemporary with the latest Himyarite. In point of fact we find in the groups which, also on other grounds I regard as the latest preserved to us (cf. end of my *Sabaean Chron.*) allusions to the Sabaean already settled in Yemen, as Hal. 237, where after the Minnean gods, there also occur 'all Gods of the named river districts (ḡalīb) Ḥabsh, (ḡalīb) Shamsīn, (ḡalīb) Ḥabsh and (ḡalīb) Yammīn, which elsewhere in the Old Sabaean inscriptions are mentioned as 'Minne' in the connection with Saba; and similarly in Hal. 485 'and all Ladies and subordinate Gods (ḡalīb) and Kings (this points to a number of petty princes) and rulers (ḡalīb) of Saba and Gaza'. Hence the Minnean kings referred to, Ḥabsh-Karibān ḡalīb and ḡalīb ḡalīb, father of ḡalīb-Karibān, may well have been contemporaries of the oldest Sabaean Kings (and thus about 700—500 at the latest estimate). In the above-mentioned old Sabaean inscription, Gl. 1255, on the other hand, the Sabaean (in conjunction with another tribe ḡalīb) clearly appear as a horde of nomads roaming over the country north of Yemen, who were accustomed to raid the Himyarite kingdom on the high-road between Rayḡan (in Nedhān) and Ma'wa (near Pāra; cf. also Hal. 1), were with quicks on carried back in an early period. The Assyrian royal inscriptions also make mention, shortly before 700 B.C. of a Prince Yammīn of Saba (the name Yammīn occurs, especially in the oldest Sabaean epoch, as that of several Prince-Kings) who, as appears from the context obviously dwelt in Central-Arabia, just as the Queen of Saba, whose tradition places in the reign of Solomon, denotes rather a North Arabian province (cf. the Queen of Arab, i.e. probably the North Arabian ḡalīb, in the inscriptions of Tiglathpilesar and Sargon).

Now it is of the greatest importance that the Sabaean kings, for the protection of their incense

trade possessed a colony in the land of Midian which is called *Musana* in the inscriptions (e.g. in *Ed. 1155*) and directly verified by the discovery of Musanan inscriptions in *al-Balā* (celebrity) by Euting. After the collapse of the Musanan kingdom (about 650 B.C.) the Nabataeans were probably the heirs of this Midianitic colony of the Musanans, as we may infer from the passages in the *Is. L. Jer. vi. 10* (about 650 B.C.) *Ezek. xxviii. 13 and xxxviii. 13* (about 580) and *Is. lxx. 11* (about 500). But already other powers made themselves felt about this period in Near West Arabia, such as is all probability Nebuchadnezzar (606—562 B.C.) cf. *Jer. xlviii—xxviii*, which also explains the fact that the next Nabataean was sent to *Tadmor*, where the existence of Aramaic-Babylonian influence at this period is independently attested by the *Tadmor* = *Stela* discovered by Fisher and Euting. The 'King of the Arabs' (Herod. 3.1) mentioned by Herodotus in 525 B.C. is very probably already a king of the Libyans whose capital *Agra* (*Hagra*) on the Gulf of Akabah is mentioned by Euting, and whose inscriptions, pointing back by their form and contents to the Persian period, were discovered by Euting in *al-'Ola* along Musanan and Nabataean. Every thing is in favour of the view that those Libyans were the Nabataeans in North West Arabia of the Hittite-Sabaeans and the predecessors of the Nabataeans, and that they are therefore to be placed about 700—500 B.C. As a matter of fact, as early as 512 Antigonus waged war with the Nabataeans, who at that time were probably under Egyptian suzerainty, and from the 2d century onwards the names of the Nabataean kings are known to us almost without a break until at length in 106 A.D. this kingdom was brought under the Roman Empire. The Nabataean capital *Petra*, *Midian* also belonged to their domain, *land of the Sabaeans* or *Sabaeanes* (cf. also the Sabaeans = Sabaites woman in the Song of Songs). In this epoch falls the unsuccessful expedition of Achaia Gallus (under Augustus) to South Arabia. While the Nabataean inscriptions (about 700 A.D.) found in the Hittite like the earlier Hittite fragments and so-called proto-Arabian or Hittite inscriptions represent by-forms of the South Arabian alphabet, the Nabataean script developed out of the Aramaic branch of the Cuneiform script, and the Arabic directly from the Nabataean in the 3d century A.D. The oldest Arabic inscription yet known is that of *Namara* in the eastern Hauran, dated in the year 223 of the era of Hegira, i.e. 328 A.D. and set up by a monarch on the tomb of a King *Imru al-Qays*, son of 'Amr 'King of all the Arabia who sent headbands and King of the two Ams (i.e. *Amal* and *Tal* in Central Arabia, near *Uyaid* *Shummar* and of *Nase* (i.e. N.W. Arabia). He extended his conquests, as the inscription further announces, as far as 'Najran, the city of *Shammar*' (i.e. the South Arabian King *Shammar* *Vahat*) and is probably identical with the King of Hittite of the same name, whose Arabian tradition places about 250 350 A.D. We have reach the so-called *Lakhmid* kings of ancient Arabic poetry, who were controlled by the Persians on the old Babylonian-Arabian frontier as vassals against the predatory incursions of the Arabs just as Byzantines had posted in the head east of Jordan the Diabid princes of the family of *Qusaym*,

who had immigrated from South Arabia, in order to prevent the incursions and hold the Arabs back behind them the Persians, in check (i.e.). As regards both dynasties, but especially the Lakhmids, we have more exact information from Arabian tradition, particularly for the 7th century and onwards until the overthrow of the kingdom of the Lakhmids and the victory of Islam, and we even possess a series of songs and fragments of songs by different court poets of the Kings of Hittite.

This covers in brief outline what we know of the political history of the pre-Islamic Arabia. But the great importance of the Arabs for the ancient East lies far more in the domain of civilisation and religion: the two catchwords *idolatry* and *idol-worship* give the best indication of the situation in which this nation otherwise so inaccessible and secluded, influenced its nearer and remoter neighbours, especially the Hebrews and the Greeks.

First of all, as regards the religion of the South Arabians, as we find it is that idolatry, it is a strongly marked star-worship, in which the cult of the moon-god, conceived as masculine, takes complete precedence of that of the sun, which is conceived as feminine. This is shown in the clearest fashion by the stereotyped series of gods (Sabaeans: 'Ahtar, Wadd, Nakrub, Shams; Nabataeans: 'Ahtar, Sam, Iml, Shams, Nakrub; 'Ahtar, Amm, Anah, Shams; Sabaeans: 'Ahtar, Nawbas, Amukha-dh, Shams); here we find throughout, a 'Ahtar (the planet Venus conceived as masculine, Babylonian: Ishkur, as symbol of the sky) the god of the heavens, mentioned first; Wadd or, as the star may be, Shu, 'Amm or Hawas the real chief God, i.e. the moon (cf. particularly Shu = Babylonian Sin); Nakrub (Babylonian Makru = the planet Saturn or Mars), or Iml (Phoenician, *Iml* being the moon in foreign stars), Anah messenger of the gods, Nabos or Amukha-dh ('the woman above') i.e. the star, cf. similarly *Tal* (i.e. the moon) 'the moon or messenger, and finally *Shams* (in certain cases some epithet denoting her as *Shams* 'the of the temple N'), the daughter of the moon-god, to whom women may have appeared by preference and who therefore stands at the whole enumeration. Besides these, a certain part was played by a great Mother-goddess, the mother and consort of the moon-god conceived as a personified lunar station, the Musanan *Ahtar* = *Aguzz*, Sabaites, who was called *Hawas* among the Sabaeans and who was also in all probability universally known as *Shu* (i.e. as a companion part to names of persons, also in the shortened form *Shu*). We may also mention various lesser 'Ahtar deities (conceived later to the part played by Venus as morning or evening star), and among the West Sabaeans, *Talab*, a god of the bow who now bears merely the epithet *Iml-Sammas* 'lord of the heavens' (cf. *Sammas* and *Amm*, *Amal* *Shammar*), and to whom especially comets (*Shu*) are sacred (hence in *Midian* but probably also in South Arabia *Habal* or *Habal*, etc. is a particularly favourite mode of thought to conceive the two chief aspects of the moon (rising and setting moon) as twin deities, in which connection sometimes the one and sometimes the other phase is especially favoured according to the locality; thus

Amu (the paternal uncle) forms a complement to the 'father' Wadd or they are set in opposition to each another as Wadd (friend) and Nalrub (the evil Satan or Man transferred to the evil i.e. the waning moon) or as Buḡw-Lai (infected from Herodotus' *ἡνερ-Λαι*, and 'Adu-Lai (886 which there is epigraphic evidence) i.e. friendship of Lai and enemy (properly, enraged against) of Lai, or to the Hameu Habel (cattleherd and shepherd, cf. Habel and Kana (smith and venger, cf. the Semitic divine name Kana) in the principal allegory of the animal and husbandman (Gen. iv, or as Wanah (here meaning 'moon') and Ḥurman (husband, saviour) in a South Arabian (Katachman) inscription.

We may note incidentally that the whole West-Semitic usage of names, which we find fully elaborated as early as about 2000 B.C. in personal names transmitted to us in the cuneiform inscriptions, was first elucidated by 1888 ~~the~~ interpretation of the South Arabian names of deities, thus in particular in the personal names beginning with *al-* and *ham-* ('my father' and 'my uncle'), the element denoting the waning and waning moon (cf. above Wadd 286 and 'Amu) as the special protecting deity of the bearer of the name.

In North West Arabia 1888 Mekeke onwards to Petra and further onwards to the Syrian desert (Palmyra) and the Hauran, the same ideas prevailed, partly even appearing under the old names partly with new designations. Here we have especially to do with the cults of Mekeke and of the whole Hijaz shortly before Muhammad (al-Lai and Habel, in certain cases also al-Lai and Wadd, in addition al-Uzza, a feminine form of the above mentioned 'Amu-Lai, the goddess of death, Maḥal, a god Kuda and others) and as an earlier period the still more important cults of the Nabataeans. Among the latter also we find the moon divided into two main deities: *Uha Sharr* ('He of the mountain'; cf. Arabic *Sharr*, the 1888 mountain region) and his consort *Sharrāh* (the sun, Heb. *Shereh*); the former especially in Petra (*Shereh* and Habel for Habel) and his consort Maḥmal; further also the 'Mother-goddess' *Uha* (especially the goddess of 'Amu and, in which we may perhaps recognize the milkmaid region of 'Amu-Ḥadab known from the Song of Songs) and a god *A'ad* (i.e. Aah, al-Aghar, 'he with the white mark on his forehead', originally perhaps only an epithet of *Uha*). The knowledge (so important for purposes of interpretation) of the meaning of *sharr* ('enemy'; cf. with *sharr*, to marry, and of *ḡar* ('husband') 886 owe to the penetration of Hugo Winckler.

For everything else the reader must be referred to the literature on the subject; the most important books are mentioned below. But we may point out in conclusion that in all probability the Greeks borrowed 1888 Arabic at an early period, through South Arabian (see merchants (cf. *Arum* in Lycia and in the Troas, i.e. the *Arum* in Lycia) their Apollo and his mother Leto (Lato, Lat. from Latona, cf. also *Diary* for Heracles, i.e. according to Herodotus the 'little Heracles') and Hermes in the same way as according to Strabo they took their additional names *Phoibos* and *Phaenon* from the South Arabian alphabet (formed at from the 'Arum', as the

remains); the identity of Leto and the divine mother Lat had already been put forward as a conjecture by the famous Arabist W. Robertson Smith as early as the year 1881 that of Habel and Habel (Hou. 4) before him by Freytag (*Stud. in the History of the Semitic Languages*, 1881, p. 345). This would seem to prove sufficiently that South Arabian connection with the gods, in whose altars, inscriptions, facts and customs, must have been in a flourishing condition as early as the beginning of the first millennium B.C.

For the above cf. I. H. Merdunian and D. H. Müller, *Schicksal der Arabier* (Vienna 1883); D. H. Müller, *Berges und Schicksal* (Vienna, 1879 and 1881); D. H. Müller, *Epigraphische Arabier* (Vienna 1889); J. Halévy, *Études Sémitiques* (Paris, 1873); Ed. Glaser, *Stich. 1888 Genes. a. Geogr. Arabien*, Vol. II. (Berlin 1890); do., *Zwei Inschriften über den Himmelsbruch von Haris* (Berlin, 1897); do., *Arabisches Katakomben* (Munich, 1906); F. Hommel, *Stich. 1888 Genes. a. Geogr. Arabien* (Munich, 1893), containing pp. 63—88 complete bibliography up to 1893 (continued up to 1903 by Otto Weber in his *Stich. 1888 Genes. a. Geogr. Arabien*, III; Berlin, 1908) with 1888 *Arab. Studien* (Munich, 1908) doi, *Arabier und Abhandlungen* (Munich, 1892—1901, three parts); do., *Die Geschichte der alten Araber* (Munich, 1901); do., *Grundriss der Geogr. u. Gesch. der alten Araber*, I (Munich, 1904); M. Hartmann, *Ein arabische Frage mit einer Vorrede der Hochwürdigsten Theol. (Leipzig, 1909)*; H. Gutschmid, *Die vorderasiatischen Sprachen* (Munich, 1904).

(F. Hommel.)

ARABIA UNDER ISLAM.

The history of Arabia under Islam will be described in the criticism dealing with the political, religious, ethnic and spiritual. Here it is sufficient to lay down the main outlines.

After Muhammad had finally established the supremacy of Islam by the conquest of Mecca, almost all the heads of tribes and petty rulers of the peninsula were deputations to Medina to undergo the *hajj* in the Prophet. On this account the 9th year of the Hijra (630—631) goes by the name, among the Mohammedans, of the Year of the Deputations. Nevertheless the Arabs 1888 an intention of surrendering their independence; no 1888 was Muhammad dead (632) then they thought the moment had come to shake off the Arabian yoke. Even in the lifetime of the Prophet, Muhammad (p.v.) the east of the Arab lands had arisen to Central Arabia as an opposition

prophet. A similar attempt was made by Tulayha (q. v.) among the Beni A'ad, al-A'wad b. Kahl (q. v.) of the tribe Anasir Yemen, and the prophetess Sadiyah (q. v.) among the 'Ansam. Khalid b. al-Walid, who was sent by the Khalif Abu Bakr with troops against Tulayha, soon settled matters with him and the 'Ansam, whereupon she prophesied Sadiyah killed Mu'awiyah. The latter was then killed in the bloody battle of 'Akraba and the Beni Khatifa brought into subjection. In Yemen al-A'wad fell a victim to a conspiracy of his own people, and the rising soon came to an end when the Muslim troops invaded Yemen in 633, so that in this way all danger threatening the constant existence of Islam in Arabia was removed.

There followed the period of the great conquests under 'Omar I., during which it seemed as if Islam had really succeeded in moulding the Arabs into a homogeneous and powerful nation. But 'Omar's successor 'Uthman favoured the interests of his family and thereby brought about the first civil war. It now soon became clear that the Arabs on their epistemic literature and tribal hostilities above any political community embracing the whole nation. It is true that the first Umayyad Mu'awiyah succeeded in ending the civil war and in establishing his rule over the whole of Arabia but he transferred the centre of his authority to Syria, with the result that during the reign of his son and successor Yazid I., the holy cities Medina and Mecca rebelled openly against the government and the second civil war broke out. It now became more apparent than ever that Islam far from having got rid of tribal differences, was now still more aware by introducing the religious opposition between Shi'as and Khawarizms. Especially the dogmas of the last prophet were to the taste of the Arabs and became the cause of repeated insurrections under the later Umayyads, after 'Abd al-Malik had defeated his Arab opponents in the year 73 (692) and had restored peace in Arabia. Finally the Khawarizms became again a leading factor in certain parts of the peninsula, especially in Basra where they have maintained their hold to the present day.

Meanwhile Arabia under the Umayyads as afterwards under the 'Abbasids, had sunk to the position of a province of the empire of the Khalif and even with regard to administration did not form a unit. There was no central government, no capital city; different cities and districts of the peninsula their own governors, who were appointed directly by the Khalif. When therefore the Khalifate lost its power after the death of al-Muwahhid (851), it was inevitable that these governors should act as independent princes, especially in isolated districts as in Yemen, where this tendency had already existed before (especially in Zabid). With such movements religious riots continued, e. g. of the Zabidis in Zabid and Sana'a, and of the Karmatians in al-Bahra. In short there can no longer be any question of a history of Arabs as a whole; there is only a history of dynasties, tribal and sectarian leaders, who came into prominence in the different parts of Arabia and again disappeared. The influence of the central government at Baghdad still makes itself felt at the south from time to time in Mecca and the frontier districts, until, after the fall of the Khalifate 656 (1258) the

Egyptian Mamluk-Sultans began to exercise some influence on the course of events in Mecca and along the shores of the Red Sea.

Under Salim I. (1518-1520-1522-1520) the Ottoman Turks came on the scene and established their rule in the holy cities and in Yemen. But in this country they had a difficult position in face of the Arab tribes who, under the leadership of their Imams, at length (1043-1053) drove them out of the country. In the case of Arabia everything remained as it was until the Wahabites (q. v.) arose in Central Arabia in the second half of the 18th century and soon won such a strong position that the Porte was compelled to call in the help of Muhammad Ali. The latter succeeded, but only after great efforts in weakening the power of the Wahabites, yet the power of the Turks in Arabia remained as before, very nominal. It was not until the last of the 19th century that they made a desperate attempt to make their power a reality, and undertook expeditions to 'Asir and Yemen (1871-1872), while Mishat Pasha (1870) and Rashid Pasha (1876), approaching from the East, subdued the Ishakids of the ancient country of the Karamanians. In consequence of this Yemen was turned into a Turkish wilayet, with Sana'a as capital, while Eastern Arabia, so far as it was subdued at all, was added to the wilayet of Basra as a new sandjak with the name Nedjd. But the new wilayet Yemen retained only no power, because the Arabs living there were in open rebellion and 11 years of repeated expeditions Turkey did not succeed in bringing them into subjection. The English, on the other hand, succeeded in establishing along the whole of the south coast from 'Aden to Maskat and Zanzibar on the Persian Gulf a supremacy which is none the less real for not being quite openly avowed.

Statistical data as to the present condition of the peninsula are not available. In 1875 Rashid Bey W. ibn Farid (Yemen u. Sana'a) (II, 253) estimated the population at 10,732,350 souls but this number is purely conjectural.

4. ARABIC WRITING.

The Arabic character, although one of the youngest in point of age, occupies the first place after the Roman character from the point of view of geographical diffusion. It is the prevailing script from the western frontier of China to the West coast of North Africa and from Constantinople to the Malay Archipelago in all other parts of the world. It is known and used at least, especially in consequence of pilgrimages from Syria.

Down to the last century erroneous views were held concerning the origin and the primitive form of Arabic writing. It was thought to be a development of the old angular script, called 'kufic' by the Arabs themselves, which had been used for the oldest Arabic documents, manuscripts of the Koran, inscriptions on stone and on coins, which were known at that time. This view was shattered by the discovery of papyrus, which have been found in numerous numbers since the eighth decade of last century, thus increasing the material of our possession in a most unexpected way. These documents some of which date back to the beginnings of Islam, exhibit the surprising fact that the form of Arabic writing even at that early stage does not essentially differ from the ordinary modern script, latter Naskh but all the

pretty widely diffused. According to Arab tradition, which in this case sounds very probable, Arabic script was then brought from North Arabia to the other Arab lands, the Kingdom of the Lakhmids in lower Mesopotamia. It is very questionable however whether it was brought there by Christians as Wellhausen assumes (*Syriac und Persisches*, III, 203). It is certain on the contrary that the literary language used by the Christians of that region was Syriac, as Nöldeke (*Geschichte des Arabers*, p. 7, note 3; *Gesch. d. Persien und Araber zur Zeit der Sasaniden*, p. 177, note 3) conjectured correctly. Even the Christians of Mesopotamia were addressed in Syriac by Jacob of Sarug. It is clear however that the Arabic script was in use here as early as the time of Muta'im and Jarafa (second half of the vi. century A.D.); though possibly it had been introduced only recently, for it still appeared in the Bedawi as something very mysterious.

The rise of Islam no doubt helped to spread a knowledge of writing. Written portions of the Koran dated before the year 622 A.D. (Nöldeke, *Gesch. d. A.* p. 39 ff. seq.), and after the text had been officially fixed under 'Umar and 'Uthman, the art of writing spread together with the study of the sacred book.

The following are the oldest monuments of Arabic writing belonging to the Muslim period:

- I. A number of coins beginning with the year 20 (641) (Nöldeke, *Catalogue des Arabischen Münzen*; vol. I, p. 53 ff. seq.), the oldest of which however bear only very short legends;
- II. several inscriptions, some of which are older than the second half of the vii. century A.D. one dating from the year 72 (691-692) in the Kubbat al-Sakhra at Jerusalem, three inscribed into stones in the caliph 'Abd al-Malik, the inscription of Ras al-Hadid which dates from 92 (710-711). — For the sake of completeness an enumeration of the inscriptions belonging to the ii. century of the Hijra may also find a place here: 1. in Ras al-Akharin (N.W. of Palmyra) dating from 110 (728-729); 2. in Ras al-Hoir (S.W. of Palmyra), both put up by the caliph Hisham; 3. in Antioch (Upper Egypt) A.H. 117 (735); 4. the Camp of Djerash A.H. 125 (742-743); 5. mosque of Amalun A.H. 125 (742-743); 6. citadel of Ramla A.H. 125 (742-743); 7. boundary-stone of Edmunah belonging to the time of 'Abd al-Rahman (in the possession of the author); 8. several inscriptions found in Persia;
- III. A number of documents on papyrus, the greater part of which also belong to the 2. half of the vii. century A.H. It is to be regretted that the oldest of these belonging to the first half of the century, which are preserved at Vienna, are still inaccessible to the world at large, but the documents which are available are quite sufficient to give a complete picture of the script of the vii. century, so it is out of the question that it should have been subject to any considerable modifications between the years 20 (641-642) and 87 (706).

Plate I gives a general view of Nabataean and the oldest forms of Arabic writing. As in the simplified Arabic script the shape of

several letters is indistinguishable from that of others, it became necessary to invent a system which would prevent confusion. Following the model of Syriac writing dots were chosen for this purpose; the date of their introduction is unknown, but they probably go back to the pre-Islamic period. The accounts of the Arabs themselves on this subject (Nöldeke, *Gesch. d. A.* p. 305, 311) may well be set aside. Even were actually used in the first century of Islam, though perhaps not as extensively as later, the documents of that period, so far as they have been accessible to me, the following letters have dots:

ا, ب, ج, د, هـ, ز, ح, ط, and ك, but not ع;

ظ papyrus of 91 (709-710);

س coin of 85 (703);

ص papyrus of 91 (709-710);

ض coin of 86 (703);

ع = ى papyrus of 91 (709-710), inscription at Khirbat 92 (710-711).

It may be remarked on passing that as early as this period ظ was in Egypt pronounced as a hard g as is proved by جستن (side by side with قستن and قستنار, the Arabic transliteration of the Latin 'quacstor' (papyrus of the year 90 = 708-709).

The first letter to receive its dots seems to have been هـ, which apparently was not then marked until the ii. century of the Hijra. Sometimes (in the MSS. of the Kor'an nearly always) the dots were replaced by strokes standing apart from left to right; double dots were placed one above the other either vertically or obliquely, three dots were placed one straight line and in the case of ا frequently combined into a stroke. The punctuation of هـ and ع exhibits interesting variations. The original distribution seems to have been, that هـ had no dot at all and ع one dot; this applied only to the letters when occurring at the beginning or in the middle of a word, as their final forms were at first sufficiently distinct to render a further distinction by means of dots unnecessary. The place where the dot of ع was put was subject to further variations, even in the same country. In Egypt towards the end of the i. and beginning of the ii. century it was placed sometimes above, sometimes beneath the letter (papyrus and Antioch inscription); in Palestine (Khirbat inscription) it was written below. The punctuation of هـ does not seem to have come into use until the ii. century, at first in the form of ى, later as هـ, whereupon هـ necessarily received a second dot. The old final form of ى = ى continued to exist down to the v. century, while the later final form of ى is found in its beginnings as early as the ii. century. Different countries preserved individual peculiarities in the use of the dots; the Maghrib still retains the old punctuation of ى = ى, and ى = ى,

not in Baghdad, where the oldest paper manuscript is for *taun* (the *Shah*) *al-fadl* of Abu 'Uthayb written in 256 (870). It was written 3 or 40 years in the middle of the 10th century.

(*Palgrave, Scripta, Oriental series, plate vi*.)

The vowel signs which were likewise borrowed from the Syriac script, seem also to be very old, but as to the date of their introduction we have no data at present. The original system of vowel marks differed considerably from that which is now in use. As *fa* had no sign, it was based on the different phonetic strength of the vowels: a *fa* as strong vowel was expressed by a dot above the letter, a occupying an intermediate position was denoted by a dot in the lower, an *af* by a dot below, the situation being explained by simply doubling the dots, in order to indicate that the dots were regarded as not actually belonging to the script proper, they were in copies of the Koran usually added to various columns, — in the oldest copies in red, later also in yellow and ~~green~~ more rarely in blue, — whereas the dots belonging to consonants were apparently always written in black. The dots are occasionally replaced by little circles.

At present we can neither be asserted nor denied, that the vowel-points were added by the writer of the text himself. It is certain however that in the 10th century they are ~~not~~ not yet received canonical sanction. Malik b. Anas (died 179 = 795-200) at any rate demanded that copies of the Koran destined for use in divines verities should contain no vowel-points, in common writings they were probably not used at all.

Towards the middle of the 11th century this system of marking the vowels was replaced by a new method which is still in use. Owing to the ignorance of the Arabs in all matters concerning the right of their script, it is impossible to say whether the statement that it was invented by *al-Khalil* (died 170 = 786-837) is founded or not. The vowel-signs of this system are simply the corresponding vowel-letters; in the case of *fa* the dotting is clearly discernible, *fa* is a dotting in the Maghribi & the Maghribi *af*, *fa* is obviously an analogous consequence of the vowel *fa* of the old *af*.

The other vocalized orthographic signs were probably borrowed at a still later date than the vowel-points, but the date of their introduction is equally obscure. It is possible that they also passed at least through two stages of development.

Amongst the most important is probably the *shamsa*. In the oldest manuscripts of the Koran it is expressed by two red dots put alongside of each other, later it is represented by a *shamsa* (a *shamsa* which appears sometimes alone and sometimes beneath the *af* or *fa*).

The other forms of these signs which are still in use are also said to have been borrowed by the above mentioned *al-Khalil*, a statement which in a certain extent is supported by the fact that they are were expressed by letters of the alphabet. *Shamsa* is a small *af*, and *ayya* or *ayya* is a small *af*.

In a similar way two systems of punctuation seem to have been in use at different periods in the history of the Koran the end

of a verse is denoted by strokes slanting upwards from left to right, the number of which varies from 4 to 10; the end of a group of five or ten verses is expressed by a circle enclosing 3, 4, 5 or more similar strokes. The later system was to denote the end of a single verse by a simple circle, the end of a group of five by a *shamsa*, usually in the form of a circle ending in a point at the top, and the end of a group of ten verses by a circle or less ornamental circle, usually a square, in which the number ten was written at first in numerals, later in letters of the alphabet. Occasionally this mark is put not in the text but on the margin. The system disappears in the 11th century; in manuscripts of the Koran dating from the later Middle Ages only the end of a single verse is denoted by a circle or crescent and numerals denoting groups of ten are occasionally written out in letters.

In profane writings punctuation is only sparingly used. In the oldest period only the ends of long sentences are marked by a circle, which perhaps represents a modified dot.

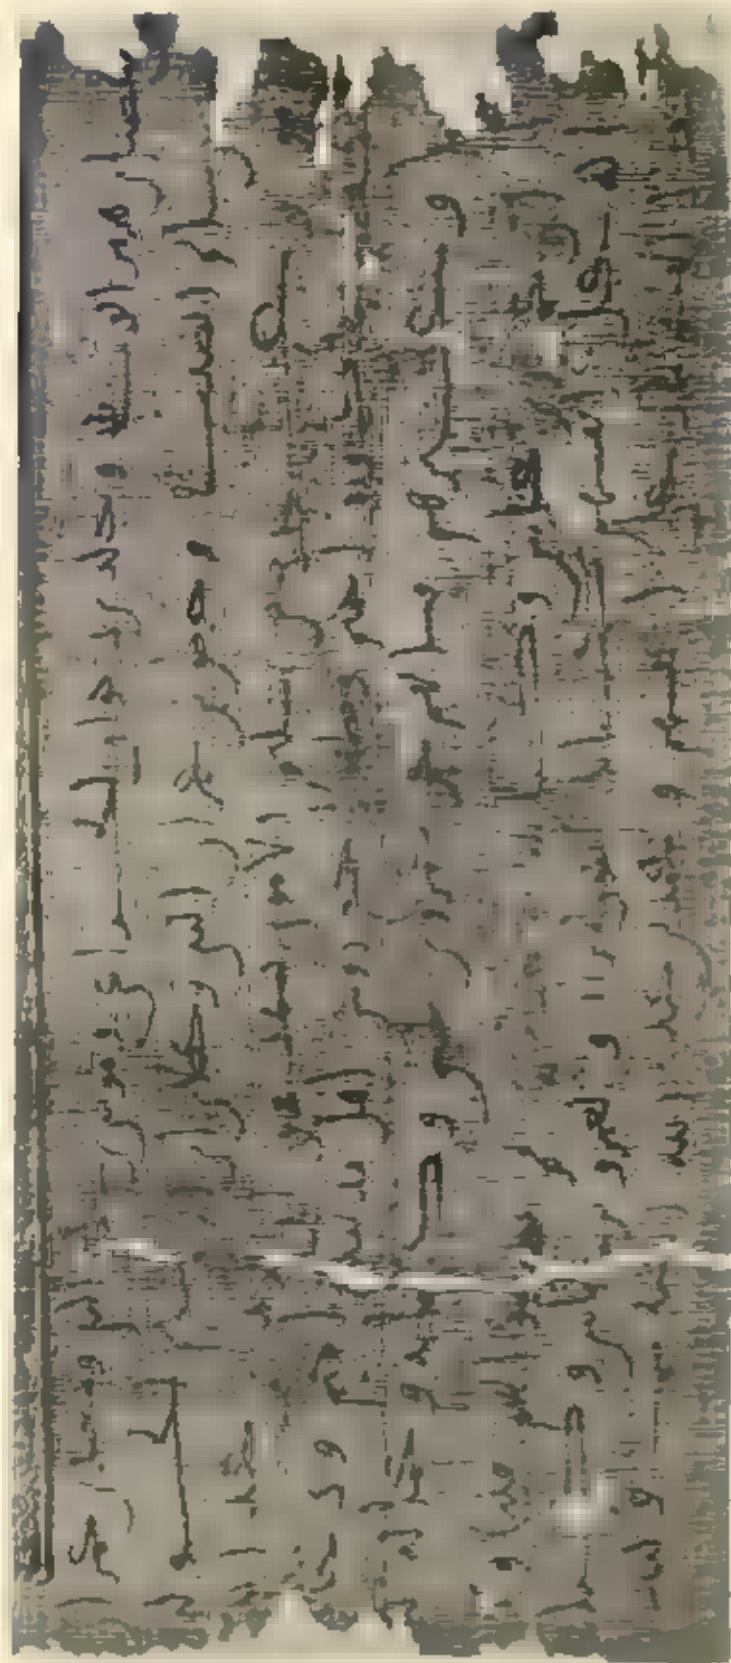

Our information about the writing materials used at that time is fairly extensive; it is derived chiefly from the accounts of the missionaries concerning the missionary epistles sent out by the papal, and about the collection of the Koran undertaken by Zaid b. 'Uthayb in the year 83 (633-634), further details which however belong to a later period are supplied by the statements of the *Muslims*.

At the time of the prophet and in all probability during the preceding period leather (*af*) was the principal material written on. In this we must understand not leather, not the much more expensive parchment, as is proved by a story told by Ibn 'Asad and repeated in several places (see Wellhausen, *Muslim and Muslim*, ii. 123; Ibn Khallikan, *Kitab al-Mu'arraf*, p. 170), according to which a messenger sent by the prophet to deliver a missionary epistle with an *af*, arrived at a pitching up his leather water-pail. The other anecdotes told by Ibn 'Asad (*Muslim*, No. 85 and 102) show that the leather was frequently dyed red (green? black? blue? etc. see Giese, p. 7). In telling the same story once instead of *af* the expression *af* is used. The Khedive's library possesses two documents on leather which however belong to a later period, viz. 233 (847-848) and 239 (853-854). Such documents were rolled up and bound together with a leather string and thus could be sealed. There is a well-known story to the effect that the famous Mesopotamian architect drew the design of his mosque on leather. Other materials used were:

1. *af*, plant *af* Kerakum (under this word see 'al-Buhārī' (Bihar-ul-Karim, V. 53). It is also known from the explanation e. g. of the *af* that the object referred to is the thick lower end of the palm-branch, which is about 1½ feet long and has a surface of about 2 inches the rest of the palm-branch, which has a diameter of less than ¼ of an inch, is much too narrow and too rough. Muhammad's missionary letter to the *af* was written on *af* (Wellhausen, *Muslim*, p. 127, No. 102).

2. *af* of the *af*, i. e. especially the *af*, *af* and the *af* (shoulder-blade, *af*). The Khedive's library possesses a specimen of the

Arabic script.

1. Inscription of Nūr al-Dīn of the year 562 A. H.

2. Inscription of Salih al-Dīn of the year 583 A. H. in the Abyss-Mosque, Jerusalem.

بسم الله الرحمن الرحيم

الملك خلوة حضرة

الحمد لله رب العالمين وعلمنا به علم سري ما كره النورانيه اجمعين وسلمه

[illegible][illegible]

1. Sans 1. from a Kor'an written by a Malay.

2. Two pages of a prayer-book "Du'at al-Muslimin" printed in Canton.

later, containing a list of witnesses, unfortunately without names. The memo is placed, in order to be filed in a good file for future reference.

4. *Pancheride* *Shayr* or *Shair*, widely used for sheet notes in Egypt, an old well known, this was a favorite material in antiquity as well as during the Greek-Coptic period — there even exists a parchment dating from the brief period of Persian rule —; in the Arab period however it seems to have been much less used, and while thousands of literate, Greek and Coptic sources are found in many instances, the Khindīf al-ḥabṣy alone possesses a few in Arabic. Pancheride was also used outside Egypt, especially in Arabia

5. Flat white stones, possibly, were also used for short axes; they were probably mostly pebbles of limestone chert horizontally by the heat. No anvil-stone seems to have been discovered so far.

8. It is very probable that wooden tablets were also in use, although no definite statement to that effect can be adduced. A specimen (unfortunately incomplete) is preserved in the Imperial Library; one side contains writing in ink, the other *sh-fa-fa* is carved 限 on the other side (il. catary).

1 Parchment (called *ḥafṣ*, *ḥafṣ*, *ḥafṣ* in the *Kitāb*, p. 21; the expression *ḥafṣ* *ḥafṣ* *ḥafṣ* used by Cassan b. Ḥabīb *was* also hardly meant anything but parchment, *ep. Nidāḥ*, *Gen.* d. C., p. 34; *ep. adon* in Tannū's *muḥṣaḥ*, v. 31, ed. Arnabī, v. 30 of the Calcutta edition, also means parchment; but since *ḥ* is mentioned in a parallel with *ḥafṣ* the meaning may be leather. The explanation of the commentators, a *ḥafṣ* = white as parchment is hollow; (black) women are (brown), in consequence of a high price in use *ḥafṣ* have been limited chiefly to documents, and accordingly to copies of the Korān. For this latter purpose it was sometimes prepared in a large size (the MSS. of the Korān n° 1 and n° 3b) have a size of but $\frac{1}{2}$ and $\frac{3}{4}$ cm.) for the Maghrib however parchment was used for books as late in the second half of the 14th, and perhaps even early to the 15th century. — *Ḥafṣ* (in the *Kitāb*) seems to mean a fragment or scrap of a larger leaf of parchment or paper.

8. Papyrus (*Pap. (zi, Papyrus)*), which appeared from Egypt over the whole ancient world, was known also to Arabs, and lasted down to the early Abbasid period as the principal writing-material of the Muslim world. The use of papyrus which had existed since the remote past declined gradually after paper had come into use, as the latter material was less expensive and more convenient for practical purposes; in the first half of the 14th century it seems to have disappeared completely. The most modern papyrus document in the Khudutskii library dates from 319 (931), that in Vienna from 323 (935; *Arab. silsilin*, II, 98).

Paper (cotton, flax, etc.) did not become known in Muslim countries until the end of the 11th century. It seems to have been known there however before the end of the new material became general. The oldest book on paper dates from 136 (195) and was probably written at Baghdad, the Cairo ~~ms~~ of 646 bears the date 263 (872-873), but this is not beyond question; it must have been written however about the year 300 (912-913), most probably at Damascus. In Egypt paper does not appear until the second half of the 11th

century (a fragment dating from the time of the fall of is in the possession of the writer); it was obviously a matter of some difficulty, owing to the conservative tendencies of the country, to pour a material like papyrus which had been in use for thousands of years. The popularity of paper seems to have increased rapidly towards the beginning of the 14. century; the ~~cheapness~~ ~~was~~ accompanied by a gradual deterioration in the quality of the papyrus, and towards the middle of this century the latter disappears altogether. The manufacture of paper on the other hand soon developed enormously. In the second half of the century the author of the *Adab* knows only seven different kinds of paper, but their number may have increased very rapidly, since paper manufactories were in almost every large city in the Muslim countries, the products of which were known by distinctive names according to their origin, quality and size. The size of the paper especially proves the high state of development which the industry maintained throughout the Middle Ages. The latest of the largest Korān in the Khediv's library (no. 19) which dates from the 12. century, have a size of 27.98 cm. although the edges are cut. Where even such sizes ~~was~~ insufficient, so in the case of large official documents, foundation deeds etc., several leaves of paper (or parchment) were stitched or pasted or sewn together. Some foundation deeds in the Khediv's library are 75 feet long.

Towards the end of the Middle Ages European paper began to be imported into the East. Al-Sakhawi (died 902 = 1496) is the first Egyptian author referred to as working in 40 volumes, most of which were written on paper coming from Faramash communities. In some cases towards the end of the century European competition gained the upper hand, the paper of manuscripts written in Egypt towards the year two (1591-1592) frequently shows European i.e. probably Italian watermarks.

The Arabs have preserved no tradition concerning the origin of their writing: al-Khalidhī (end of the 11 century) following authorities which may date back to the end of the 1 century, seems to hold that it was invented in the Kingdom of the Lakhmids. Later writers, Ibn Khaldūn (*Muqaddimah* ch. 30) and Ibn Khallikān (*Wafayāt* (in al-Bawwāl) repeat this view and state expressly that the art of writing spread through Arabia from Hira or Aḥḥā. The author of the *Ḥāriri* (p. 4) alone gives no account which may preserve an element of genuine tradition. He writes as follows, on the authority of Ḥaḥḥān al-Kalbi (died according to Ibn Khallikān in 204 = 820/830): 'The first who wrote Arabic

ابو جند حواری کثرون جمع غریبات were
They are said to be the names of Kings of Midian
who perished in the 'Days of the earthquake'
(Sura xvi, 189). It may be possible to suggest
that this statement contains a reminiscence of the
origin of writing in Midian, the country of the
Nabataeans. Another authority quoted by Abu
Nu'aim, Ibn Abi Sa'ud or Sa'ud (see *Sihrist*, ch.
Folger II, 3) gives the same names more correctly

ايجاد حاور حائلي نلمان صلع نصي نوس

If we undo the *alift* from the middle of these words the remaining letters represent the order of the letters in the original alphabet, only that

Turks destroyed the poor remains of Muslim civilisation. Like their predecessors they paid considerable attention to calligraphy. Following both in literature and in chiefly the example of Persian masters. The civil as well as the military departments of their administration preserved the official script of the Middle Ages during several centuries. It is said that as late as the sixteenth more than 50 different scripts were known, most of which fell out of use during the sixteenth and the eighteenth century. At the present time only the following are used:

1. *Ṣūṭī*, the direct descendant of the old Arabic, in which there are two forms: a larger form used in the Imperial chancellery for treaties and diplomas (ṣūṭī, ḥudūd) of all kinds; a smaller form is used side by side with the *ṣūṭī* in the ecclesiastical courts, but is falling more and more out of use. The large *ṣūṭī* is called 'Djālī-dīnī'.

2. *Ṣūṭī* (ḥudūd), used for ornamental than practical purposes.

3. *Ṣūṭī* and

4. *Ṣūṭī* chiefly used for books, the former *ṣūṭī* poetry, the latter for scientific, especially religious literature.

5. *Ṣūṭī*, an official script, but also the character most frequently used in private life. With the Turkish rule it spread over a part of the Arab countries, though *ṣūṭī* genuine Arab *ṣūṭī* is 'Turkish writing'. *Ṣūṭī* the rest these countries use *ṣūṭī* with considerable, though noticeable variations.

6. For the sake of completeness the *ṣūṭī* may be mentioned which is now but little used.

In Turkey itself calligraphy is still highly esteemed, and *ṣūṭī* works of the great calligraphists (ḥudūd) (died 934 = 1530) and *ṣūṭī* (died 1110 = 1698-1699) are in great repute as models; in the Arab countries however, and especially in Egypt, less and less attention is being paid to the art of writing, principally in consequence of the rapid increase of printing with movable type.

It has been mentioned above that the oldest examples of Arabic writing hitherto known are two inscriptions of the six century A.D. These short forms are dissimilar to the round script of the eighth of the seventh century, but resembling the other Arabic writing, the so-called *ṣūṭī*. The question arises whether these forms represent *ṣūṭī* only written character existing at that period, or whether their still angular shape is due to the hand in which they are cut, and whether a round cursive form also existed at that time; in these questions no answer can be given at present.

The forms which can so far be dated with certainty are *ṣūṭī* in the seventh century A.D., the first of the *ṣūṭī*, two *ṣūṭī* types of script are found to be in existence: a slender, more angular script on stone monuments and coins, and a round cursive on the papyrus. Closer investigation reveals considerable differences in the writing of the inscriptions: the stone monuments of 'Abd al-Malik (see above) exhibit much more angular forms than inscriptions of Kharrāb (91 = 710) and Amīn (117 = 735) which are described or painted on stone by means of a brush or palm-leaf; cf. *ṣūṭī*, *Arabic Palaeography*, plate 101-110. Similarly the type of writing found in

the coins of the first century, especially those of the early period, is not so very much different from the cursive script.

In view of these facts it is impossible to reach the conclusion that the difference between the two types was chiefly due to the nature of the material written on, though at the same time there existed a tendency to create a separate monumental script.

The distinction between the round and the angular script became more pronounced in the six century, the former assumes a still rounder shape, and apart from a few points of detail, appears to have practically identical with those now in use; the angular writing with its acute ornaments and curves and in manuscripts of the eighth century becomes still more and more angular. In the six century the angular script enters into a new phase of development which removes it even further from the round cursive. — The name 'Kufic' (*ṣūṭī* *ḥudūd*) has of old been applied to the angular script; but the origin of this appellation is not easily explained.

There can be no doubt that the name is derived from the town of Kufa which, founded in the year 637 (638), was one of the oldest Muslim cities, and before the foundation of Baghdad (750 years later) was the religious and intellectual centre not only of Iraq, but of the whole East. It is without saying that in a town of such importance the art of writing must have flourished, and this is borne out by a statement of the *ṣūṭī*, according to which the people of Kufa first invented a special process of writing by means of (fermented?) dates, whereby the inkstone hard and still parchment was made soft and flexible. Although the script itself, as we have seen above, was known in Mesopotamia at least 100 years before the foundation of Kufa, we may conjecture that it received its name from the town in which it was first put to official use; the name therefore probably arose in Mesopotamia, perhaps in Baghdad itself, and spread from the center of Islam over the whole empire as an appellation of all the more angular forms of writing to distinguish them from the round cursive. The name is first mentioned by the author of the *ṣūṭī* who enumerates the following as the oldest scripts: that of Mecca, of Medina, of Basra, and of Kufa. Unfortunately he only describes the Meccan script in a considerably intelligible manner. It is surprising that, according to this account, two cities which were situated at a comparatively short distance from each other, should have produced two distinct types of script, while Syria which for three quarters of a century was the centre of the empire, and Egypt whose probably never was made of writing, then anywhere else, are passed over in silence. It would also seem curious that neither of the scripts associated with one of the holy cities was used for copies of the sacred books.

It is even further that these four scripts were derived one from the other by the calligrapher Kufa at the time of the Umayyads we realise that our much reliance must be placed on the statement regarding the four different scripts. It proves however that the appellation 'Kufic writing' was in existence at that time. Later on it occurs frequently, once in the *ṣūṭī* in the form of *ṣūṭī* *ḥudūd* as an expression which seems to indicate that it was regarded as a charac-

has artificially derived from the original script.

During a period of about 500 years the *Käse* character, growing side by side with the round script, was used almost exclusively for copies of the *Korān* (of private books of the older period written in *ḥaṣṣ* only a single one is known; a fragment of a genealogical work — see Allwardt, *Forsch.*, Berlin I. 367, published by Rodiger, *Über zwei Pergamentblätter aus altarabischer Schrift in the Abhandlungen der Akademie der Wissenschaften zu Berlin*, 1873) inscriptions on stone and coins, and for a short time also on official documents, especially of a legal character. Standing unrelated to the needs of practical life it was artificially cultivated as a kind of literary script: it existed side by side with the cursive, but not without being influenced by it, and passed through a development of its own, which did not like that of the cursive lead to higher perfection, but to degeneracy, and finally to complete extinction. That it was an essentially artificial script, which was frequently found difficult by its artists, is proved by the fact that the latter often inadvertently drop into writing the round hand (cp. *Arabia Palaeographica*, plate 111, 114, 116).

We will now consider the monuments containing *Käse* writing in detail:

1. Manuscripts of the *Korān*. With one exception (*Seebe Patriography*, plate 43) all old copies of the *Korān* are written in *ḥaṣṣ*. Apart from the fact that it was regarded as a literary script, the use of this highly inconvenient character may possibly have been due to an imitation of the Estrangela, which as is well known continued to be used for copying the Bible even after the introduction of the Psalter character. But this hypothesis cannot be proved. The age of the *Käse* *Korān*, was long doubtful, until the discovery of dated manuscripts or fragments rendered more accurate conclusions possible. The dates unfortunately do not refer to the time when the manuscripts were written, but to the date at which they became the property of a mosque foundation (*waḥḍ*); but as most of these copies, especially those of large size (*ḥamḥ*), were written for this special purpose, we may assume that the date is accurate. According to the *waḥḍ*-inscriptions the foundation dates of the dated *Korāns* belong to the 11th century: viz. the Paris copy n^o. 336 (*de Sane, Catalogue*) dating from 229 (845-846; *de Sane* f. 107v), the Cairo fragments n^o. 339 to from 270 (885-886; *ḥamḥ* f. 107v) *ḥamḥ* f. 107v) and from 277 (890-891; probably from the mosque of 'Amr at Old Cairo), n^o. 40160 collected by Amr, the governor of Damascus from 256-264 (870-877). The only specimen of the 12th century is the complete *Korān*, Cairo n^o. 387, with a *waḥḍ* dated 155 (774-775; *de Sane* f. 107v), *ḥamḥ* f. 107v) *ḥamḥ* f. 107v); cp. *Zapfel*, *Arab. imp. pers. arab. script*, vi. 69-233. By means of these dates, however scanty, we are able to fix the different types of script exhibited in these manuscripts, and thereby to arrive with tolerable accuracy at the date of the other copies as well. The writing of the *Korān* of 155 is still simple and natural, though careful with great care; there are few consonantal dots (*ḥamḥ* f. 107v, *ḥamḥ* f. 107v), and none at all for the vowels, it would be quite wrong however to

regard this but as an argument against the existence of these signs at the period in question.

The writing of the 11th century *Korāns* differs considerably from that of the earlier manuscripts. The letters are of a rounder shape, and the *ḥaṣṣ* is drawn out to a long sharp point in the left bottom corner. Occasionally the letters are not written, but practically painted, i.e. the outlines of the characters only are drawn and filled in with ink, thus Cairo n^o. 358.

There are no 12th century copies bearing an unquestioned date — the Paris m^{ss}. n^o. 358 of the year 300 (912-913) and n^o. 376 of 356 (966-977) and the Constantinople copy Agg. S. n^o. 21 of 357 (968-969) almost certainly belong to the 12th century — but there seems to be no doubt that the copies in which the tendency towards rounder forms and ornamental flourishes in the final letters is further developed, may be safely assigned to the 12th century. — It is surprising that *Käse* *Korāns*, which however are seldom complete, are very rarely dated: out of the 227 fragments at Paris (= 480c leaves: *anal. de Sane*, I. 57) only 3 are dated, of the 66 at Berlin (6 of which are on paper) not a single one, and of 40 copies in Cairo only three.

During the 13th century the use of *ḥaṣṣ* for copies of the *Korān* seems to have become less frequent. The material in our possession is not sufficient however to fix the date of this change more definitely; for although large numbers of *Korāns* (thousands as we are told) existed at that time, especially in the mosques of Cairo, only very few have been preserved (*Reis. Museum Catal.*, II. p. 53, of 427 = 1035-1036; a Cairo copy of 490 = 1105-1106; both written in the round hand). The case applies to the 14th century. Of the few dated copies (508 = 1135-1134; *de Sane*, 355 = 1160, 566 = 1170-1171, and 590 = 1202-1203 written in Persia) three are written in the round hand; only the copy of 566 exhibits an ornamental *ḥaṣṣ*, which represents a third type of the script, viz. a flourishing towards the arabesque, especially in the final letters, and corresponding to the script of the stone monuments and coins of that period.

Inscriptions on monuments and especially coins yield far more copious material for the study of the *Käse* script. It must be borne in mind however that the shape of the characters may in these cases have been influenced to some extent by the nature of the material written on.

Three principal types of *ḥaṣṣ* may be distinguished on these inscriptions:

1. The old simple *ḥaṣṣ*, generally stiff or angular, which on the whole lasts down to the 11th century, although already an isolated inscription belonging to the end of the 11th century, e.g. the inscription on a wall at Basra of the year 272 (885-886; see *de Sane*, *Inscriptions arabes de la Syrie*, p. 4-5, plate II. 3) the tops of some letters (ا, ب, ت, ث) are drawn out to a sharp point, thus exhibiting the first beginnings of the tendency towards ornamental flourish. The numerous sepulchral inscriptions at Old Cairo which date from the 11th century as well as the inscription referring to the building of the mosque of Ibn Tulun, show a further development in the same direction, which is also exemplified on the coins of that century.

2. The inclination to adorn the characters especially the final letters, which characteristically flourished downwards with more pronounced in the vi. century, particularly with the rise of the Fatimid dynasty ('conspicuous form'; see van Dieken, *Medieval Arab Manuscript*, part 1, p. 8). This script remains characteristic for Egypt under the rule of the Fatimids (about 350—550 = 961—1153), and disappears with the fall of that dynasty.

3. In the x and still more in the vi. century the *ḥaṣṣ* of Syria and Mesopotamia fantastically intertwined forms, which in the xiii. become positively ugly; this is particularly noticeable on the coins of the last Abbāsids of Baghdad, who retained this script, perhaps as a kind of historic character, until 1258, although it was that only professional calligraphers were able to read and write it, while the mass of the people remained entirely ignorant of it.

A revision against this unsatisfactory and inept script began with the vi. century. We may leave aside the question, whether it started in the East in connection with the famous reaction against the *ḥaṣṣ*, which began in Persia in the ix. century (this is van Dieken's view, see *Medieval Arab*, 1, 85; 351 et seq.; *Scriptorium arabicum de Syria* in the *Memoires de l'Institut Egyptien*, x, 111, fasc. vi, p. 450), or whether on the contrary it spread from the West to the East. It is certain in any case that no coins of the round script first appear in the West, but of all on the coins of the Almohads 'Alī b. Yūsuf b. Tashfin (500—537 = 1106—1141; see Stanley Lane-Poole, *Cat. Brit. Mus.* v, no. 60). After the foundation of the Almohad dynasty in 524 (1130) it gained an exclusive predominance; on the coins of 'Alī b. Yūsuf it still has the old form *Ḥ*, on the Almohad coins the later form is used without exception. The most modern Kufic inscription on coins in Egypt dates from 555 (1160); the round script occurs as early as 100 years before that date under al-Muḥammad 427—487 = 1036—1094; inscriptions in the possession of the author; in Syria we find: Damascus 349 (1154—1155, in the round script, 551 (1156—1157) also in Kufic, after 555 only in the round script; 543 (1149—1150) at Hama in the round script. Aleppo 343 (1138—1149) in the round script, 545 (1150—1151) again Kufic, after this however only in the round script (see van Dieken, *ibid.* p. 451). On coins the round script first appears a few decades later: a silver coin of Saladin of 573 year 573 (1177—1178) shows a script which is still somewhat angular, but which is hardly to be called Kufic; the genuine *ḥaṣṣ* (*Ḥ* as written in this later form) is first seen on a *ḥaṣṣ* of Aḥmad 'Alī of Damascus (592 = 1196; see *Cat. Brit. Mus.* ix, 285). After 623 (1225) Naṣr al-Dīn used on gold coins a *ḥaṣṣ* without exception. Towards the same time *Ḥ* makes its appearance on the coins of the Seljuks of Asia Minor (610 = 1213—1214 still angular, 616 = 1219—1220 round script; *Cat. Brit. Mus.* ix, 122, 118). On the whole modernism of Asia Minor only the round script is used from the beginning of the vii. century onwards (cf. Sarras, *Notes on Arab-Asia*, p. 221), *ḥaṣṣ* is occasionally found as well, but only on ornamental bands containing a short inscription of hardly even more than a single

line; the content is religious, usually a passage from the Koran, and the whole inscription serves only a decorative purpose.

The use of *ḥaṣṣ* persisted longest in the further East-Mesopotamia and Persia. An extreme ugly form of it appears on the reduction of any other script, on the coins of the last Abbāsids (640—656 = 1233—1258), at a time when the round script had been used for a long time in the West. The latter however is found on the not very numerous monuments of that period, thus on the Tullams (Tullams) Gate at Baghdad dating from 618 (1221—1222) Sarras, *Medieval Arab Manuscript*, p. 8 et seq., on the bridge of Hama of 629 (1233—1234; Sarras, *Medieval Arab Manuscript*, chapter entitled: *Medieval Arab Manuscript*, on the Madrasa Maṭṭarīya in Baghdad (Nasr al-Dīn, *Notes on Arab-Asia*, p. 221), the square of the last-mentioned building, now called Maṭṭarīya *ḥaṣṣ* has inscriptions in ornamental Kufic writing (Oppenheim, *Die Arabische Kunst*, p. 140).

owing to the lack of old Arabic monuments in Persia, little can be said about that country. The inscription of the Chah Maṣṣar at Ezerum, supposed to date from the year 551 (1156/57), does not seem to be genuine. The oldest building hitherto known, viz. the tomb of Yūsuf b. Karḥān, dating from 557 (1162) and the minaret of Naṣr al-Dīn at Nishapur, erected in 582 (1186—1187), have inscriptions in pure *ḥaṣṣ*, while the round script is found on the imperial mosque of Qazvin at Sulṭāniyye which dates from the year 630 (1223).

In the different countries conquered by the Muslims, the Arabic script which they were forced to accept together with the language of the conquerors, was subjected to certain modifications, partly perhaps under the influence of the old native scripts, and partly owing to special circumstances which it is impossible to determine in detail. It is however clear that the transformation goes on far as the development of a script, just as the Roman character, as used in North America, does not differ so very much from that used by the Indians.

The oldest and most widely spread of these modified forms, which for that reason must be regarded as one of the most important, is the Maghrebi (i.e. 'Western') script, which in our time is used throughout the whole of North Africa and in some parts of Central and West Africa, while in the Middle Ages even in the beginning of the modern period its use extended to Spain as well.

According to tradition the western script was originally called 'dialect of Kairuān', and there seems to be no reason for doubting this statement. After the conquest of North Africa, Kairuān founded as early as the year 30 (476), became the political capital of the West, and after the foundation of its great university in the west remains it was the intellectual centre as well. The importance of the town grew still further in consequence of the political repulsion of the Maghreb including Egypt from the empire of the caliphs, which took place towards the end of the century; Kairuān now became the residence of the new independent dynasty of the Aghlabids (184—296 = 800—909), and so may assume that

the new script was developed there at this period. That the change took place at Kairouan seems to be proved by the name *scriptum* = *Maghribi*. As to the time the following points may be noticed: 1. The script on the coins of the Aghlabids differs in a striking way from that of the coins of Eastern countries, on the whole it is still stiff and angular, but it already exhibits clear signs of a beginning of development. 2. It is well known that a characteristic feature of the Western script is which it differs from that of the East, consists in the pronunciation of *ف* and *ق* as *ب* and *م*, as had been done in the East down to 11 century (see above). This fact seems to prove that the Maghribi writing separated from that of the East at a time when the latter still placed the stress in the other way. Similarly it would seem that the distinct order of the letters in the Maghribi alphabet dates from this period in question. The arrangement is partly that of the old Nabataean alphabet, and partly the later system based on the similarity of the letters. It is as follows:

ا ب ت ث ج ح خ د ذ ر ز ط ظ ع ف ق ك ل م ن ه و ي
 م ن ه و ي ا ب ت ث ج ح خ د ذ ر ز ط ظ ع ف ق ك ل

The oldest specimens of this script given in Houdas, *Par le Maroc, les Algérie, le Maroc, les Algérie*, p. 101, 102, do not seem to be much older than the year 912, but they show clearly that Maghribi writing is a development not of the old *scriptum* hand, but of the Kufic script. It is therefore not the result of a natural process of evolution, but represents the conscious attempt of a scholar to create a new script on the basis of the old literary Kufi.

A new form of writing arose in Spain after the centre of the Maghrib had been shifted from Kairouan to that country: it was called 'Andalusí' or 'Cordovan', and is distinguished from the still somewhat stiff script of Kairouan by the remarkably round forms of its letters. The Maghribi (*Mutadilla*, p. 30 on the script) states that after the script of Kairouan and Kairouan had gone out of fashion, the Andalusí writing spread over (North) Africa, where it was only declined together with the decay of the Almohad power. Under the Marinids, he says, writing became still worse, as it to be very difficult to read. By this third script he evidently means that used in Morocco, which after the Marinids, the third intellectual centre of the Maghrib, is called the 'Fes' script.

Although in comparison with Spanish writing it represents an undeniable deterioration, the Maghribi's judgment is somewhat too severe. The 'Fes' script of the books is not only legible, but frequently very pleasing as well.

After the 11. (12.) century Muslim states of considerable importance arose in Central Africa, their centre was Timbuktu (founded 610 = 1213-1214), which thanks to its great college became the fourth intellectual centre of the Maghrib, and retained its important position down to at least the 17. century. It became the home of yet another script called the script 'of Timbuktu' or 'of the Sudda', which is characterized by the largeness and thickness of its letters. Specimens of this script as well as of the 'Fes' are found in

Houdas, *loc. cit.* plate III, fig. 1, 2; and in Houdas, *Par le Maroc*, p. 101, 102.

At the present day four types of Maghribi are distinguished in Africa (Houdas, *loc. cit.*, p. 105):

1. The Tunisian script, which closely resembles that used in the East, but does *ف* and *ق* in the Western fashion.
2. The Algerian script, usually pointed and angular, and frequently difficult to read.
3. The Kabili distinguished from the last by the round shape of its letters.
4. The script of the Sudans, which is generally thick and clumsy and more frequently angular than most, owing to the progress of Islam among the negroes of Central Africa, especially the Hausa, during the second half of the 18. century, this script has spread considerably, and reaches to the West as far as the Atlantic where Lagos has become a new centre of Islam, and to the East as far as Wadai where it meets the Egyptian script.

Arabic writing. — It has been pointed out above that the end of the 11. century is to be regarded as a turning-point in the development of the Arabic script. I want at this time that this disappeared from present use and that the script reached the culminating point of its growth. The condition of the Arabic script — *scriptum* — seems to fail in the same period, though its beginnings cannot traced any further back.

This new script is characterized by the tendency to script downwards from right to left: hence the final forms of some letters, especially *ا*, *ب*, *ت*, *ث*, *ج*, *ح*, *خ*, are drawn out in a long line, — and *د* ends in long curves, and a similar line is repeated to form the connection between certain letters.

The peculiar development of the Arabic script during the 11. century is manifestly due to the influence of the old national script, the Pahlavi. Like the other countries with an old civilisation of their own which fell under the rule of Islam, Persia, where the resistance against Arab influence was particularly strong, retained its old script for several centuries after the conquest.

It is fixed at least to the year 140 (757-758) as the date of the birth of the Arab governors of Persia. More than two centuries later the author of the *Kitab* gives a very exact description of Persian writing, — he states that each was written *بسم الله الرحمن الرحيم*, and read *بسم الله الرحمن الرحيم* (read *بسم الله الرحمن الرحيم*) and read *بسم الله الرحمن الرحيم*.

This passage shows that at the period in question the script was still known at any rate to the learned. It would almost seem that the author of the *Kitab* even knew something of the old cursive writing — though not the Persian alphabetical script — as he states concerning it that each character represented a whole concept. Further proof is afforded by an inscription at Persepolis dating from 344 (955-956) on which the Nizid colonel 'Adud al-Dawla states that during his visit to the ruins of Persia (and of course Achaemenid inscriptions were read to him by two men (cf. however Nöldeke in *Stein's Persien*, II, 100, p. 491). The specimen of this script given in the *Kitab*, notwithstanding the imperfections of the tradition, shows clearly the

some tendency to slope downwards from right to left; the hypothesis that it received some influence from Arabic writing is therefore conceivable (cf. Flügel, p. 23; the first three lines of the specimens are upside down, the fourth line is the reverse of the third, unless both lines are intended to be Arabic). The author of the *Al-Fihrist* states in the chapter on the scripts (p. 6) that the Persians derived theirs from a script used for the Koran and called *al-kufi*, but we know neither the meaning of this word nor the character of this script. The oldest document in Persian script hitherto known seems to be a bill of sale dated 401 (1010-1011), published by Margoliush in *Journal of the Royal Asiatic Soc.* 1903, p. 701 et seq., on which the beginnings of the later *shikasta* can be recognized undoubtedly. — The *Kutub al-sharifiya* of Shams al-sharif (Polaris), Soc. de Soc. plate III and IV (1888) and recently *Iran* regarded as the earliest specimen was written in 447 (1055-1056), and the script used is Persian *shikasta*. — The autograph of Balhuz of Nishapur, dating from about 450 similarly shows the characteristic sloping tendency of the later *shikasta*.

In books however the old Arabic script was preserved much longer. To the *shikasta* of 543 see (p. 148) — North. Persian *shikasta*, n° 35 (1840) (see above). *Shikasta al-sharifiya* of 576 (1180; *Iran*, in the list. Mon. n° 115, of 672, is written in still *shikasta*, in which however the Persian punctuation of the letters *ب*, *پ*, *ز*, and *ش* is already fully developed though *هم* always consistently used; we find *پیش* and *پیدا* and *چ* (but always *چ* and *چست*) and *چشم* and *چهارم* and *چون* but *چکر* and *چکر*.

With the VII. (VII.) century the new script begins to make its appearance in books, though at first only in those containing poetry: scientific and especially religious works were still nearly always written in the Arabic script or in a peculiar *shikasta* which somewhat resembles the writing of the calligrapher of the late 'Abbasid caliph of Baghdad known as *Yahya* (see above). It is noteworthy however that the interlinear translations of the Koran, and at a later period the marginal commentaries as well, were nearly always written in *shikasta*, which apparently was regarded as a popular script. Unfortunately we have no date as to the time at which these translations were added to the text. But as the verses of the text usually left large spaces between the lines, it is probable that the addition of a translation was intended by them from the outset, we may assume therefore that in most cases it took place not long after words.

Owing to the great artistic gifts of the Persians the art of writing reached a high stage of perfection among them. Specimens of Persian writing of the older period are however so scanty, that it is impossible to get a clear idea of the production of the Persian calligraphers. One of the most famous artists of that time was Muhammad Nawwasi, properly called *Nawha al-Farabi* and *Farabi Muhammad*, born at Nawwasi near Kashan in the second half of the sixth century who was so proud in his art as to write 70 different scripts

(Schreier, *Taqdim al-Agha al-Sultan Shajar*, in the *Memories of the Ministry of Education*, p. 3).

The Mongol domination and 120 years later the invasion of Timur destroyed Persian nationality and Persian civilization. What we possess of Persian manuscripts belongs for the greater part to a later period.

It was probably not until this later period that the *shikasta* script came to be a contraction of *shikasta* and *shikasta*, a contraction of *shikasta* from which it does not differ in any essential features of style, save in the curve, 'shikasta' 'shikasta' script, used in ordinary life, it is a much thinner script which is very difficult to read owing to the contraction of diacritical dots and the use of ligatures in disjunctive of all rules of calligraphy. Some fairly a reaction against this script has found expression in a movement to make the Persian character more legible. It is to be noticed that the script known as *shikasta* to the Persians, is called *shikasta* by the modern Persians, *shikasta* is their name for a form of the old *shikasta*, which is used for official documents. A species of the old *shikasta* is called by them *shikasta* (script for 'shikasta' and *shikasta*).

From Persia the Arabic script spread to the East and South East Asia, where many authorities prophesy a great future for Islam.

In China Islam was known very early, though it is not certain whether it first appeared there as early as the VI. or not until the middle of the 10. century. The passage in the second Chinese inscription in the old mosque of Canton (Hanyu *Kutub*, d. *Qutub*, *Manhaj*, *Girdish*, XI, 741 et seq.) dating from Raddad 751 (September 630), according to which the original temple was erected in the period T'ang-Kwan of the T'ang (627-650) is not clear. Apart from the Arabic inscription of this mosque we possess practically no written documents of an early date. The inscriptions on old brass vessels can in most cases not be dated with any certainty; it is improbable that they go back beyond the 12. century. Chinese Muslims, in spite of their apparently very considerable number (perhaps 40 millions) have done practically nothing for the religious life of the community and for Muslim learning. It was not until quite recently that Chinese Muslims have begun to write and to print, the latter they do according to a very old technical process by means of wooden blocks, the engraving of which necessitated certain modifications of the written character.

The Muslims of India also evolved their script from the Persian whose language they study as much as *shikasta*. The use of *shikasta* prevails throughout, *shikasta* being reserved almost exclusively for religious and legal works, as in Persia and Turkey.

The Malay archipelago, like India, first received Islam from the Persians, whose place was later taken by Southern Arabs who came there in the early Middle Ages as merchants and sailors. At the time of the traveller Ibn Battuta, A.D. 1350, Java was governed by Muslims of Sumatra of the Shafi'ite school. Two years later South Arabian immigrants founded several states on the northern coast of Java, whereby the conversion to Islam was greatly accelerated (Van der Bary, *Le Hindoustan*, p. 4). Old documents in the Arabic character do not seem to exist; the modern script shows clear traces of its South-Arabian, non-Persian origin.

The conversion to Islam of the East coast of Africa similarly proceeded from South or East Arabia (Yemen). It does not however seem to have made much progress during the Middle Ages. A new invasion of Arabs from East and South Arabia which began towards the end of the 11th century and was continued with great energy by Negro converts from Zanzibar (Sukuti) since the middle of the 13th century, had gone far in spreading Islam throughout large parts of East Africa, at the time when the intervention of European powers began. The progress of the Arabic character which had already reached Uganda and the Congo, since then been arrested, and in the last years retrograde movement seems to have set in.

The South-Arabian script. The old inhabitants of South Arabia (Sabaeans, Minaeans and Himyarites) used a consonantal script the letters of which — with the exception of a few ligatures or rather unpronounceable combinations — corresponded combined on the stone and bronze inscriptions in our possession. This script also is derived from the oldest form of Semitic alphabetic writing, which as *Fraserius* has pointed out is distinct from the 'Hebrew' script hitherto regarded as the oldest. Whether the Southern Arabs received it from Palestine or the North or from Southern Mesopotamia is a question which cannot yet be solved with any certainty, and the same applies to the date at which the script was introduced. If it came from Palestine, the introduction probably falls later than the year 1000 B. C.; if from Southern Mesopotamia it may have taken place somewhat earlier.

It is much more surprising that nothing is known about the time of its disappearance. Probably it did not survive long after the decay of the South-Arabian civilisation; in the time of Muhammad it seems to have been already obsolete, hence e.g. the fabulous statement of Ibn al-Kutibi that at the time of the rise of Islam nobody could read or write in Yemen, a most astounding statement which is sustained by direct evidence (e.g. 'the slave from Yemen skilled in writing' in a poem by Labid). Apparently though it had fallen out of use, it was still known, as is proved by the script applied to it by the Southern Arabs (Minaeans, Sabaean, Himyarites), a name founded on the peculiar shape of the characters mostly consisting of one or two vertical or slightly slanting strokes which seem to carry on 'support' a curve, circle, hook or dash. It is certain in any case that after the rise of Islam the North Arabian script became solely dominant.

The nations of South Arabia, which were characterised in antiquity by the same peculiarities as to-day, migrated at various periods, which at present it is impossible to fix accurately, through North Arabia as far as the South of Syria, or first perhaps as traders and later for political reasons. Sabaean inscriptions have been found near Aden to the far North of Arabia, and it is not impossible that others may yet be discovered in Midian, and on the Southern frontiers of Palestine as well as in the country East of the Jordan.

Apart from these numerous other inscriptions are found in the region of Northern Arabia, the script of which is clearly derived from South Arabian writing. According to the shape of the

characters it may be regarded as certain that they belong to three different periods and thus owe their origin to three distinct migrations of Southern Arabia. (The best account of these South Arabian alphabets is found in Littmann, *Der Ursprung der Phönizischen Inschriften — Mittheilungen der Vorderasiatischen Gesellschaft*, 1904, plate III, and *Muscat, Les Arabes de Syrie*, p. 63).

1. The oldest are the Lihyan inscriptions — according to Th. H. Müller, *Epigraphische Denkmäler*, p. 20, this is the oldest form of any South Arabian script, and represents the connecting link between the old Semitic and the Sabaean script — it is chiefly found in the district of al-'Ula. These are unfortunately not very extensive; as they contain no Semitic, Jewish expressions (Littmann, *Epigraphie*, II, 120) they cannot be older than the Hittite period.

2. An obviously later type of script is found on the inscriptions, formerly called pre-Sabaean, and later known as Himyaritic. They were first discovered by Böling in 1883 near Marib; in the Lihyan inscriptions, they occur however considerably farther North. Burton (*Land of Midian*, II, 139) found a few in Midian, and the present writer discovered a number in the inland town of Grays in the North West of Tehama, *Mittheilungen der Gesellschaft der Wissenschaften zu Göttingen*, III. In spite of their large number — Böling alone collected 792 — they yield very little information, and their date cannot yet be fixed with accuracy.

3. Still more modern, because clearly exhibiting traces of Sabaean, is the script of the very numerous inscriptions found in the *Wadi*, an uninviting, arid and sterile about 100 miles S. E. of Damascus. The information yielded by their contents is similarly scanty; it is possible however to fix their origin in the time between A. D. 1—200 with some certainty (Dussaud and Macier, *Alexandrie*, p. 66 extend this time as far as before the 1st century). It is impossible to say how late the script survived; it is a striking fact that the inscription of Nensha dating from the 323 is written in the Sabaean script, but in Sabaean characters.

The South Arabian script also spread to Africa, where it still survives in a form differing from its external but not in essential characteristics. The migrations of South Arabian peoples to Abyssinia, where they founded trading stations, first probably in the district of Aksum, seem to have begun long before the commencement of our era. The Eritrean nation speaking a Semitic tongue came from their mingling with the native tribes. Elements in their South Arabian script which at that time was scarcely modified, only exist from the period after the conversion of the Abyssinians to Christianity (4th century A. D.). Soon afterwards however a Semitic transformation took place, perhaps under the influence of Greek writing; according to Th. H. Müller (*Epigraphische Denkmäler aus Abyssinien*, p. 68 et seq.) it is to be regarded as the common work of one man, perhaps a Greek. First of all the direction of writing, which until then had been from right to left and partly hemistrophedon, was changed as regards from left to right; the writing was further transformed into a syllabic script in such a way that the appropriate vowel was affixed to each consonant in the form of a dot, stroke or dash.

Between 900 and 1000 A. D. the Aztec script language died out, and was replaced by modern dialects, the most important of which, Aztec, is still used beyond the boundaries of Aztecdom as a lingua franca. It has retained the pictograph, only forming new characters out of the old material, in order to express new words. Even some of the neighboring peoples — Tz'ut and Agaa tribes — have tried to adapt the script to their languages.

This modern Abyssinian script is the last direct descendant of the old Semitic alphabet, which after a space of more than 3000 years still retains the principle of leaving the characters unconnected.

人 尼多佛耶丁：平武路四三九路四三九路
 石 尼多佛耶丁：平武路四三九路四三九路

The phrase classical Arabic denotes that form of the Arabic language which since the commencement of Arabic ~~writing~~ ~~has~~ been ~~used~~ by the Arabic writing nations for all their literary productions (for the very few exceptions see below), styles ARABIC, HEBREW and ARABIC LITERATURE. The ~~main~~ ~~character~~ ~~of~~ ~~the~~ ~~classical~~ Arabic known to us is found in the pre-Islamic poems. The problem arises how the poets (who for the most part must have been ignorant of writing) came to produce a coherent poetical language, — either (starting with the object of securing for their songs a wider field of circulation?) they used for their purposes a language composed of elements from all the different dialects, such as may have been created by the necessities of trade, and which is only remaining for them to unmix, or the dialect of ~~one~~ particular tribe (perhaps owing to political circumstances?) achieved in pre-Islamic times special pre-eminence as a language of poetry. A final answer to these questions, if it ever becomes possible at all, will

has to be removed until all remnants of the
ancient dialects in the population have been
subjected to a careful scrutiny. It may be re-
marked however that the study of other literary
languages, the history of whose origin can be
followed more closely (e.g. German, English, and
French) seems in the case of Arabic also to
confirm the hypothesis of a single dialect as the
original form of the present and thus of the
writing language. — An account of the present
state of our knowledge on this subject is given
in Brockelmann, *Geschichte der arabischen Sprache*,
for 1908, pp. i, 23; up to the Middle Ages
see most especially Brockelmann, p. 2—6; the
Sixième Spécimen (2nd ed.), p. 50 et seq., con-
tains the review of the international work in
the *Lingua Orientalis*, 1899, vol. 1924. Pre-
vious see Schenker's *Semitic Speeches in Arabland*,
1897, p. 186f., and A. Fischer in *Zeitschrift f.
Orientalische Literaturwissenschaft*, liii, 1904, no. 2.

Except in a limited sense there can be no question of a development of classical Arabic. In spite of the fact that vocabulary and forms of expression were again and again subjected to considerable modifications in accordance with the different outlook between the various stages of civilization, and with the special needs of the separate branches of literature (cp. A. Fuchs, *loc. cit.*, vol. 580 et seq.), it may still be said that the grammatical skeleton of Arabic, as now written by the lower class of newspapers in Egypt and Syria, is essentially identical with that of the old poetical language. (The difference between classical Arabic and the modern vernacular dialects is in no sense morphologically generic; see below - ARABIC DIALECTS).

The cause of this quite unique conservation may first of all be found in the fact that the later Muslims regarded the language of the Koran as genuine classical Arabic (see below), so that this particular form of the language was almost invested with religious sanctity; and secondly, it would seem, in the inability of the Arabs to free their minds from greater two which they have once fallen.

It would tend as too far to give here an account of the grammatical fragments of classical Arabic: we can only refer to the special literature on this subject: Socin's *Grammatik der Arab. Sprache* (the 2d edition, 1809, revised by Reiske), the most up-to-date of existing grammars, collected on p. 161—see a good bibliography). Wright's *Arabic Grammar* (3d ed., 1858 and 1892, revised by Robertson Smith and W. H. Green), the Saeg's *Grammatik der ar. Sprache* (1924), *Grammatik der arabischen Sprache*, *Handbuch der Arabischen Grammatik* (see later, *Lexikon*, *Rechenkunst*, *Grammatik*, *Einleitung*), and innumerable articles and *Grammatiken* scattered through the Oriental periodicals. A rapid survey of the Phonetics and accents of classical Arabic (particularly suitable for non-Arabists) — given by *Significatio Arabicae, Persicae und Turcicae* in *Three Grammatices*. *Grammatik* must be placed Arabic source: on classical Arabic are mentioned farther down in the article ARABIC LITERATURE. — Dictionaries by Lane, Freytag, Hory, Kailashrati, Böhs, Wahmann &

A few remarks on the power of expression of Arabic as compared with that of other literary languages may not be out of place. Comparing it first of all with the other Semitic languages,

fact we notice that the possibilities of syntactic distinction are in Arabic developed to a far greater extent and brought out with greater precision than in any of the others. Where other languages have to content themselves with simple construction, Arabic combines a large number of subordinating conjunctions. In one respect however classical Arabic as well as its sister modern forms unfavorably with the Aryan languages: while for the most part it has created a great number of while distinctions which enable it to express even the most abstract concepts, the development of the verb has been most neglected. We seek in vain for a distinction between imperative and permissive forms of expression. *فعل* means 'he was standing' and *فعل* 'let'! Similarly the different grades of the simple tenses of the verb which we possess by means of various auxiliary verbs are frequently left unexpressed, *فعل* 'he reads' and *فعل* 'he is able to read'. The expression of the *passive* also often lacks precision, in spite of the development of a number of verbal equivalents with a temporal force (*فعل*, *فعل*, *فعل* etc.) (cp. on this point the grammatical notes referred to above, and Brockelmann, *Gramm.* I. 23 et seq., as well as the same author's *Arab. Lit.* I. 11 et seq.).

The extent to which Islam favored the growth of Arabic literature by posing new problems before it has been set forth before (cp. *Arab. Lit.* I. 11) here we content ourselves with drawing attention to a few points in which the language of Arabic literature and Arabic philology were at least deeply in Islam. Classical Arabic owes its wide diffusion and its still unexampled predominance to the fact that the Kor'an which for the most part was composed in the dialect of Mecca, was assimilated by the Muslims, at least as far as the pronunciation and orthographic signs are concerned, if not to a wider extent (cp. Volz, *Feldgesch.* and *Schriftsprache* in *den Arabien* and Hartmann's remarks in the *Oriental. Literaturgeschichte*, all. 19. c. 12) to the language of the poets which was almost recognized as classical. The dialect which in the whole did not venture to change (cp. however e.g. Volz, *Dr. d. p. 58: *Arabisches* in place of *Arabisches* were the pronouns of the sacred book as continued in writing at an early date, although they frequently agreed with the classical pronunciation. This is the reason why the conventional orthography of the Kor'an still remains without any essential changes the norm for classical Arabic. The striking phenomenon presented by the omission of many letters in the Kor'an is probably to be explained by the assumption that the creators of this orthography in writing down the text pronounced each word separately and then accepted the *orthographic* forms as the normal form of the word. Although this hypothesis presupposes a fairly highly developed power of abstraction on the part of the early writers of the Kor'an, it is impossible to reject it even on the theory that the town dwellers of the *Meccan* had at the time of Muhammad already lost the short final vowels, the *hamza* etc. (cp. A. Fischer in the *Zitter.* I. *Deutsch. Morgenl. Forsch.* II. 116; Volz, *Dr. d. p. 165-173*); without this theory it is impossible to explain the fact that change in the position of a word was fairly consistently ignored, a phe-*

nomen most noticeable in the spelling of the feminine termination with *h* even in the construct state, which is found already in the earliest copies of the Kor'an. Cp. Nöldeke, *Gramm.* I. 247 et seq. — The redaction in read and interpret the Kor'an as 'correctly' as possible is probably responsible for the creation of new sentences which proved highly important for the task of passing the language on a scientific basis and controlling its further development: the sciences of Philology and Grammar. It is true that in the field of the former the Arabs seem to have been influenced by the Indians, and in that of the latter by the Greeks (Arabic; Brockelmann, *Gramm.* I. 177); there may be no doubt however that their achievements in both subjects are considerable. To the Arabic writers on Philology we owe an exact definition of all the old Arabic consonants, and native Arabic grammar (however artificial it may appear to us) has unquestionably rendered an important service to Arabic, by translating the ambiguity inherent in all Semitic languages to a minimum.

It would be difficult to forecast the future of classical Arabic. In Muslim countries attempts to elevate a vernacular dialect to the position of a non-literary language have proved to be failures (see article *Modern Literature*), and we may assume that the language which has had a life of at least 15 centuries, will maintain its position so long as its boldest roots in the religion of Islam. (A. SCHAEFER.)

ARABIC DIALECTS.

1. Definition of Arabic dialects. — Classical Arabic, the oldest specimens of which are found in the pre-Islamic poets, must be regarded as a form of the language which, originating probably in the Eastern part of Central Arabia, was later elevated to the position of a common language, and the rules of which were defined, and without any additions, by the Arab grammarians. It is obvious from the outset that forms of speech differing from this language must always have existed in Arabic. Of the South Arabian language we possess many specimens (cp. *Arab. Lit.* I. 11). Further historical details of the older period are preserved to us on other inscriptions (including Nabataean monuments) found in Arabia itself and in the neighbouring countries, and especially in the different peculiarities exhibited by early specimens of the language, in variants of the Kor'an, and in numerous elements of Arabic grammar and lexicography. At a later stage the mixture of Arab tribes, the intercourse with foreign nations, the influence of the classical language and other circumstances may be expected to have caused modifications in the form of the spoken language. Considerations of this nature show that it is a mistake of method to derive modern Arabic forms of speech (as is usually done) immediately from the *classical* language. It is necessary on the contrary to make the relation of such historical forms to classical Arabic the subject of investigation, while Arabic itself has to be treated of its dogmatic character and to be regarded from the point of view of linguistic history. With regard to certain elements of modern Arabic it has already been proved that they are not derived from the classical language (see below). For the rest it may

we add that the historical investigation of Arabic dialects and of the Arabic language in general has not yet emerged beyond the very first beginnings. In addition to the further investigation of modern Arabic it will be a task of fundamental importance to collect the dialectal peculiarities of old Arabic, as far as they have been handed down to us, with as much completeness as possible, and to consider them as a whole. A part of this problem has already been solved by Voisin. In the following pages we consider the modern dialects, tracing back their history as far as possible. — Cp. Th. Nöldeke, *Die arabischen Dialecte* and *Die arabischen Dialecte in ihre Dialecte und ihre Dialecte* (Leipzig, 1904), p. 1—8; K. Vollert, *Die arabischen Dialecte* (Leipzig, 1905), p. 1—8; K. Vollert, *Die arabischen Dialecte* (Leipzig, 1905), p. 1—8.

II. Extent of the region covered. — The following are the countries where Arabic is still spoken in our own time (partly also by not well-known languages): Arabic together with Masipara, and Syria as far as the frontier of Asia Minor; North Africa to the boundaries of the Sahara; Egypt as far South as the western headwaters of the Nile; Kurdistan, Dagestan, Wadai, Senegal; the western Sahara between Senegal and Morocco; Zanzibar and the districts on the opposite coast of Africa were colonised from South Arabia; other districts are found as far as the Malay Archipelago. — Arabic was formerly spoken in Spain (down to c. 1500), on the Islamic islands, in Sicily, Pantelleria (down to the 17th century), Madagascar. Whether Arabic was ever a vernacular language among the Moors in the South West of India has still to be determined. Within the boundaries indicated above Arabic came into contact with a number of other languages; see below under the separate dialects.

III. Sources. — The sources for the study of the dialectal conditions of the earliest Arabic, see above under I. For the later period the following have to be considered: 1. Arabic literary texts written in the vulgar dialect or with a vulgar colouring, some of which are of a very early date (cp. e.g. below V. 7: Spain). Of special importance are the Christian Arabic literature — cp. Georg Geel, *Die christlich-arabischen Literatur bis zur frühislamischen Zeit* — Strassburg, Thiel, 1904, vii, 1 (1905); id., *Die Sprachgeschichte der christlich-arabischen Literatur* (Leipzig, 1905) — and documents in Jewish Arabic. The latter dialects (usually written in Hebrew characters) pass over in addition to important old works (cp. Abu 'l-Walid Marwan b. 'Umayr, *Die Kunst der Hebräer*, ed. by A. Neubauer, Oxford, 1875) an important literature extending to the most recent time which still waits to be exploited from the point of view of linguistic history. Cp. Lucie Vernet, *La littérature populaire des moindres dialectes*, in *Revue Indienne*, July 1904 and following numbers. A large amount of interesting printed literature is preserved in the British Museum, at Strassburg, and in Berlin. Maltese literature (written since about 1800 in the Roman character; cp. Luigi Ronelli in the *Archivio Glottologico Italiano*, suppl. period. iv) is of considerable importance. — 2. Special mention is due to translations of Arabic texts or single sentences and names in Coptic and Greek characters, of which very old and important examples

are extant. They give the most information on the vocal system, the pronunciation of many consonants, the extent to which the / of the article was assimilated to the vowel indeterminate etc. The most important documents of this class are the old Syriac fragments of the Psalter (*Orientalische Literaturzeitung*, 1901); early Egyptian papyri, and the Syriac diplomas published by Christ (cp. below under V. 15). — 3. Arabic loanwords in other languages, as far as they were borrowed immediately from the living language. The historical importance of this source is obvious, e.g. in the case of the Arabic of Spain. — 4. Works by European authors on the most recent contemporary works by Landberg, Steensgaard and Margal are particularly prominent and contain older lexicographical studies, many of which are of considerable value, even in manuscript in many libraries. Among the numerous contemporary guides, there are many very interesting productions. — 5. The principal and most valuable source is of course the living language itself. For an exploration a thorough preparation, especially as regards phonetics, is indispensable. The most valuable contributions are texts (not songs) which should be written down with phonetical accuracy, noting the actual errors where. — For the current literature of the Arabic dialects (including also) see L. Kämpfmeier, *Kritische Bibliographie der arabischen Dialecte*, in preparation for the *Handbuch der arabischen Dialecte* der *Deutschen Akademie*.

IV. Characteristic features. — The following pages give a comparative account of characteristic features of the Arabic dialects and of texts important from the point of view of linguistic history, arranged according to the vocal grammatical scheme; the account does not in any way claim to be complete — the quantity of interesting and historically important material is immense. To this will be added, arranged according to the different dialects: 1. where necessary, short remarks relating to the various linguistic aphores; 2. in order to facilitate a rapid survey of the historical relation of the several dialects to each other, the paradigms (either complete or the characteristic forms in the well attested forms) of the independent personal pronoun and the perfect and imperfect of the first stem of the strong verb in the case of each of the better known dialects; 3. a bibliography of the most important literature).

1) The following points should be noted:

1. The transliteration adopted in that of the *E. o. I.* An acquaintance with the sound of classical Arabic is presupposed (cp. however Vollert, *Die ar.*). Occasionally *u*, *i*, *e*, *a* are used, *q* for *q*, *z* for *z*, *h* for *h* have been retained from the sources; the orthography of the vowel *h* in the whole has been simplified, similarly in the paradigms under V it has not been intended to express all the possible shades of the vowel sounds, * denotes a short vowel, * a long accented vowel. The accent has been indicated, wherever it is given in the sources, as can be determined with certainty in some other way. Forum in [] are corresponding forms in classical Arabic. 2. Abbreviations: m = masculine, f = feminine, c = common gender, s = singular, pl = plural, etc.

The ordinary values of the sounds are subject to numerous modifications caused by a variety of influences, especially the meeting of certain sounds within the same word, or from word to word. In Latin e.g. *p* becomes *f*, *t* *d*, *s*, *v* &c., *e* *i*, *a* *o*, *u* *y*, *ed* *et*, *ae* *ay*, *st* *ss* etc. Similar phenomena wherever we have exact phonetical descriptions. — Irregularities are frequent where dissimilation occurs, thus also (Trip.) *shush* (Malta) and other places in the W. *win*, *vio* (*vinum*) *stead* (Trip.), *the* or *tha* alongside of *the* (*terra*) *to see* (*vis*). Similar phenomena in the E.

In *Malta* voiced consonants at the end of a word regularly become voiceless. — Double consonants are usually preserved, the duplication is dropped however regularly in *Malta* and frequently in other regions, in cases where a double consonant occurs at the end of a syllable; in *Malta* it is also regularly dropped after a long vowel. — For an instance of a new reduplication see e. g. under *W*, and under *T*, 9 a in the case of the *Athorian* verb.

Very common words are often considerably altered and abbreviated; e.g. *fašš* instead of *fašš*, *šš* and other forms used in Algeria for *šš*, *šš*, etc.

Vowels. Instead of *el. o. i. u* we have a large variety of shades of vowel-sounds (*alo. o. is. uois. etc.*) To a certain extent the vowels have lost their character as elements distinguishing between different forms sometimes the groups containing *i* and *u* have become confused (as in 'Oua'), sometimes all the three groups (*W.*) in these cases the vocalization depends only on the nature of the adjoining consonant (whether they are emphatic or guttural etc.) or on other vowels (harmony of vowels especially in the *W.*) — Assimilation of vowels is frequent, e.g. *šifra* (*šifra*) 'be drunk' (Ar. Eg.) In the second radical of the verb the vowels of the perfect and imperfect are frequently assimilated to each other. — Unaccented short vowels are dropped, either altogether, or (in the *E.*) less of *i* and *u* than *a*. Hence e.g. in Syriac *šatān* 'the wine', but *šatān* 'be drunk'; an interesting distinction occurs in 'Oua': *šitā* 'he was killed', *šatān* 'he was strangled' (both hypoth.) became fixed in the forms *šitā* and *šatān* (with corresponding intransitive forms); when the accent was thrown back, these forms could not be changed, while *šatān*, *šitā* were fixed in the modern forms *šatān*, *šitā* etc. A well-known parallel is to be found in Arabic. — Vowels are sometimes lengthened under the influence of the accent: *šān* 'rise', *šānān* for *šānān* (*W.*) etc. — Long vowels: *ā* where not prefixed, *i. ā. ē. ā* etc., among Maltese presents, isolated even in Syriac, also in South Ar. *ā. ē. ā* (LXX. *ā. ē. ā*, stated also to occur in Maltese); *ī. (Malta) i* (Sp. Malta) etc.

• Diphthongs: α frequently = ϵ (10) and further = ϵ ; α : ϵ (2) and ϵ (3); preserved e.g. when followed by π or γ respectively (Fig.), in other regions under other conditions.

Accents: The dialects yield very important information about the accent of Arabic. The Arabic grammarians ignore the subject. Our only account of classical Arabic is based on the system employed by Egyptian and Syrian scholars in pronouncing the literary language. These scholars, however, are influenced by this way of pronouncing

the extent in the vernacular. *Ḥaṣḥ, Ḥaṣḥ, Ḥaṣḥ* were there in the West we get a different sort of *Ḥaṣḥ, Ḥaṣḥ*, etc. corresponding to the *ḥaṣḥ* used in the vernacular. A comparative study of the Arabic evidence proves beyond a doubt that the West Syrian and Egyptian method of putting the accent represents the last stage, reached at so early date in the countries mentioned, of a tendency to drive the accent back to the beginning of the word. This tendency can be traced in the entire field of Arabic speech. The oldest place for the accent which can be historically traced, is found to be nearly always the position of classical Arabic forms in a few cases an even earlier stage (stress on the last syllable) is indicated. To cite forms like the modern *Ḥaṣḥ* *Ḥaṣḥ* (*ḥaṣḥ*) (*ḥaṣḥ* derived from *ḥaṣḥ*) and to escape this appellation generally, is equivalent to a direct reversal of the historical development as proved on the most solid basis of facts, a development which however was ignored in coining and exemplifying the expression *Ḥaṣḥ* became *ḥaṣḥ*, *ḥaṣḥ* became *ḥaṣḥ* etc. —

[illegible]

Principle. For the independent personal pronouns see below. In cl. Arabic we have to assume the pronominal *šaf*, corresponding to which we find *šaf* in Sp. and other parts of the W. The form *šaf* is found side by side with it in the W. and also in the E. (*šaf*) cannot have been derived from *šaf* (nor *šaf* from *šaf*); perhaps this is a case of preservation of an older form required on historical grounds from which *šaf* was derived at an early stage by throwing away the accent. — In the case of the pronominal suffixes (as well as with the independent pronouns) the distinction between the gen-

Concerning a widespread use of old terminations of the verb and noun, which to a certain extent is undoubtedly found in the colloquial, further materials are needed. (Cf. esp. also Kampffmeyer, *Arabische Grammatik* (in preparation).

(KAMPFFMEYER.)

J. ARABIC LITERATURE.

Already at the time of their first appearance in history we find the Arabs in possession of a considerable body of traditional lore, which however does not go beyond such elements as are met with in the case of many other peoples on a low level of civilisation, such as the Bantu negroes and the South-Sea Islanders. The Arabic language which has brought out the possibilities of the Semitic family of speech in the richest yet often one-sided development, commands an extraordinarily copious vocabulary; the men who created it, were forced to give a separate name to each object in the phenomenal world, owing to the fact that general concepts, though not unknown to them, had not yet become the basis of their mental processes. From this follows both the chief characteristic of the Arabic language: it is restricted to the particular, but for this very reason it is able to work it out with the greatest precision.

As early as the year 500 A.D. the whole of North Arabia possessed a common poetical language such as it found in the case of many of the so-called primitive peoples. We may assume that it was gradually as a result of the reciprocal relations between the different tribes, which followed from their annual migrations in search of pasture, as well as from the pilgrimages to common places of worship such as Mecca and 'Obeid; the vocabulary probably was drawn from many dialects. It was fixed not only by the great poets of the royal courts of Mecca and al-Hira, whose art served the desire for refinement and accompanying a more luxurious life, but also by the quatrains of the Bedouins for the purpose of maintaining the party spirit of a nation or tribe.

The ill-effects of the same time manifested their position in every-day life, and probably supplied down to a late period the language of many of the more primitive forms of art, which are passed over in silence by tradition. The camel driver who called in his animal and whistled away the time by accompanying his regular trot with a monotonous song, the woman in the desert tent and the peasants of the palm-tree oasis, who lightened the fatigue of their work by rhythmic clucking in words, must surely have used the language of monotonous speech. This poetry of every-day life is only referred to in occasional allusions: thus we hear of lullabies and cradle-songs (Goldziher in the *Wiener Zeitschr. f. die Kunde des Morgenl.*, 1888, p. 164—167), of the workmen's songs which accompanied the singing of the fiddle for the protection of Mecca against the Meccans (Ibn Sa'd, II, 30, 2), or those verses with which St. Nithus heard the Bedouins of the Sinai peninsula singing a well (cf. Numbers, 21, 17). Scanty remains of such songs are preserved to us by Belkhat in *Revue de l'Asie*, p. 49, and in our own-day literature (cf. *Revue de l'Asie*, p. 42, 21, 22) we also find other specimens in Syria, and finally in Arabia Petraea (Arabia Petraea, in Vienna, 1906,

p. 259); they not only assisted primitive man in lightening the weariness of his labours, but were believed by him to exercise a direct beneficial influence on his work.

In the eyes of primitive man words have not yet become the current coin of common speech, and are regarded as most potent means for influencing not only the souls of his fellow men, but also his entire surroundings, which the likewise believes to be animate; the effect produced by words is much stronger than what we understand by being moved, it is a very real power which casts its spell over the soul of a person to whom the right kind of speech or song has been addressed. For this reason the poet is called by the Arabs *shair*, the knower, that is to say the possessor of supernatural insight; knowledge like that is not only valued as an adornment of life, but also feared as a dangerous weapon, which directed against an enemy, cannot only put him to shame by ridicule, but even the power practically to lame his energy. Satire, *hijab*, is thus one of the oldest forms of art, and even after its mythical character has disappeared, it continued down to a very late period to play a very important part in public life; under the Umayyad dynasty it temporarily dominated the whole field of literature. (Cf. L. Goldziher, *Abhandlungen zur arabischen Philologie*, I, Leiden, 1896, p. 1—121; also *Die Araber und die Arab. Schriftsprache*, in: *Abhandlungen zur Arab. Geschichte des Arab. Pagan*, in: *Die Arab. d. X. Jhdts.*, I, Orléans, 1901, III, p. 1—5).

Of equal antiquity as satire of an enemy is the lament for the beloved dead. It is primarily a duty of women, in whom the simple and most heartfelt expressions of grief are most fitting when in man. Owing to the nature of the old family organisation the lament of a sister for her brother is stronger than that of a wife for her husband; and thus the most famous poems of this group, those of al-Khansa (q. v.), are laments for the death of her brother. It follows from the very one-sided nature of this element, which makes up the Bedouin ideal, that the range of ideas in these poems is very limited (Cf. Goldziher, *Abhandlungen zur arabischen Philologie*, I, in the *Wien. Zeitschr. f. d. Kunde des Morgenl.*, 1888, 307—319).

But while satire and elegy continued to exist as independent forms, other motifs of poetry, which must have played an equally important part in daily life, completely lost their original character, at any rate in our tradition, which restricts itself almost exclusively to poetry cultivated as an art. This is particularly the case with the love poetry: it was not until the Umayyad age with its more refined and civilised atmosphere, that it developed into a definite artistic form, yet it can never have been absent from the mouth of the people. In the old classical poetry the love-song has degenerated into a conventional commonplace at the beginning of a *hizb*, the *muham*, which corresponds to the praise of the gods as the introduction of a mythological Homeric hymn in Greek literature. (See L. Goldziher, *Die Arab. Schriftsprache*, I, Orléans, 1901, Paris 1906, I, 8—12).

The same fate befell the description of nature, especially of animals so far as they in-

increased the Arabs rather as game to be hunted or as domestic animals. There can be no doubt that the old period preserved vivid descriptions of the animals of the desert which were the fruit of personal experience and observation. The camel, it may be said, dominated the thoughts of the Bedouins in the same way in which the cow was the principal object in the eyes of the Vedic Indian, and still is in the eyes of the Herero. Just as reference to the cow runs through the hymns of the Rigveda, see Harnischman, *Pyralis-Zusatz. Studien zur Veda* (Halle, Leipzig, 1881, p. 277 et seq.), in a similar way we may speak of an Arabian camel-poetry, for the poets never grew tired of praising the excellence of their camels, and the animal practically dominates their imagery. Yet no independent poems of this kind dating from an early period are extant: their action as well as the war songs which according to Summeiser, celebrated the victory of the great Murwya. As a separate species poems of this kind appear very late, even later than erotic poems.

At the time at which our knowledge of Arabic poetry begins, i. e. not more than about 150 years before Muhammad (see Schäfer, *Arabisches Alterthum*, Götting, 1883, I, 37, 104), poetry as an art is already dominated by a rigid conventionalized form, the *bayt* (q. v.) in which all the separate species that once had existed independently, are merged. The range of contents of Arabic poetry had never been very wide; it became still more narrow and locked in this form. Certain stereotyped similes or repeated epigrams and again, while other observations of natural objects which would be equally applicable are never used at all (see Nöldeke, *Das Arabische*, I in *Sammlung der Arab. Stud. d. Wiss. in Wien, phil.-hist. Class.*, vol. cxi, Nr. 2, p. 33); even archaisms like the Rasmī, *Qasida*, Tamm, 1865, p. 170 et seq., are numerous but few fresh thoughts with which eminent poets enriched the store of imagery possessed by the ancients.

The *bayt* compensated the independent existence of the separate species without the compensating effect of teaching the aesthetic sensibility of the Arabs to appreciate the symmetrical structure of a connected chain of thought. The general scheme of a *bayt* is totally fixed, yet the details are so loosely connected that the truthfulness of most of the poems is subject to considerable variations. The aesthetic enjoyment felt by the Arabs in reading a poem always proceeds from the single line. The poet who does not succeed in expressing a thought within the limits of one line is extremely criticised (see e. g. Ascher, *Arabisches Alterthum*, p. 1743, infra); but the appreciation of his art is proportionately greater if he can compress a separate thought within a half-line (see Schäfer, *Arabische Alterthum*, p. 44, 13 et seq.) or like Imru' al-Qais in line 28 of his *Ma'allaka*, make use of four different animals in a single verse (Ascher, *loc. cit.*, p. 180, 3).

The outward form of Arabic poetry exhibits greater variety than the range of contents and the composition. The language is rich in vowels with a recurring natural accent; thus it could create a purely quantitative system of prosody, which starting from the simple *anapaest* metre, the Bedouins had even in prehistoric times developed a large number of elaborate forms. It is probable

that all the poems were meant to be chanted to a simple musical accompaniment and only this chant could be substituted to the stable structure of the poetical language, more numerous which was influenced by the vocalic factors, being insufficient to distinguish its full effect.

An art of this type gave little opening for the expression of individual experience and personal emotion. Thus of the large number of pre-Islamic poets there are only a few who stand out conspicuously as expressing thoughts of their own. Unlike question seems to have dated of an early date as regard the poem of the so-called *Ma'allaka* (q. v.) as the most eminent representatives of their art; they are mentioned, although together with others, as early as the time of Patriklat in a poem (*Ma'allaka*, ed. Bevan, Nr. 39, p. 24) in which this poet commemorates his predecessors in the field of poetry. It is true that all the most important features of the ancient Arabic poetry are found combined in these verses: the ill-starred prince Imru' al-Qais, the famous courtesan *Uzza*, al-Nabigha, the enemy friend of the Ghassanids and Lakhmids, who sang of the intense joy of living, the typical Bedouins *Alghams* and al-Harith b. *Udhayr*, and *Yahar* and *Lahid*, the president of a *tribe* *tribe*.

The existence of this art was not however confined to the desert. The inhabitants of the oases and towns began to take their part at an early period and to a large extent struck out paths of their own. The Jews of Tadmor, it is true, like al-Samaw'al b. *Adiyar*, had become so far assimilated to the Arabs, that their art hardly differs from that of the Bedouins; but essential difference are found among those Arabs who had settled at al-Hira or the Persian frontier where they had come under the influence of Persian civilization. Their principal representative *Abi al-Fal* (q. v.) in his youth chiefly cultivated the drinking song as a separate species of poetry; in his old age however Christian influence turned his thoughts to religious subjects, such as found expression in his poems on the fall of man quoted by *Qasbi*, *Byzantin*, iv, 66, 1000. Such ideas did not excite much interest among the thoughtless children of the desert; but they appear again at Tadmor in the poems of *Umayyad* b. *Abi al-Fal* (q. v.) whose *imam* almost came within the sphere of South-Arabian influence, and who seems to have derived his inspiration more particularly from Jewish ideas.

Poetry was not however the only intellectual possession of the pre-Islamic Arabs. Prose had also begun to be a medium of artistic expression, especially in proverbs, with which the Arabs share many popular phrases, the origin of which had to meet some time ago at an early period. Similarly we find among the ancient Arabs the other forms of popular literature, thus especially the *epic* (e. g. *Qasida* *Ma'allaka*, Nr. 97, 100 in an allusion; *al-Nabigha*, *loc. cit.*, III, 163, 103 like *al-Harith*, *al-Ma'allaka*, p. 401, 1) and the *best-seller*; yet although the proverbs were carefully collected as early as the time of *Yahar* b. *Udhayr* and later by the philologists, little attention seems to have been paid to the other two species; the fables therefore are known to us only from occasional allusions and quotations (see the fable in the *Qasida* *Ma'allaka*, Nr. 73, 1000, *al-Nabigha*, *loc. cit.*, III, 163, 103 et seq.).

literary now created in Arabia itself a new poetic poetry, the chief representatives of which were the Mevānīs: *Imam* b. *Abi Bakr* and al-*Abī* b. *Yūsuf*. One of the titles of Mevānīs, 'Abd Allāh b. *Kaw al-Kawānī*, and the *Umayyad* 'Abd Allāh b. 'Umayr al-*Abī*. Their art was gladly received even in places Mevānīs which, as the residence of many of the dethroned old chiefs, retained Mevānīs in the elegancies of life; it was at Mevānīs about the year 70 (689) that 'Abd al-Hakīm al-*Abī* opened a room for reading and games (*al-ḥadīṭ*, iv. 52). The new art soon penetrated to the ranks of the people and among the Bedouins it became associated with the names of *ḥadīṭ* b. *Ḥarīṭ*, *Maḥmūd* and *Ḥamīd*.

Syria and Iraq for a long time kept aloof from these rivalries. The old tribal trade had broken out with renewed fury in the struggle for new settlements in these colonies, and found an echo in the works of the poets. Al-*Abī*, *Ḥamīd* and *Maḥmūd* and numerous lesser poets helped to stir the passions with their satires, and at the same time secured the seat in power with their influence on public opinion; thus al-*Abī* secured the *Umayyad*, who saw no objection in the fact that he was a Christian, and *Ḥamīd* their governor *Ḥamīd*. Syria was also the home of the *Umayyad*, the last representative of the old camel-poetry which with *Ḥamīd* had already become a conventional expression. Similar tendencies are represented by *Abi Naḥās* and 'Abd al-*Abī* and the latter was *Kawānī*, who applied the Arabic metre, *ḥamīd* which until then had only been used for occasional pieces, to the subject-matter of the old *ḥamīd*; the simplicity of the metrical form was compensated for in their art by a proportionately greater artificiality of language, and especially a grotesque use of all the wealth of the vocabulary including its most forgotten elements.

At the court of the *Umayyad* the new poetic poetry did not find a place until the time of their decline. Under al-*Abī* b. 'Abd al-*Abī* the Yemenite *Wajīḥ* arose as *Ḥamīd* his enemy addressed to *Ḥamīd* (sons in *ḥamīd* typical of the new manner *Ḥamīd*, vi. 35) and to the style of the caliph, which in the end was his life. In the same style the later caliph al-*Abī* sang the praise of his *ḥamīd*-law *Ḥamīd*; the same poet also cultivated the drinking-song, with preference even to erotic poetry, following the model of 'Abd b. *Ḥamīd*, to whom poems he had been introduced by his exposure; thus the *Ḥamīd* al-*Abī* b. al-*Abī*.

After the *Abbasid* had put an end to the glory of the Arab empire all culture and civilization became concentrated in the hands of Iraq while the desert sank back into deepest barbarism; at this stage the new poetry became universally predominant. The Persians who had carried the new dynasty to power and now remained the power themselves for a long period, laid on their side the old poetry of the Bedouins, but responded eagerly to the familiar theme of the celebration of love and wine. The predominance of the Arabic language was sufficiently secured for many centuries by the religion of Islam, and could not be undermined by Persians; it is only in fact that poets occasionally venture to introduce Persian words or even Per-

sian lines in their Arabic verses (see *Ḥamīd*, *Sayf*, *Ḥamīd*, 1313, i. p. 61). But Persian refinement and elegance dominated the poetry as well as the life of the *Abbasid* civilization in its prime. The art of al-*Abī* was transplanted to the court of al-*Abī* b. *Ḥamīd* b. *Ḥamīd* and it found its highest perfection in the art of al-*Abī* b. al-*Abī*, a native of *Ḥamīd* who introduced the Persian form of the *ḥamīd* into Arabic poetry (see *Ḥamīd* in *Ḥamīd*, *Ḥamīd*, Paris 1909, p. 231), and especially in *Abd Ḥamīd*, the son of a Persian mother who became the greatest poet in the Arabic language. The influence of the latter persisted for centuries; his model was followed by the immortal singers of the joy of life, who after the decay of the central power represented at the courts of the government and princes from *Ḥamīd* to Spain, the joyous Persian ideal of life, which also dominated the *ḥamīd* arts.

But the old aspirations of the purely Arabic literary art had not yet died away; the *ḥamīd* themselves who, as pointed out before, laid the foundation of the scientific study of the Arabic language, at the same time brought about a renaissance of Arabic poetry. The *ḥamīd* were praised as the unequalled models not only of the language but also of aesthetic beauty, which critics strove to analyze scientifically; it thus became the *ḥamīd* to imitate them. Even *Abd Ḥamīd* who creates himself by eliding the stiff manner of the old *Ḥamīd* *ḥamīd* cannot escape their influence in his *ḥamīd* and poems of the *ḥamīd*. This influence is still more pronounced in the works of the *Abbasid* prince *Ḥamīd*, who made the *ḥamīd* poem the subject of scholarly research, and of *Ḥamīd* and his pupil al-*Abī*, both of the tribe of *Ḥamīd* (cp. the former instructions in *Ḥamīd* *Ḥamīd* on the temple of the *Ḥamīd*, *Ḥamīd*, 1303, i. 103 of 103). Al-*Abī*, the panegyrist of *Ḥamīd*, similarly follows the path of the *ḥamīd*, though it must be confessed that the transmutations of his imagery frequently violate our canons of taste. Although he met with considerable opposition on the part of contemporary critics (cp. the severe criticism of al-*Abī*, *Ḥamīd* *Ḥamīd*, *Ḥamīd*, 1310, p. 129), a later generation regarded him as the last of the great poets, and his *ḥamīd* is still read and highly esteemed even to this day (*Ḥamīd*, *Ḥamīd*, *Ḥamīd* *Ḥamīd* in *Ḥamīd* and *Ḥamīd*, Berlin, 1894, p. 111). *Ḥamīd*, the prince *Abd Ḥamīd*, possibly appeals more directly going to the personal touches contained in some of his poems, but in the principal aims of his art he is his inferior, and of the countless number of the later imitators of *Ḥamīd* no one has equalled him (cp. Gold-*Ḥamīd*, *Ḥamīd* *Ḥamīd* *Ḥamīd*, *Ḥamīd*, i. 122-174).

A single new literary form was produced by the imitations of the *ḥamīd*. In the early period of the *ḥamīd*, the *ḥamīd* of *ḥamīd*, but found expression only in praise in a polished style full of conceits; the later development both of the elegy and the panegyric style led to the creation of a kind of epic narrative in verse. The old events which happened at *Ḥamīd* in the year 97 (682) were told by al-*Abī* in a long *ḥamīd* (*Ḥamīd*, iii. 235—

880); the *al-Mu'taz* celebrated the death of his uncle al-Mu'tazid as prince and ruler in an heroic poem (ed. by Henry Zotenberg, *Revue des Études Orientales*, 12, 563 ff. no. 211, 232 ff. 249). But these beginnings did not lead to any useful development. Ibn al-Kalbi's famous poem on the fall of the Abbasids, and other similar poems of Spanish origin, which are the most precious no longer *as such*, like those of Tammam b. al-Khattab on the history of Spain and the work of Yahya b. al-Khatib and al-Hu'ayy (Schnack, *Poetische Kunst der Araber in Spanien und Sizilien*, II, 87) seem to have been no more than rhymed chronicles in the style of the 'Abd al-Rahman b. al-Mu'tazzid (174, II, 228-303); in such works, as well as in numerous other didactic poems, the heroic metre was used only as a mnemonic help, not as an artistic form of aesthetic value. It was not until a very much later period that poems of the romances of heroism and chivalry which had sprung from ancient Arabic stories, were put into metrical form by professional chaplains.

Much greater prominence was achieved by another branch of poetical art, religious poetry which in its first beginnings also goes back to the pre-Islamic period. Under the early caliphs and the Umayyad religious sentiment and poetical form were still mutually exclusive, and the poems of the *Umayyad* *Kutayb* *Asa* and al-Kumayt strike a political rather than a religious note. But the civilisation developed in the towns of Iraq favoured the influx of numerous foreign, especially Persian ideas into the intellectual range of Islam which in its original state did not give much encouragement to the emotional element; and it was here that poetry took possession of the field of religion. In the middle of the 8th c. al-Khalil b. Ahmad al-Farisi, who was executed as a heretic in 167 (783) in the reign of al-Mahdi, we find the Persian doctrine of the creation of the world in light and darkness (see Goldziher in *Zeitschrift der d. m. G. Ges. von Orient*, II, 104-105). His contemporary Isma'il b. Huzayf in his poems openly confessed to his adherence to the Manichaean faith. The religious policy of the 'Abbasids however protected Islam against the flood of heretical doctrines, and when al-Farisi in the second period of his poetical activity turned to religious institutions confined in simple popular language, the only fault that could be found with his orthodoxy was that his pessimism did not take sufficient account of the hope of resurrection. Pessimism is also the prevalent mood in al-Farisi's *Litham wa-l-ha yadun*, the work of his mature years which however achieves its main effects by means of artificial conceits in the use of language. It was not until a late period that mysticism began to make use of the poetical form; 'Unwan b. al-Farisi has hardly any predecessors worth mentioning, and he himself created the form which since then has been regarded as canonical.

During the last seven centuries no original idea has made its appearance in poetry in its artistic form; poetical activity has continued to confine itself to poems in praise of the prophet in the model of the *Burda* of Ra'is b. Ma'ar and its pendant by al-Bayhaqi; their chief object remains in the endeavour to

have uttered an artistic effect manifested by rhetoric.

Among the people, it is true, the art of song had not died out, but the 'educators' for the most part thought it beneath their dignity to take any notice of the fact; that it is only in a casual allusion that Ibn al-Kalbi (*al-Mu'tazzid al-Farisi*, Bulak, 1252, p. 24, 1) refers to songs in popular metres which were sung in Baghdad during street processions at night in the month of Ramadan. Among the people the lyrics with its simple *qasida* running through whole poems was replaced by a strophic form by means of which it was possible to attain more pleasing musical effects. In Spain this new poetical form was introduced into literature. *Uthman b. al-Khattab*, the court poet of the 'Amir of Valencia who died in 112 (1031), created a definite form for strophic poetry, *zanzil*, which until then had only been cultivated by the people, and transferred it from the popular dialect to the literary art. He retained however the form which was inseparable from the strophic *qasida*, and in consequence this form of art remained preserved from the narrow *qasida* of a language following exclusively the pulse of the emotions. In point of subject-matter however the *zanzil* did not differ in any extent from the older poetry; from erotic poetry, which had been its popular basis, it was now transferred to the other traditional themes of poetic art, and even pious meditations were frequently clothed in the form of the *zanzil*. From the West the new art migrated at an early date to the East where Ibn Saba' al-Mulk, a contemporary of Saladin, was its first recognised representative. But the intellectual desolation which laid the Muslim countries in consequence of the Mongol devastation, did not exempt this artistic form from the general destruction, and the *zanzil* degenerated as an unimportant play with empty phrases (see H. Hartmann, *Die arabische Dichtungsgeschichte*, I, 110-111, Weimar, 1897). A hundred years after 'Uthman his fellow countryman Ibn al-Khattab (q. v.) made the bold attempt to introduce the language of the people together with the popular form of the *zanzil* into literature; but he found no success with complaining to continue his work. It was 500 years later, in 1098 (1687) that the Egyptian Yusuf al-Shirazi once more used the popular dialect in his *Qasida al-Farisi*, a satire on his fellow-countrymen; and the desire to use the language of the people for the treatment of serious literary subjects did not arise in Egypt until the 18th century. In restoring on this bold undertaking Muhammad b. 'Uthman al-Jahiz committed the mistake of assuming not national subjects, but French comedies — Molliere's comedies — which failed to appeal to the people, in spite of the ingenuity with which he adapted them to Egyptian surroundings.

From as a medium of artistic expression was of much slower growth than poetry, notwithstanding the fact that the art of oratory already attained conditions for its development in Islam with its justification of the *khutba* delivered in each community on the Friday of every week. But it was only on special occasions that it was found desirable to preserve these speeches for posterity, as was done in the case of the

arabic, since from the very beginning of the several centuries their cultivation was chiefly confined to neo-Arabs, Armenians and particularly Persians. As the national literature of the Arabs in the proper sense of the term ends with the fall of the Umayyads, the entire later development would be more correctly designated as Muslim literature in the Arabic language.

The writing of history is still more closely connected with the national literature, and at any rate in its beginnings bears a genuinely Arab stamp. The traditions concerning the life of the prophet which had been created rather than preserved by the two generations of Umayyads soon developed two distinct branches: the *hadith* which was treated on the side of its authoritative content, and the knowledge of the weights of wars, which was cultivated for its own sake like that of the days of the ancient Arabs. The earliest literary treatment of the Arabian known to us is due to Mas'ûdî, *Qishr al-fihrist*, they received their classical form at the hands of al-Wak'îlî, and gave rise to the *siyar*, the biography of the prophet by al-Hafsi and al-Jahîlî. In its later development however the biography of the prophet moves away further and further from the firm ground of historical fact and loses itself in a luxuriant mass of legends which are not characterized by the best claim of popular fancy, but plainly betray their origin in the mystic dream of hair-splitting theologians. The large biographies of the later period, like the *Tarîkh al-Imamî* of Ibn al-Khatîb, the *Siyar al-Nabi* and a still more famous development of the latter, the *Siyar al-Nabi*, tell of the technical rules of the traditionists, learned by rote with these three early centuries popular books, like the *Siyar* of Abu 'Uthman al-Dabbî, which treat their subject in a manner designed for the edification of the faithful on the birthday (mawlid) of the prophet.

Closely connected with the biography of the prophet was the tradition concerning the life and deeds of Muhammad's companions, and their immediate successors, a subject the close study of which was of considerable importance from a practical point of view as affording a criterion for the trustworthiness of the authoritative traditions handed down by the various companions. Muhammad b. Sa'd, a pupil and assistant of al-Wak'îlî, collected all the information within his reach in his large book of *classics*, and the material thus brought together which he made the basis of a separate branch of scholarship, the *siyar al-awliya*, was frequently treated anew by later authors, especially Ibn al-Arabi in his *Siyar al-awliya* and Ibn Hajar al-Asqalani in his *Asma*. The example of the science of tradition exercised a stimulating influence on all the related branches of learning. First of all the great legal schools created their books of *classics* which were continued and expanded from time to time so as to include not only the great precedents but also the less important transmitters of tradition, in this type being especially the works of Ibn Fawqîs and al-Sabîl on the Maliki and Shafi'i schools. These followed among men of letters and philologists the books of *classics* of the poets such as had been composed already by Abu 'Uthman and al-Ash'arî, the heads of the school of Basra; the work of these men and their successors formed the basis of books of final authority like

those of Ibn al-Khatîb and especially the *Siyar al-awliya* of Abu 'Uthman al-Dabbî, which, though dealing in the first instance with the history of music, rises in course of interest in the history of poetry treated on the background of such store of information on the history of culture. Next came Ibn al-Khatîb's *Yusuf al-Sabîl*, the compilation of which succeeding one another through the centuries afford abundant material for the history of Arabic poetry set down almost to the present time, a subject which has ever gradually become less and less attractive. Of biographical collections dealing with men of the different professions we may mention the histories of grammar and philology, of which the earliest extant example is the *Yusuf al-Sabîl* of al-Ash'arî, and the biographies of physicians, scientists and philosophers, like the works of Ibn al-Khatîb and Ibn al-Jahîlî. Another class is represented by the collections of lives of saints and mystics, like those of Abu 'Uthman al-Dabbî or of Ibn al-Khatîb, the legends of which frequently resemble those of the corresponding Christian literature.

The biographical interest steadily predominated in the local histories which gradually arose in all the important cities of the Muslim countries from Spain to Jordan, from the time of Ibn al-Arabi's and Ibn al-Khatîb's histories of Maliki and Maliki. It is to be regretted that most works of this class, like so many other books belonging to the great period of Arabic literature, are either lost entirely, or as in the case of the numerous works of Ibn al-Khatîb on Baghdad and that of Ibn al-Khatîb on Damascus preserved only incompletely. At the same time the material in our possession, especially for the history of North Africa and Spain which are treated in the works of Ibn al-Khatîb, Ibn al-Khatîb, Ibn al-Khatîb, Ibn al-Khatîb and others, still continues for a long time to yield an almost inexhaustible store of information concerning Muslim life through the centuries down to our own time.

The professional and local histories formed the basis of the great collections of general biography, the collection of which if we leave the work of the oldest traditionists out of account, is that of Ibn al-Khatîb. His book was continued by al-Khatîb and from the 12th (or 13th) century onwards was supplemented by comprehensive biographical collections dealing with the different centuries, as for instance that of Ibn al-Khatîb for the 11th, that of al-Sabîl for the 12th, those of al-Nawâsî and al-Sunî for the 13th and 14th, of al-Khatîb for the 15th and of al-Mawâsî for the 16th century.

Closely related to the biographies are the biographical works, the need for which was more urgently felt at an early date owing to the fact that the number of books produced by the Muslim civilization was at times practically unlimited. For the period intervening between the date of Ibn al-Khatîb's *Fihrist* and that of the *Siyar al-awliya* by the Turk al-Khatîb al-Buhârî, both of which aimed at including the entire literary production of their time, there are a number of biographical works dealing with the several branches of learning, particularly theology.

The science of genealogy which frequently touches on the field of biography takes us back to the very beginning of Arabic literature. The
